Timely displays of military force were sufficient to subdue ambitious Saldjūḳ rivals, to bring into line Ḳarakhānid princes torn by family dissensions and to persuade the Ghaznawids that their fortunes now lay in the exploitation of India rather than in futile irredentist dreams in the west. The situation on the western borders of the Great Saldjūḳ empire was more complex and the frontier, towards which Türkmen adventures and *ghāzīs* had for some time been deflected by government policy, more fluid and shifting. There was a zone of local Arab and Kurdish amīrates, jealous of their independence, mingled with ambitious Turkish slave commanders and Türkmen *begs*; beyond them, in western Transcaucasia and western Anatolia, lay the hostile Christian powers of Georgia and Byzantium. Hence the special importance to the Saldjūḳs of defending the northwestern provinces of Ādharbāydjān, Arrān and Armenia against Georgian attacks and of preserving these regions as areas of concentration for Türkmen forces. Soon after he came to the throne, Malik-Shāh took steps to strengthen his frontier by deposing the Kurdish Shaddādid [*q.v.*] prince of Gandja and Dvin Faḍl(ūn) III b. Faḍl II (466-8/1073-5) and installing there the veteran Turkish slave commander of Alp Arslan's, Sawtigin, who was already well-familiar with the situation in the Caucasus region. Malik-Shāh campaigned here personally in 471/1078-9, after the Georgian king had temporarily captured Kars from the Muslims, and again in 478/1085 after the restored Shaddādid Faḍl III had rebelled (see V. Minorsky, *Studies in Caucasian history,* London 1953, *I. New light on the Shaddādids of Ganja,* 67-8). This time, the main line of the Shaddādids in Gandja was extinguished, although a collateral branch continued in Ānī till the end of the 6th/12th century (see *ibid.*, *II. The Shaddādids of Ani,* 79-106). The submission of the Shīrwān-Shāh Farīburz [see SHĪRWĀN] was also received. Much of the Araxes-Kur basin, i.e. eastern Transcaucasia, was now parcelled out as *iḳṭāʿs* [*q.v.*] for the sultan's Turkish commanders, with Malik-Shāh's cousin Ḳuṭb al-Dīn Ismāʿīl b. Yāḳūtī as overlord.

The overrunning of Anatolia and the gradual pushing-back of the Greeks continued essentially as an enterprise of individual Türkmen leaders, prominent among whom were the sons of the Saldjūḳ Ḳutlumush b. Arslan Isrāʾīl, Sulaymān and Manṣūr. Although the later historiography of the Rūm Saldjūḳs makes Malik-Shāh officially invest these princes with the governorship of Anatolia, the assumption of the title of sultan by these last seems to have been a unilateral act which Malik-Shāh probably could only regard as one of *lèse-majesté*; and two others of Ḳutlumush's sons actually fought at the side of the Fāṭimids in Palestine against the Saldjūḳ cause (see Cl. Cahen, *Qutlumush et ses fils avant l'Asie Mineure,* in *Isl.,* xxxix [1964], 26-7; idem, *Pre-Ottoman Turkey,* London 1968, 73 ff.).

In the Arab lands of ʿIrāḳ, the Djazīra and Syria, Saldjūḳ policy aimed at containing the Ismāʿīlī Fāṭimids [*q.v.*] in Palestine, at curbing their influence among the Shīʿī Arab amīrates of the desert fringes and within the Arabian peninsula, at assuring Sunnī control of major cities like Aleppo and Damascus, and at establishing some measure of control over the Türkmen bands ranging across these lands of Syria and the Djazīra and competing with the existing Arab population for pasture-grounds. The caliphal vizier Fakhr al-Dawla Ibn Djahīr [see DJAHĪR, BANŪ] secured Saldjūḳ military help in order to reduce the Kurdish principality of the Marwānids [*q.v.*] of Diyārbakr in 478/1085, eventually incorporating it into the Saldjūḳ empire. Malik-Shāh's authority in Syria was imposed in the face of opposition from the Armenian former general of the Byzantines. Philaretos, in the middle Taurus Mountains region, from the ʿUḳaylids [*q.v.*] under their *amīr* Muslim b. Ḳuraysh in the lands between Mawsil and Aleppo, and from Sulaymān b. Ḳutlumush, firstly through the agency of Malik-Shāh's brother Tutush and then in 477-8/1084-5 by an army from the capital Iṣfahān under the caliph's personal command (see Cahen, *La Syrie du Nord à l'époque des Croisades,* Paris 1940, 177 ff.; idem, *Pre-Ottoman Turkey,* 30-2). Triumphing over his rivals, Malik-Shāh's authority was now extended as far as the Mediterranean shores, and Turkish slave commanders installed as governors in Antioch, Aleppo and Edessa. Saldjūḳ influence was even carried southwards into the Arabian peninsula, for in 469/1076-7 Malik-Shāh's commander Artuḳ b. Ekseb (later, the founder of a dynasty of Türkmen *begs* in Diyārbakr [see ARTUḲIDS]) marched into al-Aḥsā in eastern Arabia against the Carmathians [see ḲARĀMIṬA]; the *Sharīfs* of Mecca were suborned from their Fāṭimid allegiance; and Yemen and Aden were temporarily occupied.

Relations with the ʿAbbāsid caliphs were necessarily important for a power like the Saldjūḳs which claimed to be the spearhead of Sunnī orthodoxy and protector of the Commander of the Faithful against Shīʿī threats. Malik-Shāh did not manage personally to visit Baghdād until 479-80/1086-7, when al-Muḳtadī [*q.v.*] formally granted him the *salṭana* or secular authority. As Cahen has pointed out (*op. cit.*, 42), Malik-Shāh and Niẓām al-Mulk regarded the sultanate, whose protectorate over the caliph had been established by Malik-Shāh's great-uncle Ṭoghrīl Beg [*q.v.*], as an institution deriving its legitimacy from its

very self and having a full entitlement to intervene even in religious matters. The caliphs could not of course concede the validity of this constitutional interpretation of the ordering of affairs in Islam, hence the inevitability of a state of tension, in greater or lesser degree, between the two focuses of authority (see G. Makdisi, *Les rapports entre calife et sulṭān à l'époque Saljûqide*, in *IJMES*, vi [1975], 228-36).

The sultans had installed in Bag̲h̲dād a *s̲h̲iḥna* [*q.v.*] or military commander, who had to keep order in the city and often in ʿIrāḳ in general, and an *ʿamīd* [*q.v.*] or official in charge of civil and financial matters, including the allocation to the caliph of his *iḳṭāʿ*s and allowances. These personages could, and at times did, exert considerable pressure on the caliphs. Central policy in the Sald̲j̲ūḳ state was directed from the *dīwān* of the great vizier Niẓām al-Mulk, who had been first appointed under Alp Arslan; for a detailed survey of his policy, see NIẒĀM AL-MULK. Part of this policy lay in facilitating the revival of Sunnī Islam, as the authority of S̲h̲īʿī powers like the Būyids or Buwayhids [*q.v.*] and Fāṭimids disappeared or waned, by financial and other support to the orthodox religious institution, including the encouragement of the founding of *madrasas* [*q.v.*], and this in theory meant harmonious co-operation with the ʿAbbāsid caliphs, the moral heads of Sunnī Islam. In practice, strains arose between Niẓām al-Mulk and the Banū D̲j̲ahīr, viziers to the caliphs from al-Ḳāʾim to al-Muḳtafī, with a nadir of bad relations in 471/1079 when Niẓām al-Mulk secured Fak̲h̲r al-Dawla Ibn D̲j̲ahīr's dismissal. The arranging of the betrothal of one of Malik-S̲h̲āh's daughters to al-Muḳtadī in 474/1081-2 (another daughter was later to marry the next caliph al-Mustaẓhir) only brought about détente when the sultan came personally to Bag̲h̲dād and the marriage was celebrated in 480/1087. Even then, relations speedily deteriorated, and on his second visit to Bag̲h̲dād, shortly before his death, the caliph was largely ignored by Malik-S̲h̲āh, who set in motion extensive building operations, including a great mosque, the D̲j̲āmiʿ al-Sulṭān, and palaces for the great men of state, intending to make Bag̲h̲dād his winter capital (see Makdisi, *The topography of eleventh-century Baġdād, materials and notes*, in *Arabica*, vi [1959], 292, 298-9). It seems that the sultan planned to set up his infant grandson D̲j̲aʿfar, the "Little Commander of the Faithful" and fruit of the alliance between the caliph and the Sald̲j̲ūḳ princess, as caliph; but in the middle of S̲h̲awwāl 485/November 1092, not very long after Niẓām al-Mulk's assassination, of complicity in which some people thought him guilty, Malik-S̲h̲āh died of fever at the age of 58, suspectedly poisoned (see M. T. Houtsma, *The death of Nizam al-Mulk and its consequences*, in *Jnal. of Indian history*, iii [1924], 147 ff.). The caliph was thereby assured of a reprieve. Terken K̲h̲ātūn and her protégé the *mustawfī* Tād̲j̲ al-Mulk Abu 'l-G̲h̲anāʾim endeavoured to place Terken K̲h̲ātūn's four-year old son Maḥmūd on the throne, but the Niẓāmiyya, the relatives and partisans of the dead vizier, succeeded in killing Tād̲j̲ al-Mulk and eventually securing the succession of the thirteen-year old Berk-yaruḳ, Malik-S̲h̲āh's eldest son by another wife, Zubayda K̲h̲ātūn. The Great Sald̲j̲ūḳ sultanate now entered a period of internal dissension under Malik-S̲h̲āh's sons [see BARK-YĀRUḲ; MUḤAMMAD B. MALIK-S̲H̲ĀH; SAND̲J̲AR], so that the political authority of the caliphate could revive in the 6th/12th century as that of the sultans declined. Malik-S̲h̲āh's body was carried back to Iṣfahān and buried in a *madrasa* there.

Malik-S̲h̲āh is praised in the sources, Christian as well as Muslim, for his noble and generous character. Although probably no more cultured than the rest of the early Sald̲j̲ūḳ sultans, he acquired, in the conventional pattern of Islamic rulers, the reputation of being a patron of learning and literature. The great Arabic poet and stylist al-Ṭug̲h̲rāʾī [*q.v.*] served in his chancery, and amongst Persian poets, Muʿizzī [*q.v.*] in fact derived his *tak̲h̲alluṣ* from Malik-S̲h̲āh's honorific of Muʿizz al-Dīn. ʿUmar K̲h̲ayyām [*q.v.*] seems to have been attracted into the Sald̲j̲ūḳ service at the time of Malik-S̲h̲āh's Transoxanian campaign against S̲h̲ams al-Mulk Naṣr, and to have played a leading role in the reform of the calendar, involving the introduction of the new Malikī or D̲j̲alālī era (after the sultan's *laḳab* of D̲j̲alāl al-Dawla [see D̲J̲ALĀLĪ]), and in the construction of an observatory at Iṣfahān. A collection of legal *responsa*, the *Masāʾil al-Maliks̲h̲āhiyya fi 'l-ḳawāʿid al-s̲h̲arʿiyya*, perhaps composed for the sultan, is mentioned in certain sources, e.g. in Muḥammad b. Muḥammad al-Ḥusaynī's abridgement of Rāwandī, *al-ʿUrāḍa fi 'l-ḥikāya al-sald̲j̲ūḳiyya*, ed. K. Süssheim, Leiden 1909, 69-71.

Bibliography: (in addition to works mentioned in the article): Of primary sources, see the standard Arabic and Persian ones for the period, such as Ẓahīr al-Dīn Nīs̲h̲āpūrī, Rāwandī, Bundārī, Ṣadr al-Dīn al-Ḥusaynī, Ibn al-At̲h̲īr, Ibn al-D̲j̲awzī, Sibṭ b. al-D̲j̲awzī, and the Syriac one of Barhebraeus. Ibn K̲h̲allikān, ed. Iḥsān ʿAbbās, v, 283-9, tr. de Slane, iii, 440-6, has a biography of Malik S̲h̲āh, deriving material for it from the continuation of Miskawayh by Muḥammad b. ʿAbd al-Malik al-Hamad̲h̲ānī (d. 521/1127).

Of secondary sources, see İ. Kafesoğlu, *Sultan Melikşah devrinde Büyük Selçuklu imparatorluğu*, Istanbul 1953; C. E. Bosworth, in *Cambridge history of Iran*, v, 66-102, for political and dynastic history, and A. K. S. Lambton in *ibid.*, 203 ff. for administrative history; O. Turan, *Selçuklar tarihi ve Türk-Islam medeniyeti*, Istanbul 1969, 152-75.

2. MALIK-S̲H̲ĀH II B. BERK-YARUḲ, infant son of sultan Berk-yaruḳ, who, after the latter's death in 498/1105, was briefly proclaimed sultan in Bag̲h̲dād, with Ayāz as his Atabeg and Saʿd al-Mulk Abu 'l-Maḥāsin as vizier, but who soon had to yield to Muḥammad b. Malik-S̲h̲āh I [*q.v.*].

Bibliography: Bosworth, in *Camb. hist. of Iran*, v, 111.

3. MALIK-S̲H̲ĀH III B. MAḤMŪD B. MUḤAMMAD MUʿĪN AL-DĪN (547-8/1152-3), son of sultan Maḥmūd [*q.v.*], who, with the support of the *amīr* K̲h̲āṣṣ Beg Arslan and of Ildegiz [*q.v.*], Atabeg of Arrān and most of Ād̲h̲arbāyd̲j̲ān, briefly became sultan in western Persia after the death of his uncle Masʿūd b. Muḥammad [*q.v.*] without direct heir. His incapability as a ruler—the caliph al-Muḳtafī was now able to get rid of all Sald̲j̲ūḳ authority from Bag̲h̲dād and ʿIrāḳ—speedily led to his deposition in favour of his brother Muḥammad. He was imprisoned, escaped and then was granted the governorship of Fārs by Muḥammad, but died at Iṣfahān in 555/1160.

Bibliography: Bosworth, in *Camb. hist. of Iran*, vi, 169, 175-7.

4. MALIK-S̲H̲ĀH was also the name of two members of the Sald̲j̲ūḳs of Rūm in the 6th/12th century: (a) MALIK-S̲H̲ĀH B. ḲĬLĬD̲J̲ ARSLAN I B. SULAYMĀN B. ḲUTLUMUS̲H̲ (for a brief spell after his father's death in 500/1107); and (b) MALIK-S̲H̲ĀH B. ḲĬLĬD̲J̲ ARSLAN II B. MASʿŪD, ḲUṬB AL-DĪN, who during the division of territories during the latter part of his father's reign (i.e. 551-88/1156-92), received Sīwās and Aḳsaray, and who then kept his father in semi-captivity in Konya [see ḲĬLĬD̲J̲ ARSLAN II].

MALIK AL-SHUʿARĀʾ (A.), "King of the Poets", honorific title of a Persian poet laureate, which is also known in other forms. It was the highest distinction which could be given to a poet by a royal patron. Like other honorifics [see LAKAB], it confirmed the status of its holder within his profession and was regarded as a permanent addition to his name which sometimes even became a hereditary title. Corresponding to this on a lower level was the privilege, given occasionally to court poets, of choosing a pen name [see TAKHALLUṢ] based on the name or one of the *laḳabs* of their patron.

Certain responsibilities went with the title, at least during the Middle Ages. The poet laureate was a supervisor of the poets assembled at the court and passed judgment on poems before they were presented to the patron. He also decided about the admission of applicants to the position of a court poet, but it is evident from some of the anecdotes related by Niẓāmī-yi ʿArūḍī that such introductions could equally be sought through the intermediacy of other dignitaries. Being the guardian of the ruler's reputation as a benefactor of letters, he occupied a position of trust; it is frequently mentioned that the poet laureate was a prominent boon companion (*nadīm* [*q.v.*]) of his patron. E. E. Bertels ascribed an important role in the development of Persian poetry before the Mongol period to the institution; the influences exerted by a poet laureate on the poets under his control fostered the rise of local traditions marked by common stylistic features.

The scarce information about literary life at the Sāsānid court available to us suggests that the rank of favourite artist was known in Iran prior to Islam. The story about the rivalry between Sarkash and Bārbad over the first place among the minstrels of Khusraw Parwīz can be taken as an indication (cf. A. Christensen, *L'Iran sous les Sassanides*, Copenhagen 1944, 484). The founding of a *dīwān al-shi ʿr* for the distribution of rewards to poets by the Barāmika [*q.v.*] and the appointment of Abān al-Lāḥiḳī (died about 200/815-16 [*q.v.*]) as an official critic of the poems presented to these Iranian viziers of the ʿAbbāsids, point into the same direction (see also D. Sourdel, *Le vizirat ʿAbbāside de 749 à 936*, Damascus 1959-60, i, 143 f.).

Dawlatshāh (*flor.* at the end of the 9th/15th century) recorded the formal appointment of ʿUnṣurī as a poet laureate by Maḥmūd of Ghazna through a *mithāl-i malik al-shuʿarāʾī* in the early 5th/11th century. The duties of this office were similar to those incumbent on the holder of the office instituted by the Barmakids (*Tadhkirat al-shuʿarāʾ*, London-Leiden 1901, 44 f.). Although the actual title is not mentioned in sources from his own time, there is little reason to doubt that ʿUnṣurī did occupy the leading position at the Ghaznawid court ascribed to him. This need not mean, however, that he was the first Persian poet who was honoured in this manner. The chapter on the poets in the *Čahār maḳāla*, the anecdotes of which illustrate the most important aspects of early court poetry, refers to the special position held by Rūdakī under the Sāmānids in the 4th/10th century. Particularly informative is the story on Niẓāmī-yi ʿArūḍī's visit to Amīr Muʿizzī [*q.v.*] in 510/1116-17 in order to get a reward for a *ḳaṣīda* presented to this poet-laureate of the Saldjūḳ sultan. It contains a detailed account of Muʿizzī's succession to the post of *amīr al-shuʿarāʾ* which was held already by his father Burhānī. The remunerations attached to this function consisted of a *djāmagī* and an *idjrāʾ*, the kinds of salary regularly assigned to officials [see DJĀMAKIYYA]. Another anecdote tells about a conflict at the court of the Khāḳānīyān (i.e. the Ilek-Khāns [*q.v.*]) of Transoxania between rival poets. Rashīdī defies successfully the authority of the *amīr al-shuʿarāʾ* ʿAmʿaḳ and wins for himself the title of *sayyid al-shuʿarāʾ*. It should be noted that the title of *malik al-shuʿarāʾ*, which later appears to be in general use, does not occur in the *Čahār maḳāla*.

The institution remained a part of the organisation of courts wherever poetry was practised according to the Persian tradition. We find it under the Saldjūḳs of Anatolia as well as under the Muslim rulers of the Indian subcontinent. For the later periods, it is difficult to decide to what extent its significance exceeded that of a merely honorary office. A remarkable revival of mediaeval customs came about in 19th-century Iran under the Ḳādjār dynasty. Fatḥ ʿAlī Shāh tried to imitate the literary splendour of the ancient court of Ghazna by attracting a great number of court poets who were united in a society called *andjuman-i Khāḳān*. He gave the title of *malik al-shuʿarāʾ* to Ṣabā, the author of the *Shāhinshāh-nāma*, which in the style of the *Shāh-nāma* glorified the exploits of Fatḥ ʿAlī Shāh. Many honorifics of this kind were handed out by Shāhs, viziers and provincial governors to their favourite poets throughout this period. Among the last who received the title of *malik al-shuʿarāʾ* was Muḥammad Taḳī Bahār [*q.v.*]. In 1904, when he was only eighteen, Muẓaffar al-Dīn Shāh allowed him to adopt this title which was previously held by his father Ṣabūrī. In spite of his subsequent renouncing of feudal poetry, the title remained attached to Bahār's name till the end of his days.

(J. T. P. de Bruijn)

MALIK AL-TUDJDJĀR (A. "king of the big merchants"), an office and a title which existed in Iran from Ṣafawid times (J. Chardin, *Journal de voyages du Chevalier Chardin, en Perse, et autres lieux de l'Orient* ..., ed. L. Langlès, v, Paris 1811, 262), and probably earlier, until the end of the Ḳādjār period.

It is not clear precisely what the functions of the *malik al-tudjdjār* were during the Ṣafawid and early Ḳādjār periods, or to what extent the office existed in the various commercial centres of the country. It is, however, obvious, that not all major towns had a *malik al-tudjdjār* in the first half of the 19th century. In Djumādā I 1260/May-June 1844 Muḥammad Shāh (1834-48) issued a *farmān* which ordered that a *malik al-tudjdjār* be appointed "in every place in Persia where extended commerce is carried on ..." ("Firman relating to bankruptcies ...", in L. Hertslet [ed.], *A complete collection of the treaties and conventions ... between Great Britain and foreign powers*, ix, London 1856, 614). By the second half of the 19th century, big merchants (*tudjdjār*) acting as *malik al-tudjdjār* were to be found in most major commercial centres of Iran (Mīrzā Muḥammad Ḥasan Khān Iʿtimād al-Salṭana [Ṣaniʿ al-Dawla], *Mirʾāt al-buldān-i Nāṣirī*, Tehran

1297-1300/1880-83, ii, 270; iii, 2, 4-5, 25, 33, 120; Ḥādjdjī Mīrzā Ḥasan Fasāʾī, *Fārs-nāma-yi Nāṣirī*, Tehran 1313/1895-6, i, 308-9; ii, 205; *Rūznāma-yi Dawlat-i ʿAliyya-yi Īrān* [Tehran], 486, 2 Ramaḍān 1277; 26 Dhu 'l-Ḥidjdja 1280; Aḥmad ʿAlī Khān Wazīrī, *Djughrāfiyā-yi Kirmān*, ed. M. Bāstānī Pārīzī, Tehran 1346/1967, 67, 159; J. E. Polak, *Persien: Das Land und seine Bewohner, ethnographische Schilderungen*, Leipzig 1865, ii, 188; E. G. Browne, *A year amongst the Persians*, London 1893, 372, 407; W. M. Floor, *The merchants (tujjār) in Qājār Iran*, in *ZDMG*, cxxvi (1976), 107-9). In Nāṣir al-Dīn Shāh's reign (1848-96), the *malik al-tudjdjār* of Tehran was officially recognised as the superior *malik al-tudjdjār* of the country, and received the title *malik al-tudjdjār al-mamālik* (Mīrzā Muḥammad Ḥasan Khān Iʿtimād al-Salṭana [Ṣāniʿ al-Dawla], *Taʾrīkh-i muntaẓam-i Nāṣirī*, Tehran 1300/1883, iii, 231; *Rūznāma-yi Dawlat-i ʿAliyya-yi Īrān*, 642, 16 Rabīʿ I 1287). It seems that the prominent big merchants of each main town chose one from out of their ranks and recommended his name to the authorities, which would then nominate him to that office (*Rūznāma-yi Dawlat-i ʿAliyya-yi Īrān*, 486, 2 Ramaḍān 1277; 26 Dhu 'l-Ḥidjdja 1280; Polak, *Persien*, ii, 188; J. Greenfield, *Die Verfassung des persischen Staates*, Berlin 1904, 145). It appears that the office almost always fell into the hands of one of the most prominent and wealthy big merchants of any given commercial centre (Dr. J.-B. Feuvrier, *Trois ans à la Cour de Perse*, new ed., Paris 1906, 284; J. G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān, and Central Arabia*, i/2, Calcutta 1915, 2618; "Maʾdan" and "Shīrāz" in Government of India, *Gazetteer of Persia*, Simla 1910, i, 497-8, 502-3; iii, 852; J. Greenfield, *Verfassung*, 143), and that a strong hereditary tendency developed in the holders of the office (*Rūznāma-yi Dawlat-i ʿAliyya-yi Īrān*, 642, 16 Rabīʿ I 1287; Iʿtimād al-Salṭana, *Mirʾāt*, iii, 120; Fasāʾī, *Fārs-nāma*, ii, 205).

The *malik al-tudjdjār* was not a government official. He did not receive any payment for holding the office, nor was he officially a member of any government department. He had two main functions: (1) he was the merchants' representative, or better, the link between the trading community of a given town or province and the authorities, and (2) he was entrusted with authority to settle disputes between the Iranian merchants and their customers, among the merchants themselves, and between local and foreign merchants and trading-firms (Polak, *Persien*, ii, 188-9; J. M. de Rochechouart, *Souvenir d'un voyage en Perse*, Paris 1867, 176; C. J. Wills, *Persia as it is*, London 1886, 45; G. N. Curzon, *Persia and the Persian question*, London 1892, i, 450; A. Houtum-Schindler, art. *Persia. I. Geography and statistics*, in *Encyclopaedia Britannica*, 10th ed., London 1902, xxxi, 619; Greenfield, *Verfassung*, 143; idem, *Das Handelsrecht ... von Persien*, Berlin 1906, 22, 27). It was the latter function, especially so far as it concerned the claims of foreign merchants in cases of the bankruptcies of Iranian merchants, that provoked the issue of Muḥammad Shāh's above-mentioned *farmān*. Nāṣir al-Dīn Shāh extended the functions of the *malik al-tudjdjār* to include, in collaboration with the provincial official in charge of trade and commerce (*raʾīs tudjdjārat*), the encouragement of commercial activity in particular and of the economy of the country in general (Greenfield, *Verfassung*, 143). In Tehran, the *malik al-tudjdjār* was consulted by the government on commercial and various other economic issues. He was asked by Nāṣir al-Dīn to form a council of the prominent big merchants of the capital which would hold regular meetings, in which the question of developing and encouraging trade and commerce, should be discussed, and the results of its deliberations communicated to the government (Iʿtimād al-Salṭana, *Taʾrīkh*, iii, 231. Cf. Houtum-Schindler, in *EB*[10], xxxi, 619).

The economic developments of the 1870s and 1880s were bound to bring to an end the co-operation which had existed between the government and the big merchants. While the central government found itself faced by growing fiscal difficulties, the big merchants became wealthier. Against this background, the government initiated new economic measures. The tobacco concession (1890) and the new customs administration and regulations (1898-1904) in particular aroused the opposition of the big merchants to the government. Big merchants holding the office of *malik al-tudjdjār* in several major towns played a central role in the protest movements which brought about the cancellation of the tobacco concession in 1892, and the granting of a constitution (*ḳānūn-i asāsī*) and the establishment of a national consultative assembly (*madjlis-i shūrā-yi millī*) in 1906 (see further Mihdī Malikzāda, *Taʾrīkh-i inḳilāb-i mashrūṭiyyāt-i Īrān*, Tehran 1328/1949, i, 128-30, 278-9; ii, 28, 168-72; Ibrāhīm Taymūrī, *Taḥrīm-i tanbākū yā awwalīn muḳāwamat-i manfī dar Īrān*, Tehran 1328/1949, 78-9, 112; Nāẓim al-Islām Kirmānī, *Taʾrīkh-i bīdārī-yi Īrānīyān*, Tehran 1332/1952, 12; Mīrzā ʿAlī Khān Amīn al-Dawla, *Khāṭirāt-i siyāsī-yi Mīrzā ʿAlī Khān Amīn al-Dawla*, ed. Ḥāfiẓ Farmānfarmāyān, Tehran 1341/1962, 155; Yaḥyā Dawlatābādī, *Taʾrīkh-i muʿāṣir yā ḥayāt-i Yaḥyā*, Tehran n.d., i, 108; A. K. S. Keddie, *Religion and rebellion in Iran, the tobacco protest of 1891-1892*, London 1966, 49-53, 85, 90-1; eadem, *Iranian politics 1900-1905: background to revolution*, in *Middle Eastern Studies*, v [1969], 7, 12, 155-6, 163, 236, 240, 243; G. G. Gilbar, *The big merchants (tujjār) and the Persian constitutional revolution of 1906*, in *Asian and African Studies*, [The Hebrew University, Jerusalem], xi [1976], 288-303; idem, *Persian agriculture in the late Qājār period, 1860-1906: some economic and social aspects*, in *ibid.*, xii [1978], 334-46).

With the fall of the Ḳādjārs and the adoption of modern forms of government and Western institutions, the office of *malik al-tudjdjār* lapsed, its functions being taken over by the Chambers of Commerce of the major towns and by several government departments.

MĀLIKĀNE, a technical term made up of Arabic *mālik* "owner" and the Persian suffix *-āne* which gives the meaning of "in the manner of, way of" to the word to which it is added. It is used to describe intangible property, i.e. fiscal revenues, whenever the enjoyment of them is connected with full ownership. The term's content has nevertheless changed over the centuries. The oldest attestation of it known to us appears in a grant of Ghiyāth al-Dīn Pīrshāh, ruler of Khwārazm, d. 627/1230 (see H. Horst, *Die Staatsverwaltung der Grosselğūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 142). Under the Saldjūḳs of Asia Minor and their subsequent successor states, including the Ottomans, the term *mālikāne* was applied to the tithe (i.e. the tax levied according to the religious law) or to a proportion of it ceded by the state either subject to various liabilities or freely to a

certain person, who could sell it, make it into a pious foundation or bequeath it to his descendants. It is thus contrasted with those fiscal revenues called *dīwānī* which were composed of customary rights. Under this form, the *mālikāne* system was able to maintain itself only in certain long-established pious foundations, since the Ottoman state would not tolerate any fiscal revenue slipping from its control.

In 1695, the *defterdār* [see DAFTARDĀR] of the time elaborated the bases of a new form of *mālikāne,* i.e. a grant of the enjoyment of revenues for life, with care to protect the properties of the state from the dilapidation allowed by uncaring lessees, heedless of the ultimate fate of properties granted to them. The fiscal revenues were, as in ordinary leases, put up for auction and sold to the highest bidder. This last paid over to the state the "price" of the lease called *muʿadjdjele* and contracted to hand over each year a fixed sum corresponding to the fiscal revenues taken on lease. In the case of a new sovereign coming to the throne, he paid additionally 25% of the cost of the lease, and in times of war, 10%. Given the fact that the holders of these leases for life came from the class of high officials and persons (such as civilian and military dignitaries and scholars) who usually lived in the capital, they in turn sub-let the properties they had leased. In 1715 a *firman* decreed the abolition of the system, but it continued in existence till *ca.* 1839.

MĀLIKIYYA, a juridical-religious group of orthodox Islam which formed itself into a school (*al-madhhab al-mālikī*) after the adoption of the doctrine of Imām Mālik b. Anas [*q.v.*] who died at Medina in 179/795.

In the 2nd/8th century, when the islamisation of law had been partially accomplished but different systems coexisted, the need for a uniform judicial code became imperative. The second ʿAbbāsid caliph, Abū Djaʿfar al-Manṣūr (d. 159/775), approached the Medinan jurist with a proposal to establish a judicial system which would unify the different methods then in force in the different Islamic countries. This project was in accordance with the spirit of ʿAbbāsid policy, and Mālik b. Anas was chosen because he represented Medina, where the principles of Islamic law had been determined, and because it is almost certain that, at the time that this proposal was put to him, his doctrine had already been diffused and circulated by his pupils in the Maghrib and in Spain.

1. DOCTRINE

The sources. The originality of the teaching of Mālik consists in the fact that he introduced in the *Kitāb al-Muwaṭṭaʾ* the recognition of *ʿamal,* i.e. the effective and unanimous practice of Medina, which he established as an organised judicial system. The *Muwaṭṭaʾ* is the earliest Islamic judicial work which has survived to the present day; a treatise of *fiḳh* based on *ḥadīth* which plays the rôle of judicial argument, it has two objects in view: religious worship (*ʿibādāt*) and general law (*muʿāmalāt*). In its final edition, the *Muwaṭṭaʾ* contains approximately a hundred *ḥadīths*, 222 *mursals*, 613 *mawḳūfs* [see ḤADĪTH] and 285 opinions of *Tābiʿūn.* All the individuals mentioned are Medinans or scholars who had frequented Mecca or Medina. The bulk of the traditions are traced back to ʿAbd Allāh b. ʿUmar. The success enjoyed by the *Muwaṭṭaʾ* is owed to the fact that it represented the moderate view then holding sway in Medina and that, without being a particularly original work, it bore witness to the judicial level attained by the consensus of opinion in Medina (for an analysis of the *Muwaṭṭaʾ,* see A. Békir, *Histoire de l'école mālikite.*) The *Muwaṭṭaʾ* is thus a code of legislation according to a description of law, statute and dogma as practised according to the consensus and the tradition (*sunna*) of Medina, augmented by personal remarks of Mālik. On the recensions of the *Muwaṭṭaʾ,* see MĀLIK B. ANAS, and al-Suyūṭī, *Tazyīn al-mamālik bi-manāḳib sayyidinā al-Imām Mālik,* where there is a list of authors who have passed on a *riwāya* of the work.

The other principal source for the study of the doctrine of Mālik is intitled *al-Mudawwana al-kubrā.* It is the work of the Ḳayrawānī Saḥnūn (160-240/776-854 [*q.v.*]), and is a collection of Mālikī *fiḳh* which contains the corrections and responses made to Saḥnūn by Ibn al-Ḳāsim al-ʿUtāḳī (d. 191/806), a disciple of Mālik, according to the opinions of Mālik himself, of his contemporaries and his masters in tradition including al-Zuhrī (d. 124/740), Nāfiʿ (d. 116/734) and Rabīʿat al-Raʾy. The *Mudawwana* was also called the *Mukhtaliṭa,* since it completed and improved upon, through the diversity of subjects considered, the *Asadiyya* of Ibn al-Furāt (d. 213/828), a work based on the teaching of Mālik and of the Ḥanafīs of ʿIrāḳ. The practical interest of the *Mudawwana* consists in the fact that it illustrates the connections between religion and trade and that it describes mercantile practices (documentation, bills of exchange and all kinds of commercial transactions). See G. H. Bousquet, *La Mudawwana. Index* (*avec la table générale des matières*), in *Arabica,* xvii/2 (1970), 113-50.

This work gave rise to a whole literature of commentaries of which the principal examples will be indicated here, and some of which have been translated. The first to be mentioned are the works of Ibn Abī Zayd al-Ḳayrawānī (d. 386/996): the *Ikhtiṣār al-Mudawwana* and the *Kitāb al-Nawādir wa 'l-ziyādāt ʿalā 'l-Mudawwana,* a summary of the precepts of the school, supplemented by a study of cases not foreseen by Saḥnūn. Ibn Abī Zayd al-Ḳayrāwānī is also the author of a famous *Risāla,* a précis of Mālikī law, translated by L. Bercher, Algiers 1952 (see H. R. Idris, *Note sur l'identification du dédicataire de la Risâla d'Ibn Abî Zaid al-Qairâwânî,* in *CT,* i [1953], 63-8). Another work which enjoyed great success in North Africa is the *Tahdhīb al-Mudawwana,* Tunis ms. Zaytūna, of Abū Saʿīd al-Bardhaʿī (d. 400/1009). In imitation of Saḥnūn, the Andalusian Ibn Ḥabīb (d. 238/845) composed *al-Wāḍiḥa* after a visit to Egypt as the guest of Ibn al-Ḳāsim. One of his pupils, al-ʿUtbī (d. 255/869), made an abridged version of it entitled *al-ʿUtbiyya.* The Mudawwana also inspired Ibn Ḥādjib (d. 646/1248) who restated the precepts of the Mālikī school in his *Mukhtaṣar fī 'l-furūʿ.* Khalīl b. Isḥāḳ (d. 776/1374 [*q.v.*]) is the author of a *Mukhtaṣar* of this work. It has been translated into French by Perron (*Précis de jurisprudence musulmane,* 2nd éd., Paris 1877); into Italian by Guidi and Santillana in 1919, and again into French by G. H. Bousquet (*Abrégé de la loi musulmane selon le rite de l'Imâm Mâlik,* Algiers-Paris 1956-63), to say nothing of partial translations.

This *Mukhtaṣar* of Khalīl, a basic text of Mālikī law, is in its turn barely usable without the aid of commentaries, of which the best known are:
—*al-Sharḥ ʿalā Mukhtaṣar Khalīl* of al-Zurḳānī (d. 1099/1687, published in Cairo in 1307 with a commentary by al-Bannānī (a version highly valued in the Orient);
—*al-Sharḥ al-ṣaghīr* of Dardīr (d. 1201/1786), Būlāḳ 1289, and, of the same author;
—*al-Sharḥ al-kabīr,* Būlāḳ 1295, with glosses by al-Dasūḳī;
—*Mukhtaṣar Khalīl* of al-Khirshī, with glosses by al-ʿAdawī, Būlāḳ 1316, vols, iv and v;
—*al-Djuzʾ al-awwāl min Kitāb Mawāhib al-Djalīl li-sharḥ Mukhtaṣar Sīdī Khalīl* of al-Mawwāḳ, vols. iii and iv; Abu ʾl-Walīd al-Bādjī (d. 474/1081), a celebrated polemicist who composed a *Mukhtaṣar fī masāʾil al-Mudawwana* is also the author of the *Muntaḳā sharḥ al-Muwaṭṭaʾ,* published in Cairo in 1312.

Transmission of the doctrine. According to Ibn Khaldūn (*Muḳaddima,* Cairo n.d.), until the 5th/11th century the Mālikī school was divided into three tendencies (*ṭuruḳ*): Kayrawānī, Andalusian and eastern, the last-named including the ʿIrāḳī, Egyptian and Alexandrian transmissions. The following are the lines of transmission from Mālik onwards:

Ḳayrawānī *sanad:* Ibn al-Ḳāsim (d. 191/806), Saḥnūn (d. 240/854), who also inherited from Asad b. al-Furāt (d. 213/828) and, by this indirect means, from the disciples of Abū Ḥanīfa. After Saḥnūn, there are the commentaries of Abū Zayd al-Ḳayrāwānī (d. 386/996), of al-Bardhaʿī (d. 400/1009), of Ibn Yūnus (d. 451/1059), of Ibn Muḥriz (d. 450/1058), of al-Tūnisī (d. 443/1051) and of al-Lakhmī (d. 478/1085). This line of transmission established the reputation of the *Mudawwana* and of its commentaries for the Maghrib.

Andalusian *sanad*: Yaḥyā b. Yaḥyā al-Laythī (d. 234/848), al-Aṣbagh (d. 224/838), Ibn al-Mādjishūn (d. 214/829), al-Muṭarrif (d. 220/835), Ibn al-Ḳāsim (d. 191/806) who transmitted to Ibn al-Ḥabīb (d. 238/845) and in his turn to al-ʿUtbī (d. 255/869). The Andalusian transmission for its part accords the greatest respect to the *ʿUtbiyya,* of which the best known commentary is the *Bayān* of Ibn Rushd (d. 520/1126 [*q.v.*]).

ʿIrāḳi *sanad*: Ḳāḍī Ismāʿīl (d. 246/860), Ibn Khuwayzmindād, Ibn al-Labbān and al-Abharī (d. 375/985) who transmitted to ʿAbd al-Wahhāb (d. 421/1030). The last-named, who settled in Egypt, was to influence directly and profoundly the Egyptian *sanad.*

Egyptian *sanad*: Ibn ʿAbd al-Hakam (d. 214/829), Ibn al-Ḳāsim (d. 191/806) and Ashhab (d. 204/819); al-Ḥārith b. Miskīn (d. 250/864) inherited from both these last two. The following may be regarded as the most significant links in this chain of transmission: Ibn al-Rashīḳ (d. 632/1234) and Ibn al-Ḥādjib (d. 646/1248), the latter inheriting via the Alexandrian *sanad* from Ibn ʿInān (d. 541/1146), Ibn ʿAṭāʾ Allāh (d. 612/1215) and Ibn ʿAwf (d. 581/1185), and transmitting to al-Ḳarāfī (d. 684/1285). The connection between eastern and Andalusian transmission was established in the 6th/12th century with Abū Bakr al-Ṭurṭushī (d. 520/1126), who travelled to Egypt and secured employment as a teacher in Alexandria (see V. Lagardère, *L'unificateur du malikisme oriental et occidental à Alexandrie: Abū Bakr al-Ṭurṭushī,* in *ROMM,* i [1981]). This connection with the Egyptian school, already much influence by the ʿIrāḳi transmission in the person of the *ḳāḍī* ʿAbd al-Wahhāb, was to have as its consequence the abandonment, in the 7th/13th century, of the *Mudawwana* and of the *ʿUtbiyya* in favour of the *Mukhtaṣar fī ʾl-furūʿ* of Ibn al-Ḥādjib (d. 646/1248). These two basic works of Mālikī doctrine, which had led to the production of a significant corpus of judicial writing, continued to be influential for some time after the disappearance of Cordova and Ḳayrawān as centres of learning, but lost their effective role at the end of the 8th/14th century.

Principles and judicial theory. Like other schools of Sunnī Islam, Mālikism bases its doctrine on the Ḳurʾān, the *Sunna* and *idjmāʿ* [*q.v.*]; nevertheless, divergencies of greater or lesser significance exist in regard to the other rites. While there is unanimity surrounding the Holy Book, a primary difference appears concerning the *Sunna.* The tradition of the Prophet Muḥammad and that of the Companions constitute the *Sunna* according to Mālik, who excludes from it the tradition of ʿAlī, which other schools incorporate (in fact, in refusing to choose between ʿAlī and ʿUthmān, Mālik would have recognised the legitimacy of their caliphate, but, according to another trend of opinion, he would have agreed as to the superiority of ʿUthmān, which would seem more likely in view of the fact that his school also flourished at Baṣra in an ʿUthmānī milieu).

To *idjmāʿ,* universal consensus of the Muslims, there is added the Medinan *idjmāʿ* which proceeds from the *ʿamal,* the effective practice of Medina. It can even result that this consensus prevails over *ḥadīth,* Medinan opinion being considered to testify to the acts of the Prophet. For Mālik, *ḥadīth* is thus not the most important source, and personal judgment, *raʾy,* is to be used in parallel, when *idjmāʿ* cannot provide the answer to a question and only if this procedure does not injure the public good (*maṣlaḥa*). Mālik is sometimes reproached for making too much use of this method. *Ḳiyās* [*q.v.*], reasoning by analogy, which had many opponents among the Sunnīs, is applied by the Mālikīs in cases of *idjmāʿ al-umma.*

Mālikism and schismatics. It was the intolerance of Mālik towards schismatics which made his school so successful. The hostility of his teaching towards the Ḳadariyya [*q.v.*] and the Khāridjīs is based on the fact that they are considered to be disturbers of public order and agents of corruption (*fasād*). Khāridjīs must make an act of repentance (*tawba*); if they refuse, they are condemned to capital punishment. For the *zindīḳ* [*q.v.*], even repentance is not allowed; he is immediately condemned to death for the crime of apostasy. The temporal authorities, notably the ʿAbbāsid caliphate, often had recourse to a Mālikī *ḳāḍī* to judge heretics, public agitators or those considered as such. Thus it was the Mālikī Grand *Ḳāḍī* of Baghdād, Abu ʿUmar Ibn Yūsuf, who tried and condemned to death al-Ḥallādj [*q.v.*] in 319/922. Two Shīʿī extremists of the Middle Ages are known to have perished in similar circumstances: Ḥasan b. Muḥammad al-Sakākīnī, executed at Damascus in 744/1342, and ʿAlī b. al-Ḥasan al-Ḥalabī, executed in 755/1354.

Mālikism and mysticism. There is *a priori* no place for mysticism in the school of Mālik. A *ḥadīth* of the Prophet forbids monasticism, which is even regarded as *bidʿa.* Nevertheless, under the impulse of piety an ascetic movement was established, and until the 2nd/8th century it attracted little attention. But, stimulated by the intense intellectual activity which developed in the Orient from the end of this century, mysticism spread widely and attained proportions which were disturbing for the prevailing orthodoxy. In the Maghrib, in spite of *fatwās* promulgated to condemn and ban the works of al-Ghazālī (d. 505/1111), Ṣūfism gained ground with the Almoravids and even

flourished under the Almohads. In al-Andalus, where the milieu was particularly intolerant, the mystical movement enjoyed a brief period of ascendancy with Ibn Masarra (d. 319/931) [*q.v.*] and his disciples (see V. Lagardère, *La Ṭarīqa et la révolte des Murīdūn en 539H/1144 en Andalus*, in *ROMM*, i [1983]).

The following may be named among the Mālikī mystics: Abu 'l-Ḳāsim al-Shiblī (d. Baghdād, 334/945), the Ifrīḳiyan Abū ʿUthmān Ibn Sallāmī al-Maghribī (d. Nīsābūr, 373/983). After al-Ghazālī, mysticism triumphed with the Ḥanbalī ʿAbd al-Ḳādir al-Djīlī (d. 561/1166), whose school spread widely both in the East and the West. Abū Madyān al-Andalusī diffused his doctrine in the Maghrib, and one of his pupils was ʿAbd al-Salām b. Mashīsh (d. 624/1227), the teacher of al-Shādhilī (d. 656/1258), who was educated in Ifrīḳiya and in Egypt and had numerous disciples in Syria and the Ḥidjāz. From this time onwards, there were many Ṣūfis among the Mālikīs. In Syria, around Ibn al-ʿArabī (d. 638/1240), the greatest mystic of Muslim Spain, a complete organisation was established and *zāwiyas* were built for his followers. Among known Mālikī Ṣūfis, also worthy of mention are Muhammad b. Aḥmad al-Bisāṭī (d. 842/1438), Mālikī *ḳāḍī* and *shaykh* of the Ṣūfīs of Cairo, and ʿAlī b. Muḥammad al-Ḳurashī (d. Alexandria, 808/1405). Another who should be mentioned is a famous Egyptian Ṣūfi who introduced gnosis (*maʿrifa*) into his doctrine, Dhu 'l-Nun al-Miṣrī; a Mālikī, he is the author of a version of the *Muwaṭṭaʾ*.

Works of Ṭabaḳāt, *other sources for the knowledge of Mālikism and of its disciples.* Although the first text of Mālikī *ṭabaḳāt* is owed to the pen of Ibn Abī Dalīm (d. 351/962), under the title of *Kitāb al-Ṭabaḳāt fī man yarwī ʿan Mālik wa-atbāʿihim min ahl al-amṣār*, it is not this that is regarded by posterity as a fundamental work, both of *ṭabaḳāt* and of history of the doctrine, but the second of the genre in chronological order, that of the *ḳāḍī* ʿIyāḍ (d. 544/1149 [*q.v.*]), which bore the title *Tartīb al-madārik wa-taḳrīb al-masālik*. This source is particularly important for the reason that, in addition to the biographies of Eastern and Western Mālikīs, it contains a lengthy study of the life of Mālik, his work, the eminence of his doctrine and the causes of its expansion before dealing with the expansion itself. The next text, which contains the biographies of Mālikīs who lived after the time of ʿIyāḍ until the end of the 8th/14th century, is the work of the Andalusian Ibn Farḥūn (d. 799/1396) and is intitled *al-Dībādj al-mudhhab fī maʿrifat aʿyān ʿulamāʾ al-madhhab*.

The Shāfiʿi al-Sakhāwī (d. 780/1378) is the author of *Ṭabaḳāt mālikiyya* which is composed on the basis of some twenty sources mentioned in the conclusion. Two further works of *ṭabaḳāt* directly inspired by the *Dībādj* of Ibn Farḥūn should be noted: *Nayl al-ibtihādj bi-taṭrīz al-Dībādj* of Aḥmad Bābā (d. 1032/1622 [*q.v.*]), printed in the margins of the *Dībādj*, and the *Tawshīḥ al-Dībādj* of al-Ḳarāfī (d. 1008/1600). The last text of Mālikī *ṭabaḳāt* is that of the Tunisian Muḥammad Makhlūf who lived at the beginning of the 20th century; it is intitled *Shadjarat al-nūr al-zākiyya fī ṭabaḳāt al-Mālikiyya* and was published in Cairo in 1931. This is the most complete source, since it relates the biographies of the Prophet, of the Companions, of the *tābiʿūn*, then those of the eminent *fuḳahāʾ* of the Ḥidjāz, of ʿIrāḳ, of Egypt, of the Maghrib and of Andalusia, concluding with those of the masters who instructed the author in 1922.

2. The expansion of Mālikism

The Orient. In general, in the East as in the West, it was the disciples of Mālik who took upon themselves the task of spreading his doctrine in his lifetime. In the *Tartīb al-madārik*, the *ḳāḍī* ʿIyāḍ informs us that it was in Egypt, at Alexandria, that the second centre of Mālikism after Medina was established, through the efforts of ʿUthmān b. ʿAbd al-Ḥakam al-Djudhāmī (d. 163/779), Saʿīd b. ʿAbd Allāh al-Maʿāfirī who introduced Mālikism to Alexandria, and Ibn al-Ḳāsim al-ʿUtāḳī who lived for a long time at Medina as an intimate of Mālik and was the intermediary through whom the doctrine gained sway in the Maghrib and Muslim Spain. On his death in 191/806, ʿAbd Allāh b. Wahb (d. 197/812) succeeded him as leader of the Mālikīs of Egypt. These eminent *fuḳahāʾ* were successful in definitively implanting Mālikism in this country in spite of the difficulties caused by living in proximity with Shāfiʿism which was ultimately to supplant it; today, this school is dominant in Egypt, but Mālikism remains active in the Ṣaʿīd.

In his *Rafʿ al-iṣr ʿan ḳuḍāt Miṣr*, Cairo 1957, Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1449) provides a list of the Mālikī *ḳāḍīs* of Egypt from the origin of the post until the middle of the 9th/15th century. Al-Ḳalḳashandī, in the *Ṣubḥ al-aʿshā*, xii, explains how the Mālikīs were addressed under the Mamlūks. For the modern period, see also G. Delanoue, *Moralistes et politiques musulmans dans l'Egypte du XIX siècle (1798-1882)*, Cairo 1982.

In ʿIrāḳ, it was ʿAbd al-Raḥmān al-Kaʿnabī (d. 221/835), of Medinan origin, who spread the doctrine of Mālik in the region of Baṣra. One of the most eminent figures of the ʿIrāḳī school is the *ḳāḍī* Ismāʿīl b. Isḥāḳ who, by his judical and political activities, represents the Mālikī authority *par excellence* of his period. Other figures, no less renowned, including Abū Bakr al-Bāḳillānī or al-Abharī, continued the enterprise and spread the doctrine in Khurāsān and Syria. But the crises provoked by the Shāfiʿī movement at the beginning of the 5th/11th century led to the eviction of Mālikism from ʿIrāḳ. In Khurāsān, the doctrine did not long resist the competition of the new ideologies, and in Syria, after promising beginnings, Mālikism could not succeed in supplanting the doctrine of al-Awzāʿī and did not survive in that country.

In the Yemen, it stood firm for more than a century, but was ultimately ousted by Shāfiʿism.

At Medina, after the demise of the first disciples of the *Imām* Mālik, all trace of the school is lost. Nevertheless, some Mālikī scholars are attested before the time of the arrival of the Fāṭimids, notably ʿAbd al-ʿAzīz b. Abī Ḥāzim, Muḥammad b. Dīnār al-Djuhaynī (d. 182/798) and ʿAbd al-Malik al-Mādjishūn (d. 213/828). It was not until the triumph of Sunnism in the 8th/14th century that Mālikism returned to Medina (see A. Békir, *op. cit.*).

In the present day, the Shāfiʿī rite holds sway in the Ḥidjāz, but Mālikī nuclei exist in the cities. In the contemporary United Arab Emirates, there exists a small Mālikī community represented by a section of the Ḥinawī clan.

The Muslim West. North Africa. It was Asad Ibn al-Furāt who introduced Mālikism into North Africa and Saḥnūn who established it as a formal sect. A Mālikism of extreme severity then dominated the Maghrib, in particular Ifrīḳiya under the Aghlabid dynasty, and this continued until the arrival of the Fāṭimids (298/910), which marked the triumph of Shīʿism. A vigorous resistance was directed against the latter by the Mālikī scholars of Ḳayrawān, but it was not until 440/1048 that Mālikism was definitively adopted in the Maghrib following the expulsion of the Fāṭimids from Ifrīḳiya.

However, the intransigent doctrine which became the norm in the Maghrib had the effect of suppressing intellectual effort and religious feeling. In fact, the study of the Ḳur'ān and of *ḥadīth*, as well as *idjtihād* (personal effort at interpretation) were abandoned in favour of the manuals of applied *fiḳh* (*furūʿ*). The Almoravid sovereigns gave their support to these methods and encouraged the *fuḳahā'* to accord supreme importance to the study of manuals of *furūʿ*. This abandonment of recourse to the Ḳur'ān and the *Sunna* is denounced by al-Ghazālī in the *Iḥyā' ʿulūm al-dīn*, which shows that Mālikism as practised by its disciples no longer had any connection with the religion as it had developed. He also condemns the important role played by the *fuḳahā'* in political life. Ibn Tūmart [*q.v.*] went even further than al-Ghazālī. Inspired by his principles, he declared war on the Almoravids, appointed himself judge of morals, appropriated the title of *Mahdī* and, by violent means, restored true orthodoxy. He banned the works of *furūʿ*, and established as the basis of his doctrine elements of the purest orthodoxy, sc. Ḳur'ān, *Sunna* and consensus of the *umma*. The doctrine of Ibn Tūmart was to be the impulse for an important mystical movement throughout the whole of the Maghrib, and in spite of the collapse of the Almohad empire, and thus of its political support, it was to imprint upon victorious Mālikism an indelible mark of austerity (segregation of the sexes, fasting, dietary prohibitions, among other elements characteristic of Maghribi austerity).

It is, on the one hand, with the Ḥafṣid civilisation in Ifrīḳiya, under the influence of the judicial schools of Tunis, Bougie and Ḳayrawān, and of scholars of the calibre of Ibn ʿArafa (d. 804/1401), and on the other, with the Marīnid civilisation in the Western Maghrib, and the famous *madrasas* of Fās and Tlemcen, that the renaissance of Mālikism in North Africa is observed. If, today, Maghribī Islam seems particularly rigorous, this is due to Mālikism. In fact, practice and doctrine have remained totally unchanged since the middle of the 7th/13th century, immediately after the fall of the Almohads. The success of Mālikism in North Africa may be explained by reference to the theory of Ibn Khaldūn (d. 808/1406) according to whom Bedouin culture accounts for the predominance of this school in the Muslim West. Effectively, Mālikism is loyal to the Tradition and hostile to rational explanations; it is perfectly suited to the Berber mentality of the Maghribīs who refuse to accept any idea unless it can be traced back to a tradition. It is for this reason that Maghribī Mālikism seems rigid in comparison to that of the East, which does not reject effort at interpretation (*idjtihād*). In contemporary North Africa, Mālikism is predominant in Morocco, Algeria, Tunisia and Libya; it coexists with some Ibāḍī and Ḥanafī centres in the three last-named countries. It is exclusive in Mauritania where it has been the object, over the centuries, of an interesting adaptation (see Ould Bah, *Littérature juridique*).

Muslim Spain. It was at the end of the 2nd/8th century that Mālikism was introduced into Muslim Spain where it superseded the Syrian doctrine of al-Awzāʿī. Those who brought to the country the principles of the *Imām* of Medina were Andalusian scholars, initiated by Mālik himself or by his pupils. The best known among them are Ziyād b. ʿAbd al-Ḥakam, Yaḥyā b. Yaḥyā al-Laythī, Yaḥyā b. Muḍar and ʿĪsā b. Dīnār. This class of scholars was the nucleus of a clerical aristocracy which, throughout the duration of the Umayyad dynasty, exercised real power in the state and made Mālikism the sole official rite of al-Andalus. This state of affairs, which lasted for nearly two centuries, coincided with the period of the transmitters of Mālik and of the Medinan tradition, of the commentaries on the *Muwaṭṭa'* and compilations of *responsa*. Andalusian Mālikism was characterised then by an intransigent austerity, exclusively attached to the study of manuals of jurisprudence (*furūʿ*), forsaking, in the manner of its Maghribī neighbour, the study of *ḥadīths* and proscribing all effort at personal reflection (*idjtihād*).

The fall of the Umayyad caliphate, then the emergence of regional principalities (*mulūk al-ṭawā'if*) in the 5th/11th century, and later, the domination of the Almohads, put an end to the supremacy of jurisprudence. Political decentralisation, stimulated, at an early stage, a socio-cultural renewal with individuals including Ibn ʿAbd al-Barr (d. 463/1070), al-Bādjī (d. 474/1081) and Ibn Ḥazm (d. 456/1063); with the last-named, a Ẓāhirī jurist who opposed the Mālikī doctrine, *ḥadīth*, the *uṣūl al-fiḳh* and polemics of judicial methodology (*djadal*) became the order of the day (see in this context, the edition of *al-Minhādj fī tartīb al-ḥidjadj* of Bādjī, edited by A. M. Turki, Paris 1978, and Turki, *Polémique entre Ibn Ḥazm et Bāǧī sur les principes de la loi musulmane*, Algiers 1976).

This opening towards the exterior, towards other systems of thought, is given formal expression in the work of Ibn Rushd (d. 595/1198), especially with the *Bidāyat al-mudjtahid wa-nihāyat al-muḳtaṣid* (ed. Cairo 1329). Nevertheless, the class of the *fuḳahā'* retained a dominant position until the last days of the Andalusian principalities and in particular that of Granada, by means of individuals like Ibn Lubb and Muḥammad al-Saraḳusṭī in the 8th/14th and 9th/15th centuries, and through them, Mālikism, as the compilations of biographies testify.

Africa, Bilād al-Sūdān. Islam was propagated at an early stage in the Sudan, among the Nūba of the Nile Valley. But it was not until the 10th/16th century that it was introduced to Dār Fūr by Arab tribes. The progress of Islam became most definitive towards the end of the 13th/19th century under the influence of the *Mahdī* Muḥammad Aḥmad. At the present time, the majority of the Muslims of the Sudan are of the Mālikī rite and use the *Mukhtaṣar* of Khalīl. Islam spread to Kanem in the 5th/11th century and was firmly established around Lake Chad from the 9th/15th century onwards.

In West Africa, Mālikism was introduced by the Almoravid conquest of the Takrūr (Fūta Tōro) among tribes which were to a greater or lesser extent vassals of Ghāna. At the end of the 5th/11th century, Islamisation gained sway in the Gold Coast. Timbuktu became the Islamic metropolis of the western Sudan in the 8th/14th century, and its influence lasted until the conquest of Songhay by Morocco in 1000/1591. It was especially among political functionaries and senior officials that the Muslim faith was spread. It was not until the 12th/18th and 13th/19th centuries that theocratic monarchies were established in Fūta Djallon and Fūta Tōro, following the victories of the Toucouleur Muslims over the Peuls who were forcibly converted. The Toucouleur Usmānu Fōdjo preached *djihād* and founded the empire of Sokoto in 1207/1802. Muslim law was introduced to Masīna by the Peul Sēku Ḥamadu Bari in 1225/1810 and, in 1236/1820, the Toucouleur al-Ḥādjdj ʿUmar had himself appointed *khalīfa tidjānī* for the Sudan. A vast empire was established in which the Muslim faith was the state religion. At the present time, there are Mālikī Muslims in the Black African states of Senegal, Mali, Niger, Togo, Chad and Nigeria.

(N. Cottart)

MALINDI, a town on the Kenya coast in lat 4°N. It is first mentioned in literature by al-Idrīsi (*ca.* 1150); the Ma-in mentioned by Ou-yang Hsiu, *Hsin T'ang-shu, ca.* 1060, is more likely to have been situated in Somalia. Al-Idrīsi says that it was a town of hunters and fishermen, whose inhabitants owned and exploited iron mines. Iron was their greatest source of profit. The iron, however, as A. O. Thompson has shown, was not mined, but recoverable from seashore deposits. Al-Idrīsi also mentions Malindi as a centre of witchcraft, a view also confirmed by Abu 'l-Fidāʾ (1273-1331), who adds that it was the capital of the King of the Zandj; he is likewise aware of the exploitation of iron. Malindi was visited by the Chinese admiral Cheng Hô in the course of his fifth diplomatic and commercial voyage in the Indian Ocean. Otherwise, little is known of the town in the Middle Ages.

It was from Malindi that Vasco da Gama set off for India in 1498 under the guidance of the pilot Aḥmad b. Mādjid al-Nadjdjī [see ibn mādjid]. Da Gama had been cold-shouldered at Mombasa, but was well-received at Malindi, where the ruler had an ancient enmity against Mombasa. The town of Malindi, which in Swahili means "deep-water anchorages", lay in a bay and extended along the shore. A more detailed description is given by Duarte Barbosa in *ca.* 1517-18. The place was well laid out, with many storeyed houses with flat roofs. The people traded gold, ivory and wax, importing rice, millet and wheat from Cambay. It was visited briefly by St. Francis Xavier in 1542, when he had a conversation with a *ḳāḍī*, who would seem to have been a Shīʿī. He reported that the practice of Islam had greatly declined in recent years, and that, out of seventeen mosques, only three were in use. A later missionary, Fr. João dos Santos O.P., reported in 1609 that the whole coast from Mozambique to Lamu was Shīʿī.

The royal family of Malindi was of Shīrāzī descent, and possibly related to that of Kilwa [*q.v.*]. When the royal line of Mombasa failed in *ca.* 1590, the Portuguese donated Mombasa to the Malindi dynasty, which then reigned from Mombasa until 1632 [see mombasa]. In the 18th century the Malindi traders at Kilwa had as their chief an officer known as the Malindāni, who had virtually sovereign powers over them which even the Sultan of Kilwa could not overrule. After the move of the royal house to Mombasa, the town lost its importance. Captain Owen found it deserted in 1827. The modern seaside resort contains few Islamic antiquities: two ruined mosques, a cemetery, and a pillar tomb which is possibly near the site of the former royal palace.

Ten miles from Malindi to the south, and two miles inland, is the very remarkable Islamic site of Gedi, which was occupied from the 11th until the 17th century, when it was abandoned to nature. The outer wall encloses an area of about 45 acres, and may have contained a population of some 10,000. Within the inner wall are a palace, a Friday mosque and several other small mosques, numerous houses and what may have been a commercial centre. The place is not mentioned either in Arabic or Portuguese literature. Its proximity to Malindi, and the fact that it lies some two miles from the sea, suggests that, unlike other eastern African coastal sites, which were primarily trading centres, Gedi was, as it were, a country residence of the *sulṭāns* of Malindi, around which a small town had grown up. Three architectural features of the houses are of especial interest: the houses are divided into two distinct compartments, presumably for a wife each; of these compartments one has a store especially designed for cowrie shells, the local currency; and the palace and houses have elaborately constructed water conduits, leading to internal ablutions and latrines.

(G. S. P. Freeman-Grenville)

MĀLIYYE. In the Ottoman Empire and successor states. In the 19th and 20th centuries, this term has been used in Arabic and Turkish to refer to financial affairs and financial administration. In the Ottoman Empire, and in various of its successor states, the term has also acquired a more specific reference to the Ministry of Finance (*Māliyye Neẓāreti* under the empire; *Māliyye Wekāleti* or *bakanlığı* under the Turkish Republic; *Wizārat al-Māliyya* in the Arab states). The history of financial institutions in the Ottoman Empire and its successor states still awaits thorough research. In part, this fact is attributable to problems of the original sources, which remain largely inaccessible even for the empire (e.g., Çetin, 28-35, 42, 83, 128, 133-4, 135, 158-60; Sertoğlu, 62-7, 72,

74, 78-9, 85). In part, the challenge of studying the history of the financial institutions, or financial problems more generally, derives from the fact that the economic and fiscal problems of the Middle East cannot be fully understood as unique, local occurrences. Increasingly, as time passes, they have been manifestations of world-encompassing patterns of economic relationships that only become clear when seen in a comparative perspective, preferably one of global scope.

While it is essential to acknowledge this fact, a brief article can only be selective in coverage. Since much of the scholarship on economic and financial topics has concentrated on problems of particular interest to people outside the Islamic world, this discussion will concentrate on *māliyye* in the sense of institutions for financial administration. Even within that limit, it will focus on the Ministry of Finance of the Ottoman Empire and the Republic of Turkey. A concluding section will offer comments aimed at setting Ottoman and republican Turkish developments in a comparative perspective that encompasses other Islamic states.

1. The late Ottoman Empire. During the last quarter of the 18th century, the Ottoman financial agencies were still concentrated in a large building situated between Ṭop Ḳapî Palace and the Sublime Porte and referred to by terms such as *Bāb-î Defterī*. These agencies were presided over by three officials known respectively as the *defterdārs* [*q.v.*] of the first, second, and third "divisions" (*defterdār-î s̲h̲iḳḳ-î ewwel, t̲h̲ānī, t̲h̲ālit̲h̲*). In the 18th century, the first *defterdār* functioned as the real head of the financial departments, and the other two as assistants to him. Different sources from the period show the *Bāb-î Defterī* as including a slightly varying list of bureaux, numbering close to 30. In addition to records on the revenues and disbursements of the empire, these bureaux kept the muster rolls and pay records of various categories of military personnel and palace functionaries, as well as the records on the provisioning of the capital city and major fortresses. Other responsibilities of the offices of the *Bāb-î Defterī* included processing the papers for appointments of Muslim religious functionaries, maintaining records on relations between the imperial government and the non-Muslim religious authorities of the empire, and disposing of the estates (*muk̲h̲allefāt*) of important officials, when these estates reverted to the sultan by death or expropriation. As was characteristic of Ottoman government agencies of the period, these responsibilities were parcelled out among the various bureaux in a way that reflected the effects of accretion over time, more than any effort at systematisation. At the head of each bureaux stood an official holding the rank of the scribal élite (*k̲h̲ʷādjegān*). The potential for gradual change among the financial agencies, even before the beginning of serious efforts at innovative reform, was illustrated by the introduction, at the beginning of the reign of Selīm III, of a type of internal debt securities (*eshām*) and the creation of a new bureau to maintain the records on them (*Eshām Muḳāṭaʿasî Ḳalemi*). According to a source of *ca.* 1770-90 (Top Kapu Sarayı Arşivi D3208), the number of officals employed in the offices discussed here was about 650. This fact made the *Bāb-î Defterī* the largest, though not the most influential, of the scribal agencies.

Eighteenth-century Ottoman financial practice displayed several traits of particular significance for later periods. One was the custom of assigning specific revenues to specific expenses and limiting the extent to which transfers could be made. This practice goes back to the beginnings of Islamic fiscal practice and is still found in many parts of the world, but is in contrast to the preferred modern practice, at least in the West, of pooling revenues in a unified budget (Heidborn, ii, 12-14). A second characteristic was particularly prominent among the Ottomans in the era of imperial decline: revenue collection by means of tax farms, either on an annual basis (*iltizām*) or for life (*mālikāne* [*q.v.*]; Issawi, *Turkey*, 343-7). A third practice, which helps to explain the reliance on tax farming, was that some of the most important revenues continued to be collected in kind.

The chief business of the offices of the *Bāb-î Defterī* was to keep records of transactions organised on these bases. In furtherance of this, the staff included, in addition to the bureaux discussed above, an auctioneer (*mīrī dellāl bas̲h̲îsî*) to conduct auctions of tax farms, an *ʿālim* appointed with the title *mīrī kātibi* to hear cases arising between the financial department and revenue farmers or other individuals; and staffs of quasi-police officers (*bas̲h̲ bāḳī ḳulî, k̲h̲arādj̲ bas̲h̲ bāḳī ḳulî*) whose responsibility was to collect overdue revenues (d'Ohsson, iii, 375-9; Hammer, *Staats.*, ii, 145-69; Uzunçarşılı, 319-73).

In the late 18th century, the treasury was still located in Ṭop Ḳapî Palace. In fact, there were two treasuries. One was known as the outer treasury (*k̲h̲azīne-yi bīrūn, tas̲h̲ra k̲h̲azīnesi*) or state treasury (*k̲h̲azīne-yi ʿāmire*). The other was known as the inner treasury (*k̲h̲azīne-yi enderūn, ič k̲h̲azīnesi*). The latter was supposed to be a reserve treasury, filled at least in part out of the surplus of the former and bound to aid the former in event of shortage. In addition, there were a number of so-called *k̲h̲azīne*s, including a "privy purse" (*dj̲eyb-i hümāyūn*) at the palace and a number of others located in specific government agencies [see K̲H̲AZĪNE]. These were little more than special funds or cashiers' offices for specific needs or departments (Deny, 119-20).

Substantial efforts at reform of Ottoman financial institutions began under Selīm III (1789-1807 [*q.v.*]) in conjunction with his programme of military reform. To finance his new military force, he created a "new receipts treasury" (*īrād-î dj̲edīd k̲h̲azīnesi*), under the direction of the former *defterdār* of the "second division" (*s̲h̲iḳḳ-i t̲h̲ānī*), and assigned a number of revenues to him. The new treasury survived until the end of Selīm's reign, when, like other reforms of his "new order" (*niẓām-î dj̲edīd* [*q.v.*]), it was eliminated. Those of its revenue sources that were still productive were reassigned to the "treasury" of the Mint (*ḍarbk̲h̲āne-i ʿāmire k̲h̲azīnesi*), which was a branch of the inner or private treasury (Muṣṭafā Nūrī, iv, 113-4; Pakalın, *OTD*, ii, 79-80; Shaw, *Old and new*, 128-34). Selīm's reforms also included some efforts to limit fiscal exactions and to reorganise the state treasury (*ibid.*, 170, 174).

Under Maḥmūd II (1808-39 [*q.v.*]), financial reform resumed in the 1820s, at first, it appears, as a concomitant of efforts in other fields. For example, Maḥmūd assigned a number of Anatolian *sandj̲aḳs* to a kind of collection agents (*mütesellim*), rather than the normal type of provincial administrators (*wālī, mutaṣarrif*). Such assignment of *mütesellims* was not new, but this time the revenues that would otherwise have gone to the *wālī* or *mutaṣarrif* were diverted to Istanbul [see K̲H̲AZĪNE, IV, 1185]. Another of Maḥmūd's policies affected the *tîmar* [*q.v.*] system and the provincial cavalry (*sipāhīs* [*q.v.*]) who had traditionally benefited from it. In 1241/1825-6, Maḥmūd began re-assigning *tîmars* and *sipāhīs* to other types of military forces (Dj̲ewdet, *Taʾrīk̲h̲* xii, 143-4). In 1831,

he attempted to abolish what remained of the *tīmar*-system and to carry out a land survey and census (Lewis, 90-2).

While the exact course of events is still not entirely clear, Maḥmūd's reforms had clearly extended by then into a direct reorganisation of financial offices. With the abolition of the Janissaries in 1826, the one of the offices of the *Bāb-ī Defterī* that had been responsible for maintaining records of that corps, that of the *yeñi-čeri kātibi*, went through a series of changes of name and function, emerging as a "military supervisorship" (*ʿaskerī neẓāreti*; Luṭfī, i, 132, 143; Pakalın, *Maliye*, iii, 22-3). By 1831, further change had produced at least two financial "supervisorships", a *maṣārīfāt neẓāreti*, responsible for military expenditures, and a *muḳāṭaʿāt neẓāreti*, responsible for other aspects of government finance. This nomenclature is somewhat confusing, since presumably the revenues assigned to both agencies were farmed out, although the term *muḳāṭaʿa* might be taken to indicate that this was true only of the second (Heidborn, ii, 37; Pakalın, *Maliye*, i, 10; idem, *OTD*, ii, 578). Over the next several years, there were a number of further reorganisations, a persistent feature, at least until 1838, being maintenance of one agency for military finance and another for government finance more generally (Hammer, *Histoire*, xvii, 182; Luṭfī, iv, 111). In 1250/1834-5, for example, we find a state treasury (*khazīne-yi ʿāmire*) and a financial agency for the army, referred to as the *manṣūre defterdārlighi* (Heidborn, ii, 37; Pakalın, *OTD*, ii, 406-7). In 1251/1835-6, the state treasury (*khazīne-yi ʿāmire*) was combined with that of the mint (*ḍarb-khāne*), the new agency being placed under the headship of a *ḍarb-khāne defterdārī* (Luṭfī, v, 17). Then on 3 Dhu 'l-Ḥidjdja 1253/28 February 1838, the *manṣūre defterdārlighi* was added to the organisation, the mint was again separated out, and the result became known as the Ministry of Financial Affairs (*Umūr-ī Māliyye Neẓāreti*).

The second half of the 1830s was when Maḥmūd organised the larger departments of the Ottoman government into European-style ministries, for which he adopted the generic term *neẓāret*. From that point onwards, that term continued, as in the past, to refer both to small-scale agencies, where it is more appropriately translated as "supervisorship", and to the new ministries. The financial agency created in 1838 was clearly of the latter type (Luṭfī, v, 104-5; Pakalın, *Maliye*, i, 25-6).

Following the death of Maḥmūd II, the development of the Ottoman system of financial administration reflected both the goals of reformers like Muṣṭafā Reshīd [*q.v.*] and the intensity of the political struggle that surrounded them. At the death of Maḥmūd, Khosrew Pasha [*q.v.*] seized the grand vizierate and set to work undoing many of the reforms of the late sultan and his civilian bureaucratic advisers, who were Khosrew's enemies. Among other things, Khosrew abolished the Ministry of Financial Affairs (Djumādā 'l-Ūlā 1255/July-August 1839), replacing it with a dual system of a state treasury (*khazīne-yi ʿāmire*) and a *defterdārlīk* for farmed revenues (*muḳāṭaʿāt*; Pakalın, *Maliye*, iii, 96). When Muṣṭafā Reshīd and his friends managed to topple Khosrew in 1840, they also launched an ambitious attempt to replace tax-farming with direct collection of revenues, at least in selected localities. About the same time, it appears that they converted the *defterdārlīk* for farmed revenues into a Ministry of Finance (*Māliyye Neẓāreti*) responsible for supervision of the system of direct collection, relegating responsibility for revenues that continued to be administered in the "old way" to the state treasury (*khazīne-yi ʿāmire*; Luṭfī, vi, 68-9, 106). At the beginning of 1257/1841, the treasury was again combined with the ministry to form a single Ministry of Financial Affairs (*Umūr-ī Māliyye Neẓāreti*; Pakalın, *Maliye*, i, 26). Muṣṭafā Reshīd and his friends did not consolidate their hold on high office until *ca.* 1845; however, the history of the Ministry of Finance was continuous from 1841 onwards. By the early 1840s, the bureaux formerly attached to the *Bāb-ī Defterī* had also undergone considerable modification; and the ministry had acquired a number of new functionaries and agencies. The resulting organisation remained essentially unchanged from that point until 1297/1880 (Luṭfī, v, 105, 116; vi, 125-6; Pakalın, *Maliye*, i, 26-7; iii, 29-31, 34).

Had Muṣṭafā Reshīd and his colleagues succeeded in realising the policy goals that lay behind these changes of organisation, the results might have done a lot to provide the *Tanẓīmāt* [*q.v.*] reforms with the sound economic foundation that they never acquired. What the reformers intended was a fundamental reorganisation of the system of taxation: eliminating many of the old taxes, especially the arbitrary exactions (*tekālīf-i ʿörfiyye*), substituting direct collection for revenue farming, centralising receipts and disbursements in the state treasury, and assigning salaries to all officials to replace the prebendal forms of compensation and the revenue forms on which most of them had previously depended. In 1838, the tax reforms were inaugurated on an experimental basis in selected provinces, and the salary system was supposed to go into effect. The Gülkhāne Decree of 1839 proclaimed the general principles underlying the changes. Subsequent acts generalised the fiscal reforms to a larger number of provinces. The chief agents of the new system of revenue-collection were to be collectors (*muḥaṣṣīls*) appointed to assess and collect revenues in collaboration with locally appointed administrative councils (*medjlis-i idāre*), which were to include both ex officio members and representatives of the local populace (ʿAbd al-Raḥmān Wefīḳ, i, 346-7; ii, 6-50; İnalcık, *Tanzimat'in uygulanması*, 623 ff.; idem, *Application of the Tanzimat*, 97 ff.; Shaw, *Tax reform*, 422). These reforms failed, and the Ottomans never succeeded in overcoming the consequences. In part, the failure resulted from the fact that the Ottoman system of financial administration was not ready for the demands that fiscal centralisation made on it. In part, the problem resulted from the opposition of former tax farmers or *ṣarrāfs* [*q.v.*], who had vested interests in the old system (Pakalın, *Maliye*, iii, 52-4; Shaw, *Tax reform*, 422). In any case, revenue receipts fell off. In 1258/1842, tax farming (*iltizām*, but not the life farms, *mālikāne*) had to be restored (Pakalın, *OTD*, ii, 397). Direct collection was later revived for some taxes. But for the tithe on agricultural produce (*aʿshār*), the most important single revenue, tax farming continued at least into the Young Turk period (Heidborn, ii, 117-30; Lewis, 385-6, 458; Shaw, *Tax reform*, 428-9; Issawi, *Turkey*, 351-60). The failure of the effort at centralisation of revenue collection crippled the new system of official salaries from the start. And that was not all.

The extent to which the Ottoman Empire had been integrated, prior to the 19th century, into the worldwide system of European economic dominance is clear from the evolution of the capitulations (*imtiyāzāt* [*q.v.*]) and the abuses that developed out of them. One of the saddest ironies of the *Tanẓīmāt* is that the economic subordination of the empire underwent a critical tightening in 1838, just as the new period was about to open. This occurred with the adoption of

the Anglo-Ottoman Commercial Convention of Balta Liman. This, and comparable treaties concluded later with other states, marked the substitution of negotiated bilateral treaties for the capitulations. More important, it forced Ottoman statesmen, who were desperate at that point for European help against the Egyptian challenge, to accept what amounted to free trade (Bailey, Kütükoğlu). The effects on an unindustrialised economy, in which customs revenues had traditionally been one of the most important cash revenues, were very serious. Not only were Ottoman markets now opened wide to European industrial goods, but the ability of the Ottoman government to raise new revenue, either by taxation or by setting up monopolies or other government enterprises, was limited by the terms of the treaties (du Velay, 338). The deteriorating economic situation, and the political and military crisis with Egypt, led to the issue in 1840 of the first Ottoman paper money (*ḳāʾime* [*q.v.*]). This remained in circulation until 1862, and gave rise to serious problems of counterfeiting and depreciation. Paper money was again issued in the wake of the Russo-Turkish War and during World War I (Toprak, 205 ff.). The coinage, too, was in disarray (Schaefer, 25 ff.; Issawi, *Turkey*, 326-31). The monetary problems were aggravated by the lack, prior to the second half of the century, of modern banking facilities; when created, these were essentially foreign enterprises (du Velay, 132 ff.; Biliotti; Issawi, *Turkey*, 339-42).

To make matters worse, the Ottoman government began during the Crimean War to contract foreign loans (Dj̲ewdet, *Ted̲h̲ākir, 1-12*, 20-3; du Velay, 134 ff.). In a little over twenty years, the empire acquired a foreign debt of 200 million pounds sterling (Blaisdell, 74) and experienced a complete collapse of its credit. The crisis over the public debt resulted in Muḥarram 1299/1881 in the creation of an international Council of the Public Debt (*duyūn-i ʿumūmiyye* [*q.v.*]), to which the Ottoman government was forced to cede control of a number of revenues (du Velay, 463 ff.; Young, v, 55 ff.; Blaisdell, 90 ff.; Issawi, *Turkey*, 361-5). The Russo-Turkish War also left the empire saddled with an indemnity of 35 million Turkish pounds to pay to Russia (Blaisdell, 85; Heidborn, ii, 294-5; Milgrim, 519 ff.). The liabilities that the Ottomans incurred under concessions for various economic development projects—example, the kilometric guarantees granted to assure a profit to foreign railway builders—were another drain (du Velay, 550 ff.). Over the course of time, the government ceded more of its revenues to the Public Debt Administration in order to cover further commitments, until that agency controlled almost one-quarter of Ottoman revenue (Blaisdell, 150-1).

Considering the swift failure of its most important attempts at fiscal reform and the continuing decline in the economic independence of the Empire, it is not surprising that Ottoman financial institutions of the reform era made little progress in achieving increased efficiency. The Public Debt is only the most conspicuous example of the extent to which control of public revenues remained dispersed among a number of different agencies. By the last years of the reign of ʿAbd al-Ḥamīd II (1876-1909), there were twenty or more official or semi-official bodies in Istanbul with power to collect and disburse revenues directly. The most important were the Public Debt Administration and the privy treasury (*k̲h̲azīne-yi k̲h̲āṣṣa*). As successor to the old privy purse (*dj̲eyb-i hümāyūn*), this became a very large and powerful organisation, thanks to the growth of ʿAbd al-Ḥamīd's enormous personal fortune. The Minister of Finance really had control only over fiscal resources not otherwise accounted for. Even there, the control was not effective. Partly because the economy was overwhelmingly agricultural, with important revenues still collected in kind, tax collection was always in arrears (Heidborn, ii, 162 ff.). The weakness of central control over provincial finance is clear from the use, as a favourite mode of payment, of the *ḥawāle*. This was an order to pay, drawn against a provincial "treasury", which might or might not have funds to honour the order. Ottoman bankers and *ṣarrāfs* made a business of discounting these orders. The Ministry of Finance seldom had enough money on hand to pay more than a few of its creditors in cash. Procedures were so complicated that even this favoured few had to "jump through many fiery hoops" before getting their money (Pakalın, *Maliye*, i, 38). Favouritism and irregularity in salary payments were but a variation on this theme. By inflating the numbers of officials in all departments, ʿAbd al-Ḥamīd's policy of using the bureaucracy as a vast patronage machine made the financial situation much worse.

Under these circumstances, it was out of the question for Ottoman officials to use budget preparation as an effective instrument of fiscal policy. What look like modern budgets began to be prepared in 1863; there had been somewhat similar documents earlier in the *Tanẓīmāt* (Shaw, *Tax reform*, 449-50; idem, *Ottoman expenditures*, 373-8; Findley, 349-52, 384 n. 123, 396 n. 178, 404 n. 124; Issawi, *Turkey*, 348-9). Contemporary experts were united in the opinion that the budgets bore little correspondence to reality, especially before 1908 (Heidborn, ii, 45-9; du Velay, 174-88, 317-24).

The late 19th century nonetheless witnessed some efforts to improve the organisation and efficiency of financial institutions. There was an attempt in 1277/1861 to organise a hierarchy of fiscal officials to serve in the local administrative system then being created (*Düstūr*[1], ii, 4-25). Under ʿAbd al-Ḥamīd, there were further acts on this subject and on the related issue of tax collection (Young, v, 18-21). The Constitution of 1876 contained a special section on financial affairs, including articles on taxation, budgeting, and the creation of an independent Board of Audit (*Dīwān-i Muḥāsebāt*; *Düstūr*[1], iv, 16-17, arts. 96-107). The law of 1877 on provincial municipalities authorised them to have their own budgets (Young, i, 69-84; *Düstūr*[1], iv, 538-53). After the Russo-Turkish War, there was a flurry of effort at reorganisation on a number of fronts, the purpose being to convince the major powers of the empire's capacity for reform. Among the measures then enacted were one of 1296/1879 setting up the Board of Audit (*Dīwān-i Muḥāsebāt*; *Düstūr*[1], iv, 602-13) and another of 1297/1880 reorganising the Ministry of Finance (*ibid.*, iv, 674-84; Pakalın, *Maliye*, i, 28-30, 32-7). The latter measure reorganised the ministry and its personnel into two components, the central organisation (*heyʾet-i merkeziyye*) and the attached agencies (*heyʾet-i mülḥaḳa*), located either in the provinces or in other ministries at the centre. The central organisation was to include a corps of inspectors (*heyʾet-i teftīs̲h̲iyye*) empowered to investigate the accounts of all central and provincial departments. Under the Ḥamīdian régime, control measures such as the inspectorate and the Board of Audit produced little real effect. The practice of filling the post of undersecretary of finance (*māliyye müstes̲h̲ārī*) with a foreign expert did at least provide a continuing source of critical perspective on fiscal affairs (Young, v, 16).

There was also another extensive reorganisation of the ministry in *ca.* 1305/1888. The ministry in this form appears to have been distinguished by the complexity of its internal organisation and records-keeping procedures (Pakalın, *Maliye,* i, 37-52). Like most governmental agencies under ʿAbd al-Ḥamīd, it also became grossly overstaffed. The number of officials in its central offices stood at 650 in 1879, 750 in 1888, and perhaps 1,400 at the time of the Young Turk Revolution *(ibid.,* i, 36, 52).

The 1908 Revolution opened the way for efforts at fundamental reform in finance, as in other fields. The most important reforms of the period appear to have been three in number. First, as part of a program affecting the bureaucracy in general, there was a purge (*tensīḳāt*) of superfluous and unreliable officials and a reduction of salaries for all others (Findley, 296-8). The purge was carried out in several waves and reduced the number of officals in the central offices of the ministry for a time to about 500. Second, as a natural extension of the purge, there was a reorganisation of the ministry. Thenceforth, its central agencies consisted of the minister, his undersecretary, a directorate general for accounts, eight specialised departments, and two consultative bodies. One of these, the Financial Reform Commission (*Iṣlāḥāt-ī Māliyye Komisyonī*), included foreign as well as Ottoman members and served to study reform proposals and draft legislation on them; the other, the Consultative Committee (*Endjümen-i Müs̲h̲āwere*), was to advise on implementation of a new accounting system. Even more important, the inspectorate of finance and the Board of Audit (*Dīwān-ī Muḥāsebāt*) were at last made into active institutions. The ongoing practice of training financial inspectors by a period of apprenticeship abroad dates from this period (Ayni, 25). The third major reform of the Young Turk years was a new system of accountability, embodied in a law (*uṣūl-ī muḥāsebe-yi ʿumūmiyye ḳānūnī*) that went into effect in 1911. The new system centralised control of revenue and expenditure in the Ministry of Finance, established in principle the universality of the state budget, defined the system for budget preparation, and provided for a directorate of accounts, controlled by the minister of finance, in every ministry. These major reforms of the Young Turk period were the most important innovations attempted in government finance since the beginning of the *Tanẓīmāt* (Heidborn, ii, 42-65; Pakalın, *Maliye,* i, 30-1, 50-5).

In addition, the Young Turk years also included many other financial innovations. Publication of budgets and other acts of fiscal relevance began for the first time on a prompt and regular basis, and the budgets were much more realistic than any published before (see *Bibl.*). Some taxes were abolished, and the assessment and collection of many others revised. The law of 1913 on provincial administration allowed each province to have a budget consisting of revenue and expenditure items controlled at the provincial level (*Düstūr*[2], v, 144, 186-216, arts. 79-83; vi, 505-8). The Land Registry Office (*Defter-i K̲h̲āḳānī* [*q.v.*]), was attached to the Ministry of Finance. A special school for financial officials (*Māliyye Mektebi*) was founded in 1910. The privileges that foreigners enjoyed under the capitulations were unilaterally repudiated in 1914. In response to wartime needs, a Ministry of Supply (*Iʿās̲h̲e Neẓāreti*) was eventually created. Many of these reforms occurred during the four periods between 1909 and 1918 when D̲j̲āwīd Bey [*q.v.*] was minister of finance (Pakalın, *Maliye,* iv, 238-9, 243, 246-7). He exemplifies the energy and determination characteristic of the period.

2. The Turkish Republic. Following the collapse of the empire, the Turkish Republic managed to extricate itself from the problems that had done most to breach Ottoman economic sovereignty. The position of the Public Debt Administration had previously been undermined by the wartime loss of co-operation among its European members, the collapse of the Ottoman monetary system, and the shrinkage during the armistice period of the territory under control of the Ottoman government (Blaisdell, 179 ff.). The Treaty of Lausanne (1923) recognised the end of the capitulatory régime in Turkey and apportioned the Ottoman debt among the various successor states, setting the share of the Turkish Republic at 67%. The Turkish government accepted the debt obligations assigned to it, but later unilaterally suspended payment, and in 1943 made a final offer to redeem outstanding bonds at a reduced rate (Robinson, 98-9).

Meanwhile, the development of the Ministry of Finance, as of other agencies of the new government, was "evolutionary, rather than revolutionary" (Dodd, 47). Although the matter appears not to have been studied, there must have been substantial initial carry-over of personnel and organisation from the imperial government. Serious efforts at financial reorganisation came only with the abolition of the tithes (*aʿs̲h̲ār*) in 1925 and subsequent tax reforms (Ayni, 29), then in 1929 with a reorganisation of the Ministry of Finance under a law on unification and equalisation of government payrolls (*devlet memurlarının maaşlarının tevhid ve taadül hakkındaki kanun*; Ülker, 91). These provisions were superseded by a law of 1936 on the organisation and duties of the Ministry of Finance (*maliye bakanlığı teşkilât ve vazifeleri hakkındaki kanun*; Gorvine and Barber, 78-89). With numerous amendments, this remained in effect in the mid-1970s (Ülker, 91-2; *Teşkilât rehberi 1976,* 332).

Under the Republic, the mission of the Ministry of Finance has been defined as "to carry out the financial administration of the State in harmony with the efforts directed toward the economic development of the country" (*Organization and functions,* 164). In keeping with this extension of the old concept of financial administration into the newer one of economic development, the internal organisation and the size of the ministry have become considerably greater than in the Ottoman period, while a number of other organisations with related missions have also come into existence.

In contrast to the bipartite organisation of central and attached officials prescribed for the ministry in 1880, the Republican Ministry of Finance comprises four categories of agencies: central, provincial, international, and attached (*bağlı*) or related (*ilgili*). During the mid-1970s, the central organisation had at its top the minister, with his undersecretary, assistant undersecretaries, and private secretariat. There were five advisory and staff units, including the Financial Inspectorate (*teftiş kurulu*), the Board of Accounting Experts, and the Board of Certified Bank Examiners (*bankalar yeminli murakıpları kurulu*). The ministry had six principal organisational units, including a department for legal counsel and general directorates for budget and financial control, accounts (*muhasebat*), revenues (*gelirler*), and the treasury, the last also serving as a general secretariat for international economic co-operation. There were also support agencies in charge of personnel (*özlük işleri*), the mint and printing plant, the accounts of the ministry itself, etc. The provincial agencies of the Ministry of Finance were found at the two highest jurisdictional levels of the local administrative hierarchy, the *il* (province) and the *ilçe.*

At the province level, the chief financial officer continued to bear the old title *defterdar*. There were a number of agencies attached to him with functions parallel to various of the central agencies. The most important of these provincial agencies were those responsible for assessment and collection of taxes. At the next lower administrative level, the *ilçe*, the senior official was the *mal müdürü*, whose functions and staff were a reduced-scale replica of those of the provincial *defterdar*. The international agencies included financial representatives serving with the Turkish missions to organisations like the North Atlantic Treaty Organisation (Brussels) or the United Nations (New York), as well as financial counsellors attached to embassies and consulates. The category of agencies attached or related to the Ministry of Finance included the Central Bank, the State Investment Bank, the government retirement fund, and the national lottery (*Turkish government organization manual*, 138 ff.; Ülker, 92 ff.; *Teşkilât rehberi 1976*, 333 ff.).

During the mid-1960s, the staff of the ministry reportedly stood on average at 2,000 in the central offices and 15,000 in all (Ülker, 92). A decade later, it was reported at 5,600 in the central offices and over 40,000 in total (*Teşkilât rehberi 1976*, 342). The comparison between these two sets of figures is startling, suggesting that political forces have again been at work, as in the days of ʿAbd al-Ḥamīd, to bloat the bureaucracy. Whatever the explanation of the short-term contrast, that between either of these sets of figures and those dating from the empire is probably more significant. Whatever other factors may be at work, the presence of many times more financial officials in a state much smaller than the empire surely reflects the greater demands made on the ministry in a society committed not just to financial administration, but to economic development.

Indeed, the growth of the Ministry of Finance is only a partial illustration of this point. To appreciate it fully, one must also note the proliferation of governmental agencies with financial and economic responsibilities. The empire in its day had ministries, which appear not to have been very effective, for trade, agriculture, public works, forests and mines, as well as certain state enterprises. Atatürk committed the Republic to eliminating the hold of foreign interests over the economy and to étatism, and the first state plan for economic development went into effect in 1934 (Robinson, 103 ff.; Hershlag, 31 ff.; Issawi, *Turkey*, 367-8). By then, the development of a new series of official and semi-official agencies had begun. By the mid-1960s, this series included the State Planning Organisation (*Devlet Plânlama Teşkilâti*, created 1960), Board of Audit (now known as *Sayıştay* instead of *Dīwān-ī Muḥāsebāt*), the ministries of customs and monopolies, commerce, industry, public works, communications, agriculture, health and social assistance, reconstruction and settlement, tourism and information, plus other agencies or enterprises concerned with banking, energy, natural resources, land tenure, and various forms of industrial production (*Organization and functions*, 62-6, 163-4, 198-317). The obvious need for coordination among so many agencies has given rise to several interministerial bodies intended to perform this function in support of the development plans (*Teşkilât rehberi 1976*, 139-43, 156-8). Where the Ministry of Finance is concerned, probably the most critical need for co-ordination arises between it and the State Planning Organisation, which not only prepares the economic development plans for the state but also plays a central role, together with the Ministry of Finance, in budget preparation (Dodd, 245-6; *Organization and functions*, 175-76).

The Ministry of Finance of the Turkish Republic, though vastly larger in size and wider-ranging in functions than its imperial prototype, has thus been surrounded with a galaxy of agencies with financial and economic responsibilities. According to recent sources, some major developmental needs of the ministry are still unmet. These include improved coordination with other agencies, especially the planning organisation; the full acceptance of "programme budgeting", as opposed to dispersion of sums needed for a given project under different headings; and an end to the age-old practice of assigning specific revenues to specific needs (Dodd, 246; *Organization and functions*, 170-1, 179-80). The last point, in particular, shows that the Ottoman tradition dies hard. To these problems must, of course, be added others of general economic significance, such as the monetary instability and mounting public debt that have again come to plague the republic.

3. Comparative note. In the 19th century, the financial and economic history of autonomous regions within the Empire passed through stages parallel to those observable in Istanbul. The similarities derive from a common institutional heritage, similar economic and environmental constraints, and confrontation with the same set of problems in dealing with the outside world. At many points, there is not only parallelism, but also contemporaneity, in the major economic events occurring in different locales. In the 20th century, parallelisms are equally noticeable, the main difference being the proliferation of sovereign states and the growth of emphasis on economic development. In both periods, similar traits can be found in Islamic states beyond the frontiers or former frontiers of the empire, as well as farther afield.

In the 19th century, there were two regions in the Islamic parts of the empire that the Ottomans acknowledged as autonomous. These were the "privileged provinces" (*eyālāt-ī mümtāze*) of Egypt and Tunisia. As early as the time of Muḥammad ʿAlī (1805-49), Egypt, at least, began to develop financial agencies that resembled, and for a time anticipated, those of Istanbul in their development. Both Tunisia and Egypt professedly adopted a European-style system of ministries in the 1850s; the Istanbul government had done so in the late 1830s. Tunisia and Egypt resembled their suzerain in the form and weakness of procedures for budgeting and revenue control. They shared the same problems where the privileges of foreigners were concerned. Tunis, Cairo, and Istanbul all began to accumulate a foreign debt between 1854 and 1862. Bankruptcy occurred for Tunis as early as 1866; for Cairo and Istanbul, it came a decade later, although Egypt had been in deep trouble ever since the collapse of the cotton boom enjoyed during the American Civil War (1861-5). Fiscal control agencies, dominated by Europeans, were established in all three places between 1870 and 1881. In Egypt, there was not only a *Caisse de la dette*, but also an Anglo-French dual controllership over the remainder of government finance. Even the personal fortune of the Khedive was taken under European control (Deny, 104-20, 131-43, 398-414, 519-48; Rivlin, 75-136; Landes, 278 ff.; Issawi, *Egypt: an economic and social analysis*, 23-5; idem, *Economic history of the Middle East and North Africa*, 62-70; Owen, 122-52, 216-43; Brown, 134-7, 245-50, 335-49; Ganiage, 99-112, 186-216, 298-334, 348-402). It is true that Tunisia came under direct European domination in 1881, and Egypt did in 1882, while the territories remaining under control of the Istanbul government did not. Yet for the Istanbul government, as for the few other

Asian and African states that retained nominal independence in this period, sovereignty became almost a fiction. With its fiscal system a weaker version of the Ottoman one, and its economy even more dominated by foreign interests, Ḳādjār Īrān is one of the clearest examples (Bakhash, *Evolution,* 139 ff.; idem, *Iran,* 102-4, 110-14, 142-4, 166-7, 263-6, 270-81).

Following World War I, the dismantling of the Ottoman Empire meant that all its Islamic territories outside what became the Republic of Turkey fell under European control, if they had not been before. The only exceptions—to the extent that it can be spoken of as former Ottoman territory—were in the Arabian peninsula. The fact that the Turkish Republic managed, through the Treaty of Lausanne, to escape the peace terms inflicted on the empire following World War I, while others of the successor states did not, meant that some aspects of the old régime survived elsewhere, after being abolished in Turkey. For example, the capitulatory privileges of foreigners were not abolished in Egypt until 1937 (Issawi, *Egypt: an economic and social analysis,* 172). In Egypt, the development of financial institutions continued in this period under the British-dominated monarchy. In the Fertile Crescent, the development of such institutions, beyond what had existed as part of the Ottoman provincial administration, began in the 1920s under the mandatory régimes controlled by the French and British. Whether for the mandate period or for that of independence, detailed examination would disclose important parallelisms between economic and fiscal developments in the Arab successor states and Republican Turkey. Major traits in common include demands that economic and financial institutions provide an increasing range and quality of services, a growing number of government agencies with responsibilities of such types, and an increasing emphasis on social welfare. Government control of important sectors of the economy, efforts to restrict foreign enterprises, reliance on centralised planning for economic development are now also generally characteristic. In recent years, the chief factor in differentiating the economic fortune of the various successor states has been the presence or absence of significant petroleum resources (see e.g. Issawi, *Economic history of the Middle East and North Africa,* 170 ff.; on Egypt, idem, *Egypt in Revolution,* 46-75, 169-80, 246-315; Hansen and Marzouk, 1-21, 246-316; Mabro, 107-63; Ikram, *passim*; on ʿIrāḳ, Penrose and Penrose, 148-81, 240-73, 381-530, 538-44; on Saudi Arabia, El Mallakh, *Saudi Arabia,* passim).

MALḲARA (modern Turkish Malkara; Ottoman Maᶜlghara < Mīghalghara/Mīghalḳara; oldest forms: Mīghal Ḳarā (in a *waḳfiyya* of Murād I of 767/1366—but cf. Wittek, in *WZKM*, lviii [1962], 180); Mīghalḳarā (temp. Meḥemmed II, cf. Gökbilgin, *Edirne*, 167, 193) < ? *Μεγάλη ἀγορά/*Μεγάλη χαρύα cf. Jacopo de Promontorio, *ca.* 1475: "Magalicarea"), a township in European Turkey (pop. 1973, 12,204), approximately 95 km to the south-south-east of Edirne [*q.v.*] and lying 57 km. to the west of Tekirdağ (Tekir/Tekfūr Daghī [*q.v.*]) on the Ottoman "route of the left hand" (*ṣol ḳol*) from Istanbul to Greece and Albania.

In the oldest surviving Turkish narrative sources for the conquest of Eastern Thrace, the apparently uncontested (and possibly temporary) first Turkish seizure of Malḳara is linked with that of Bizye/Vize (which incontestably occurred between September 1357 and August 1358, cf. Schreiner, i, 9, 42; ii, 287-8), and of Kypsela/Ipsala, and with the name of Sulaymān Pasha b. Orkhan [*q.v.*] (Aḥmedī, *Iskendernāme*, 120, 11. 117-119: *Wize wü Mighalḳara wü Ibṣala/fetḥ oldī aña* [sc. Sulaymān Pasha] *bu üči* [*sic:* ? *udjī*] *bile/anda leshkeri oldī zebūn*). In a different, *taḳwīm*-derived tradition, the fall of Malḳara is linked with Dimetoḳa [*q.v.*], Keshan and, dubiously, Edirne [*q.v.*; but see now Beldiceanu-Steinherr, *Recherches*, and *Travaux et mémoires*, i]. Other sources, some of which are reflected in later recensions (e.g. Saᶜd al-Dīn, *Tādj al-tawārīkh*, i, 57-8), attribute to the *udj-begi* Ḥādjdjī Ilbegi the "extinction of the rites of polytheism" in Malḳara, while Murād I's tutor and commander Lālā Shāhīn Pasha is also linked with grants of land in the vicinity of Malḳara (cf. Babinger, *Beiträge*, 47). This process of Ottomanisation of territory originally conquered and controlled by the virtually autonomous *udj-begis* probably took place after *ca.* 777/1376, from which time the other great *udj-begi* family of the Turakhan-oghullarī, which also had its original seat in Rumeli in and around Malḳara (Beldiceanu-Steinherr, *Recherches*, 47-8), found more lasting possessions in the new *udj* being opened up by then in Thessaly.

Despite this uncertainty in matters of chronology, evidence, such as the listing of a number of villages in the *nāḥiye* of Malḳara as forming part of the *waḳf* of Sulaymān Pas͟ha, and the names of some of them (e.g. Ṣaruk͟hanlu, Ḳasṭamonlu, Tatarlar, Ḳarā Ak͟hī, Ḳara Yak͟hshi; cf. Gökbilgin, *op. cit.*, 167-8; Beldiceanu-Steinherr, *op. cit.*, 142-3), suggests both the origin and the rapidity of Turkish colonisation in that part of Thrace. Malḳara, indeed, from the earliest period of Turkish rule, seems to have been a place of particular resort for *ak͟hīs* and dervish elements (cf. the numerous 9th/15th and 10th/16th century foundations of minor *tekkes* and *zāwiyas* in and around Malḳara, Gökbilgin, *op. cit.*, *passim*). Conversely, the *yürük* element in the population appears to have been scanty in comparison with districts more to the north and north-west (Gökbilgin, *Yürükler*, 262).

In the later centuries of Ottoman rule, the history of Malḳara appears to have been both obscure and uneventful. In the reign of Meḥemmed II, Malḳara possessed 938 Muslim hearths, but there was still a Christian element in the population, not only at the end of the 9th/15th century (cf. Barkan, *Belgeler*, i/1 [1964], Ek cedvel I), but also in the 19th century (150 Armenian houses and one chapel; 100 Greek houses and one church (*Journals* of Benjamin Barker [1823], cf. R. Clogg, in *Univ. Birmingham Historical Journal*, xii/2 [1971], 259; *Sāl-nāme-i wilāyet-i Edirne 1311*, 223 f.). In the 11th/17th century Malḳara formed a *ḳaḍāʾ* in the *sand̲jaḳ* of Gallipoli (Gelibolu [*q.v.*]); a rather meagre description of the town at this time is given by Ewliyā Čelebi [*q.v.*], *Seyāḥat-nāme*, v, 325). At the end of the 11th/17th century, it figures as a relay-station (*menzil-k͟hāne*) on the above-mentioned *ṣol ḳol*, between Tekir Dag͟hî and Kes͟han (Istanbul, Başbakanlık Arşivi, Kepeci 3006).

(C. J. Heywood)

MALKOM K͟HĀN, Mīrzā, Nāẓim al-Dawla (1249-1326/1833-1908). Perso-Armenian diplomat, journalist and concession-monger, important in the history of 19th-century Iran for his early advocacy of governmental reform and thorough-going westernisation, themes he expounded first in a series of privately-circulated treatises and then in the celebrated newspaper *Ḳānūn*.

He was born in the Iṣfahān suburb of D̲julfā [*q.v.* in Suppl.] to an Armenian family whose ancestors had been transplanted there by S͟hāh ʿAbbās from Ḳarabāg͟h [*q.v.*] in the southern Caucasus. His father, Mīrzā Yaʿḳūb, was converted to Islam some time after the birth of Malkom, but the profession of Islam sat lightly on the shoulders of father and son; both appear to have believed in a "religion of humanity", inspired by freemansonry and the theories of Auguste Comte. Recognising the importance of Islam in Iranian society, Malkom generally took care to present his proposals in Islamically-acceptable terms (see H. R. Haweis, *Talk with a Persian statesman*, in *Contemporary Review*, lxx [1896], 74-7), a stratagem imitated by other secular reformists of the time.

After preliminary studies in D̲julfā, Malkom received his further education at the Samuel Moorat College in Paris, an Armenian institution operated by the Mechitarist Fathers. The seven years which he spent studying in Paris were the first of his many residences in Europe, which far exceeded in total the years he spent in Iran. He returned to Iran in 1267/1850, entering government service in two capacities: as interpreter for European instructors at the newly-established Dār al-Funūn, the first institution of modern, secular learning in Iran, and as personal translator for Nāṣir al-Dīn S͟hāh. At the same time, he began composing his earliest treatises on the necessity of westernising reform, notably the *Kitābča-yi g͟haybī* ("The Booklet inspired from the Unseen"). In 1273/1856, he acquired his first diplomatic experience, accompanying Mīrzā Farruk͟h K͟hān's mission to Paris and London. After his return the following year, Malkom established a *farāmūs͟h-k͟hāna* (lit. "house of forgetfulness") [*q.v.* in Suppl.] in Tehran, the first masonic lodge to be set up in Iran. Numerous courtiers, merchants and even religious scholars joined the organisation, the purpose of which appears to have been twofold: the propagation of ideas of governmental reform, and the building up of a personal following for Malkom K͟hān. Fearing that the *farāmūs͟h-k͟hāna* might be the centre of a republican conspiracy, Nāṣir al-Dīn S͟hāh ordered its dissolution in October 1861, and soon after banished Malkom to Arab ʿIrāḳ. After Malkom had spent a few months in Bag͟hdād, the Ottoman authorities, responding to Iranian pressure, had him transferred to Istanbul.

There he was able to acquire the friendship of Mīrzā Ḥusayn K͟hān, the Iranian ambassador, and to enter his service. With his livelihood thus assured, he resumed writing his treatises, and also began to take an interest in alphabet reform, corresponding extensively on the subject with the ʿAd͟harbāyd̲jānī playwright Fatḥ ʿAlī Āk͟hūnd-zāda [*q.v.*].

In 1288/1871, Mīrzā Ḥusayn K͟hān was recalled to Iran and appointed prime minister, and the following year he invited Malkom to join him as special adviser. Malkom accepted, and his influence is to be seen on the measures of governmental reorganisation that Mīrzā Ḥusayn K͟hān undertook. But a new emphasis had emerged in the thinking and aspirations of both men: the attraction of foreign capital to Iran, for the sake of personal profit as well as economic development. Thus Malkom became profitably involved in the negotiations surrounding the notorious Reuter concession, and it was partly in connection with the unfinished business of the concession that he left Iran early in 1873 to take up an appointment as Iranian envoy in London. He was now destined to spend the rest of his life in Europe, with the exception of four brief return visits to Iran, later in 1873, in 1881, in 1887 and in 1888.

His sixteen years as minister in London were spent chiefly in fruitless attempts to promote various concessions, above all for the construction of railways in Iran, and to interest Britain more closely in Iran, in the hope that she would provide a counterweight to Russia and would encourage reform in Iran. Despite his relative ineffectiveness in these areas, Malkom exerted some influence on events through correspondence with numerous princes and politicians, the most important of whom were Mīrzā ʿAlī K͟hān Amīn al-Dawla, a confidant of Nāṣir al-Dīn S͟hāh and later prime minister; Mīrzā Yūsuf K͟hān Mustas͟hār al-Dawla, Iranian ambassador in Paris; Masʿūd Mīrzā Ẓill al-Sulṭān, the governor of Iṣfahān; and Muẓaffar al-Dīn Mīrzā, the heir-apparent. He also continued to compose treatises on the problems of government and reform, and took up again the question of alphabet reform (the scheme he finally elaborated is set forth in *Namūna-yi k͟haṭṭ-i ādamiyyat*, London 1303/1885).

The most important period of Malkom's career began after his dismissal from his diplomatic post in December 1889. The preceding year, he had obtained from Nāṣir al-Dīn S͟hāh a concession for the institution of a national lottery and the construction of casinos in Iran. The concession was swiftly rescinded,

but Malkom deftly sold it to European investors before they had a chance to realise it was worthless. He invoked diplomatic immunity and escaped legal condemnation, but the profitable venture cost him his post of ambassador. Partly to avenge himself for his dismissal, he embarked on the publication of a newspaper, *Ḳanūn* ("The Law"), in which he castigated the Iranian government—particularly Amīn al-Sulṭān, the prime minister of the day—for its corruption, and hinted at the existence of a vast revolutionary network in Iran, owing allegiance to himself. It is unlikely that such a nework did exist, although an association called *Madjmaʿ-i Ādamiyyat* ("The League of Humanity") did operate under Malkom's general and remote supervision, chiefly for the purpose of distributing *Ḳanūn*. Malkom also attempted to implicate the Bahāʾīs in his activities, almost certainly without foundation (see the letter of ʿAbd al-Bahāʾ to E.G. Browne quoted in Browne, *Materials for the study of the Bábí religion*, Cambridge 1918, 296). Despite these ambiguities, it is certain that the newspaper was widely-circulated and avidly-read in Iran. Its strictures on tyranny struck a responsive chord, and it is indeed the impact made by *Ḳanūn* during the years preceding the constitutional revolution that is Malkom's chief claim to a place of importance in modern Iranian history. In keeping with its agitational purposes, *Ḳanūn* contained little systematic discussion of the changes Malkom proposed; noteworthy, however, is the demand, put forward in no. 35 of the newspaper, for the institution of a bicameral legislature, with the lower house to be elected by popular vote.

The contents of *Ḳanūn* appear to have been written almost exclusively by Malkom himself. Nonetheless, during the years of its publication he had extensive contact with other notable opponents of the Tehran government: Sayyid Djamāl al-Dīn Asadābādī ("Afghānī") [*q.v.*], who met Malkom in London in 1891; Mīrzā Āḳā Khān Kirmānī, a formerly Azalī freethinker resident in Istanbul, who helped in the distribution of *Ḳanūn* in the Ottoman Empire; and Shaykh al-Raʾīs Abu 'l-Ḥasan Mīrzā, a Ḳādjār prince of unconventional views living in India.

When Nāṣir al-Dīn Shāh was assassinated in 1896 and it appeared to Malkom that his political fortunes might be restored, the insurrectional tone which had marked *Ḳanūn* was abruptly abandoned. Two years later, in anticipation of his appointment to the Iranian embassy in Rome, Malkom ceased publishing *Ḳanūn* altogether. He retained his diplomatic post in Italy until the end of his life in July 1908, and no longer seriously involved himself in Iranian politics. Another organisation operating under this supervision, the *Djāmiʿ-i Ādamiyyat* ("The Society of Humanity"), did, however, play a role of marginal importance in the struggles over the constitution in 1907 and 1908, and, more importantly, many of those active in promoting its cause can be shown to have belonged to the readership of *Ḳanūn*.

Most of those who knew Malkom personally—even those who can be termed his collaborators—seem to have had a low opinion of his personal qualities, regarding him as venal, arrogant and inconstant, despite his obvious talents as writer and thinker. Subsequent Iranian historiography accorded him a more honorable mention, emphasising his role as a pioneer of reform and modernisation. Of late, with the growing rejection in Iran of westernisation as a panacea, critical voices have again begun to be raised (Djalāl Āl-i Aḥmad, for example, ridiculed Malkom as "a homegrown Montesquieu" in his *Gharb-zadagī* (new, uncensored edition, Tehran 1357 *sh.*/1978, 80; for a similar, but more detailed critique, see Humā Nāṭiḳ, *Mā wa Mīrzā Malkom Khānhā-yi mā*, in her book *Az māst ki bar māst*, Tehran 1354 *sh.*/1975, 165-99).

Bibliography: (1) Published works of Malkom: *Kulliyyāt-i Malkum*, ed. Hāshim Rabīʿ-zāda, Tabriz 1328/1908 (this collection contains 13 treatises, including one, *Risāla-yi Ghaybiyya*, falsely ascribed to Malkom); *Madjmūʿa-yi āthār-i Mīrzā Malkom Khān*, ed. with introd. by Muḥīṭ Ṭabāṭabāʾī, Tehran 1327 *sh.*/1948 (the contents of this collection overlap with those of the preceding one); *Persian civilisation*, in *Contemporary Review*, lix (1891), 238-44; *Ḳanūn*, 42 issues, London 1890-8. (2) Unpublished works of Malkom: manuscript collection dated 1295/1878 containing 11 treatises, Central Library, University of Tehran 3257; *Risāla-yi Farāmūsh-khāna*, Malik Library, Tehran 3116; manuscript treatises in the library of Firīdūn Ādamiyyat, Tehran. (3) Letters written and received by Malkom: Fatḥ ʿAlī Ākhūnd-zāda, *Alifbā-yi djadīd wa maktūbāt*, ed. Ḥamīd Muḥammad-zāda and Ḥamīd Ārāslī, Baku 1963 (contains letters exchanged between Malkom and Ākhūnd-zāda on the alphabet question); B. N. Paris, supplément persan 1986-91, 1995-7 (a collection of letters received by Malkom and donated by his widow in 1924; contents described in Blochet, *Catalogue des manuscrits persans*, iv, 284-91). (Hamid Algar)

MALLĀḤ, "Jewish quarter in Morocco". The institution of *mallāḥ*/*mellāḥ* is essentially linked to the history of Jewish settlement in the major cities of Morocco and to the distribution of their communities within the frontiers of the Sharīfian Empire. In

Morocco, it is the name given to the place of residence assigned to the Jewish *dhimmīs*.

At the outset, it is necessary to distinguish the urban *mallāḥ* from the rural *mallāḥ*. The former, as it exists in several large towns, is a quarter adjacent to the Muslim city, integrated within it or shifted to the nearby periphery, yet enclosed within a separate enclave defended by a wall and a fortified gateway. It is most often situated close to the *ḳaṣaba* (citadel), the residence of the king or the governor, in order to guarantee the security of its inhabitants, some of whom occupy senior positions in the civil administration or carry out important functions in the royal palace and must therefore remain close at hand in order to answer the summons, should their presence be required. The latter, the rural *mallāḥ*, that of the mountains and valleys of the Atlas and the Rīf, the southern and eastern plains as far as the fringes of the Sahara, is an "open" village exclusively inhabited by Jews, situated some distance from the nearest Muslim *ḳṣar* or the fortress of the protector *ḳāʾid*). Also to be noted is the existence, in some towns, of an old and a new *mallāḥ*, *mallāḥ ḳdīm* and *mallāḥ jdīd*. The reason may be a transfer of the Jewish population from one to the other, in order to move it away from an already existing site of Muslim culture or for purposes of construction (here we may note the religious scruples of the pious sultan Mawlāy Slīmān/Sulaymān, with reference to Tetouan and Salé), or it may be an extension of the former quarter on account of its overpopulation (al-Sawīra and Meknès/Miknās).

Not all towns necessarily possess a *mallāḥ*, and with those that do have one, it has not always been so. The institution of the *mallāḥ* was only imposed on some communities at a relatively recent date, as their history testifies. Whereas, in Christian cultures, segregation was the rule (although originally, here too, there was a preference for living together in the same quarter for reasons of security or simply for convenience, in order to facilitate the practice of ritual and the communal observance of religious laws, customs and usages), in Islamic lands the Jews coexisted for a long time, and almost everywhere, in the towns as well as in the country, with their Muslim fellow-citizens, in peaceful proximity in the same quarters and the same streets. Very often, and this predates the Arab conquest, there is evidence of a deliberate choice on the part of ethnic, religious and professional groups, to live together in the same space, with their own streets and quarters. Jewish quarters are called *ḥāra* in Algiers, Tunis and Tripoli; *ḳāʿa* in the Yemen; *maḥalla* in Persia, or quite simply *darb al-yahūd* "the street of the Jews" or *al-sharʿ* "the avenue".

The etymology of the term *mallāḥ* is closely associated with the history of the Jewish community of Fās and with what might be called its "ghettoisation". At the end of the 7th/13th century, the Marīnids founded, alongside Fās al-Bālī ("Old Fez"), Fās al-Jdīd ("New Fez"), and close by, a little later (first half of the 8th/14th century), the town of Ḥimṣ, which was initially allocated to the *Ghuzz* archers and the Christian militia; then, at the beginning of the 9th/15th century, in 1438 according to the Jewish chronicles (*Kisse ha-melakhim* "Throne of the Kings", by Raphael Moise Elbaz; *Yaḥas Fās* "Genealogy of Fās" by Abner Hassarfati), the Jews were compelled to leave their homes in Fās al-Bālī and to settle in Ḥimṣ, which had been built on a site known as *al-Mallāḥ* "the saline area". From toponymy (derived from the root *m-l-ḥ* with the connotations "salt", "to salt", etc.), this term is extended in a generic sense, becoming a common name which, passing from Fās to the other towns of Morocco, ultimately designated the Jewish quarter. All the other proposed etymologies are to be rejected, in particular that which maintains that *mallāḥ* is "salted, cursed ground" and that the Jews are "those appointed to the task of salting the heads of decapitated rebels". It should be noted that originally there was nothing derogatory about this term: some documents employ the expression "*mallāḥ* of the Muslims" and conversely, the Jewish quarter contained large and beautiful dwellings which were favoured residences for "the agents and ambassadors of foreign princes". But for the Jews, these transfers from one quarter to the other were resented as a bitter exile and as the manifestation of a painful segregation, often accompanied by the conversion to Islam of those who refused to submit to the exodus imposed by the royal edicts and to abandon their homes and their shops. This was what happened at Fās in 1438 and, much later, at Salé in 1807.

The *mallāḥ* of Fās is, in every respect, the oldest in Morocco and, for a long time, remained the only and the most important one. It is only in the second half of the 10th/16th century (*ca.* 1557) that the term *mallāḥ* appears in Marrakesh, with the settlement there of Jewish and Judaised populations from the Atlas and, in particular, from the city of Aghmāt where there had lived, since time immemorial, an important Jewish community. G. Mouette, a French captive in Morocco from 1670 to 1681, writes (*Histoire des Conquestes de Moulay Archy*, Paris 1683): "In Fās and in Morocco (= Marrakesh), the Jews are separated from the inhabitants, having their own quarters set apart, surrounded by walls of which the gates are guarded by men appointed by the King ... In the other towns, they are intermingled with the Moors." It was not until 1682, or more than a century later, that a third *mallāḥ* was founded; it was that of the town of Miknās, new capital of the kingdom of Mawlāy Ismāʿīl (1672-1727). At the beginning of the 19th century, *ca.* 1807, the "ghettoisation" of the Jews was undertaken by the pious sultan Mawlāy Sulaymān in the towns of the coastal region, at Rabat and Salé, at al-Sawīra (Mogador) and at Tetouan. With the exception of Tetouan, where the Spanish word *juderia* is used, elsewhere it is the term *mallāḥ* which designates the new Jewish residential areas.

In Rabat, the Jews were living alongside the Muslims in the Bḥīra quarter when, in 1807, the sultan ordered the construction of a *mallāḥ* at the eastern extremity of the town, buying the land with his own money, building houses, kilns, mills and shops, all in the space of one year. In Salé, the New Mallāḥ, built in 1807, is a long avenue extending from the Gate of the Mallāḥ to the old monumental gate dating from the Marīnid period; in the alleyways which open out on this avenue there are 200 houses, 20 shops and trading booths, two kilns and two mills.

The Jewish community of Mogador deserves a special mention: the Jews were for a long time a majority in this town which was familiar with intense commercial activity and uninterrupted international relations (with the United States and Europe) from its recent foundation, in 1765, on ancient sites (the Purple Islands in the time of Juba II, the Portuguese Castello Real) until the beginning of the 20th century. When Muḥammad b. ʿAbd Allāh set about building the town, there were Jews living in the village of Dyābāt on the Oued Ḳsob, some 2 km. to the south of the town. To populate the new city, designed to replace Agadir as a centre of international commerce, the sultan appealed to the wealthieth and most

dynamic Jews of other Moroccan communities, conferring upon them, along with the title of *tud̲j̲d̲j̲ār al-sulṭān* "the King's merchants", special privileges such as tax exemptions and other immunities, assigning them comfortable homes in the quarter known as *ḳaṣaba al-ḳdīma* which was the residence of the governor, the higher functionaries and the consuls. The other Jews and Christian traders lived, with the Muslims, in the *madīna*. As in Tetouan, Rabat and Salé, it was in 1807 that orders were given for the separation of Jews from Muslims and for the construction of the present-day "old *mallāḥ*", with a surrounding wall and a fortified gate. Becoming overpopulated (8,000 souls in 1865), it was permitted to extend into the quarter known as S̲h̲abānāt where it took the name of *al-mallāḥ al-jdīd* "the new *mallāḥ*".

On the topography of the *mallāḥ*, administrative organisation, commercial and manufacturing activities, intellectual and cultural life, see in the *Bibl.* the works which the author of the present article has devoted to these various themes.

(H. Zafrani)

MALLŪ IḲBĀL K̲H̲ĀN, Indian military leader of the Tug̲h̲luḳ period.

The decade of decadence following the death of Sultan Fīrūz S̲h̲āh of Dihlī in 790/1388 is marked by the manoeuvrings of the princes, intrigues of the nobles and sufferings of the people. According to Firis̲h̲ta, the vast kingdom of the Tug̲h̲luḳs fell to pieces and the central administration lost all authority over the outlying provinces. Confusion reached such a point that there occurred an unprecedented spectacle of two sovereigns within a radius of 12 miles of Dihlī, i.e. Nuṣrat S̲h̲āh at Fīrūzābād and Maḥmūd S̲h̲āh at D̲j̲ahānpanāh, like two kings in the game of chess, to use Badāʾūnī's words. Both the monarchs were no more than puppets in the hands of their ambitious but unscrupulous patron-nobles; and Mallū Iḳbāl K̲h̲ān was one such noble who emerged as the strongest out of this internecine mêlée.

Mallū was one of the three sons of Daryā K̲h̲ān, better known as Ẓafar K̲h̲ān Lodī II, the influential Afg̲h̲ān chief under Fīrūz S̲h̲āh Tug̲h̲luḳ. Along with his elder brother Sārang K̲h̲ān, who was governor of Dīpālpūr, he obtained ascendancy over all other *amīrs* of Sultan Maḥmūd, who gave him the title Iḳbāl K̲h̲ān and the command of the fortress of Siri, modern Shahpur Jat, east of the Dihlī-Ḳuṭb road. He owed his rise also to the Sultan's minister, Muḳarrab K̲h̲ān, another member of the ruling military oligarchy of that time. Perfidious as he was by nature, Iḳbāl K̲h̲ān gradually got rid of those whom he regarded as rivals. He first aligned himself with the other king, Sultan Nuṣrat S̲h̲āh, whom he deceitfully dislodged from Fīrūzābād, which he immediately occupied in 800/1398. He followed it up by treacherously killing his benefactor Muḳarrab K̲h̲ān and securing complete control of Dihlī. Annexation of Pānipāt a little later made Iḳbāl K̲h̲ān undisputed master of the region.

His triumph proved short-lived, as Tīmūr's sudden invasion of the Dōʾāb country caught him unawares. He confronted the Mongol invaders, but had to flee in order to avoid complete annihilation. He escaped to Baran (modern Bulands̲h̲ahr), while Sultan Maḥmūd fled to Gud̲j̲arāt.

After Tīmūr's onslaught ended, Iḳbāl K̲h̲ān again took possession of the ruined city of Dihlī. Though he had the capital of the sultanate under his sway, his writ did not extend beyond a part of the Dōʾāb and some districts round Dihlī. In 804/1401, he invited thither the fugitive Sultan Maḥmūd S̲h̲āh and accorded him a warm reception, without however parting with the reality of power. Not content with a limited sovereignty, Iḳbāl K̲h̲ān was bent upon extending the boundaries of his suzerainty. But he felt frustrated by the powerful S̲h̲arḳī rulers of D̲j̲awnpur [*q.v.*] in the east and the influential governor of Multān, K̲h̲iḍr K̲h̲ān, in the west. Accompanied by Sultan Maḥmūd, Iḳbāl K̲h̲ān undertook an expedition against D̲j̲awnpur, where Ibrāhīm S̲h̲āh S̲h̲arḳī had lately ascended the throne. At a time when battle lines were being drawn, Sultan Maḥmūd secretly deserted Iḳbāl's camp and went over to the ruler of D̲j̲awnpur with a view to securing his assistance to extricate himself from tutelage of Iḳbāl K̲h̲ān. On failing there, the Sultan went to Kanawd̲j̲ [*q.v.*], an appendage of the S̲h̲arḳī kingdom, where he was allowed to live with the status of a local king as long as Iḳbāl lived. Iḳbāl returned to Dihlī in 805/1402 disappointed.

Iḳbāl K̲h̲ān now decided to try his luck in the west, an attempt which brought about his downfall. He first marched to Samana, which was ruled by Bahrām K̲h̲ān Turkbačča, who was in league with K̲h̲iḍr K̲h̲ān. Though Iḳbāl managed to have Bahrām K̲h̲ān murdered, he had to face the challenge of K̲h̲iḍr K̲h̲ān, and in a fierce engagement by the river Dahinda in Ad̲j̲odhan (modern Pakpattan in Pakistan), Iḳbāl K̲h̲ān was defeated and killed by K̲h̲iḍr K̲h̲ān's army in 808/1405. His severed head was presented to K̲h̲iḍr K̲h̲ān, who sent it to Fatḥpūr, the latter's native town, where it was fixed on the gate of the city. According to the *Ṭabaḳāt-i Akbarī*, the family and dependents of Iḳbāl K̲h̲ān were expelled from Dihlī and sent to Kol, but none of them was harmed in any way.

A Persian inscription of Iḳbāl K̲h̲ān, fixed on the southern bastion of an old *ʿīdgāh* at Kharera village near Dihlī, describes him as Mallū Sulṭānī, indicating that he insisted on being called a slave or servant of the Sultan. It must be said to his credit that in spite of possessing what were in effect the absolute political and administrative powers of a king, Iḳbāl K̲h̲ān never assumed royal prerogatives, such as striking coins in his name and inserting his name in the *k̲h̲uṭba*. The epitaph referred to above also reveals his religious zeal in having erected the place of worship with his own money, and condemns the destruction and desolation wrought by the Mongol marauders.

MALTA (ancient Melita; Ar. Māl(i)ṭa; French Malte), the name of the main island of a Mediterranean archipelago which is situated around 100 km from Sicily and about 300 km from Tunisia and which also includes Gozo, Comino, Cominotto, Filf(o)la and some unimportant rocks, measuring 47 km. from the north-west to the south-east. The island of Malta measures 27 km in length and 14 km in breadth; its main town is Valletta (Fr. La Valette), the capital of what has been since 21 September 1964 an independent state included however in the British Commonwealth. In 1968, the total population was around 320,000. Malta is exclusively Christian, and owes its mention in the *EI* solely because it was occupied for more than two centuries by the Muslims and because its official language derives from an Arabic dialect.

1. History. Malta was inhabited in ancient times by a Mediterranean race, whose megalithic monuments are preserved at Hagiar Kim ("standing stones"), Hal Tarxen and Hal Saflieni. It was colonised very early, certainly before the 10th century B.C., by the Phoenicians, and formed a base for their trading ships. It is not certain that the name of Malta is derived from the Phoenician, while the Phoenician origin of Gaulos (Gozo), meaning "a merchant boat of round shape", seems certain.

The Carthaginians became masters of the island in the 7th-6th century B.C. and kept it for four or five centuries. The Romans conquered it in 218 B.C., and for the next ten centuries Malta remained under Roman and Greek influence, being situated near Eastern Sicily. Gozo had only Greek coins, and Greek and Roman coins in great number were minted in Malta. Very early, with St. Paul in the 1st century A.D., the island was converted to Christianity; during the Western Empire's decay the Byzantines established themselves in it; after their conquest of Northern Africa, the possession of Malta became indispensable to them.

The Muslim conquest of Malta is generally fixed in 256/870, but it is possible that the island was the goal of at least a reconnaissance raid in 221/835-6, if one considers it probable that the island was included amongst those against which the Aghlabid Ibrāhīm sent a fleet in that year. E. Rossi (in *EI*[1] s.v.) thought that it would not be too bold to adopt the view of Malta's falling under Muslim domination even before 184/800, and added that de Goeje shared his opinion (in *ZDMG*, lviii, 905 n. 2), but there is nothing to confirm this hypothesis. What seems certain is that in 256/870 a squadron left Sicily under the command of Aḥmad (called Ḥabashī) b. ʿUmar b. ʿAbd Allāh b. Ibrāhīm b. al-Aghlab in order to relieve Malta, which was being invested by a Byzantine fleet (Ibn al-Athīr, vi, 307, and al-Nuwayrī, ed. Remiro, ii, 81, do not give the exact year). This shows that the island was already occupied by the Muslims before that date, and the year 255/869 indicated notably by Ibn Khaldūn (*ʿIbar*, iv, 430) and al-Ḳalḳashandī (*Ṣubḥ*, vi, 121) should probably be retained. The retreat, without a fight, of the Byzantine fleet on 28 Ramaḍān 256/29 August 870 seems to have given the signal for ill-treatment inflicted on the Greek population of the island, the arrest of its bishop, who was then sent into captivity at Palermo, and the destruction of the church, the materials from which were re-used at the time of the construction of the Ḳaṣr Ḥabashī at Sousse.

In Malta, the Muslim occupation was certainly more permanent and strongly established than in Sicily; the narrow island was completely subjugated by the conquerors, who made it a strategic base; this helps us to understand how the Arab-Berber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived (see below, 2).

Besides the Arabic language and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones; one of them, the celebrated inscription called of Maymūna, dated 568/1173, was published more than a century ago, and repeatedly studied by orientalists (Italinski, Lanci, Amari, Nallino, etc.); another one, found in Gozo, is to be seen in the Malta Museum. About twenty more have been found in the excavations in 1922-5 at Rábato (near the place called Notabile); they are preserved in the Museum of the Villa Romana, near the place of the excavations.

The Muslims lost Malta in 483/1090, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 647/1249, the date when Frederick II expelled them. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organised there an important war fleet. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Porte and the Levantine and Barbary pirates. The Turks attempted to occupy Malta in 1565, with their well-known expedition, which ended in disaster, and again in 1614; more than once, they threatened to invade it under Sultan Meḥemmed IV.

A few Arabic manuscripts and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

(E. ROSSI*)

2. The Maltese language. Maltese is the language of the inhabitants of the Maltese Islands (Malta, Gozo, and Comino; *ca*. 330,000 speakers). It is to some extent a mixed language, for its basic structure, together with much of the vocabulary for the more basic features of life, are derived from Arabic—mainly North African Arabic—while an important Romance adstratum (mainly [Siculo-] Italian) comprises, in particular, vocabulary linked with more advanced civilisation. The relation between the two constituent elements is comparable to that between the Anglo-Saxon and Norman French elements in English. For several centuries mainly a medium of oral communication, Maltese became a literary language chiefly during the 19th and 20th centuries; it gained official recognition in 1933, and became the national language of Malta in 1964. It is written in a modified form of the Latin alphabet (29 letters; see table), being the only Semitic language thus written; the present system, officially adopted in 1934, follows

experimentation influenced by Italian and Arabic models from the 18th century onwards. The language has thus been subject to standardising influences only for a comparatively brief period, and it is still actively developing in response to modern needs. Several variants of contemporary Maltese can be distinguished. Literary Standard Maltese, used in *belles lettres*, tends to aim at a mainly Semitic diction. Journalistic Maltese tends to differ from it slightly in spelling, phonology, morphology and syntax, but substantially in vocabulary and phraseology (many foreign loanwords and *calques*). Colloquial Standard Maltese is intermediate between the two, varying in composition according to socio-linguistic factors such as the social standing of individual speakers. In addition, there is dialectal Maltese, varying from town to town and from village to village, but essentially to be divided into urban and rural. Dialectal Maltese is now under threat, owing to the levelling effects of compulsory education and the news media.

Any attempt to offer a description of present-day Maltese, and still more of the past history of the language is faced with some difficulties. Grammars and dictionaries of Maltese were indeed being made at least by the 18th century: notably early works are Agius de Soldanis' grammar *Della lingua Punica presentemente usata dai Maltesi* (Rome 1750), and his unpublished dictionary surviving in manuscript *Damma tla Kliem Kartaginis Mscerred Fel Fom tal Maltin u Ghaucin*, followed by M. A. Vassalli's dictionary *Lexicon Melitense-Latino-Italum* (Rome 1796) and his two grammars, *Mylsen Phoenico-Punicum sive grammatica Melitensis* (Rome 1791), and *Grammatica della lingua Maltese* (Malta 1827). Understandably, the Maltese described by them differs somewhat from that of today. Correct present usage as taught in schools is given in A. Cremona's *Taghlim fuq il-Kitba Maltija* (2 vols. Malta 1934-8; many reprints), and in the grammars by E. Sutcliffe and J. Aquilina listed in the bibliography below. However, Maltese is at present not yet completely covered descriptively; thus no complete comprehensive dictionary on modern lines is available: the one by E. Serracino Inglott, *Il Miklem Malti* (Maltese-Maltese, Malta 1975 ff.) is still proceeding, while the Maltese-English dictionary by J. Aquilina is still to be published. There is also as yet no complete and comprehensive description of Maltese dialects, though work is proceeding.

Historically, Maltese is at present practically undocumented before the 15th century, and very badly known up to the 18th. To the 15th century belongs the earliest known Maltese literary text, the *Cantilena* by Peter Caxaro published by G. Wettinger and M. Fsadni (*Peter Caxaro's Cantilena, a poem in medieval Maltese*, Malta 1968; for a discussion, see the literature quoted by G. Wettinger, in *Jnal. of Maltese Studies*, xii [1978], 88 ff., and R. Bin Bovingdon, in *ibid.*, 106 ff.), as well as Maltese phrases and names of persons and places contained in notarial documents, all written in varying and often ambiguous transcriptions into the Latin alphabet. More texts of this nature are available from the 16th and 17th centuries (cf. G. Wettinger, in *Oriental studies presented to Benedikt S. J. Isserlin*, Leiden 1980, 173 ff.; idem, in *Procs. of the First Congress of Mediterranean Studies of Arabo-Berber influence*, Algiers 1973, 484 ff.), as well as a 16th-century word list gathered by the German traveller H. Megiser, published in his *Propugnaculum Europae* ... (Cracow 1611; discussed by W. Cowan in *Journal of Maltese Studies*, ii [1964], 217 ff.). Of 17th century date is another word list compiled by the English traveller Philip Skippon (cf. A. Cremona, *A historical review of the Maltese language*, Malta 1945, 14), as well as a sonnet by G. P. Bonamico (*ca.* 1672). From the 18th century, a few prose texts also survive, such as popular dialogues by de Soldanis, sermons and other devotional work, the Lord's Prayer (1718) and the first catechism in Maltese (1752)—brief bibliographical notes concerning all of which can be found in Wettinger and Fsadni, *op. cit.*, 8 ff. Broadly speaking, however, Maltese prose literature postdates the age of the early grammarians and lexicographers, though the origins of Maltese folk literature (songs, ballads, tales, proverbs) are earlier. Confronted with this scarcity of data, scholars attempting to trace the development of Maltese, and to explain its character and relations to Arabic dialects, have been compelled to work back from the present state of the language, to some extent, through theoretical reconstruction.

It can, however, be said that Maltese contains, according to present information, no recognisable linguistic elements going back to the pre-Phoenician prehistoric period. Though Phoenician or Punic was both spoken and written in Malta from *ca.* 800 B.C. to the Roman conquest of 218 B.C. and probably afterwards, the once popular opinion that Maltese is a direct descendant from Phoenician or Punic is now antiquated (cf. P. Grech, *Journal of Maltese Studies*, i [1961], 130 ff.).

The persistence of Phoenician substratum influences in Maltese has been suggested by J. Cantineau with reference to the realisation of *ā* as *ō* in Maltese rural dialects (*Cours de phonétique arabe*, Paris 1960, 100), and other scholars have suggested morphological or lexical survivals; but all this remains hypothetical at present. The existence of Latin elements in Maltese vocabulary going back to the period of Roman rule there is also disputed (cf. J.Aquilina, *Papers in Maltese linguistics*, Malta 1961, 8 ff.), and Greek terms which should date from the time of Byzantine supremacy, like *lapsi* (from Greek *analepsis* "Ascension Day") are remarkably few. The linguistic board appears in fact to have been wiped clean to an astonishing extent by the Arab conquest of A.D. 870, which brought in the North African dialectal (pre-Hilālian) Arabic which is still the basis of Maltese. This included some Berber elements in vocabulary (cf. G. S. Colin, in *Mémorial André Basset (1895-1956)*, Paris 1957, 7-16; J. Aquilina, *Maltese linguistic surveys*, Malta 1976, 25 ff.). Possible links with Eastern Arabic, like the Maltese realisation of *ḳ* as a glottal stop, are less cogent, though *bitāʿ*, recently identified in transcription in 15th century Maltese lists as the ancestral form of present Maltese *ta* "of" (G. Wettinger, *Journal of Maltese Studies*, vi [1971], 37 ff.), links Malta with Egypt rather than the North African dialect region, which has *mtaʿ*. Eastern Arabic-derived religious terms were possibly brought to Malta by Maronite clergy (J. Aquilina, *Maltese linguistic survey*, 19 ff.). The essentially Western Arabic dialect ancestry of Maltese is in fact sufficiently evident from two morphological features: the formation of the first persons singular and plural of the imperfect of verbs according to the pattern *nḳtl/nḳtlu* as against Classical and Eastern Arabic *ʾḳtl/nḳtl*, and the replacement of the verbal form derived from IX by a modified XI, with a resultative meaning (like *ħmar* (*ḥmār*) "to redden"). See further on the whole question, Ph. Marçais, ARABIYYA. 3. Western dialects.

Nevertheless, classical literary Arabic was used in Malta as well, down to *ca.* 1200 A.D. at least, as is shown by tombstones and surviving quotations from three 12th century Maltese poets writing in Arabic. This must have kept dialectal tendencies in check at

least among the educated. However, the Norman conquest of A.D. 1090, followed by the expulsion of the Arabs in 1249, gradually separated Malta from the Arabic-speaking world of Islam and linked her with the Romance-speaking part of the Christian West. This would have involved the removal of the linguistic control up to then exercised over Maltese Arabic by the Arab scribal and grammatical tradition, and allowed dialectal tendencies and local linguistic development to progress unchecked. With this one may link grammatical impoverishment, such as the loss of derived form IV of verbs (not all of which can still form perfect, imperfect and participle), or the loss of the feminine plurals of adjectives, besides a reduction and modification in the stock of broken plurals (e.g. merging of type *faʿālīl^u^* with *faʿālil^u^*, spread of *faʿālī*), as well as the survival and development of aberrant forms, like mixed verbal forms derived from forms VII and VIII (such as *intħarat* as well as normal *inħarat* "was ploughed"—Arabic root *ḥ-r-th*), or of forms X and II (like *stkerraħ* "he loathed"—Arabic root *k-r-h*, besides normal forms X of type *staktab*). There are analogies to such developments in dialectal Arabic, including North African Arabic. This is partly true also where the development of auxiliaries is concerned, Maltese *qiegħed/qed* corresponding to dialectical Arabic *ḳāʿid* followed by the imperfect, indicating the actual present.

Lexically, Maltese underwent progressive shrinkage of its Semitic stock—even basic Semitic terms, like "father", "much, many" have disappeared. The former was replaced by Romance *missier*, the latter by Semitic terms changed in meaning, like *ħafna* (Arabic "a handful"), or *wisq* (Arabic "a load"). Changes in meaning are indeed not uncommon: thus, e.g., in Maltese *ħalq* means "mouth", not "throat" as in Arabic. This loss of contact with Literary Arabic also meant that Maltese was not much affected later by the Arabic renaissance of the 19th and 20th centuries; its vocabulary of abstract and technical terms has remained non-Semitic to a considerable extent, the use e.g. of verbal nouns, or of nouns ending in *-iyya* (Maltese *-ija*) for such purposes being much rarer than in Arabic. The replacement of Arabic as a written language first by Latin, then in the 15th century by Siculo-Italian and from the 16th onwards by Italian, the close connection with Sicily which continued during the rule of the Knights (1530-1798), and the influx of Romance speakers (administrators, merchants, artisans, sailors and fishermen) into Malta, all explain the importance which the Romance, and in particular the Siculo-Italian, element then acquired in Maltese. Standard Italian became the language of law and administration, literature and culture, up to the 20th century. The coming of British rule (1813-1964) added an English element to the language, which is noticeable now particularly in such semantic fields as sport, commerce and administration, and in professional and technical vocabularies. The English component in Maltese is still developing, owing to the importance of English as an international medium and also because it is taught in Maltese schools. On the other hand, recent interest in Malta's Arab connections has not so far found much linguistic reflection.

The present condition of the language thus evolved can be summarised as follows. While the Semitic vocabulary in Maltese may be limited, it is quantitatively very strong where actual use is concerned. In literary and ecclesiastical texts it may amount to over 90% of the total, according to word statistical investigation. In spoken Maltese the percentage is smaller, but even in newspapers with their tendency to use foreign loan words the Semitic element comes to over two-thirds, the Romance element to not quite one-third; similarly also in other texts dealing with political, social, and economic matters (cf. F. Krier, *Le maltais au contact de l'italien*, in *Forum phoneticum*, xv, Hamburg 1976, 110 ff.; E. Fenech, *Contemporary journalistic Maltese*, Leiden 1978, 216-17 and *passim*). The growth of this Romance component can be followed to some extent over the centuries: in Peter Caxaro's *Cantilena* there is one single purely Romance term, but by the mid-18th century de Soldanis' dictionary shows the Romance constituent in Maltese vocabulary was fairly substantial. English words in most contexts on the other hand amount to less than 5% of the total.

Phonetically, the Semitic stock of Maltese has undergone considerable changes. Among consonants, the emphatics, primary or secondary, have become fused with the corresponding non-emphatics: *ṭ* > *t*, *ḍ* > *d*, *ẓ* > *d*, *ṣ* > *s* (*ṛ* > *r*, etc.). However, the former presence or absence of emphasis may still be responsible for the different colouring of adjoining vowels: contrast Maltese *sajf* "summer" (Arabic *ṣayf*) with *sejf* "sword" (Arabic *sayf*). Interdental fricatives *dh*, *th* have become stops *d*, *t*. Arabic *ḳ* is normally replaced in Standard Maltese pronunciation by glottal stop (occasionally by *g*; and in some dialect pronunciations by *k*). *Kh* has become fused with *ḥ*, and *gh* with ʿ (but *kh* and *gh* survive as allophones in some dialects). ʿ itself, while still written, is no longer pronounced: it has left traces of various kinds (pharyngalisation, colouring, or lengthening of neighbouring vowels); in some contexts it is replaced by *ḥ*. *H* in standard Maltese is mostly silent (in which case it may cause compensatory lengthening in neighbouring vowels); in certain conditions it may become *ḥ*. Many of these changes seem to have occurred after the 15th or 16th century, when ʿ, *dh*, *th* may still have existed (though the fusion of *dh* and *th* with *d* and *t* may have gone some way in pre-Hilālian Arabic, from which Maltese descended, and *dh* had become *d* in Muslim Sicily); *kh* and *gh* were still fairly widely used in the 18th century. The diminishing Semitic consonantal répertoire was on the other hand augmented by the inclusion of Romance phonemic consonants *p*, *v*, *č*, *ts*, *dz*, and Romance influence is reponsible for a much wider use of *g*. The devoiced pronunciation of voiced consonants, an occasional feature in Arabic dialects, became regular in word final position or before voiceless consonants (thus *bieb* "door" is pronounced approximately *biep*, and *libsa* "suit" *lipsa*). *Vice versa*, voiceless consonants before voiced consonants become voiced. Consonant assimilation, fairly frequent, also affects the verbal prefix *t-* (e.g. *iġġib* (for Arabic *tadjīb* "you/she bring(s)" (via *itjīb*). As for vowels, the various realisations of phonemic vowels (*a*, *i*, *u*:*ā*, *ī*, *ū* inherited from Arabic are supplemented by the phonemic vowels *e*, *o*:*ē*, *ō* taken over from Romance. Since there is pronounced stress in Maltese, short unstressed vowels may disappear. Original Arabic *i* and *u* in open syllable before stress normally vanish, but short *a* is preserved near former emphatics and after ʿ or *gh*; since in some environments it may have gone into *i* before disappearing, Maltese may originally have been a "differential" dialect in Cantineau's terminology (*a* in the feminine singular ending *-a* once seems to have undergone *imāla*—15th century transcriptions not rarely give it as *-e*, but present Standard Maltese again has *-a*; the reasons for this change are not clear. *Imala* of *-a* may still occur in rural dialects). Among long vowels, Arabic *ā* is now mostly represented by *ie* (*ī*) in Maltese, rarely by *ē*—

except near former emphatics, velars, and pharyngals, where it may survive as *ā*. This *ie* is very typical of Maltese; it seems to have spread at the expense of *ē* during the last four centuries. Diphthongs mostly survive with some modification, though Arabic *ay* may be represented by *ī*, and *aw* by *ū*, as in *xitan* (Arabic *s̲h̲ayṭān*) "devil", or *mulud* (Arabic *mawlūd*) "born". Vowel harmony, and the formation of prosthetic and epenthetic vowels, are all noticeable features.

Maltese morphology remains essentially that of dialectal Arabic, somewhat modified and reduced. Foreign loan words may be fitted into this framework: thus, among nouns, *spalla* "shoulder" is given the dual ending *-ejn* (*spallejn* "two shoulders"), and sound or broken plurals are often given to loan words. On the other hand, foreign plural endings may be preserved: Italian *-i* (standing also for Italian *-e*), and English *-s*, the latter in recent loans. Incorporation often involves restructuring of loan words. In the case of Romance loan terms, this has most recently been studied by F. Krier (*Le maltais au contact de l'Italien*, following J. Aquilina, *The structure of Maltese*, Malta 1959; *Papers in Maltese linguistics*. Italian vowels may undergo the impact of Sicilian: cf. Maltese *munita* with Italian *moneta*. Nouns may lose vocalic endings but receive prosthetic prefixes (cf. Maltese *istess* with Italian *stesso*). Unstressed short vowels, but also some consonants, may be lost (cf. Maltese *storbju* with Italian *disturbo*, archaic variant *disturbio*). Early Romance loan words in particular may show a replacement of Romance by corresponding Semitic consonants (cf. Sicilian *palla* with Maltese *balla*). English loan words, recently studied by E. Fenech (*Contemporary journalistic Maltese*) have undergone similar restructuring: cf. e.g. Maltese *kitla*, plural *ktieli*, for English *kettle*. Verbs of both Romance and English derivation are similarly adapted, e.g. by internal modifications, or the addition of prefixes or suffixes; cf. e.g. *ikkopja* "copied" *jibbrajba* "bribes".—The Romance element has in turn affected the Semitic by the incorporation of endings—*azz* (from Sicilian - *acciu*) and *-un* (Italian *-one*) cf. *sakranazz* "addicted to drunkenness" and *darun* "big house", from Semitic *sakrān* and *dār*, respectively.

This substantial influx of foreign terms has led to many Romance-Semitic doublets, such as *hu stessu*/*hu nnifsu*, both meaning "he himself". Sometimes there are different shades of meaning. The occurrence of numerous *calques* derived from Italian and English expressions is a related feature. On the other hand, foreign influence in syntax is rather less marked, though e.g. the frequence of the sentence structure in which the verbal predicate follows rather than precedes the subject may owe something to European models.

Dialectal Maltese has received attention since the 18th century, when Vassalli recognised the existence of five regional dialects in the Maltese Islands and outlined their respective characteristics. H. Stumme's *Maltesische Studien* (*Leipziger Semitische Studien*, i/4, Leipzig 1904) made an outstanding contribution of permanent value; within the last decade, study has received a renewed impetus (cf. works by P. Schabert, J. Aquilina and B. S. J. Isserlin *et alii*, and A. Borg listed in the *Bibl.*). While urban dialects may be nearer to Standard Maltese, rural dialects show some archaic features: *k̲h̲* and *g̲h̲* are still sounded in some Gozitan villages, and the *imāla* of Arabic *ā* into *ē* (or *ī*—the latter found especially in Gozo) recalls 15th century transcriptions. The realisation of the *ā*, preserved as *ā* in standard Maltese, as *ō* is typical of country dialects; so is a tendency towards the diphthongisation of simple vowels, such as *ū* into *eo* or *eu*. The age of the former phenomenon is unclear—up to now, it has not been attested in early transcriptions—but the latter may have spread during the past few centuries. A greater tendency to use rare or archaic terms and broken plurals, and to employ Semitic rather than Romance vocabulary, are shared also by some oral folk literature. All in all, rural dialectal Maltese may represent to some extent a strain parallel to Standard Maltese, but one which is less far removed from the Western Mediterranean Arabic ancestry of the Maltese language than the latter.

3. Maltese literature.

The literature of the small Maltese archipelago emanates from a culture which may still be defined today as Christian, and more specifically as Roman Catholic, in all its essential aspects. The very early Christianisation of the island of Malta (which its inhabitants trace back to a visit made there by Saint Paul—Acts, xxviii, 1-10) was able to resist a Muslim domination of almost four centuries, and Islam does not seem to have exerted a significant influence.

Until the 19th century, Italian, the official and administrative language, the language of education, was the vehicle of Maltese literature, just as it was the language of social relations among the educated classes. But alongside this learned literature, written in a foreign language, there existed, and still exists, an oral and genuinely national literature. At the festival of *Imnarja*, a great popular gathering in the woods of Buskett attended by peasants and artisans from all the villages of the island, among other displays there take place, on the night of 28-9 June, poetical contests and improvisations, some forms of which are approved by public acclamation.

On the other hand, since the end of the 19th cen-

Table showing the Maltese alphabet and corresponding Arabic and Romance sound values

Ż	ż	z	z	z, ʒ
Z	z	ts	t and s in disjunction	ts, č

Note: Long and short vowels are not distinguished in Maltese writings; e.g. *dar* stands for *dār*.

tury, collections of oral literature have been made by foreigners, including the German Stumme, and also by Maltese: Nawel Magri (1851-1907) published collections of popular tales, including *Ħrejjef missierijietna* ("Stories of our ancestors", 1902). Ġużè Cassar-Pullicino (b. 1921) wrote a number of volumes dealing with folklore; one of these, *Femmes de Malte dans les chants traditionnels* (1981), in collaboration with Micheline Galley, specifically studies the feminine repertoire.

These collections reveal the basic forms of this literature: stories which are generally short, very vivid and colourful, little quatrains which are usually satirical or amorous, also lullabies, prayers and ballads of which the most renowned is *L-Għarusa tal-Mosta* ("The wife of Mosta"), the tale of the kidnapping of a girl by Turks on her wedding day.

Similarly, proverbs have been collected since a very early date. In the 18th century, de Soldanis had already made an extensive collection, *Apoftegmi e proverbi maltesi*. He was followed in this course by M. A. Vassalli, whose *Motti, aforismi e proverbi maltesi* dates from 1828, and by G. Aquilina, whose *Comparative dictionary of Maltese proverbs* appeared in 1969.

Despite the cultural domination of Italian, there are available some items written in Maltese dating from before the 19th century. The oldest is a *Cantilena* of twenty verses attributed to Peter Caxaro, dating from the 15th century. Unfortunately, difficulties of reading and a syntax sometimes unfamiliar to modern scholars make its interpretation problematical. Moreover, the system of transcription lacks consistency, since a single phoneme may have two or even three graphical equivalents, and the converse applies. However, analysis of this text shows that certain phonetic evolutions, characteristic of Maltese as currently spoken, have not yet taken place; in particular the pharyngeals and the velars have not disappeared. Also worthy of mention are a short poem by the writer G. F. Bonamico (1639-80) composed *ca.* 1672 and dedicated to the Grand Master Nicholas Cottoner; humorous verses concerning the Carnival composed by Dun Felic Demarco in 1760; religious hymns and also some prose works, including a collection of sermons of Father Ignazio Saverio Mifsud (1739), in a rather feeble oratorical style, and a catechism (*Tagħlim Nisrani*) of F. Wzzino, published in 1752. It was also in the middle of the 18th century that de Soldanis composed his *Djalogi*; this consists of eight short dialogues which were discovered in the manuscript of his grammar and were published in 1947 by Ġ. Cassar-Pullicino. The majority of their protagonists are common people, whom the author makes talk in a very idiomatic manner, from which it may be supposed that these dialogues are a faithful reflection of the popular language of the period. Moreover, they contain a great deal of sociological and historical interest. Also available to us is an acrostic poem (1758) by the same author, in honour of Dr Ludovico Coltellini, secretary of the Academy of Botany and Natural History of Cortona, a documentary rather than literary curiosity.

Maltese prose-writing began quite modestly. Over a long period, the main concern of writers was to translate religious works, as well as Italian, English or French works. M. A. Vassalli himself made an ex-

cellent Maltese version of the Gospels (1823-9). Richard Taylor (1818-68) produced in 1846 a translation of *Robinson Crusoe* which is still highly regarded today. But all these works had the merit of showing that the Maltese language, unjustly scorned by the educated classes, was capable of serving literature of the highest quality.

It is only in the last quarter of the 19th century that an original prose is seen to emerge. The first novels, described as "Gothic" by the Maltese, enjoyed considerable popular success, in spite of their somewhat mediocre quality. *Neriku u Guditta* ("Henry and Judith", 1872), by M. German, *Ġorġ il-Bdot* ("George the Pilot", 1880) by Ninu Muscat Fenech and *Ermelinda u l-vendetta tal-Konti* ("Ermelinde and the vengeance of the Count", 1894) by A. Adam are nothing more than somewhat pale imitations of popular foreign novels. However, some works testify even at this time to a greater degree of independence, such as *Fernandu Montagnes* (1896) by Alwig Vella, or the stories of V. Busuttil, *Il-Ħabib tal-familji* ("The friend of the families", 1893-4). Here too the phraseology is of Italian type, but the reader is no longer aware of the awkwardness of a language of translation. In fact, it should not be forgotten that all these authors began their writings in Italian, a situation still applying at the beginning of the 20th century, before Italian was displaced in favour of English, which became an official language in 1934, at which time Maltese achieved the same status.

Two authors succeeded particularly well in defying the ascendancy of Italian, an achievement which earns them a special place in the history of Maltese literature. The first, A. E. Caruana, is distinguished by the purity of his language and the facility with which he expresses complex notions in spite of a vocabulary remarkably deficient in abstract terms. These features are especially evident in his historical novel *Inez Farruġ*, which appeared in 1889 and of which the action is set in the 15th century during the Spanish occupation, but which denounces by implication all the foreign powers who have ruled the archipelago. The second, Ġużè Muscat Azzopardi (1853-1927), was concerned above all to give to the Maltese language a literary syntax of its own. It may be said that he achieved his purpose with *Nazju Ellul* (1909), a historical work describing the Maltese resistance to the occupation by Napoleonic troops.

But the Maltese novelists of this period, guided by concern for purity and nobility of expression, were generally unable to avoid the pitfalls of an excessively neutral language, of a frigid style dominated by the taste for oratorical eloquence. A further four decades were to elapse before they were able to rid themselves of the shackles of Italian romanticism.

However, their ambitious works exerted only a limited influence on the authors of the 20th century. The stories composed by F. M. Galea (1861-1941), *Mogħdija taż-żmien* ("Entertainments"), between 1899 and 1915, provided a model for a popular literature; written in a simple and living language, dealing with issues of daily and local life, they enjoyed immediate success. But it is to Temi Zammit (1864-1935) that there belongs the privilege of being considered the founder of the Maltese short story, idiomatic and concise. His writings were collected by Cremona in *Stejjer, ħrejeff u kitba oħra* ("Stories, tales and other works") and *Stejjer u kitba oħra* ("Stories and other works") in 1961.

The historical and patriotic vein continued predominant in the inter-war period. Among the works produced at this time and worthy of mention are *Imħabba u mibegħda* ("Love and hate", 1927) and *Helsien* ("Liberty", 1940) by Ġużè Bonniċi (1907-40), *Żmien l-Ispanjoli* ("The time of the Spanish", 1938) by Ġużè Galea (1901-78) and *Anġli tan-niket* ("Angels of sadness", 1938) by Ġino Muscat Azzopardi (1899-1982), the son of Ġużè Muscat Azzopardi.

But, at the same time, new tendencies are taking shape. There is observed the appearance of an ironical tone, hitherto absent from Maltese literature, and Ġwann Mamo (1886-1941) is its initiator. His novel *Ulied in-Nann Venut fl-Amerka* ("The children of Grandmother Venut in America", 1930) is described by the author himself as a "satirico-descriptive, contemporary, semi-political novel". *Leli ta' Ħaż-Żgħir* ("Christmas of Ħaż-Żgħir", 1938) by Ġużè Ellul Mercer (1898-1961) is written in the same vein.

Some clear social preoccupations also begin to be observed, as in *Tejbilhom ħajjithom* ("To improve their life", 1937) by John Francis Marko (1894-1954) or in *Is-Salib tal-fidda* ("The cross of silver", 1939) by Henry Wistin Born (b. 1910).

However, the novel which is still today considered the masterpiece of modern prose belongs to the historical vein. The work in question is *Taħt tliet saltniet* ("Under three dominations"), published in 1937 by Ġużè Aquilina, then only 26 years old. But historical anecdote is here only the pretext for a more general social critique which goes far beyond the scope of the traditional historical novel. Furthermore, the work contains neither melodramatic plot nor rudimentary psychology. In addition, the work is distinguished by a great virtuosity of writing, Aquiline possessing perfect knowledge of the language and its popular usages.

Although under increasing competition, the historical novel was to remain an important genre until the decade of the 1970s. Example include *Manwel Gellel* (1961) by Ġużè Cardona (b. 1922), *Il-Qassis li rebeħ* ("The victorious priest", 1970) by Ġorġ Scicluna (1923-74), or *Beraq u qawsalli* ("Lightning and rainbow", 1976) of Ġorġ Pisani (b. 1909).

The "ironical" novel was also to be developed by M. C. Spiteri (b. 1917) in *L-Għafrid* ("The devil", 1975), and Trevor Zahra (b. 1947) in *Is-Surmast* ("The master", 1973).

But two European movements were to give rise to a new literary genre, the "social" genre, after the Second World War; these were the expressionist movement, which reached the archipelago at a late stage, and the theories of existentialism. The Maltese novel began to turn more and more towards contemporary social reality. Numerous authors achieved renown in this genre, notably Ġużè Chetcuti (b. 1914) who was the pioneer with *Nirien ta' mħabba* ("The fires of love", 1961). He was followed in particular by Victor Apap (b. 1913) and Alfred Massa (b. 1938). The former published *F' bieb il-ħajja* ("At the doors of life") in 1975, the latter *It-Tfajla tal-bikini vjola* ("The girl in the violet bikini") in 1979.

However, this movement only really began to be taken seriously under the pen of J. J. Camilleri (b. 1929). Thus *Aħna sinjuri* ("We are rich", 1965) is a political diatribe against certain aspects of Maltese life.

Finally, since the end of the decade of the 1960s, it has been the psychological novel which has dominated. The characters are no longer out-of-the-ordinary heroes; they are simple individuals, confronted by daily reality. The way was opened in 1968 by Frans Sammut (b. 1945) with his stories *Labirint u stejjer oħra* ("Labyrinth and other tales"). But it was especially in his first novel *Il-Gaġġa* ("The cage",

1971) that he showed himself a writer of talent, confirming this four years later with *Samuraj* ("Samurai"). Alfred Sant (b. 1948) for his part shows more philosophical preoccupations in *L-Ewwel weraq tal-bajtar* ("The first leaves of the fig-trees"), which appeared in 1969. Also worthy of mention are J. J. Camilleri for *Is-Sejħa tal-art* ("The call of the earth", 1974), T. Zahra for *Ħdejn in-nixxiegħa* ("Close to the source", 1975). Anton Grasso (b. 1952) for *Aħjar jibqa joħlom* ("Better continue to dream", 1975), and Oliver Friggieri (b. 1947) with *L-Istramb* ("The strange one", 1980).

Unlike the novel, dramatic art had a long time to wait before attaining a position of prestige. With Italian opera exerting a strong attraction upon the educated classes, theatre was relegated to a status of simple entertainment designed for the people, who had to be content with mediocrity.

It is to Luigi Rosato (1795-1872) that Maltese literature owes its first dramatic work, *Katarina* (1836), a historical and patriotic drama written in verse. But most of the works produced in the 19th century were nothing other than farces and melodramas, without much psychology or technical originality, and served by feeble, barely natural dialogues and excessively conventional situations.

The only dramatist of distinction of this period was Ġużè Muscat Azzopardi, who composed several pieces of romantic inspiration, or of social character, for example *X' Inhuma l-fatati* ("What phantoms are"), a comedy in two acts dating from 1874. Later, his son Ġino also wrote numerous dramatic works of some merit, including *Huwa* ("He").

Later still, certain authors distinguished themselves by sound knowledge of scenic technique and by vivid dialogue. Cremona set the example with a versified drama in five acts, *Il-Fidwa tal-bdiewa* ("The redemption of the farmers"), written in 1913, published in 1936. Subsequently added to the repertoire were some pieces by A. Born (b. 1901), whose main concern was in adapting French or Italian vaudeville, and by E. Sarracino Inglott (1904-83), in whose work the formal influence of the Classical Greek theatre is clearly perceived (*Il-Barrani*, "The stranger", 1942). A. Cassola (1915-74) was renowned in particular for a comedy in three acts, *Il-Vizzju tal-vjaggi* ("The vice of journeys"), and Ġorġ Pisani for four comedies of social nature derived directly from the expressionist trend: *Is-Sengħa tal-imħabba* ("The art of love", 1945). *Għanja tar-rebbiegħa* ("Song of spring", 1947), *Il-Kewkba* ("The star", 1949), and *Is-Sigriet ta' Swor Kristina* ("The secret of Sister Christina"), written in 1958 and published in 1978. Ġ. Chetcuti is also known for his two dramas, *Il-Kerrejja* ("The Reformatory", 1963), and *Imħuħ Morda* ("Sick spirits", 1966), in which he studies the effects of social environment on individuals.

But four authors have been especially esteemed by critics; these are Ġużè Diacono (b. 1912). Ġużè Aquilina, Francis Ebejer (b. 1925) and Oreste Calleja (b. 1946).

Ġużè Diacono is a realist author whose works are both a document and a study of the life of his contemporaries. His most ambitious piece, *Erwieħ marbuta* ("Enslaved souls", 1965) is a transposition to the period of the Second World War of the Biblical story of Samson and Delilah. There also exists in his work a "naturalist" tendency, after the pattern of Zola, especially in relation to the problems of heredity, as emerges from *L-Ewwel jien!* ("I am the first!", 1963).

The works of Ġużè Aquilina show real, and often courageous, moral and sociological preoccupations, as in *L-Ikkundannata* ("The condemned woman", 1969), the plot of which revolves around the drama of an unmarried mother. In 1962, he published a collection of one-act plays, intitled *Fit-teatru* ("In the theatre"), which deal with both serious and humorous themes in a very brisk and masterly style. In 1981, there appeared a collection of three plays: *Xafra mill-borża* ("The knife of the sack"), *Il-Każ taz-Zija Olga* ("The case of aunt Olga") and *Coqqa u dublett* ("Hood and petticoat"), of a very different style which Ġ. Aquilina defines as "the exploration of the mystic aspects of pathological crime".

Francis Ebejer is for his part considered the leading light of the new Maltese dramatic art. His theatre, very philosophical and symbolic, has been strongly influenced by the "Theatre of the absurd" of Ionesco, although he lacks the latter's pessimism, since he always endows his characters with a certain willingness to change. In *Boulevard*, he denounces the absurdity of stereotyped and mechanical human language, as an image of the alienating ascendancy of society over the individual. In *Menz*, a more overtly political play, he contrasts the romantic hero, a positive and revolutionary figure, with the anti-hero, a man without qualities or illusions. These two plays were published in 1970.

Belonging to the same vein is the work of Oreste Calleja, whose four *Drammi* ("Dramas"), appearing in 1972, were favourably received by critics.

With the exception of Dwardu Cachia (1858-1907), whose poems were for the most part based on the octosyllabic metre of popular verse, a form of which M. A. Vassalli was a leading advocate, Maltese poetry, since its beginnings in the 19th century, has been much influenced by the Italian school, copying the metre, the accentual rhythm and strophic forms of classical and romantic poetry.

It was initially in the field of translations that the efforts of the first versifiers, who at this stage can hardly be called poets, were deployed. At around the middle of the 19th century, Dun Dovik Mifsud Tommasi (1796-1879) translated the hymns of the Breviary (1853), as well as the original compositions of a Salvatore Cumbo (1810-77) or of an Indri Schembri (1805-72); Richard Taylor also provided a version of the *Psalms* (1846), then adapted a canto of the *Divine Comedy* in 1864.

Ġan Anton Vassallo (1817-67) has left a corpus that is more personal, although considerably less spontaneous, in which he has experimented extensively in metrical forms. His epic *Il-Ġifen Tork* ("The Turkish galley"), based on the folklore tradition of piracy, written in 1844 and published in 1853, is still widely known.

These authors had opened the way, at least in part, and all that was lacking was a poet of real quality. This was found in the person of Ġużè Muscat Azzopardi. By means of pure and simple language, he was able to avoid the stiffness and monotony of his predecessors, and to adapt an original content to a borrowed form. His poetry, essentially religious, like all Maltese poetry, sought to express the preoccupations of his contemporaries. To him belongs the credit of having removed poetry from servile imitation of classical Italian forms. His influence on the following generation, of which Dun Karm is the most eminent representative, was essential.

The reputation of Dun Karm, considered the national poet, has extended beyond the frontiers of the archipelago, as is attested by the study devoted to him jointly by the Maltese P. Grech and the Englishman A. J. Arberry. He wrote one work of great lyrical in-

spiration which has led him to be compared with Foscolo and Leopardi. In its entirety, it is a long meditation on nature (*Dell u dija*, "Shadow and Light"), history (*Lil Malta*, "To Malta"), the condition of Man, especially in his relationship to God (*Zjara lil Ġesù*, "Visit to Jesus"), and on the destiny of the poet himself (*Non omnis moriar*). Although very romantic in its inspiration and sentiments, the versifying of Dun Karm remained classical and in conformity with the model of Azzopardi, although no constraint is perceptible since the writing is smooth and fluent. The major part of his works was published in 1940 by G. Bonnici in three volumes: *X' Ħabb u x' kaseb il-poeta* ("What the poet likes and thinks"), *X' Emmen il-poeta* ("What the poet believes"), and *X' Ħamel izjed il-poeta* ("What the poet does most"). O. Friggieri devoted a critical edition to him in 1980: *Dun Karm, il-poeżiji miġbura* ((Dun Karm, collected poems").

Among his contemporaries, Anastasju Cushieri (1876-1962) and Ninu Cremona showed the greatest audacity in prosodic and rhythmic style. Cushieri's poem *Il-Millied* ("Christmas") contains no less than six different metres within a very complex structure. Cremona has adopted the rhythms and the lightness of popular poetry in his recent *Għana Malti* ("Maltese songs"), after going somewhat astray in attempts at complicated syntax. A collection of his poems was edited in 1970 under the title *Mis-Siġra ta' ħajti, weraq mar-riħ* ("From the tree of my life, leaves in the wind").

All of this poetry is characterised chiefly by a very serious and relatively objective manner of approaching religious, patriotic or narrative subjects, which is found in such diverse works as those of Ġorġ Pisani, who gives the impression of being an Epicurean (*Il-Għid taż-żgħożija*, "The feast of youth", 1945), Ġorg Zammit (b. 1908), Ġ. Aquilina, Mary Meylaq (1905-75), a poetess of nature as is shown by her collection *Pleġġ il-hena* ("The promise of joy", 1945) and *Villa Mejlaq* (1947), Anton Buttigieg (1912-83), or Ġużè Delia (1900-80), renowned as the poet of legends following the appearance in 1958 of his collection *Leġġendi*.

But even among the poets of this generation there is already a perceptible change, with the deepening of poetic sentiment. "Religious fervour is tainted by pessimism and often has the object of questioning the norms of social life. Patriotic exaltation yields to philosophical or poetic satire. Lyricism becomes more personal" (David Cohen, *La littérature maltaise*, in *Encyclopedie de la Pléiade*). The work of a certain Karmenu Vassallo (b. 1913) takes this new tendency to the extreme. His collections, *Nirien* ("Flames, 1938), *Kwiekeb ta' qalbi* ("Stars of my heart", 1944), *Ħamien u sriep* ("Doves and serpents", 1959) and *Tnemnim* ("Flickerings", 1970) give the impression of a man disgusted with his century. Even Rużar Briffa (1906-63), in spite of the elegance and the musicality which characterise his work, is not immune from existential pessimism (*Jien ma naf xejn*, "I know nothing", 1957) and from social and political indignation (*Milied atomiku*, "Atomic Christmas", 1957).

His influence, as well as that of Wallace Gulia (b. 1926) who has greatly diversified his source of inspiration, has exerted a powerful influence on contemporary poetry. Indignation and lyricism, despair and hope, are intermingled in the world of young Maltese poetry, and there has been a revival of amorous poetry. Moreover, unlike their elders who were moulded by the influence of the Italian school, contemporary poets turn rather towards English poetry (that of T. S. Eliot for example) or French, abandoning classical versification. However, there has not been a crucial break with tradition, since Roman Catholicism still maintains the link with the preceding generation, and the same Christian perception of the world is evident.

Nevertheless, the independence of the country in 1964 induced among many young Maltese writers a new awareness of the restraint which the British occupation had constituted; this sense was accompanied by a reaction against the scholasticism of ancient poets. But this national awareness was combined with a desire to set poetry on the level of modern European literature. This was expressed in a kind of "dispute of the Ancients and the Moderns". Out of this controversy there was born in November 1966 the *Moviment Qawmien Letterarju* ("Movement for Literary Revival"), of which the first efforts materialised, under the inspiration of Victor Fenech (b. 1935), in publications to which all young authors contributed: *Kwartett* ("Quartet") in 1965, *Dħaħen fl-imħuh* ("Smoke in the brains") in 1967, *Prizmi* ("Prisms") and *Antenni* ("Antennae") in 1968 and *Kalejdoskopju* ("Kaleidoscope") in 1969. In 1973 P. Serracino Inglott (b. 1936) devoted an authoritative anthology to this movement, *Linji godda* ("New lines").

Numerous authors illustrate this "revival": J. J. Camilleri, Marjan Vella (b. 1927) and Bernard Mallia (b. 1941) have succeeded in creating in various genres a synthesis between tradition and modernity. Ġorġ Borġ (b. 1946), greatly influenced initially by R. Briffa, has subsequently shown an occasional affinity with modern Arabic poetry in poems that are for the most part very short and melodious (*Solitudni fir-ramla*, "Solitude in the bay", 1978). Achille Mizzi (b. 1936), in *L-Għar tal-enimmi* ("The cave of the enigma", 1964) attempts a new metrical system. A poet of dreams and of mythology, he appeals to the mind rather than to the feelings. Daniel Massa (b. 1937), while being very close to the last-named, showed greater audacity in the treatment of themes.

Mario Azzopardi (b. 1944) expresses with great violence the protest of the individual against society in *Il-Qniepen nhar ta' ġimgħa* ("The bells of Friday", 1971); he is also a poet of sensuality. But his stylistic experiments sometimes lead him to copy foreign phraseologies.

Victor Fenech is also one of the most rare "committed" poets, but his vision is more analytical than that of M. Azzopardi. Worthy of mention, finally, are Joe Friggieri (b. 1946); Lilian Sciberras (b. 1946); Kenneth Wain (b. 1943); Philip Sciberras (b. 1945), an autobiographical author; and O. Firggieri, whose cold style conceals a deep despair.

These are some of the names which attest to the vitality of this poetry, the finest flower of Maltese literature.

The history of Maltese literature, barely a century old, is closely linked with the development of a literary language, the objective of several generations of writers. Today, the objective seems to have been attained. Works such as those of Dun Karm or Aquilina show that, after the ideological barriers, the linguistic obstacle has also been overcome. Furthermore, the Maltese writers, while succeeding in preserving their national identity, increasingly show a desire and a real capacity to exert a universal appeal.

For their part, the Europeans have begun to take an interest in this young literature, through the medium of anthologies and translations, of which the most recent are devoted to Dun Karm, Ġużè Galea (in English), Anton Buttigieg (in Italian) and Oliver Figgieri (in Serbo-Croat).

It may be agreed with the writer Guzè Cardona that

"the effort represented by the flowering of Maltese language and literature, coming from a small nation of 320,000 souls, is such as to fill us ... with astonishment and admiration".

(MARTINE VANHOVE)

AL-**MAᶜLŪF**, a Lebanese family name which became renowned throughout the Arab world through the literary and other intellectual efforts of at least ten of its members, both in Lebanon and in the *Mahdjar* [*q.v.*], during the past 150 years. The best known members are Nāṣīf (1823-65), Lūwīs (1867-1947), Yūsuf (1870-1956), Amīn (1871-1943), the three brothers Ḳayṣar (1874-1964), Djamīl (1879-1950) and Mīshāl (1889-1942) and ᶜĪsā Iskandar (1869-1956) and his sons Fawzī (1899-1930) and Shafīḳ (1905-76).

According to ᶜĪsā Iskandar, who wrote the history of the family, the Maᶜlūf family are descendants of the Ghassānids [*q.v.*] who had their centre at Dāma al-ᶜUlyā in the Ḥawrān. They gave armed support to the four Rightly-Guided caliphs and so won exemption from paying the poll-tax. The same services were rendered to the Umayyads, who likewise exempted them from payment of the poll-tax. They called themselves Banu 'l-Maᶜyūf, because of the *iᶜfā'* (exemption) which they enjoyed. The ᶜAbbāsids did not prolong this privilege for the supporters of their adversaries, and then the name was changed into Banu 'l-Maᶜlūf.

The Ḥawrān became less secure for Christians when a new round of fights between the Ḳays and the Yaman [*q.v.*] had begun at the beginning of the 15th century. Some members of the Maᶜlūf clan left the Ḥawrān. One of those who left was Ibrāhīm al-Maᶜlūf, called Abū Nātiḥ because of his large offspring. He settled in Sirᶜīn not far from the Baᶜalbakk. His descendants split up after a fight in 1572 and settled in Nazareth, Djūni, al-Muḥaydatha and above all in Kfar ᶜAḳāb. The descendants of those who settled in Kfar ᶜAḳāb again spread over Syria and Lebanon with Zaḥla as their main city (see *al-Machriq*, viii, ix).

Muslim branches of the family are mentioned by ᶜĪsā Iskandar in his *Riḥlatī ilā Miṣr* (*al-Adīb* [March 1964], 58-9). He describes his visit in 1934 to the shrine of al-Shaykh Aḥmad al-Maᶜlūf in Shubrā al-Khayma, Cairo, to which he refers as a place of pilgrimage and of a *mawlid*. Among his other discoveries is a manuscript in the National Library in Cairo, with the title *Riyāḍ al-nufūs*, by Abū Bakr ᶜAbd Allāh al-Mālikī. This manuscript mentions the *Āl al-Maᶜlūf al-muslimīn fī Siḳilliyya wa 'l-Ḳayrawān wa-Sūsa*. The oldest Maᶜlūf mentioned is Abū ᶜUmar Ibn Maymūn b. ᶜAmr b. al-Maᶜlūf, who died in 316/928 (see *al-Adīb, loc. cit.*).

1. NĀṢĪF al-MAᶜLŪF (Nassif Mallouf), born in Zabbūgha (Lebanon) 20 March 1823, died near Smyrna 14 May 1865.

He received his first educational lessons at Bayt al-Dīn, where he went with his father, *ᶜāmil* of the *amīr* Bashīr II (1788-1840). He met there the poets and the scholars who were invited to Bayt al-Dīn by Amīr Bashīr, among whom he met Nāṣīf al-Yāzidjī. Languages attracted his prime interest. He was engaged by a merchant from Smyrna to instruct his sons in Arabic and to teach them the basic rules of French in 1843. Part of his time was reserved for the business of the merchant. In 1845 he was nominated teacher of eastern languages at the school of the Propaganda of the Lazarists at Smyrna. From then on, he used his spare time for the study of Turkish, Italian and modern Greek. He was Dragoman to Lord Raglan, the supreme commander of the English forces during the Crimean War, whom he accompanied from August 1855 to September 1856. His travels with Lord Raglan brought him to London, where he stayed until the end of the year. During this stay, he was elected a member of the Athenaeum Club. He then became Dragoman to Sir Henry Bulwer, whom he accompanied from Bucharest to Istanbul. In 1858 he went back to Smyrna to become the first Dragoman of the English consul. He died in 1865 from yellow fever.

All his chroniclers make mention of the fact that Nāṣīf al-Maᶜlūf was a member of both the English and the French Asiatic Societies. He is listed as a member of the Société Asiatique from 1854, and the Royal Asiatic Society has his name on its lists of members from 1860 until 1867. A *curriculum vitae* was published in French in the *Courrier d'Orient*.

His most renowned works are his French-Turkish and Turkish-French dictionaries. The first was printed in Smyrna in 1849 and reprinted in 1856 by Maisonneuve in Paris and listed as Nassif Mallouf, *Dictionnaire français-turc*. The companion volume *Turc-français* was first published in 1863. Most of his polyglot and two-language conversation books had at least one reprint edition. His *Grammaire élémentaire de la langue turque* was published by Maisonneuve.

Bibliography: *Maṣādir al-dirāsa al-adabiyya*, Beirut 1957, iii, 1258-61; Y. A. Dāghir, in *al-Machriq*, viii, ix; Ziriklī, *al-Aᶜlām*⁴, vii, 350; *Philologiae turcicae fundamenta*, i, Wiesbaden 1959.

2. LŪWĪS AL-MAᶜLŪF, SJ (Louis Maᶜlūf), born in Zaḥla 18 October 1867, died in Beirūt, 7 August 1947. He was baptised with the name Ẓāhir, which he changed into Louis upon his entry into the Jesuit Society. He studied at the Jesuit College in Beirut, went to England to study philosophy and studied theology in France, where he stayed for ten years. He is best known for his *al-Mundjid fi 'l-lugha wa 'l-adab wa 'l-ᶜulūm*, the first edition of which dates from 1908 and which has since been reprinted and expanded in many editions.

From 1906-32 he was director and editor of the Catholic weekly *al-Bashīr*. Its annual supplement *Taḳwīm al-Bashīr*, the almanac, was made by him into a useful instrument of information on matters of calendar, church and state, in that order. His *Maḳālāt falsafiyya ḳadīma li-baᶜḍ mashāhir falāsifat al-ᶜarab, muslimīn wa-naṣārā* was first published in Beirut in 1911 by the Imprimerie Catholique and then

republished at Frankfurt in 1911 with the French title *Traités inédits d'anciens philosophes arabes musulmans et chrétiens, publiés dans la revue al-Machriq par L. Malouf, E. Eddé et L. Cheikho.* He edited *Taʾrikh ḥawādith al-Shām wa-Lubnān min sanat 1197 ilā sanat 1257 (1782-1841)* of Mikhāyil al-Dimashkī, Beirut 1912. His *Riyāḍa rūḥiyya li 'l-kahana ḥasab ṭarīkat al-kiddīs Ighnāṭiyūs* was published in 1937 in Beirut.

Bibliography: Dāghir, *Maṣādir*, ii, 727-9; Ziriklī, *al-Aʿlām*⁴, v, 247; Riyāḍ al-Maʿlūf, *Shuʿarāʾ al-Maʿālifa*, Beirut 1962, 85.

3. YŪSUF NUʿMĀN AL-MAʿLŪF, born at Zaḥla 1870, died at New York, 18 June 1956. He emigrated to North America, settled in New York and founded the newspaper *al-Ayyām*, which survived for ten years from 1897 to 1907. He enlisted the help of his nephew Djamīl (no. 6), who migrated for this purpose. Through their newspaper they made propaganda for Arab independence, and thus earned the displeasure of the Ottoman government. Both were condemned to death under Djamāl Pasha, the military governor of Syria from 1915 until the end of the Syrian campaign of the combined Arab-English forces. Yūsuf, however, never came within reach of the Ottoman authorities. Together with Djamīl he published *Kitāb Khizānat al-ayyām fī tarādjim al-ʿiẓām*, New York 1899, a biographical dictionary of important men, Arabs and Turks. Another joint publication is *Asrār Yildiz aw al-ʿakd al-thamīn fī taʾrīkh arbaʿat salāṭīn*, New York 1900. His other publications were *Lāʾiḥat Ismāʿīl Bek*, and *Ḥikāyat Abi 'l-Hudā.*

Bibliography: Dāghir, *Maṣādir*, iii/2, 1262-3; Ṣaydaḥ, *Adabunā wa-udabāʾunā fi 'l-Mahādjir al-Amīrkiyya*², Beirut 1957, 21, 307; al-Badawī al-Mulaththam, *al-Nāṭikūn bi 'l-ḍād fī Amīrkā*, New York 1946, 36; Ziriklī, *al-Aʿlām*⁴, viii, 255; Riyāḍ Maʿlūf, *Shuʿarāʾ al-Maʿālifa*, 88.

4. AMĪN FAHD AL-MAʿLŪF, born in al-Shwayfāt (Lebanon), 1871, died in Cairo, 21 January 1943.

Amīn al-Maʿlūf studied medicine at the Medical Faculty of the University of Beirut until 1894 and then went to Istanbul to obtain his *idjāza*. He served as a physician in the Egyptian army and took part in the Sudan expedition, the battle of Khartoum and the occupation of Bahr al-Ghazāl. An account of the Baḥr al-Ghazāl occupation by his hand was published in ten instalments in *al-Muktafaf* in 1911 and 1912.

He was active during the Balkan war and during the battle of the Dardanelles in the First World War, and then joined the Arab forces of Sharīf Ḥusayn. He taught biology at the Maʿhad al-Ṭibbī al-ʿArabī in Damascus after the capture of that city. When the French put an end to the rule of Fayṣal over Syria and the British offered him ʿIrāk instead, Amīn also went to ʿIrāk to serve in the ʿIrākī army. He returned to Egypt when his time of retirement had come.

He wrote a large number of articles on Arabic scientific terms, especially on the names of plants. His *Muʿdjam al-ḥayawān* was published in instalments in *al-Muktaṭaf*, from 1908 onwards, giving the English names in alphabetical order, followed by the scientific names, the Arabic equivalents and the current Arabic names. It was republished in book-form by *al-Muktaṭaf* and given to the subscribers as the annual present in 1932. A supplement was published not long after, possibly in 1933. His *al-Muʿdjam al-falakī* appeared in Cairo, 1935. Studies about plant-names appeared in the *Madjallat al-Madjmaʿ al-ʿIlmī al-ʿArabī*, but reasons of health prevented the author from developing these studies into a dictionary of plant names. Medical terms in Arabic were another field of study for him. He started the translation of *Webster's Dictionary*, reaching the letter F. An obituary by Fuʾād Ṣarrūf appeared in the magazine of the Overseas Services of the BBC, *Hunā London*, no. 75 (Febr. 1963), 30.

Bibliography: *al-Adīb*, 55-6; Dāghir, *Maṣādir*, ii, 713-15; Ziriklī, *al-Aʿlām*⁴, iii, 19; *al-Muktaṭaf*, lxxxvii (1935), 245, cii (1943), 186, 418, 479.

5. KAYṢAR IBRĀHĪM AL-MAʿLŪF, born in Zaḥla 1874, died in Beirut, 25 April 1961; brother of Djamīl and Mīshāl, brother-in-law of ʿĪsā Iskandar and nephew of Yūsuf, his paternal uncle.

In 1895 he emigrated to São Paulo, Brazil. In 1898 he became editor of the newspaper *al-Barāzīl*, which had been founded in Santos in 1896 and had been moved to São Paulo in 1897. He continued to work for this paper until 1903, when it was absorbed by the paper *al-Afkār*. He was one of the founding members of an Arabic literary circle among emigrants *al-Nahḍa al-adabiyya* and of the literary club *Riwāk al-Maʿarrī*, both in São Paulo. The *Riwāk al-Maʿarrī* was quite popular, having many itinerant merchants among its members. Their main activity was the recitation of newly-received poems by Aḥmad Shawkī and Khalīl Muṭrān, followed by comments and imitations along well-known lines of the *muʿāraḍa* (Ṣaydaḥ, 151). The activities of the *Riwāk* came to an end during the First World War, when preference for nationalistic content to the detriment of literary value drove the better poets out (Ṣaydaḥ, 316). Kayṣar had meanwhile, in 1906 (Riyāḍ al-Maʿlūf, *Shuʿarāʾ*, 45) or 1914 (Ziriklī, *Aʿlām*⁴, v, 209 f.) returned to Lebanon.

The list of his publications opens with a play in verse, *Riwāyat Nīrūn*, Zaḥla 1894. His *dīwān, Tidhkār al-Mahādjir*, was published in São Paulo in 1904, as were his novels: *al-Ghāda al-Sūriyya fi 'l-diyār al-Amīrkiyya*, São Paulo 1907; *Fidyat al-ḥubb*, São Paulo 1907 and *Midḥat Bāshā*, São Paulo 1907. *Djamāl bilādī* is an epic poem which appeared in Beirut in 1939. The *Dīwān Kayṣar al-Maʿlūf* was published in Beirut in 1958.

Bibliography: F. dī Ṭarrāzī, *Kurrās al-nasharāt al-dawriyya al-ʿarabiyya*, Beirut 1933, 450-1; Riyāḍ Maʿlūf, *Shuʿarāʿ al-Maʿālifa*, 45; Dāghir, *Maṣādir*, iii/2, 1256 f.; Ziriklī, *al-Aʿlām*⁴, v, 209 f.; Ṣaydaḥ, *Adabunā wa-udabāʾunā*, 151, 316, 454.

6. DJAMĪL AL-MAʿLŪF, born at Zaḥla, 15 February 1879, died 30 December 1950; brother of Kayṣar and Mīshāl, brother-in-law of ʿĪsā Iskandar and nephew of Yūsuf Nuʿmān, his paternal uncle.

He learned Turkish in Beirut and then, in 1896, answering the call of his uncle, he migrated to the United States and helped in editing the newspaper *al-Ayyām*. He became a member of the literary circle *al-Ḥalka al-Afghāniyya*. Part of his time he spent travelling between New York, São Paulo and Lebanon. In 1908 he went to Paris and made contact with the Turks who were working for the deposition of ʿAbd Ḥamīd II. The following year, after ʿAbd Ḥamīd's reign had come to an end, Djamīl travelled via Istanbul to Beirut. The coming of Djamāl Pasha as military governor of Syria turned out to be a direct threat against his life. He was condemned to death, but escaped from being hanged as his family knew how to hide him from Turkish eyes. An incurable disease put him in hospital before the First World War ended, and there he remained until his death in 1950.

He wrote a large number of articles for the newspaper *al-Iṣlāḥ* in Brazil with the title *Kayf taṭhūr al-umam*. With his uncle Yūsuf he published *Khizānat al-ayyām fī tarādjim al-ʿiẓām*, New York 1899, in which publication he wrote the part concerning the Turkish notables. His *Turkiya al-djadīda wa-ḥukūk al-insān*, São Paulo, is said to have served Kemāl Pasha as a hand-

book, but the catalogue of Atatürk's library does not mention the book. Djamīl advocated turcification of the country, the separation of church and state, unified schooling programmes, the adoption of the European dress, etc.

His further publications include *Waṣiyyat Fuʾād Bāshā*, Sao Paulo 1908, and *Ḳānūn al-ṣiḥāfa al-ʿarabiyya*, also 1908, which he translated from the Turkish.

Bibliography: *Madjallat al-ʿUṣba*, xi/4 (April 1951), 297-308; *al-Adīb*, x/4 (April 1951), 55 ff.; Riyāḍ al-Maʿlūf, *Shuʿarāʾ al-Maʿālifaʾ*, 21-2; Dāghir, *Maṣādir*, ii, 716-19; Ṣaydaḥ, *Adabunā wa-udabāʾunā*, 308; Ziriklī, *al-Aʿlām*⁴, ii, 137; *Atatürk'ün özel kütüphanesinin kataloğu (Anıtkabir ve Çankaya bölümleri)*, Ankara 1973.

7. MĪSHĀL AL-MAʿLŪF, born in Zaḥla, 1889, died in Beirut, 3 June 1942; younger brother of Ḳayṣar and Djamīl, brother-in-law of ʿĪsā Iskandar, and nephew of Yūsuf Nuʿmān al-Maʿlūf, his paternal uncle.

His fame chiefly rests on the fact that he was one of the founding-members and the first chairman of *al-ʿUṣba al-Andalusiyya* from 1932 to 1938, being one of the sponsors who made the publication of the monthly *al-ʿUṣba* possible. In 1938 he returned to Lebanon.

His contribution to Arabic poetry was limited. Some of his poems are reprinted as an appendix to the memorial volume *Fī haykal al-dhikrā*, containing the commemorative speeches and the elegies of the members of *al-ʿUṣba al-andalusiyya*, as well as the "In memoriam"'s which had appeared in *Djarīdat Zaḥla al-Fatāt* and in the monthly *al-Adīb*. A play by his hand, *Sadjīn al-ẓulm*, was printed at Zaḥla in 1910.

Bibliography: *Fī haykal al-dhikrā*, São Paulo 1944; Riyāḍ al-Maʿlūf, *Shuʿarā al-Maʿālifa*, 51.

8. ʿĪSĀ ISKANDAR AL-MAʿLŪF, born at Kfar ʿAḳāb, 23 April 1869, died 2 July 1956. He married in 1897 ʿAfīfa Maʿlūf, the daughter of Ibrāhīm Bāshā al-Maʿlūf. Out of this marriage were born Fawzī (1899-1930) and Shafīḳ (1905-76), for whom see below, nos. 9 and 10.

ʿĪsā Iskandar received his education at the Scottish Missionary school in his home village and at the Scottish Missionary school in al-Shuwayr. Circumstances forced him to leave this last school and to pursue his studies privately. In 1890 he was nominated teacher at the Patriarchal Orthodox school in Damascus. Almost simultaneously, he began to contribute historical articles to the periodical *al-Niʿma*, and in December of the same year he started to work as the editor, secretary and proof-reader of the newspaper *Lubnān*. He exchanged Damascus for Zaḥla in 1898 to teach Arabic, English and Mathematics at al-Kulliyya al-Sharḳiyya (al-Badawī al-Mulaththam, *ʿĪsā Iskandar*, 49). His articles in *al-Machriq* in this period have his name followed by the words *mudarris ādāb al-lugha al-ʿarabiyya wa ʾl-khiṭāba*. At al-Kulliyya al-Sharḳiyya he edited and printed the paper *al-Muhadhdhib* from 1901 onwards, and, after an absence from the college for one year, 1908-9, he produced the paper *al-Sharḳiyya*. Both papers were produced on a forerunner of the stencil-machine. In 1903 he founded the *Djamʿiyyat al-nahḍa al-ʿilmiyya* for his students as a training-ground on which they could develop their eloquentia and where they could indulge into literary research. He was its chairman until 1921. He made an important contribution in the field of humanities when in 1911 he founded *al-Āthār*, a periodical devoted to history, archaeology and literature, to which many scholars of fame throughout the Arab world contributed. The periodical continued to appear until 1928, with an interruption of three years during the First World War.

His efforts in the field of learning were so much appreciated that he became a member of the learned societies in Syria, Lebanon and Egypt on the very first day of their existence. On 8 January 1918 the *Shuʿbat al-tardjama wa ʾl-taʾlīf* was formed during the reign of Fayṣal in Syria. It was transformed into the *Madjlis al-maʿārif* and then in 1919 into *al-Madjmaʿ al-ʿilmī al-ʿarabī*. He was a member of these societies from the first day, as also of *al-Madjmaʿ al-ʿilmī al-Lubnānī*, founded on 20 February, 1928. The *Madjmaʿ al-lugha al-ʿarabiyya* Egypt counted him among its members on its foundation-day, 6 October 1933. In 1936 he was nominated corresponding member of the Brazil Academy of History and Literature in Rio de Janeiro.

He was a very prolific writer. Ṭarrāzī, *Taʾrīkh al-Ṣiḥāfa*, ii, 234-8, lists almost 40 journals and magazines to which he contributed his articles on a wide variety of subjects. Larger works were often serialised in magazines and then printed in book-form. Dāghir lists 22 printed works and more than 50 titles of works which did not pass the manuscript-stage. During his lifetime he acquired a large library of about 1,000 manuscripts and 10,000 printed works. Some 500 manuscripts were purchased by the American University in Beirut and catalogued.

The following is a list of works published in book-form or serialised in the periodicals *al-Adīb*, *al-Machriq* and *al-Muḳtaṭaf*:

—*al-Kitāba*—a volume of studies on script, language and writing (84 pp.), 1895—*Lamḥa fī ʾl-shiʿr wa ʾl-ʿaṣr* (40 pp.) 1902—*al-Akhlāḳ. Madjmūʿ ʿādāt*, Zaḥla 1902—*al-Mubkiyāt*, a collection of elegies in memory of Mrs. Mahība bint Yūsuf Abī ʿAlī al-Maʿlūf, the wife of Ibrāhīm al-Aswad, proprietor of the newspaper *Lubnān*, 1903—*al-Iḥtiḍārāt wa-ḳabariyyāt*, about last words and epitaphs. A series of articles in *al-Muḳtaṭaf*, xxx-xxxi (1905-6)—*Nāṣīf al-Maʿlūf wa-usratuhu*, a series of articles on the origins of the al-Maʿluf family and a short biography of Nāṣīf al-Maʿlūf, in *al-Machriq*, viii-ix (1905-6)—*al-Khūrī Djirdjis ʿĪsā al-Lubnānī*, 2 parts, in *al-Machriq*, ix, (1906)—*Nukhba min dīwān Ibrāhīm al-Ḥakīm al-Ḥalabī*, 4 parts, in *al-Machriq*, x (1907)—*Dawānī al-ḳuṭūf fī sīrat Banī Maʿlūf*, al-Maṭbaʿa al-ʿUthmāniyya, Baʿabda 1908. Apart from being a family history of the Maʿlūfs, other families are also followed. The book is a history of Lebanon, Syria and Palestine with information about customs. Asad Rustum, in *al-Machriq*, lvii (1963), 518-20, describes the book as an encyclopaedia of the situation in Lebanon in the first half of the 19th century as it survived in the memories of the old people at the end of that century. The subtitle is *A general socio-historical book, being a description of facts, morals and customs and cultural affairs.*—*Nukhba min amthāl al-ḳiss Ḥanānyā al-Munīr*, 5 parts, in *al-Machriq*, xii, (1909)—*al-Shuʿarāʾ wa ʾl-sirḳāt wa ʾl-maʾākhidh al-shiʿriyya*, 16 parts, in *al-Muḳtaṭaf*, xxxvii-xxxix, xliv-xlvi (1910-15)—*Taʾrīkh madīnat Zaḥla*, 298 pp., Zaḥla 1911 and 1912—*Taʾrīkh Lubnān*, printed during World War I, it is said.—*Muʿāraḍāt Yā layl al-ṣabb*, a collection of *muʿāraḍāt* and the original poem by al-Ḥuṣrī al-Ḳayrawānī [see Abu ʾl-Ḥasan al-Ḥuṣrī al-Ḳayrawānī, ed. of M. Marzūḳī and Dj. b. al-Ḥādjdj Yaḥyā, Tunis 1963, 143-9 and *muʿāraḍāt*, 150-201, containing César al-Maʿluf (177-9), ʿĪsā Iskandar (182-4), Fawzī al-Maʿluf, (185-6) and a *muʿāraḍa* by ʿĪsā Iskandar 1921, also published in *al-Muḳtaṭaf*, lix, (1921)]—*Taʾrīkh al-ṭibb ḳabl al-ʿarab*, 55 pp., 1924—*Taʾrīkh al-ṭibb ʿind al-ʿarab*, Damascus 1922—*al-Ḳilāʿ wa l-ḥuṣūn fī Sūriyya*, in *al-Muḳtaṭaf*, lxi-lxiii, lxv, (1922-4)—*Ṣināʿāt Dimashḳ al-ḳadīma*, Damascus 1924—*Taʾrīkh ḳaṣr Āl al-ʿAẓm bi-Dimashḳ*, Beirut 1926. This was serialised in *al-Machriq*, xxiv

(1926) with the title *Ḳaṣr Asʿad Bās̲h̲ā al-ʿAẓm fī Dimas̲h̲ḳ—al-Ḳaḍāʾ fī Lubnān bi-zaman al-umarāʾ al-S̲h̲ihābiyyīn*, in *al-Machriq*, xxxi (1933)—*Taʾrīk̲h̲ al-Amīr Fak̲h̲r al-Dīn al-Maʿnī al-t̲h̲ānī ḥākim Lubnān min sanat 1590 ilā sanat 1635*, 468 pp., Beirut 1934 and 1966, also published in *al-Machriq* until vol. xxx (1932)—*al-Usar al-ʿarabiyya al-mus̲h̲tahira bi 'l-ṭibb al-ʿarabī wa as̲h̲har al-mak̲h̲ṭūṭāt al-ṭibbiyya al-ʿarabiyya* (60 pp.), Beirut 1935—*al-G̲h̲urar al-taʾrīk̲h̲iyya fi 'l-usra al-Yāzid̲j̲iyya*, two parts of 128 and 142 pp., Sidon 1944 and 1945—*Taʾrīk̲h̲ Mas̲h̲āyik̲h̲ al-Yāzid̲j̲iyyīn wa-as̲h̲ʿārihim*, Dayr al-Muk̲h̲alliṣ 1945, which is an abridged edition of *al-G̲h̲urar al-taʾrīk̲h̲iyya—Muʿd̲j̲am al-alfāẓ al-ʿāmmiyya al-ʿarabiyya wa 'l-dak̲h̲īla*, serialised in 9 parts in *al-Adīb*, iii (1944), iv (1945). The introduction gives a survey of Arabic colloquial words and expressions from ancient until modern times.—*Muʿd̲j̲am taḥlīl asmāʾ al-as̲h̲k̲h̲āṣ*, serialised in *al-Machriq*, lix-lx (1964-6)— *Muʿd̲j̲am taḥlīl asmāʾ al-amākin fi 'l-bilād al-ʿarabiyya*, serialised in *al-Machriq*, liii-lvii (1959-63)—*Taʾrīk̲h̲ Ṣaydnāyā*, written in 1924 but not published till 1973 at Bikfāyā—*al-Ak̲h̲bār al-marwiyya fī taʾrīk̲h̲ al-usar al-s̲h̲arḳiyya*, only partly published in periodicals.

Bibliography: *al-Adīb*, xvi/1 (January 1957), 56-7; *al-Machriq*, lvii (1963), 518-20; al-Badawī al-Mulat̲h̲t̲h̲am, *ʿĪsā Īskandar al-Maʿlūf: al-muʾarrik̲h̲, al-mawsūʿī, al-adīb*, Cairo 1969; Riyāḍ al-Maʿlūf, *al-ʿAllāma al-Marḥūm ʿĪsā Iskandar al-Maʿlūf, ʿuḍw al-Mad̲j̲āmiʿ al-ʿilmiyya al-ʿarabiyya: ḥayātuhu, āt̲h̲āruhu, baʿḍ maḳālātihi*, in *MMIA* (1957); Dāg̲h̲ir, *al-Maṣādir*, iii/2, 1246-55; Riyāḍ al-Maʿlūf, *S̲h̲uʿarāʾ al-Maʿālifa*, 37-8; Ziriklī, *al-Aʿlām*, v, 101; Ṭarrāzī, *Taʾrīk̲h̲ al-Ṣiḥāfa*, i, 25, ii, 234-8.

9. S̲h̲afīḳ al-Maʿlūf, born at Zaḥla, March 1905, died at São Paulo 1976; son of ʿĪsā Iskandar and brother of Fawzī.

S̲h̲afīḳ studied at al-Kulliyya al-S̲h̲arḳiyya in Zaḥla. In 1922 he went to Damascus and joined the editorial staff of the newspaper *Alif-Bāʾ*. His first *dīwān* of poetry, *al-Aḥlām*, was completed in 1923 but not printed till 1926 in Beirut. The *dīwān* called forth many disputes and comments, including those of Anṭūn Saʿāda, published in his *al-Ṣirāʿ al-fikrī fi 'l-adab al-Sūrī*, Beirut 1947. S̲h̲afīḳ left for São Paulo in 1926 to join his brothers Fawzī and Iskandar, who had set up a textile factory there. With his uncle Mīs̲h̲āl and others, he took an active part in founding *al-ʿUṣba al-Andalusiyya* in 1932 and its monthly *al-ʿUṣba* in 1933, which survived until 1952. He served Arab literary life in São Paulo by giving weekly dinners, at which he and his wife Rūz received writers and poets, with literary discussions before and after the meals (al-Badawī al-Mulat̲h̲t̲h̲am, *al-Nāṭiḳūn bi 'l-ḍād fī Amīrkā al-D̲j̲anūbiyya*, part 2, Beirut 1956, 747).

In 1936 he produced the first version of *ʿAbḳar*, or a visit to the land of the D̲j̲inn, S̲h̲ayṭāns, Ḥūrīs, etc., in six cantos. This work was immediately hailed as an important innovation in Arabic literature, and a solemn meeting in honour of its author was held shortly after its publication. Speeches and poems read at this meeting were published in a special issue of *al-ʿUṣba* (ii, December 1936). The second edition with six new cantos added was published in 1949.

From 1951 onwards he published five new *dīwāns*: *Li-kull zahra ʿabīr*, São Paulo 1951; *Nidāʾ al-mad̲j̲ād̲h̲īf*, São Paulo 1952; *Wa-ʿaynāki mihrad̲j̲ān*, 1960; *S̲h̲umūʿ fi 'l-adāb* and *ʿAlā sindān al-k̲h̲ayl*. A selection from the last two *dīwāns* was republished in a new *dīwān* with the title *Sanābil Rāʿūt̲h̲* (= Ruth), Beirut 1961. *Ḥabbat zumurrud*, Damascus 1966, consists of two longer essays and a collection of shorter essays. *Satāʾir al-hawdad̲j̲*, containing poetry and prose, was published in Damascus 1975. His *Laylā al-Ak̲h̲aliyya* is a *riwāya*.

A commemorative meeting was held in Zaḥla on 26 June 1977.

10. Fawzī al-Maʿlūf, born at Zaḥla, 21 May 1899 (*D̲h̲ikrā*, 4; *Dawānī al-ḳuṭūf*, 288; *Dīwān*, 127), died at Rio de Janeiro 1930; son of ʿĪsā Iskandar and brother of S̲h̲afīḳ.

Of the primary constituent elements of his development, mention may be made of the influence of his father (see *al-Ḍād*, v [1935]; Aoun, 28-9) and the dual cultural background that he acquired in the two clerical institutions of al-S̲h̲arḳiyya (in Zaḥla) and of the Brothers of the Christian Schools (Beirut 1914-15). The World War and the severe famine in Lebanon forced him to interrupt his studies; in 1916 he was employed by the Wheat Commission (*Biḳāʿ*, ms. Jan. 1916), then, in 1919, he was appointed bursar of the teachers' training college in Damascus, and secretary to the Dean of the School of Medicine (*al-Maʿhad al-ṭibbī*, vii, 127; *D̲h̲ikrā*, 4; Aoun, 33-4). It is to this period that his literary first-fruits belong (*D̲h̲ikrā*, 5-6, 8-11, 39), and in 1921 his poem *al-Firdaws al-mustaʿād* won him a literary prize. On 17 September of the same year, apparently under compulsion (*D̲h̲ikrā*, 30; *Dīwān*, 25-28), he emigrated to Brazil and settled in São Paulo, where he joined his maternal uncle and engaged in commerce (*al-S̲h̲arḳ*, iv [March 1931]; *D̲h̲ikrā*, 186-8).

In 1922, he founded *al-Muntadā al-Zaḥlī* (*al-Ittiḥād*, 18 January 1930; *al-Rābiṭa*, 10 January 1930; *D̲h̲ikrā*, 4-5, 185), which led to a redoubling of both social and literary activity, and Spanish-Portuguese culture came to be grafted on to his original Arabic-French background (*D̲h̲ikrā*, 37). Although well-known in emigré society from the year 1923 onward, his name only began to arouse the interest of Brazilian literary circles after the appearance, in 1926, of his poem *ʿAlā bisāṭ al-rīḥ*.

Details concerning his short life, his generous nature, his illness (20 November 1929) and his death in the English Hospital in Rio de Janeiro (7 January 1930) have been carefully collected by his father (*D̲h̲ikrā, passim*): *al-Adīb*, xxxii (March 1973), 53d, reprints a letter of S̲h̲afīḳ to ʿĪsā al-Nāʿūrī saying that Fawzī had not died of appendicitis but of an inflamation of the duodenum, but that he had told his parents at the time that Fawzī was suffering from an appendicitis in order to allay their worries. The letter was written after ʿĪsā al-Nāʿūrī had written in *al-Adīb*, xxi/11 (Nov. 1972), 46, that Fawzī had possibly died of a venereal disease or of tuberculosis.

The rare unedited works preserved in his father's library (fragments of poetry, the first issue of a monthly revue, *al-Adab*, intended to be distributed in the school—ms. January 1914—assorted meditations, proverbs and aphorisms translated from French, two panegyrics—ms. 1914-15) display tendency towards an elegant and elaborate prose (*al-Adab*, preface), a quasi-traditional prosody, a romantic taste and a con-

cern for the collation or insertion of items of wisdom.

His first novellas, including *Salmā* and *^cAlā ḍifāf al-kawthar* (*Dhikrā*, 5-6, 39) recall the romantic genre of Djabrān (d. 1931 [*q.v.*]). In 1916 he completed the composition of *Ibn Ḥamīd aw suḳūṭ Gharnāṭa* (*Dhikrā*, 39, 107-9), a romantic drama in five acts (published in Brazil by *al-^cUṣba*, 1952). The subject is borrowed from Andalusian Muslim history and the action is set in Granada. Attention has been drawn to analogy between this drama and the novel of Florian, *Gonzalve de Cordoue* (*Ibn Ḥāmid*, preface; Aoun, 59-74) which the poet, while still an adolescent, is said to have translated into Arabic (*Dhikrā*, 10). A closer analysis, however, shows the precise similarity between the drama and the novel by Chateaubriand, *Le dernier des Abencérages*, translated into Arabic by Shakīb Arslān (1870-1946) as *Ākhir Banī Sirādj* (ed. *al-Manār*, 1920, in *Khulāṣat ta'rīkh al-Andalus*). The dialogue is a poetic-prosodic mixture of a high level. There are, however, a number of weaknesses regarding theatrical technique, plot, analysis of characters (Act iv, sc. 2) and strict observation of local colour (Act iii, sc. 3, pp. 66, 69). Lyrical effusions have the effect, here and there, of hindering the rhythmic evolution of the action (*passim*; and Act v, sc. 7).

In its incomplete form, the *Dīwān* is a collection of 46 fragments and poems. It shows numerous omissions (see tentative outline, Aoun, 35-53, and appendix, 166-8; thesis, AUB 1967, appendix) and a chronological classification of the poems has still to be made. The three main titles (*Ta'awwuhāt al-rūḥ*: 12 poems; *Aghānī al-Andalus:* 12 *muwashshaḥāt*; *Shu^clat al-^cadhāb*; 6 cantos with a seventh incomplete) denote a set of varying correspondences within classical conformism (in the themes, *Elegy of Sulaymān al-Bustānī*, the *Muwashshaḥāt*, the occasional borrowings from al-Ma^carrī and al-Mutanabbī).

The influence of the two poets Shawḳī (d. 1932; see Fir^cawn, in *Dīwān*, 9-15) and Kh. Muṭrān (d. 1949; see Ṣaydaḥ, 348-9) and a lyricism charged with childhood memories, nostalgia, love, dreams, mingled with the thought of death and the disillusionment of a bitter pessimism (his poems *Ba^clabakk, ^calā shāṭi' Rio, al-Lifāfa*), are typical of the literary output of his generation and that of émigré poets in particular.

His position in contemporary Arabic poetry rests, however, on *^cAlā bisāṭ al-rīḥ*. This long poem (218 verses, in *khafīf* metre) contains fourteen cantos each with fourteen lines and originally modelled on the French sonnet (see the 1st ed., published in São Paulo, 28 June 1926, by al-Djāliya (*Dhikrā*, 74; *al-Āthār*, viii [October 1927], 387-400). In a 2nd ed. (1929) which was to give the poem its definitive form, the author fixes the number of lines at sixteen, except in the last three cantos. A two-line preamble, in the guise of a musical leitmotif (*madjzā' al-khafīf* = *fā^cilātun, mustaf^cilun*) defines the respective phases of the poem. The illustrated edition (1929, 1931) is accompanied by a long introduction by F. Villaespasa, responsible for the Spanish version. Venturelli Sobrinho undertook the Portuguese version and seven other translations followed (*MSOS*, xxxi, 158-65; Aoun, 93-4; Dāghir, *Maṣādir*, ii, 722-3; *Dīwān*, 139-40). The poetic form, erratic in the *Dīwān*, more accomplished in the later poems, is to a large extent free from earlier imperfections and represents a harmonious fusion of restraint and simplicity. In this freely-flowing acoustic style, ideas, often common ones, take on a new and larger potential. The imaginary escape to the astral plane and the "Land of the Souls" is stimulated by the dualism of a divorce between the soul and the body. Faced by his insoluble dilemma, the divided and shattered being searches for its lost unity. The transitory tends towards immortality and the finite towards infinity. Thanks to his imaginative power, the poet, a stranger in the material world, seeks deliverance from his terrestrial imprisonment and project himself into space (cantos i, ii, iii). The stellar journey is marked out with dialogues, notably that of the winged and planetary race. These passages nevertheless bear the melancholic accent of a broken and lonely poet facing his implacable destiny (cantos vi, vii, viii). The spatial distance opens up a vertical perspective on the world; seen from these spiritual altitudes, controversies deepen, life takes on the appearance of a thin flux of ephemeral beings and there is a proliferation of meditations on the passions of mankind, his vanity and the destructive materialism of a perverse and perfidious civilisation ruled by the spirit of evil (cantos x to xiii). The poet's expiation is achieved by purificatory inspiration, and original unity is regained by the fusion of the two unyielding elements. But this state of grace attained through the mystery of love is dissipated like "the brightness of a dream" and the flesh is seen to fail. Only the pen, the poet's beloved harp, remains as the sole instrument of consolation and deliverance (canto xiv).

His poetic style takes as its starting-point the neo-classicism of his contemporaries, where the new professes to be the epiphenomenon of a traditionalist prosody. Then he frees himself from this genre so as to integrate himself with the emigrant literary movement. We may recall, in this connection, the elaborate themes, the nature of the imagery, the dimensions of the poetic state, the system of evocative language, which form common ground with the pleiad of *al-Rābiṭa al-ḳalamiyya*. Other reminiscences seem to recall the Arabic version of the *Rubā^ciyyāt* of ^cUmar Khayyām (tr. W. Bustānī, 1912) and Djabrān's poem *al-Mawākib* (New York 1918). Imbued with French romanticism, a desperate idealist, fleeing from confusion, an uprooted emigrant, his lyrical impulse is characterised by an authentic and personal accent within an incomplete poetic corpus.

(A. G. KARAM)

11. DJŪRDJ ḤASSŪN MA^cLŪF, born at Bikfayā 1893, died in São Paolo 1965. He visited the English school at Shuwayr and then studied law at the Jesuit College in Beirut. Ya^cḳūb al-^cAwdāt, who knew him well in later years, relates that Djūrdj Ḥassūn joined the Jesuit College in 1907 to study law and that he practised as a barrister for two years before he left Lebanon for Argentine in 1911. There he worked as the secretary to the Ottoman Consulate at Buenos Aires for one year and then he went to Brazil. He became

one of the founding-members of *al-ʿUṣba al-andalusiyya*. Though he had an astounding knowledge of Arabic poetry, prose held his chief interest. He translated from French, Spanish and Portuguese, and composed some stories himself, apart from numerous articles. He wrote a long introduction (32 pp.) to the *Dīwān* of Ilyās Farḥāt in 1932. *Al-ʿUṣba* published a volume of stories, partly translated, partly original, with the title *Aḳāṣīṣ* in 1954. The first instalment of a book on the literature of the *Mahdjar* was published in *al-Marāḥil*. He died in 1965 in a car accident.

Bibliography: al-Badawī al-Mulaththam (= Yaʿḳūb ʿAwdāt), *al-Nāṭiḳūn bi 'l-ḍād fī Amīrkā al-Djanūbiyya*, part 1, Beirut 1956, 338-9.; ʿĪsā al-Nāʿūrī, *Adab al-Mahdjar*,[2] Cairo 1967.

MAʿLŪLĀ, a place in Syria.

1. The locality. Maʿlūlā is situated 38 miles/60 km. to the south-east of Damascus, 6 miles/10 km. to the west of the main Damascus-Ḥimṣ road, on the second plateau (5,000 feet/1,500 metres altitude) of the Djabal Ḳalamūn, the last chain of the Anti-Lebanon. The agglomeration is constructed in the form of an amphitheatre, inside a wide and deep gap; access to it is protected, from the side of the third plateau, by two defiles which open on to its flanks. There is access by one of these defiles to the monastery of St. Sergius, whose church with a cupola supported on pendentives is of Byzantine date; at the entrance to the other defile there is built, partly on the rock, the monastery of St. Thecla. The parish church of St. Leontius has no features of interest, but a mosaic from the 4th century A.D. has been found in the church of St. Elias.

Maʿlūlā is mentioned by George of Cyprus as Magloula and as forming part of Lebanese Phoenicia; Yāḳūt gives it as a district (*iḳlīm*) of the environs of Damascus. It is known to have been the seat of a Melkite Orthodox bishopric in the 17th century, and in 1724 was attached to Ṣaydnāyā. At the time of the rebellion of the *amīr* of Baʿlabakk, Muḥammad Ḥarfūsh, in 1850, Maʿlūlā was sacked by the Turkish troops of Muṣṭafā Pasha chasing the rebels who had taken shelter in the village against the desires of the local population. In 1860 and 1925, Maʿlūlā was again attacked and besieged.

The fame of this picturesque place comes from the fact that its inhabitants (about 2,000), who have remained Christians, mainly Melkite Catholics, still speak a Western Aramaic dialect, just like the people of two other nearby villages, Djubbaʿdīn and Bakhʿa, which became Muslim in the 18th century. Since the time of the first notes on the Aramaic or Maʿlūlā published by Cl. Huart in 1878, this speech has been the subject of several important works by Dom J. Parisot, G. Bergsträsser, S. Reich and A. Spitaler (see below, 2. The language).

Since the Aramaic of Edessa was formerly the liturgical language of these Christians of Byzantine rite, a certain number of Syriac manuscripts from the monasteries and churches of Maʿlūlā have come down to us, but most were burnt on the orders of a bishop in the 19th century.

Poizat, *Bibliographie du néo-araméen*, in *Comptes-rendus du GLECS*, xviii-xxiii (1973-9), 379-80.

(G. Troupeau)

2. The language. Maʿlūla and its Aramaic-speaking neighbouring villages, Bakhʿa and Djubb ʿAdīn-Ghuppa ʿŌdh are bilingual, and use varieties of dialectal Arabic more or less rapidly assimilating to the regional prestige speech of the city of Damascus—a process already completed for Maʿlūla itself—in all outside relations. Hence it is not astonishing that there is a strong Arabic influence on their Aramaic vernacular, especially in the field of vocabulary: a random count will yield an average of about 20% and even more of words of Arabic origin in any given text. Loan translations abound. Nevertheless, the Aramaic language of Maʿlūla and Djubb ʿAdīn is still in full vigour, while at Bakhʿa there seems to be a marked tendency, especially among the younger generation, to supplant it entirely by Arabic, which, of course, in due time will lead to its extinction there; in 1971 people of less than forty years' age were, according to information by inhabitants of the village, no longer able to use the vernacular correctly, although they had no difficulties in understanding it. Understandability among the three villages is mutual, except for smaller details which on the whole will not impair the comprehension of any utterance.

The characteristics of Maʿlūla Aramaic (or, to be more exact, Western Neo-Aramaic) include:

General. MA is a descendant of the western branch of Aramaic (*yiḳtul, yḳuṭlenn-e, inter alia*), its closest relationship being to Judaeo-Aramaic and Syro-Palestinian.

Phonology. Long vowels of Older Aramaic have been preserved under stress; *ā* > *ō*. In unstressed position, they appear shortened -*ā* > *a* - and partially merged, e.g. *ḥṓmi* < *ḥāmē*, *páyṯi* < *bayṯī*. Short vowels in a stressed syllable seem to continue the former state, while, when unstressed, they too have undergone, at least phonologically, certain mergers (*e* ~ *i*, *o* ~ *u* against *a*, pre-tonic even *e i o u* > *ə* against *a*). Stress is usually on the penult, and may hit even originally prosthetic vowels: *ébra* < *brā* via *əbrā*. Voiced plosive consonants have been devoiced (*b d g* > *p t k*), voiceless plosive consonants except *p* palatalised (*ṯ ḵ* > *č k*; Dj. ʿA. *k* > *č*), *p* has become *f*, *b* > *b*. *Begadkefat* laws are no longer operating, although they have left many traces; roots containing susceptible consonants will appear either unified: *irkheb* "he mounted (a horse)" from *rḵeḇ*: *arkhep* "he put somebody on horseback" corresponding to older *arkeḇ* which, except for palatalisation and *ḇ* > *b*, should have remained unchanged (for *p*, see below); or there exists a so-called root-variant: *irkheb* as above: *rikhpiṯ* "I mounted", the *p* having been generalised in the causative (see above example). Initially, in general the spirant version of these consonants has been perpetualised (original context pronunciation after final vowel).

Morphology. On the whole, the older system has changed very little, much less than in eastern Neo-Aramaic. This is doubtless to be attributed to a certain preserving force exerted by the structurally very similar surrounding Arabic dialects. Salient innovatory features out of Aramaic material are the development by fusion of analytical constructions of obligatory verbal forms to show the definiteness of a following direct or indirect nominal object (*iḳṭal ghabrōna* "they hit a man": *ḳaṭlull ghabrōna* "they hit the man", < *ḳaṭlunn-eh l-*) and the personal inflexion of predicative adjectives by prefixes formally identical with those of the imperfect (*ana n-ifḳer* "I'm poor"), as well as the strongly extended use of old *ḳṭīl* and *ḳaṭṭīl* participles as a resultative or perfect. Arabic has contributed in addition to a good many of verbal stems (III, V, VI, VII—the normal expression of the

passive voice—, VIII, X), which, with the exception of VII, of course may be regarded as a special kind of lexical innovation, above all its construction of *ʿamma* + *b*-imperfect (this latter being represented in Aramaic by the present participle) to render continuous action or state. This fact has led to at least a partial restructuring of the verbal system, the simple participle in main clauses being restricted to the function of a general present. Besides, mention should be made of the free possibility of forming an elative even of Aramaic roots on the model of Arabic (*awrab* "bigger", from *yrb*: Ar. *aḥsan*).

Syntax. For category syntax, see the preceding section. Clause and sentence connection is realised on the one hand to a large extent by intonation alone (asyndesis), while on the other hand there is, as far as clause adverbials of time are concerned, a real profusion of incessantly reappearing temporal conjunctions. Very remarkable is the introduction from Arabic of the asyndetic relative clause (the *ṣifa*) to be used in exactly the same circumstances (indefinite clause-head) as in the tongue of origin.

The value of western Neo-Aramaic for the clarification of difficult problems raised by our not always complete understanding of the intricacies of the grammar of Older Aramaic has not yet been fathomed; there is still a grave lack of studies of this kind.

MĀLWĀ proper is an inland district of India bordered on the south by Vindhyās, and lying between lat. 23° 30′ N. and long. 74° 30′ E.

To this tract, known in the age of the *Mahābhārata* as Nishadha, and later as Avanti, from the name of its capital, now U̲d̲j̲d̲jayn, was afterwards added Akara, or eastern Mālwā, with its capital, Bhīlsā, and the country lying between the Vindhyās and the Sātpūras. Primitive tribes like Ābhīras and Bhīls have been dwelling among the hills and jungles of Mālwā since ancient times, some of whom still cling to their primitive way of life. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the white Huns, and the kingdom of Kanawd̲j̲ [*q.v.*], and then passed to the Mālawās, from whom it has its name since about the 5th century A.D. These when Hinduised formed the Paramāra tribe of Rād̲j̲pūts, which bore sway in Mālwā from 800 to 1200, but from the middle of the 11th century onward their power was increasingly challenged by a confederacy of the Čālukyas of Anhilvada and the Kalačuris of Tripurī.

Mālwā, at the crossroads between northern India and the Dakhan, and between the western provinces and the seaports of Gud̲j̲arāt [*q.v.*], always occupied a position of great strategic and commercial importance. It was therefore only a matter of time for the territory to attract the attention of the Sultans of Dihlī. In 632/1234-5 S̲h̲ams al-Dīn Iltutmis̲h̲ [*q.v.*] of Dihlī invaded U̲d̲j̲d̲jayn, demolished the temple of Mahākāl, and sacked Bhīlsā. This, however, was no more than a predatory raid and did not lead to annexation. Sultan ʿAlāʾ al-Dīn K̲h̲ald̲j̲ī [see KHALD̲J̲ĪS]—who as governor of Karā had led a successful raid on Bhīlsā in 691/1292—sent his commander ʿAyn al-Mulk Multānī [*q.v.* in Suppl.], "a master of pen and sword" (Amīr K̲h̲usraw), in 705/1305 to conquer Mālwā. It now became a province of Dihlī, and, with interludes of Hindu revolt, remained so until, in 804/1401-2, on the disintegration of the Kingdom of Dihlī after Tīmūr's invasion, the Afg̲h̲ān governor Dilāwar K̲h̲ān G̲h̲ūrī made it an independent kingdom. On his death in 809/1406-7 (evidence of his having been poisoned by his son Alp K̲h̲ān is inconclusive), Alp K̲h̲ān succeeded him under the title of Hūs̲h̲ang S̲h̲āh. He transferred the capital from Dhār to Māndū [*q.v.*] and founded Hūs̲h̲angābād. To him goes the credit for the consolidation of the newly-established kingdom. He followed an active foreign policy, extended his territory wherever possible, maintained friendly relations with his southern neighbours and succesfully withstood the pressure of Gud̲j̲arāt. He favoured a policy of toleration towards his Hindu subjects and encouraged Rād̲j̲pūts to settle in his kingdom. Mālwā prospered under his benign rule, and his patronage of letters attracted many scholars. On his death in 838/1435 he was succeeded by his son G̲h̲aznī K̲h̲ān, entitled Muḥammad S̲h̲āh, who after a reign of less than a year was poisoned by his ambitious *wazīr* and brother-in-law Maḥmūd K̲h̲ald̲j̲ī.

Attempts by *amīrs* loyal to the G̲h̲ūrī dynasty to raise Muḥammad S̲h̲āh's thirteen-year old son Masʿūd were foiled by Maḥmūd who, in 839/1436, ascended the throne as Maḥmūd I, and whose reign of thirty-three years was the most glorious in the annals of Mālwā [see MAḤMŪD I K̲H̲ALD̲J̲Ī]. He waged war successfully against the kings of Gud̲j̲arāt, the Dakhan, and D̲j̲awnpūr, against the small state of Kālpī, and against Rana Kūmbhā of Čitor; he retired, but without disgrace, before the superior power of Dihlī; and he extended the frontiers of his kingdom on the north, east and south. Maḥmūd followed a policy of "perfect toleration" (Jain). He protected the interests of the peasantry and encouraged extension of cultivation; trade and industry flourished, since he succeeded in establishing law and order throughout the realm. Robbery and theft were said to be almost unknown in his kingdom (Firis̲h̲ta). He was interested in the welfare of his subjects, and established hospitals, dispensaries, schools and colleges. Maḥmūd was known outside India, and had diplomatic relations with the titular ʿAbbāsid caliph of Cairo as well as with the Tīmūrid Abū Saʿīd Mīrzā of K̲h̲urāsān.

On his death in 873/1469 he was succeeded by his son ʿAbd al-Ḳādir G̲h̲iyāt̲h̲ al-Dīn. Though G̲h̲iyāt̲h̲ al-Dīn was well-versed in warfare, he had the sagacity to shift the emphasis from conquest to consolidation. He gave up his father's aggressive foreign policy and tried to maintain friendly relations with his neighbours. His reign was a period of peace and plenty and of cultural development. Having a large harem to look after, he increasingly associated his son Nāṣir al-Dīn in state affairs. In the event, Nāṣir al-Dīn removed all rivals from the throne, forced abdication on his father and himself ascended the throne (906/1500). His cruel reign ended with his death in 916/1510, leaving the kingdom in disarray and beset with grave problems. He was succeeded by his son Maḥmūd II [*q.v.*], who, though personally brave, was a poor general. With the help of Muẓaffar II of

Gudjarāt he rid himself of his powerful Rādjpūt minister, Mednī Raī, but in doing so embroiled himself with Sangrāma Rānā of Čitor, who defeated him in the field and took him prisoner, but generously released him. He then, with inconceivable folly and ingratitude, bitterly offended Bahādur Shāh of Gudjarāt, who invaded Mālwā and, after giving Maḥmūd every opportunity of atoning for his error, carried Māndū by assault in Shaʿbān 937/March 1531. Maḥmūd and his sons were sent in custody towards Čampāner, but the officer in charge of them, apprehending a rescue, put them to death.

Mālwā now became a province of Gūdjarāt, and in 941/1535 the emperor Humāyūn [*q.v.*], invading that kingdom, defeated Bahādur Shāh at Mandasor and captured Māndū, but was recalled to Hindūstān in the following year by the menacing attitude of Shīr Khān in Bengal; hence Mallū Khān, an officer of Maḥmūd II, established himself in Mālwā and assumed the title of Ḳādir Shadjāʿat Khān and Ḥādjdjī Khān, two officers of Shīr Shāh, drove him from Mālwā and assumed the government of the province. Shadjāʿat Khān died in 962/1554-5, and was succeeded by his son Malik Bāyazīd, known as Bāz Bahādur, who, during the decline of the power of the Sūr emperors, became independent. A severe defeat at the hands of the queen of the Gond Kingdom of Garha Mandla engendered in him a distaste for warlike enterprise, and he devoted himself to music and to the embraces of the beautiful Rūpmatī. In 968/1561 Akbar's army under Adham Khān surprised Bāz Bahādur at Sārangpūr, defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror's paramour. Bāz Bahādur fled into Khāndēsh [*q.v.*] and Pīr Muḥammad Khān, second-in-command of Akbar's army, who followed him thither, was defeated by Mubārak Khān of Khāndēsh and drowned in the Narbadā. Bāz Bahādur returned and again reigned in Māndū, but in 969/1562 another Mughal army under ʿAbd Allāh Khān the Uzbek invaded Mālwā and compelled him to flee to Čitor. He remained a fugitive until 978/1570, when he submitted to Akbar and entered his service. Abu 'l-Faḍl mentions him among the musicians of Akbar's court.

Mālwā flourished under Mughal rule, and made notable progress in agricultural and industrial production. It became one of the best revenue-yielding provinces of the empire. The Marāthās [*q.v.*] started raiding the province during the closing years of Awrangzīb ʿĀlamgīr's [*q.v.*] reign. The province suffered greatly under their recurring depredations. In 1154/1741 the Mughal emperor Muḥammad Shāh, with his authority greatly shaken by Nādir Shāh's invasion, was compelled by increasing Marāthā pressure to appoint the Peshwā as deputy-governor of Mālwā and virtually to hand over the province to the Marāthās. They failed, however, to restore Mālwā as a unified and settled province, and it soon "became a jumble of principalities ruled over by Marāthā generals and officers, Rajput princes and Afghan adventurers" (Raghubir Sinh).

It was afterwards divided between the great Marāthā generals whose descendants, Sindhya of Gwalior, Holkar of Indore, and the Ponwārs of Dhār and Dewas, still held most of it till 1947.

From 1780 until 1818, when British supremacy was firmly established, the province was one of the principal arenas in which Muslim, Marāthā and European contended for empire. Since then, its history has been uneventful, but sporadic risings took place at six military stations during the great rebellion of 1857.

(T. W. Haig - [Riazul Islam])

MALZŪZA, an ancient Berber people belonging to the branch of the Butr, and to the family of Ḍarīsa, who most probably lived in Tripolitania.

If we are to believe Ibn Khaldūn (8th/14th century) and his sources, the Berber genealogists, the Malzūza were descendants of Fāṭin, son of Tamzīt, son of Ḍarī (eponym of the Ḍarīsa) and were the sister-tribe of the important Berber tribes of the Maṭghara, the Lamāya, the Ṣadīna, the Kūmiya, the Madyūna, the Maghīla, the Maṭmāṭa, the Kashāna (or Kashāta) and the Dūna. The majority of these peoples have survived until the present day, except for three, sc. the Malzūza, Kashāna and Dūna, who became extinct at an early date and whom the mediaeval Arab historians knew only by name. According to Ibn Khaldūn, all the nine peoples above-mentioned occupied, before the 8th/14th century, "an exalted rank among the Berber populations and were distinguished by their great exploits". One should add that, according to another passage of the *History of the Berbers* of Ibn Khaldūn, the Malzūza were not a sister-tribe of the Maghīla [*q.v.*], but rather a clan of this latter people. Another genealogy of the Malzūza, quite different from that of Ibn Khaldūn, was given by Ibn al-Aḥmar in his monograph on the Marīnids entitled *Rawḍat al-nisrīn fī dawlat Banī Marīn*. According to this author, the Malzūza belonged, together with the Maghīla, the Maṭghar (*sic*), the Madyūna, the Kashāshāna (or Kashāna), the Maṭmāṭa and the Lamāya, and also the people of Fāṭin, not to the descendants of Ḍarī, but to the great Berber branch of the Zanāta.

It seems that the majority of the Malzūza were annihilated by the ʿAbbāsid general Yazīd b. Ḥātim b. Ḳabīṣa b. al-Muhallab during the great massacre of the Berber peoples of Tripolitania which took place after the defeat and death of the Ibāḍī *imām* Abū Ḥātim al-Malzūzī [*q.v.*]. The Malzūza, his fellow tribesmen, were to suffer in particular after his fall. However, it is not impossible that a clan of the Malzūza survived until the 4th/10th century. Indeed, one would be tempted to link the name of ملزوزة Malzūza with that of مزورة Mazūra whom Ibn Ḥawḳal, who was writing during this century, mentions in his list of Berber tribes as among the peoples of Tripolitania belonging to the great branch of the Mazāta.

(T. Lewicki)

AL-**MALZŪZĪ**, ABŪ ḤĀTIM YAʿḲŪB B. LABĪD, famous Ibāḍī *imām*. He is mentioned in the *Kitāb al-Sīra wa-akhbār al-aʾimma*, an Ibāḍī chronicle written shortly after 504/1110-11 by Abū Zakariyyā' Yaḥyā b. Abī Bakr al-Wardjlānī. Abū Ḥātim was also known by other names. In the chronicle (which is at one and the same time a collection of biographies of famous Ibāḍī-Wahbī *shaykhs*) composed by Abu 'l-ʿAbbās Aḥmad al-Shammākhī towards the beginning of the 10th/16th century and entitled *Kitāb al-Siyar*, the *imām* concerned is called Abū Ḥātim Yaʿḳub b. Ḥabīb al-Malzūzī al-Nadjīsī; he was, according to this author, a *mawlā* of the Arab tribe of Kinda. Al-Shammākhī used, in the paragraph of his work concerning Abū Ḥātim, the historical work written by Ibn Salām b. ʿUmar, a scholar who is the first Ibāḍī historian known from the Maghrib and who lived in the 3rd/9th century. Similarly, the form of the name of the *imām* Abū Ḥātim mentioned in the *Kitāb al-Siyar* is the oldest known and may be correct. As for the *nisba* al-Nadjīsī, which is added by al-Shammākhī, following Ibn Salām b. ʿUmar, to the name of Abū Ḥātim al-Malzūzī, it most probably originates from the Berber tribe of Nadjāsa, which is known to us from the table of Berber peoples of Ibn Ḥawḳal (4th/10th century). The latter author cites the Nadjāsa among the peoples belonging to the branch of the Mazāta who lived in Tripolitania. Similarly, the tribe of the Malzūza seem to have belonged to the Mazāta and not to the Ḍarīsa or Zanāta, as it would appear from the evidence of the works of Ibn Khaldūn and Ibn al-Aḥmar.

Another Ibāḍī historian and biographer of the Maghrib who has transmitted to us several details concerning Abū Ḥātim al-Malzūzī, that is, Abu 'l-ʿAbbās Aḥmad b. Saʿīd al-Dardjīnī (7th/13th century), calls him Abū Ḥātim Yaʿḳūb b. Labīb al-Malzūzī al-Hawwārī. The tribe of the Hawwāra, the largest part of which lived, in the first centuries of Islam, in the vicinity of the city of Tripoli, had, in the 2nd/8th century, played a major role in the history of the Ibāḍīs of Tripolitania. Also, it is not impossible that this tribe may have headed the confederation of Ibāḍi Berber people of the Maghrib who supported Abū Ḥātim al-Malzūzī, giving its tribal name to this confederation. It is very likely that Abū Ḥātim, being the supreme head of the confederation in question, added the name of Hawwāra to that of the tribe into which he was born, Malzūza [*q.v.*].

To conclude our discussion of the Ibāḍī sources, let us add that Abū Ḥātim is also mentioned in an anonymous document called *Tasmiyat mashāhid al-Djabal*, published by R. Basset under the title *Sanctuaires du Djebel Nefousa*. It is a list of the places venerated on Djabal Nafūsa, probably composed in the 9th/15th century, and was written as an autograph in an appendix to al-Shammākhī's *Kitāb al-Siyar* (ed. Cairo, 598-600). At the end of this list, we read that "one faces towards the oratory opposite the tomb of Abū Ḥātim". No doubt this is Abū Ḥātim al-Malzūzī who was killed, as we shall see, in a battle with the ʿAbbāsid army in the Djabal Nafūsa and buried in a place in this district. Finally, a distinguished Ibāḍī writer of the 9th/15th century, Abu 'l-Ḳāsim al-Barrādī, calls the leader in question Abū Ḥātim Yaʿḳūb b. Labīd al-Malzūzī al-Hawwārī.

As for the orthodox Arabic sources, only three authors tell us of Abū Ḥātim al-Malzūzī: Ibn ʿIdhārī al-Marrākushī (7th/13th century), al-Nuwayrī (8th/14th century) and Ibn Khaldūn, who lived in the same century. Ibn ʿIdhārī calls him simply Abū Ḥātim, except in a passage where he cites al-Ṭabarī and where this *imām* is called Abū Ḥātim al-Ibāḍī. Al-Nuwayrī says that this leader bore the name Abū Ḥātim b. Ḥabīb and that he was also called Abū Ḳādim. He adds that Abū Ḥātim was a *mawlā* of the Arab tribe of Kinda. Sometimes he is named by al-Nuwayrī quite simply as Abū Ḥātim. Ibn Khaldūn gives the Berber leader the name of Abū Ḥātim Yaʿḳūb b. Ḥabīb b. Midyan Ibn Īṭūwafat. According to Ibn Khaldūn, he also bore the name Abū Ḳādim; this historian also makes him an *amīr* of the tribe of the Maghīla [*q.v.*]. It should be noted that the tribe into which Abū Ḥātim was born, the Malzūza, was regarded by Ibn Khaldūn and the Berber genealogists on whom he depended as the sister tribe of the Maghīla or, indeed, as a clan of this latter tribe.

Let us now turn to Abū Ḥātim's political and military activity. It is not impossible that he played a certain role, as *amīr* of the powerful tribe of the Maghīla who professed Khāridjī, Ibāḍī and Ṣufrī doctrines, as early as the imāmate of Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā al-Maʿāfirī (140-4/757-61). In fact, if we are to believe Abū Zakariyyā' al-Wardjlānī (6th/12th century), he was governor of the city of Tripoli during this *imām*'s rule. He survived the great massacre of the Ibāḍī populations of Tripolitania by the ʿAbbāsid general Ibn al-Ashʿath which followed the defeat and death of Abu 'l-Khaṭṭāb in the battle that took place at Tawargha between the Ibāḍī forces and the ʿAbbāsid army (Ṣafar 144/May-June 761). In 151/768-9, when the ʿAbbāsid caliph al-Manṣūr sent a new governor to Ifrīḳiya in the person of a distinguished Arab general called ʿUmar b. Ḥafṣ, also known as Hazārmard, the Ibāḍī Berber tribes of Tripolitania, already recovered after the defeat of Tawargha, were ready to rise again against Arab domination. ʿUmar b. Ḥafṣ established himself in Ḳayrawān, capital of Ifrīḳiya, but soon received orders from the caliph al-Manṣūr to go to the Zāb and rebuild the strong fortress of Ṭubna which was to be the main base of the Arab armies in the central Maghrib. He was anxious to confront the powerful Ṣufrī leader of the central Maghrib, Abū Ḳurra, who was supported by two great Berber tribes of this land, the Banū Īfran and Maghīla, and who was proclaimed caliph by his followers in 148/765. Abū Ḳurra had created a powerful state with Tilimsān (Tlemcen) as his capital. Making for Ṭubna, ʿUmar b. Ḥafṣ entrusted the government of Ḳayrawān (already depleted, like the whole of Ifrīḳiya, of Arab troops, most of whom had gone to Ṭubna, following the new governor), to his cousin Ḥabīb b. Ḥabīb b. Yazīd b. al-Muhallab. ʿUmar b. Ḥafṣ was entirely assured of the attitude of the Berbers of Tripolitania and Ifrīḳiya who had been, in 144/761-2 so severely punished by Ibn al-Ashʿath. But this peace was only apparent. In fact, the Ibāḍīs of this land were already prepared to rebel against the Arabs. Indeed, immediately after the departure of the ʿAbbāsid forces commanded by ʿUmar b. Ḥafṣ in the central Maghrib, where they had difficulty in dealing with Abū Ḳurra, the Ibāḍī Berbers of the area around the city of Tripoli rebelled, in 151/768-9, against the Arab governor of the city of Tripoli. The rebels chose as their leader Abū Ḥātim. Under the command of their leader, they challenged the forces that the ʿAbbāsid governor of this city had sent against them, and seizing Tripoli, they went on to lay siege to Ḳayrawān. Later, Abū Ḥātim al-

Malzūzī moved against Ṭubna, at the head of the Ibāḍī insurgents of Tripolitania and Ifrīḳiya, who then joined with the other Ibāḍī and Ṣufrī groups besieging ʿUmar b. Ḥafṣ. The latter put up a brave defence, at the head of 15,000 soldiers. As for the besieging forces, they formed a huge army, in which Abū Ḳurra stood out at the head of 40,000 Ṣufrīs. Another band of Ṣufrīs numbering 2,000 soldiers was commanded by ʿAbd al-Malik b. Sakardīd. Several Ibāḍī forces, commanded by different leaders, were independent of one another. The sources mention among these latter troops: Abū Ḥātim at the head of a considerable number of warriors; ʿAbd al-Raḥmān b. Rustam, with 15,000; ʿĀṣim al-Sadrātī at the head of 6,000 warriors and al-Miswar b. Hāniʾ with 10,000. The army under the command of Djarīr b. Masʿūd al-Madyūnī was also composed of Ibāḍīs. During the siege of Ṭubna, Abū Ḥātim al-Malzūzī was only one of the leaders of the Ibāḍī groups and not the commander-in-chief of the Ibāḍī armies who besieged ʿUmar b. Ḥafṣ. The latter, threatened by the great Khāridjī army, whose total strength was about four times that of his own army, bought the neutrality of Abū Ḳurra for 40,000 *dirhams*. After this, the latter's warriors left Ṭubna. Similarly, ʿAbd al-Raḥmān b. Rustam, whose troops had been routed by a detachment of the garrison of ʿUmar b. Ḥafṣ, hastened to lead back to Tāhart, his capital, the remnants of his army. It was only from this time that Abū Ḥātim al-Malzūzī took charge of the besieging forces. ʿUmar b. Ḥafṣ, seeing that the forces of the Ibāḍīs surrounding Ṭubna were very much weakened, succeeded in escaping from this fortress and making haste to Ḳayrawān, which was also besieged by the Ibāḍīs. The Ibāḍī army which was besieging this city was already commanded by Abū Ḥātim, who had abandoned the siege of Ṭubna to make an end of the capital of Ifrīḳiya and its governor in the name of the ʿAbbāsids, ʿUmar b. Ḥafṣ Hazārmard. This army was at this moment 350,000 men strong, of whom 35,000 were horsemen. It may be that, during the siege of Ḳayrawān, Abū Ḥātim al-Malzūzī had been proclaimed *imām* of all the Ibāḍīs of the Maghrib with the title of *imām al-difāʿ* (Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā al-Maʿāfirī bore the title of *imām al-ẓuhūr*). The siege of Ḳayrawān lasted for a long time and ended with the death of ʿUmar b. Ḥafṣ (who was killed by the Ibāḍīs during a sortie) and with the surrender of Ḳayrawān, whose population and garrison were already totally starved.

But Arab help was near. Indeed, a large ʿAbbāsid army was heading for Tripolitania under the command of the new Arab governor Yazīd b. Ḥātim. At the news of the approach of this army, Abū Ḥātim al-Malzūzī set out for Tripoli, from where he headed for the Nafūsa Mountains, whose inhabitants were particularly attached to the Ibāḍī doctrine. But other Ibāḍī Berber tribes also gathered around Abū Ḥātim, in anticipation of the final battle which would decide the future of Ibāḍism in the Maghrib. Among Abū Ḥātim's faithful followers, apart from the Nafūsa, may be counted the Hawwāra and Ḍarīsa. Abū Ḥātim held out in the Djabal Nafūsa in an almost impregnable place, according to certain sources, in Djanbī, where, however, he died, with his companions, despite their brave defence (155/772). Abū Ḥātim's tomb, which is situated in the same part of the Djabal Nafūsa and which is one of the holy places of this land, was surrounded with legends. After his death, the dignity of the Ibāḍī *imām* of the Maghrib passed to ʿAbd al-Raḥmān b. Rustam and his descendants, who succeeded in maintaining what was left of the Ibāḍī imāmate of Tāhart until the beginning of the 4th/10th century.'

AL-MĀMAKĀNĪ, ʿAbd Allāh b. Muḥammad Ḥasan b. ʿAbd Allāh al-Nadjafī (b. at Nadjaf 15 Rabīʿ I 1287/15 June 1870, d. 15 Shawwāl 1351/11 February 1933), Imāmī Shīʿī scholar of *fiḳh* and *uṣūl*, and author of some 30 works to which the bibliographical guides devote in general only a few lines.

He is very well-known among the Imāmīs for his *Tanḳīḥ al-maḳāl fī ʿilm al-ridjāl* (lith. Nadjaf, i, 1349/1930-1, ii, 1350/1931-2, iii, 1352/1933-4), one of the last works in the tradition of *ʿilm al-ridjāl* [*q.v.*], of which al-Kashshī, al-Nadjāshī and al-Ṭūsī are the most eminent representatives. This is a collection in which the persons who were witnesses and/or transmitters of the *sunna* of the Prophet and the Twelve Imāms are arranged in alphabetical order. It gathers together 13,365 persons, enumerated by the author, and it is also possible to glean information about his own life from the *tardjama* which he devotes to himself, to follow his scholarly career, i.e. his studies, his travels and pilgrimages and the bibliography of his works, and to discover some important dates of his life, such as that of 14 Ramaḍān 1314/16 February 1897 when he received from his father the *idjāza* to function as a *mudjtahid*. The *Tanḳīḥ* can certainly be considered as his main work, and can be judged as the widest repertory existing of *ridjāl*. At the same time, it has been the object of various criticisms, both for the author's numerous errors and also for his particular way of using the term *madjhūl*. Among the specialists in this field, the term indicates a transmitter concerning whom the *aʾimmat al-ridjāl* (i.e. the chief authorities in this matter) have asserted *djahāla* "ignorance about the degree of confidence to be placed in him", but al-Māmaḳānī uses it in a wider sense, so that the *madjhūl* becomes merely a person whose biography he is ignorant about. This is why, on reading the *Tanḳīḥ*, and even more the *Natāʾidj al-Tanḳīḥ*, the index in which are set forth the "results" of the *Tanḳīḥ*, the impression is given that the transmitters of Imāmī *ḥadīth* were very largely *madjhūl*, unknown persons. These deficiencies led the contemporary scholar Muḥammad Taḳī al-Tustarī to write a final dictionary, the *Ḳāmūs al-ridjāl*, which puts itself forward as definitive in this particular sphere.

(A. ARIOLI)

AL-MĀMĪ, AL-SHAYKH MUḤAMMAD (d. 1282/1865-6), traditional Mauritanian scholar of a highly individualistic nature, whose reputation is founded less upon his considerable qualities as a poet and a Mālikī jurist than upon some of his statements, which caused a sensation in their time.

Thus, for example, he claimed to know the number of grains of sand contained by the earth, by means of a calculation which he reveals in a poem in *ḥassāniyya* Arabic, although he refrains from giving the precise result of his computations. He caused something of a scandal by declaring the principle of the roundness of the earth, something of which his compatriots, adhering to the letter of the Ḳurʾān: "The earth, We have stretched it out ..." (XV, 19), were still unaware in the 19th century. He is also credited with having predicted the existence of the rich mineral deposits which are exploited today in Mauritania. Legend has it that from his reading of all the books currently available (except two!) he acquired original knowledge which is revealed particularly in his poems in dialectal Arabic. He employed this same mode of expression to declare grammatical rules or to formulate prayers, but he resorted to classical Arabic for anything that could be described as didactic poetry; the latter includes in particular the *ḳaṣīdas* intitled *al-Mīzābiyya* on the art of debate, and *al-Dulfīniyya* which express the essence of his judicial teaching.

Concerned to adapt law in such a way as to legitimise the practices of his time, he naturally rejects *taḳlīd*, blind imitation, and reveals himself an advocate of *idjtihād*, personal effort; while not going to far as to claim for himself the status of a *mudjtahid*, he skilfully recommends recourse to the practice of *takhrīdj*, which consists in formulating general rules on the basis of the teaching of a particular school, in his case, Mālikism.

A practical problem which engaged the attention of al-Māmī is that of the *zakāt* [*q.v.*] of animals owned by the tributaries of a Mauritanian tribe; he considers that they should be relieved of this obligation and bases his conclusion on substantial arguments. Otherwise, in a general fashion, he makes it his business to give legal foundation, in conformity with the *sharīʿa*, to all the customs rooted in his social milieu and, in his principal work entitled, significantly, *Kitāb al-Bādiya*, he addresses himself to the specific problems of nomadic societies: the open-air mosque, the valuation of objects according to a monetary system constituted by non-financial items (a block of salt, a sheep or a piece of fabric), the treatment of *wakfs* among nomads, etc. At the beginning of the *Kitāb al-Bādiya*, he deals at length with custom (*ʿurf* or *ʿāda*), stressing its continuance and normative value, and he reveals the fundamental role that it has played in the judicial system of Islam, especially among the Mālikīs. He is thus led to sanction practices current in his time and considered contrary to the *sharīʿa*: *wangala* (the slaughtering and sharing, each day, of a sheep within a given group), force-feeding of women, ear-piercing, *iḥsān* (contract for the loan of a lactiferous animal, the hiring of young camels for the purpose of following a she-camel so that she continues to give milk), gifts offered by merchants to sellers of gum, *faskha* (dowry supplied by the family of the bride when she joins the conjugal home), consumption of tobacco, etc., all these being topics treated in a very liberal fashion. It is this spirit which characterises the teaching of al-Māmī in the judicial sphere; it appears more exacting in the context of politics, and this author is observed deploring the absence of any administrative structure corresponding to the requirements of the authentic Islamic city and regretting to some extent that he has never found the opportunity to exploit his talents as a statesman, in spite of his prestige, his wealth and his personal connections with sultans of Morocco, to whom he dedicated many of his poems.

The literary corpus of al-Māmī is quite significant, but is yet to be edited. It comprises in particular, besides the *K. al-Bādiya* and the verse writings to which reference has been made, a rendering in verse of the *Mukhtaṣar* of al-Khalīl and several commentaries on judicial works.

Bibliography: The only study is that of Mohamed El Mokhtar Ould Bah, *La littérature juridique et l'évolution du Mālikisme en Mauritanie*, Tunis 1981, 82-96, 112-13 (list of works) and index.

(M. M. OULD BAH)

MAMLAKA (A.), which may be considered (*LA*, s.v.) either as *maṣdar* or *ism al-makān* of the root *m-l-k* "to hold, possess", denotes in its first sense absolute power over things and especially over beings: to begin with, that of God over creation as a whole, and then, that of any individual, in certain circumstances. In a second sense, the word is applied to the place either in origin or by application, of the power under consideration: in the first case, it can refer e.g. to an all-powerful minister (Dozy, *Supplément*, s.v.); in another case, it can denote the spatial entity under the control of the above-mentioned power—the human one (whence: a free man who has become a slave, above all, by reason of war) or the natural one (notably: the middle of a road). But the most current denotation of the word, in this latter sense, is that of a piece of territory under the control of some authority—in the modern meaning of the term, a kingdom.

Arabic geographical literature provides some interesting developments of the word. It adopts it, on one hand, in its plural form *mamālik*, as it attested by the titles of several works of the type of geography called "that concerned with roads and kingdoms" (*Kitāb al-Masālik wa 'l-mamālik* [*q.v.*]), made popular by Ibn Khurradādhbih. But it is the singular form, *mamlaka*, which merits attention here. One of the pioneers of Arab geography, al-Djāḥiẓ, distinguishes in his *K. al-Amṣār wa-ʿadjāʾib al-buldān* between the *mamlakat al-ʿArab* and the *mamlakat al-ʿAdjam*, which was a classic distinction in the framework of the Shuʿūbiyya controversies. About 70 years later, around 316-20/928-32, another pioneer of the genre, representing administrative geography, Ḳudāma b. Djaʿfar, want beyond the controversy and reunited the two *mamlakas* into a single one, the *mamlakat al-Islām* or, more simply, *al-mamlaka*. This course of evolution ended with the geographers of the Balkhī school, that of the so-called "atlas of Islam" who devoted themselves to depicting the Islamic world and that world only. The *mamlakat al-Islām* from this time onwards monopolises geographical description in al-Iṣṭakhrī, Ibn Ḥawḳāl and above all al-Muḳaddasī, who opposes, en bloc, this *mamlaka* to the whole of the remainder of the world, calling it, according to the needs of the context, *mamlakat al-Islām, al-mamlaka* or *al-Islām*. The feeling of unity, based on economic links and the sense of belonging to the same civilisation, here transcends the political cleavage inherent in the existence of two caliphates at Cordova and Cairo, rivals of the one in Baghdād. But the appearance of the Turks in the 5th/11th century en masse, and the decline of the caliphate were to justify this vision;

political divisions were to make this vision disappear, at a single blow, after the year 1000 A.D., from the works of the geographers.

Bibliography: Given in A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du XI^e siècle*, Paris-The Hague 1963 (new ed. 1973) - 1980, index (see esp. i, 99, ii, 525-8, iii, pp. x-xi).

(A. Miquel)

MAMLŪK (a.), literally "thing possessed", hence "slave" [for which in general see ᶜabd, ḳayna and khādim], especially used in the sense of military slave"; for these last in various parts of the Islamic world, with the exception of those under the Mamlūk sultanate of Egypt and Syria [see next article], see ghulām. Although for many centuries the basis of several Islamic powers, the institution of military slavery can in many ways best be studied within the framework of the Mamlūk sultanate of Egypt and Syria (648-922/1250-1517) since the latter is so richly documented in the historical sources, many of them contemporary to the events which they describe and containing definitions and descriptions of that sultanate's institutions. Although differences of circumstances and the need to handle the Mamlūk sources with care (since many of them are partial or inaccurate or valid only for the author's own time) call for caution in making a comparative study, it is nevertheless true that an examination of Mamlūk military slavery is bound to shed much light on other Islamic societies in which the institution played a leading rôle.

Of all the slave societies which should be examined in connection with that of the Mamlūks, it is obvious that those immediately preceding and following it (in the Ayyūbid period and in Ottoman Egypt) should have first priority.

1. *Countries of origin and racial composition.*

We know quite a lot about the racial composition of the Mamlūks of the Mamlūk sultanate and their countries of origin (called quite often simply *al-bilād*; see e.g. Ibn al-Dawādārī, ix, 71, 11. 12-13). By contrast, though we know that the greater part of the Ayyūbids' Mamlūks were Turkish, we do not know their exact lands of origin, with the certain exception of al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb's reign, the direct precursor of the Mamlūk period, and with the possible exception of the reigns of one or two of his Ayyūbid contemporaries or immediate predecessors.

The source evidence on the characteristics of the peoples supplying the Mamlūks and on the various factors which brought about those Mamlūks' sale and importation into the sultanate, clarifies the reasons for the creation of a military slave institution and explains its unparalleled success and durability as the major military force for its time in the lands of Islam.

A most important description of the Ḳîpčaḳ steppe [see dasht-i ḳîpčaḳ in Suppl.] and its people, the major source of military slaves for the Mamlūk sultanate in the first part of its existence, is that of Ibn Faḍl Allāh al-ᶜUmarī, who based it on the evidence of persons who visited the Golden Horde (K. Lech, *Das Mongolische Weltreich*, Wiesbaden 1968, 68-71 of the Arabic text, which is an excerpt of the *Masālik al-abṣār*; al-Ḳalḳashandī, *Ṣubḥ al-aᶜshā*, iv, 456-8). There the author stresses both the very harsh circumstances in which the inhabitants of that steppe live, their primitiveness (including that of their pagan religion), as well as their military ability, faithfulness and loyalty (see also al-Dimashḳī, *Nukhbat al-dahr*, 264, 11. 4-11, 279, 11. 9-12), a combination of qualities which made them highly suitable raw fighting material. The sources attest a unanimous conviction that the Mamlūks of Egypt and Syria had been the decisive factor in saving Islam both from the Frankish and the Mongol threats since the battles of al-Manṣūra (647/1249) and ᶜAyn Djālūt (658/1260) [*q.v.*] to the later battles against the Ilkhāns of Persia and ᶜIrāḳ (al-ᶜUmarī, *op. cit.*, 70, 1.7-71, 1.12; *Ṣubḥ*, iv, 458. See also D. Ayalon, *The transfer of the ᶜAbbāsid caliphate*, 58-9, and n. 1; idem, *The European-Asiatic steppe*, 47-52; idem, *The Great Yāsa*, part C_1, 117-130, part C_2, 148-56; idem, *From Ayyūbids to Mamlūks*). This unanimous and repeated evidence is crowned by Ibn Khaldūn's evaluation of the Mamlūk phenomenon in the lands of Islam in general and in the Mamlūk sultanate in paticular (*ᶜIbar*, v, 369-73; Ayalon, *Mamlūkiyyāt*, 340-3). The resultant prestige greatly helped the Mamlūks in overthrowing the Ayyūbids, in firmly establishing their rule, and in thoroughly incorporating in their realm an undivided Syria, as a region with a status very inferior to that of Egypt.

The factors which led to the sale of slaves by the inhabitants of the Ḳîpčaḳ steppe and their rulers were the following ones: the general destitution of the population, which forced it, in certain years, to sell its children (ᶜUmarī, 70, 11. 2-4; *Ṣubḥ*, iv, 458, 1.2; al-Maḳrīzī, *Sulūk*, i, 942, 11. 10-12); the need to sell the children in lieu of taxes to the ruler (*Ṣubḥ*, iv, 476, 11. 11-16); the ruler's capturing and selling the children and women of his subjects (ᶜUmarī, 69, 11.6-10; *Ṣubḥ*, iv, 474, 1.10-475, 1.1). It was not, however, only under duress and such pressures that those children were sold. The high sums paid for them constituted an immense incentive. In the third reign of al-Nāṣir Muḥammad b. Ḳalāwūn (1309-40 [*q.v.*]), who was exceptionally lavish in his buying of Mamlūks, the Mongols competed so fiercely with each other in selling their boys, girls and relatives to the slave-merchants, that it marred their internal relations (*Sulūk*, ii, 525, 11.6-10).

It is true that the Mongol attacks on the Ḳîpčaḳ steppe filled the slave markets with Turks from there, thus facilitating their purchase by the later Ayyūbids and particularly by al-Ṣāliḥ Nadjm al-Dīn Ayyūb, and indirectly contributing to the establishment of the Mamlūk state (see e.g. Ayalon, *Le régiment Bahriya*, 133-4; idem, *The Great Yāsa*, part C_1, 117 ff.). However, prisoners of war captured by any kind of external enemy, or even by a Muslim ruler, could not guarantee the uninterrupted supply of Mamlūks, particularly children below military age, without the constant co-operation of local elements, whether the ruler, or the heads of the tribes, or above all, the parents and relatives of those children. Furthermore, that co-operation in selling their own flesh and blood was not confined to the subjugated peoples, but included as well the conquering and subjugating Mongols, and we are even informed as well that the subjugated peoples of that region used to steal the children of their Mongol conquerers and sell them to the slave-dealers (ᶜUmarī, 72, 11.16-17).

The Islamisation of the Mongol dynasty of the Golden Horde and many of its constituent peoples must have contributed, in the long run, to the diminution of military manpower for the lands of Islam from the Ḳîpčaḳ steppe and especially for the Mamlūk sultanate. In the short run, however, it is quite doubtful whether the adoption of Islam had a considerable effect on the slave-trade from that region. For many years, those who became Muslims retained many of their old pagan habits, and numerous others remained pagan (ᶜUmarī, 72, 11.12-19; *Ṣubḥ*, iv, 457, 1. 19-458, 1.3). Both sellers and buyers had a very strong interest in the continuation of the slave-trade,

which meant that new converts to Islam were not necessarily excluded from becoming Mamlūks (*ibid.*). For the effects of conversion to Judaism or Christianity of nomads of the Eurasian steppe at an earlier period on their readiness to sell their children, see al-Iṣṭakhrī, 223, 11.11-15.

One of the major drawbacks of the Mamlūk system, from which almost all the Muslim states suffered, was that they had little or no control on their sources of supply (the outstanding exception being the Ottoman empire, which recruited most of its *ḳullar* from the Christian peoples living within its boundaries). The states which were not contiguous to those sources of supply had an additional major problem, that of being dependent on favourable factors concerning the routes leading to the sources in question (be they sea or land-routes) (see e.g. Ayalon, *Aspects of the Mamlūk phenomenon*, i, 207-9). The Mamlūk sultanate was, in this respect, completely dependent on foreign factors both on land and on sea; hence its attempts to diversify its routes (and very probably its sources) of supply as far as it could.

The main route was by sea through the Bosphorus and the Dardanelles, and this was under the complete command of Byzantium, and later the Ottomans, and the Franks. In the Byzantine period there is no complaint in the Mamlūk sources about Byzantine interference with the ordinary flow of slaves to the Mamlūk sultanate, in spite of Byzantium's ambivalent policy in its relations with the Mongols of the Golden Horde, the Ilkhāns of Persia and ʿIrāḳ and the Mamlūks. In the correspondence between Michael Palaeologus and Ḳalāwūn in 680/1281 concerning the conclusion of a pact between the two states, the slave traffic figures quite prominently. The emperor promises, *inter alia*, safe passage of Mamlūks and slave girls, on the condition that there will be no Christians among them, but demands the release of all the Christian Mamlūks already in the sultanate to Byzantium. The sultan agrees, in his answer, to most of the emperor's suggestions, and stresses the importance of granting safe conduct to the merchants coming from Ṣūdāḳ and the Ḳîpčaḳ steppe, but completely ignores the emperor's demand about the Christian Mamlūks (Ibn al-Furāt, vii, 229, 1.20-230, 1.16, 232, 11.15-22, 233, 11.3-6).

Even more important was the attitude of the Ottoman empire, now in the ascendant. With the deterioration of Mamlūk-Ottoman relations from the beginning of Ḳāyitbāy's reign onwards, the Ottomans had an excellent means of weakening the Mamlūks by cutting off the supply of military manpower to them, and they do seem to have used that weapon to some extent. In 895/1490, when the Ottomans wanted to conclude peace with the Mamlūks, one of Ḳāyitbāy's two major stipulations was the release of the merchants of Mamlūk slaves (Ibn Iyās, iii, 267). In 922/1516, on the eve of the destruction of Mamlūk sultanate's independence, Sultan Selīm writes to Sultan Ḳānṣawh al-Ghawrī a conciliatory letter in which he states that al-Ghawrī's claim that the Ottomans prevent the slave merchants from coming to his empire is wrong; those merchants avoided bringing Mamlūks to the Mamlūk sultanate because of its debased currency (Ibn Iyās, v, 43, 11.17-17). Considering the sizes of the Mamlūk regiments of Ḳāyitbāy and Ḳānṣawh al-Ghawrī, it would appear that the Ottoman embargo, as far as it existed, was not very thorough.

There were two additional land routes. One ran through Eastern Anatolia, about which we do not know much, but which seems to have been quite important. In using this route, the Mamlūks had to surmount two formidable obstacles: their enemies, the Ilkhānid Mongols, and the Mongols' staunch allies, the Christians of Little Armenia (*Bilād Sīs*). The attitude of the Mongols is unknown (for a single exception, see below), but that of the rulers of Little Armenia, as well as the importance of the route, is revealed in the truce (*hudna*) concluded between Ḳalāwūn and King Leon III in Rabīʿ II 684/June 1285, which included the following stipulation; the merchants bringing Mamlūks and slave-girls to the Mamlūk sultanate will be permitted to pass through King Leon's territory without hindrance, and those of them already stopped or imprisoned will be freed and allowed to pursue their journey (Ibn ʿAbd al-Ẓāhir, *Tashrīf al-ayyām wa 'l-ʿuṣūr*, Cairo 1960, 99, 11.7-11,15, and especially 100, 1.19-101, 1.1). In all probability, Sultan Baybars I, who had been bought together with others in Sīwās, arrived in the Mamlūk realm by this Eastern Anatolian route.

The other land route seems to have been through the very heart of the Ilkhānid empire, and the slave-trade here apparently centred round a great merchant, named Madjd al-Dīn Ismāʿīl al-Sallāmī (or al-Madjd al-Sallāmī), a native of that empire, who was born in the vicinity of Mawṣil, described as al-Nāṣir Muḥammad b. Ḳalāwūn's "slave-dealer of the Privy Purse" (*tādjir al-khāṣṣ fī 'l-raḳīḳ*) and very influential at the Ilkhānid court. He is said to have been the main instrument in the conclusion of a peace treaty between the Mamlūks and the Mongols (723/1323), but even before that date, he used to go repeatedly to Tabrīz and other places in the Ilkhānid realm and bring slaves from there. One of the stipulations of the Mamlūk sultan in that treaty was the free purchase of Mamlūks in the Ilkhānid dominions (*Esclavage*, 3; al-Ṣafadī, *al-Wāfī bi 'l-wafayāt*, ix, Wiesbaden 1974, 220, 1.9-221, 1.6; Ibn al-Dawādārī, *Kanz al-durar*, ix, 312, 1.16-313, 1.10; al-Maḳrīzī, *Sulūk*, ii, index, p. 1020b), and it is thus very probable that the flow of Mamlūks through Ilkhānid territory increased as a result of the treaty. It is true that Dimurdāsh b. Djūbān, the Ilkhānid governor of Anatolia (*Bilād al-Rūm*), prohibited, after 1323, the dispatch of Mamlūks to Egypt from or through that area (*sulūk*, ii, 293, 11.1-8), but the attitude of that highly controversial ruler, for which he paid with his life, should be considered as exceptional. How the slave trade from the Ilkhānid empire went on after its disintegration in 736/1336 is unknown.

In the third reign of al-Nāṣir Muḥammad b. Ḳalāwūn, the purchase of Mamlūks reached, perhaps, its peak. He is said to have imported Mamlūks and slave girls from "the Golden Horde (*Bilād Uzbak*), Anatolia (*al-Rūm*), Tabrīz and Baghdād and other countries" (*Sulūk*, ii, 524, 11.13-15); clearly, at this time all the three main routes connecting his realm with the Mamlūks' countries of origin were in use.

In summing up the problem of the routes through which military manpower was supplied to the Mamlūk sultanate, it can be said that interference with the flow of slaves into it, be it by Byzantines, Ottomans, rulers of Little Armenia, Ilkhānid Mongols or Christian Europeans, never seriously affected the military strength of that sultanate; only an effective embargo on this item alone might have broken that strength.

One of the major events in the history of the Mamlūk sultanate, which transformed the racial composition of its military aristocracy, was the supplanting of the Ḳîpčaḳ Turks by the Circassians. The

Mamlūk sources attribute that transformation solely to internal causes (Ayalon, *Circassians*, 135-6). There are, however, good reasons to suggest that the situation in the Mamlūks' countries of origin had some share in bringing about that result. There is a considerable amount of evidence about the comparatively flourishing situation and the dense population of the Ḳîpčaḳ steppe in *ca.* 1200-1350 (*ibid.*, 136, and n. 2), although the process of its decline seems to have started with the Mongol occupation (al-ʿUmarī, 71, 11.15-18). Ibn ʿArabs̲h̲āh gives quite a detailed description of how it had been devastated and depopulated by internal wars and the attack of Tīmūr (*Ak̲h̲bār Tīmūr*, 113, 1.5-115, 1.4, 122, 1.2, 126, 1.2-127, 1.4; see also A. N. Poliak, in *REI* [1935], 241-2; *idem*, in *BSOS*, x, 864-7). The very fact that the area had been a major source for the supply of Mamlūks must have contributed considerably to its depopulation and perhaps even to the military devaluation of its human material, since the slave traffic was confined mainly to a particular section of a special age group, namely, the cream of adolescent boys and girls who still had all the reproductive years ahead of them, and this must have adversely affected the future generations in the steppe. Although the number of the Royal Mamlūks (*al-mamālīk al-sulṭāniyya*) was not very great, it should be remembered that many of the commanders, both in Egypt and in Syria, had their own Mamlūks, and that the owning of white slaves existed in sections of society well beyond the military aristocracy. Furthermore, the Ḳîpčaḳ steppe supplied slaves to countries outside the Mamlūk sultanate as well. Finally, the rate of mortality among those Mamlūks in the countries to which they had been imported was very high, especially in times of epidemics, necessitating the more or less constant need for the replenishment of their thinning ranks. The long-range effects of the islamisation of the peoples of the Ḳîpčaḳ steppe have already been mentioned.

Before enumerating the races of the Mamlūks, the term *Turk* must be discussed. It had two meanings; one very wide, the other much narrower. We shall start with the wider meaning, leaving the other to the enumeration of the races. *Turk* or *Atrāk* in the wide sense embraced all the Mamlūk races, and was practically synonymous with Mamlūks. The Mamlūk sultanate was called *Dawlat al-Turk* or *Dawlat al-Atrāk* or *al-Dawla al-Turkiyya.* The commonest designation of the Mamlūk sultans was *Mulūk al-Turk.* But whereas the sultans of the Ḳîpčaḳ period had only this designation, each of the sultans of the Circassian period had a double designation; thus Sultan D̲j̲aḳmaḳ was the thirty-fourth of "*Mulūk al-Turk* and their sons" and the tenth of the "*D̲j̲arākisa* and their sons"; and so on.

To compile a list of the various races represented in Mamlūk military society is quite easy. But to evaluate the respective weight of the various racial groups, with the exception of the two major ones (the *Turk* and the *D̲j̲arkas*) is very difficult. This is because it is quite rare that the sources refer to the racial affiliation of individual Mamlūks, who were usually given Turkish names, irrespective of their racial origin; moreover, the mention of racial groups taking an active part in a certain event or struggle (again with the exception of the two main races) is even much rarer (some lists of Mamlūk racial groups do however exist). This is in glaring contrast to the extremely rich and varied data furnished by those sources about the groups (*ṭawāʾif*, sing. *ṭāʾifa*) based on slave and patron relations, like the Ẓāhiriyya of Baybars, Manṣūriyya of Ḳalāwūn, Nāṣiriyya of Farad̲j̲, As̲h̲rafiyya of Ḳāyitbāy, etc. Therefore, our picture of these groups and their relations (on whom see below) is far clearer than that of the racial groups (*ad̲j̲nās*, sing. *d̲j̲ins*). The racial struggle comes into prominence mainly in connection with the Circassians and from a comparatively early date in the Turkish-Ḳîpčaḳ period, reaching its peak in the closing decades of the 8th/14th century. After the almost total victory of the Circassians, it is brushed aside, with the exception of some flickers of antagonism on the part of other races, and of repeated expressions of haughtiness towards and discrimination against those races on the part of the Circassians.

In Ottoman Egypt, the racial factor is even more subdued than the Mamlūk one. Furthermore, at least as far as the chronicle of al-D̲j̲abartī [*q.v.*] is concerned, practically the only data we possess about the racial composition of the military aristocracy are that source's mentioning of the racial affiliation of a certain number of individual Mamlūks.

From the data in the sources of the Mamlūk period (including the lists of races), the following general list can be reconstructed: *Turk* (or *Atrak*), *Ḳifd̲j̲āk*, *Tatar*, *Mug̲h̲ul* (or *Mug̲h̲ūl*), *K̲h̲iṭāʾiyya*, *Rūs*, *Rūm*, *Arman*, *Āṣ*, *Abaẓa*, *Lāz* and *D̲j̲arkas*.

By far the two dominant races were the *Turk* and the *D̲j̲arkas*, if the whole Mamlūk period is considered. The *D̲j̲arkas* seem to have constituted an important element already in the *Burd̲j̲iyya* [*q.v.*] regiment created by Ḳalāwūn, and are the only ones mentioned as repeatedly challenging the supremacy of the *Turk.* The *Ḳifd̲j̲āḳ* are rarely referred to in the above-mentioned data and lists, and are an obvious synonym of *Turk.* The case of the *Mug̲h̲ul* and the *Tatar* is more complicated. The *Mug̲h̲ul*, who are mentioned only in the Ḳîpčaḳ period, seem to have been distinct from the *Turk*, although perhaps with a certain degree of overlapping. The *Tatar*, on the other hand, especially under the Circassians, were very often synonymous with *Turk.* This can be proved in two ways: (a) *Turk* and *Tatar* are never mentioned together in the same list, or in connection with the same event; and (b) a good number of individual Mamlūks in the Circassian period are said to have been *Turkī al-d̲j̲ins* on one occasion and *Tatarī al-d̲j̲ins* on another. The reason for that alternation is obvious. The more the Tatars advanced in the steppe, the greater was the Turkish element which they subjugated and incorporated in their armies; and since the Turks were much more numerous, it was they who absorbed their conquerors. Already Ibn Faḍl Allāh al-ʿUmarī says that the Tatars were completely assimilated by the Ḳîpčaḳīs and lost their own identity (*op. cit.*, 73, 11. 17-20).

The *Rūm* were third in importance. There is no sufficient information for establishing the relative importance of the other racial groups. The *Rūs* are never mentioned as a racial group outside the lists, and there are hardly any individual Mamlūks who are said to have belonged to that race (the best-know individual is Baybug̲h̲ā Rūs, or Urus or Urūs).

The Franks (*Farand̲j̲*, *Ifrand̲j̲*) are never mentioned in the Mamlūk sources as a racial group. There are, however, a fair number of Mamlūks who are said to have been of Frankish origin; and since the Mamlūks, as already stated, did not preserve their original infidel names—especially if they had not been Turks—and since the origin of many of them is not mentioned, the number of the Franks amongst them might well have been considerably higher. Yet the sources' absolute silence about the Franks as a separate body does not support the claim of some mediaeval Euro-

pean writers about the very great proportion of Franks in the Mamlūk army. One should, however, take into consideration the possibility that there might have been a certain degree of overlapping between *Farandj* and *Rūm*.

There were some Muslim-born people, even from within the boundaries of the Mamlūk sultanate, or from the neighbouring countries (particularly the areas inhabited by the Turcomans), or from regions lying further away, who managed to join the Mamlūk military aristocracy either by fraudulent means (such as an arrangement with the slave dealer), or because they were taken prisoners and found the status of a Mamlūk too good to give up by admitting that they were in reality Muslims. Some of these whose bluff had been called were ousted from the military aristocracy, deprived of their Mamlūk names and forced to bear again their original names. These Muslim-born Mamlūks constituted, however, only a very marginal element in Mamlūk society. A few of the Turcomans who became Mamlūks were called *Rūmīs* as well.

2. *The arrival and early training of the Mamlūk*

The crucial stage in the Mamlūk's career, from his leaving his country of origin, through his education and upbringing, and up to his manumission, can be reconstructed fairly well in the Mamlūk sultanate, despite numerous gaps which affect the sureness of the general picture; even so, this picture is far superior to what we know at present about the parallel careers of military slaves in the rest of the mediaeval Muslim world, including the Ottoman empire, up to the beginning of the 10th/16th century.

In the life story of each Mamlūk, his slave merchant, and especially the one who brought him over from his country of origin, figured most prominently. He was his first patron and protector from the hardships and dangers during the long voyage to his adopting country. He also served as the most usual link between him and his original homeland, so that Mamlūk was usually bound with strong ties of affection and veneration to that merchant. All of those merchants were Muslim civilians from outside the Mamlūk sultanate, and some of them became very influential in that sultanate. They should not be confused with the "merchant of the Mamlūks" (*tādjir al-mamālīk*, or fully, *tādjir al-mamālīk al-sulṭāniyya*), who was generally a low-ranking Mamlūk *amīr* (*amīr* of ten) and whose function was to supervise the commerce of the Mamlūks; this personage usually stayed within the boundaries of the sultanate.

While we know very little about the slave-market and its functioning, we know much more about how the sultans bought their Mamlūks; they in fact usually bought them from the *Bayt al-Māl* [*q.v.*] or treasury. Those of them who had not yet been manumitted before the death or dismissal of the reigning sultan were returned to the *Bayt al-Māl* and bought from there by the new sultan.

The sultan's Mamlūks were brought up in a military school situated in the barracks (*ṭibāḳ*, *aṭbāḳ*, sing. *ṭabaḳa*) of the Cairo citadel, of which there were 12. It would appear that each of those barracks had a special (probably separate and secluded) section assigned to the Mamlūk novices (*kuttābiyya*, or possibly *kitābiyya*, sing. *kuttābī* or *kitābī*), since (a) after having finished their period of training, and as long as they had not been driven out of the citadel, the Mamlūks continued to stay in those barracks and belong to them, bearing their respective names; and (b) the barracks accommodated far bigger numbers of Mamlūks than the number of novices staying there at any given moment.

The education of the novice was divided into two main parts: first, the study of the elements of Islam and afterwards the military training (*anwāʿ* (or *funūn*) *al-ḥarb* (or *al-furūsiyya*)). The first part was most essential; for, in spite of its unavoidable elementary character, it inculcated in him the conviction that he had been led in the right path from the darkness of heathendom to the light of Islam (see also Baybars al-Manṣūrī, *Zubdat al-fikra*, B.L. ms. no. 23325, fol. 51b, 11.5-16). This kind of gratitude of the Mamlūk, even if later in his career he did not lead a very strict religious life, was at least as important as his other kinds of gratitude to the Muslim environment in general, and to his patron in particular, for raising him from poverty to richness and from anonymity to fame and high position. As al-Maḳrīzī aptly puts it in his well-known passage on the Mamlūk's upbringing, the combination of his identification with his new religion, and a great proficiency in the art of war (more precisely, in horsemanship) were the targets of the Mamlūk's education. "[Until] the glorification of Islam and its people had been merged in his heart, and he became strong in archery, in handling the lance and in riding the horse" (*Khiṭaṭ*, ii, 214, 11.1-2). Curtailing the religious education, or dropping it altogether, because of the need or desire to shorten the period of apprenticeship, was always a symptom of decline in the Mamlūk sultanate or elsewhere.

3. *The role of the eunuchs*

The overwhelming dominant element in the personnel of the military school was that of the eunuchs [see KHAṢĪ], who took part in the upbringing of the novices (even in the religious field, in addition to the theologians), as well as in keeping very strict discipline among them. A major reason for manning the school with eunuchs was to use them as a buffer between the young and adult Mamlūks to prevent pederasty [see LIWĀṬ]. A novice proved to have been the object of sodomy could be sentenced to death (*Khiṭaṭ*, ii, 214, 11.6-8).

The eunuchs in the military school formed a kind of a pyramid, at the basis of which were the simple eunuchs called *khuddām* (or *ṭawāshiyat*) *al-ṭibāḳ*. At the head of each barracks was a eunuch called *muḳaddam al-ṭabaḳa*, and all the barracks were commanded by a eunuch who was called *muḳaddam al-mamālīk al-sulṭāniyya* and who had a deputy (*nāʾib*), also a eunuch.

There does not seem to have been a separation between eunuchs serving in the school and in other military or administrative capacity and those of them serving in the harem or in religious institutions. It would appear, however, that they did not usually perform those different functions simultaneously.

The eunuchs as a body were extremely strong and influential under the Mamlūk sultans. It is difficult to compare their power with that of the eunuchs in other Muslim mediaeval states, because the eunuch hierarchy of those other states cannot be reconstructed to the same degree. What is certain, however, is that individual eunuchs in the Mamlūk sultanate could not rise to the highest ranks or be as powerful as those in other Muslim states, including under the Ayyūbids and in the very early decades of the Mamlūk sultanate; neither could they be commanders in the field of battle, as happened so often in earlier Muslim states. The highest rank that a eunuch could reach under the Mamlūks was the middle one, namely, *amīr* of forty, and even to this rank only one single eunuch could be appointed, the *Muḳaddam al-Mamālīk al-*

Sulṭāniyya. Only in the chaotic conditions prevailing in the years immediately following al-Nāṣir Muḥammad b. Ḳalāwūn's third reign, to a very great extent as a result of that reign, the eunuchs, together with the women and slave-girls of the court, accumulated unprecedented power. This kind of power could not have lasted for long, for in addition to its running counter to the basic concepts of Muslim society, it would have destroyed the very foundations of Mamlūk aristocracy. Other evils originating from that reign (usually believed to be good and great, with only partial justification) lasted much longer (see below).

The eunuchs in the Mamlūk sultanate belonged mainly to four races, the *Rūm, Ḥabas͟h, Hind* and *Takrūr*, the two first-named being the predominant races. Thus only one race, the *Rūm*, was common to them and to the Mamlūks. Like the Mamlūks, each one of them was considered to be Ibn ᶜAbd Allāh (thus shrouding his infidel past in obscurity). Unlike them, however, they bore a special kind of Muslim names, representing the pleasant and beautiful (gems, perfumes, etc.; see LAḲAB). Only a few of them bore Turkish names.

With all the differences between them and the Mamlūks, the eunuchs of the court formed a very essential part of the aristocracy, and without them, the early stage of the Mamlūk's career, which affected so decisively his subsequent one, would have been fundamentally different.

4. *Completion of training and manumission*

There is no evidence indicating the average length of the period which the novice had to stay in the military school. There is, however, much proof to show that, on the whole, that period was considerably shortened in the later period, a curtailment which adversely affected the proficiency of the Mamlūk soldier. Each single Mamlūk attending the school was manumitted on finishing his period of apprenticeship. The ceremony was a communal one, carried out in the presence of the sultan in a passsing-out parade called *k͟hard͟j*, in which 150 to 500 "graduates" took part. Each one of them received a manumission certificate, called *ᶜitāḳa*, which attested, at the same time, his being a fully-fledged soldier.

The *amīrs* did not have at their disposal facilities even remotely similar to those of the sultan for upbringing and training their Mamlūks, a fact which was reflected in their comparative military inferiority. There are, however, certain indications that the Mamlūks of the great *amīrs* were brought up according to principles resembling those which were applied in the case of the sultan's Mamlūks (see e.g. *Zubdat al-fikra*, fols. 51b, 11.5-16, 99b, 11.13-100a, 1.4).

The Mamlūks, on their manumission, were simple soldiers. Thus they were given an equal start. However, they had a real chance to rise to the highest ranks only if they had been manumitted by a sultan and not merely by an *amīr*, and this chance was greatly improved if the Mamlūk was included in the sultan's personal guard (*al-k͟hāṣṣakiyya* [*q.v.*]). There was no school for training officers; these rose from the rank of simple soldier without having to undergo a special kind of training.

In a most illuminating passage, where al-Maḳrīzī contrasts the attitude of al-Nāṣir Muḥammad b. Ḳalāwūn to his Mamlūks with that of the sultans who preceded him, the correct principles for creating a healthy and successful Mamlūk military body, as against the wrong ones, come to the fore: The earlier sultans, besides giving the Mamlūk the proper upbringing (already described earlier), used to dress him in comparatively simple costumes, raise his salary gradually and promote him slowly in rank and position. A Mamlūk thus treated, when reaching the top, will know how valuable is his new status, acquired with such efforts, and will be able to make the right comparison between his previous wretchedness (*s͟haḳāʾ*) and his present well-being (*naᶜīm*) (*Sulūk*, ii, 524 1.3-525 1.15).

5. *The Mamlūk and his patron*

The period of the Mamlūk's slavery, terminated by his manumission, did not only affect his career (i.e. his chances of rising in the socio-military ladder), but also determined for life his close affiliations. He was bound by loyalty, on the one hand, to his manumitting patron (*muᶜtiḳ, ustād͟h*), and, on the other, to his colleagues in servitude and manumission (*k͟hus͟hdās͟hiyya*). The intensity of the Mamlūks' feelings of loyalty to their patron is revealed in those cases when things did not work according to plan. It happened that a patron-sultan died or was dismissed shortly before the date fixed for the manumission of a certain group of his Mamlūks. This group refused sometimes to be manumitted by their new patron-sultan in spite of the fact that by doing so they practically dealt a death blow to their chances of becoming part of the uppermost stratum of the military aristocracy. The patron and his freedmen developed relations very similar to those of a family. He was considered to be their father (*wālid*), and they his sons (*awlād*, sing, *walad*), and the freedmen amongst themselves were regarded as brothers (*ik͟hwa*, sing. *ak͟h*), with special relations between senior and junior brothers (*ag͟hawāt*, sing. *ag͟ha*, and *iniyyāt*, sing. *inī*).

The ties binding the patron to his own freedmen and the same freedmen to each other constituted the pivot upon which Mamlūk internal relations hinged. These ties continued to be binding after the dismissal or death of the patron. That cohesive factor, most formidable in itself, was supplemented and strengthened by a rejective one: a freedman of patron A, who had been transferred to the service of patron B, would never be accepted by him and his own freedmen on an equal footing. He would always be considered as a stranger (*g͟harīb, ad͟jnabī*). A Mamlūk "family" or group or faction (*ṭāʾifa*, pl. *ṭawāʾif*) kept outsiders serving their patron at arm's length. Such a faction, if and when separated from its patron, could either be broken by killing its members, putting them in prison, sending them into exile and transferring them to the service of other patrons, under whom they were given an inferior status, or else remain intact and carry on until the death of the last of its members. In the Mamlūk sultanate, a new sultan quite often broke up part of his immediate predecessor's freedmen and let the other part stay on until it petered out after several decades. Under the Circassians, where the attempts to create a dynasty failed constantly, and sultans followed each other in quick succession, numerous factions, owing allegiance to different sultans, existed simultaneously. Many combinations of short-lived coalitions between those factions were constantly forming and dissolving. A very instructive case in point is Ibn Tag͟hrībirdi's account of the change in sultan K͟hus͟hḳadam's position from almost complete shakiness to comparative stability as a result of the varying attitudes of the Mamlūks of the sultans who preceded him, both in their relations among themselves and with the Mamlūks of the reigning sultan, al-Ẓāhiriyya K͟hus͟hḳadam. The Mamlūks of the sultans who preceded K͟hus͟hḳadam were, in the order of their seniority, al-Muʾayyadiyya S͟hayk͟h, al-

As̲h̲rafiyya Barsbāy, al-Ẓāhiriyya D̲j̲aḳmaḳ and al-As̲h̲rafiyya Aynāl (*Ḥawādit̲h̲ al-duhūr*, 442, 1.7-444, 1.10, 550, 11.4-9). They formed ephemeral coalitions which changed kaleidoscopically.

The particular ties existing between the patron and his slave soldiers go back to the very beginning of military slave society in Islam and always constituted one of that society's mainstays. However, they clashed quite often with interests wider than those of the specific ruler and his military slaves, thus constituting a source of weakness as well. Yet on balance, they had, from a Muslim point of view, a positive value. The great drawback of the whole system was that it had outlived its purpose; it could not cope properly with the progress of technology and with the unavoidable military changes which it brought about, as was so decisively demonstrated in the annihilation of the Mamlūk army and empire by the Ottomans [see BĀRŪD. iii. The Mamlūks]. In Ottoman Egypt, the antiquated character of the art of war as practised by the Mamlūks was only accentuated. At the same time, the internal dissensions within Mamlūk society were greatly intensified, through a strange merging of hereditary and one-generation nobilities in that society. Hence Mamlūk "houses" (*buyūt*, sing. *bayt*) did not peter out as they did in the Mamlūk sultanate, but went on living indefinity as long as they were not crushed by a factor external to the specific "house". The longer they lived, the more deep-rooted and vehement became their mutual hatreds. The incidents necessitating the taking of blood revenge (*al-ak̲h̲d̲h̲ bi 'l-t̲h̲aʾr*) grew in number, ultimately leading to the unflinching determination of annihilating physically (*ḳaṭʿ*, *izāla*) the rival "house". When the Fiḳāriyya wiped out the Ḳāsimiyya in 1142/1729, the causes which brought about the inevitably uncompromising struggles within the Mamlūk society were not removed; the "houses" which grew out of the Fiḳāriyya continued their fights according to the old pattern.

6. *Mamlūk society*

Mamlūk society in the sultanate was a very exclusive one. In order to become a member of it, one had to fulfill very definite requirements. One had to be fair-skinned; to be (in most cases) an inhabitant of the area stretching to the north and to the north-east of the lands of Islam; to be born an infidel; to be brought into the Mamlūk sultanate as a child or young boy (preferably at the age of puberty); and to be bought, brought up and manumitted by a patron who was a member of the military aristocracy (preferably a Mamlūk as well, and most preferably the sultan himself). The chances of a Mamlūk who had been bought and manumitted by a civilian of joining the aristocracy, and particularly of rising high within it, were very meagre indeed.

What greatly helped in making the Mamlūks such an easily distinguishable, distinct and exclusive caste was a practice which started long before the creation of the Mamlūk sultanate, namely, that all of them, with but a few exceptions, bore Turkish names, irrespective of their origin. This was also the case of the Circassians when they came to constitute the major factor in the military aristocracy. The fact that most of the Mamlūks' sons (*awlād al-nās* [*q.v.*]) bore Muslim names greatly helped in their smooth ousting from that aristocracy, thus facilitating its preservation as a one-generation aristocracy. In Ottoman Egypt, the adoption of Muslim names by the overwhelming majority of the Mamlūks was an important factor in the creation of a society in which hereditary and one-generation nobilities merged into one.

Another important aspect of the exclusiveness of that society was that its members married mainly slave-girls from their own countries of origin or daughters of Mamlūks. Most of their concubines were also from the same region, although black girls were by no means excluded from that category. Marriages between Mamlūk *amīrs* and local girls (mainly the daughters of high-ranking officials, great merchants or distinguished *ʿulamāʾ*) were quite rare. This meant that the number of slave-girls imported from the areas which served as the source for military slaves was at least as great as the number of Mamlūks. Marriages between the sons of the Mamlūks and local girls were much more numerous, and this represents one facet of the assimilation of the Mamlūks' offspring in the local population.

The Mamlūks were also distinguished by their dress, which was considered to be much more respectable than that of any other class. This distinction goes back to the Mamlūk regiment of the ʿAbbāsid caliph al-Muʿtaṣim (al-Masʿūdī, *Murūd̲j̲ al-d̲h̲ahab*, vii, 118 = § 2801).

The owning of Mamlūks was the prerogative of the Mamlūks (although cases of Mamlūks owned by civilians were quite frequent), as was the riding of horses. Orders prohibiting civilians from buying Mamlūks were rarer than those forbidding them to ride horses (some of the highest civilian officials were explicitly exempted from the riding prohibition).

The language which the Mamlūks used predominantly among themselves was Turkish. The knowledge of Arabic of most of them seems to have been very superficial, although a more systematic study of this question may change that impression to a certain extent. Their Islamic awareness, however, was very strong. It was expressed, *inter alia*, in the numerous religious institutions which they built. This activity had also its material aspect, as stated by Ibn K̲h̲aldūn; in order to assure the future of the Mamlūks' descendants, who could not join the military upper class, they appointed them as administrators or superintendents of the *waḳfs* assigned to those institutions for their maintenance (*al-Taʿrīf bi-Ibn K̲h̲aldūn*, 279).

The main body of the Mamlūk sultanate's army, namely, all the Royal Mamlūks (*al-mamālīk al-sulṭāniyya*)—who formed the backbone of the Sultanate—and most of the armies of the first-ranking *amīrs* were stationed in Cairo. It was very difficult to make any part of the Royal Mamlūks serve as a garrison anywhere outside the capital. Units of the corps which were forced to stay in Syria, for example, soon declined in power and importance, and some minor exceptions to this rule do not affect the general picture. Considering the comparatively limited number of the Mamlūks, keeping their élite element together must have been the only way of preserving its military might. This, in its turn, considerably increased the already great preponderance of the capital vis-à-vis the rest of the realm. Nothing could move the Royal Mamlūks, of their own choice, from Cairo, not even epidemics, which wrought havoc among them.

This concentration in the capital had its grave drawbacks. Any serious revolt of the Bedouins or Turcomans anywhere in the realm could not be quelled without the participation of the Royal Mamlūks, who were often stationed far away from the scene of the revolt. Worse still, all the major wars of the Mamlūk sultanate took place in its northern part or beyond it, a great distance from the main centre of military might, and this became critical in the closing decades of Mamlūk rule, when the Mamlūks had to cope with

the Turcomans beyond their borders, who lived contiguously to the Turcomans of their own realm, and who were supported by the ominously growing power of the Ottoman empire.

7. *Mamlūks in other Islamic states*

The Mamlūk sultanate served as an example to other Muslim states, including in the reliance on Mamlūk soldiers, many of whom were acquired in Egypt. For the ruler of Yanbuʿ, see Ibn al-Furāt, ix, 43, ll.6-9; for the ruler of Mecca, see *Ḍawʾ al-ṣubḥ*, 332; Ibn Iyās, iv, p. 456, ll.10-12; *Nudjūm*, ed. Popper, vi, 117, ll. 18-23; Ibn al-Furāt, ix, 208, ll.12-15, 308, ll. 7-20; for the ruler of Yemen, see *Ṣubḥ*, v, 35, ll. 15-17; Nudjūm, v, 81, ll.1-2; for the ruler of Bidjāya, see *Ṣubḥ*, v, 137, l.9; and for the sultan of Takrūr, see *Ṣubḥ*, v, 300, ll.7-9.

In 869/1464-5 the army of the ruler of Shīrwān and the adjacent areas, whose capital was Shamākhī, was estimated at 20,000 combat soldiers (*muḳātila*), of whom 1,000 were Circassian Mamlūks (*Ḥawādith al-duhūr*, 579, l.16-580, l.13). This does not necessarily imply direct influence from the Mamlūk sultanate, but what it certainly reflects is the great competition from other Muslim states which that sultanate had to face in drawing manpower from the same sources, and especially from states situated much nearer to those sources.

The character, structure and development of military slavery in the Mamlūk sultanate can be more properly understood if it is studied in connection with its Ayyūbid predecessor. The Kurdishness of the Ayyūbid régime and its army has been greatly exaggerated. The Turkish, and even more so the Turkish Mamlūk element in its armed forces was the dominant one throughout its history, as was only natural for a dynasty whose founders came from the ranks of the Zangid army. Shīrkūh's private army, the Asadiyya, who numbered 500, and who were, most probably, the main factor which enabled Ṣalāḥ al-Dīn to succeed his uncle, were—contrary to what students of the Ayyūbids have written about them—a pure Mamlūk unit (see e.g. Abū Shāma, i, 173, l.1-2; al-Maḳrīzī, *Ittiʿāẓ al-ḥunafāʾ*, iii, 308, ll. 9-10), as were the other private armies of the Ayyūbid sultans, like the Kāmiliyya of Muḥammad, the Ashrafiyya of Mūsā, the Nāṣriyya of Yūsuf, etc.

The reign of al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb, the founder of the Baḥriyya regiment which toppled the Ayyūbids and established the Mamlūk sultanate, strengthened the Ayyūbid impact on that sultanate. That sultan was venerated by his Baḥriyya, who looked upon him as the example which should be followed. It was very rare that a ruler belonging to a deposed dynasty should leave such an impress on its deposers; it took the Baḥriyya quite a long time to disconnect themselves from the direct heritage of their patron, and from their general Ayyūbid heritage they disconnected themselves only partly.

Mamlūk military slavery certainly shows an evolution in comparison with its Ayyūbid prototype, but the changes were quite slow and each of them has to be traced and identified separately.

Bibliography: That given here is restricted to studies dealing in some detail with Mamlūk military slavery and with a few related subjects discussed above; works based on European sources are only perfunctorily mentioned.

MAMLŪKS, the Mamlūk sultanate, i.e. the régime established and maintained by (emancipated) *mamlūks* [see preceding article] in Egypt from 648/1250 to 922/1517, and in Syria from 658/1260 to 922/1516; and with the role of their successors, the neo-Mamlūks, in Ottoman Egypt. It surveys (i) political history, and (ii) institutional history. On military history, see the relevant sections by D. Ayalon of the articles BAḤRIYYA (i.e. navy), BĀRŪD, ḤARB, ḤIṢĀR; on the bureaucracy, see DĪWĀN, ii. Egypt (H. L. Gottschalk).

(i) POLITICAL HISTORY

(a) *Origins of the Mamlūk sultanate*

The Mamlūk sultanate had its origins in the Baḥriyya [*q.v.*], a military household of Ḳïpčaḳ [*q.v.*] Turkish *mamlūks*, which belonged to the bodyguard (*ḥalḳa* [*q.v.*]) of al-Ṣāliḥ Ayyūb (637-47/1240-9). The Baḥriyya superseded the Ayyūbids [*q.v.*] in Egypt and Syria less by a deliberate process of usurpation than under the constraint of two military crises: the crusade of St. Louis (647-9/1249-50) and the Mongol invasion of Syria (657-8/1259-60). Their seizure of power in Egypt resulted directly from the preference shown by the new sultan, Tūrānshāh, for his own household at the expense of the Baḥriyya. A group of the Baḥriyya murdered Tūrānshāh on 27 Muḥarram 648/1 May 1250. The rise of the Baḥriyya to political dominance was assisted by their outstanding part in the resistance to the crusade, and probably also by the death of the last non-*mamlūk* commander, Fakhr al-Dīn Ibn Shaykh al-Shuyūkh, who had handled the affairs of state when al-Ṣāliḥ Ayyūb died, but was himself killed before the arrival of Tūrānshāh. The Baḥriyya sought to preserve the appearance of Ayyūbid sovereignty by installing as sultan al-Ṣāliḥ Ayyūb's widow, Umm Khalīl Shadjar al-Durr, herself of Turkish slave origin, but the shift of power was indicated by the appointment of a Mamlūk commander (*atābak al-ʿasākir*), Aybak al-Turkumānī. Al-Nāṣir Yūsuf, the Ayyūbid ruler of Aleppo, refused to recognise the sultanate of Shadjar al-Durr, and captured Damascus. The Baḥriyya thereupon deposed Shadjar al-Durr, and raised Aybak to the sultanate as al-Malik al-Muʿizz (28 Rabīʿ II 648/11 July 1250). A few days later he resumed his former command, and a child, al-Ashraf Mūsā, descended from the Ayyūbids of the Yaman, was recognised as nominal sultan. This device failed to appease al-Nāṣir Yūsuf, who undertook more than one campaign against Egypt in the following decade. Aybak resumed the sultanate in 652/1254. At some time he married Shadjar al-Durr, thus following Saldjūḳid precedents for the marriage of an *atabeg* to the widow of his former lord. Meanwhile, hostility was developing between the Baḥriyya and the household of Aybak, the Muʿizziyya. The leading Baḥrī, Fāris al-Dīn Aḳṭāy al-Djamadār, assumed the royal insignia, contracted a political marriage with an Ayyūbid princess, and demanded that she should reside in the Citadel of Cairo. Aybak procured Aḳṭay's assassination by his *mamlūk*, Ḳuṭuz al-Muʿizzī. This coup broke the power of the Baḥriyya, many of whom fled to Syria and entered Ayyūbid service. Among these was Baybars al-Bunduḳdārī [*q.v.*], who now emerged as their leader.

Ironically, another political marriage led to Aybak's death. His intention to marry a daughter of the *atabeg* of Mosul, Badr al-Dīn Luʾlu [*q.v.*], aroused the jealousy of Shadjar al-Durr, who had him murdered on 23 Rabīʿ I 655/10 April 1257. The dispersal of the Baḥriyya had, however, left her without an adequate power-base. The Muʿizziyya had her put to death, and installed as sultan ʿAlī, a youthful son of Aybak by another wife, Ḳuṭuz being the most important of the magnates. When the Mongol invasion of Syria began in 657/1259, Ḳuṭuz usurped the sultanate and effected a reconciliation with Baybars, who returned to Egypt. They led an expeditionary force into Palestine, and defeated the Mongols at ʿAyn Djālūt [*q.v.*] on 25 Ramaḍān 658/3 Sept. 1260. The Mongol evacuation of Syria rapidly ensued. Al-Nāṣir Yūsuf being a captive of the Mongols, the two major Ayyūbid principalities of Damascus and Aleppo fell under direct Mamlūk control, although the three minor lordships of Ḥimṣ, Ḥamāt and al-Karak retained their autonomy. With the ending of this crisis, the inveterate rivalry of the Mamlūk households reappeared. Baybars headed a group of conspirators who murdered Ḳuṭuz. He then usurped the sultanate after undertaking to help his brothers-in-arms, the Baḥriyya.

(b) *The embattled sultanate*

Al-Ẓāhir Baybars, rather than his predecessors, was the effective founder of the Mamlūk sultanate. In his comparatively long reign (658-76/1260-77), a high degree of internal stability, contrasting with the political vicissitudes of the previous decade, allowed the establishment of the characteristic political structure and institutions of the régime. Nevertheless, during his reign and those of his immediate successors, the Mamlūk sultanate was an embattled power, threatened by the Mongol Īlkhāns [*q.v.*] in the east, and by the remains of the Frankish states on the Syro-Palestinian coast. Of the two, the Mongols were by far the greater danger. A few months after ʿAyn Djālūt, a second Mongol invasion of Syria was stopped by the Ayyūbids of Ḥimṣ and Ḥamāt at the first battle of Ḥimṣ (Muḥarram 659/December 1260). Another critical encounter was at the second battle of

Ḥimṣ [q.v.] in 680/1261, during the reign of Ḳalāwūn [q.v.], while the last invasion took place as late as 712/1313, early in the third reign of al-Nāṣir Muḥammad b. Ḳalāwūn. The Frankish states were by comparison militarily insignificant: the danger was that they might provide a base for a crusade from Europe, which would make possible a pincer-movement of Crusaders and Mongols against the Mamlūks. This fear seemed about to be realised when the Lord Edward, son of the English King Henry III, brought a crusading force to Acre in 669/1271, and obtained the limited co-operation of the Īlkhān Abaḳa. This combined operation, the first and last of its kind, accomplished nothing. The security of Muslim Syria as a salient in enemy territory was thus one of Baybars's chief preoccupations. He strove with much success to strengthen his control there. At the beginning of his reign, his comrade Sandjar al-Ḥalabī, whom Ḳuṭuz had appointed governor of Damascus, proclaimed himself sultan, perhaps hoping for autonomy under Baybars's overlordship, somewhat on the Ayyūbid pattern. His bid for power was, however, quickly terminated, as was that of a war-lord in Aleppo, Āḳūsh (for Āḳ-ḳūsh) al-Burunlī (or al-Barlī). In 661-2/1263, two of the remaining Ayyūbid principalities fell into Baybars's hands: al-Karak by the treacherous capture of its lord, al-Mughīth ʿUmar (whom Baybars had served when in exile), and Ḥimṣ by the death without an heir of Shīrkūh's last descendant. The Ismāʿīlīs were reduced to submission, and between 669/1271 and 671/1273 their castles were taken over by Baybars. The reduction of the Frankish states was equally one of his objectives, and his aggressive policy contrasts with the general acceptance of co-existence by the Ayyūbids after Saladin. Baybars campaigned almost annually in Syria, and captured many of the remaining Frankish cities and castles: Caesarea, Haifa and Arsūf fell in 663/1265, Jaffa and Antioch in 666/1268. These towns were forthwith demolished, to deny them as bases to Crusaders. Inland fortresses, however, such as Ṣafad (captured in 664/1266) and Ḥiṣn al-Akrād (Crac des Chevaliers, taken in 669/1271) were restored and provided with Muslim garrisons. Warfare alternated with uneasy truces, in which the Frankish frontiers were eroded by the establishment of condominia (*munāṣafāt*). Against the Mongols Baybars remained on the defensive, seeking to weaken them by diplomacy rather than force of arms. He exploited the hostility between the Īlkhāns and Berke [q.v.], the *khān* of the Golden Horde (reigned 654-64/1256-66), a convert and the ruler of the Ḳîpčaḳ steppes [see DASHT-I ḲÎPČAḲ in Suppl.], the Mamlūk recruiting-ground. The alliance with Berke promoted a flow of Mongol tribal warriors (*wāfidiyya*) from Īlkhānid territories to Baybars. Only at the end of his reign did Baybars invade the Īlkhānid sphere of influence by an expedition into the sultanate of Rūm. He defeated a Mongol army in the frontier-region of Elbistan [q.v.] in Dhu 'l-Ḳaʿda 675/April 1277, and was enthroned in Kayseri (Ḳayṣariyya), but withdrew without achieving a lasting conquest.

Two of Baybars's internal aims were to legitimise his rule and to establish a dynasty. He succeeded in the former by installing an ʿAbbāsid prince as caliph in Cairo, and receiving from him a formal delegation of plenary powers as the universal sultan of Islam (Radjab 659/June 1261). When this caliph (al-Mustanṣir bi 'llāh) shortly afterwards died in a forlorn hope against Baghdād, Baybars installed a successor, al-Ḥākim bi-amri 'llāh, whose descendants were recognised as caliphs in Egypt and Syria until (and even beyond) the Ottoman conquest. This translation of the caliphate assisted Baybars in his negotiations with Berke, in view of the social disparity between a *mamlūk* and a Čingizid. In regard to the second aim, Baybars early took steps to ensure the succession of his son, Baraka (i.e. Berke) Khān, named after his maternal grandfather, a Khʷārazmian warrior-chief. In Shawwāl 662/August 1263, Baraka Khān, aged about four years, was duly invested as joint-sultan with his father.

Baybars's dynasty did not long survive, the essential cause of its downfall being the hostility between the veteran magnates of Baybars's household, the Ẓāhiriyya, and the *khāṣṣakiyya*, i.e. the court-*mamlūks* of his son. The leading opponent belonged to an older generation, and was Ḳalāwūn al-Alfī, a comrade of Baybars. Having deposed Baraka Khān, the magnates installed his seven-year-old brother Salāmish (Süleymish) as nominal sultan. A few weeks later, Ḳalāwūn usurped the throne (Rabīʿ II 678/August 1279), and exiled the sons of Baybars to al-Karak.

Al-Manṣūr Ḳalāwūn was responsible for an important military innovation, viz. the recruitment of a Circassian *mamlūk* regiment, known (from its quarters in the towers of the Citadel) as the Burdjiyya [q.v.]. This was the first indication of a threat to the ascendancy of the Ḳîpčaḳ Turkish *mamlūks*. In other respects, Ḳalāwūn continued the policies of Baybars. Syria remained a central preoccupation. The governor of Damascus, Sunḳur al-Ashḳar, proclaimed himself sultan like Sandjar al-Ḥalabī before him. He was defeated after some difficulty in Ṣafar 679/June 1280, but succeeded in establishing himself in the former crusader-castle of Ṣahyūn, whence he controlled the fortresses in the mountainous hinterland of Latakia. Finally, he joined Ḳalāwūn in operations against a Mongol force sent by the Īlkhān Abaḳa, which was routed at the second battle of Ḥimṣ (Shaʿbān 680/November 1281). Abaḳa died in the following year, and his successor, Tegüder Aḥmad, a convert to Islam, sought good relations with the sultan. Ḳalāwūn was thus left free to pursue the *djihād* against the Frankish states. Tripoli fell in Rabīʿ II 688/April 1289, and like the other coastal towns was demolished. Ḳalāwūn was about to lead an expedition against Acre when he died (Dhu 'l-Ḳaʿda 689/November 1290). Like Baybars, he endeavoured to establish a dynasty, but his intended successor, his son al-Ṣāliḥ ʿAlī, predeceased him. The throne passed to another son, al-Ashraf Khalīl [q.v.], for whom was reserved the crowning mercy of the capture of Acre (Djumādā I 690/May 1291) and the extinction of the Latin kingdom. In the following year, Khalīl took the Armenian patriarchal see of Ḳalʿat al-Rūm (Radjab 691/June 1292), but in Muḥarram 693/December 1293 he fell a victim to a conspiracy of magnates who had belonged to his father's military household (the Manṣūriyya), and who felt themselves threatened.

The murder of al-Ashraf Khalīl inaugurated seventeen years of political instability, during which magnates with the support of *mamlūk* factions dominated the sultanate. Twice in this period, in 693-4/1293-4 and 698-708/1299-1309, another son of Ḳalāwūn, al-Nāṣir Muḥammad, was installed as sultan. Aged less than ten at his first accession, he was no more than a figurehead, and he was twice set aside by usurpers; between 694/1294 and 698/1299 by Kitbughā and Lāčīn (Lādjīn [q.v.]), and in 708-9/1309-10 by al-Muẓaffar Baybars al-Djāshnikīr [q.v.]. It is significant that this last usurper was a Circassian, originally recruited into the Burdjiyya. The part played by the Burdjiyya added a further com-

plication to the factional struggles after the death of al-Ashraf Khalīl. In 709/1310, however, al-Nāṣir Muḥammad, now mature in political experience and with a *mamlūk* household of his own, emerged from exile in al-Karak, and, with the support of the governors of Aleppo, Ḥamāt and Tripoli, marched on Egypt and overthrew al-Muẓaffar Baybars.

(c) *The autocracy of al-Nāṣir Muḥammad*

During the long third reign of al-Nāṣir Muḥammad (709-41/1310-41) the Mamlūk sultanate was no longer threatened by external enemies. The Frankish states were gone, and with them any serious danger of a crusade from Europe. The last Mongol invasion, commanded by the Īlkhān Öldjeytü in the winter of 712/1312-13, was abortive. Thus the Sultan did not need to divide his time between Syria and Egypt, and al-Nāṣir Muḥammad was free to concentrate on internal problems, and to establish an autocratic government.

He had first to secure his own position. The usurper Baybars and his colleague Salār were put to death within a few months of the restoration. The three Syrian governors who, as kingmakers, might become dangerous were the next to go. One died naturally, the second was arrested, while the third fled to Öldjeytü. Meanwhile, with consummate political skill, al-Nāṣir Muḥammad carried out the operation which had been fatal to several earlier sultans—the substitution of his own *mamlūks* for veteran magnates in key positions. Outstanding among his servants was Tankiz al-Ḥusāmī, appointed governor of Damascus in 712/1312, and in effect governor-general of Syria two years later. Another, Arghūn al-Dawādār, received similar extensive powers as vicegerent in Egypt (*nāʾib al-salṭana bi 'l-diyār al-Miṣriyya*). Early in the reign, the sultan carried out a fiscal reorganisation (*al-rawk al-Nāṣirī*), which greatly strengthened his own position against the magnates. Such a reform had been attempted in 697/1298 by Lāčīn, and had been a principal cause of his murder. Al-Nāṣir Muḥammad proceeded with his habitual caution, commissioning first a cadastral survey and redistribution of assignments of landed revenue (sing. *iḳṭāʿ* [*q.v.*]) in the less politically sensitive province of Damascus (713/1313). This was followed in 715/1315 by the cadastral survey of Egypt, after which the sultan sat in full court to distribute warrants of assignments to the beneficiaries. In consequence of the *rawk*, the share of revenue assigned to the sultan's fisc (*al-khāṣṣ*) was raised from one-sixth to five-twelfths at the expense of the other holders of assignments. At this time also he abolished a wide range of uncanonical taxes (*mukūs* [see MAKS]), many of them abusive. This was a popular act, which probably had little effect on the sultan's own resources but worked to the detriment of the tax-farmers.

Al-Nāṣir Muḥammad's third reign was thus a period of autocratic and sometimes arbitrary rule. His tenure of power was so secure that on three occasions (712/1313, 719/1320, 732/1332) he was able to absent himself from Cairo for the Pilgrimage—thereby also demonstrating his suzerainty over the Holy Cities. His relations with his magnates, although apparently close and cemented by political marriages, were liable to sudden rupture. Even Tankiz al-Ḥusāmī was disgraced and put to death, after nearly thirty years' service in Syria. In the last months of the sultan's life, rival court-factions were forming around two of his favourites, Ḳawṣūn (who had married a daughter of the sultan) and Bashtak, although on his deathbed he obtained the semblance of a reconciliation between them. He died in Dhu 'l-Ḥidjdja 741/June 1341, having nominated his son, Abū Bakr, to succeed him.

(d) *The ascendancy of the magnates*

Although three generations of al-Nāṣir Muḥammad's descendants succeeded him in the sultanate, the fact that twelve sultans reigned in less than half a century indicates their weakness. They were mostly young and inexperienced, some of them mere children, who lacked the essential power base of *mamlūk* households. Behind these figureheads, the magnates controlled the state, and struggled among themselves for the ascendancy. The period also saw a rise in Circassian recruitment after an intermission during the reign of al-Nāṣir Muḥammad. Political instability appeared immediately after al-Nāṣir Muḥammad's death. Three weeks later, Ḳawṣūn obtained Abū Bakr's approval for the arrest of Bashtak and the sequestration of his vast wealth and assignments. The fallen *amīr* was sent to Alexandria, where shortly afterwards he was put to death. Then in Ṣafar 742/August 1341, Ḳawṣūn forestalled a plot against himself by the sultan, whom he deposed, substituting an infant son of al-Nāṣir Muḥammad, named (or perhaps nicknamed) Kudjuk, i.e. Küčük. The new sultan was certainly not more than seven years old, and Ḳawṣūn was the effective ruler until he was overthrown, and his puppet-sultan deposed, in Radjab 742/January 1342. It would be otiose in this article to recount in detail the political history of the later Ḳalāwūnids. The one sultan in this period who showed some promise of repeating the success of his father, al-Nāṣir Muḥammad, was al-Nāṣir Ḥasan. Eleven years old when he was first raised to the throne after the killing of his brother and predecessor (Ramaḍān 748/December 1347), he was deposed in favour of another brother in Djumādā II 752/August 1351. Restored in Shawwāl 755/October 1354, he succeeded in ridding himself of the kingmaker and regent, Ṣarghatmush al-Nāṣirī, in Ramaḍān 759/August 1358. He then promoted his own *mamlūks*, chief among them being Yalbughā al-ʿUmarī, and tried to create a power-base of a new kind by conferring high amīrates and provincial governorships on *awlād al-nās* [*q.v.*], i.e. descendants of the *mamlūks*, a socially privileged group who nevertheless did not normally form part of the military and ruling establishment. This experiment inevitably aroused the mistrust of the *mamlūks*, and an opposition faction appeared, headed (against the traditions of *mamlūk* loyalty to the founder of the household) by Yalbughā al-ʿUmarī. The sultan was defeated, captured, and put to death (Djumādā I 762/March 1361). Yalbughā acted as regent until his own overthrow and death in Rabīʿ II 768/December 1366. Sixteen years later, Barḳūḳ b. Anaṣ [*q.v.*], a Circassian nurtured in his military household, the Yalbughāwiyya, deposed the last Ḳalāwūnid and usurped the sultanate.

(e) *The Circassian Mamlūk sultanate*

The Circassian Mamlūk sultanate, which begins with al-Ẓāhir Barḳūḳ's usurpation in Ramaḍān 784/November 1382, follows a regular and almost invariable pattern of succession. A magnate would usurp the throne, which on his death would pass to his son. Within a few years at most, the latter would be deposed by another usurper, and the cycle of events would be repeated. But the sultanate was not a prize open to all comers: the usurpers emerged from specific circles, namely the military households of previous sultans. The two principal nurseries of sultans were the households of Barḳūḳ and of Ḳāʾit Bāy [*q.v.*], each

of which produced five rulers. Since Ḳā'it Bāy was a *mamlūk* of Barsbāy [*q.v.*], who was himself a *mamlūk* of Barḳūḳ, the Circassian sultans may be regarded as constituting a dynasty by *mamlūk* clientage rather than blood descent (cf. Table 2).

The Circassian sultanate faced in its early years a threat comparable to that which al-Ẓāhir Baybars had confronted in the later 7th/13th century—the danger of annihilation by the Turco-Mongol forces of Tīmūr Leng. Barḳūḳ responded by offering asylum in 796/1394 to Aḥmad b. Uways the Dj̲alāyirid [*q.v.*] expelled from Bag̲h̲dād by Tīmūr, by establishing a common front with the Ottomans and the Golden Horde, and by replying defiantly to Tīmūr. The storm did not break until 803/1400-1, during the reign of Barḳūḳ's son, Faradj̲ [*q.v.*]. He and his forces were compelled to evacuate Syria, which Tīmūr occupied and devastated. He did not, however, attempt to invade Egypt. In S̲h̲aʿbān 803/March 1400, he began to withdraw from Damascus, having secured his flank for an advance on the Ottomans.

Although throughout the 9th/15th century the Mamlūk sultanate continued to present the appearance of a great power, it was undergoing a prolonged economic and military decline. Its growing economic weakness has usually been ascribed to political factors—the factional conflicts of the magnates, resulting in enfeebled administration, and hence in the decay of agriculture. These disorders were probably rather symptomatic than causative, and the basic reason for the economic decline may lie in the heavy mortality occasioned by successive epidemics of plague. The most serious of these (the Black Death of European history) occurred in 749/1348-9, during the first reign of al-Nāṣir Ḥasan, and there were twelve severe epidemics during the last century of the sultanate. Since mortality was particularly high among the *mamlūks*, this must have necessitated very heavy expenditure by the sultans and magnates to keep up their military households. Even so, there seems to have been a marked fall in recruitment. The Royal Mamlūks dropped from about 12,000 in the third reign of al-Nāṣir Muḥammad to less than half the number under the Circassian sultans. The plague, however, inflicted its severest damage by its inroads upon the agrarian and industrial workforce. Villages were deserted, irrigation works neglected, and cultivated land went back to waste. The landed revenue of Egypt shrank in the last century of the sultanate from over 9 milion *dīnārs* to less than 2 million. Alexandria, the centre of the textile industry, suffered badly from the Black Death, and its decline continued in the Circassian period. Both in Egypt and Syria, the weakening of administration and the decline of the sedentary population were reflected in growing tribal pressure on the cultivable areas and the routes. It is in this period that a fraction of Hawwāra [*q.v.*], settled by Barḳūḳ in Upper Egypt, established a domination there which they retained into the Ottoman period.

As the landed revenue decreased, the magnates and sultans made growing depredations upon commerce; e.g. they compelled merchants to buy goods at an artificially-enhanced price (*ṭarḥ, rimāya*), an abuse for which there had been sporadic precedents. The transit-trade, especially in spices, from the Indian Ocean, which had been handled since the 6th/12th century by the group known as the Kārimīs [*q.v.*], was brought under strict control by Barsbāy (825-41/1422-38). Dj̲udda, under Mamlūk customs-administration from 828/1425, became in effect the staple for oriental trade in the Red Sea, and its revenue was shared between the sultan and the S̲h̲arīf of Mecca. In 832/1428 Barsbāy established a monopoly of the pepper trade, forcing up the price at Alexandria to the detriment of the Venetian merchants. His interest in the transit-trade between the Red Sea and the Mediterranean explains two other developments in his reign. Three campaigns against Cyprus, culminating in the conquest of the island (829/1426) and the reduction of its king to a vassal of the sultan, ended the danger to Muslim shipping from this Frankish outpost. The campaigns are of interest as being the only major naval operations undertaken by the Mamlūks. Furthermore, Barsbāy's refusals, repeated over ten years (828-38/1424-34), to allow S̲h̲āhruk̲h̲ the formal privilege of providing a veil for the Kaʿba indicate a determination to deny the Tīmūrid any *locus standi* within the Mamlūk commercial sphere of interest.

Between the reign of Barḳūḳ at the beginning of the Circassian period, and that of Ḳānṣawh al-G̲h̲awrī [*q.v.*] at its end, the Mamlūk sultanate was involved in only one major land-war, that fought with the Ottomans between 890/1485 and 896/1491. The underlying cause of this war in the reign of Ḳā'it Bāy 872-901/1468-96) was the threat offered by the Ottomans to the marcher-principalities, particularly Elbistan, which since its foundation by the ruling dynasty (Dulḳadīr, see DH̲U 'L-ḲADR) in the first half of the 8th/14th century had been a Mamlūk protectorate. This localised conflict of interests was aggravated by considerations of high policy when, on the accession of Sultan Bāyazīd II [*q.v.*] in 886/1481, Ḳā'it Bāy gave asylum to his brother and rival, Dj̲em [*q.v.*]. Although in appearance the Mamlūks confronted the Ottomans on equal terms, the outcome of the war was merely to maintain the *status quo* on the frontiers.

Bāyazīd had been unable to commit all his forces to the war, and the next conflict between the two powers was to reveal the inherent military and political weakness of the Mamlūks. As a fighting-force they were obsolescent. Unlike the Ottomans, they had failed to take advantage of the development of firearms, the conservative Mamlūk cavalry showing particular reluctance to adopt the crude hand-guns of the period. Even the traditional equestrian exercises and games were neglected, and the insubordination of newly-recruited *mamlūks* (*dj̲ulbān*) is a feature of the later 9th/15th century. A principal cause of the overthrow of Ḳā'it Bāy's son and successor, al-Nāṣir Muḥammad (901-4/1496-8) was his recruitment of a force of black arquebusiers. Ḳānṣawh al-G̲h̲awrī attempted to restore the military effectiveness of his state. An arquebus unit (*al-ṭabaḳa al-k̲h̲āmisa*) was set up in 916/1510, but the old prejudice remained, and it was dissolved in 920/1514. He paid attention to the casting of cannon, which had been used by the Mamlūks (but for siege-warfare only) since the later 8th/14th century, and he made efforts to revive the traditional cavalry-training.

At the beginning of Ḳānṣawh al-G̲h̲awrī's reign (906-22/1501-16), the Mamlūk sultanate was hemmed in by three great powers. To the north was the Ottoman state, which was now confronted on the east by the new military monarchy of the Ṣafawid S̲h̲āh Ismāʿīl [*q.v.*]. To the south, dominating the Indian Ocean and threatening the Red Sea, was the naval power of the Portuguese. The Mamlūks lacked the maritime traditions and experience to deal with this danger. They received supplies of material and personnel for a naval expedition from the Ottomans in 520/1514. Ottoman-Ṣafawid hostilities, however, in-

volved the Mamlūks when Sultan Selīm I invaded Syria, probably to safeguard his flank, and defeated Ḳānṣawh (who died during the battle) at Mard̲j̲ Dābiḳ (25 Rad̲j̲ab 922/24 Aug. 1516). He subsequently advanced into Egypt, and inflicted a second defeat on the Mamlūks at al-Raydāniyya (29 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 922/23 January 1517). Cairo fell, and the last Mamlūk sultan, al-As̲h̲raf Ṭūmān Bāy, was subsequently captured and hanged. Egypt thus became a province of the Ottoman Empire, and was separately administered from Syria.

(f) *The Neo-Mamlūks of the Ottoman period*

The Ottoman conquest of Egypt was not followed by the extirpation of the *mamlūks*. Indeed, from one point of view, it may be regarded as an episode in Mamlūk factional politics, since Selīm's victories were facilitated by Mamlūk collaborators in opposition to Ḳānṣawh al-G̲h̲awrī and Ṭūmān Bāy. The leaders of this faction were the governors of Aleppo and Damascus, K̲h̲āʾir Bay and D̲j̲ānbirdī al-G̲h̲azālī [*q.v.*], who received their reward from the conqueror, K̲h̲āʾir Bey being appointed viceroy in Cairo (where he maintained much of the state of the sultans, his predecessors), and D̲j̲ānbirdī being restored to Damascus. These arrangements marked, however, a transitional phase. On Selīm's death in 926/1520, D̲j̲ānbirdī attempted to make himself independent, but his revolt was suppressed, and he himself killed (927/1521). K̲h̲āʾir Bey died in 928/1522, and thereafter Ottomans were appointed to both Damascus and Cairo. A last Mamlūk rising headed by the *kās̲h̲ifs* D̲j̲ānim and Īnāl was suppressed shortly afterwards.

Mamlūk recruitment and the formation of *mamlūk* military households nevertheless continued, and provided part of the armed forces of Egypt beside, but distinct from, the seven corps of the Ottoman garrison troops, the most important of which were the Janissaries and the *ʿazabs* [*q.v.*]. The heads of the Mamlūk establishment, nominally 24 in number, bore the Ottoman designation of *sand̲j̲aḳ beyi* (whence in the Arabic chronicles *sanād̲j̲iḳ/ṣanād̲j̲iḳ* is used as the plural of *bak/beg*; the modern *bakawāt* is a neologism), but they differed in their functions from their homonyms elsewhere in the Ottoman empire. After continuing in obscurity during the remainder of the 10th/16th century, the beylicate emerged as a factor of great political importance in the middle decades of the 11th/17th century (a period of Ottoman weakness), and the old pattern of Mamlūk factionalism reappeared with the inveterate hostilities between the two households of the D̲h̲u 'l-Faḳāriyya (usually Faḳāriyya) and the Ḳāsimiyya [*q.vv.*]. The former attained its apogee with Riḍwān Bey, who was *amīr al-ḥād̲j̲d̲j̲* for over 20 years until his death in 1066/1656. The Faḳārī ascendancy was broken in 1071/1660 by the Ḳāsimiyya in collusion with the Ottoman viceroy, but with the assassination of their chief, Aḥmad Bey the Bosniak, in 1072/1662, they too sank into impotence. A revival of the political power of the beylicate, and of factional rivalry, may be observed in the early 12th/18th century. By this time, complex webs of protection and patronage were linking the Mamlūk households with the officers and troops of the Ottoman garrison, the urban population of Cairo and the Arab tribes, and a new polarisation appears in the factional struggles. There was a manifestation of this in 1123/1711, when the ambition of a Janissary boss, Afrand̲j̲ Aḥmad, produced a split between Janissaries and *ʿazabs*, and between Faḳāriyya and Ḳāsimiyya, which culminated in a battle outside Cairo. Although in 1142/1730 the Faḳāriyya finally obtained the supremacy over the Ḳāsimiyya, they were soon overshadowed by a younger household, the Ḳāzdug̲h̲liyya [*q.v.*], which (a significant indication of the assimilation of Ottoman military society in Egypt to Mamlūk norms) had been founded, and was for some decades headed, by officers of the garrison. *Mamlūks* from this household began to enter the beylicate after 1161/1748. Its most famous member was ʿAlī Bey [*q.v.*], known as *Bulūṭ Ḳāpān*, who as *s̲h̲ayk̲h̲ al-balad* (i.e. premier bey) dominated the affairs of Egypt between 1173/1760 and 1186/1772. He was ruthless in extirpating his rivals and opponents, and gave signs of an intention to make himself independent in Egypt. After his overthrow, his former *mamlūk*, Muḥammad Bey Abu 'l-D̲h̲ahab, enjoyed a brief supremacy until he died on campaign against S̲h̲ayk̲h̲ Ẓāhir al-ʿUmar in 1189/1775. Thereafter factional struggles continued among the leading beys, the most notable of whom were two of Abu 'l-D̲h̲ahab's *mamlūks*, Ibrāhīm Bey al-Kabīr [*q.v.*] and Murād Bey, whose uneasy duumvirate was threatened by the expedition of D̲j̲ezāʾirli G̲h̲āzī Ḥasan Pas̲h̲a [*q.v.*] in 1200-1/1786-7, and destroyed by Bonaparte's occupation of Egypt in 1213/1798. The massacre and proscription of the Mamlūk chiefs by Muḥammad ʿAlī Pas̲h̲a in 1812 marked the end of their ascendancy in Egypt.

(ii) INSTITUTIONAL HISTORY

(a) *Institutions of the sultanate*

The central and essential institution of Mamlūk society under both the sultanate and the Ottomans was the military household. This consisted of the *mamlūks* obtained, trained and emancipated by a master (*ustād̲h̲*), to whom they remained attached by loyalty and more formally by legal clientage (*walāʾ*). This link was indicated by the *mamlūk*'s *nisba*. The loyalty felt towards the *ustād̲h̲* was narrowly personal; during the sultanate, it extended, if at all, only in a very attenuated form to his sons or other members of his family. The second bond of loyalty created by the Mamlūk household was the comradeship (*k̲h̲us̲h̲dās̲h̲iyya*) existing among the *mamlūks* as brothers-in-arms (sing. *k̲h̲us̲h̲dās̲h̲*). The constant propensity of each generation of magnates to recruit new households of *mamlūks* virtually excluded their blood-descendants (*awlād al-nās*) from military functions, and hence from political power. The second and later generations of immigrant origin thus became absorbed into the Arabic-speaking Muslim society of Egypt and Syria, to the culture of which they made notable contributions.

The principal households were those of the sultans (the Royal Mamlūks), designated from the *laḳab* of the founding *ustād̲h̲*, e.g. the Ṣāliḥiyya of al-Malik al-Ṣāliḥ Ayyūb, the Ẓāhiriyya of al-Malik al-Ẓāhir Baybars etc. Since the *mamlūks* were immigrants, recruited at any one time principally from a single ethnic group (originally the Ḳïpčaḳ Turks, subsequently the Circassians), they formed in effect a synthetic alien tribe. The factional struggles among the different households, which form a recurrent feature of Mamlūk history, bear some analogy to clan warfare. The *mamlūks* depended upon their *ustād̲h̲* for patronage and advancement, while the *ustād̲h̲* depended upon his *mamlūks* for the maintenance of his own power and security. This was clearly the case as regards the royal household. The short reigns of many sultans, e.g. the later Ḳalāwūnids and the sons of Circassian usurpers, may largely be explained by their lack of *mamlūk*

households recruited before their accession. Even if a sultan began his reign with an effective household, as did most of the usurping magnates, his position was not secure until he had ousted the great office-holders who were his potential rivals (often his *khushdāsh*-comrades), and installed his own *mamlūks* in their places. It was this situation which produced recurrent succession-crises from the time of Tūrānshāh onwards, and it resulted in continual tension between the two constituent groups of the Royal Mamlūks—those recruited by the reigning sultan (*djulbān, adjlāb, mushtarawāt*) and the veterans of his predecessors' recruitment (*karāniṣa, karāniṣ*).

The nature of the sultanate in the Mamlūk period is obscured by our sources, which present the ruler in accordance with traditional Islamic stereotypes. During the early decades, the sultan was primarily a war-leader, seen by his *khushdāsh*-comrades as first among equals, and presented as the supreme *mudjāhid* in the royal biographies. On the other hand, there is an anxiety to assert the Islamic legitimacy of the sultans, at first as the successors to the Ayyūbids. In his biography, Ibn ʿAbd al-Ẓāhir shows Baybars as the true successor to al-Ṣāliḥ Ayyūb by *mamlūk* clientage and qualities of character, rather than Tūrānshāh, the heir by blood-descent. The need for these somewhat specious arguments was ended, however, when Baybars, by his translation of the caliphate to Cairo, placed the supreme legitimating authority in Sunnī Islam under the control of himself and his successors. Thereafter the caliph played an essential, if formal, part in the accession observances of the Mamlūk sultans. When the danger from the Frankish states and the Mongols came to an end, and the sultans became sedentary in Cairo, their governmental functions became more important than leadership in war—a development demonstrated in the autocracy established by al-Nāṣir Muḥammad in his third reign (709-41/1310-41), and reasserted by the effective usurping sultans during the Circassian period.

The distinctive characteristic of the administrative system was the over-riding control exercised by the sultan through Mamlūk *amīrs*. The amīrates that had existed under the Ayyūbids were organised, probably in Baybars's reign, into three principal ranks. At the top was that of *amīr miʾa wa-mukaddam alf*, i.e. the commander of a household force of 100 horsemen and head of a company of 1,000 warriors of the *ḥalka*. With the differentiation of the Baḥriyya from the *ḥalka* which had been its matrix, the latter sank into being an honourable but archaic formation of declining military significance, latterly recruited largely from *awlād al-nās*. In theory there were 24 *amīrs* of the highest rank. The second rank was that of *amīr ṭablkhānāh*, who had the privilege of a military band, and came to be equated with the commander of 40 household troopers. The third rank, *amīr ʿashara*, had a military household of ten horsemen. This was a hierarchy of rank; it did not imply a chain of command, nor was there any kind of subinfeudation, although it usually provided a *cursus honorum*. The military households, including that of the sultan, were maintained by assignments of landed revenue (sing. *iḳṭāʿ* [*q.v.*], *khubz*), which as mentioned above were reorganised by al-Nāṣir Muḥammad in 715/1315, thereby laying the fiscal basis of his autocracy. It was the Royal Mamlūks who were promoted to amirates and appointed to the great offices at court and in the provinces. Although their tenure of office was individually precarious, and their assignments were never in this period hereditary or life-tenures, these magnates were always potential opponents of the sultan. Repeated attempts to establish a species of contractual relationship by obtaining an accession-compact at the installation of a sultan were never effective in practice; hence many reigns ended in factional revolt, and the deposition (or even murder) of the ruler.

A noteworthy instance of the development of offices in this period, and of the extension of Mamlūk control over the administration, is provided by the history of the vizierate. Under the Ayyūbids, as under previous régimes, the greatest officer of state had been the *wazīr*, a civilian usually trained as a jurist, who served during the ruler's pleasure as his omnicompetent minister. The erosion of the *wazīr*'s powers began with the establishment of the office of vicegerent (*nāʾib al-salṭana*), held by a *mamlūk*, as a permanent post, not an *ad hoc* appointment during the sultan's absence on campaign. This development may be dated to the reign of Baraka Khān (676/1277). The close relationship which had existed between the ruler and the *wazīr* was further weakened in 678/1280 when Ḳalāwūn promoted the civilian head of the chancery (*ṣāḥib dīwān al-inshāʾ*) to the confidential post of secretary (*kātib al-sirr*) to himself. The secretaryship was held by a succession of civilian officials down to the end of the Mamlūk sultanate. The *wazīr* then was restricted to being the head of the state treasury (*al-dawla al-sharīfa, dīwān al-wizāra*), but on several occasions Mamlūk *amīrs* were appointed to the office until it was abolished by al-Nāṣir Muḥammad in 728/1328. A professional financial official, the controller of the treasury (*nāẓir al-dawla*) was jointly responsible with the *wazīr*, and handled its affairs directly when his colleague was an inexpert military officer. On the abolition of the vizierate, the controller continued to administer the treasury. A new financial department, *dīwān al-khāṣṣ*, created by al-Nāṣir Muḥammad to administer his fisc, was also placed under a civilian controller (*nāẓir al-khāṣṣ*), who absorbed many of the *wazīr*'s financial functions as the secretary had taken over his chancery functions. Although the vizierate was restored after the reign of al-Nāṣir Muḥammad, it was restricted to a limited financial field. Barḳūḳ created two new personal treasuries, *al-dīwān al-mufrad* and *dīwān al-amlāk*, which were managed by a Mamlūk great officer of the household, the high steward (*ustādār al-ʿāliya* from *ustādh al-dār al-ʿāliya*).

The militarisation of household offices, and the acquisition by some of state functions, were characteristic developments of the Mamlūk sultanate. In contrast to the Ayyūbids, under whom only four court offices were normally held by the military, the Mamlūks beginning with Baybars quickly developed a hierarchy of such offices. The *dawādāriyya* was militarised, and its holder rose from being the bearer of the royal ink-well to being the channel of communication between the sultan and the chancery. Not until the 8th/14th century, however, was this office usually given to an *amīr* of the highest rank. Another officer who acquired public functions was the chamberlain (*ḥādjib* [*q.v.*]), who obtained jurisdiction in disputes between the *amīrs* and the soldiery. Originally, he acted in conjunction with the vicegerent, hence his importance increased when al-Nāṣir Muḥammad left the vicegerency vacant after 727/1326. During the first half of the 9th/15th century, the chamberlain's jurisdiction was abusively extended to ordinary subjects, to the detriment of the *Sharīʿa* courts. A proliferation of offices took place; e.g. by the end of Barḳūḳ's reign there were six chamberlains, Faradj raised the number to eight, and by the mid-9th/15th century their numbers had increased still more.

An important military office, which went back

through Ayyūbid and Zangid antecedents to a Saldjūḳid institution, was that of the *atābak* [*q.v.*], i.e. *atabeg*. From the start of the Mamlūk sultanate, it was held exclusively by officers of *mamlūk* origin, whereas under the Ayyūbids, free-born Muslims, and even princes of the blood, had also been appointed. The Mamlūk *atābakiyya* was originally a tenure of the supreme military command by delegation from a sultan who could not exercise it in person, e.g. Shadjar al-Durr, ʿAlī b. Aybak. Hence the specific title of *atābak al-ʿasākir* becomes standard form. The regency, which had been exercised by the *atabeg* under previous régimes, is usually separately designated as *tadbīr al-mamlaka* (or equivalent term), although this function was often combined with the *atābakiyya*. The four decades of the last Ḳalāwūnids, during which *atābaks* and *mudabbirs* flourished at the expense of the feeble sultans, saw the absorption of another title, that of *amīr kabīr*. In the Ayyūbid period and during the first century of the Mamlūk sultanate, this meant simply and literally a senior *amīr*, until in 756/1355-6, during the second reign of al-Nāṣir Ḥasan, Shaykhūn al-ʿUmarī annexed the title to his office of *atābak al-ʿasākir*, and the two terms were thenceforth synonymous. This was, however, itself an indication that the *atābakiyya* was coming to imply pre-eminence in rank rather than specific functions. From about the same time also, the title of *atābak al-ʿasākir* comes to be held by *amīrs* in the Syrian provinces, and so loses its uniqueness.

In contrast to the loose Ayyūbid family confederacy of autonomous principalities, the provinces of the Mamlūk sultanate were under close central control, being administered by governors of *mamlūk* origin serving as the sultan's delegates (sing. *nāʾib al-salṭana*). In Egypt, this title was originally held solely by the vicegerent (*al-nāʾib al-kāfil*), who (as indicated above) was in some respects the functional successor to the *wazīr*. The title of *nāʾib* was extended in 767/1365 to the governor of Alexandria (after the brief occupation of the city by King Peter I of Cyprus), and by Barḳūḳ to the governors of Upper and Lower Egypt. The vicegerency was characteristically allowed to lapse by al-Nāṣir Muḥammad in 727/1326. Restored after his death, it was overshadowed by the *atābakiyya*. The last appointment was made by Faradj in 808/1405. The Syrian *nāʾibs* held the title of *malik al-umarāʾ*, which had been used by the Saldjūḳs of Rūm [see BEGLERBEGI], and which continued to be borne by Khāʾir Bey as viceroy of Egypt after the Ottoman conquest. Pre-eminent among them was the governor of Damascus. Although the Syrian governors seemed like kinglets in their provinces, they were subject to various controls, both from the arbitrary will of the sultan and of an administrative nature. Grants of assignments could only pass under the sultan's signature, or sometimes that of the vicegerent. Several of the principal provincial officials, e.g. the governor of the citadel at Damascus and the chamberlain there, were appointed by the sultan, as was the governor's secretary, who served as a spy on him. Governors of the Egyptian provinces bore the inferior titles of *kāshif* or *wālī*.

(b) *Neo-Mamlūk institutions*

The extinction of the Mamlūk sultanate ended the recruitment of Royal Mamlūks, but the formation of *mamlūk* households continued until the time of Muḥammad ʿAlī Pasha. Detailed information on their structure is only available from the early 12th/18th century with the copious data provided by al-Djabartī. By this time the households (sing. *bayt*) had developed into complex patronage-systems comprising the following elements: (1) the head (*ustādh*) of the household, who might be a *bey*, an Ottoman garrison-officer, or even a native civilian (e.g. Ṣāliḥ al-Fallāḥ, d. before 1161/1748). (2) Children of the *ustādh*. By contrast with the normal practice under the sultanate, sons of an *ustādh* were members of the military household, and might succeed to its headship. Daughters or widows of an *ustādh* might marry *mamlūks* of the household. (3) True *mamlūks*. The immigration (especially of Circassians) continued as under the sultanate, but there is some evidence of the recruitment for military purposes of black slaves (*ʿabīd sūd*). (4) Free retainers recruited in Anatolia and Rumelia. They served chiefly as mounted bodyguards (sing. *sarrādj*), and were subsequently, it appears, enrolled in the Ottoman garrison-corps as clients (sing. *čirak*, whence *ishrāḳ* or *djirāḳ*) of their former employers. They were thus largely excluded from the advancement open to true *mamlūks*, although the Bosniaks who appear in the Ḳāsimiyya in the 11th/17th century, and the future Djazzār Aḥmad Pasha, may have started their careers in this way. (5) Allies among the native urban population and the tribes, where Mamlūk factionalism tended to link up with an indigenous division into the rival groupings of Saʿd and Ḥarām.

With the disappearance of the Royal Mamlūks, the old factional polarisation between *ḳarāniṣa* and *djulbān* ceased, but factionalism reappeared (perhaps not before the later 11th/17th century) basically to obtain high office and the control of the revenues of Egypt. Although the old *iḳṭāʿs* had been abolished after the Ottoman conquest, their place was soon taken by a system of tax-farms (sing. *iltizām* [*q.v.*]), many of which were appropriated by the neo-Mamlūks. The *sandjaḳ beyis* (an Ottoman term which almost certainly conceals their continuity with the *amīrs* of the highest rank under the sultanate) were at one and the same time the leading *multazims* and the chiefs of the neo-Mamlūk establishment. Although they formed a military élite, the *beys* were outside the cadres of the Ottoman garrison. Their lack of specific duties enabled them to assume a wide range of functions and to develop into a self-perpetuating ruling group. Their principal functions were: (1) the command as *serdār* of forces levied for service inside Egypt (e.g. against nomadic incursions) or outside in the Ottoman sultan's wars. (2) The command of the annual tribute-convoy sent by land to Istanbul, held by the *amīr al-khazna*. (3) The command of the annual Pilgrimage-caravan to Mecca, held by the *amīr al-ḥādjdj* (the form *amīr al-ḥadjdj*, which might be expected, is not found in mediaeval or later sources), who accompanied the *maḥmal*, sent, as during the Mamluk sultanate, in token of sovereignty. (4) The headship of the financial administration as *daftardār*. The earliest *daftardārs* after the conquest were Ottomans, but from the later 10th/16th century the post was held by a *bey*. (5) Service as acting viceroy (*ḳāʾim-maḳām* [*q.v.*]) in the interim between the withdrawal of a viceroy and the arrival of his successor. In the factional struggles, such an appointment was a means of legitimating the position of the dominant group. In addition, during the 12th/18th century, *beys* served as military governors of the sub-provinces of Egypt, thus reducing the status of the former governors, the *kāshifs*, who were also *mamlūks* by origin. They became in effect subordinates of the *beys*. An important new office which emerged during the 12th/18th century was that of *shaykh al-balad*, which institutionalised the primacy (*riʾāsa*) held by military and political leaders. The title

seems to have been held only by members of the beylicate. With the administrative reorganisation carried out by Muḥammad ʿAlī Pas̲h̲a as the autonomous viceroy of Egypt, the neo-Mamlūk titles and offices became obsolete.

Bibliography: (i) *Primary sources*: (a) Archival. For documentary material preserved in the monastery of St. Catharine in Sinai, see H. Ernst, *Die mamlukischen Sultansurkunden des Sinai-Klosters*, Wiesbaden 1960; S. M. Stern, *Petitions from the Mamlūk period*, in *BSOAS*, xxix (1966), 233-76. For other documents extant in various European archives, see Aziz Suryal Atiya, *Egypt and Aragon*, in *Abh. K. M.*, 1938; J. Wansbrough, *A Mamluk ambassador to Venice*, in *BSOAS*, xxvi (1963), 503-30; idem, *Venice and Florence in the Mamluk commercial privileges*, in *BSOAS*, xxviii (1965), 482-523; idem, *A Mamlūk commercial treaty concluded with the republic of Florence 849/1489*, in S. M. Stern (ed.), *Documents from Islamic chanceries*, Oxford 1965, 39-79. Various documents are reproduced in al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲ā*, Cairo 1331-8/1913-20; e.g. treaties with the Frankish states and other Christian powers, on which see P. M. Holt, *Qalāwūn's treaty with Acre in 1283*, in *English Historical Review*, xci, no. 361 (1976), 802-12; idem, *Qalāwūn's treaty with Genoa in 1290*, in *Isl.* lvii (1980), 101-8; idem, *The treaties of the early Mamluk sultans with the Frankish states*, in *BSOAS*, xliii (1980), 67-76.

(b) Literary. There is extant a very considerable amount of material, particularly chronicles, royal biographies and biographical dictionaries, a number of which have been published. The following is a representative sample only. (1) The four major chronicles for the period are: Ibn al-Dawādārī (d. after 736/1335), *Kanz al-durar*, viii, ed. U. Haarmann, Freiburg 1391/1971; ix, ed. H. R. Roemer, Cairo 1379/1960; al-Maḳrīzī (d. 845/1442), *K. al-Sulūk*, ed. M. Mustafa Ziada *et alii*, Cairo 1956- Ibn Tag̲h̲rībirdī (d. 874/1470), vii-xvi, Cairo 1348-92/1929-72, ed. W. Popper, Berkeley-Leiden 1908-36; Ibn Iyās (d. *ca.* 930/1524), *Badāʾiʿ al-zuhūr*, ed. Mohamed Mostafa, Wiesbaden 1379-95/1960-75. Among Syrian chroniclers may be mentioned Abu 'l-Fidāʾ (d. 732/1332), *al-Muk̲h̲taṣar fī taʾrīk̲h̲ al-bas̲h̲ar*, various edns., iv, for memoirs of his own times; Ibn Ṣaṣrā (d. after 801/1399), *A chronicle of Damascus 1389-1397*, ed. and tr. W. M. Brinner, Berkeley and Los Angeles 1963; Ibn Ṭūlūn (d. 953/1546), *Mufākahat al-k̲h̲illān fī ḥawādit̲h̲ al-zamān*, ed. Mohamed Mostafa, Cairo 1381/1962, 1384/1964. The principal published royal biographies are: (Baybars), Ibn ʿAbd al-Ẓāhir, *al-Rawḍ al-zāhir fī sīrat al-Malik al-Ẓāhir*, ed. ʿAbd al-ʿAzīz al-K̲h̲uwayṭir, al-Riyāḍ 1396/1976; S̲h̲āfiʿ b. ʿAlī b. ʿAbbās (d. 730/1330), *Ḥusn al-manāḳib al-sirriyya al-muntazaʿa min al-sīra al-Ẓāhiriyya*, ed. al-K̲h̲uwayṭir, al-Riyāḍ 1396/1976; (Ḳalāwūn), Ibn ʿAbd al-Ẓāhir, *Tas̲h̲rīf al-ayyām wa 'l-ʿuṣūr fī sīrat al-Malik al-Manṣūr*, ed. Murād Kāmil, Cairo 1961; (K̲h̲alīl), A. Moberg (ed. and tr.), *Ur ʿAbd Allâh b. ʿAbd Ez-Ẓâhir's biografi över Sultanen El-Melik El-Aśraf Ḫalîl*, Lund 1902. Among biographical dictionaries, a recent important publication is Ibn al-Ṣuḳāʿī (d. 726/1326), *Tālī kitāb wafayāt al-aʿyān*, ed. and tr. Jacqueline Sublet, Damascus 1974.

(2) Much less has been published on the Ottoman period. Chronicles available are: al-Isḥāḳī (*fl. ca.* 1032/1623), *Kitāb Ak̲h̲bār al-uwal fī man taṣarrafa fī Miṣr min arbāb al-duwal*, various edns.; Aḥmad S̲h̲alabī b. ʿAbd al-G̲h̲anī (d. 1150/1737), *Awḍaḥ al-is̲h̲ārāt fī man tawallā Miṣr al-Ḳāhira min al-wuzarāʾ wa 'l-bās̲h̲āt*, ed. ʿAbd al-Raḥīm ʿAbd al-Raḥmān ʿAbd al-Raḥīm, Cairo 1978; ʿAbd al-Raḥmān b. Ḥasan al-D̲j̲abartī (d. 1825-6), *ʿAd̲j̲āʾib al-āt̲h̲ār*, Būlāḳ 1297/1879-80. Two important documents are: S. J. Shaw, *Ottoman Egypt in the eighteenth century* [i.e. the *Niẓām-nāme-yi Mîṣîr* of D̲j̲azzār Aḥmad Pas̲h̲a], Cambridge, Mass. 1962; S̲h̲afīḳ G̲h̲urbāl, *Miṣr ʿinda mafraḳ al-ṭuruḳ* [i.e. the answers of Ḥusayn Efendi to Estève in 1216/1801], in *Mad̲j̲allat Kulliyyat al-Adab* [Cairo], iv (1936), 1-71; tr. and annotated Shaw, *Ottoman Egypt in the age of the French Revolution*, Cambridge, Mass. 1964.

(ii) Secondary sources: (a) Political history. There is no recent large-scale study of the Mamlūk sultanate. The pioneer work is that of Gustav Weil, *Geschichte der Chalifen*, iv-v, Stuttgart 1860-2. Its derivative, W. Muir, *The Mameluke or slave dynasty of Egypt*, London 1896, is inadequate. The period is presented in wider historical surveys by S. Lane-Poole, *A history of Egypt in the Middle Ages*, London 1901; and by G. Wiet, *L'Egypte arabe ... 642-1517* [= G. Hanotaux (ed.), *Histoire de la nation égyptienne*, iv, Paris 1937]. On individual sultans, see G. Schregle, *Die Sultanin von Ägypten*, Wiesbaden 1961 (for S̲h̲ad̲j̲ar al-Durr); Abdul-Aziz Khowaiter, *Baibars the First: his endeavours and achievements*, London 1978; P. M. Holt, *The sultanate of al-Manṣūr Lāc̲h̲īn (696-8/1296-90)*, in *BSOAS*, xxxvi (1973), 521-32; Shah Morad Elham, *Kitbuġā und Lāǧīn*, Freiburg 1977; Aḥmad Darrag, *L'Égypte sous le règne de Barsbay 825-841/1422-1438*, Damascus 1961. The establishment of the Circassian ascendancy is studied in Ḥākīm Amīr ʿAbd al-Sayyid, *Ḳiyām dawlat al-Mamālīk al-t̲h̲āniya*, Cairo 1966. Some account of the neo-Mamlūks of Ottoman Egypt is given in Holt, *Egypt and the Fertile Crescent 1516-1922*, London 1966; see also idem, *Studies in the history of the Near East*, London 1973. A. Raymond, *Artisans et commerçants au Caire au XVIIIᵉ siècle*, Damascus 1973, deals widely with political as well as social and economic history.

(b) Social, economic and institutional history. Data (chiefly from al-Ḳalḳas̲h̲andī) on the institutions of the Mamlūk sultanate are presented in the introduction to [M.] Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923. Most of the illuminating articles of D. Ayalon on many aspects of Mamlūk society are now conveniently assembled in *Studies on the Mamlūks of Egypt (1250-1517)*, London 1977, and *The Mamlūk military society*, London 1979; idem, *Gunpowder and firearms in the Mamluk kingdom*, London 1956, is a seminal monograph on military and social history. The transition from Ayyūbid institutions is examined by R. Stephen Humphreys, *The emergence of the Mamluk army*, in *SI*, xlv (1977), 67-99; xlvi (1977), 147-82. A general survey is provided by Saʿīd ʿAbd al-Fattāḥ ʿĀs̲h̲ūr, *al-Mud̲j̲tamaʿ al-Miṣrī fī ʿaṣr al-salāṭīn al-mamālīk*, Cairo 1962. On economic and social history, E. Ashtor, *A social and economic history of the Near East in the Middle Ages*, London 1976; idem, *Histoire des prix et des salaires dans l'orient médiéval*, Paris 1969; Hassanein Rabie, *The financial system of Egypt A.H. 564-741/1169-1341*, London 1972; H. Halm, *Ägypten nach den mamlukischen Lehensregistern. I. Oberägypten und das Fayyūm*, Wiesbaden 1979, *II. Das Delta*, Wiesbaden 1982. On governmental institutions, Holt, *The position and power of the Mamlūk sultan*, in *BSOAS*, xxxviii (1975), 237-49;

and *The structure of government in the Mamluk sultanate*, in Holt (ed.), *The eastern Mediterranean lands in the period of the Crusades*, Warminster 1977, 44-61. For urban society during the sultanate, I. M. Lapidus, *Muslim cities in the later Middle Ages*, Cambridge, Mass. 1967; C. F. Pekry, *The civilian elite of Cairo in the later Middle Ages*, Princeton 1981; in the Ottoman period, A. Raymond (as above).

(P. M. HOLT)

MAʿMAR B. AL-MUTHANNĀ [see ABŪ ʿUBAYDA].

AL-**MAʾMŪN** [see AL-BAṬĀʾIḤĪ; DHU 'L-NŪNIDS].

al-**MAʾMŪN**, ABU 'L-ʿABBĀS ʿABD ALLĀH B. HĀRŪN AL-RASHĪD, seventh ʿAbbāsid caliph. Born on 15 Rabīʿ I 170/14 September 786, "the night of the three caliphs" (death of al-Hādī, accession of al-Rashīd, birth of the future al-Maʾmūn), he was the eldest of the eleven sons of al-Rashīd. His mother, Marādjil, a concubine originally from Bādhghīs, died soon after his birth and he was brought up by Zubayda, the grand-daughter of al-Manṣūr, wife of al-Rashīd and mother of Muḥammad (the future al-Amīn) who was born in Shawwāl 170/April 787. He received a classical education in Arabic, tutored by al-Kisāʾī [*q.v.*], in *adab* (as a pupil of Abū Muḥammad al-Yazīdī), in music and in poetry (where his tastes were classical). In religious sciences, he was trained in *ḥadīth* (and became a transmitter himself) and in *fiḳh* (taught by al-Ḥasan al-Luʾluʾī), where he excelled in Ḥanafī jurisprudence. He was distinguished by his love of knowledge, making him the most intellectual caliph of the ʿAbbāsid family, which accounts for the way in which his caliphate developed.

In 177/794, in response to the wishes of members of his family, al-Rashīd named as his first successor Muḥammad (al-Amīn), the only caliph born to parents both of whom were ʿAbbāsids; proclaimed initially in Khurāsān by his guardian al-Faḍl b. Yaḥyā al-Barmakī [*q.v.*], he subsequently received the *bayʿa* in Baghdād. As for ʿAbd Allāh (al-Maʾmūn), he had to wait until the age of puberty to be declared second heir of al-Rashīd, in 183/799, under the guardianship of Djaʿfar b. Yaḥyā al-Barmakī, the caliph's favourite. While reviving the Marwānid tradition of appointing two heirs to the throne in order to guarantee the stability of the régime and the future of the dynasty, al-Rashīd made an innovation in accepting the appointment of a third successor, al-Ḳāsim (al-Muʾtamin), the son of a concubine, sponsored by his ʿAbbāsid guardian ʿAbd al-Malik b. Ṣāliḥ [*q.v.*].

The protocol was solemnly proclaimed, during the pilgrimage of 186/802, in Mecca: the unity of the empire was re-affirmed by the existence of a single caliph-designate, Muḥammad (al-Amīn), residing in Baghdād, supported by his two heirs who were given charge of key-provinces: greater Khurāsān, the heartland of the ʿAbbāsid régime since the success of the *daʿwa hāshimiyya* (132/750), was entrusted to ʿAbd Allāh (al-Maʾmūn) and the war-front in the struggle against the Byzantine Empire (al-Djazīra and northern Syria), a major pre-occupation of al-Rashīd, placed under the authority of al-Ḳāsim (al-Muʾtamin). This interdependence between the different groupings of the empire conferred autonomy on Ifrīḳiya, where the authority of the Aghlabids was recognised in 184/800, with the purpose of containing the Khāridjīs, the ʿAlids and the Umayyads who had succeeded in founding principalities in the Maghrib and in al-Andalus, in the second half of the 2nd/8th century.

On his return from the pilgrimage, al-Rashīd rid himself of the patronage of the Barmakids, ordering the execution of Djaʿfar b. Yaḥyā on the night of 1 Ṣafar 187/29 January 803, and arresting al-Faḍl and his brothers, who were imprisoned at al-Rāfiḳa. Henceforward, ʿAbd Allāh (al-Maʾmūn) had as his guardian al-Faḍl b. Sahl, son of a Zoroastrian from a village near Kūfa, who entered the service of the Barmakids and ultimately converted to Islam, in 190/806, assuming the role of *kātib*-tutor, thus becoming qualified for the post of future vizier on the accession of al-Maʾmūn.

At the age of eighteen, ʿAbd Allāh married his cousin, Umm ʿĪsā, daughter of Mūsā al-Hādī, who bore him two sons (Muḥammad al-Aṣghar and ʿAbd Allāh), and had numerous concubines. In 192/808, having stabilised the war-front with the Byzantine empire, al-Rashīd took personal charge of the situation in Khurāsān, which was disturbed by the revolt of Rāfiʿ b. Layth, grandson of Naṣr b. Sayyār (the last Umayyad governor of Khurāsān), against the centralising policy of the governor ʿAlī b. ʿĪsā b. Māhān, who represented the *abnāʾ al-dawla* (Khurāsānians resident in ʿIrāḳ). Accompanied by ʿAbd Allāh (al-Maʾmūn) and al-Faḍl b. Sahl, but also by the *ḥādjib*-vizier al-Faḍl b. al-Rabīʿ, successor to the Barmakids at the head of the central administration, he set out, but died at Ṭūs on 3 Djumada II 193/24 March 809, al-Maʾmūn having preceded him to Marw with a part of the army. Immediately, the new caliph in Baghdād began to take measures designed to reinforce the position of the central power in opposition to the autonomist aspirations of greater Khurāsān, in line with the policy that had been in force for fifty years; he ordered the return of the army and of the treasury to Baghdād, which deprived the prince-governor al-Maʾmūn of the means to "pacify" rapidly and completely the troubled regions (Transoxania; Sīstān-Kirmān, disturbed by the revolt of the Khāridjī Ḥamza since 179/795; etc.). Nevertheless, al-Maʾmūn did not lack the ingenuity to consolidate his position in confrontation with the caliphate, and following the example of his father, he devolved his responsibilities upon the Sahlids, who received full powers to manage affairs and to safeguard his rights of inheritance to the caliphate, which were sealed in the Kaʿba. A process of pacification and mobilisation of the forces of the eastern provinces was achieved by means of the recognition of the autonomy of local chieftains, the support of the aristocracy, which saw in the potentialities of the empire an opportunity of gaining unprecedented wealth and prestige, an increase in the wages of the army, the reduction of the *kharādj* by a quarter, the restoration of the efficiency of the administration and recourse to the *maẓālim* [*q.v.*], regularly presided over by al-Maʾmūn. Particular efforts were applied in the direction of the *fuḳahāʾ* and *mutakallimūn* suffering persecution in ʿIrāḳ (the Muʿtazila), whose opinions were canvassed. These various concessions, following the line of the Barmakid policy of al-Faḍl b. Yaḥyā, as practised at the time of his recruitment of an *ʿAbbāsiyya* army (in 177/794), had the expected effects in regard to the maintenance of the territorial integrity of the provinces subject to the authority of al-Maʾmūn (ending the various insurrections, except that of the Khāridjī Ḥamza in Sīstān) and the rallying of local populations to the "son of their sister" and a member of the Family of the Prophet whose rights to the *imāma* of the *umma* had been endorsed by the *daʿwa hāshimiyya*, installed at Marw.

Similarly, in the West, supported by his *ḥadjib*-vizier al-Faḍl b. al-Rabīʿ b. Yūnus, chief of the *mawālī* of the caliph, whose role had been augmented at the expense of the *kuttāb* of the administration

(represented by the Barmakids), his confidential ally Bakr b. al-Muᶜtamir (the holder of the Seal), his chief of police, al-Sindī b. Shāhak, *mawlā* of the caliph, al-Amīn enlarged his circle of partisans; he ordered the release of ᶜAlī b. ᶜĪsā b. Māhān, chief of the *Abnā'* (determined to preserve their privileges at the expense of the autonomist aspirations of Khurāsān), and the surviving Barmakids, including Mūsā b. Yaḥyā, who rallied to his cause, while Muḥammad rejoined the camp of al-Ma'mūn. ᶜAlī b. ᶜĪsā b. Māhān was promoted leader of the caliph's bodyguard, while ᶜAbd al-Malik b. Ṣāliḥ, the principal supporter of al-Mu'tamin, was arrested. Rule over Syria was entrusted to Thābit b. Naṣr, grandson of Mālik b. al-Haytham al-Khuzāᶜī (one of the twelve *nuḳabā'* of the *daᶜwa hāshimiyya*, who became the confidential ally of Abū Muslim al-Khurāsānī), while Egypt, governed by ᶜAbd al-ᶜAziz b. ᶜAbd al-Raḥmān al-Azdī (descended from a Hāshimite *dāᶜī*, former governor of Khurāsān), was potentially dissident. Only the Ḥidjāz, which had benefited from irrigation projects and from the riches of Zubayda, was firmly behind al-Amīn (at the expense of the ᶜAlids). This bipolarisation has been the object of a historical misunderstanding, with the eastern provinces being identified with "Iran" and the western provinces with the contemporary Arab countries. In fact, greater Khurāsān extended only as far as Rayy and Hamadhān (in the west), while Fārs was detached from it following the assassination of Abū Muslim (137/755), and the most advanced centres of Islamisation and Arabisation in the period of al-Ma'mūn were situated in the former Sāsānid empire (divided between al-Amīn and al-Ma'mūn) rather than in the former Roman-Byzantine empire (Syria-Egypt); cf. R. W. Bulliet, *Conversion to Islam in the medieval period: an essay in quantitative history*, Cambridge, Mass.-London 1979. Likewise, the rivalry between al-Amīn and al-Ma'mūn is not explained by the origin of their mothers (Arab and Iranian), in view of the patrilineal system of the ᶜAbbāsid family, recalled by al-Manṣūr, son of a Berber concubine, to Muḥammad al-Nafs al-Zakiyya (who prided himself on being of pure and free descent on both the paternal and maternal side) to refute the legitimising pretensions of the ᶜAlids (in 144/762; cf. al-Ṭabarī, iii/1, 211-15). Al-Amīn attempted to copy the example of al-Manṣūr (in regard to ᶜĪsā b. Mūsā), of al-Mahdī (in regard to the same ᶜĪsā b. Mūsā), and of al-Hādī (in regard to his brother al-Rashīd), seeking to institute a direct line of succession, at the expense of his brothers (al-Mu'tamin and al-Ma'mūn). This attempt to modify the pre-established order had its supporters, the *mawālī* of the caliph and the *abnā' al-dawla* of ᶜIrāḳ, whose privileges were threatened by the success of regional autonomism, beginning in the Maghrib and extending to greater Khurāsān, the pillar of the ᶜAbbāsid régime. Under these circumstances, it comes as no surprise to find the eastern provinces supporting the defender of their aspirations. This was the first time that their status was officially defined (by the "Meccan Documents") and that their representative was not only an ᶜAbbāsid prince but also an heir to the caliphate. In other words, if victorious, the Khurāsānians would win their autonomy and be assured of an influential position in the structure of the state. As for al-Ma'mūn, it was his good fortune to reside beyond the jurisdiction of the reigning caliph, thus avoiding the fate undergone by ᶜĪsā b. Mūsā (obliged to abdicate in favour of the sons of al-Mahdī) or that all but suffered by al-Rashīd (imprisoned by his brother al-Hādī). His brother al-Mu'tamin did not have the same opportunity and his case confirmed *a contrario* the lot of al-Ma'mūn.

The conflict began in 194/810, sparked off by the addition of the name of Mūsā, the young son of al-Amīn, to the list of heirs to the caliphate: al-Ma'mūn and al-Mu'tamin. A delegation was sent to Marw to persuade al-Ma'mūn to return to Baghdād, where he was to take on the role of adviser of the caliph. Offended by his refusal, al-Amīn attempted to re-assert his authority over the whole of the empire; he demanded the sending of the surplus revenues of certain provinces (Rayy, Ḳūmis and western Khurāsān, then the nomination of fiscal agents and finally the appointment of a chief of postal services or intelligence officer at Marw, al-Ma'mūn's capital. The perspicacity of al-Faḍl b. Sahl, and the determination of the Khurāsānians to defend the autonomy that they had finally acquired, helped al-Ma'mūn to refuse any modification of the letter of "Meccan Documents" and thus to avoid any involvement with the mechanism set in motion by the advisers of al-Amīn with the object of threatening his position. The rift opened wide in 195/811, with the removal of the caliph's name from the coinage and the *ṭirāz* of Khurāsān. Taking advantage of the strength of his position, al-Amīn resolved to settle the question of relations between the central power and Khurāsān, while there was still time. He proclaimed his son Mūsā (son of a concubine) first heir (at the expense of al-Ma'mūn) and ᶜAbd Allāh (son of another concubine) second heir (at the expense of al-Mu'tamin), in flagrant violation of the "Meccan Documents". Al-Ma'mūn replied by taking the title of *Imām*, following the example of the *Imām* Ibrāhīm, son of Muḥammad b. ᶜAlī, heir of Abū Hāshim (son of Muḥammad b. al-Ḥanafiyya). This return to the principles of the first *daᶜwa hāshimiyya* at Marw was further underlined by appeals sent to the various Arab tribal factions of Khurāsān, exalting the role of the *nuḳabā'*: Abū Dāwūd Khālid b. Ibrāhīm al-Dhuhlī al-Shaybānī (confidential ally of Abū Muslim), Ḳaḥṭaba b. Shabīb al-Ṭā'ī (commander of the revolutionary army), Mūsā b. Kaᶜb al-Tamīmī, Mālik b. al-Haytham al-Khuzāᶜī, etc. In addition, the authority of the *Imām* is of a more religious nature than that of the *Amīr al-Mu'minīn*, this prefiguring the "imperial-papal" policy of al-Ma'mūn. Communications between ᶜIrāḳ and Khurāsān were cut, and the frontiers guarded to prevent the sending of intelligence to Baghdād, while al-Ma'mūn's intelligence service was in action at the court itself (through the efforts of al-ᶜAbbās, son of the former heir to the caliphate ᶜĪsā b. Mūsā, and other informers recruited by al-Faḍl b. Sahl).

The "Meccan Documents" were undermined and then revoked at the behest of al-Amīn, who finally ordered his brother to recognise his complete authority over Khurāsān. The rupture became total with the appointment of ᶜAlī b. ᶜĪsā b. Māhān, the deposed former governor of Khurāsān, as governor of Djibāl (the provinces of Ḳumm, Nihāwand, Hamadhān, Iṣfahān) with the mission of restoring the caliph's authority over Khurāsān (Djumādā II 195/March 811). The caliph's army was composed of the *abnā'* "sons" of the Khurāsānian army garrisoned in ᶜIrāḳ, of whom some were supporters of the conflict with Khurāsān (notably ᶜAlī b. ᶜĪsā b. Māhān), while others showed themselves loyal, in spite of the reservations of some (in particular Khuzayma, son of Khāzim b. Khuzayma al-Tamīmī, governor of the region bordering on the Byzantine empire, the *ᶜAwāṣīm* [*q.v.*] of al-Djazīra and of northern Syria). Consequently, it is not appropriate to identify the par-

tisans of al-Amīn with Arabs bent on vengeance, since this leads to a flagrant contradiction: after all, the Khurāsānian army (composed of Arabs and of *mawālī*) had destroyed the Kaysī army of al-Djazīra to establish equality between Muslims, conquering Arabs or conquered *mawālī*, and to solve the social problems of the empire. The politico-military "establishment" was divided on the question of centralisation as oppossed to the autonomy of provinces, whose supporters were likewise of Arab and non-Arab origin. It is for this reason that a certain number of *abnā' al-dawla* are found in the camp of al-Ma'mūn, including Harthama b. Aᶜyan, a *mawlā* of the Banū Ḍabba, a native of Balkh; this former supporter of ᶜĪsā b. Mūsā (who accepted the idea of a partial autonomy for Khurāsān), having espoused the cause of al-Hādī and become a confidential ally of al-Rashīd, took the part of al-Ma'mūn, who appointed him chief of his bodyguard (although his son Ḥātim was governing Egypt in the name of al-Amīn); Zuhayr, son of al-Musayyib b. Zuhayr al-Ḍabbī (who was a deputy of the *naḳīb*), put himself on the side of al-Ma'mūn (who appointed him governor of Sīstān), as did his brother al-ᶜAbbās, retained as chief of police by al-Ma'mūn (although another brother, Muḥammad, was an army officer in Baghdād in the service of al-Amīn); Shabīb, grandson of Ḳaḥṭaba b. Shabīb al-Ṭā'ī, took the part of al-Ma'mūn (who appointed him head of the Ḳūmis), although the rest of his family supported al-Amīn; Muḥammad b. al-Ashᶜath al-Khuzāᶜī, whose family was resident in a village of Bukhārā, supported al-Ma'mūn, while the grandsons of his namesake (who was a deputy of the *naḳīb*) were in the camp of al-Amīn.

The reserved attitude of ᶜAbd Allāh, son of the *naḳīb* al-Haytham al-Khuzāᶜī, who refused a post in the administration (the other members of his family were on the side of al-Amīn), as well as Yaḥyā b. Muᶜādh b. Muslim, a *mawlā* of the Banū Dhuhl, a veteran of the army of al-Rashīd, opened the way to the promotion of Ṭāhir b. al-Ḥusayn, of Būshandj, descendant of Abū Manṣūr Ṭalḥa b. Ruzayḳ, a *mawlā* of the Khuzāᶜa, one of the twelve *nuḳabā'* of the *daᶜwa hāshimiyya*, in charge of relations with the *Imām* Ibrāhīm. As governor of his native city. Ṭāhir had taken part in the revolt of Rāfiᶜ b. al-Layth against the governor ᶜAlī b. ᶜĪsā b. Māhān, until his deposition at the hands of Harthama b. al-ᶜAyan (192/808). Promoted governor of Djibāl, Ṭāhir was sent to Rayy with a small army, to oppose the advance of ᶜAlī b. ᶜĪsā b. Māhān, commander of the main army of the caliph (40,000 men against 4,000-5,000 under the orders of Ṭāhir).

The composition of al-Ma'mūn's army was Transoxanian, thus extending recruitment to the ᶜAbbāsid army to the populations of Soghdia, of Khʷārazm and of other principalities of Central Asia. Only the chiefs were dignified with the title of *mawālī* of al-Ma'mūn, in the sense of supporters (singular *muwālī*) of the heir to the caliphate, this permitting them to acquire a majority of key posts in the event of victory. The confrontation with the caliph's army took place near Rayy and, with odds of ten against one, the result of the battle seemed a foregone conclusion. Nevertheless, Ṭāhir b. al-Ḥusayn succeeded in killing ᶜAlī b. ᶜĪsā b. Māhān (7 Shawwāl 195/3 July 811). This surprise victory earned him the honorific title of *Dhu 'l-Yamīnayn* and restored the situation in favour of al-Ma'mūn, saved by this feat of arms. Ṭāhir occupied Ḳazwīn and marched against Hamadhān, where the remnants of the caliph's army were entrenched. He was obliged to confront an army of reinforcements (20,000 *abnā'* based at al-Anbār) commanded by ᶜAbd al-Raḥmān b. Djabala, who had borne a grudge against al-Ma'mūn since the latter ordered the sending of the army of al-Rashīd and the treasury to Marw, in 193/809. Once more, Ṭāhir was victorious, and ᶜAbd al-Raḥmān was killed (196/812). The whole of the province of Djibāl was now conquered, opening the road to ᶜIrāḳ. To block the route of the Khurāsānian army, al-Amīn mobilised two new armies, one of 20,000 *abnā'* under the orders of ᶜAbd Allāh b. Ḥumayd, grandson of the *naḳīb* and commander of the revolutionary army Ḳaḥṭaba b. Shabīb al-Ṭā'ī [*q.v.*], and the other of 20,000 Arabs commanded by the Ḳaysī Aḥmad b. Mazyad al-Shaybānī, representing the Rabīᶜa of al-Djazīra. Once more, Ṭāhir skilfully succeeded in playing these two sections of the army against each other by exploiting their rivalries (Ḳaysīs cheated of their rights by the Khurāsānians for 60 years!). These repeated reverses suffered by the *abnā'* of ᶜIrāḳ and the impracticability of mobilising the Arabs of al-Djazīra forced al-Amīn to attempt to raise levies in Syria, in spite of the recent revolt of the Sufyānid against him (195/811). ᶜAbd al-Malik b. Ṣāliḥ was reinstated as governor of the *ᶜAwāṣim* of al-Djazīra and Syria, and Ḥusayn son of ᶜAlī b. ᶜĪsā b. Māhān, his lieutenant, was sent on a recruiting mission to Syria. However, the divisions between Ḳaysīs and Kalbīs (Yemenis) did not constitute a propitious climate, all the more so in that the Arabs of Syria had learned lessons from their participation in the struggle for the caliphate, and the support given to the ᶜAbbāsid ᶜAbd Allāh b. ᶜAlī against the caliph al-Manṣūr (136/754). Finding his task impossible, al-Ḥusayn organised a *coup d'état* at Baghdād; in Radjab 196/March 812, he ordered the arrest of al-Amīn and proclaimed his brother al-Ma'mūn caliph. Nothing better illustrates the divisions of the *abnā'* than the counter-coup which restored the caliphate of al-Amīn, while al-Ḥusayn was sent away to fight the army of Ṭāhir, but was killed in retribution. Henceforward, the *ḥādjib*-vizier al-Faḍl al-Rabīᶜ, one of the leading instigators of the conflict with al-Ma'mūn, sensing the cause of al-Amīn to be finally lost, decided to make provision for the future by leaving the political scene and plunging into obscurity. He was replaced by the *kātib al-sirr* of al-Amīn, Ismāᶜīl b. Ṣubayḥ al-Ḥarrānī, who had little to say regarding the opening of further hostilities with al-Ma'mūn.

On the same date, al-Ma'mūn was officially proclaimed caliph at Marw, while al-Faḍl b. Sahl was endowed with the title of *Dhu 'l-Ri'āsatayn* (a dual civil and military command), and Ṭāhir b. al-Ḥusayn received orders to march on Khuzistān, which was defended by a Muhallabid, Muḥammad b. Yazīd b. Ḥātim, resident at Ahwāz. Ṭāhir won the battle, and this forced the Muhallabid of Baṣra, Ibn Abī ᶜUyayna, to assure the position of his family by rallying to the new caliph al-Ma'mūn. In return, he was appointed governor of Eastern Arabia (Baḥrayn, Yamāma and ᶜUmān), while an ᶜAbbāsid prince, Ismāᶜīl b. Djaᶜfar, was charged with the government of Baṣra. Ṭāhir's troops marched on Kūfa, where they encountered some resistance; then they set out towards al-Madā'in, which they occupied, and finally arrived at a point west of Baghdād. A second Khurāsānian army, commanded by Harthama b. al-Aᶜyan, one of the leading military chiefs under al-Rashīd, was sent by al-Ma'mūn to invest the capital from the east (Dhu 'l-Ḥidjdja 196/August 812). The siege of Baghdād lasted thirteen months, prolonged by the popular resistance of the *ᶜayyārūn* [*q.v.*], people

of humble origin, who exploited the situation to their advantage. This urban guerilla warfare checked the advance of the regular army of Ṭāhir b. al-Ḥusayn, who began a destructive bombardment of the "City of Peace". The provinces situated to the west of ʿIrāḳ recognised the authority of al-Maʾmūn in 197/813: the Ḥidjāz (where the pilgrimage was under the supervision of al-ʿAbbās, son of Mūsā b. ʿĪsā, an early ally of al-Maʾmūn); Egypt, where the *abnāʾ* were divided between partisans of *al-Makhlūʿ* (al-Amīn) and those allied to al-Maʾmūn, supported by the Yemeni Arabs (against the Ḳaysīs); Ifrīḳiya, autonomous under the Aghlabids, recognised the established power; northern Syria and al-Djazīra, which had lost their governor ʿAbd al-Malik b. Ṣāliḥ (d. 196/812), took advantage of the situation to establish their autonomy, an example followed by Ādharbāydjān and Armenia.

As for al-Amīn, after squandering the resources of the public treasury (several hundreds of millions of *dirhams*), he lost his supporters, who negotiated with Ṭāhir b. al-Ḥusayn in order to safeguard their interests. Finally, he was obliged to seek the protection of Harthama b. al-Aʿyan. But Ṭāhir captured him and ordered his execution on the night of 24-5 Muḥarram 198/24-5 September 813; this was the first time that an ʿAbbāsid caliph was thus humiliated and put to death by rebel soldiers, whose conduct contrasted with the more respectful and conciliatory attitude of the veteran Harthama b. al-Aʿyan.

The government of ʿIrāḳ was entrusted to al-Ḥasan, brother of al-Faḍl b. Sahl, while Ṭāhir b. al-Ḥusayn was charged with securing the front in the war against Byzantium, starting with al-Djazīra, where Naṣr b. Shabath al-Laythī, grandson of one of the leading Ḳaysī chiefs, had made his base at Kaysūm (in Diyār Muḍar). The conqueror of al-Amīn underestimated this adversary (whose resistance lasted until 210/825), while in Ādharbāydjān Arab chieftains took control of the towns in which they were established (their autonomy lasted until 206/821). In order to subjugate Baghdād, al-Ḥasan b. Sahl did not spare the conquered *abnāʾ*, and this had the effect of re-kindling their resistance under the leadership of the family of the Banū Khālid, *mawālī* of the Banū ʿĀmir b. Luʾayy, originally from Marw al-Rūdh, who took over the role of the family of ʿAlī b. ʿĪsā b. Māhān (it may be noted that Aḥmad b. Abī Khālid allied himself with al-Maʾmūn and held high office in the administration of Marw). This unrest, encouraged by the demobilisation of the *abnāʾ* and fiscal problems in Baghdād, was exploited by the ʿAlids, of Zaydī tendency, who sought to seize power at the very heart of the empire: on 10 Djumādā 199/26 January 815, Muḥammad b. Ibrāhīm Ṭabāṭabā [*q.v.*], a descendent of al-Ḥasan b. ʿAlī and of Fāṭima, was proclaimed *al-Riḍā min āl Muḥammad* (in accordance with the *daʿwa hāshimiyya*) at Kūfa. He was supported by Abu 'l-Sarāyā al-Sirrī b. Manṣūr al-Shaybānī, who had left the army of Harthama b. al-Aʿyan; the troops of al-Ḥasan b. Sahl, sent to suppress this revolt, were repulsed, but Ibn Ṭabāṭabā died of his wounds (February 815). A new Ḥusaynid *Imām* was proclaimed in the person of Muḥammad b. Muḥammad b. Zayd. The movement sought to spread throughout ʿIrāḳ: at Baṣra, the Ḥusaynid Zayd, son of Mūsā al-Kāẓim, set upon the ʿAbbāsids of this metropolis to avenge the execution of his father (in 183/799) on the orders of al-Rashīd, as did the victims of the revolt of 145/762-63 which had been organised by Ibrāhīm b. ʿAbd Allāh, brother of Muḥammad al-Nafs al-Zakiyya [*q.vv.*], against al-Manṣūr. The same occurred at Kūfa, where the property of ʿAbbāsids was attacked. Emboldened by these successes, the Shīʿīs marched on Baghdād, forcing al-Ḥasan b. Sahl to appeal for help to the veteran Harthama b. Aʿyan, who put an end to the revolt of his former lieutenant Abu 'l-Sarāyā (executed in Rabīʿ I 200/October 815 [*q.v.*]). Kūfa was recaptured, as was Baṣra (where Zayd al-Nār "the Firebrand" was arrested and sent to Marw). Other Shīʿī centres were established in the Ḥidjāz and the Yemen: at Mecca, the envoy of Abu 'l-Sarāyā succeeded in organising the proclamation of Muḥammad al-Dībādj, grandson of the *Imām* Djaʿfar al-Ṣādiḳ, in Rabīʿ I 200/ November 815. The suppression of the uprising was entrusted to Ḥamdawayh, son of ʿAlī b. ʿĪsā b. Māhān, leading a force of those *abnāʾ* who had supported al-Maʾmūn in the civil war. Mecca was recaptured and Muḥammad al-Dībādj was spared (he eventually went into exile in Djurdjān). There was still the Yemen, where Ibrāhim, son of Mūsā al-Kāẓim succeeded in taking power in a bloodthirsty fashion (which earned him the epithet of al-Djazzār "the Butcher"), from Ṣafar 200/September 815. Ḥamdawayh succeeded in suppressing this movement (then attempted, in his turn, to make himself independent!).

These outbursts of hatred on the part of the ʿAlids for the ʿAbbāsids, who were accused of violating the "rights" of the descendents of ʿAlī and Fāṭima, drove al-Maʾmūn to effect a spectacular reconciliation between the two branches of the Family of the Prophet, ʿAlids and ʿAbbāsids, by means of a return to the principles of the first *daʿwa hāshimiyya*, which did not in any way prohibit the choice of an ʿAlid *Imām*, in accordance with the interpretation of the first vizier Abū Salama al-Khallāl [*q.v.*] (who, on the death in 132/749 of the ʿAbbāsid *Imām* Ibrāhim had offered the caliphate to the Ḥusaynid Djaʿfar al-Ṣādiḳ, then to the Ḥasanid ʿAbd Allāh b. al-Ḥasan, as well as to ʿUmar b. ʿAlī b. al-Ḥasan). In addition, not only did he spare the ʿAlids who had recently been proclaimed anti-ʿAbbāsid caliphs, but most significant of all, he went further than his grandfather al-Mahdī in choosing as his successor another son of the martyr Mūsā al-Kāẓim, ʿAlī, brother of Zayd the rebel in Baṣra and of Ibrāhīm the rebel in the Yemen, who was given the title of *al-Riḍā min āl Muḥammad.* This initiative by al-Maʾmūn ran counter to the policy pursued for a century, and in particular, since the support given by the Khurāsāniyya to the ʿAbbāsid branch, with the proclamation of al-Saffāḥ, brother of the *Imām* Ibrāhīm, in preference to the ʿAlid candidates. The Sahlids, who controlled the machinery of state, were forced to identify with this etymologically revolutionary policy in order to avoid suffering disgrace analogous to that of the Barmakids (when they did not share the anti-ʿAlid policy of al-Rashīd). Nevertheless, the relative strengths of ʿIrāḳ and of Khurāsān did not permit the realisation of this attempt to broaden the social base of al-Maʾmūn's régime. In fact, the threat of an inversion of roles at the expense of ʿIrāḳ led its aristocracy, far from enfeebled by the war between partisans of al-Amīn and of al-Maʾmūn, to resist the Sahlids whose policy in ʿIrāḳ was judged dangerous for the caliphate itself by such veterans as Harthama b. Aʿyan. The latter did not hesitate to present himself in person at Marw, to inform al-Maʾmūn of the reality of the situation in ʿIrāḳ, instead of taking up his post as governor of Syria and the Ḥidjāz, to which he had been appointed on the eve of the revolt of Kūfa. Taking advantage of his influence over the caliph, al-Faḍl b. Sahl succeeded in turning al-

Ma'mūn against him and ultimately he had him executed in Dhu 'l-Ḳaʿda 200/June 816. In consequence, Ḥātim, son of Harthama b. al-Aʿyan and governor of Armenia, raised a revolt. Allying himself with other local chieftains of Ādharbāydjān, Bābak al-Khurramī [*q.v.*] went into action in 201/816 at Badhdh [*q.v.* in Suppl.] in the mountainous region to the south of the Araxes.

The struggle for power in Baghdād and the attempt to impose ʿAlī al-Riḍā as successor to al-Ma'mūn granted a respite to the autonomists of Ādharbāydjān, of Armenia, of the *ʿAwāṣim* of northern al-Djazīra and Syria, of Syria and of Egypt. In fact, the resistance of the *abnā'* forced al-Ḥasan b. Sahl to abandon the capital. A triple power was established there with the appointment of al-Manṣūr b. al-Mahdī, son of a Persian concubine, as delegate of al-Ma'mūn, from 25 Djumādā II 201/18 January 817 onwards. In addition, the urban lower classes supported the movement of Sahl b. Salāma al-Anṣārī, a native of Khurāsān, in the quarter of al-Ḥarbiyya; "[the command] *al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar* became identified more or less with political independence and with the self-government of small social groups" (J. van Ess, *Une lecture à rebours de l'histoire du muʿtazilisme,* in *REI,* xlvii/1 [1979], 68 = Extrait hors série 14, Paris 1984, 127), while Abu 'l-Hudhayl and al-Naẓẓām, who had introduced Muʿtazilism to the court of al-Ma'mūn, worked, on the contrary, for a policy of reconciliation with the ʿAbbāsid power. In other words, the process of recovery of the second half of the reign of al-Ma'mūn, was beginning to evolve. In the meantime, on 2 Ramaḍān 201/24 March 817, al-Ma'mūn proclaimed ʿAlī b. Mūsā al-Kāẓim as his successor (at the expense of al-Mu'tamin, his brother), with the title of *al-Riḍā min āl Muḥammad,* and abandoned the black colour of the ʿAbbāsids in favour of the green colour (the *Katība al-khaḍrā'* of the Prophet). Henceforward, the choice of caliph-*Imām* was to be made from among the descendents of Hāshim, common ancestor of Muḥammad and of his uncles al-ʿAbbās and Abū Ṭālib the father of ʿAlī (a census taken in 201/816 counted 30,000 Hāshimites, who had their own *naḳīb*). When the news reached ʿIrāḳ four months later, the ʿAbbāsids and their supporters reacted against this assault on their "acquired rights": the ʿAbbāsid governor of Baṣra Ismāʿīl b. Djaʿfar b. Sulaymān b. ʿAlī refused to wear green, while in Baghdād, the sons of al-Mahdī led the opposition. When al-Manṣūr (whose mother was al-Buḥturiyya, daughter of the Dābūyid *ispahbadh* of Ṭabaristān, Khurshīd) refused to be proclaimed caliph, his half-brother Ibrāhīm b. al-Mahdī (whose mother was Shakla, daughter of the Maṣmughān of Damāwand, deposed at the time of the conquest of this district) accepted the title (28 Dhu 'l-Ḥidjdja 201/17 July 817) and chose his nephew Isḥāk b. Mūsā al-Hādī, brother-in-law of al-Ma'mūn, as heir to the throne. He was supported by the ʿAbbāsid princes, notably Ibrāhīm b. Muḥammad b. ʿAbd al-Wahhāb b. Ibrāhīm al-Imām (known as Ibn ʿĀ'isha), Abū Isḥāḳ the future al-Muʿtaṣim, the *mawālī* of the preceding caliph al-Amīn, al-Faḍl b. al-Rabīʿ (who returned to his post of *ḥādjib* at the court), al-Sindī b. Shāhak, reappointed chief of the police, and the *abnā'*, comprising the sons of both ʿAlī b. ʿĪsā b. Māhān and of Abū Khālid, and even of former partisans of al-Ma'mūn, including al-Muṭṭalib b. ʿAbd Allāh, grandson of the *naḳīb* Mālik b. al-Haytham al-Khuzāʿī, or Nuʿaym b. Khāzim b. Khuzayma al-Tamīmī (who joined his brother Khuzayma, who had remained loyal to al-Amīn). In other words, this was the revival of the war between the two camps, dormant since 198/813. The fact that al-Amīn was the son of an Arab wife, and Ibrāhīm b. al-Mahdī that of a Persian concubine, like al-Ma'mūn, did not affect the way that the conflict was waged, in terms of the relations between ʿIrāḳ, (capital Baghdād) and Khurāsān (capital Marw).

The new caliph Ibrāhīm b. al-Mahdī succeeded in extending his authority over the capital by putting and end to the activities of Sahl b. Salāma al-Anṣārī in the quarter of al-Ḥarbiyya. Then he sought to take control of Kūfa, from which the ʿAlid governor al-ʿAbbās, brother of ʿAlī al-Riḍā, was expelled (Djumādā I 202/November 817). But Wāsiṭ served as a headquarters for al-Ḥasan b. Sahl, who regained control of Baṣra. The governor of Egypt, ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān al-Azdī, rallied to Ibrāhīm b. al-Mahdī, while the autonomous *amīr* of Ifrīḳiya remained neutral as before. The gravity of the situation was hidden from al-Ma'mūn by al-Faḍl b. Sahl, until ʿAli al-Riḍā disclosed to him that Ibrāhīm b. al-Mahdī had been proclaimed caliph, rather than *amīr*, in Baghdād. Henceforward, at the age of thirty-one years, al-Ma'mūn decided to take personal control of affairs; he recognised that a military solution was not appropriate and that only agreement between the social elements of the empire was capable of saving the régime, by enlarging its social base as a means of gaining control of the different provinces. A first concession to the aristocracy of ʿIrāḳ was effected by the announcement of his return to Baghdād, whose rôle as capital of the empire was thus assured; on 10 Radjab 202/22 January 818 al-Ma'mūn left Marw with the court, the administration and the army, leaving Ghassān b. ʿAbbād, a cousin of the Sahlids, as governor of Khurāsān at Marw. At Sarakhs, al-Faḍl b. Sahl, who had attempted to usurp the authority of the caliph, suffered the same fate as the Barmakids; he was assassinated at the instigation of al-Ma'mūn (2 Shaʿbān 202/13 February 818), but unlike the Barmakids, the other Sahlids were spared; besides controlling Khurāsān and southern ʿIrāḳ, they held influential posts in the central administration, with the promotion of al-Ḥasan b. Sahl to the post of vizier-*amīr* which had been held by his brother al-Faḍl. A matrimonial alliance was concluded to consolidate this situation, with the betrothal of al-Ma'mūn to Būrān, daughter of al-Ḥasan b. Sahl (the marriage was to be celebrated in Ramaḍān 210/December 825). Two months later, al-Ma'mūn left Sarakhs for Ṭūs, making no attempt to hasten the issue. As for Ibrāhīm b. al-Mahdī, he was hampered by lack of financial resources and was obliged to combat opposition movements: on the part of Asad, who raised a revolt in the quarter of al-Ḥarbiyya (suppressed by ʿĪsā b. Muḥammad b. Abī Khālid); on the part of Mahdī b. ʿAlwān al-Shārī (al-Ḥarūrī) in the region between Baghdād and Madā'in (the headquarters of Ibrāhīm b. al-Mahdī), who was defeated by Abū Isḥāḳ (al-Muʿtaṣim); and on the part of certain *abnā'* who sought to come to terms with the generals of al-Ḥasan b. Sahl. Alerted to this conspiracy, in which al-Manṣūr b. al-Mahdī was implicated, Ibrāhīm b. al-Mahdī returned to Baghdād (14 Ṣafar 203/21 August 818) and had his half-brother arrested, as well as Khuzayma b. Khāzim al-Tamīmī, although al-Muṭṭalib b. ʿAbd Allāh al-Khuzāʿī succeeded in escaping. It was then that the army of al-Ḥasan b. Sahl captured al-Madā'in and the Nahr Diyālā. Meanwhile, in Khurāsān, ʿAlī al-Riḍā met his death in the village of Sānabād, near Ṭūs, on 29 Ṣafar 203/5 September 818, and the Shīʿīs were convinced that al-Ma'mūn had had him poisoned

(whence the name of *Mashhad* [*q.v.*], given to this place). Not only was a heavy taxation levied, but in Bāghdād, certain *abnāʾ* conspired against Ibrāhīm b. al-Mahdī; ʿĪsā b. Abī Khālid was supposed to capture him and hand him over on Friday 29 Shawwāl 203/29 April 819, but his plan was revealed and he was imprisoned. To free him, the family of the Banū Khālid entered into conflict with Ibrāhīm b. al-Mahdī and rallied to the cause of al-Maʾmūn (Dhu 'l-Kaʿda 203/May 819), who was in Djurdjān at this date (in other words, it had taken him sixteen months, since leaving Marw, to cover the twenty journey-stages which separated this town from Djurdjān). Feeling the cause lost, once more, the *hādjib* al-Faḍl b. al-Rabīʿ deserted his caliph and his post and plunged again into obscurity. As for Ibrāhīm b. al-Mahdī, he was reduced to using his rival Sahl b. Salāma al-Anṣār in an attempt to mobilise the lower classes of Baghdād. After two years as caliph, Ibrāhīm decided to leave the political scene, at the same time escaping from a conspiracy of some of his military chiefs who had plotted to hand him over to al-Ḥasan b. Sahl (16 Muḥarram 204/13 July 819). The authority of al-Maʾmūn was restored in Baghdād, while al-Ḥasan b. Sahl withdrew from political life (on account of his ill-health). In other words, the way was clear when al-Maʾmūn arrived at Ḥulwān, which separates ʿIrāḳ from the Iranian plateau. Ṭāhir b. al-Ḥusayn, who had withdrawn to Raḳḳa, received orders to return to Baghdād, where al-Maʾmūn made a triumphal entry on 17 Ṣafar 204/August 819 (after ten years of absence). One month later, he re-adopted the colour black, but retained the title of *Imām* (which all his successors were to bear) with the object of consolidating his role as guide of the *umma*, following the example of the ʿAlid *Imāms*.

Henceforward, the attempt to control the empire and to guide the *umma* was the personal responsibility of al-Maʾmūn, advised by the Muʿtazilīs and the *ḳāḍī* Aḥmad b. Abī Duʾād [*q.v.*]. To apply the new policies of the *Imām*, the *kuttāb* of the previous administration were first disbanded but then reinstated as advisers on the administrative staff which was recalled from Khurāsān. Aḥmad b. Abī Khālid, kinsman of the *abnāʾ* of ʿIrāḳ, was the personal secretary of al-Maʾmūn, and acted as principal adviser and as agent for rallying the *abnāʾ* of Baghdād (until his death in 211/826). The chiefs of the *dīwāns*, most of whom were former protégés of the Barmakids, were controlled directly by the caliph, who took personal charge of recourse to the *maẓālim*. For the maintenance of order, supervision of the police was entrusted to Ṭāhir b. al-Ḥusayn, while yesterday's adversaries were pardoned in the interests of communal reconciliation: thus al-Faḍl b. al-Rabīʿ and then Ibrāhīm b. al-Mahdī (in 210/825) benefited from the *ḥilm* of al-Maʾmūn (who executed only the recalcitrant Ibrāhīm Ibn ʿĀʾisha, descendent of the *Imām* Ibrāhīm, in 210/825). The central army combined numerous bodies of troops, and privileged status reverted to the supporters of al-Maʾmūn, of Transoxanian and Khurāsānian origin, at the expense of the *abnāʾ* who had been defeated on two occasions, in 198/813 and then in 204/819. Since the empire was only now emerging from a civil war that had lasted ten years, al-Maʾmūn confined himself to supporting the revolt of Thomas the Slav in Asia Minor (820-3), while awaiting the opportunity to renew the campaign against the Byzantine empire (which he did from 215/830 onwards). As for the government of the provinces, he entrusted the holy cities of the Ḥidjāz to an ʿAlid, while al-Djazīra, troubled by the revolt of Naṣr b. Shabath at Kaysūm, received as its ruler the veteran Yaḥyā b. Muʿādh b. Muslim, who was also required to act with restraint.

In 205/820, a number of troublesome incidents occurred in the marshlands of lower ʿIrāḳ, where the Zuṭṭ [*q.v.*] controlled the routes of communication (until 219/834), but also and especially in Khurāsān. It was in response to these problems that there was established a dynasty of Ṭāhirid governors, in accordance with the conditions granted to al-Maʾmūn by the "Meccan Documents" (in 186/802), this representing a durable compromise solution. This was the first time that the ʿAbbāsids made use of governors to rule the eastern half of the empire and to support the policies of the caliphate (similar methods had been practised under Muʿāwiya with Ziyād b. Abīhi, and under ʿAbd al-Malik b. Marwān with al-Ḥadjdjādj b. Yūsuf al-Thaḳafī). In fact, Ṭāhir b. al-Ḥusayn ruled greater Khurāsān, while his cousin Isḥāḳ b. Ibrāhīm b. Muṣʿab deputised for him as commander of the police in Baghdād, and his son ʿAbd Allāh b. Ṭāhir was responsible for extending the caliph's authority over the autonomous provinces by means of the central army, which was recruited principally from the eastern provinces.

In other words, the autonomy of the Ṭāhirids was of a different nature from that of the Aghlabids in Ifrīḳiya, and, contrary to the views of some "Jacobin" historians, the power of the state was not conceived in terms of centralisation, representing a very high cost and uncertain results, but in the co-operation of different provinces which, in exchange for a degree of autonomy, were prepared to mobilise and to employ the energies and creative abilities of their inhabitants in the service of the *umma*. It was by this means that the integration of the former Sāsānid empire was achieved, assisting al-Maʾmūn in his task of restoring the unity of the empire on new cultural bases. In fact, Muʿtazilism seemed to represent a compromise solution which would conciliate the ʿAlids and would adapt Islam to the economic and social evolution of the empire, seeing that the rural communities were unfairly oppressed by the scale of land-taxes levied by the aristocracy of the towns, while the urban proletariat, by frugal living, managed after a fashion to support a non-Ḳurʾānic burden of taxation (whence its support for Ḥanbalism, favouring a strict adherence to the Ḳurʾān and to the *Sunna* of Muḥammad and his Companions). The political implications of Muʿtazilism, elaborated by the *mawālī* of Kūfa (including Bishr b. al-Muʿtamir) and of Baṣra (including Abu 'l-Hudhayl al-ʿAllāf and his nephew al-Naẓẓām), explain the interest of al-Maʾmūn in this school of *kalām*, which supplemented the Arabic literary tradition by recourse to Greek philosophy as a means of arguing in favour of the oneness of God (whose shadow on the earth is the *Imām*). In other words, the "son of the Persian" al-Maʾmūn, far from hallowing the influence of the Sanskrit and Pahlavi cultural and scientific heritage, was the promoter of the cultural watershed of the 3rd/9th century, encouraging the translation into Arabic from Greek (and from Syriac) of the philosophy, astronomy, mathematics and medicine of the Hellenistic period (cf. R. Walzer, *Greek into Arabic*, 1962; G. E. von Grünebaum, *Islam and medieval Hellenism*, London). The foundation of the *Bayt al-Ḥikma* [*q.v.*] in Baghdād (217/832) confirmed his interest in the development of a new culture, Arabic in expression and Islamic in inspiration, integrating the contributions of the various peoples of the Orient, including the neighbours of the ʿAbbāsid empire, whether they were commercial part-

ners (India) or political enemies (Byzantium). Scholars of all persuasions (Muslims, Christians, Jews, Zoroastrians and Ṣābians) and from different provinces of the empire (Kh^w^ārazm, Farghāna, Khurāsān, Ṭabaristān, al-Djazīra and ʿIrāḳ) contributed to the advancement of Arab science, heir to the sciences of antiquity, adopted and adapted according to the requirements of Arab-Islamic civilisation.

These borrowings from various foreign cultures were not to the taste of the traditionists (*muḥaddithūn*) who adhered to the Ḳurʾān and the *Sunna* as sources of the law. While certain *fuḳahāʾ* were supporters of *raʾy* in questions of jurisprudence (particularly the Ḥanafīs of ʿIrāḳ), the majority tended to distrust divergences of opinion and, to maintain the purity of religion, re-affirmed the authority of the Ḳurʾān completed by the *Sunna* (at that time being edited in textual form, a process begun by Mālik. b. Anas). Al-Maʾmūn applied himself to encouraging politico-religious controversies, on the one hand between representatives of different religions (cf. G. Tartar, *Dialogue islamo-chrétien sous le calife al-Maʾmūn. Les épitres d'al-Hāshimī et d'al-Kindi*, doctoral thesis, Univ. of Strasbourg, ii, 1977, repr. in the Bulletin *Evangile-Islam*, special issue, October 1982; *Gudjastak Abalish*, ed. and tr. A. Barthélemy, Paris 1887; the subject is a polemic between a Zoroastrian converted to Islam and the leader of the Mazdaeans of Fārs); on the other hand, and most of all, between *ʿulamāʾ* of the different tendencies with regard to the interpretations of Islam. Aware of the gulf between Muʿtazilī concepts (hitherto classed as *zandaḳa*) and those of the *fuḳahāʾ* and *muḥaddithūn*, opposed to the notion of the created Ḳurʾān, al-Maʾmūn was at pains, over the years, to promote the Muʿtazilī point of view, of which the political implications were obvious: the *Imām*, seeking to correct the inequitable effects of the established order (particularly in terms of the taxation levied on citizens) borrowed from the Muʿtazilīs that which he judged necessary for his purpose, this being the dogma of the created Ḳurʾān (only God is uncreated and eternal), which he was able to use in rectifying the order himself, by means of his knowledge (*ʿilm*). This perspicacity brought him close to the example of ʿAlī, the first of the Companions of Muḥammad to have understood that a practical interpretation of Islam was necessary after the upheavals set in motion by the success and the extent of the Arab conquests (634-44). Furthermore, with the object of wooing the support of the Shīʿīs, ʿAlī was proclaimed "the best of the Companions after the Prophet" (in 211/826, re-affirmed in 212/827).

Scientific work, especially in the realms of astronomy and of mathematics, as well as cartography, conducted alongside the theological discussions of the decade beginning in 820, coincided with the restoration of the authority of the caliphate over the autonomous provinces with the regions situated to the north of ʿIrāḳ. Through the efforts of ʿAbd Allāh b. Ṭāhir, the revolt in al-Djazīra of Naṣr b. Shabath was suppressed (surrender in 210/825), while in Ādharbāydjān, ʿĪsā b. Abī Khālid put an end to the autonomy of the chieftains in the principal cities, but failed to subdue the mountainous region held by Bābak, who controlled the principalities of Siounik and Baylaḳān, situated in Arrān (on the other side of the Araxes). The various expeditions entrusted to Ṣadaka b. ʿAlī al-Azdī (in 209/824), then to Muḥammad b. Ḥumayd al-Ṭāʾī or al-Ṭūsī (212-14/827-9) were unable to stamp out a mountain guerilla force, strongly based and particularly effective against a regular army. These repeated failures cost the caliphate very dear, but did not impede the extension of the caliph's control over other mountainous regions; in 207/822, after arranging the succession of Ṭāhir b. al-Ḥusayn at Marw, Aḥmad b. Abī Khālid succeeded in integrating the principality of Ushrūsana into the empire, through the help of Ḥaydar b. Ḳāwūs, son of al-Afshīn [*q.v.*], who had taken refuge with al-Maʾmūn. Another local prince, Māzyār b. Ḳārin, driven out of his mountainous principality in the Elburz, was employed by al-Maʾmūn as co-governor of Ṭabaristān, of Rūyān and of Dunbāwand which were under the control of the Ṭāhirids (cf. M. Rekaya, *Māzyār*, in *Studia Iranica*, ii/2 [1973], 143-92, and ḲĀRINIDS). All these local princes who rallied to al-Maʾmūn were converted to Islam and were honoured with the title of *mawālī Amīr al-Muʾminīn* as a reward for their support of his policies. As for the Yemen, it was the base for the outbreak of a new ʿAlid revolt, fomented in 207/822 by ʿAbd al-Raḥmān b. Aḥmad, but al-Maʾmūn succeeded in obtaining his surrender, thus salvaging the desired reconciliation. However, the revolt of the citizens of Ḳumm, discontented by the refusal to reduce the *kharādj*, had to be suppressed (in 210/825, again in 216/831).

Once the pacification of the empire had been almost achieved, with the return of Egypt under the control of the caliphate (in 210-11/825-6), and the confirmation of the autonomous status of Aghlabid Ifrīḳiya, al-Maʾmūn felt sufficiently strong to proclaim Muʿtazilism as the official doctrine (in 212/827). He thus announced an "imperial-papal" policy, the application of which had been deferred until the consolidation of the new régime. In fact, the *Imām* undertook to reorganise the central army in order to provide himself with a powerful and effective striking force which would serve under his guidance. In 213/828 he took control of the armed forces, and divided them into three main army groups (each comprising a company of *abnāʾ*, troops of the *ʿAwāṣim* and recruits drawn from the eastern provinces): the first under the command of Isḥāḳ b. Ibrāhīm (charged with the maintenance of order in ʿIrāḳ and in Djibāl and Fārs, adjoining greater Khurāsān, which was entrusted to Ṭalḥa b. Ṭāhir); the second under the orders of al-ʿAbbās b. al-Maʾmūn (responsible for the war-front in the struggle against the Byzantine empire in al-Djazīra and northern Syria); and the third entrusted to Abū Isḥāḳ Muḥammad (al-Muʿtaṣim, successor to al-Maʾmūn) and charged with the government of Egypt, where the situation was explosive. In fact, from 214/829, the Muslims and the Copts fomented a revolt against the system of taxation and inflicted a defeat upon the forces of al-Muʿtaṣim. In northern Ādharbāydjān, Bābak al-Khurramī succeeded in killing Muḥammad b. Ḥumayd al-Ṭūsī (214/829) and repelling his army, forcing al-Maʾmūn to charge ʿAbd Allāh b. Ṭāhir, veteran of the pacification of al-Djazīra and then of Egypt, with the suppression of this movement. However, before being able to intervene against Bābak, ʿAbd Allāh b. Ṭāhir was transferred to Khurāsān on the death of his brother Ṭalḥa (214/829), this coinciding with the end of the revolt of the Khāridjī Ḥamza b. Ādarak (which had lasted for a third of a century in Sīstān-Kirmān). The task of pacifying Djibāl, Ādharbāydjān and Armenia was then entrusted to ʿAlī b. Hishām, one of al-Maʾmūn's leading generals, who did not however succeed in changing the territorial *status quo*.

This policy of restoring the unity of the empire preceded the resumption of war against Byzantium, already under way with the settlement of Andalusians in Crete (from 210/826) and the conquest of Sicily by

the Aghlabids of Ifrīḳiya (a campaign launched in 211/827). In addition, deserters from the Byzantine empire were gathered together and posted in frontier sites (cf. P. Lemerle, *L'histoire des Pauliciens d'Asie mineure d'après les sources greques*, in *Travaux et Mémoires du Centre de recherches d'histoire et civilisation de Byzance*, v [1973]; H. Gregoire, *Manuel et Théophobe*, in *Byzantion*, ix [1934]; M. Rekaya, *Mise au point sur Théophobe et l'alliance de Bâbek avec Theophile*, in *ibid.*, xliv [1974]).

The first campaign began in 215/830 under the personal command of al-Ma'mūn, who thus intended to prove himself worthy of his title of *Imām*, according to the Zaydī definition which then obtained, meaning a guide endowed with great knowledge (*ʿilm*) and with tried and tested political and military courage. On the way, al-Ma'mūn made the discovery of the Sabaeans of Ḥarrān, some of whom were obliged to convert to a Religion of the Book, while a *fatwā* proclaimed a formal accord between Islam and this religious community (then assimilated to the Ṣābi'ūn of the Ḳur'ān, II, 59/62, V, 73/69, XXII, 17), which produced many scholars and translators of the Greek heritage into Arabic. The outcome of this campaign was the capture of a number of fortresses in Cappadocia (in Arabic: al-Maṭāmīr [see MAṬMŪRA]. In response, the Byzantine emperor Theophilus attacked the fortresses of al-Maṣṣīṣa and Tarsus, provoking the second campaign of al-Ma'mūn (216/831) in which he was accompanied by his son al-ʿAbbās (the conqueror of Theophilus) and by his brother and successor Abū Isḥāḳ (al-Muʿtaṣim). After a series of victories in Asia Minor, al-Ma'mūn rejected the proposal for an exchange of prisoners and a five-year truce. The caliph withdrew to Damascus and from here he was obliged to make his way in person to Egypt to put an end to the revolt of the Copts and the Muslims against the burden of taxation. After the subjugation of the rebels, al-Ma'mūn undertook a fiscal reform; the system of *ḳabāla* replaced the former method of collection, and the state showed itself willing, in case of need, to take account of difficult circumstances. In addition, relations with the Nubians were improved, enabling the Muslims to exert better control of the lands of the Nile.

With the pacification of Egypt achieved, al-Ma'mūn returned to the Byzantine front in 217/832, with the object of gaining control over the ports of Cilicia beyond the Taurus. The siege of the fortress of Lu'lu'a (which controlled access to Tyana) ended with its capitulation, and once more the emperor Theophilus called unsuccessfully for a truce and an exchange of prisoners.

In spite of his preoccupation with the Byzantine war-front, and the political difficulties aroused by the persistent rebellions of the Zuṭṭ (of lower ʿIrāḳ), of Bābak al-Khurramī in the north of Ādharbāydjān, complicated by the sedition of ʿAlī b. Hishām, governor of Djibāl, of Ādharbāydjān and of Armenia (executed in Djumādā I 217/June 832), al-Ma'mūn did not neglect cultural matters (foundation of the *Bayt al-Ḥikma* in 217/832) and did not lose sight of his objective of having his "imperial-papal" policy recognised by the Sunnī *ʿulamā'*. While preparing for the major campaign of 218/833 (of which the objective was Amorium, the natal city of the current Byzantine dynasty and thus the heart of Byzantium itself), al-Ma'mūn engaged in a trial of strength with the *ʿulamā'* in the Islamic sciences, instituting the *miḥna* [*q.v.*] (Rabīʿ I 218/April 833), four months before his death. Henceforward, Muʿtazilism was to be adopted by all the *ʿulamā'*, whether in the service of the state or independent of the ʿAbbāsid power. A struggle for influence over the *ʿāmma* took place between the *Imām* al-Ma'mūn who claimed for himself the right to interpret the law (and to change the established rules in the name of social justice), and the *ʿulamā'* and *fuḳahā'*, traditionalists who refuted this pretension on the part of the caliphate (and believed that the changes would be, in fact, carried out in the interest of the *khāṣṣa*, the least of whose concerns was the general interest, represented by the *ʿāmma'*). The majority of the *ʿulamā'* conceded the claims of the *Imām*, whether through loyalty or through fear of reprisals. A minority refused his directive, forming the nucleus of a resistance movement which received the support of the urban proletariat of Baghdād (cf. W. M. Patton, *Aḥmed ibn Ḥanbal and the Miḥna*, Leiden 1897). The social conflict between the *khāṣṣa* and the *ʿāmma* of the capital was revived (leading the successor of al-Ma'mūn to found a new capital at Sāmarrā).

Shortly before his death, al-Ma'mūn chose as his successor not his son al-ʿAbbās, who was in charge of the *ʿAwāṣim* (in the manner of al-Mu'tamin, who was to be the third heir of al-Rashīd), but his brother al-Muʿtaṣim who was responsible for the new recruits from Transoxania. His political testament recommended the pursuit of his politico-religious work, incomplete in Radjab 218/August 833, the date of his death near Tarsus.

In conclusion, it is not inappropriate to compare al-Ma'mūn with ʿAbd al-Malik b. Marwān (65-86/685-705), both of whom restored unity to the empire after a long civil war and promoted a political and cultural upheaval (of the 2nd/8th century in the case of ʿAbd al-Malik, and of the 3rd/9th century in the case of al-Ma'mūn). Their successors benefited from their work (built up over twenty years) and developed its main points of policy during their reign (of ten years); al-Muʿtaṣim put an end to various centres of persistent revolt (the Khurramiyya of Djibāl in 218/833, the Zuṭṭ of the marshlands of lower ʿIrāḳ in 219/834; the Khurramiyya of Bābak in Ādharbāydjān in 222/837; the *abnā'* favourable to al-ʿAbbās b. al-Ma'mūn in 223/838; and the Sufyānid al-Mubarḳaʿ in Syria in 226/841). He endorsed the Ṭāhirids, the pillars of the régime, going so far as to suppress the autonomist revolt of Māzyār, the prince-governor of Ṭabaristān (225/840) and to sacrifice one of his leading supporters, al-Afshīn of Ushrūsana (225/840), in order to put an end to his rivalry with the Ṭāhirids. He surrounded himself with the same Muʿtazilī advisers as had been chosen by al-Ma'mūn, in particular the chief *ḳāḍī* Aḥmad b. Abī Du'ād, a native of Ḳinnasrīn, and pursued the *miḥna* inaugurated in 218/833. He made new campaigns against the Byzantine empire, achieving in 223/838 the project undertaken by al-Ma'mūn in 218/833. The stimulus given to translations and to scientific works under al-Ma'mūn continued unabated, permitting the tutor of the sons of al-Muʿtaṣim, al-Kindī, to achieve the integration of Neo-Platonism into Muʿtazilī theology. In spite of this continuity there were some changes, exemplified by the transfer of the capital to Sāmarrā [*q.v.*] (from 221/836), in order to preserve the strength of the strike force constituted by the army, dominated by Transoxanians, among whom the rôle of the Turkish guard was growing in importance.

Bibliography: Sources. These embrace practically all the categories of documents, cf. Cl. Cahen, *Introduction à l'histoire du monde musulman médiéval (VIIe-XVe siècle)*, Paris 1982. The section of Ṭabarī on al-Ma'mūn's reign has been translated into English by C. E. Bosworth, *The caliphate of al-*

Maʾmūn 198-213 (813-33), Albany 1986. 2. Studies. There is no work of synthesis on al-Maʾmūn (the subject however of the present writer's thèse d'état, in preparation). The 3 vols. of A. al-Rifāʿī, *ʿAṣr al-Maʾmūn*, Cairo 1928, are a compilation from the Arab sources; M. M. Haddāra, *al-Maʾmūn, al-khalīfa al-ʿālim*, Cairo n.d. [1966], has no scholarly pretentions. F. ʿUmar touches on this period only in certain articles collected together in his *Buḥūth fi 'l-taʾrīkh al-ʿAbbāsī*, Baghdād 1977, and *al-Taʾrīkh al-islāmī wa-fikr al-ḳarn al-ʿishrīn*, Beirut 1980. Chapters are devoted to al-Maʾmūn's age in recent works on the ʿAbbāsids: M. A. Shaban, *Islamic history, a new interpretation. 2. A.D. 750-1055 (A.H. 132-448)*, Cambridge 1976; H. (M. REKAYA)

AL-**MAʾMŪN**, ABU 'L-ʿALĀʾ IDRĪS B. YAʿḲŪB AL-MANṢŪR B. YŪSUF B. ʿABD AL-MUʾMIN B. ʿALĪ, ninth sovereign of the Almohad dynasty, born in 581/1185-6 in Málaga, of the marriage of his father with the Spanish princess Ṣafiyya, daughter of the *amīr* Abū ʿAbd Allāh b. Mardanīsh (Martinez). The Arab historians pay high tributes to the good qualities of this prince, who was very well-read, and equally well-versed in profane and religious learning. At a time when the Almohad dynasty was much troubled by the strife stirred up by pretenders, he was able by his energy to postpone for several years its final collapse.

At first, al-Maʾmūn served in Spain as the lieutenant of his brother Abū Muḥammad ʿAbd Allāh al-ʿĀdil, then on the throne. The latter had soon to leave the Peninsula and return to Morocco without having been able to subdue the rebel leader Abū Muḥammad al-Bayyāsī, who was supported by Ferdinand III of Castile, but he was soon betrayed by his own men in his own land and assassinated in 624/1127. This murder was followed by the almost simultaneous proclamations of al-Maʾmūn and another Almohad pretender, nephew of the preceding, Yaḥyā b. al-Nāṣir b. al-Manṣūr, who took the honorific *laḳab* of al-Muʿtaṣim bi'llāh. On his accession and without leaving Spain, al-Maʾmūn was soon able to make himself recognised in the greater part of his empire and to get rid of the rebel al-Bayyāsī. But almost immediately, a rebellion broke out in the east of al-Andalus, in which Muḥammad b. Yūsuf of the powerful family of the Banū Hūd [*q.v.*] was proclaimed caliph in the town of Murcia. At the same time, the prestige of Yaḥyā al-Muʿtaṣim increased in Morocco and his partisans became more and more numerous. Feeling himself powerless in Spain and forced to turn his eyes towards Africa, al-Maʾmūn was forced to seek an alliance with the king of Castile. The latter agreed to support al-Maʾmūn under very harsh terms, including the surrender of ten Muslim strongholds of the *frontera* and the building of a church in Marrākush and the granting of freedom of worship. In return, al-Maʾmūn received a body of 500 Christian mercenaries with whom he at once went to the Maghrib. He was soon able to enter Marrākush in triumph, after having defeated the army of al-Muʿtaṣim (627/1230), and to open the chapel of St. Mary for his Christian troops.

Enraged at the defection of the Almohad *makhzan* [*q.v.*] so devoted to his predecessors, al-Maʾmūn took a decision at Marrākush that was quite unprecedented in the annals of the dynasty. He stigmatised the memory of the Mahdī Ibn Tūmart, denied him "impeccability" (*ʿiṣma*) and had a large number of Almohad *shaykh*s executed whom he suspected of having betrayed him. The rest of the reign of al-Maʾmūn was spent in trying to put down several rebellions in the Maghrib; but he did not succeed in bringing al-Muʿtaṣim to terms, for the latter was able

to take Marrākush, to massacre the Christians and destroy their church and to plunder the town. On hearing this, al-Maʾmūn, then busy with the siege of Ceuta, hurried off to the capital at once but fell ill and died on the way in the valley of the Wādi ʾl-ʿAbīd at the end of Dhu ʾl-Ḥidjdja 629/October 1232.

MAʾMŪN b. MUḤAMMAD, Abu ʾl-ʿAbbās, founder of the short-lived line of Maʾmūnid Khwārazm-Shāhs in Khwārazm [*q.v.*].

Maʾmūn was governor, probably as a nominal vassal of the Sāmānids [*q.v.*], in the town of Gurgandj [*q.v.*], which during the 4th/10th century had been prospering commercially at the expense of the ancient capital Kath [*q.v.*], seat of the old-established line of Afrīghid Khwārazm-Shāhs [see khwārazm-shāhs]. In 385/995 the Afrīghids were overthrown and their dynasty extinguished, so that Maʾmūn became ruler of a unified Khwārazm.

Very soon he was drawn into the struggle between the last Sāmānid *amīrs*, in particular, Nūḥ b. Manṣūr, and the rebellious Turkish slave commanders Abū ʿAlī Sīmdjūrī and Fāʾiḳ Khāṣṣa, arranging a peace between the two sides in 386/996, in the face of the threat of a renewed Ḳarakhānid invasion [see ilek-khāns]. In the following year, however, Maʾmūn was assassinated in an internal turmoil, and was succeeded on the throne by his son Abu ʾl-Ḥasan ʿAlī.

al-MAʾMŪNĪ, ʿAbū Ṭālib ʿAbd al-Salām b. al-Ḥasan, Arabic poet of the 4th/10th century, whose name indicates his descent from the caliph al-Maʾmūn. He was born in Baghdād after 343/953, left the capital in his youth and went to Rayy, where the famous Ṣāḥib Ibn ʿAbbād [*q.v.*] made him a member of his learned circle. However, "the scorpions of envy from the part of the boon-companions of the Ṣāḥib were creeping around him", so he decided to move and went to Nīshāpūr, where he was introduced to Ibn Sīmdjūr, a high-ranking military commander of the Sāmānids, who recommended him to the court in Bukhārā. The brilliant young poet having arrived there, al-*wazīr* Abu ʾl-Ḥusayn al-ʿUtbī and his successor Abū Naṣr showered gifts and honours upon him. Al-Maʾmūnī seems to have dreamt of regaining—or usurping—the ʿAbbāsid caliphate by the aid of a Khurāsānian army; at least, this is what he intimated to al-Thaʿālibī (cf. below). However, his poetry shows him to have been rather an epicure and pleasure-lover than a warrior. He died of hydropsy in 383/993.

The main source for his life and poetry is al-Thaʿālibī's *Yatīmat al-dahr* (vol. iv, part. 4, ch. 3, Damascus 1304/1886-7,iv,84-112; Cairo (1352/1934), iv, 149-79). In addition to this, a number of verses are scattered in various sources including al-Djurdjānī's *Asrār al-balāgha* and al-Nuwayrī's *Nihāyat al-arab*. Most of his poems are short specimens of *waṣf*, descriptive epigrams on buildings, various utensils (e.g. for writing), fruits, and dishes. His art of description makes ample use of metaphors, metonymy, periphrasis, and the attribution of human characteristics to objects, e.g. showing a pair of scissors as two inseparable spouses, a basket as a devout, reliable servant, and so on. With its still somewhat clumsy mannerism, this poetry forms an interesting document for the development of the sophisticated Persian style, showing it at an early stage and in Arabic guise, as already pointed out by Bertels.

Heinrich, in *ZDMG*, xcci (1971), 166-90. (J. C. Bürgel)

MAʾMUNIDS [see khwarazm-shāhs]

MAʾMŪR (a), in the usage of the late Ottoman empire and Turkish republic, "civil official".

Roughly at the end of the 18th century, this term began to appear in Ottoman Turkish, not only as a passive participle designating "one who is ordered or commissioned" to do something, but also as a substantive referring to an "official", normally a "civil official". As far as one can tell from research done to date, the change was a matter of gradual transition, and not the result of any clearly-marked shift in governmental practice. This was, however, a period when traditional scribal institutions were undergoing extensive change, and scribal officials were being used increasingly for assignments or missions (*meʾmūriyyet*) other than those evoked by such traditional designations for scribal roles as *kātib* [*q.v.*], *kalfa* (from *khalīfe*, normally applied to scribal officials only in the plural form *khulefāʾ*), or *khwādje* (also normally applied to officials only in the plural form *khwādjegān* [see khwādjegān-i dīwān-i hümāyūn]; Findley, 64-6, 106-11). Usage in historical works of this period suggests that repeated references to individuals who were "ordered" (*meʾmūr*) to perform a particular mission (*meʾmūriyyet*) gradually caused these terms to float free of association with specific persons or duties and acquire the general meanings of "official" and "official position or appointment". In the *History* of Wāṣif, published in 1219/1804, and in that of ʿĀṣim [*q.v.*], written about five years later, there are numbers of section headings containing the terms *meʾmūr* or *meʾmūriyyet* (e.g. Wāṣif, i, 148, 155, 184, ii, 110, 116, 119, 147, 154, 185, 207, 266, 268, 272, 294; ʿĀṣim, i, 62, 155, 174, 223, ii, 20, 26, 166). At some points, the word *meʾmūr* appears with meanings approaching that later conventional in Turkish. *Meʾmūrs* go to Egypt and return (Wāṣif, i, 172-3); the *meʾmūrs* of the naval arsenal (*tersane*) are accused of negligence (ʿĀṣim, i, 51); Russian consuls behave inappropriately toward government officials (*dewlet meʾmūrlarî, ibid.*, i, 178-9).

From roughly the 1830s onwards, the term *meʾmūr* began to be associated in Ottoman official usage with the term *mülkiyye*, which was then coming into use as a noun meaning "civil administration" or "civil service". Eventually, a civil official came to be known as a *mülkiyye meʾmūrî*, a compound that contrasted both the man and his branch of service with the scribe (*kātib*, etc.) of the scribal service (*ḳalemiyye*), as it had been known prior to the beginning of reform. Since

the terms *mülkī* and *mülkiyye* convey associations with both land ownership and sovereignty, generalised use of the new nomenclature may have been a result of the growing association of civil officials with provincial administration, thus with a vast domain of employment external to the bureaux in the capital city, in which most scribal officials had historically served. When Maḥmūd II [*q.v.*] reorganised the central offices as a series of ministries, the first title of the new minister of the interior was, in fact, *umūr-ī mülkiyye nāẓirī*, or "Minister of Civil Affairs". The title was conferred in 1251/1836 (Luṭfī, v, 29-31), but was changed to Minister of the Interior (*dākhiliyye nāẓirī*) a year later. Ultimately, however, the term *mülkiyye me'mūrī* and its variations, such as the common plural *me'mūrīn-i mülkiyye*, clearly referred, not just to local administrators but to civil officials in general (Findley, 65-6, 140, 364, n. 66). Despite some inconsistency in usage, this fact became clearer as a systematic personnel policy emerged for this branch of service (*ibid.*, 140-7, 194-7, 270-9, 326-33). In the Turkish of the republican era, *me'mūr* remains, first and foremost, a noun that means "official" and refers especially to the civil service.

Nineteenth-century lexicographical works were slow to register the use of *me'mūr* in this sense. This fact no doubt reflects the tendency of the authors to rely on earlier written works; but it is probably also another sign that the shift in usage was not clearly marked. Works that do not mention the new usage include Alexandridis (1812), Bianchi (*Vocabulaire*, 1831, *s.vv.* "fonction", "fonctionnaire", "officier"), Hindoglu (1838, *s.v.* "*me'mūr*"), and Handjéri (1841, *s.vv.* "fonction", "fonctionnaire", "officier"). Even Redhouse, whose long years in Ottoman service made him a great authority, gave only conservative definitions in his first lexicographical publication, the *Müntakhabāt-i lughat-i ʿothmāniyye*, prepared by the early 1840s and first published in 1269/1852-3 (see the printing of 1285/1868-9, 88). Even in his last dictionary, he gave the traditional meanings first, as was his wont (*Turkish and English Lexicon*, 1890, *s.vv. me'mūr, me'mūriyyet*). By then, however, indications of the new usages had long since appeared in Rhasis (1828, *s.vv.* "fonctionnaire" and "civil", giving as one translation of the latter term *milkī* [*sic*], with the example "troubles civils, *ikhtilālāt-ī milkiyye* ou *dākhiliyye*"), Bianchi (*Dictionnaire français-turc*, 1843, *s.v.* "fonctionnaire"), and in Guzel-oglou (1852, *s.v.* "fonction"). In 1835, Bianchi and Kieffer (*Dictionnaire turc-français*, s.vv. *me'mūr, me'mūriyyet, mülkī*) had given the new meanings, but had associated them with Egyptian usage.

The reference to Egypt does reflect usage there, at least in Ottoman Turkish, under Muḥammad ʿAlī Pasha. In Ottoman-language Egyptian documentation of that period, one finds *me'mūr* as a general term for "official" (Deny, 106); by the 1820s, *mülkiyye* was also in use in Egypt with essentially the meaning "civil affairs" (e.g. *dīwān-ī mülkiyye*, as opposed to *dīwān-ī djihādiyye*; *ibid.*, 108, 111-5). From this period also dates the use of the term *me'mūr* as a title for the chief officer of a given type of local administrative district (*ibid.*, 130, 565); this usage has survived in Egypt. In general, *muwaẓẓaf*, rather than *ma'mūr* has been the common term for "civil official" in modern Arabic.

(C. V. Findley)

MAʿMŪRAT AL-ʿAZĪZ, a town in eastern Anatolia, modern Turkish Elaziğ, now the chef-lieu of a *vilayet* of the latter name.

The area around the town is rich in evidence of prehistoric and protohistoric settlement. Bronze Age sites have been investigated at Ağin, Norşuntepe, Tepecik and Han İbrahim Şah, whilst traces of Hellenistic and later occupation have been found at Aşvankale and Kalecikler. Thus a more or less continuous occupation of the Elaziğ area since Chalcolithic times seems likely, even though it is not certain exactly at what periods the site of Elaziğ town was inhabited. In classical and mediaeval times, the main settlement of the region was at Khartpert (Latin name Ziata Castellum, Arabic Ḥiṣn Ziyād, Khartabird or Khartabirt, Classical Armenian Kharberd, mediaeval French Quart-Pierre, vulgar Armenian K'arp'ut, Byzantine Greek Χαρπότε, Ottoman Turkish Kharpurt, Kharpurd, or as in ʿAynī ʿAlī Efendī's *Ḳawānīn risālesi*, repr. Istanbul 1979, 30: Kharbrūt, modern Turkish Harput). For its history in classical and Byzantine times, see *EI*[1] art. KHARPŪT, and for the mediaeval Islamic and Ottoman periods, see KHARTPERT). It survives as a village and as a recreational area for the inhabitants of Elaziğ.

Although Kharpūt's location on its hilltop made it splendidly defensible, during the 19th century the difficulty of access came to be considered a liability rather than an asset. Hence early in that century, the governors of the *sandjaḳ* of Kharpūt in the *eyālet* of Diyārbakr, moved their residence to the plain to the little town of Mezere. The name of this settlement is probably derived from the word *mazraʿa, mezraʿa* "sown area, hamlet", which has not infrequently entered into the formation of Anatolian place names (compare in this context the articles *Harput* and *Elâziz* in *İA*, by Besim Darkot, also the different editions of TC Dahiliye Vekâleti, *Köylerimiz*. For an alternative, but less likely, suggestion, connecting the name with Μαζάρα as apparently found in Ptolemy, see H. Hübschmann, *Die altarmenischen Ortsnamen*, in *Indogermanische Forschungen*, xvi [1904]). Visitors of the 19th and early 20th centuries such as von Moltke and Gertrude Bell still record the name of the new settlement as Mazraa.

The new settlement gained importance in 1250/1834 when Rashīd Meḥmed Pasha, after a tour of inspection through the provinces of eastern Anatolia, suggested Mezere as the seat for the local governor. Barracks and a hospital were accordingly constructed, and von Moltke saw them on his visit in

1254/1838. In 1278/1862, upon a suggestion from the local governor Ismāʿīl Pa<u>sh</u>a, the settlement was renamed Maʿmūrat al-ʿAzīz in honour of the reigning sultan ʿAbd al-ʿAzīz [*q.v.*]. The name was extended to the *sand<u>j</u>aḳ* and then in 1296/1879 to a new *wilāyet* formed on these upper reaches of the Euphrates. It was soon transformed in popular parlance into al-ʿAzīz/Elaziz, and the present name Elaziğ adopted in 1937.

Until the end of World War II, the growth of Elaziğ was somewhat irregular. While the town probably consisted of about 10,000 to 12,000 inhabitants at the beginning of World War I, the first census conducted by the Turkish Republic in 1927 recorded 20,052 inhabitants. In 1940, this figure had risen to 25,465, but the shortages of the war years led to an exodus of population, so that in 1945 only 23,695 inhabitants were counted. However, from then onward, the city has gone through a period of dramatic and uninterrupted growth (1950: 29,317; 1955: 41,667; 1960: 60,289; 1965: 78,605; 1970: 107,364; 1975: 131,415).

The most important factor determining the growth of Elaziğ in recent years has been the construction of the Keban power plant at a distance of only 45 km. from the town (lake area: 68,000 ha., productive capacity 5,871,000 kwh/year). Throughout the construction period, building workers employed on the Keban dam generally lived in the city, so that during the nineteen-sixties and seventies, Elaziğ was inhabited by many more males than females (1960: 32,449 males, 27,840 females; 1975: 69,797 males, 61,681 females).

Among the factories constructed in the area, some of the more important ones are connected more or less directly with the Keban dam project. Thus a cement factory belonging to the public sector of the Turkish economy was founded in the city, possessing a capacity of 400,000 ton/year. In addition, the city is located close to an important mining area, in which chrome is extracted; this situation accounts for the relatively high percentage of miners in the Elaziğ district (2.5% of the active population in 1965). Due to these activities, the level of urbanisation in the district of Elaziğ (40.2% in 1970) has surpassed the average not only for eastern Anatolia, but even for Turkey as a whole (38.7% in 1970).

The growth of Elaziğ has also been stimulated by a side effect of the Keban dam, namely the total flooding of close to a hundred villages. In addition, over a hundred others have lost a large part of their agricultural lands. Among the 20,000 people who were forced to move, many apparently chose to settle in Elaziğ and to invest the indemnities paid by the government in houses and small business. Some of the recipients of major indemnities were encouraged to invest their money in a holding company, which by 1972 had built a factory producing plastic pipes and tubes, and by 1977 had also erected a leather factory employing 260 workers. State offices and enterprises also absorbed some of the migrants, mainly in subordinate capacities. However, just as the electricity produced by the Keban dam is mainly consumed outside of the area, it appears that a considerable percentage of the money received as indemnities was invested in the large cities of western Turkey.

(SURAIYA FAROQHI)

MĀN SINGH, Mahārād<u>j</u>ā of Amber, outstanding general of the Mu<u>gh</u>al armies under Akbar, later governor of Mu<u>gh</u>al provinces.

He was born in 1607 V.S. = 975/1550, the son of Bhagwant Dās, eldest son and heir apparent of the reigning Mahārād<u>j</u>ā Bhārah Mali, a Rād<u>j</u>pūt [*q.v.*] of the Kaččhwāha clan; the Muslim sources (Niẓām al-Dīn, Badāʾūnī, Firi<u>sh</u>ta, Abu 'l-Faḍl, and D<u>j</u>ahāngīr in his *Tūzuk*) garble the names and confuse Mān Singh's parentage, but there seems no reason to doubt the contemporary Rād<u>j</u>pūt records. After a young martial training, he entered the Mu<u>gh</u>al service (together with his father Bhagwant Dās) in 970/1562 on the occasion of Akbar's marriage with the daughter of Bhārah Mall, the first of those alliances which were to strengthen Mu<u>gh</u>al-Rād<u>j</u>pūt relations. He was with the Mu<u>gh</u>al armies at the capture of Ranthambor in 976/1569 (Tod, ii, 472-3, casts Mān Singh as mediator in the surrender, but the assertion is without evidence and inherently improbable); his first command seems rather to have been in the Gud<u>j</u>arāt campaigns in 980/1572 against the Mīrzās [*q.v.*], before the campaign against Dāwūd <u>Kh</u>ān Kararānī [*q.v.*] two years later. He was, though, sent as a mediator to Pratāp Singh who had succeeded as Mahārāṅā of Mēwār on the death of Uday Singh, the knowledged senior ruler of the Rād<u>j</u>pūt tribes. Pratāp continued his father's arrogance and hostility to the Mu<u>gh</u>als, and gratuitously insulted Mān Singh, which resulted in the latter's being chosen to lead the Mu<u>gh</u>al army against him at the battle of Haldīghāt, 35 km. north-west of Udaypur, in 984/1576; he inflicted a devastating defeat, but his chivalrous orders that the Rāṅā was not to be pursued and that Mēwār was not to be looted lost him Akbar's favour for a while. He next cleared Mālwā of Mīrzā disaffection, and was rewarded with a *manṣab* [*q.v.*] of 3,500. Sent against the disaffected Af<u>gh</u>ān and Balūčī elements in the Pand<u>j</u>āb, he acquitted himself well, and was placed in charge of operations in the north-west against Akbar's half-brother Mīrzā Muḥammad Ḥākim [*q.v.*], then ruling Kābul; after the Mīrzā's death in 993/1585, he occupied Kābul, brought the district to order, and was officially its governor, his principal occupation being to control the threat from the Raw<u>sh</u>anāʾīs [see RAW<u>SH</u>ANIYYA] and Yūsufzays. In 995/1587 Mān Singh was transferred to the governorship of the *ṣūba*

of Bihār, where he pursued a vigorous policy against both recalcitrant Hindū *rād̲j̲ās* and disaffected local Afg̲h̲ān chiefs. He had succeeded to the Ambēr *gaddī* "cushion of state", i.e. throne in 998/1589, receiving the Mug̲h̲al title of Rād̲j̲ā with his *manṣab* confirmed as 5,000. In two campaigns he next brought Orissa (Uṛīsā, [*q.v.*]) under Mug̲h̲al suzerainty, its local Afg̲h̲ān chieftains fleeing to eastern Bengal. His campaigns against them were continued in his next appointment, as *ṣūbadār* of Bengal, in 1002/1594. He built a new capital at Agmahal which he renamed Akbarnagar (Akbarī mint-town; later renamed Rād̲j̲mahal [*q.v.*]), with fort, palace and large mosque (see Catherine B. Asher, *Inventory of key monuments*, in G. Mitchell (ed.), *The Islamic heritage of Bengal*, UNESCO-Paris 1984, 120-1). Further chastisement of dissident Afg̲h̲āns, and the conquest of Kuč̣h-Bihār, occupied him until 1014/1605, when he returned to the imperial court at Āgrā with the *manṣab* of 7,000. He was less successful as a courtier than as a military commander, for he urged the claims of K̲h̲usraw against those of D̲j̲ahāngīr; when the latter succeeded to the Mug̲h̲al throne a couple of months later, Mān Singh was sent first to Bengal again, then on the Deccan campaign, accomplishing nothing of note in either. He died a natural death in Iličpur in 1023/1614. His contributions to building are important. Among much temple building and restoration, irrelevant here, stands the Govindadeva temple at Mathurā, which marries the Muslim use of arch and dome to traditional Hindū forms; Mān Singh's palace at Ambēr is largely in frank imitation of the buildings of Āgrā fort; various buildings at Akbarnagar [see RĀD̲J̲MAHAL]; especially repairs to fortifications at Rohtās [*q.v.*] with gateways and imposing palace, and originally a garden in the Mug̲h̲al style.

Bibliography: Career details especially in Abu 'l-Faḍl, *Akbar-nāma*; Badāʾūnī, *Muntak̲h̲ab al-tawārīk̲h̲*; Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, all *passim*, and information concerning "Mancinus" in Fr A. Valuable additional information, often correcting the above, in *D̲j̲aypur Vansāvalī* in State Archives of Jaipur. R.N. Prasad, *Raja Man Singh of Amber*, Calcutta 1966, is very useful for the Hindū sources quoted. (J. BURTON-PAGE)

MAᶜN, BANŪ, an Arab family of chiefs of the Druse district of the S̲h̲ūf, in the southern parts of Mount Lebanon, who enjoyed a special political prominence in Syria in the 10th/11th and 11th/17th centuries.

The origin of the house of Maᶜn remains unclear, what is related about it by the traditional Lebanese historians being without foundation. The first Maᶜn whose historicity is beyond question was Fak̲h̲r al-Dīn ᶜUt̲h̲mān b. al-Ḥād̲j̲d̲j̲ Yūnis who died in 912/1506. Another, possibly Fak̲h̲r al-Dīn ᶜUt̲h̲mān's son, was a Yūnis Maᶜn who died a young man in 917/1511. Ḳurḳumāz b. Yūnis Maᶜn, possibly a son of this Yūnis, was established as a *muḳaddam* (local chief) in the S̲h̲ūf in 922-3/1516-17, when the Ottomans conquered Syria and Egypt. At least two other Maᶜns, a ᶜAlam al-Dīn Sulaymān and a Zayn al-Dīn (thus known by his *laḳab*, with no *ism* mentioned), were recognised chiefs in the S̲h̲ūf at the same time. While the Maᶜns of the 10th/16th and 11th/17th centuries comprised Ḳurḳumāz and his descendants, it appears that the ᶜAlam al-Dīns, who feature as the rivals of the house of Ḳurḳumāz in the S̲h̲ūf at the time, were also Maᶜns descended from ᶜAlam al-Dīn Sulaymān.

Of the career of Ḳurḳumāz b. Maᶜn, not much is known, beyond the fact that he was reportedly residing in the village of al-Bārūk in 934/1528 and being deeply involved in the factional politics of the mountain. A second Ḳurḳumāz, possibly the grandson of the first, died in 993/1585 while Ottoman forces were invading the Druze districts. This Ḳurḳumāz left two sons, Fak̲h̲r al-Dīn and Yūnis. By the 1590s, his son Fak̲h̲r al-Dīn (d. 1044-5/1635), commonly believed to have been the older of the two, was already set on a career of political success which was to make him the dominant figure in the politics of Syria during the first three decades of the seventeenth century.

From small beginnings as a *muḳaddam* and Ottoman *multazim* (tax farmer) in the S̲h̲ūf, Fak̲h̲r al-Dīn rose by 1011/1602-3 to become the *sand̲j̲aḳ-beyi* of Sidon-Beirut and of Ṣafad, under the *beylerbeyi* of Damascus. He had already taken possession of Beirut, along with the southern parts of the district of Kisrawān, as far north as Nahr al-Kalb (the Dog River), in 1006/1598. In 1014/1605, he took possession of the whole of the Kisrawān. He next became involved in the rebellion of ᶜAlī D̲j̲ānbūlād, the usurper Pas̲h̲a of Aleppo, by coming to his support against the *beylerbeyis* of Tripoli and Damascus. This aroused the suspicion of the Porte against him for the first time.

As the master of two *sand̲j̲aks*, Fak̲h̲r al-Dīn established himself in Sidon. He recruited a mercenary army of *levends* [*q.v.*] and *sokmans*, whom he used to garrison old Crusader fortresses in his territory which were restored for military use. By 1017/1608 he had reached an agreement with the Medicis of Tuscany, who had ambitions in Syria at the time, which increased the Ottoman suspicious against him. Attacked by the Ottomans in 1022/1613, Fak̲h̲r al-Dīn fled to Tuscany, but was permitted to return home in 1027/1618, to resume office as *sand̲j̲aḳ-beyi* of Sidon-Beirut and Ṣafad. During the years that followed, he crushed rival chiefs in every direction, at first with Ottoman support and approval, until most of rural Syria fell under this control. Alarmed by the growth of his power, the Ottomans organised an expedition against him in 1042/1633. In the face of the Ottoman offensive, his power rapidly collapsed; his eldest son, ᶜAlī, was killed in battle, and he and his remaining sons were captured and taken to Istanbul in 1045/1635. There Fak̲h̲r al-Dīn was put to death by strangulation in that year, along with his son Manṣūr. His youngest son, Ḥusayn Maᶜn-zāda [see MAᶜN-ZĀDA], survived him to become chamberlain to the Sultan and Ottoman ambassador to India. This Ḥusayn was an informant of the Ottoman historian Nāᶜīmā [*q.v.*], and the author of a book of *adab* literature entitled the *Kitāb al-Tamyīz*.

At home, Fak̲h̲r al-Dīn was survived by a nephew, Mulḥim, whose political claims in the S̲h̲ūf (the Sidon hinterland) and the other Druze districts (the G̲h̲arb, D̲j̲urd and Matn, in the Beirut hinterland) were challenged by the ᶜAlam al-Dīns—as already mentioned, probably the descendants of ᶜAlam al-Dīn Sulaymān b. Maᶜn. At various times, Mulḥim held the *sand̲j̲aḳ* of Ṣafad, or the *sand̲j̲aḳ* of Batrūn, the latter in the *eyālet* of Tripoli. Upon his death, reportedly in 1068/1658, he was survived by a son, Aḥmad, who succeeded in expelling the ᶜAlam al-Dīns from the Druze districts and the Kisrawān in 1078/1667 and in installing himself in their place as the local *multazim*, in subordination to the *beylerbeyi* of Sidon (an *eyālet* since 1070/1660). By holding this position without interruption for thirty years (1078-1108/1667-97), Aḥmad Maᶜn became, *de facto*, the founder of the autonomy enjoyed by the territory in question (today part of Lebanon) until the 19th century.

With the death of Aḥmad Maᶜn, the direct Maᶜnid male line became extinct, and the *iltizām* of his territory passed over to his nephew (sister's son) Bas̲h̲īr I S̲h̲ihāb (1109-1118/1697-1706), then to his grandson (daughter's son) Ḥaydar S̲h̲ihāb, Sunnī Muslim chiefs from Wādī al-Taym, in the Anti-Lebanon. The ᶜAlam al-Dīns, apparently as Maᶜns in the indirect line, rose to challenge this S̲h̲ihāb succession sometimes by intrigue, sometimes by military action, until they were defeated in battle and killed to a man in 1123/1711.

In the modern Republic of Lebanon, the Banū Maᶜn have become a national legend, and their tenure of their mountain territory in the southern Lebanon, as *multazims* for the Ottoman State, has come to be regarded as a precursor to the modern Lebanese State. Fak̲h̲r al-Dīn, in particular, is regarded as a Lebanese national hero, although Lebanon in his time was no more than a geographical expression. The real achievements of the Banū Maᶜn are of a different order. By controlling the predominantly Maronite district of Kisrawān alongside the Druze districts of the S̲h̲ūf, G̲h̲arb, D̲j̲urd and Matn, Fak̲h̲r al-Dīn and his Maᶜn successors, more by accident than by design, laid the foundations of a political symbiosis between Maronites and Druzes in the *sand̲j̲ak* of Beirut-Sidon (after 1660, part of the *eyālet* of Sidon). This became, in its turn, the mainstay of the *de facto* autonomy enjoyed by the same territory in subsequent Ottoman times. By encouraging silk production, and protecting foreign traders, the Maᶜns furthermore secured for their territory a modest properity unknown in other rural parts of Syria in Ottoman times.

(K.S. SALIBI)

MAᶜN B. AWS AL-MUZANĪ, Arab poet belonging to the tribe of the Muzayna (see Ibn al-Kalbī-Caskel, *D̲j̲amhara*), Tab. 88), which was established in a fertile region between Medina and Wādī 'l-Ḳurā.

He was considered to have been a *muk̲h̲aḍram* poet, but was probably born shortly before the mission of Muḥammad and lived most of his life under Islam. He lost his sight towards the end of his life, which came about no earlier than 64/684, at least if the verses in which he complains about the hospitality offered by ᶜAbd Allāh b. al-Zubayr [*q.v.*] in Mecca are authentic. Although probably converted along with his tribe before the capture of Mecca, he does not seem to have participated in the conquests, and his poetry barely reflects the situation created by the new religion, which is mentioned only occasionally. Moreover, the available biographical information is sparse and is mainly concerned with his private life, his wives and his daughters (whom he by no means considered insignificant persons). Closely attached to an estate which he owned not far from Medina, and to the Bedouin life-style which he followed in his home-territory, he nevertheless visited Baṣra, where he is said to have met al-Farazdaḳ [*q.v.*] and to have married a woman of his tribe, also of Syria, the country of origin of another of his wives. He wrote eulogies of a number of Muslim personalities, including ᶜUbayd Allāh b. al-ᶜAbbās, ᶜAbd Allāh b. D̲j̲aᶜfar, ᶜĀṣim b. ᶜUmar b. al-K̲h̲aṭṭāb and Saᶜīd b. al-ᶜĀṣ, without deviating from the Bedouin tradition. Although Ibn Sallām and Ibn Ḳutayba appear to ignore him, he is considered a talented poet, regarded by Muᶜāwiya as almost the equal of his fellow-tribesman Zuhayr b. Abī Sulmā. The fact is that his poetry contains, alongside personal references, passages of a moralistic nature. His name does not feature in the lists of *dīwāns*, collected by the early *ruwāt*, but P. Schwarz discovered in the Escurial an incomplete manuscript, with a commentary the contents of which go back to al-Ḳālī [*q.v.*] and published it under the title *Gedichte des Maᶜn ibn Aus* (Leipzig 1903) with an introductory account of the poet (cf. Nöldeke, in *ZA* [1903], 274 ff.; Reckendorf, in *OLZ* [1904], 138-40; R. Geyer, in *WZKM*, xvii, 246-70). Kamāl Muṣṭafā reprinted the Schwarz edition, with some additions and omissions, under the title *Maᶜn b. Aws, ḥayātuh, s̲h̲iᶜruh, ak̲h̲bāruh*, Cairo 1927; these collections could probably be enriched by the use of new sources. O. Rescher partially translated the *dīwān* in his *Beiträge zur arab. Poesie*, vi/2, Istanbul 1956-8, 1-28, and M.R. al-Nadawī has devoted a study to the poet, *Maᶜn b. Aws al-Muzanī*, in *Mad̲j̲allat al-Mad̲j̲maᶜ al-ᶜIlmī al-Hindī*, i/1 (1396/1976), 107-25. A new edition of the *Dīwān*, based on Muṣṭafā's edition plus a combing of *adab* works, etc., is by ᶜUmar Muḥammad Sulaymān al-Ḳaṭṭān, D̲j̲udda 1403/1983. *S̲h̲iᶜr Muᶜn b. Aws al-Muzanī* (47 poems and fragments).

(M. PLESSER - [CH. PELLAT])

MAᶜN B. MUḤAMMAD, B. AḤMAD B. ṢUMĀDIḤ al-TUD̲J̲ĪBĪ, ABU 'l-AḤWAS, founder of a branch of the dynasty of the Tud̲j̲ībids [*q.v.*] in the little principality of Alméria [see AL-MARIYYA] in eastern Spain in the middle of the 5th/11th century. The principality had been founded in *ca.* 416/1025 by the two ᶜĀmirid *fatās* K̲h̲ayān and Zuhayr. On the latter's death in 428/1037, their overlord ᶜAbd al-ᶜAzīz b. Abī ᶜĀmir, king of Valencia, declared it his property and in 432 or 433/1041-2, placed his brother-in-law Maᶜn b. Ṣumādiḥ as governor there. The latter belonged to a noble family of Arab origin; his father

had been one of the generals of the celebrated *ḥādjib* al-Manṣūr [*q.v.*] and was governor of the town Huesca [see WASHKA]. Maᶜn remained loyal to the king of Valencia for nearly four years, then cast off his allegiance and declared himself independent. He reigned at Alméria for a few years longers and died in Ramaḍān 443/January 1052.

(E. Lévi - Provençal)

MAᶜN b. ZĀᵓIDA, Abu 'l-Walīd al-Shaybānī. military commander and governor of the late Umayyad and early ᶜAbbāsid period. He came from the *ashrāf* of the Shaybān tribe and rose to importance with the patronage of Yazīd b. ᶜUmar b. Hubayra (see IBN HUBAYRA], the last Umayyad governor of ᶜIrāḳ. He fought against the advancing ᶜAbbāsid armies when they reached ᶜIrāḳ in 132/749, and was said to have killed the enemy commander, ḳaḥtaba b. Shabīb [*q.v.*]. He joined his master Ibn Hubayra in the defence of Wāsiṭ and was one of the few leaders not to be executed, apparently because he was in Kūfa, conveying Ibn Hubayra's oath of allegiance to al-Saffāḥ. Thereafter he remained in hiding until the rebellion of the Rāwandiyya in the newly-founded capital of Hāshimiyya (variously dated 139 to 141/756-9), when he was able to rescue the caliph from the rebels and so earn his forgiveness. Al-Manṣūr appreciated his value as a man with a strong tribal following, and sent him as governor to Yaman in 142/759-60. In this post he pacified the country brutally but successfully, and in 151/768 he was recalled and sent on another difficult mission to Sīstān. It was here that he came into conflict with the local Khāridjīs, who were defeated in battle but succeeded in killing him in his winter quarters at Bust by disguising themselves as workmen (152/769-70). He left at least four sons, but his position in the tribe of Shaybān and at the ᶜAbbāsid court was inherited by his nephew, Yazīd b. Mazyad, who also continued the feud with the Khāridjīs. Maᶜn was remembered in the Arab literary tradition as a fierce warrior, but also for his extreme generosity and as a patron of poets, notably Marwān b. Abī Ḥafṣa [*q.v.*], who wrote a famous elegy on Maᶜn.

(H. Kennedy)

MAᶜN-ZĀDA, Ḥusayn b. Fakhr al-Dīn al-Maᶜnī (Maᶜn-oghlu) son of the famous Druze *amīr*, Fakhr al-Dīn II [*q.v.*]; [see also MAᶜN, BANŪ], born on 14 Dhu 'l-Ḥidjdja 1030/29 October 1621, his mother being the niece of Yūsuf Pasha Sayfa, the Sunnī Turkoman chieftain in the regions of ᶜAkkār and Tripoli. When he was an infant, his father sent him several times in delegations to receive senior Ottoman officials passing via the Syrian coast. Through bribery and other cunning methods, his father was in 1031/1621 able to get an imperial order entrusting Ḥusayn with the *sandjak* of ᶜAdjlūn, replacing the established Ghazzāwī family who were confidants of the Ottomans and the leaders of the Ḳaysī faction in southern Syria. Fakhr al-Dīn deputed one of his men to administer the *sandjak* on behalf of Ḥusayn, but two years later delegated the job to a certain Bashīr al-Ghazzāwī.

Very little is know about the childhood of Ḥusayn and his youngest brother Ḥasan. However, when Sultan Murād IV in 1043/1634 commissioned the governor of the province of Damascus, Küčük Aḥmad Pasha, to eradicate the Maᶜnids, Fakhr al-Dīn instructed Ḥusayn to take shelter in al-Marḳab citadel situated in the neighbourhood of Lādhiḳiyya. Ḥusayn was arrested and sent to Aleppo, whence he was eventually dispatched to Istanbul. In 1044/1635, his father and two of his sons were put to death, but the life of Ḥusayn was spared because of his youth. He was sent to the Palace pages' school. After graduating from there, he served at the Ottoman court in the *Khāṣṣ odası*. It appears that he showed competence, because he was promoted to be a private secretary to Sultan Meḥemmed IV (1058-99/1648-87). Later on, he held the post of chief assistant at the treasury, *khazīne ketkhüdāsī*, and then in 1066/1656 that of *ḳapïdjï bashï* or head of the Sultan's guards. Later in the same year, he was sent as the Sultan's special envoy (*elči*) to the Mughal sultan in India Shāh Djahān (1037-68/1628-57), travelling by land to Baṣra in the company of an ambassador sent by Shāh Djahān, and from there they sailed to India; Ḥusayn refers to this journey in his only surviving work *al-Tamyīz*. Arriving in Dihlī, he found that the emperor had died and that fighting had broken out between his sons. It seems that his stay there did not last long, and he went back to Istanbul carrying a message of good wishes from Murād Bakhsh, son of the deceased sultan. It is possible that he was not on good terms with the new Grand Vizier Meḥmed Köprülü (1656-61) [see KÖPRÜLÜ], since he was not appointed to any official post, although fortunately his property was not confiscated. This enabled him to devote ample time to his work *al-Tamyīz*, for which he made use of his own rich library and other private libraries in Istanbul. During this period of his life, it seems that the court historian, Muṣṭafā Naᶜīmā [*q.v.*] (d. 1128/1716) came to acquaint himself with Ḥusayn and to make use of his knowledge and of his library; on several occasions, Naᶜīmā acknowledges his indebtedness to him, praising his vast knowledge, his modesty and *zuhd*. He states that his information about both Sultan Ibrāhīm and Sultan Meḥemmed IV was taken orally from Ḥusayn, but a recent study doubts this role accredited to Ḥusayn by Naᶜīmā.

The *Tamyīz* comprises 26 *bābs* with a *faṣl* (section) appended to each chapter. In the *bāb* he mentions the merits of the subject he is analysing, whereas in the *faṣl* he relates what other learned sages have said for or against that particular subject. His citations came from innumerable sources, but mainly from the Ḳurᵓān, *Ḥadīth*, the *Nahdj al-balāgha* and the *Iḥyā*ᵓ *ᶜulūm al-dīn*. Naᶜīmā states that on the request of Ḥusayn, he made several copies of the *Tamyīz*, which were presented by the author to the dignitaries of Istanbul, and particularly to the Grand Vizier Ḥusayn Köprülü. It appears that he finished the first final copy in 1686.

Naᶜīmā places Ḥusayn's death in 1102/1690, while Muḥammad Khalīl al-Ḥusaynī al-Murādī (d. 1206/1791) mentions that this took place in 1109/1697, and this last report was accepted by some Lebanese historians such as the Patriarch Iṣṭifān al-Duwayhī (d. 1704), Ḥaydar al-Shihābī (d. 1835) and

Ṭannūs al-Shidyāk (d. 1859), who claim that Ḥusayn intervened with Ottoman officials in 1697, when the Maᶜnid family came to an end. According to this, he succeeded in persuading the Ottomans to appoint Ḥaydar al-Shihābī, the grandson of *amīr* Aḥmad al-Maᶜnī, the last Maᶜnid *amīr*, rather than *amīr* Bashīr al-Shihābi, to govern al-Shūf. If Naᶜīmā is accurate in reporting the date of Ḥusayn's death (1102/1690), then this aspect of local Lebanese history clearly needs further investigation.

MAᶜNĀ (A.), a term whose sense needs to be defined according to the discipline in which it is used.

1. In grammar. Etymologically, *maᶜnā* is what the speaker intends to say (*ᶜibāra ᶜan al-shayʾ alladhī ᶜanāhu ʾl-ᶜānī*, al-Rāzī, *Mafātīḥ*, i, 24,16); it is then almost synonymous with terms such as *maḳṣūd, niyya and murād*. As a technical term, *maᶜnā* indicates the semantic counterpart of *lafẓ*. Each word has an *aṣl*, i.e. the radicals that constitute the consonantal structure of the word, which is realised in a pattern (*binya*). For each *aṣl* there is a correlating *maᶜnā*, as well as for each *binya*, the latter *maᶜnā* being the primary concern of the grammarian.

The terminological pair *maᶜnā/lafẓ* is already found in Sībawayhi's *Kitāb* (according to Troupeau, *Lexique-index*, 891 and 215 times respectively). This early popularity shows the importance of the use of *maᶜnā* in grammar and the need to take the grammatical data into account for any theory which tries to explain its origin in other disciplines, e.g. by pointing out analogies with the Stoic term *lektón*.

Although according to some authors there exists a correlation between the phonic and the semantic part of a word (Ibn Djinnī, *Khaṣāʾiṣ*, ed. Nadjdjār, ii, 245 ff., iii, 264 ff.), there is an inherent discrepancy between the two entities, in that one expression may stand for several meanings, and vice-versa (cf. already Sībawayhi, *Kitāb*, ed. Būlāḳ, i, 7, 22-8, 3). On other level, one may say that the *lafẓ* never expresses the complete meaning, which can only reconstructed by means of a grammatical analysis, called *taḳdīr*. Through this method, the grammarian re-establishes, for instance, those governing words which are necessary for the meaning, but do not appear in the actual sentence (*ᶜāmil maᶜnawī*).

A special use of *maᶜnā* in grammatical writings is found in the expression *ḥarf maᶜnā* "particle" as against *ḥarf* "consonant, letter" (connected with the controversial definition of the *ḥarf djāʾa li-maᶜnan*, Sībawayhi, *Kitāb*, i, 2, 1); and *ism maᶜnā* "abstract noun" as against *ism ᶜayn* "concrete noun" (e.g. al-Zamakhsharī, *Mufaṣṣal*, 5, 3).

In the debate between logicians and grammarians in the period after the first translations of Greek logical writings had appeared, the difference between *lafẓ* and *maᶜnā* was used by the logicians to define the different subjects of the two disciplines; grammar was to occupy itself solely with the *alfāẓ*, whereas the study of the *maᶜānī* was restricted to logic (e.g., al-Sidjistānī, *apud* al-Tawḥīdī, *Muḳābasāt*, ed. Sandūbī, 169, 21 ff.). The two terms are not synonymous with the pair *ism/musammā*, which is often used in logical and philosophical discussions, because *ism* denotes the entire linguistic symbol., whereas *musammā* is either the correlating thought or the object in the outer world.

The opposition between *alfāẓ* as the linguistic expression, and *maᶜānī* as the underlying meaning, was common in rhetorics and poetics, where one of the much-debated questions concerned the status of these two entities. For al-Djāḥiẓ, for instance, the *alfāẓ* of the poet are more essential for an evaluation of his qualities than the *maᶜānī* (*Bayān*, ed. Sandūbī, i, 98 ff.). The numerous books with titles such as *Kitāb Maᶜānī ʾl-shiᶜr, Kitāb Maᶜānī ʾl-Ḳurʾān*, etc., contain primarily discussions of the meaning of words and phrases, and are, therefore, lexicographical rather than grammatical writings.

In Ibn Ḥazm's grammatical theory, finally, there is a strict distinction, contrary to the generally-accepted usage, between the intention of the speaker and the inherent signification of the word.

Bibliography: A fundamental analysis is given by G. Bohas, *Contributions à l'étude de la méthode des grammairiens arabes en morphologie et en phonologie d'après des grammairiens "tardifs"*, thèse d'état Paris III, 1979, 33-42, 64 ff., 167 f.; cf. also C. Arnaldez, *Grammaire et théologie chez Ibn Ḥazm de Cordoue*, Paris 1056, 56-61, 90-6. (C. H. M. VERSTEEGH)

2. In philosophy. This term is used to translate a number of Greek expressions. *Maʿnā* is frequently used as a synonym of *maʿḳūl*, corresponding to the Greek *noéma*, a concept, thought or idea. Sometimes *maʿḳūl* is used to translate the term "concept" (as in al-Fārābī's commentary on Aristotle's *De Interpretatione*) and sometimes *maʿnā* (as in his commentary on Aristotle's *De Intellectu*). Isḥāḳ b. Ḥunayn uses *maʿnā* in his translation of the *De Interpretatione*, but he also translated Aristotle's use of *prágmata* (real things) by *maʿānī*. (For an argument against the Latin translation of *maʿnā* by *intentio*, see Gyeke). Al-G͟hazālī uses *maʿānī* to represent meaning, a general usage, and it has been argued that this sense of the expression is Stoic in origin, representing *lectón* (Shehaby). Al-Ḥasan b. Suwār, in his notes on Aristotle's *Categories*, identifies *maʿānī* with *āt͟hār* (affections produced by natural things in the soul) and identical to the forms (*ṣuwar*) of the actual things (*umūr*). It is in a similar sense that Ibn Sīnā identifies a form in the soul with a *maʿnā*, a meaning or notion, which in mediaeval epistemology has the technical sense of "natural sign in the soul". Ibn Sīnā's distinction between *maʿānī* of the first and second understanding probably stems from Porphyry's distinction between terms of first and second imposition. The latter, *maʿānī* of second understanding, are abstract notions which are applied to the notions of first understanding. The expressions *maʿānī maʿḳūla*, intelligible notions, or *maʿānī* or just *maʿḳūlāt*, are often found in Ibn Sīnā, all frequently translated as *intellecta*. These terms are important for his argument of the complex relationship between logic and language (see Sabra).

Muʿammar b. ʿAbbād al-Sulamī, the Baṣran Muʿtazilī philosopher, is undoubtedly the chief exponent of the use of the term *maʿnā* as a vital part of a metaphysical system. According to him, every *maʿnā* (entity) is brought about by another entity, which itself has its origin in a third entity, and so on ad infinitum. Muʿammar speaks of an infinite chain of determinant *maʿānī*, the first determinant of which is God, and through which God is indirectly the real cause for the accidental external appearance of substances. For example, he talks of God creating countless *maʿānī* of colour, the final effect of which is the accident "colour". The infinite chain of *maʿānī* are causes of creating, and the occasionally evil accidents brought about thereby are caused by the subtance through the real features of nature, not God. *Maʿnā* is used by Muʿammar to represent the principle of individuation of one substance from another. Horovitz identifies *maʿānī* with Plato's ideas, while Horten thinks they originate in the Indian system of categories. Watt identifies *maʿnā* with Aristotelian *eidos* and Plato's ideas, as a real determination of a substance. Wolfson relates it to Aristotle's concept of nature as the cause of motion and rest, a claim hotly contested by Frank. The latter describes it as an intrinsic causal determinant, a Stoic notion which certainly seems to be present in Muʿammar's distinction between primary and secondary causal determinants. Frank criticises the accounts of Muʿammar's use of *maʿnā* provided by al-Rāzī and al-S͟hahrastānī and insists that *maʿānī* in the original system inhere in the material substrate of atoms, not with the accidents (references in Frank). Daiber, in the fullest account of *maʿānī* in Muʿammar's system yet to appear, on the contrary stresses their relational properties as opposed to their property of inherence in substance.

(O.N.H. Leaman)

3. In poetry. Marked out to serve as a reflection on the language and to take its place in a cultural synthesis, poetry, after the preaching of Islam, assumed its role under the surveillance of academic phraseology. Scholars began to derive arguments from it to support their theories. Thus called upon by morpho-phonology, syntax, lexicography and even exegesis and historiography, poetry was turned into an instrument and reduced to being just a speech practice meant for providing arguments for the basic disciplines of language and thought. Hence one should not be surprised at the lack, until the 4th/10th century, of a true theory of meaning visualised as starting from poetical experience. Until then the word *maʿnā* had only two meanings:

(1) The meaning of a word or proposition in a *certain given verse*. This meaning limits the reading to a purely contextual explanation. The *Kitāb Maʿānī al-s͟hiʿr* of Abū ʿUt͟hmān Saʿīd al-Us͟hnandānī, transmitted by Ibn Durayd, gives an example of these courses and monographs devoted to verses considered difficult. Lexically, attention is concentrated on terms which have become rare in usage (*g͟harīb*) or culturally marginal (*wahs͟hī*), but also on those syntactic expressions which leave the expressions ambiguous. Numerous works devoted to poetry are subsumed under this pragmatic aim and the elucidation of meaning.

(2) The meaning of a trope. The procedure here is similar, that of a clarification of the meaning, but the specific nature of the figurative expressions opens up perspectives which were later to become a semantics of poetry.

In this way, a fragmentary poetical text, reduced to citations, finds a place in lexicography, syntax and rhetoric. The school exercise of explaining it corresponds to a demand of criticism. The latter, born out of philology, requires the fitting of the *maᶜnā* to the *maḳṣad* or *gharaḍ*, with the supposition that what is said corresponds exactly to what it was intended to say. Every displacement between the intention and the statement betrays the poet's inability to express what is correct with complete exactitude and shows up an inadequacy in the tools of the language. The *maᶜnā* is a target which may be missed in two ways: either by not respecting the established correlations between the word and its referent, or between the syntactic expression and the logical distribution of its meanings; or else by disturbing the rules of construction of such figurative expressions as comparison, metaphor, metonymy, etc. The divergence between what is said and what it was intended to say (*buᶜd*) is the measure of the ambiguity in the meaning (*ghumūḍ*). Criticism of meaning remains, within this framework, a criticism of effectiveness.

This enterprise ends up by updating the cultural codes prevailing in the language and makes an important contribution to the study of an archaeology of meaning. But one must note carefully that the works devoted to classification of meanings and tropes (Ibn Ḳutayba, al-Mubarrad, Thaᶜlab, Ibn al-Muᶜtazz in the 3rd/9th century) do not have poetry in view in the first place, or else they do not make the tropes analysed there a specific phenomenon of poetic writing. Moreover, even the terms connected with a single poetic genre such as *madīḥ*, *hidjāʾ*, *rithāʾ* or *nasīb* are not fashioned by means of a reflecting on the genres and themes. Till the end of the 3rd/9th century, it is quite wrong to consider the *ᶜilm al-maᶜānī* as an analysis of thematic forms, even with an author like Ibn Ḳutayba, who devotes a chapter of his *Kitāb Maᶜānī al-shiᶜr* to *marāthī*.

It is Ḳudāma b. Djaᶜfar [*q.v.*] in his *Naḳd al-shiᶜr* who puts forward a general theory on the nature of poetry. This theory aims at defining an aesthetic, hence at regulating taste (*dhawḳ*) by setting out the rules of a science of what is good in poetry. Since the latter is an art (*ṣināᶜa*), its actualisation can be placed on a scale of values which it is possible to draw up by reference to established canons of taste. Ḳudāma brings forward these canons of the connections existing between the constituent elements of poetic writing (*lafẓ*, *maᶜnā*, *wazn* and *ḳāfiya*). The *maᶜnā* here does not mean signification, since the latter is a fact of language, but the register of expression. Thus there are six *maᶜānī* in poetry: *madīḥ*, *hidjāʾ*, *marāthī*, *tashbīh*, *waṣf* and *nasīb*. Four of these names denote a semantic field relatively clearly delimited. Ḳudāma is here remaining within the track traced by his forerunners. He is an innovator in that he included *tashbīh* in this list; he considers it as a general way of proceeding for the production of poetical statements, and all his attention is concentrated on the figures of thought. *Waṣf* brings in the general problem of the relationship of the statement to the object described. We can discern here a trace, small but clear, of the Greek theory of mimesis. The dialectic of *kadhib* and *ṣidḳ* is thus here set aside, for Ḳudāma himself clearly, on this occasion, distances himself from all moralistic purposes.

Maᶜnā is definitively that particular form (*ṣūra*) which poetry sketches out in a general sense. What is good may be measured by the amount of the conforming of the statement produced to an ideal statement (*gharaḍ*) The progress of poetry is contained in this movement which leads towards the perfect forms.

In fact, reflection about meaning in poetry eluded the *udabāʾ*, who remained fixed on the need of philological and lexical explanations, and had no theoretical system which could enable them to go further ahead. Work on the *maᶜnā* became the preoccupation of the rhetoricians who had evolved the required tools for analysis. But it was the task of the logicians to put forward an attempt at definition, no longer of poetry, but of poetic theory, i.e. the ways of achieving the specific meanings required in poetry. Since al-Kindī's commentary on Aristotle's *Poetics* has not come down to us, we have to consider al-Fārābī [*q.v.*] as the first to have turned his attention and thought to *al-aḳāwīl al-mukhayyila*. The problem of *takhyīl* was to remain as a subject of thought for the analysts, especially for Ibn Sīnā, ᶜAbd al-Ḳādir al-Djurdjānī, Ibn Rushd and Ḥāzim al-Ḳarṭādjannī. Our point of departure is a re-interpretation of the Aristotelian mimesis, which al-Ḳarṭādjannī in the end separates completely from speculative discourse. *Takhyīl* denotes "the imaginary representation of the object which mimetic discourse (i.e. poetry) fixes in the speaker's imagination. The meaning is thus contained in a relationship of the object with its aesthetic representation as the producer of an effect". In this way, a fresh posing of the problem of meaning is formulated, and "the specificness and autonomy of poetry is circumscribed". The poet, as the creator of images, thus throws off the task of being truthful to life and becomes consequently free to project on to the object chosen all the features which his imagination pictures for him. The theory of the poetic *uslūb* set forth by Ibn Khaldūn in his *Muḳaddima* is actually a theory of the genuine poetic image. The *uslūb* is the abstract form of the meaning which becomes fixed in the poet's imagination. The latter realises it in statements made up of a thing signified (*maᶜnā*) contained within a framework of the phrase (*tarkīb*). The nomenclature put forward by Ibn Khaldūn stems from this: *kalām*/*fann* (poetry, in contrast to prose)/*madhāhib* (*madḥ*, *rithāʾ*, *nasīb*)/ *asālīb*/*aghrāḍ* or *maᶜānī* and *tarākīb*. Ibn Khaldūn in this way completes his predecessors' analysis by studying the mechanism of production of *maᶜānī*.

Bibliography : Texts: Since the texts utilised are well-known and amply cited in the articles on the respective authors, it is enough to say that the logicians' developments of the topic of poetic theory are given in ᶜAbd al-Raḥmān Badawī's *Arisṭūṭālīs, fann al-shiᶜr*¹, Cairo 1954, with a better ed. of Ibn Rushd's commentary and a 1st ed. of al-Fārābī's *Djawāmiᶜ al-shiᶜr* by M. Salīm Salīm, Cairo 1971; the part of Ibn Sīnā's *K. al-Shifāʾ* devoted to the commentary on Aritotle's *Poetics* has been tr. with an English commentary by I. M. Dahiyat, *Avicenna's commentary on the Poetics of Aristotle, a critical study with an annotated translation of the text*, Leiden 1974.

salis, new ed. (the definition of *takhyīl* is borrowed from here). (J. E. BENCHEIKH)

MANĀF, name of a deity of ancient Arabia. This IVth form *maṣdar* from the root *n-w-f* is connected with the Qatabanite *nwfn* "the exalted", an epithet describing ʿAthar-Venus at its zenith, as opposed to *shrkn* "the eastern" and *ghrbn* "the western". From the same root is derived *tanūf* "that which climbs high in the firmament", an epithet of the sun, as opposed to *mshrktym* "that which rises", and *tadūn* "that which sets" (cf. A. Jamme, *Le panthéon sud-arabe préislamique d'après les sources épigraphiques*, in *Le Muséon*, lx [1947], 88 and n. 225, 102, 106; on the meaning of this root and the vocabulary which is derived from it, cf. *TA*, s.v.).

"Manāf was one of the greatest deities of Mecca", states al-Ṭabarī (i, 1092). Such a statement is nevertheless surprising, bearing in mind how little information we have on the subject. Only Ibn al-Kalbī (*K. al-Aṣnām*, ed. and Fr. tr. W. Atallah, Paris 1969, 26) devotes a few lines to it, repeated by al-Ṭabarī (i, 1091-2) and Yāķūt (iv, 651); however, going by the inscriptions, the name was known in Thamudic (A. van den Branden, *Les inscriptions thamoudéennes*, 48 (Huber, 12), 225 (Huber, 696), in Ṣafaitic and in Liḥyanitic (G. Ryckmans, *Les noms propres sud-sémitiques*, i, Louvain 1934, 18; *idem*, *Les religions arabes préislamiques*², Louvain 1953, 17), and altars were dedicated to him in the Ḥawrān (cf. P. Mouterde, *Inscriptions grecques conservées à l'Institut Français de Damas, no. 33*, in *Syria*, vi [1925], 246-52) and at Volubilis in Morocco (cf. L. Robert, in *Revue des études grecques* [1936], 3-8).

Probably of South Arabian origin, the cult of this deity was widespread among the Ķurayshites, Hudhayl and Tamīm, as is shown by the theophoric names composed with his name (cf. Ibn al-Kalbī, *Aṣnām*, *loc. cit.*; Ibn Durayd, *Ishtiķāķ*, 143, l. 16, 66; *TA*, iii, 470, l. 7 f. *a fine*). One of the most famous is that of ʿAbd Manāf, one of the four sons of Ķuṣayy, reformer of the cult in Mecca. His mother had promised him to the god, so as to protect him from the evil eye, for he was so handsome that he was surnamed *al-ķamar* "the moon" (al-Ṭabarī, *loc. cit.*).

Ibn al-Kalbī, reproduced by Yāķūt, notes a practice common to all the idols, mentioned by G. Ryckmans (*Les religions arabes préislamiques*, 17) as being peculiar to Manāf; menstruating women did not touch them as a token of blessing and kept at a distance from them. Two verses, one by Balʿāʾ b. Ķays, relating to Manāf, the other Bishr b. Abī Khazīm, relating to Isāf, allude to this (Ibn al-Kalbī and Yāķūt, *locis citatis*; Yāķūt, i, 235).

Bibliography: Apart from the references cited, see J. Wellhausen, *Reste*², Berlin 1897, 57; T. Fahd, *Le Panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968, 122-3. (T. FAHD)

MANĀĶIB (A.), plural substantive (sing *manķaba*) featuring in the titles of a quite considerable number of biographical works of a laudatory nature, which have eventually become a part of hagiographical literature in Arabic, in Persian and in Turkish.

To define this term, the lexicographers make it a synonym of *akhlāķ*, taken in the sense of "natural dispositions (good or bad), innate qualities, character", and associate it with *naķība*, explained by *nafs* "soul", *khalīķa* or *ṭabīʿa*, likewise signifying "trait of character, disposition", but also with *nafādh al-raʾy*, "perspicacity", in such a way that the connection with the radical *n-ķ-b*, which is particularly expressive and implies especially the concrete sense of "perforate, pierce (a wall, for example)", thus, in an abstract sense, "succeed in penetrating a secret", becomes perfectly clear. Perhaps it should be approached as is suggested by Ibn Manẓūr (*LA*, sub radice *n-ķ-b*), via *naķīb* "chief", thus named because he is privy to "the secrets of his fellow-tribesmen (*dakhīlat amr al-ķawm*) and to their *manāķib*, which is the means of knowing their affairs"; in short, *manāķib* would signify almost simultaneously both "traits of character" and "acts and deeds", and its use to introduce a biography centred not only on the actions, but also on the moral qualities of an individual, would be entirely legitimate. Finally, also worth consideration is an alternative meaning of the verb *naķaba*, "walk, follow a narrow path", and a subtle connection may be observed between two senses of the singular *manķaba*: on the one hand, "narrow street between two houses", or "difficult path on the mountain" (cf. Yāķūt s.v. al-Manāķib; *Sīra*, ii, 468) and, on the other hand, "noble action", in contrast to *mathlaba* "villainy, subject of shame" [see MATHĀLIB], as is supported by the evidence of numerous titles, particularly that on the *Kitāb al-Manāķib wa 'l-mathālib* by Hibat Allāh Ibn ʿAbd al-Wāḥid (Brockelmann, S II, 908), where the two antithetical terms possess the added advantage of mutual rhyme. If the last explanation suggested is correct, one is entitled to consider that a semantic evolution has occurred comparable to that of *sīra* [*q.v.*].

However, although this last term may be accompanied by a depreciative epithet (e.g. *sayyiʾ*), *manāķib*, sometimes made more precise, sometimes not, by a qualificative (*djamīl, karīm*, etc.), is always taken in a good sense; the term may be rendered approximately by "qualities, virtues, talents, praiseworthy actions", and introduces a laudatory biography in which the merits, virtues and remarkable deeds of the individual concerned are given prominence. It will be observed that, immediately following the development of mysticism and the cult of saints, it is the marvellous aspects of the life, the miracles or at least the prodigies (*karāmāt*) [*q.v.*]) of a Ṣūfī or of a saint believed to have been endowed with miraculous powers, which are the subjects preferred, and *manāķib* ultimately acquires the sense of "miracles" or "prodigies". It is perhaps a reminiscence of this last sense that is used to form an abstract applied even to the army by ʿAzīz al-Aḥdab in his *Djaysh Lubnān wa-manāķibiyyatuh al-ʿaskariyya*, Beirut 1975.

Such is, schematically outlined, the apparent evolution of this concept, although it is not easy, in reality, to follow it with precision. In fact, the most ancient texts bearing the title of *manāķib* have in general hardly survived at all, and their existence is only known to us thanks to the biographers and bibliographers of the Middle Ages; on the other hand, that which could be called "the *manāķib* genre" is hard to isolate, since it is practically impossible, on account of constant interference, to establish a neat classification according to the etiquettes affixed by authors to the account of the life and enumeration of the virtues of the individual or the group chosen. The nomenclature in fact comprises a full gamut of titles which must be examined.

—*tardjama* [*q.v.*], quite neutral, implies no particular quality and introduces any biography; it may be said, however, that this term features in titles where another would be expected, for example *Tardjamat Aḥmad b. Ḥanbal* or *Tardjamat al-Shāfiʿī* by al-Dhahabī (see Ṣ. al-Munadjdjid, *Muʿdjam al-muʾarrikhīn al-dimashķiyyīn*, Beirut 1398/1978, 445), while the founders of judicial schools are most often entitled to *manāķib* (see below).

—*taʿrīf*, likewise neutral, but already used by ʿIyāḍ

(see below) for the Prophet, appears in the title of lives of saints, possibly for reasons of discretion, in a period where *manāḳib* seems to be confined to the hagiographical sphere. For example, ᶜAbd al-Salām al-Ḳādirī (d. 1110/1698 [see AL-ḲĀDIRĪ]) devoted *al-Maḳṣad al-aḥmad fi 'l-taᶜrīf bi-Sayyidinā Ibn ᶜAbd Allāh* to Ibn Maᶜn al-Andalusī (see E. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1922, 278), while the monograph on the same saint by Muḥammad al-Mahdī al-Fāsī (d. 1109/1698 [see AL-FĀSĪ in Suppl.]) is intitled *ᶜĀrif/ᶜAwārif al-munna bi-manāḳib Sayyidī (Sīdī) Maḥammad b. ᶜAbd Allāh muḥyī 'l-sunna* (*Chorfa*, 275; ms. in Leiden, see P. Sj. van Koningsveld, *Ten Arabic manuscript-volumes of historical contents acquired by the Leiden Univ. Libr. after 1957*, in E. van Donzel (ed.), *Studies on Islam*, Amsterdam-London 1974, 95). Similarly, Maḥammad al-Masnāwī al-Dilāʾī (d. 1136/1724 [see AL-DILĀʾ in Suppl.]), is the author of *al-Taᶜrīf bi 'l-shaykh Abi 'l-ᶜAbbās al-Yamanī* (*Chorfa*, 302), ᶜAbd al-Madjid al-Zabādī (d. 1163/1750; see *Chorfa*, 314) wrote the *Ifādat al-murād bi 'l-taᶜrīf bi 'l-shaykh Ibn ᶜAbbād* (d. 792/1390) and al-Darᶜī (12th/18th century), *al-Rawḍ al-zāhir fi 'l-taᶜrīf bi 'l-shaykh Ibn Ḥusayn wa-atbāᶜih al-akābir*, on the saint of Tamgrūt named al-Ḳabbāb (d. 1045/1635-6; see *Chorfa*, 315). This term, adopted by Ibn Khaldūn for his autobiography, seems to be particularly common in Morocco, where hagiographical literature is especially prolific.

—*akhbār*, also neutral, tends to be applied to collections of historical traditions, even of simple anecdotes, concerning individuals of ethnic or social groups (see e.g. *Akhbār Abī Nuwās, Akhbār al-ḳiyān*, etc.). Nevertheless, one encounters, again from the pen of al-Dhahabī (d. 748/1347 [*q.v.*]), the *Akhbār Umm al-Muʾminīn ᶜĀʾisha* (Munadjdjid, 445), which does not necessarily imply a greater concern for objectivity than is found in the *Manāḳib Ḥaḍrat Umm al-Muʾminīn ᶜĀʾisha*. (Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, ed. Istanbul 1941, ii, col. 1843) by Muḥibb al-Dīn al-Ṭabarī (d. 694/1294-5 [*q.v.*]) or in the *Kitāb al-Albāb al-ṭāʾisha fī manāḳib Umm al-Muʾminīn ᶜĀʾisha* by the Moroccan Muḥammad b. ᶜAlī al-Wadjdī al-Ghammād (d. 1033/1624; see M. Hajji, *L'activité intellectuelle au Maroc à l'époque saᶜdide*, Rabat 1976, 487). For his part, Aḥmad Adfāl gave the title *Akhbār* to his biography of Aḥmad b. Mūsā al-Samlālī (d. 971/1564; see Hajji, 181, 650; al-Sūsī, *al-Maᶜsūl*, Casablanca 1380-3/1960-3, 20-43), whereas that of the same Sūsī saint by Yibūrk al-Samlālī (Hajji, 181) bears the title of *Manāḳib al-Sayyid Aḥmad b. Mūsā*. A further example: ᶜAbd al-Raḥmān al-Fāsī (d. 1096/1685 [see AL-FĀSĪ in Suppl.]) celebrated the memory of his father in two works: *Bustān al-azāhir fī akhbār al-shaykh ᶜAbd al-Ḳādir* and *Tuḥfat al-akābir fī manāḳib ᶜAbd al-Ḳādir* (*Chorfa*, 267).

—*sīra*, as is known, is not reserved for the Prophet, and a considerable number of biographies (and even stories, such as the *Sīrat ᶜAntar*) bearing this title are mentioned in the repertoires; it will be noted only, for the sake of example, that al-Dhahabī (yet again) wrote a *Sīrat al-Ḥallādj* (Munadjdjid, 446), and the Ṣūfī Ḥiṣnī (d. 829/1426; see Munadjdjid, 231), a *Siyar al-nisāʾ al-ᶜābidāt*, just as Ḳāsim al-Ḥalfawī (d.after 1000/1591; see Hajji, 181) entitled his monograph on the santon of Marrakesh known as Abū ᶜAmr al-Ḳasṭallī *Shams al-maᶜrifa fī sīrat ghawth al-mutasawwifa* (mss. in Rabat and Marrakesh).

—*faḍāʾil*, "virtues", is closer to the sense of *manāḳib* and even serves as its equivalent, although covering a much more extensive range [see FAḌĪLA]. While the "*faḍāʾil* genre" is in part reserved for the vindication of towns and of countries, Ibn al-Djawzī (d. 597/1200 [*q.v.*]) wrote the *Manāḳib Baghdād* (ed. Baghdād 1921; see Brockelmann, S I, 917), he merely used *faḍāʾil* for Bishr al-Ḥāfī (d. 226 or 227/840-2 [*q.v.*]). The two terms are set in parallel and applied with exactly the same meaning to the people of Cordova by al-Idrīsī [*q.v.*] in his *Opus geographicum* (written in 548/1154), v, 574. *Faḍāʾil* is used by authors anxious, as was al-Ṭabarī (d. 310/923 [*q.v.*]), to celebrate the virtues of the Companions and of the Orthodox Caliphs (see Yāḳūt, *Udabāʾ*, xviii, 80-1); otherwise it had already been adopted by al-Madāʾinī (d. 226/840 [*q.v.*]) for Djaᶜfar b. Abī Ṭālib, al-Ḥārith b. ᶜAbd al-Muṭṭalib and Muḥammad Ibn al-Ḥanafiyya (*Udabāʾ*, xiv, 132) and by al-Bukhārī (d. 256/870), who dedicates a *bāb* to the *faḍāʾil aṣḥāb al-Nabī*, following it however with a *bāb manāḳib al-Muhādjirīn* and a *bāb m. al-Anṣār* (v, 2-47); as late as the 5th/11th century, Ibn al-ᶜUshārī (d. 441/1049; see Brockelmann, S I, 601) wrote a *Kitāb Faḍāʾil Abī Bakr al-Ṣiddīḳ*, and, in the 7th/13th century, Amīn al-Dawla Ibn ᶜAsākir (d. 686/1288), *Faḍāʾil Umm al-Muʾmimīn Khadīdja* (Munadjdjid, 120). However, the anonymous ms. 8273 of the British Museum is called *Manāḳib al-Ṣaḥāba*, and, in Spain, al-Ghāfiḳī (d. 540/1146; see Brockelmann, S I, 629) wrote *Manāḳib al-ᶜashara wa-ᶜammay Rasūl Allāh*, while ᶜAbd al-Ghanī al-Maḳdisī (d. 600/1203; see Munadjdjid, 68-9) left for posterity *Manāḳib al-Ṣaḥābiyyāt* (ms. Ẓāhiriyya 3754), and Madjd al-Dīn Ibn al-Athīr (d. 606/1210; see IBN AL-ATHĪR), *al-Mukhtār fī manāḳib al-akhyār* (cf. O. Spies, in *MO*, xxiv [1930], 1-15) on the pious men and women of early Islam; al-Ḍiyāʾ al-Maḳdisī (d. 643/1245; see Munadjdjid, 86, 442) eulogised the *manāḳib* of Djaᶜfar b. Abī Ṭālib (ed. M.H. Āl Yāsīn, Baghdād); the afore-mentioned Muḥibb al-Dīn al-Ṭabarī, has, like al-Ghāfiḳī, celebrated the "ten assured of Paradise" in *al-Riyāḍ al-naḍira fī manāḳib al-ᶜashara* (ed. Cairo 1372/1953); al-Dhahabī is himself credited with *al-Tibyān fī manāḳib ᶜUthmān* (Munadjdjid, 445) and Ibn ᶜAbd al-Hādī (d. 909/1503; see Munadjdjid, 274, 276) even wrote a *Maḥḍ al-ikhlās fī manāḳib Saᶜd b. Abī Waḳḳāṣ* (ms. Ẓāhiriyya 3248). If, for ᶜAlī b. Ṭālib and his descendants, the use of *manāḳib* is fully justified in the works of those authors who particularly revere their memory (see below), and if the same can to a certain extent be said of ᶜUmar b. 'Abd al-ᶜAzīz, thus eulogised by Ibn al-Djawzī, it is hard to say why the last-named (*Kashf*, iv, col. 560; Brockelmann, S I, 916-17) and, for example, al-Barzandjī (Brockelmann S II, 934) gave the title *Manāḳib* to their biographies of Abū Bakr and of ᶜUmar b. al-Khaṭṭāb. It is true that it is impossible to find the explanation in the variation which manifests itself in the *Djamᶜ al-fawāʾid min Djāmiᶜ al-uṣūl* [of Ibn al-Athīr] *wa-Madjmaᶜ al-zawāʾid* [of al-Haythamī], Medina 1381/1961, in which *ḥadīth*s concerning the Companions as a group are given under the title of *faḍāʾil* (ii, 490-500), whilst those relating to the same Companions considered individually are given under that of *manāḳib* (ii, 500-81).

—*maʾāthir* and *mafākhir*, "exploits, objects of pride", normally feature in the titles of collections of traditions in favour of tribes, peoples or groups and are the reverse of *mathālib*; they are also encountered, as is sometimes *maḥāsin*, in those of monographs of individuals who have played an eminent political, politico-religious or military role. An example which may be mentioned, from Morocco, is a *Rawḍat al-taᶜrīf fī mafākhir Mawlānā Ismāᶜīl b. al-Sharīf* by al-Ifrānī (d. 1156 or 1157/1743-5 [*q.v.*]), which concerns a sultan (*Chorfa*, 275); *al-Muntaḳā 'l-maḳṣūr ᶜalā maʾāthir khilāfat al-Manṣūr* (ms. in Leiden, see van Koningsveld, 94;

Brockelmann, S II, 679) by Ibn al-Ḳāḍī (d. 1065/1616 [*q.v.*]), where *maʾā<u>th</u>ir* is sometimes replaced by *maḥāsin*, is a panegyric of the sultan al-Manṣūr al-<u>Dh</u>ahabī; on the other hand, the *Rawḍat al-maḥāsin al-zahiyya bi-maʾā<u>th</u>ir al-<u>sh</u>ay<u>kh</u> Abi ʾl-Maḥāsin al-bahiyya*, by the afore-mentioned Muḥammad al-Mahdī al-Fāsī, is the biography of a religious man (*Chorfa*, 114), and the same al-Ifrānī who is cited above gave the title *Durar al-ḥi<u>dj</u>āl fī maʾā<u>th</u>ir "sabʿat ri<u>dj</u>āl"* (*Chorfa*, 115) to a hagiography of the "seven saints" of Marrakesh (see G. Deverdun, *Marrakech*, Rabat 1959, 571-5), whereas *manāḳib* would more naturally be expected.

—*a<u>kh</u>lāḳ*: Ibn Fāris (d. 395/1004 [*q.v.*]) is credited with a *Kitāb A<u>kh</u>lāḳ al-Nabī (Udabāʾ*, iv, 84) which justifies the assimilation, by Ibn Manẓūr (see above), of *manāḳib* to *a<u>kh</u>lāḳ*, for it seems likely that in choosing this latter term, the author of the *Ṣāḥibī* wished to signal his intention of dealing with the character and moral qualities of the Prophet, as al-Tirmi<u>dh</u>ī (d. *ca.* 275/888-9 [*q.v.*]) had done in his *<u>Sh</u>amāʾil al-Nabī* (ed. Cairo 1306). In the 6th/12th century, the *ḳāḍī* ʿIyāḍ (d. 544/1149 [*q.v.*]) chose a more neutral title, *al-<u>Sh</u>ifā bi-taʿrīf al-Muṣṭafā* (numerous editions), not suspecting that this biography of the Prophet was destined to be accorded "throughout North Africa, supernatural virtues" (M. Talbi, *Biographies aghlabides*, Tunis 1968, 19); Ibn Ḥabīb al-Dima<u>sh</u>ḳī (d. 779/1377; see Muna<u>dj</u><u>dj</u>id, 449), who is said to have imitated the *Shifā*, showed less discretion, since he entitled his work *al-Na<u>dj</u>m al-<u>th</u>āḳib fī a<u>sh</u>raf al-manāḳib*. Ibn ʿArabī (d. 638/1240 [*q.v.*]) for his part, is the author of a *manḳabat mawlid al-Nabī* (this is the only attestation of the singular in a title), which is a "presentation of the life of the Prophet from the point of view of his metaphysical reality, that is to say in his capacity of representing the Perfect Man upon the earth" (O. Yahia, *Histoire et classification de l'œuvre d'Ibn ʿArabī*, Damascus 1964, 358; the singular is not attested in any Arabic title, but it may be noted that in Urdu *manḳabat* indicates a poem in honour of ʿAlī and the <u>Sh</u>īʿī *Imāms*. [see MADĪḤ. 4. In Urdu]). *<u>Sh</u>amāʾil* is almost synonymous with *a<u>kh</u>lāḳ* when the latter is taken in good a sense, and ʿAbd al-ʿAzīz b. ʿAbd al-Sulamī al-Dima<u>sh</u>ḳī (d. 660/1262; see Muna<u>dj</u><u>dj</u>id, 97) associates this term with *manāḳib* in his *Manāḳib al-Muṣṭafā wa-shamāʾiluh*. There is however a fundamental difference between *a<u>kh</u>lāḳ* and *manāḳib*, as is clearly revealed by al-<u>Dj</u>āḥiẓ (d. 255/868 [*q.v.*]), who is the author of a *Madḥ* ... and of a *<u>Dh</u>amm a<u>kh</u>lāḳ al-kuttāb*, where the key-word remains neutral, and of a *Risāla fī manāḳib al-Turk/al-Atrāk wa-ʿāmmat <u>dj</u>und al-<u>kh</u>ilāfa*, in the title of which no further proof is needed of the desire to depict in the most favourable colours the natural dispositions, the merits and the characters of the Turkish troops and of other elements in the army. It appears from this example that in the 3rd/9th century, under the pen of a writer of the calibre of al-<u>Dj</u>āḥiẓ, *a<u>kh</u>lāḳ* and *manāḳib* may again be practically synonymous, on condition that the former be given clearer definition by means of a favourable term, except, of course, where no doubt is possible as to the intentions of the writer, as when the subject of discussion is the Prophet.

—*manāḳib*: R. Sellheim [see FAḌĪLA] considers that the *Faḍāʾil* of al-Ḥasan al-Baṣrī by Ibn al-<u>Dj</u>awzī belongs to the literature of *manāḳib*, but one may wonder why this author chose *faḍāʾil* for the title of his eulogy of the famous preacher, whereas he opted for *manāḳib* when he sought to glorify Baghdād, ʿUmar b. <u>Kh</u>aṭṭāb or ʿUmar b. ʿAbd al-ʿAzīz, and the most appropriate usage of the word in question is found in his *Kitāb Manāḳib al-imām Ibn Ḥanbal* (ed. Cairo 1349/1931), as will be observed in due course. Study of a long series of titles in fact leaves the impression that, for many writers, there was scarcely any difference in conception and in method of exposition according to the terminology employed; in effect, the latter seems to be to a large extent interchangeable, and although R. Sellheim is probably correct in thinking that the lives of saints were to exercise a sort of monopoly over the use of *manāḳib*, the fact remains that a degree of fluctuation in the choice of terms demands constant vigilance.

While the *Manāḳib* of ʿAlī b. Abī Ṭālib by Aḥmad b. Ḥanbal (d. 241/855 [*q.v.*]) which Ḥa<u>dj</u><u>dj</u>ī <u>Kh</u>alīfa (ii, col. 1843-4) mentions, saying that later authors have to a large extent exploited this biography, and perhaps also that by al-Kūfī (d. 300/931; Brockelmann, S I, 209), are probably no more than collections of traditions relating the virtues of the Prophet's son-in-law, this probably does not apply to the *Manāḳib ʿAlī b. ʿAbī Ṭālib* by al-<u>Kh</u>ʷārazmī (d. 568/1172; Brockelmann, S I, 623; there is said to be a ms. of it at Na<u>dj</u>af (al-Samāwī library), which further possesses others; see *RIMA*, iv, 237), to the *Manāḳib Āl Abī Ṭālib* (ed. Telmay 1317; Na<u>dj</u>af 1376/1956), by Ibn <u>Sh</u>ahrā<u>sh</u>ūb (d. 588/1192 [*q.v.*]), *al-Arbaʿīn fī manāḳib sayyidat al-nisāʾ Fāṭima al-Zahrāʾ* by the same author or the *Manāḳib Fāṭima al-Zahrāʾ* by al-Suyūṭī (d. 911/1505 [*q.v.*]), to which reference is made in the *Ka<u>sh</u>f* (ii, col. 1843). These last-named works are in fact closer to hagiography, like those, in a more general sense, which are devoted to the family of the Prophet, such as the *<u>Dh</u>a<u>kh</u>āʾir al-ʿuḳbā fī manāḳib <u>dh</u>awi ʾl-ḳurbā* (ed. Cairo 1356) by Muḥibb al-Dīn al-Ṭabarī (d. 694/1294-5) or the *Maḥāsin al-azhār fī manāḳib al-ʿitra al-aṭhār* by Ḥamīd al-Maḥallī (d. after 652/1254; see A. Fuʾād Sayyid, *Sources de l'histoire du Yémen à l'époque musulmane*, IFAO, Cairo 1974, 127, 128) or even the *Nūr al-abṣār fī manāḳib Āl Bayt al-Nabī al-mu<u>kh</u>tār* by Muʾmin al-<u>Sh</u>ablan<u>dj</u>ī (ed. Cairo n.d.).

There is no doubt as to the legitimacy of associating with this category a *Kitāb al-Manāḳib* of a 4th/10th century Imāmī <u>Sh</u>īʿī named ʿAlī b. Ibrāhīm b. Hā<u>sh</u>im al-Ḳummī (*Fihrist*, ed. Cairo, 311; cf. *Udabāʾ*, xii, 215), but there is certainly no justification for including in the corpus of hagiographical literature *the K. al-Iʿlām bi-manāḳib al-Islām* (ed. Cairo 1968) by the Persian philosopher al-ʿĀmirī (d. 381/992 [*q.v.*]) "a philosophical defence of Islam" or the *Manāḳib al-aʾimma* by al-Bāḳillānī (d. 403/1013 [*q.v.*]), which are designed to defend "the Sunnī position with regard to the imāmate". In fact, a number of other titles are encountered which testify to the imprecision of the nomenclature, for example the *Manāḳib al-maʿārif* by Ibn ʿArabī (O. Yahia, *op. cit.* no. 406; Brockelmann, S I, 801, no, 175) or *Kitāb Manāḳib al-kuttāb* by Ibn Ku<u>th</u>ayyir al-Ahwāzī (*Fihrist*, ed. Cairo, 200; cf. *Udabāʾ*, iv, 244) which must have been a simple vindication of government secretaries; it is hardly likely that ʿUbayd Allāh b. <u>Dj</u>ibrīl (d. 450/1058) described miraculous cures in the *Manāḳib al-aṭibbāʾ* (*Ka<u>sh</u>f*, ii col. 1842), and attention may be drawn to *Manāḳib* of poets in Persian by Abū Ṭāhir al-<u>Kh</u>ātūnī (*Ka<u>sh</u>f*, ii, col. 1842) and, in Turkish, the *Manāḳib-i hünerverān* (ed. Istanbul 1926) by ʿĀlī (d. 1008/1599-1600 [*q.v.*]), in which "he collected important material on several hundred calligraphers, miniaturists, illuminators and book binders". Also, *al-Kawkab al-<u>th</u>āḳib fī a<u>kh</u>bār al-<u>sh</u>uʿarāʾ wa-<u>gh</u>ayri-him min <u>dh</u>awī ʾl-manāḳib* of ʿAbd al-Ḳādir b. ʿAbd al-Raḥmān al-Salawī (written 1176/1762-3) contains some 129 biographies of poets (ms. Royal Library of Rabat 925; see ʿAbd Allāh al-Yāsimī, in *al-Fikr*, xxvii/10 [1982], 121-32).

Dynasties, families, distinguished individuals, also have their compilations of *manāḳib* which are apparently nothing more than glorious deeds or achievements. Thus al-Yazīdī al-Naḥwī (d. 313/925) gathered together those of the Banu 'l-ʿAbbās (*Kas͟hf*, ii, col. 1841) and al-Ṣūlī (d. 335/946-7 [*q.v.*]), those of Ibn al-Furāt (d. 312/924 [*q.v.*]), as is noted by Ḥād͟jd͟jī K͟halīfa (iv, col. 559), while Ibn al-Samāʿī (d. 674/1275-6 wrote a *Kitāb Manāḳib al-k͟hulafāʾ* (*Kas͟hf*, ii, col. 1841) and Ṣadr al-Dīn al-Baṣrī (7th/13th century) dedicated to Baybars (d. 676/1277 [*q.v.*]) *al-Manāḳib al-ʿabbāsiyya wa 'l-mafāk͟hir al-mustanṣiriyya* (Brockelmann, S I, 457), where the two terms used in parallel are evidently regarded by the author as synonymous. This Mamlūk sultan was himself the subject of a biography by S͟hafiʿ b. ʿAlī b. ʿAbbās (d. 730/1330), *Ḥusn al-manāḳib al-sirriyya al-muntazaʿa min al-sīrā al-ẓāhiriyya*, ed. al-K͟huwayṭir, Riyāḍ 1396/1976. The *Manāḳib Banī Hās͟him wa-mat͟hālib Banī Umayya* (Sezgin, *GAS*, i, 577) and the *Kitāb Manāḳib al-ḥikam fī mat͟hālib al-umam* by a somewhat presumptuous author known as S͟humaym al-Ḥillī (d. 602/1204; see *Udabāʾ*, xiii, 72) testify once more to the use of *manāḳib* as an antonym of *mat͟hālib* and as a synonym, here too, of *faḍāʾil* or of *maʾāt͟hir/mafāk͟hir*. These latter terms could without inconvenience be substituted for *manāḳib* in the titles of those works written in praise of the ʿAbbāsids which have just been mentioned, and of the following, which celebrate ruling families or political figures: *al-Kawākib al-durriyya fī 'l-manāḳib al-Badriyya*, a *maḳāma* [*q.v.*] written in 791/1389 by al-Ḳalḳas͟handī [*q.v.*] for his master Badr al-Din (see C.E. Bosworth, *A maqāma on secretaryship*, in *BSOAS*, xxvii [1964], 291-5); *al-Ḥadāʾiḳ al-wardiyya fī manāḳib (wa-d͟hikr tarād͟jim) al-aʾimma al-Zaydiyya* by the already-mentioned Ḥamīd al-Maḥallī (Fuʾād Sayyid, 127), *al-Durr al-t͟hamīn fī manāḳib Nūr al-Dīn* by Badr al-Dīn Ibn Ḳadī S͟huhba (d. 874/1470 [see IBN ḲĀḌĪ S͟HUHBA]), of which numerous mss. exist (Brockelmann, S II, 25; Munad͟jd͟jid, 252-3), *al-Mas͟hraʿ al-rawī fi manāḳib al-sādāt Āl Abī ʿAlwī* (ed. Cairo 1319) by al-S͟hillī (d. 1093/1682; see Fuʾād Sayyid, 246), *Fatḥ al-Raḥmān fī manāḳib Sayyidī ʿAbd al-Raḥmān b. Sulaymān*, written in 1263/1847 in honour of a member (d. 1250/1834-5) of the al-Ahdal [*q.v.*] Yemeni family by Saʿd b. ʿAbd Allāh Suhayl (Fuʾād Sayyid, 294), or indeed *al-Durr al-t͟hamīn fī d͟hikr al-manāḳib wa 'l-waḳāʾiʿ li-Amīr al-Muslimīm ʿIyāḍ* (Fuʾād Sayyid, 305), a history of the revolt against the Ottomans of this *amīr* and his descendants up until the year 1288/1871, by Ḥasan b. Aḥmad al-Yamanī. Also to be mentioned, in this context, are the *Manāḳib-i Maḥmūd Pas͟ha-yi Welī* on an Ottoman Grand Vizier (d. 879/1474 [*q.v.*]) and al-*Manāḳib al-Ibrāhīmiyya wa 'l-ma ʾāt͟hir al-k͟hidīwiyya* (ed. Cairo 1299/1882) by Abkāryūs (d. 1885 [see ISKANDER AG͟HA]) on the viceroy of Egypt Ibrāhīm Pas͟ha [*q.v.*]. The natural gifts of the Yemenis are celebrated by al-Afḍal al-Rasūlī (d. 778/1377) in *al-ʿAṭāyā 'l-saniyya wa 'l-mawāhib al-haniyya fi 'l-manāḳib al-Yamaniyya* (Fuʾād Sayyid, 148), and reference is also made to a work of al-G͟hazzī (d. 1061/1651), *al-Kawākib al-sāʾira bi-(manāḳib) a ʿyān al-mi ʾa al-ʿās͟hira*, ed. D͟j. S. D͟jabbūr, Beirut 1945-9 (cf. Munad͟jd͟jid, 319-20).

To the examples of this genre others could be added which would only further complicate the preceding survey, involved as it is already, and intentionally so, since the titles are an indication of a constant fluctuation of the terminology. What emerges from them is simply a clear desire on the part of the authors to emphasise the remakable qualities of the persons whose lives they describe and the superior merits of the groups concerned. Conversely, there are a good many works which could be entitled *manāḳib*, for they contain laudatory biographies and even belong to a literature of hagiographic type, starting with the *Ḥilyat al-awliyāʾ* by Abū Nu ʿaym (d. 430/1039 [*q.v.*]). Nevertheless, two important tendencies come to light in the usage of the term which is the subject of the present article.

Biographies of the founders of *mad͟hāhib*.

Regarding the first of these tendencies, we are fortunate in that a connoisseur of Arabic literature in general of the calibre of Ḥād͟jd͟jī K͟halīfa (d. 1067/1657 [see KĀTIB ČELEBI]), can help us to a clearer view of the subject by offering his own interesting conclusions. It happens that this bibliographer not only supplies the researcher with a long list of *manāḳib* (*Kas͟hf*, ii, col. 1836-43; see also iv, 559-60), but also declares, referring to the authors of works belonging to this category, that the disciples of the different legal schools need to know, in order to imitate them, the *manāḳib*, the qualities (*s͟hamāʾil*), the virtues (*faḍāʾil*), the behaviour (*sīra*) and the truth of the sayings (*aḳwāl*) of their founders, besides information regarding their genealogy, places of birth etc. Although in this passage, *manāḳib* could no doubt be rendered simply by "natural dispositions, character", it is plain that, for Ḥad͟jd͟jī K͟halīfa, the term has a specialised meaning in its application to a genre composed of detailed, edifying and exemplary biographies of the great *imāms*. In fact, although *faḍāʾil* is employed from time to time, notably by al-Mag͟hāmī (d. 288/900) for Mālik b. Anas (see al-Maḳḳarī, *Nafḥ al-ṭīb*, Cairo 1949, iii, 274-5) and by Abu 'l-ʿArab (d. 333/945 [*q.v.*]) for the same *imām* and for Saḥnūn (see below), and although al-D͟hahabī preferred *tard͟jama* for Abū Yūsuf, Aḥmad b. Ḥanbal and al-S͟hāfi ʿī (see Munad͟jd͟jid, 445), it is nevertheless *manāḳib* which prevails in this category for:

—Abū Ḥanīfa (d. *ca.* 150/767 [*q.v.*]): the impressive list contained in the *Kas͟hf* (ii, cols. 1836-9), also includes compilations in Persian (ii, col. 1839) and in Turkish (iv, col. 560). Those of Brockelmann (S I, 285) and more especially of Sezgin (*GAS*, i, 411-12) are likewise well-stocked; their most significant contents are the works of al-Muwaffaḳ b. Ahmad al-Makkī (d. 588/1192) and Muḥammad b. Muḥammad al-Kardarī (d. 827/1424), *Manāḳib al-imām al-aʿẓam* (ed. Ḥaydarābād 1321) and of al-Suyūṭī, *Tabyīḍ al-ṣaḥīfa fī manāḳib Abī Ḥanīfa* (ed. Ḥaydarābād 1307). Also to be mentioned are al-Ṭaḥāwī (d. 321/933 [*q.v.*]); al-Zamak͟hs͟harī (d. 538/1144 [*q.v.*]), *S͟haḳāʾiḳ al-nuʿmān ...fī manāḳib al-imām Abī Ḥanīfa al-Nuʿmān* (*Udabāʾ*, xix, 135); al-Bakrī (d. 568/1172; Brockelmann, S I, 549); Ibn al-D͟jawzī (d. 597/1200); al-S͟hāmī (d. 942/1536), *ʿUḳūd al-d͟jumān fī manāḳib Abī Ḥanīfa al-Nuʿmān* (numerous mss. in Cairo, Istanbul and Damascus; see Munad͟jd͟jid, 287-8); Ibn Ṭūlūn al-Ṣāliḥī (d. 953/1546 [*q.v.*]) *al-Amānī 'l-laṭīfa fī manāḳib Abī Ḥanīfa* (Munad͟jd͟jid, 291); Ibn Ḥad͟jar al-Hayt͟hamī (d. 973/1565 [*q.v.*]) see Brockelmann, S II, 528): al-ʿAd͟jlūnī (d. 1162/1749), *ʿIḳd al-laʾālī wa 'l-mard͟jān fī manāḳib Abī Ḥanīfa al-Nuʿmān* (ms. Princeton 4225; see Munad͟jd͟jid, 351-2); anon., ms. Yale 1202; Abu 'l-Kāsim b. ʿAbd al-ʿAlīm al-Ḥanafī, *Manākib Abī Ḥanīfa wa-ṣāḥibayhi* (ms. ʿAbd al-Wahhāb, see *Ḥawliyyāt al-D͟jāmiʿa al-Tūnisiyya*, vii [1970], 153, no. 76).

—al-Awzāʿī (d. 157/774 [*q.v.*]): Ibn Zayd (d. 870/1465; see Munad͟jd͟jid, 248), *Maḥāsin al-masāʿī fī manāḳib al-Awzā ʿī*, ed. S͟hakīb Arslān, Cairo 1352 (see Brockelmann, S I, 308; O. Spies, in *ZS* [1935], 189 ff.; for the identification of the author, see *MMIA*, xx [1947], 187).

—Mālik b. Anas (d. 178/795 [*q.v.*]): besides the *Ta-*

zyīn of al-Suyūṭī (Brockelmann, S I, 297; Sezgin, *GAS*, i, 458), one may mention al-Dīnawarī al-Miṣrī (d. 310/922; *Kashf*, ii, col. 1841), al-Zawāwī (Brockelmann, S II, 961) and al-Ḥanbalī (d. 909/1503; Sezgin, *GAS*, i, 458).

—al-Shāfiʿī (d. 204/820 [*q.v.*]) has benefited from a large number of collections of *manāḳib*; Ḥādjdjī Khalīfa alone (ii, cols. 1839-40) lists thirteen: al-Subkī (*Ṭabaḳāt*, i, 185), Brockelmann (S I, 304) and Sezgin (*GAS*, i, 480) mention several others. One of the most ancient is probably that of Abu 'l-Husayn al-Rāzī (d. 347/958; see Munadjdjid, 17-18), whose death Ḥādjdjī Khalīfa places in 454/1063, while Sezgin (*GAS*, i, 480; cf. Brockelmann, S I, 921) attributes the *Manāḳib al-Shāfiʿī* (ed. Cairo 1372/1953) to Fakhr al-Dīn al-Rāzī (d. 606/1209 [*q.v.*]). It is also appropiate to mention Ibn al-Nadjdjār (d. 643/1245; see *Udabāʾ*, xix, 50; *Dāʾirat al-maʿārif*, iv, 102-3); Ibn al-Ṣalāḥ (d. 643/1245; Munadjdjid, 83-4), *Ḥilyat al-Shāfiʿī* (ms. Ẓāhiriyya 3795), the title of which recalls that of Abū Nuʿaym; al-Nawawī (d. 676/1277 [*q.v.*]), *Manāḳib al-Shāfiʿī wa 'l-Bukhārī* (ms. Ulu Cami 2462; Munadjdjid, 113-4); Ibn Kathīr (d. 774/1373 [*q.v.*]), *Tardjamat* (or *Manāḳib*) *al-imām al-Shāfiʿī* (ms. Chester Beatty 3390; Munadjdjid, 204, 206-7); Badr al-Dīn al-Hāshimī (d. 826/1423; *Kashf*, iv, col. 560); Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1449 [*q.v.*]), *Tawālī 'l-taʾsīs bi-maʿālī Ibn Idrīs fī manāḳib ... al-Shāfiʿī* (ed. Būlāk 1301/1884).

—Aḥmad b. Ḥanbal (d. 241/355 [*q.v.*]) has been the subject of fewer collections than al-Shāfiʿī, but some are encountered (*Kashf*, ii, col. 1836; Brockelmann, S I, 309); Sezgin, *GAS*, i, 503-4), among which the following may be mentioned: al-Bayhaḳī (d. 458/1066 [*q.v.*]), *Manāḳib al-imām Ibn Ḥanbal wa 'l-imām al-Shafiʿī* (*Kashf*; cf. Brockelmann, S I, 619, nos. 11-12; Sezgin, i, 503), al-Harawī (d. 481/1088), Ibn al-Djawzī (d. 597/1200), *Manāḳib al-imām Aḥmad b. Ḥanbal* (ed. Cairo 1349/1931) and al-Maḳrīzī (d. 845/1442 [*q.v.*]), *Manāḳib Aḥmad b. Ḥanbal* (Brockelmann, S II, 37; Sezgin, *GAS*, i, 504).

To these monographs may be added the biographical dictionaries devoted to the disciples of a school. They usually start with an account of the founder, and most often bear the classical title *Ṭabaḳāt* [*q.v.*], but one encounters nevertheless, by al-Sharīf al-Ḥusaynī (d. 776/1374), *al-Maḳātib al-ʿaliyya fī manāḳib al-Shāfiʿiyya* (ms. Feyzallah 1525; see Munadjdjid, 211) and, by Taḳī al-Dīn Ibn Ḳāḍī Shuhba (d. 851/1448 [see IBN ḲĀḌĪ SHUHBA]), *Manāḳib al-Shāfiʿī wa-aṣḥābih* (= *Ṭabaḳāt al-Shāfiʿiyya*), drawn from the *Taʾrīkh al-Islām* by al-Dhahabī (numerous mss.; see Munadjdjid, 238-9).

It has been observed (see above) that al-Bukhārī (d. 256/870 [*q.v.*]) was associated with al-Shāfiʿī by al-Nawawī, although he belonged to no particular *madhhab*, and it will be noted not without interest that al-Dhahabī, whose capricious choice of titles has already been established, entitled *manāḳib* the biographies of the author of the *Ṣaḥīḥ* and of Sufyān al-Thawrī (d. 161/778 [*q.v.*]), but *tardjama* those of the founders of the legal schools (see *Kashf*, iv, col. 560; Munadjdjid, 446).

On account of the specialisation of the *manāḳib* genre and the proscribing of *iʿtizāl*, one would hardly expect to find compilations of this type composed in honour of the Muʿtazilīs. On the other hand, partisans of al-Ashʿarī (d. 324/935-6 [*q.v.*]) were entitled to the *Manāḳib al-Ashʿariyya* (*Kashf*, ii, col. 1835) by ʿAlī Ibn ʿAsākir (d. 571/1176 [see IBN ʿASĀKIR] and to the *Manāḳib al-miʾa min al-aʾimma al-Ashʿariyya* (*Kashf*, ii, col. 1841) by a certain al-Yāfiʿī (d. 868/1464).

Among the Ḥanbalīs, Ibn Taymiyya (d. 728/1328 [*q.v.*]) was not slow to benefit from a favourable treatment, as three of his contemporaries dedicated compilations of *manāḳib* to him: Ibn ʿAbd al-Hādī (d. 744/1343; see Munadjdjid, 157), *al-ʿUḳūd al-durriyya fī manāḳib shaykh al-Islām Ibn Taymiyya* (ed. Cairo 1356), Ibn Ḳudāma al-Maḳdisī (d. 745/1344; see Brockelmann, S II, 119) and al-Bazzār (d. 749/1349), *al-Aʿlām al-ʿaliyya fī manāḳib shaykh al-Islām Ibn Taymiyya*, ed. Munadjdjid, Beirut 1396/1976.

The Mālikism which prevails in North Africa owes much to one of its interpreters, Saḥnūn (d. 240/854 [*q.v.*]), founder of a local legal school, to whose memory al-Khushanī (d. 371/981 [*q.v.*]) dedicated a compilation of *manāḳib*, after Abu 'l-ʿArab gave the title *faḍāʾil* to his biography and to that of Mālik, while he had written a *Kitāb Manāḳib Banī Tamīm*. Among the eminent representatives of Mālikism in Ifrīḳiya, al-Ḳābisī (d. 403/1012 [*q.v.*]) was the object of *manāḳib* (ed. H.R. Idris, Algiers 1959) on the part of Abū ʿAbd Allāh Muḥammad al-Mālikī (d. 438/1046); a similar honour was awarded to his disciple Abū Bakr Aḥmad b. ʿAbd al-Raḥmān (d. 432 or 435/1040-3; see Idris, *Deux maîtres de l'école kairouanaise*, in *AIEO Alger*, xiii [1955], 30-41) by a pupil of the latter, Ibn Saʿdūn (d. 485 or 486/1092-3; see Idris, *ibid.*, 35-6). It is appropriate in this context to stress the importance of biographical works relating to this Mālikī school which was so active in the Maghrib, especially *al-Iftikhār fī manāḳib fuḳahāʾ al-Ḳayrawān* by ʿAtīḳ al-Tudjībī (d. 422/1030; see Idris, *Deux juristes kairouanais*, in *AIEO Alger*, xii [1954], 153), the *Tartīb al-Madārik wa-taḳrīb al-masālik bi-maʿrifat aʿlām madhhab Mālik* (ed. A. Bakīr, Beirut 1967) by the *ḳāḍī* ʿIyāḍ (d. 544/1149 [*q.v.*]), which begins with a lengthy biography of Mālik and in which the articles on the leading *fuḳahāʾ* contain a paragraph entitled *faḍāʾiluh* (= *manāḳibuh*), and the *Maʿālim al-īmān fī maʿrifat ahl al-Ḳayrawān* by Ibn Nadjī (d. 839/1435 [*q.v.* in Suppl.]), who took up (see ed. Tunis, iii, 262, 263) the *Maʿālim al-īmān fī manāḳib al-mashhūrīn min ʿulamāʾ al-Ḳayrawān* of al-Dabbāgh (d. 699/1300 [*q.v.* in Suppl.]), already continued by Ibrāhīm al-ʿAwwānī (d. 720/1320), and is also furnished with Ḳayrawānī *manāḳib* such as those of Sīdī Abū Yūsūf al-Dahmānī or of Abū 'Ali al-Ḳadīdī. R. Brunschvig (*Ḥafṣides*, ii, 382), who quotes these last-named authors, reckons that the biographies of the *Maʿālim* "are closely linked to the *manāqib* genre", meaning that they tend towards hagiography.

Hagiography

This second tendency appears all the less astonishing as certain of these Ḳayrawānī jurists were drawn, from the beginning of the 4th/10th century, into the ascetic movement which held sway in Ifrīḳiya and died more or less in an odour of sanctity or as "martyrs" in the ranks of the insurgents led by Abū Yazīd (d. 336/947 [*q.v.*]): it is thus in this period that the *manāḳib* genre begins in the Maghrib to take on a gradually more marked hagiographical tone. Featuring prominently among these persons is al-Rabīʿ b. al-Ḳaṭṭān (d. 334/946 who, having renounced his activities as a *faḳīh*, withdrew from the world but was one of the instigators of the revolt and attained the accolade of martyrdom (see Idris, *Deux juristes*, 129-30) in such a way that his *manāḳib* were gathered together by al-Ḥusayn b. ʿAbd Allāh al-Adjdābī (d. 432/1040) who dedicated monographs of the same type to another "martyr", al-Mammasī (d. 333/944), also to al-Sabāʾī (d. 356/966) whose piety and asceticism has been noticed (see Idris, *op. laud.*, 126-7, 133-4). Two other Ifrīḳiyans whose merits are widely celebrated,

al-Djabanyānī (d. 369/979) and the patron saint of Tunis, Muḥriz b. Khalaf (Sīdī Maḥrez, d. 413/1022 [*q.v.*]), have been the object, through the offices of, respectively, al-Labīdī (d. 440/1048) and al-Fārisī (d. *ca.* 440-50/1048-58), of hagiographies which have been published and translated by H.R. Idris (*Manâqib d'Abû Isḥâq al-Jabanyânî par Abû l-Qâsim al-Labîdî et Manâqib de Muḥriz b. Ḫalaf par Abû Ṭâhir al-Fârisî*, Tunis 1959, 111-20; one can also find there a short exposé on the genre studied in the present article and a description of several mss. containing various collections of *manāḳib*, as well as the text and the translation of those concerning (161-2, 329-30) Ibn al-Nafīs (d. 479/1086) and (163-7, 331-3) Abū Zayd al-Manāṭiḳī; see also Yūsuf al-Ḥanāshī, *Kutub al-manāḳib wa-maẓāhir min al-ḥayāt al-idjtimāʿiyya bi-Ifrīḳiya fi 'l-ḳarn al-rābiʿ li 'l-hidjra/al-ʿāshir milādī*, in *al-Fikr*, xxvii/6 [1982], 111-20).

From that time onward, the development of hagiolatry, then of religious orders, favoured in the Muslim world as a whole the evolution and the rich proliferation of a specialised *manāḳib* genre, and there is scarcely a single famous ascetic, venerated saint, founder of a *ṭarīḳa* [*q.v.*] or eminent Ṣūfī who did not earn his own monograph or at very least an article in general works, the titles of which do not necessarily contain the word *manāḳib*; this is the case, as has been observed, of the *Ḥilyat al-awliyāʾ* by Abū Nu ʿaym or of the Indian and other *Tadhkiras* [*q.v.*], or indeed, in a later period, the *Akhbār al-akhyār* (ed. Dihlī 1309/1891) by ʿAbd al-Ḥaḳḳ Dihlawī (d. 1052/1642 [*q.v.*]). But reference may be made to, for example, the *Manāḳib al-abrār min maḥāsin al-akhyār* by Ibn Khamīs al-Mawṣilī al-Shāfiʿi (d. 552/1157; Brockelmann, S I, 776), the *Manāḳib al-abrār fī maḳāmāt al-akhyār* by Muḥammad b. al-Ḥasan al-Shāfiʿī (d. 676/1277-8; *Kashf*, iv, col. 559), the *Manāḳib al-ʿibād min ṣulaḥāʾ al-bilād* by al-Ṣayrafī, of whom Ḥadjdjī Khalīfa says (ii, col. 1843) that he took some of his biographies from the *Ṣafwat al-ṣafwa* by Ibn al-Djawzī, the *Manāḳib al-aṣfiyāʾ* (ed. Calcutta 1895) by Shu ʿayb b. Djalāl al-Dīn Manīrī (after the 8th/14th century) and, in Turkish, the *Manāḳibi-awliyāʾ* of Sharīfī-zāde (d. 1040/1630-1; *Kashf*, iv, 560).

The eminent eastern saint Uways al-Ḳaranī (d. 37/657 [*q.v.*]), who is not lacking in biographies (see for example Abū Nuʿaym, *Ḥilya*, ii, 79-87), has, omissions excepted, only at a late stage been the object of a monograph, and in Turkish, by al-Lāmiʿī (d. 938/1531-2 [*q.v.*], *Manāḳib-i Ḥaḍrat-i Uways al-Ḳaranī*; for mss. see G. K. Alpay, *Lāmiʿī Chelebi and his works*, in *JNES*, xxxvi [1976], 82, no. 9. The legend of Abū Ayyūb (d. 52/672) is recounted by Ḥādjdjī ʿAbd Allāh in *al-Āthār al-madjīdiyya fi 'l-manāḳib al-khālidiyya* (ed. Istanbul 1257/1841), and Ibn al-Djawzī celebrates the *manāḳib* of Maʿrūf al-Karkhī (d. 200/815-16 [*q.v.*]), ed. Ṣ.M. al-Djumaylī, in *al-Mawrid*, ix/4 (1401/1981), 609-80. On Dhu 'l-Nūn (d. 246/861 [*q.v.*]) we are aware of *al-Kawkab al-durrī fī manāḳib Dhi 'l-Nūn al-Miṣrī*, attributed to Ibn ʿArabī (d. 638/1240), but not mentioned by O. Yahya (*Histoire et classification de l'oeuvre d'Ibn ʿArabī*; a ms. of this work exists in Leiden, see van Koningsveld, 108), while Ibn ʿArabī himself has *manāḳib* composed in his honour (*Kashf*, ii, col. 1843), in particular by al-Suyūṭī (d. 956/1549) according to Ḥādjdjī Khalīfa (ii, col. 1835). The great saint ʿAbd al-Ḳādir al-Djīlānī (d. 561/1166 [*q.v.*]) naturally has his place in the hagiographical dictionaries, and it is even said that the *Mirʾāt al-zamān* by Sibṭ Ibn al-Djawzī supplied al-Yūnīnī (d. 726/1326) with the material for a collection of his *manāḳib* (*Kashf*, ii, col. 1842), which would be a further indication of the close links that have already been observed between general biography and hagiography when religious persons are concerned. Ḥādjdjī Khalīfa lists numerous other monographs on the eponymous founder of the Ḳādiriyya [*q.v.*], notably *Asnā 'l-mafākhir fī manāḳib al-shaykh ʿAbd al-Ḳādir* by al-Yāfiʿī (d. 768/1367 [*q.v.*]). Another founder of an order, Abu 'l-ʿAbbās Aḥmad b. ʿAlī al-Rifāʿī (d. 578/1183 [see AL-RIFĀʿĪ]) soon earned his *manāḳib* from the pen of al-Wāsiṭī (d. 589/1194; see Brockelmann, S I, 781, who also mentions the compilation by Djaʿfar al-Barzandjī, 1179/1765). For their part, the Mawlawiyya [*q.v.*], and in particular their first *shaykh*, Djalāl al-Dīn Rūmī (d. 672/1273 [*q.v.*]) and his successors, quickly inspired Aflākī (8th/14th century [*q.v.*]) to compose, in Persian, the *Manāḳib al- ʿārifīn wa-marātib al-kāshifīn* (French tr. Cl. Huart, *Les saints des derviches tourneurs*, Paris 1918-22; ed. T. Yazıcı, Ankara 1959); numerous other religious persons have their *manāḳib* written in Turkish (see *Kashf*, ii, col. 1842, iv, col. 560); for instance, Ahmet Yaşar Ocak presents in *JA*, cclxvii/3-4 (1979) a Turkish *mathnawī* of Elwān Čelebī (after 761/1360), Menāḳib 'ul-ḳudsīya fī menāṣib 'il-unsīya: *une source importante pour l'histoire religieuse de l'Anatolie au XIIIe siècle*, devoted to Baba Ilyās and his descendants. The saint so much respected in Egypt, Aḥmad al-Badawī (d. 675/1276 [*q.v.*]), has been honoured by various compilations (see Brockelmann, S I, 808), but ʿAbd al-Ṣamad Zayn al-Dīn (d. 1028/1634-5), no doubt judging *manāḳib* insufficiently expressive, entitled his *al-Djawāhir al-saniyya fi 'l-karāmāt al-Aḥmadiyya* (numerous editions). Ibn Ḳiwām (7th/13th century) owes to his grandson the *Manāḳib al-shaykh Abī Bakr Ibn Ḳiwām* (mss. Ẓāhiriyya 5398, 6951), while Ibn Ṭūlūn (d. 953/1546 [*q.v.*]) is content to entitle his biography *Tuḥfat al-kirām fī tardjamat Abī Bakr Ibn Ḳiwām* (Munadjdjid, 291). Naḳshband (d. 791/1389 [*q.v.*]), eponymous founder of the Naḳshbandiyya, speedily acquired his *manāḳib* through the offices of al-Sharīf al-Djurdjānī (d. 816/1413; *Kashf*, ii, col. 1841), while the Khalwatiyya [*q.v.*] have been honoured by Muḥammad b. al-Makkī in *al-Nafaḥāt al-raḥmāniyya fī manāḳib ridjāl al-Khalwatiyya* (Istanbul 1927) and by Ibn ʿAzzūz al-Tūnisī (*Kashf*, iv, col. 560). Ibn al-Bazzāz al-Ardabīlī (8th/14th century [*q.v.* in Suppl.] wrote a biography of Ṣafī 'l-Dīn, founder of the Ṣafawiyya order and eponymous ancestor of the Ṣafawids, *al-Mawāhib al-saniyya fī manāḳib al-Ṣafawiyya*, or *Ṣafwat al-ṣafāʾ* (lith. Bombay 1329/1911). The patron saint of Aden or ʿAdan, Abū Bakr Ibn Aydarus (d. 914/1508 [see ʿAYDARUS]), found his panegyrist in the person of his contemporary Ḥusayn b. Ṣiddīḳ al-Ahdal (d. 903/1497 [see AL-AHDAL]), author of the *Mawāhib al-ḳuddūs fī manāḳib Ibn ʿAydarūs*. Al-Djaʿfarī (d. after 1157/1744) wrote *al-Ṭabīb al-mudāwī bi-manāḳib al-shaykh Aḥmad al-Naḥlawī* on a saint who died in 1157/1744 (see Munadjdjid, 347), and *mullā* Niẓām al-Dīn is the author of the *Manāḳib-i Razzāḳiyya* in honour of the *pīr* Sayyid ʿAbd al-Razzāḳ [see FARANGĪ MAḤALL in Suppl.]. In the 13th/19th century, the vogue for *manāḳib* was perpetuated in the east. The Egyptian Ṣūfī saint Aḥmad al-Ṣāwī (d. 1241/1825) inspired a collective work, *al-Nūr al-waḍḍāʾ fī manāḳib wa-karāmāt ʿumdat al-awliyāʾ Sayyidī Aḥmad al-Ṣāwī* (ed. Cairo 1347/1928), al-Duwayhī (d. 1874 [*q.v.* in Suppl.] has left behind a biography of his master Aḥmad b. Idrīs, partially reproduced in a compilation of Ṣāliḥ b. Muḥammad al-Madanī, *al-Muntaḳā al-nafīs fī manāḳib Ḳuṭb dāʾirat al-taḳdīs Aḥmad b. Idrīs*, Cairo 1960, Khalīfa al-Saftī (d. 1296/1879) is the author of

the *manāḳib al-shaykh* ᶜAbd al-Laṭīf al-Ḳayātī (d. 1258/1842; ms. Yale 1209), and Ḥusayn al-Djisr dedicated the *Nuzhat al-fikr fī manāḳib mawlānā 'l-ᶜārif bi-llāh taᶜālā ḳuṭb zamānih wa-ghayth awānih al-shaykh Muḥammad al-Djisr* (ed. Beirut 1306) to his father, who was a Syrian Ṣūfī (d. 1262/1846) and a disciple of al-Ṣāwī. Al-Ḥiṣāfī (d. 1910 [*q.v.* in Suppl.], founder of the *ṭarīḳa hiṣāfiyya*, has found his hagiographer in the person of ᶜAlī al-Djaᶜfarāwī, author of *al-Manhal al-ṣāfī fī manāḳib al-Sayyid Ḥasanayn al-Ḥiṣāfī*, Cairo 1330/1911-12.

Rich though the list of Ḥādjdjī Khalīfa is, it is still incomplete, for it is highly probable that many hagiographies of a more or less popular nature, which must have circulated in Ṣūfī circles, have escaped this conscientious bibliographer, without counting, of course, those which appeared at a later time. Whatever the reason, he makes scant reference to the collections of *manāḳib* composed in North Africa and particularly in Morocco, which was a breeding-ground of saints and marabouts. Just as hitherto there has been no attempt to cite all the relevant titles or to go beyond the 19th century, so we will confine ourselves to discussion of those Maghribī works which appear to be the most characteristic.

The earliest compilations of Ifrīḳiyan *manāḳib* have already been mentioned. The Moroccan saint al-Sabtī (d. 601/1205 [*q.v.*]), whose memory has remained very much alive in the Maghrib, inspired a number of them (mss. in Rabat, Algiers, Tunis, Paris etc.; see E. Lévi-Provençal, *Les manuscripts arabes de Rabat*, Paris 1921, no. 403; Brockelmann, S II, 1013). ᶜAbd al-Salām b. Mashīsh (d. 625/1227-8 [*q.v.*]) has been honoured by al-Warrāḳ; Abū Sa ᶜīd Khalaf al-Bādjī (d. 629/1230) enjoyed the same distinction, after 633/1235, through the offices of Abu 'l-Hasan al-Ḥawwārī (see the catalogue of the mss. left by Ḥ.Ḥ. ᶜAbd al-Wahhāb, in *Ḥawliyyāt al-Djāmi ᶜa al-tūnisiyya*, vii [1970], no. 205; Public Library of Tunis, ms. ar. no. 30). Al-Shādhilī (d. 656/1258 [*q.v.*]), his disciples and even his grotto situated in the Djabal al-Zallādj (ms. ᶜAbd al-Wahhāb, no. 655), have been the object of collections of *manāḳib* which have survived (mss. ᶜAbd al-Wahhāb nos. 45, 321, 655). In the same period (7th/13th century), there lived in Tunis the saint ᶜĀʾisha al-Mannūbiyya [*q.v.*], whose *manāḳib* have been published (Tunis 1344/1925). To a Tunisian saint of a later time, Sīdī Ben ᶜArūs (d. 868/1463; see R. Brunschvig, *Ḥafṣides*, ii, 341-50), ᶜUmar al-Rashīdī dedicated the *Ibtisām al-ghurūs wa-washy al-ṭurūs bi-manāḳib al-shaykh Abi 'l-ᶜAbbās Aḥmad b. ᶜArūs* (ed. Tunis 1303); to a member al-Asmar (d. 981/1574 [*q.v.*]), of the order of the ᶜArūsiyya founded by the above-named, numerous compilations have likewise been dedicated, among which that of Muḥammad b. Muḥammad al-Munastīrī, *Tanḳīḥ rawḍat al-azhār ... fī manāḳib Sīdī ᶜAbd al-Salām al-Asmar*, was published in Tunis in 1325/1907-8. A large number of monographs on Tunisian saints have yet to be published. Two mss. of the Great Mosque of Tunis (nos. 1697 and 3875) contain some fifteen of them, and in the catalogue of ᶜAbd al-Wahhāb manuscripts more than half-a-dozen *madjmūᶜas* are to be found (nos. 45, 205, 321, 519, 520, 541, 655) comprising a total of some 45 texts (some of them in duplicate or triplicate); it is likely that private libraries have also preserved a certain number of them.

On writings of this genre dating from the Ḥafṣid period (627-982/1229-1574), R. Brunschvig (*op. laud.*, ii, 381) makes a judgement which is capable of wider application: "Numerous and of living and of varying dimensions, often anonymous, are these lives of saints or *manāḳib*, a genre which is, moreover, fairly monotonous, where virtues and miracles are complacently enumerated on the testimony of witnesses, living or dead, who are named. Works of panegyrists or of devotees, they should not be expected to show any critical tendency, and some of the historical information that they purport to contain is to be treated with caution. Often composed by the semi-literate who address a poorly-educated public, they are written in simple language, as close as possible to the spoken idiom ... In this sense, they constitute linguistic documents of some interest. Similarly, the insights that they supply, unwittingly, on the toponomy and the 'realia' of their period are by no means to be disregarded, but above all they throw a useful light on the mentality and customs of these people, insignificant folk who congregated around the mystical shaikhs, eager to benefit from their *baraka*."

In the course of the ensuing period, the cult of saints did not weaken in Tunisia, but the activity of the hagiographers seems to have declined somewhat. A Abdesselem (*Les historiens tunisiens des XVIIᵉ, XVIIIᵉ et XIXᵉ siècles*, Tunis 1973, 495) notes that this literary genre "contains very few works", and, although monographs were probably still being composed, in addition to *al-Fatḥ al-munīr fī taᶜrīf al-ṭarīḳa al-shābbiyya* by Muḥammad al-Masᶜūdī al-Shābbī (10-11th/16th-17th century), the third chapter of which contains the miracles and prophecies of the founder of the Shābbiyya fraternity and of his sons, he points out and analyses only two hagiographical works: the first (149-53) is the *Nūr al-armāsh fī manāḳib Sayyidī (Sīdī) Abu* (sic) *'l-Ghayth al-Ḳashshāsh* (d. 1031/1621) written in 1032 by al-Muntaṣir b. Abī Liḥya of Gafsa, who put together a number of miracles (*karāmāt*) "all of them equally implausible" (according to Ḥādjdjī Khalīfa, ii, col. 1835, a certain Muḥammad b. Sha ᶜbān al--Ṭarābulusī, d. 1020/1611, had already recorded the *manāḳib* of this saint); the second (385-6) is the *Takmīl al-ṣulaḥāʾ wa 'l-aᶜyān li-maᶜālim al-īmān fī awliyāʾ al-Ḳayrawān* (ms. Paris ENLOV, 452) by ᶜĪsā al-Kinānī al-Ḳayrawānī (d. 1292/1875), which purports to be a sequel to the *Maᶜālim al-īmān* by Ibn al-Nādjī (see above) and contains "material borrowed from earlier *manāqib*".

Travel narratives of a later period [see RIḤLA] are not lacking in hagiographical tendencies, but this does not apply to that of al-Sanūsī (d. 1318/1900 [*q.v.*]), who is nevertheless the author of numerous texts which A. Chenoufi (*Un savant tunisien du XIXᵉ siècle: Muḥammad al-Sanūsī, sa vie et son œuvre*, Tunis 1977, 181-6) classifies under the heading "works of a hagiographical nature"; they do not bear the title *manāḳib*, but the *Tuḥfat al-akhyār bi-mawlid al-Mukhtār*, where there is an account of "the miraculous happenings which attended the birth of the Prophet, and those which characterised his youth", and *al-Mawrid al-maᶜīn fī dhikr al-arbaᶜīn*, which contains the laudatory biographies of the forty companions of al-Shādhilī (see above) testify to the permanence of this literary genre in Tunisia.

In Morocco, hagiolatry made its appearance at approximately the same time as in Ifrīḳiya, thus well before the springing-up, in the 9th/15th century, of the wave of mysticism which was to spread throughout North Africa and before the evolution of maraboutism as a characteristic of religious activity. In fact, the first elements of Moroccan hagiography appear as early as the 7th/13th century in the form of dictionaries such as the *Tashawwuf ilā [ma ᶜrifat] ridjāl al-taṣawwuf* (ed. A. Faure, Rabat 1958) of Ibn al-Zayyāt al-Tādlī (d. 627/1229-30) which contains 277 biographies of san-

tons and Ṣūfīs of the 5th-7th/11th-13th centuries, or *al-Maḳṣad al-sharīf ... fī dhikr ṣulaḥā' al-Rīf* (tr. G.S. Colin, in *AM*, xxvi [1926]), of al-Bādisī (d. after 722/1322 [*q.v.*]), which describes the lives of some forty saints of the Rīf, of whom the majority are now forgotten; among this number, one who features (88-93) is an Andalusian named Abū Marwān ʿAbd al-Malik b. Ibrāhīm al-Ḳaysī al-Yuḥānisī (7th/13th century), who was the master of al-Shādhilī and to whom is dedicated the *Tuḥfat al-mughtarib bi-bilād al-Maghrib fī karāmāt al-shaykh Abī Marwān* by Aḥmad al-Ḳashtālī (ed. Madrid 1974, under the title *Milagros de Abū Marwān al-Yuḥānisī*, by F. de la Granja, who stresses the rarity of words of this type in Spain). In the 8th/14th century, Abū ʿAbd Allāh al-Ḥaḍramī dedicated to the Marīnid sultan Abu 'l-Ḥasan (767-74/1366-72) *al-Salsal al ʿadhb wa 'l-manhal al-aḥlā* on the forty saints revered in Fez, Meknès and Salé (*Chorfa*, 222-3; ms. in Leiden, see van Koningsveld, 94). Aḥmad b. ʿĀshir al-Ḥāfī (d. 1163/1750; see *Chorfa*, 313-14) is the author of a hagiographical work on his homonym, the patron saint of Salé (d. 764 or 765/1362) or 1363), the *Tuḥfat al-zā'ir bi-baʿd manāḳib Sayyidī (Sīdī) al-Ḥādjdj Aḥmad b. ʿĀshir al-Ḥāfī* (ms. in Leiden, see van Koningsveld, 96). Ibn Ḳunfudh al-Ḳusanṭīnī (d. 810/1407-8 [*q.v.*]) uses *manāḳib* in the sense of "prodigies" when he gives the title *Taḥṣīl al-manāḳib fī takmīl al-ma'ārib* (ms. in Rabat) to a commentary on his astronomical treatise, the *Taysīr/Tashīl al-maṭālib fī taʿdīl al-kawākib*, but curiously, he refrains from employing the term in the *Uns al-faḳīr wa- ʿizz al-ḥaḳīr*, which is a biography of the patron saint of Tlemcen Abū Maydan (d. 594/1197 [*q.v.*]) and of his disciples (ed. M. al-Fāsī and A. Faure, Rabat 1965).

On account of the often-quoted *ḥadīth: bi-dhikr al-ṣulaḥā' tanzil al-raḥma* "mention of the virtuous (= saints) makes mercy descend", biographical literature developed to a considerable extent in Morocco under the Sharīfian dynasties, and the *manāḳib* genre, even though this term is not always used, plays a significant role in the form both of hagiographical dictionaries and of monographs of saints or at least of persons whose memory is revered. To become familiar with the extent of the phenomenon, it is sufficient to peruse *Les historiens des Chorfa* by Lévi-Provençal (from p. 220); numerous works of this type have been mentioned at the beginning of this article, and we confine ourselves here to reference to those which seem particularly representative.

A relatively ancient hagiography, dating from the 8th/14th century, bears a title devoid of ambiguity (*Chorfa*, 221); *al-Minhādj al-wāḍiḥ fī taḥḳīḳ karāmāt Abī Muḥammad Ṣāliḥ*, by the great-grandson of this disciple (d. 631/1234) of Abū Madyan. The term *manāḳib* is observed as appearing to introduce an account of the lives of two saints of Aghmāt [*q.v.*] by al-Hazmīrī al-Marrākushī (*Chorfa*, 223); *Ithmid al-ʿaynayn wa-nuzhat al-nāẓirayn fī manāḳib al-akhawayn Abī Zayd wa-Abī ʿAbd Allāh al-Hazmīriyyayn* (d. respectively in 706 or 707/1306-8 and 678/1280). In the 10th/16th century, the Djazūlī [*q.v.*] movement, of which the spiritual line stretches back to ʿAbd al-Salām b. Mashīsh (see above), found its historian in the person of Ibn ʿAskar (d. 986/1578; [*q.v.*]), author of the *Dawḥat al-nāshir li-maḥāsin man kān bi 'l-Maghrib min mashāyikh al-ḳarn al-ʿāshir*, (lith. Fās 1309/1892; ed. M. Ḥādjdjī, Rabat 1396/1976), which is a catalogue of *shaykhs* to whom, as a group, "was allotted a particle of sanctity" (*Chorfa*, 234); another catalogue, from which was drawn the *ʿArīf al-munna* of the above-mentioned Muḥammad al-Mahdī al-Fāsī, was moreover entitled *Mumtiʿ al-asmāʿ bi-manāḳib al-shaykh al-Djazūlī wa-man lahu min al-atbāʿ*. The great Moroccan saint Abū Yaʿazzā (d. 572/1177 [*q.v.*]), who was the subject of a long article in the *Tashawwuf* (195-205), inspired another al-Tādlī (d. 1013/1604), to write a monograph, the *Kitāb al-Muʿzā fī manāḳib Abī Yaʿzā* (ms. in Rabat; see *Chorfa*, 239-40). Ibn Raysūn al-ʿAlamī (d. 1055/1645) is the author of the *Manāḳib al-Raysūniyyīn* on his father and his paternal uncles (Hajji, 520). To Ibn ʿAyshūn al-Sharrāṭ (d. 1109/1697) is attributed *al-Rawḍ al-ʿāṭir al-anfās fī akhbār al-ṣāliḥin min ahl Fās* (ms. in Rabat; see Hajji, 712). The *Ṣafwat man intashar min akhbār ṣulaḥā' al-ḳarn al-ḥādī ʿashar* (lith. Fās n.d.) by al-Ifrānī (d. 1151/1738-9 [*q.v.*]) is a catalogue of Moroccan saints, forming a sequel to the *Dawḥa* of Ibn ʿAskar. A Syrian emigré in Morocco, Aḥmad al-Ḥalabī (d. 1120/1708) is the author of *al-Durr al-nafīs wa 'l-nūr al-anīs fī manāḳib al-Imām Idrīs b. Idrīs* (lith. Fās 1300, 1304; see *Chorfa*, 287). ʿAbd al-Raḥmān al-Fāsī, who has already been mentioned on account of the fact that, like al-Ifrānī, he preferred *akhbār* to *manāḳib*, nevertheless also wrote the *Bustān al-adhhān fī manāḳib al-shaykh Abī Muḥammad ʿAbd al-Raḥmān* ;(ms. in Rabat) on the saint and poet in *malḥūn* al-Madjdhūb [*q.v.*]. Also to be mentioned is *al-Murkī/Muraḳḳī fī baʿd manāḳib al-ḳuṭb al-Sayyid Maḥammad al-Sharḳī* (12th/18th century?) by his descendant ʿAbd al-Khāliḳ al-Sharḳī (ms. in Rabat); and *al-Dhahab al-ibrīz fī manāḳib al-shaykh ʿAbd al-ʿAzīz* by al-Lamaṭī (d. 1156/1743 [*q.v.*]) devoted to the Fāsī saint called al-Dabbāgh (d. 1131/1719), lith. at Cairo in 1278/1861, printed at Būlāḳ in 1292/1875 and at Cairo in 1304/1886. The Ḳādirīs [*q.v.*] left to posterity numerous monographs of saints and prominent members of their family. One of them, ʿAbd al-Salām (1110/1698), is the author of the *Muʿtamad al-rāwī fī manāḳib walī Allāh Aḥmad al-Shāwī*, on a popular saint of Fās (d. 1014/1605), and of the *Nuzhat al-fikr fī manāḳib al-shaykhayn Sayyidī (Sīdī) Maḥammad wa-wālidih sayyidī (Sīdī) Abī Bakr*, on the founder of the *zāwiya* of al-Dilā' [*q.v.* in Suppl.] and his son (see *Chorfa*, 278); the wonderful history of this *zāwiya* is recorded by al-Tāzī (d. 1247/1831-2) in the *Nuzhat al-akhyār al-marḍiyyīn fī manāḳib al-ʿulamā al-Dilā'iyyīn al-Bakriyyīn* (ms. in Rabat). The Ashrāf (Shurafā') of Wazzān [*q.v.*] have, in their own right, been the object of several complications: ʿAbd al-Salām al-Ḳādirī, *al-Tuḥfa al-Ḳādiriyya fī manāḳib al-Wazzāniyyīn wa 'l-Shādhiliyyīn* (ms. in Rabat); Ḥamdūn al-Ṭāhirī (d. 1191/1777), *Tuḥfat al-ikhwān bi-baʿd manāḳib shurafā' Wazzān*, lith. Fās 1324/1906, with, in the margins, *al-Kawkab al-as ʿad fī manāḳib Sayyidinā wa-Mawlānā ʿAlī b. Muḥammad [al-Wazzānī]* (d. 1226/1811), of a 19th century author, Abū Allāh Muḥammad b. Ḥamza al-Miknāsī (see *Chorfa*, 327), Muḥammad al-Ruhūnī (d. 1230/1815) likewise collected the *manāḳib* of this last-named *sharīf* (see M. Lakhdar, *Vie littéraire*, 279). As early as 1214/1799, Ḥarāzim was commending the merits of the founder of the Tīdjāniyya [*q.v.*] in the *Bulūgh al-amānī fī manāḳib al-shaykh al-Tīdjānī* (d. 1230/1815) which was published in Cairo in 1345/1926-7, with a different title. To conclude, attention may also be drawn to the *Manāḳib al-shaykh Abī ʿAbd Allāh Muḥammad al-Ḥaḍīkī* by Muḥammad b. ʿAbd Allāh al-Ḥaḍīkī al-Djazūlī (d. 1189/1775), the *Manāḳib al-ṣulaḥā'* (see Lakhdar, 259) by Muḥammad al-Tāwudī Ibn Sūda (d. 1209/1795) and the *Manāḳib al-ʿAkkārī* (d. 1118/1707) by one of his descendants (d. 1304/1886); a ms. of it exists in Rabat. Finally, it will be noted that Ḥamdūn b. al-Ḥādjdj (d. 1232/1817 [see IBN AL-ḤĀDJDJ in Suppl.]), who was in no sense a saint, also earned his *Manāḳib* (ms. in Rabat), which proves that this key-word was

not always felt, even in the 19th century, necessarily to imply the accomplishment of miracles.

As may be observed through a perusal of the intentionally-abridged list which precedes, several hagiographers are descendants of a saint or a *s̲h̲ayk̲h̲*; possessing sufficient education, they were no doubt able by themselves to put into shape the oral or written testimony as well as assembled family documents. On the other hand, many poorly-educated Moroccans devoted themselves to similar researches, but were obliged to entrust the dossier thus compiled to some learned individual, with instructions to compose the monograph which they wished to dedicate to the memory of their ancestor; E. Lévi-Provençal (*Chorfa*, 49, n. 1) cites an example of the latter procedure of which he has had direct knowledge, but it is known that others exist. Thus the libraries, especially the private ones, contain, among others, a number of these lives of saints which R. Brunschvig finds monotonous because the portraits of the individuals whom they honour are repeated without any great regard for originality. In general, writes Lévi-Provençal (50), although one may encounter "some accounts of events which seem distorted and tending towards the miraculous, it should be recognised that, in the majority of cases, the men whose lives are presented here are quite ordinary mortals. The true legend of the saint is not found in the written hagiographies, so to speak; it resides in the spirit of the uneducated masses. Popular hagiolatry often has little in common with compilations of *manâqib*. In the latter, the saint is above all a very orthodox, devout and ascetic Muslim; his biographers endow him with the nature of an intercessor; he sometimes has the ebullient spirit of a mysticism which brings him close to unity with the divine ... It is in the social role which they play in the land that the Moroccan marabouts gradually appear through the monographs. It is precisely here that the interest of the latter resides. This general observation also provides an explanation as to why female saints, who enjoy a widespread popular cult in Morocco, are almost ignored by the learned national hagiography". It will be noted, however, as exceptions confirming the rule, that a number of articles relating to Moroccan women, often anonymous, feature in the hagiographical dictionaries, particularly in the *Tas̲h̲awwuf*, that there exist in the Sūs the *Manāḳib* of al-Sayyida Maryam bint Mas ʿūd al-Sūsī al-Samlālī (d. 1165/1751) by Abu 'l-ʿAbbās Aḥmad b. Ibrāhīm al-Adrīzī (d. 1168/1754) and that al-Kuntī (d. 1224/1810 [see KUNTA]) honoured both his parents in one tribute, *al-Ṭarīfa wa 'l-tālida min karamāt al-s̲h̲ayk̲h̲ayn al-wālid wa 'l-wālida* (ms. B.N. Paris 5511).

At the end of this inevitably limited catalogue of works which may be regarded as belonging in general to the *manāḳib* genre, it is possible to summarise its evolution as follows.

Since the earliest centuries of Islam, *manāḳib*, which is not yet a key-word, appears, concurrently with other terms which may be neutral *(tard̲j̲ama, ak̲h̲bār, taʿrīf)* or more expressive (*faḍā ʾil, mafāk̲h̲ir, maʾāt̲h̲ir*), in the titles of individual biographies or of biographical compilations whose principal aim is to offer to the reader a moral portrait and information on the noble actions of the individuals who constitute their subject or on the superior merits of a certain group. This concurrence is perpetuated over the centuries, although *manāḳib* clearly tends towards specialisation. In fact, from the 4th/10th century onwards, both in Ifrīḳiya and in other Islamic countries this term is quite regularly applied to laudatory biographies of the *imāms* who founded the great legal schools and played a fundamental role in the elaboration of the *S̲h̲arīʿa*. Like the *faḍāʾil* of the Companions of the Prophet, the *manāḳib* of the *imāms* and of their leading disciples are aimed towards the edification of the community, which is thus invited to acquire their real or supposed virtues and scrupulously to follow their example. However, hagiolatry which begins to emerge at this time and subsequently expands to a considerable extent, is concerned to recount the lives of saints whose memory has not yet been effaced, while the gradual foundation of religious orders, a gradual process over the years, leads to the proliferation of *s̲h̲ayk̲h̲s* who are to a greater or lesser extent tinged with an aura of sanctity; thus the *manāḳib* genre takes on an increasingly marked hagiographical nature, and the term which designates it, having been applied to the qualities and actions and behaviour of any human being, however little virtuous, becomes synonymous, in the public mind, with prodigies, even more with miracles performed by a saint recognised as such, or by a Ṣūfī, a marabout or indeed by a simple mortal to whom, rightly or wrongly, miraculous gifts are attributed.

Systematic research into the bibliographical catalogues, of biographical works and of general histories of Islamic literature, as well as a more detailed examination of texts bearing the title *manāḳib*, would certainly serve to bring into sharper focus the preceding outline. Just as the study of the *ṭabaḳāt* genre undertaken by I. Hafsi (in *Arabica*, xxiii/3 [1976], 227-65 and xxiv/1-2 [1977], 1-41, 150-86) has shown how a term as simple as the plural of *ṭabaḳa* has undergone, in the sphere of biographical literature, an astonishing semantic evolution, so parallel researches into the *manāḳib* genre deserve to be undertaken, seeing that it involves a delicate and ultimately quite complex concept.

Bibliography: The principal sources have been cited in the article. What is offered here is a simple reminder of the titles of a few works to which reference has repeatedly been made: E. Lévi-Provençal, *Les historiens des Chorfa*, Paris 1922; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, Paris 1940-7; A. Fuʾād Sayyid, *Sources de l'histoire du Yémen à l'époque musulmane*, IFAO, Cairo 1974; P. Sj. van Koningveld, *Ten Arabic manuscript-volumes acquired by the Leiden University Library after 1957*, in E. van Donzel (ed.), *Studies on Islam*, Amsterdam-London 1974; M. Hajji, *L'activité intellectuelle au Maroc à l'époque sa ʿdide*, Rabat 1976; S. al-Munad̲j̲d̲j̲id, *Mu ʿd̲j̲am al-muʾarrik̲h̲īn al-dimas̲h̲ḳiyyīn*, Beirut 1398/1978. (CH. PELLAT)

AL-MANĀMA, the capital city of the amirate of Baḥrayn [*q.v.*] in the Persian Gulf. The city is located at latitude 26° 13′ N and longitude 50° 35′ E, on the north-eastern coast of the island of Baḥrayn, which was formerly known as Awāl. The shallow waters between Manāma and the neighbouring island of Muḥarraḳ [*q.v.*] have long been used to provide good shelter for native craft. It has been suggested that the name Manāma (A. "a place of resting, sleeping") may reflect the proximity of a number of prehistoric burial mounds.

The early history of Manāma remains obscure, for reliable references are few and their topographical nomenclature is both vague and confusing. When the Portuguese seized Baḥrayn in the 10th/16th century, they built their major fortification on the coast at Ḳalʿat al-ʿAd̲j̲ād̲j̲, some 4 miles west of Manāma. The Persians, who wrested control from the Portuguese in 1011/1602, held the archipelago for much of the

following turbulent period of 180 years, during which time they erected a defensive position on the current side of Manāma. In 1197/1783 the Āl Khalīfa [*q.v.*] clan of the ʿUtūb tribe invaded the islands from Zubāra in Ḳaṭar, and after a siege of some 2 months the Persians were expelled from that fort. The Āl Khalīfa — who remain the ruling dynasty — did not, however, enjoy an unchallenged accession to power, and the Āl Bū Saʿīd [*q.v.*] rulers of ʿUman mounted a series of expeditions against Baḥrayn between 1214/1799 and 1244/1828 during which time the small town was attacked and occupied on several occasions.

Over the next century, Manāma gradually became an important entrepôt port serving much of eastern Arabia, though its fortunes fluctuated in response to the vagaries and violence of local and regional political rivalries. Although Manāma was becoming the commercial centre of the archipelago, the Āl Khalīfa usually resided at Muḥarraḳ, which was also the harbour used by the island's large pearling fleet. The ruling family used the fort at Manāma only during the hottest months of the year, and it was not until the second decade of the 20th century that the town became the true capital of the amirate.

European activities had, however, been concentrated at Manāma since the end of the 19th century. In 1893 the Dutch Reformed Church of America established a mission in the town, and in 1902 that organisation built a hospital and a dispensary. A British Assistant Political Agent was appointed and took up residence in 1900; four years later the post was upgraded to a Political Agency. According to Lorimer, the population of Manāma in 1905 was approximately 25,000, of whom 60% were Shīʿī and 40% Sunnī Muslims. There were, in addition, a small number of Hindu, Jewish and Christian residents.

The development of the modern city began after the First World War. In 1920 a municipal administration was established, educational facilities at the primary school level were created, and electricity supplies were inaugurated in 1930. The discovery of oil at Djabal al-Dukhkhān in 1932, and the subsequent development of that resource, helped to stave off the otherwise serious economic and social consequences of the decline in pearl fishing. In 1935 the British established a naval base at Raʾs al-Djufayr, some 2 miles southeast of Manāma, following withdrawal from the Persian island of Handjām. This base later became the major centre of British naval activity in the Gulf. In 1942 a causeway road was built linking Manāma with Muḥarraḳ. In 1946 the British Political Residency was transferred from Būshahr to Manāma. By 1950, the population of the town had grown to over 40,000 and the following three decades have seen even greater expansion and development. By 1981 the population was believed to be over 121,000, and Manāma had become an important regional centre for banking, commerce and communications.

Bibliography: As there are no works devoted exclusively to Manāma, the reader is referred to the bibliographical sections of the entries for BAḤRAYN and ĀL-KHALĪFA, which list the standard sources. The following recent monographs contain some additional information. E.A. Nakleh, *Bahrein: political development in a modernizing society*, Lexington 1976; M.G. Rumaihi, *Bahrain: social and political change since the First World War*, London 1976; Fuad I. Khuri, *Tribe and state in Bahrein: the transformation of social and political authority in an Arab state*, Chicago 1980 and Mahdi Abdalla al-Tajir, *Language and linguistic origins in Bahrain: the Baḥārnah dialect of Arabic*, London 1982. (R.M. BURRELL)

MANĀR, MANĀRA (A), "lighthouse", an elevated place where a light or beacon is established; the means of marking (with fire, originally) routes for caravans or for the army in war; lampstand ("candelabrum", archaic meaning); minaret (in this sense normally in the fem., *manāra*, whereas for "lighthouse", in both the masc. and fem., *manār*, *manāra*). In some modern Arabic dictionaries we also find *fanār*. It is by chance that this latter word resembles *phare* (French), *faro* (Italian, Spanish, which derive their origin from Pharos = the islet situated at the entrance to the port of Alexandria, on which formerly stood the famous lighthouse; see below). *Fanār* has no doubt come into Arabic via Turkish *fanār/fener*, which comes from the Greek *pharos*, whose diminutive *phanarion* was used, for example in Byzantine Greek; in a parallel fashion, in mediaeval Latin *fanarium* = lantern, lighthouse, beacon light, French *fanal* (cf. von Hammer-Purgstall and *İA*, s.v. *Fenerliler*; but the *Türk Ansiklopedisi*, 1968, xvi, 230, confuses *phanòs* and Pharos). From Turkish, the word has also passed into Persian.

Classical Arabic literature describes several uses of fire among the ancient Arabs (*nīrān al-ʿArab* = "fires of the Arabs"; see al-Djāḥiẓ, *Ḥayawān*, iv, 461-91, v, 123, 133-4; al-Nuwayrī, *Nihāya*, i, 109-13; T. Fahd, *Le feu chez les anciens Arabes*, in *Le feu dans le Proche-Orient antique*, Leiden 1973, 43-61). Some of them were intended to guide caravans, convoys and individuals who were travelling, by night, indicating the route for them, or the beginning of it (*irshād al-sārī*). The roads were shown with "landmarks" (stones, etc., with fire; then the meaning was extended to those even without fire); the historical legends give the ruler of Pre-Islamic South Arabia, Abraha, the title "the man of the *manār*", for he was the first to mark out the routes, in time of war (see al-Suyūṭī, *al-Wasāʾil*, ed. al-ʿAdawī and ʿUmar, 146). But among these clearly recorded fires, we find no mention of maritime lighting (see also Yāḳūt, s.v. *manāra*; al-Nuwayrī, *Ilmām*, iv, 3: *manāra* of ʿĀd).

The word *manāra* designates several objects (or buildings) which facilitated lighting; for example the candelabrum in the sense outlined above, and which supported the lamp (*misradja*; see al-Djāḥiẓ, *Bukhalāʾ*, ed. al-Ḥādjirī, 19; al-Bīrūnī, *K. al-Djawāhir*, 227: *manāra* in porcelain; and the iconographic evidence in a miniature of the illustrated ms. Paris BN, Ar. 5847, fol. 13b; Leningrad, Acad. of Sc., Or. S. 23, fol. 30; cf. in the Cairo Geniza, e.g. Camb. T-S.J.1, 15 and Ox. 2821 [16], fol. 56a [and see E. Ashtor, in *JESHO*, vii, 179; *idem*, *Histoire des prix*, Paris 1969, under "chandelier"]), and even certain kinds of "arms" (arm-rests of seats, thrones, etc. (Sadan, *Mobilier*, 39, 126). The commonest word to designate the tower standing alongside (or on top of) a mosque and which is used to call the faithful to prayer, is *miʾdhana* [*q.v.*], but *manāra* is also found. This word has produced, in the European languages, forms such as *minaret* and *minareto* (A. J. Butler, *The Arab conquest of Egypt*, thinks that the connection between *manāra*-lighthouse and *manāra*-minaret is much more than a pure and simple etymological connection; the lighthouse of Alexandria influenced, in his view, the creation and form of the minaret in Islamic architecture; in the new ed. of Butler-Fraser, pp. LXXIV-LXXV, other references have been added, for, in fact, there is no unanimity among researchers; cf. H. Thiersch, *Pharos*, 98-201; Creswell, *A short account of Muslim architecture*, Beirut 1968, 14; and see MASDJID).

The research published on the pre-Islamic Arabs bears witness to the existence among them of a certain

knowledge of maritime life; however, they did not have very substantial experience. If we add that the "fires of the Arabs" do not contain anything on maritime lighting, we may assume that it is especially after the expansion of Islam that interest in this genre was awakened. It seems that in the east of the Islamic world (Persian Gulf, Indian Ocean), the Arabs had discovered the sporadic use of fires, and only the more durable "lighthouse" of the *khashabāt* [*q.v.*], near Baṣra, is mentioned in the description of Arab geographers.

Some sporadic uses of fire are even confirmed in the information about the only fixed and noteworthy lighthouse, properly speaking, that of Alexandria: communication by signalling with fires on the departure of Muslims' ships towards the Alexandria lighthouse which, in its turn, gave warning of the arrival of an enemy (by lighting the fire in the direction of the town); some fires were lit on the Mediterranean coast from Alexandria as far as the regions of North Africa, so as to give notice of enemies and direct ships. It is even recorded that opposite the Palestinian coast an exchange of signals of this kind was made between ships and the coast (see, apart from the *Bibl.* below, M. Gaudefroy-Demombynes, *La Syrie*, 258-61; RIBĀṬ, in *EI*[1], and especially ʿA. Elʿad, *Coastal cities*, in *The Jerusalem Cathedra*, ii, 146-67, which summarise (following G. Marçais and others) information taken from al-Balādhurī, al-Muḳaddasī, Ibn Marzūḳ (according to E. Lévi-Provençal, in *Hespéris*, v, 31 and al-Maḳrīzī, and cf. al-Ḳalḳashandī *Khiṭaṭ* ch. iv of *maḳāla* 10). It was a system of lighted fire signals, rather than fixed lighting, but nothing prevented them from profiting from this use of fires for the security of maritime pilotage (see al-Ḥamawī, in the *Bibl.*). These fires and their sites, near the sea, are called *nīrān*, *mawāḳīd*, *maḥāris* and *manāẓir*; al-Muḳaddasī even uses the word *manāra* for a kind of "lighthouse" or beacon-light and even for a tower (minaret of a *ribāṭ*?) being used as a lighthouse. Arabic geographical literature, and especially that of the maritime guides, e.g. in the 9th/15th century (Ibn Mādjid) and in the 10th/16th (Sulaymān al-Mahrī), clearly reflects the dangers presented by reefs and other maritime obstacles and the various means used to avoid them, as if the existence of lighthouses was rare (see I. Y. Kračkovskiy, *Geografičeskaya literatura*, Ar. tr., Cairo 1963-5, ii; G. R. Tibbetts, *Study*, Leiden and London 1979, *passim*; A. M. ʿAṭiyya, *Adab al-baḥr*, Cairo 1981, 79-98).

The famous lighthouse of Alexandria was inherited by the Arabs from the civilisation which had preceded theirs; it had been built, at the entrance to the port, on the islet of Pharos (which is connected today to the coast by a causeway), by Ptolemy Philadelphus, around 279 A.D. Since then and until the conquest of Alexandria by the Arabs (in 21/642), it had undergone some modifications and it has been concluded that its functioning and structure deteriorated successively. There is a tendency to accuse, often moreover without reason, the conquerors and change of régime of being the cause of deterioration, and the assumption that two centuries after the conquest, the lighthouse had fallen completely into ruin (G. F. Hourani, *Seafaring*, 61: "The wonderful Pharos fell to ruin and no one could be found who knew to repair it") seems exaggerated; for several centuries the lighthouse was indeed used, although its functioning was not as perfect as before Islam.

It is logical to suppose that during the first years of the Islamic régime, maritime traditions persisted as before. It is to the Umayyad period that certain historian-geographers attribute its first deterioration; the legend relates that a Christian, pretending to be a Muslim, was able to convince the caliph al-Walīd (d. 87/705) to allow him to look for treasure near (and underneath) the lighthouse and that the sabotage carried out at that time caused some damage to the upper part of the tower. But the Muslims continued to light the fire on the lighthouse, and only the Arab writers (geographers, etc.) allude to the fact that, in the past, the technique used in its functioning (the lantern) was more perfected, in recounting to their readers that in earlier times it was equipped with mirrors (or a mirror); by concentrating the sun's rays, these mirrors could burn the enemy ships (the historical fact which is hidden here is, perhaps, the existence in ancient times of a reflector or another technical method; the technique consisting of adding a reflector to a lantern was not completely unknown in the Islamic world (see al-Maḳḳarī, *Rawḍa*, 13-14),but it was probably more difficult to repair the damage undergone by a proper lighthouse). In the 3rd/9th century, the governor Ibn Ṭūlūn had the upper part of the lighthouse repaired, but the work was often in wood which was not strong and durable. The use of the lighthouse by the Arabs (lighting the fire on top, at night, by means of special custodians, who even had rooms intended for their lodging) continued until the 5th/11th century. In 578/1182-3 the lighthouse was only 50 cubits high; this diminution of its height was due to a deterioration of the construction and to an earthquake (which was neither the first nor the last experienced by the lighthouse), so that the upper parts had been destroyed. At the beginning of the 8th/14th century, it was no more than a ruin, despite the efforts made by certain sultans (for example, Baybars I (d. 676/1277) and Baybars II (d. 709/1310), some time earlier to repair it a little. Already al-Malik al-Kāmil (d. 635/1238) had built on this site a mosque, and the fort which is to be found there today (and which now houses the maritime museum of Alexandria) was constructed by the sultan Ḳāʾit Bay (d. 901/1496).

As for the form of the lighthouse of Alexandria, it is often described by the mediaeval Arab authors, who strive to accentuate its splendour in the past (one of the "Seven Wonders of the World"); but it is hard to deduce what were its original dimensions, especially because the upper parts (a statue of Poseidon, on top, and the lantern) no longer existed in the Islamic period; some conclude that, during the major part of its history, after the birth of Islam, the lighthouse only reached two-thirds of its original height. Three attempts have been made to record its form and dimensions according to the description of the Muslim historians and geographers by H. Thiersch, Asín Palacios (who also discovered a description of the 7th/13th century) and E. Lévi-Provençal (who added a source drawing on the description of the geographer al-Bakrī in the 5th/11th century). The latter is the most recent and may also be summarised. The rectangular base of 320 cubits was surmounted by a narrower, octagonal section of 80 cubits, then by another narrower, rectangular section (until the discovery of this description it was considered to be cylindrical) of 50 cubits; no more of it was in existence.

Manār and *fanār* have given their names to some neighbouring quarters, e.g. in Istanbul (see Fanar[a]ki = Fener + köy, J. von Hammer-Purgstall, *Constantinopolis und der Bosporus*, 1822, 270, 279 and the Istanbul miniature of the 17th century, in B. Lewis, *Istanbul*, Norman, Oklahoma 1963, 99, on the left; see also *Fenerliler* in *İA*; however, the lighthouse—or rather the signalling tower, Kız Kulesi, at the en-

trance to the Bosporus—dates almost from our own times). With or without a direct connection with maritime illumination, some trading places, an important journal [see AL-MANĀR], etc., are called "lighthouse".

The modern age has witnessed several improvements and constructive efforts in the maritime field, including the building of lighthouses (e.g. in Morocco in 1865 [see MUḤAMMAD B. ᶜABD AL-RAḤMĀN]), of a more organised nature, in the necessary places.

(J. SADAN AND J. FRAENKEL)

AL-**MANĀR**, a journal of Muslim thought and doctrine which appeared in Cairo from 1898 to 1940. Its work was the counterpart of that of a printing-house, of the same name, which, besides its other publications, re-issued articles previously published in the review, such as the famous modern commentary on the Ḳurʾān (*Tafsīr al-Manār*). Without forming part of any particular school, the *Manār* subscribed to the reformist line of the *salafiyya* [*q.v.*]; this movement of cultural resistance towards colonial encroachment sought to restore to Islam its former power and to re-establish confidence in its traditional values, starting with the Arabic language, while employing modern techniques. It elaborated an apologetic which is still widely known and influential today.

The *Manār* was the personal work of one man, Sayyid Rashīd Riḍā [*q.v.*], born in 1865 near Tripoli (Lebanon). At the end of 1897, the same year as the death of Djamāl al-Dīn al-Afghānī [*q.v.*], with whom he had dreamed of collaborating, he travelled to Cairo in order to work in partnership with the *Imām* Muḥammad ᶜAbduh [*q.v.*]. Resolved, from the outset, to found a journal which he entitled the *Manār* ("The Beacon"), he published the first issue at the end of Shawwāl 1315/March 1898. He was, over the course of the years, to include in it a number of articles by al-Afghānī, Muḥammad ᶜAbduh, al-Kawākibī, Djamāl al-Dīn al-Ḳāsimī, and others. Scientific questions were tackled by Dr. Tawfīḳ Ṣidḳī. After the war of 1914-18, the *amīr* Shakīb Arslān sent him copy from Geneva. But the bulk of the material was drawn from him own tireless pen.

As H. Laoust writes in his article *Le réformisme orthodoxe des "Salafiya"*, "Its discreet expertise, its Islamic internationalism and the reliability of its general documentation, direct the *Manār* towards a liberal, cultured minority. The publication of the commentary of ᶜAbduh gives it the prestige of a great name. Its leading articles perfectly convey the progressive orthodox view, always well-argued and a balanced in form, of the major contemporary Islamo-Arab questions." In addition, its judicial discussions, its criticism of books and its news of the Muslim world made it into a link between correspondents, writing from Indonesia as well as from India, Syria, North Africa and even some European countries.

From being at the outset a weekly periodical numbering eight pages, later distributed at longer intervals (once a fortnight, then once a month), the journal very rapidly built up an annual total of 960 pages, a figure which declined during the war of 1914-18 and then rose back to 800 (ten issues per year). Each of its 35 volumes possesses either a detailed table of contents, or alphabetical indices, the form of which evolved over the years. The first 34 volumes covered a period of 37 years (1898-1935). As a result of the death of Rashīd Riḍā in 1935, the next volume (no. 35) had its ten issues spread over a period of six years (July 1935 - September 1940). The Muslim Brothers [see AL-IKHWĀN AL-MUSLIMŪN] had guaranteed its revival, but they preferred to concentrate their efforts on journals of their own. Initially printed in an edition of 1,500, then of 1,000, its circulation rose after the fifth volume with subscriptions from students. The figure of 300 subscribers henceforward guaranteed it a stable, basic readership. There were sometimes temporary difficulties in the distribution of the issues: these were later solved (cf. Turkish censorship in Syria in the first year of publication).

The collected corpus of the *Manār* provides a mine of information on the attitudes, the focuses of interest, the hopes and disappointments of reformists over a period of nearly forty years. It reflects the major events of the Muslim world seen from Cairo, as well as the personal development of Rashīd Riḍā. The judicial discussions have been separately reprinted in Beirut.

Being centred on the religious and social reform (*iṣlāḥ*, [*q.v.*]) of the Islamic *umma*, the *Manār* vindicates the *salafi* heritage of al-Afghānī and of ᶜAbduh, extolling a return to the Ḳurʾān and to the Sunna with a view to a purer *tawḥīd*. It is concerned with the unity of the community, and makes appeals for the surmounting of divisions. It opposes those Europeans who seek to efface the last vestiges of the Muslim law. It teaches the compatibility of Islam with science and with reason, in the best interests of mankind at all times and in all places. Following the expression of H. Laoust, "The canonical legitimacy of the sciences, the incorporation into the primitive conception of Islam of the most contemporary social and political ideas to which Muḥammad ᶜAbdūh had attached his name", have the right of free entry into the *Manār*. But Rashīd Riḍā remained cautious with regard to what was later to be called *al-tafsīr al-ᶜilmī* which seeks to discover in the Ḳurʾān all the modern sciences (cf. *Manār*, xxx, 514-16, on the *tafsīr* of Shaykh Ṭanṭāwī Djawharī [*q.v.* in Suppl.]).

Diverging from the Ḥanafism-Māturīdism of ᶜAbduh, the *Manār* turned towards Ḥanbalism. The journal's continual attacks on culpable practices, contrary to the *tawḥīd (mawlid, bidaᶜ*, etc.) are based on Ibn Taymiyya and certain of his *fatwās*. This paved the way for the reconcilation which was realised through the eulogy of Wahhābism and the transformation of the *Manār* publishing-house into an active centre of Wahhābī propaganda, beginning after the war of 1914-18 and especially following the conquest of the Ḥidjāz by Ibn Saᶜūd (1924-6). In the *Manār* there is insistence on the need for Muslim propaganda and for guidance (*al-daᶜwa wa 'l-irshād*). Many lines

are devoted to these topics, particularly to the idea of founding a seminary designed to train enthusiasts for this task. There are articles on Arab nationalism, on relations between Turks and Arabs and on the need to ensure for the Arabic language a land of freedom where it may flourish; Islam cannot in fact survive without it, especially at a time when the Turks are adopting a hostile linguistic policy. Similarly, the *Manār* enables us to follow the affair of the caliphate and the upheavals caused by its suppression by the Turks in 1924 [see KHILĀFA].

There are articles describing various personalities of the Muslim world, mostly Arab. Attitudes towards Shīᶜism are discussed. Polemic is directed as much against liberal Muslims (cf. that against the *Siyāsa*, which supported Ṭāhā Ḥusayn, etc.) as against al-Azhar. There is news relating to the pilgrimage, the construction of the Ḥidjāz railway, the wars in Tripolitania, in the Rīf, etc., as well as European colonial policy, particularly in regard to the Syrian question after 1918, the Coptic Congress in Asyut in 1911, the Muslim Congresses of Cairo, of Mecca, etc.; relations with the Christians, their doctrine, missions of Western Christians, Western writers sympathetic to Islam, studies on the greatness and decadence of nations, on pedagogy, on the role of the *ᶜulamāʾ* in the Muslim renaissance, etc. Literary and cultural Arab news items are not lacking. The judicial discussions tackle various difficulties, some of them relevant to the modern world, mentioning the position of Muḥammad ᶜAbduh (cf. for example the question of the Savings Bank). In short, the periodical contained material suitable for learned and illuminating monographs.

The commentary on the Ḳurʾān published from the third year onward was the work of Rashīd Riḍā; it included lengthy extracts from the commentary expounded by Muḥammad ᶜAbduh in evening lectures at al-Azhar, and the respective contributions of the two men were clearly distinguished. ᶜAbduh went no further than v. 125 of sūra IV *(al-Nisāʾ)* whereas Riḍā continued to the end of sūra XII, (*Yūsuf*, v. 107). Some of the positions adopted were daring: ᶜAbduh maintained that the texts of the Jewish Scriptures and of the Gospels were authentic and that only their interpretation had been false (Riḍā denied their authenticity); he claimed that the execution of the Muslim apostate was a measure dating from a time of war during which apostasy constituted desertion in the face of the enemy—today this is not the case and the apostate who does not attack Islam should not be put to death; it is for God to punish him. These examples and other show how ᶜAbduh sought to re-open the door of *idjtihād*. Reference to all these allusions are to be found in the studies mentioned in the bibliography.

Although a positive and very important work in the context of the modern Muslim awakening, it should be noted that the *Manār* sometimes confined itself to schematic views of an apologetic nature, simplifying in extreme fashion certain historical problems, notably those of the causative influences which helped to bring about the Renaissance of Europe. It also used its influence on behalf of the Gospel of Barnabas, "this undoubtedly apocryphal work" according to L. Massignon, edited for the first time in the 14th century and later in the 16th, sponsoring its translation into Arabic in 1908. This apologetic must have responded to a deeply-felt need, for it enjoyed, and still enjoys, enormous success, even if it contributed little to imparting a sense of objectivity and of history to those who studied it. Similarly, the *Manār* seems to have ignored a fundamental question: did the adoption of Western techniques not also entail a certain change of mentality, and if so, what? It thus remained silent on one of the key problems posed by the very existence of technological civilisation.

Bibliography: Rashīd Riḍā, *Taʾrīkh al-Ustādh al-Imām*, 3 vols., Cairo; the 35 volumes of the review al-*Manār* itself, as well as texts reprinted separately, such as *Fatāwā ʾl-Imām Muḥammad Rashīd Riḍā*, 6 vols., Beirut 1961-2, or from Cairo, *al-Manār* printing house: *Tafsīr al-Manār*, 12 vols.; *al-Manār wa ʾl-Azhar*, 1353/1934-5; *al-Khilāfa aw al-Imāma al-ᶜuẓmā*, 1341/1923. Numerous references to *al-Manār* articles are to be found in the notes accompaying the translation of the latter work by H. Laoust, under the title *Le califat dans la doctrine de Rashīd Riḍā*, Beirut 1938. The most important study of the subject is H. Laoust, *Le Réformisme orthodoxe des "Salafiya"*, in *REI* (1932), 175-224. See also J. Jomier, *Le Commentaire coranique du Manār*, Paris 1954; idem, *Les raisons de l'adhésion du Sayyed Rashīd Riḍā au nationalisme arabe*, in *Bulletin Inst. d'Egypte*, liii-liv, 53-61; idem, *L'Imam Mohammad ᶜAbdoh et la Caisse d'Épargne (1903-1904)*, in *Revue de l'Occident Musulman et de la Méditerranée* (1973), 99-107. For the influence of *al-Manār* on the *ᶜulamāʾ* of Algeria, see Ali Merad, *Le Réformisme musulman en Algérie de 1925 à 1940*, Paris 1967. (J. JOMIER)

MANĀRA, MANĀR (A.) minaret.

1. In the Islamic lands between the Maghrib and Afghanistan.

Unlike the other types of Islamic religious building, such as the mosque and the *madrasa*, the minaret is immediately and unambiguously recognisable for what it is. The reasons for this are worth investigating. It seems on the whole unrelated to its function of the *adhān* [*q.v.*] calling the faithful to prayer, which can be made quite adequately from the roof of the mosque or even from a house-top. During the lifetime of the Prophet, his Abyssinian slave Bilāl [*q.v.*], was responsible for making the call to prayer in this way. The practice continued for another generation, a fact which demonstrates that the minaret is not an essential part of Islamic ritual. To this day, certain Islamic communities, especially the most orthodox ones like the Wahhābīs in Arabia, avoid building minarets on the grounds that they are ostentatious and unnecessary. Others are content with the so-called "staircase" minarets which consist simply of a few broad external steps leading to a diminutive kiosk a little above roof level. These perpetuate a practice common in the first century of Islam. While such structures are obviously functional, it is very doubtful whether the same can be said for any minaret much more than 15 m. high. Without mechanical amplification, the human voice simply cannot make itself heard, especially in a noisy urban setting, from the top of such celebrated minarets as the Giralda in Seville [see ISHBĪLIYA: 2. Historic buildings] or the Ḳuṭb Minār [*q.v.*] in Dihlī.

If then, the ostensible function of the minaret is somewhat misleading, what other purposes might it have served? If the investigation confines itself in the first instance to the early minarets of the Islamic world —i.e. those predating 1000 A.D.—three possible approaches may be suggested. One is to examine the role of the very earliest minarets in their particular historical setting, on the theory that these examples laid down guidelines for the further development of the form. Another is to see what clues lie in the Arabic words used for minaret, and in their etymology. A third approach would focus on the forms of these early minarets and on their immediate sources, and would

thus involve the assumption that at least traces of the earlier functions associated with these forms survived into the Islamic period. It must be remembered, however, that throughout the mediaeval period, the rôle of the minaret oscillated between two polarities: as a sign of power and as an instrument for the *a<u>dh</u>ān*. These functions were not mutually exclusive.

It will be convenient to begin by studying the circumstances in which the earliest minarets were built. According to the literary evidence, the first minaret was erected in *ca.* 45/665 by the governor of ʿIrāḳ Ziyād b. Abīhi [*q.v.*]: a stone tower (*manāra*) was added to the mosque at Baṣra. Soon afterwards, orders were given by the caliph Muʿāwiya to the governor of Egypt, and the mosque of ʿAmr at Fusṭāṭ was given a quartet of *ṣawāmiʿ*, whilst these were also added to other mosques in Egypt. Although nothing remains of these structures, this literary evidence is important in showing that the impetus to build was not a matter of local initiative but came from the highest power in the land, the idea emanating from Syria, where minarets were presumably added to at least some Syrian mosques at this time. It is hard not to see religio-political motives at work here. Christian Syria, within which the Muslims formed a few small enclaves, was lavishly endowed with fine stone churches whose most striking external feature was a tall tower. At the top of these towers was struck the *simandron*—the Orthodox equivalent of the church bell—to summon worshippers for divine service. Some attribute the change in the *a<u>dh</u>ān* to ʿUmar, but Muʿāwiya, sensitively attuned as he was to the discrepancies between Christian and Muslim culture, and to the need to reconcile them wherever possible, can scarcely have failed to compare this Christian practice with its simpler Islamic equivalent. It would have been wholly in character for him to have decided to secure for the *a<u>dh</u>ān* a dignity and formality it had not hitherto possessed by giving it monumental expression. Typically, too, that expression borrowed a Christian form but imbued it with a new Muslim meaning. The slightly later case of the Dome of the Rock leaps to mind as the obvious parallel. The intrusion of political concerns into the forms of early Islamic religious architecture was to be a hallmark of the Umayyad period.

The arguments set out above are susceptible to more than one interpretation. They could support the theory that these early, essentially redundant, minarets were intended simply to demonstrate to the local non-Muslims that the new faith was no less capable than its rivals of devising monumental architecture to glorify itself. However, they could also imply the conclusion that from its very beginning the minaret was intended to function as an outward sign of Islam. A usage formulated in response to a hostile environment would then gradually have become canonical and would have persisted even when circumstances had overtaken the need for it. These two interpretations will be considered in more detail below in the context of the form of the earliest minarets.

The second possibly approach to the original function of the minaret is through the etymology of the words used in Arabic to describe this kind of building. It is perhaps significant that the three words most commonly used - *manāra, ṣawmaʿa* and *miʾ<u>dh</u>ana* - all arguably refer to quite separate functional aspects of the building. Thus the notion that the minaret served multiple functions is embedded in the Arabic language itself. These functions quite naturally generated appropriate terms for themselves. Whether the prevalence of a given term in a given geographical area reflects the predominance of one function over another is, however, doubtful.

By far the commonest of the three terms is *manār(a)*, the source via Turkish of English and French "minaret", lit. "place of fire" (*nār*), a word used in pre-Islamic Arabia to denote an elevated place from which signals of fire or smoke were made. Whence the frequent education of the minaret with the lighthouse [see preceding article MANĀR]; the cylindrical towers attached to Islamic fortresses along parts of the North African littoral, e.g. in Tunisia, not only served as beacons and lighthouses but were actually called *manāras*. One should, on the other hand, avoid any temptation to connect *manār(a)* with *nūr* "light" and to discern a basis for symbolic interpretation of the minaret as an emanation of divine light or as an image of spiritual illumination. The original term *manār(a)* soon lost its necessary connection with fire, and became used to designate signposts, boundary stones or markers, and watch-towers when no particular association with fire was intended. Hence there emerges that *manār(a)* came to involve the two distinct notions of fire and of a marker, neither of which, however, had a specific role in Islamic ritual. The lighting of a fire on the minaret of a mosque was an event of utmost rarity in early Islam (it is recorded as having occured in the case of the Manārat al-ʿArūs in the Damascus mosque), though it is self-evident that the minaret had a value as marker of the principal building of the Islamic community. It seems therefore safe to assume that, in the context of religious architecture, the association between the minaret and fire is irrelevant.

The second term frequently used to designate the minaret—indeed, it is the standard usage in North Africa—is *ṣawmaʿa*. The word means the cell in which a person (usually a monk) secludes himself, with the particular gloss that the cell has a slender pointed apex. Such cells were a regular feature of pre-Islamic Byzantine architecture; they were incorporated into the tall rectangular towers with which churches, monasteries and houses were furnished. Once again, however, as in the case of *manāra*, the etymology is apt to mislead—for while the basic meaning of *ṣawmaʿa* is indeed "hermitage", the word has come to designate, by a process of *pars pro toto*, the entire structure of which the cell was a small part. The specific connotation of *ṣawmaʿa* in the present context is perhaps a "sentry-box" minaret, and eventually a tall, rectangular minaret, rather than the minaret genre itself. For this reason, it is an entirely appropriate term for the minarets of North Africa. Moreover, unlike the word *manāra*, its connotations are religious, albeit with a Christian tinge. Possibly as a result of its association with the minaret, the word is also used more generally to mean "a higher place" or even "a high building", and in this less specific since its connection with *manāra* in the sense of signal tower or marker is plain. In North Africa, however, a distinction clearly exists, for *manāra* is used for signal towers and lighthouses. Appropriately enough in view of its Christian connotations, *ṣawmaʿa* has found a lodging in Europe, in the Spanish word *zoma* meaning "minaret".

It is a challenging reflection that the two Arabic words most frequently used to designate the minaret give no clue to the ritual function commonly associated with the building. Instead, they evoke respectively pre-Islamic and Christian associations. The term that does accurately render the ritual function of the building—*miʾ<u>dh</u>ana*—is, ironically enough, much rarer than the other two, suggesting, perhaps, that earlier "minarets"/*manāras* had functions not ex-

clusively ritual. It derives of course from *adhān*, hence literally "place from which the call to prayer is made", whose root further gives *mu'adhdhin* "muezzin, he who gives the call to prayer". Even this last has pre-Islamic connections, for in the Djāhiliyya the herald who made important announcements was known as the *mu'adhdhin*. Before leaving the problem of etymology, it may be worth noting that several other words occur sporadically in literary or epigraphic texts as synonyms for at least some of the meanings of *manāra*: *ʿalam/ʿalama* ("signpost", "boundary maker", "standing stone", "flag"), *mīl* (possibly derived from the Greek *miliarion*, "milestone") and *ʿasās*, "a place of watching", a term especially popular in the Maghrib. The mere mention of these words in the context of the foregoing discussion is enough to emphasise yet again that etymology is a somewhat treacherous guide in determining the function of the minaret. It can safely be asserted, however, that the review of Arabic terminology given above establishes that the minaret performed not one function but several in the mediaeval Islamic world. Whilst the rarer Arabic words for "minaret" may well reflect the function of the building in the particular context concerned, the most commonly employed word, *manāra*, was obviously a blanket term which does not readily lend itself to precise elucidation, unless the context offers further, more specific, clues.

The third possible approach to determining the function of the minaret in the early centuries of Islam is by way of morphology. The briefest survey of the formal characteristics of mediaeval minarets is enough to yield one very significant result: that virtually the whole body of surviving minarets belongs to one of two categories. One category comprises minarets with ample interior space; the other, minarets in which the interior space is reduced to the bare minimum required for a spiral staircase to ascend the structure. Minarets with external staircases obviously belong in neither category. Useful as this division is, it cannot shed light on the crucial first century of Islam. Any attempt to explain the function of the minaret by means of its form has to take some account of the earliest recorded minarets, even though none of these has survived. The interpretation placed on the tantalising brief literary accounts which refer to the earliest minarets is therefore crucial.

These accounts are unfortunately either ambivalent or too short to throw any light on the problem. For example, the historian al-Balādhurī refers to the minaret at Baṣra as a stone minaret. Since stone is specified and the rest of the mosque was of mud brick, it seems legitimate to conclude that the minaret was important enough to have special care taken over its construction. This, then, seems to be a fairly straightforward case. The same cannot be said for the minarets of the mosque of ʿAmr at Fusṭāṭ. The source here is the 9th/15th century author al-Maḳrīzī, who states that Muʿāwiya ordered the building of four *ṣawāmiʿ* (pl. of *ṣawmaʿa*) for the call to prayer, and that Maslama placed four *ṣawāmiʿ* in the corners of the mosque. Since this is not, in all probability, the first word for minaret that would have come naturally to the Mamlūk historian's mind, its use in this passage needs some explanation. It is possible that al-Maḳrīzī used it deliberately because it connoted to him tall, rectangular minarets of the Syrian or Maghribī type (very unlike those which he saw all around him in Egypt). His choice of word would in that case have reflected either his own or his source's precise knowledge of the form which these early Umayyad minarets took; or he may have been quoting an earlier text. Alternatively, he may have used the word *ṣawāmiʿ* with one of his other meanings in mind, such as a high place. In that case, the sense of the passage might be more accurately rendered by translating the key passage as "Maslama heightened the four corners of the Friday Mosque". Such an interpretation would find further support in the literary accounts dealing with the construction of the Damascus mosque.

The key point to bear in mind in a discussion of the Damascus minarets is that there is no evidence that they were the work of any early Muslim patron. Indeed, the geographer Ibn al-Faḳīh, writing at the opening of the 10th century A.D., states specifically that the minarets (*mi'dhana*) in the Damascus mosque "were originally watch towers in the Greek days, and belonged to the Church of John. When al-Walīd turned the whole area into a mosque, he left these in their old condition". Similarly, al-Masʿūdī writes that in this rebuilding "the *ṣawāmiʿ* were not changed, they serve for the *adhān* at the present day". Thus strictly speaking, there is no clear evidence even that these pre-Islamic towers were used for the call to prayer in Umayyad times, and one may especially doubt that they served this function before the reign of al-Walīd, when the Muslims shared the site of the future Great Mosque with the Christians. Nevertheless, the significant use of the word *ṣawāmiʿ* by the ʿIrāḳī al-Masʿūdī pinpoints the connection between Damascus and Fusṭāṭ, a connection which would make sense anyway because Damascus was Muʿāwiya's capital. Conversely, one might justifiably use the evidence of Fusṭāṭ to conclude that in all probability the corner towers at Damascus were indeed used for the *adhān* after the mosque had been built.

Reasonable grounds therefore exist for assuming that the corners of the mosque of ʿAmr at Fusṭāṭ looked very like those of the Damascus *temenos*. Such *ṣawāmiʿ* could be no more than abrupt excrescences at roof level, possibly articulated a little further by crenellations. They would indeed resemble Christian towers, but only in a somewhat stunted fashion. They could not aspire to dominate the skyline or indeed make any marked physical impact on the urban landscape. If this motive had loomed large in the mind of al-Walīd at the time that he was building the Damascus mosque, it would have been a simple process to heighten the existing corner towers accordingly. That he chose not to do so is clear evidence that the symbolic role of the minaret was not yet generally accepted. Indeed, the mosques of Baṣra and Fusṭāṭ are more prophetic of later developments, even though they were built earlier. At Baṣra, the minaret, whatever its form may have been, was clearly distinguished by its different material of construction, while at Fusṭāṭ the *ṣawāmiʿ* were solid up to roof level, necessitating access by ladders. While this detail reflects the early Islamic practice of delivering the *adhān* from the roof, it is also conceivable that such corner *ṣawāmiʿ* had an architectural function as buttresses for the whole building. Their location and strength in turn invites a symbolic interpretation of their function as cornerstones of the faith. The impact of their placing can be gauged from the statement of al-Maḳrīzī that, at the time of the dawn prayer, a muezzin was stationed at each *ṣawmaʿa* and that their combined *adhān* resounded like thunder through the silent city. It might fairly be said, then, that despite the probably rather truncated nature of their resemblance to Christian towers, the *ṣawāmiʿ* of the Mosque of ʿAmr did operate as markers of the mosque. This function was certainly performed more

effectively and elegantly by later minarets, but the crucial point is that it is already implicit in the earliest buildings of this genre.

As evidence of the relationship between the Christian towers of Syria and the early minaret, the earliest surviving Islamic monument, at Boṣrā [*q.v.*] in southern Syria, is often cited and certainly its minaret fits naturally into a long series of similar towers erected in pre-Islamic times as part of Christian churches, monasteries and houses, often with a defensive function. Yet, this Boṣrā minaret, notable for its bold projection from the otherwise regular perimeter wall of the mosque, a feature not explicable by e.g. any peculiarity of the site or structural consideration, is actually Mamlūk. The Umayyad *miʾd̲h̲ana*, according to recent research by Jonathan Bloom, is the staircase minaret along the west wall.

Hence already in the first Islamic century, the religious role of the minaret had been defined in essentials; later times were to bring refinements, but after this first century, the development of the minaret proceeded rather on the lines of variations in form and new secular functions.

For some time, the square form, already well established in Syria, continued to dominate in the Islamic world. Recent excavations have confirmed that the square substructure of the minaret of the Mosque of Sīdī ʿUḳba at al-Ḳayrawān in Tunisia is of Ag̲h̲labid date though some of the upper parts are later (thus weakening a once-popular theory that this minaret reflects the influences of the Pharos of Alexandria, which had a three-tier elevation, each tier smaller than the previous one), but it is quite possible that in its original form the minaret looked much as it does now. Lézine suggested that the lighthouse at Salakta was the formal model, but it is also possible that the Arab conquerors of North Africa, coming westwards as they did from Egypt, should have used the most celebrated tower of Egypt as a model for the minaret of the first mosque built in the newly-Islamised territory. In this mosque of al-Ḳayrawān, the minaret was placed opposite the *muṣallā*, and it was only a matter of time before the last refinement was added and the minaret aligned exactly with the *miḥrāb* [*q.v.*] (the Great Mosque at Sāmarrā is the earliest and best surviving example of this culminatory process). The substantial enclosed space of the al-Ḳayrawān minaret (base *ca.* 10m. square and height *ca.* 35m.) encouraged the possibility of provision of chambers within the minaret. For some reason, this was not done there, hence the minaret has inordinately thick walls; but later Mag̲h̲ribī and Andalusian minarets, such as the Almohad examples in Seville, Rabat and Marrakesh, employed such chambers and also gave them decorative vaults in stone or brick.

These three minarets of the later 6th/12th century mark the zenith of this genre in Western Islam, perpetuating the outer shell of pre-Islamic and early Islamic Syrian towers, and of the minaret at Cordoba, but they are much larger than their distant Syrian models (approaching 65m. in height) and display rich decoration on all four sides, with cusped, horseshoe or multifoil arches, often generating a lattice-work design, and also with single or paired windows on each storey. Eventually, too, the Andalusian minarets were to exert an influence on the campaniles of Spanish churches of the period—the wheel coming full circle, as it were, after these towers' Syrian Christian origins. So strong was the tradition of the tall, square-shafted minaret in the Mag̲h̲rib, that in the eastern Mag̲h̲rib it survived the coming of the Ottomans; and in Ottoman Tunis, a novel type of octagonal minaret, with each face richly tiled and the whole crowned by a projecting balcony and steepled pavilion, enjoyed special popularity.

An unexpected and distant by-product of the Syrian tradition is the Saharan or West African minaret. The Saharan type, often very high (e.g. the fairly recent example of the Walad D̲j̲alal at Zibane) has a marked batter to its walls—a feature which had occurred at al-Ḳayrawān but had not been exploited subsequently in the mediaeval period—and is crowned by an open-plan kiosk. In West African minarets, most of which date from the last four centuries (e.g. Timbuktu and Agadès), the latter is so pronounced that the minaret resembles a truncated cone, studded with projecting palm beams. These facilitate the constant repairs that such mud-brick structures require. Similar minarets are found as far north as the Mzāb region in Algeria.

The minarets of the Mag̲h̲rib and Andalusia form a school unique in the Islamic world for its fidelity to an imported model and for its innate conservatism, which maintained a broadly consistent form throughout a vast area for over a millennium. The history of the minaret in the rest of the Islamic world, sc. in Egypt and Turkey and in the area to the east of them, is somewhat more varied. It embraces a very wide range of forms, of alien influences, and of functions both secular and religious.

This wider canvas is immediately apparent in the immediately post-Umayyad minarets which survive in the eastern Islamic world. These are principally to be found in ʿIrāḳ. Possibly the earliest among them is the so-called Manārat al-Mud̲j̲īda, which departs from the norms of the first century by being a slender cylindrical structure of baked brick, with a winding interior stair and sparing external decoration in baked brick; hence it is prophetic of the minarets erected in Iran during the Sald̲j̲ūḳ period. Moreover, it is entirely freestanding, with no sign of there ever having been a building adjoining it. It lay strategically on the route between the ʿAbbāsid princely palace of al-Uk̲h̲ayḍir [see ARCHITECTURE and pl. XIV there] and Kūfa, hence may have had the funtion of a marker, with its peculiar form a reflection of watchtowers which apparently stood along the former Sāsānid *limes* against the Arabs in ʿIrāḳ.

The most celebrated of early ʿAbbāsid minarets are of course the helicoidal towers attached to the Great Mosque of Sāmarrā (234-7/848-52) and the mosque of Abū Dulaf (245-7/859-61) [see ARCHITECTURE and Pls. XVII-XVIII there]. Although their precise origin is a matter of dispute, the question of a classical or Christian source does not arise. Their forms are deeply rooted in ancient Near Eastern architecture. In both cases, a square base carries an external ramp which spirals upwards, at first gently but then with increasing steepness, around a solid central cylinder. In the case of the minaret at Sāmarrā (the *malwiyya*) the ramp ends after five complete revolutions at an arcaded kiosk. A similar aedicule probably crowned the minaret of the Abū Dulaf mosque after the ramp had completed four revolutions. The Sāmarrā minaret is therefore substantially larger, and with a height of 53m. is indeed one of the highest minarets in the Islamic world. As befits its importance, the minaret has a new and imposing location. It is placed some 30m. outside the mosque and is precisely on the axis of the *miḥrāb*. By this means, its integration with the mosque and its liturgical function in relationship to the rest of the building is adequately stressed, while its isolation is sufficiently marked for the minaret to invite attention as a separate structure. The practice of

placing the minaret on the *miḥrāb* axis was copied throughout the Islamic world.

There seem to be two possible origins for this bizarre helicoidal form for a minaret. Firstly, an Iranian one. There survives at Fīrūzābād in Fārs, the first capital of the Sāsānids, a square-shafted tower with the remains of an external ramp winding round it (called a *tirbāl* by the Arabs), and this monument has been interpreted as a Zoroastrian one, which had a fire burning at its summit; and we have noted the Arabs' readiness to take over architectural forms sanctified by earlier faiths. Secondly, there is the ancient Mesopotamian form of the ziggurat or tower-temple. Whilst most of these had stepped elevations made up of superimposed squares of decreasing size, a few had a square base which carried a huge central cylinder encircled by a rising ramp; a four-storeyed building of this type has been excavated at Khorsābād [*q.v.*] in northern ʿIrāḳ. To have adopted either of these types as a basis for minarets would have accorded with the anti-Syrian attitudes of the ʿAbbāsids. In the event, however, the *malwiyya* form seems to have been too eccentric to serve satisfactorily as a minaret, and it remained virtually without progeny.

The sole important descendant of the ʿIrāḳī *malwiyya*, specifically that of the Mosque of Abū Dulaf, was indeed the minaret of the mosque built by a servant of the ʿAbbāsids in ʿIrāḳ, Aḥmad b. Ṭūlūn, in Egypt (263-5/876-9) [see ARCHITECTURE and Pls. XXI-XXIV there]. Unfortunately, the present minaret is a reconstruction of the late 7th/13th early 8th/14th century, but earlier historians agree that its original form was spiral.

But these spiral minarets, though fascinating, represent a by-way in the history of the minaret. In the eastern Islamic world, the dominating tradition was henceforth to be that of Iran, where an entirely different form, that of the lofty, cylinder type, developed; this obviously owed nothing to Syria, but might well have owed something to the regions on Iran's northern and eastern fringes, sc. India, Central Asia and even China (E. Schroeder speculated that the pillar form is an immemorial symbol of "the axis of the universe, and the direct way to Heaven"). Even so, such fragmentary evidence as survives suggest that the very earliest Iranian minarets, e.g. at Dāmghān and Sīrāf, followed the Umayyad square-towered form, but judging by the minaret of the Nāyin mosque, which has a square, ground-level format surmounted by an octagonal shaft merging into a tapering cylinder, this form was soon modified. The Nāyin minaret seems to be pre-Saldjūḳ, and the literary evidence confirms that, by the 4th/10th century, extremely tall minarets were a feature of Iranian towns.

The tally of surviving 5th/11th and 6th/12th century buildings in Iran shows that this was a time of unprecedented building activity, with mosques being, like *madrasas* [*q.v.*], expressions of official Saldjūḳ patronage often executed by their *amīrs* (as at e.g. the mosques of Ḳazwīn and Burudjird). These soaring Saldjūḳ minarets—often around 30m. high, with a pronounced taper which accentuates their height, internal stairways, and lavish external brick geometric or calligraphic decoration contrasting with the plainness of the mosque walls—are of such assurance and completeness in their form that a previous period of development must surely be postulated. Within this context of Saldjūḳ patronage, one notes that the rich decoration of such minarets testified to its patron's munificence. Moreover, as an architectural project it was substantially smaller in scope—despite its ostentation—than a mosque. This would obviously recommend it to less wealthy patrons. That these minarets did not necessarily have a straightforward liturgical function is suggested by the case of 6th/12th century Iṣfahān. Given that it is only the Friday mosque that according to custom (not dogma) requires a minaret, it is remarkable to note that this city, one of the Saldjūḳ capitals of Iran, had over a score of minarets in this period. In nearly every case, the mosque for which the minaret was originally intended has vanished. It is tempting to speculate that these mosques were very much simpler and humbler structures which had earlier not had minarets. One may justifiable assume that some evidence besides the minarets themselves would have remained if these minarets had been built contemporaneously with their adjoining mosques as integrated building projects.

The case of the mausoleum traditionally associated with the Sāmānid Ismāʿīl b. Aḥmad at Bukhārā shows that by *ca.* 900 A.D. the effectiveness of brick decoration as a mantle for a building, one of relatively small surface area and therefore cheap, had been discovered, and was now transposed to the minaret (overall brick decoration on contemporary tomb towers, with their much larger diameters, occurs only on smaller buildings of that genre). The cylindrical Iranian minaret generated a surprising variety of forms, mostly in the 6th/12th century, with variations in the proportion of the plinth, octagonal or square, and the cylindrical shaft; two or three tiers of tapering cylinders (e.g. at Ziyār near Iṣfahān and at Djam in Ghūr in central Afghanistan); staircases might revolve round a central column or be built into the thickness of the exterior wall and carried on small vaults. Paired minarets probably date from this period, as a means of lending extra importance to the entrance gate of a building (e.g. at Ardistān and Nakhčiwān), eventually to be brought into the mosque proper in order to flank the entrance to the *muṣallā*. There seems to have been no consistent practice governing the location of single minarets within the mosque. When the minaret was erected as an integral component of the mosque, provision was often made for it to be entered not at ground level but from the roof of the mosque. The otherwise puzzling existence of such doorways comparatively high up the shaft of minarets which are now free-standing are clear evidence that they were originally intended to be part of a mosque.

A few minarets of this period raise searching problems of function. Some are located along major routes or at the edge of the desert (Khusrawgird; Ziyār; Mīl-i Nādirī), which would lend support to the theory that they served, no doubt *inter alia*, as signposts. Since much caravan travel was by night, a lamp at the top of a minaret would allow the building to serve as a landlocked lighthouse. A chance literary reference establishes that in 581/1185 the practice of placing a lamp at the top of a minaret was sufficiently familiar in Khurāsān to occasion no comment. Perhaps the most enigmatic, as well as the most splendid, minaret of the period is that of Djam, with a height of *ca.* 60m. unprecedented among Iranian minarets, and its main lower shaft principally decorated by a whole Ḳurʾānic sūra (XIX, *Maryam*) plus other, mainly historical, inscriptions, lauding the achievements of the Ghūrid sultan Ghiyath al-Dīn Muḥammad b. Sām [see GHŪRIDS]; clearly, there is a motive here of prestige and victoriousness, with the Ḳurʾānic text perhaps emphasising the Islamic faith in a land which had not long emerged from paganism.

In later periods, the Iranian minaret never recovered the importance it had had under the Saldjūḳs, but even so, new uses and new types of

decoration were found for it. In Il-Khānid times, the device of paired minarets flanking an important *īwān* [*q.v.*]—usually the entrance to a building—was enthusiastically employed (Abarḳūh, Ashtardjān, Ḳarābāghlar and two buildings in Iṣfahān). There was a new emphasis on lavishly-applied tilework, and this was a crucial factor in a change of emphasis, the deliberate highlighting of the lower stages of the minaret. Under the Tīmūrids, the separateness of the minaret was stressed by the technique of enveloping the shaft with a lozenge grid in brick whose interstices were each filled with a medallion of high-quality tilework (e.g. the minarets of the Masdjid-i Shāh and the Mosque of Gawhar Shād, both in Mashhad). In Ṣafawid times, the topmost storey of the minaret was standardised in the form of a tapering shallow-domed cylinder which, like the rest of the minaret, was entirely sheathed in glazed tilework, with, occasionally, much of the shaft gilded (e.g. at the shrines of Ḳum and Mashhad). Under the Ḳādjārs, architects signalled the increasingly secular function of the minaret by using it to punctuate entrance portals to bazaars (Yazd), towns (Ḳazwīn, Simnān) and places (Ṭihrān); minarets, formerly single or in pairs, now proliferated and became trivial.

The influence of the Saldjūḳ minaret is clearly discernable in Muslim India, carried thither by the Ghūrids and their epigoni; see below, 2. India.

There remains to examine the architectural genre of the minaret in Egypt and Turkey, two areas where it enjoyed great popularity. Turkey has had a distinguished though shorter tradition of minaret construction than Egypt, beginning with the very numerous minarets erected by the Saldjūḳs of Rum, in which we find a use of paired portal minarets, of massive strength, all of brick in their upper sections, contrasting with the ashlar stone façades below, all of this showing their ultimate Iranian origins.

Rather more individual, perhaps, was the Anatolian interpretation of what had long been a standard device of Islamic architects, namely employing a single minaret as an integral part of a mosque deserving special attention in its own right. The novelty lay in reducing the surface area of the mosque and thereby giving the minaret much more prominence. Nowhere in the Islamic world is the familiar silhouette of a compact mosque with a low dome and cylindrical minaret encountered as regularly as in Turkey. This is a schema which has attained well-nigh symbolic status, and was in Anatolia extended to *madrasas* and *ʿimārets*. Their sturdiness and their location at a corner of the building lends these minarets the air of a bastion, well exemplified in the ʿAlāʾ al-Dīn mosques at Konya and Niğde or the Ulu Cami at Divriği (all 7th/13th century) and, in the following century or so, in the mosques of ʿĪsā Bey at Selçuk 777/1375) or Ilyās Bey at Miletus (806/1404). Such buildings kept the tradition alive and ensured that it became canonical under the Ottomans from the time of their earliest buildings at Iznik (Yeşil Cami) and Bursa (Yeşil Cami and the Hüdavendigâr mosque among others). In the mature Ottoman masterpieces of Istanbul, two or more minarets are standard equipment for mosque complexes; but in the provinces the old tradition continued unchanged, as mosques in Elbistan, Diyarbakir, Gebze and elsewhere testify.

Although a variety of forms were used in pre-Ottoman Anatolia, these minarets give little hint of the unique role which the minaret was to play in Ottoman architecture, one which became largely fixed, with its slender and elegant form, like a sharpened pencil, after the capture of Istanbul. In the Ottoman minaret, the main cylindrical shaft rises from a square or polygonal base and is punctuated by one, two or even three circular balconies carried on *muḳarnas* [*q.v.*] vaulting, the whole being capped by elongated conical roofs, sheathed in lead and ending in finials. Muezzins on each balcony would deliver the call to prayer in the form of a canon; and the acoustic impact of these many voices would of course be significantly intensified in a mosque with multiple minarets, the voices interweaving in different sonorities depending on the height and distance separating the muezzins. Whether such musical refinements were entirely audible is another matter.

Perhaps the most celebrated feature of Ottoman minarets was not their outward form but their use in pairs, quartets or sextets as a device to proclaim the royal status of the building—for it seems that only a reigning sultan could erect more than one minaret per mosque. There can be little doubt that these mosques represent the most sustained attempt in all of Islamic architecture to reconcile the divergent aims of royal and religious iconography. These gigantic, needle-sharp lances clustered protectively, like a guard of honour, around the royal dome, have a distinctly aggressive and ceremonial impact, largely dependent on their almost unprecedented proportions; the pair of minarets flanking the Süleymaniye dome are each some 70m. high. Such minarets function simultaneously to enrich the exterior silhouette of the mosque—in the case just cited, for instance, the outer minarets flanking the principal façade of the building are shorter than those flanking the dome. Thus a pyramidal effect is achieved which is still further emphasised by the choice of a sloping site. The gently rolling skyline of Istanbul, with its rural views, was ideally suited for this kind of display, and the political significance of the city as the Ottoman capital may partly have motivated this new use of the minaret as a component of urban design on a mammoth scale. Such minarets were also used in a more symbolic way as markers of the courtyard of the *muṣallā*, or of the entire mosque, staking out the boundaries of the religious domain within a secular environment. Dome chamber and minaret alike thus acquire extra significance as symbols of the faith. This development was not new, but only in Ottoman architecture is it pursued with such singlemindedness. It is therefore entirely appropriate that these minarets should, like the domes over the *miḥrāb*, also bear the emblem of the crescent, supported on a series of superposed orbs.

If conservatism is the hallmark of the Ottoman minaret, its counterpart in Egypt is above all varied. This variety is all the more remarkable because the Egyptian school is to all intents and purposes concentrated on the buildings of Cairo, though it is represented in some small measure in the provincial towns of Egypt and in the architecture of the Mamlūks in Syria and the Levant. Unfortunately, very few surviving pre-Mamlūk minarets have escaped extensive alternation. Moreover, the most important examples to fall within this category are not metropolitan work at all but are found in various provincial towns—Esna, Luxor, Aswan and nearby Shellal, all dating from the late 5th/11th century and already displaying the characteristic Egyptian division of the minaret into separately conceived superimposed tiers, though Ḥidjāzī influences are at work also.

Interesting as these minarets are stylistically, they are insignificant in comparison with the great corner towers marking the main façade of the Mosque of al-Ḥākim in Cairo, built between 380/990 and 401/1010. With their massive—but later—embattled

square bases, whose taper, like that of an ancient Egyptian pylon, is so pronounced that it is almost a slope, they have all the appearance of bastions. That this military quality was to some degree present in the original layout is shown by the façade of the Mahdiyya mosque, built in Tunisia early in the previous century, which too had the corners of its main façade heavily emphasised by bastions which matched the main entrace of the mosque in projecting some 3m. from it and moreover projected a full 7m. from the lateral walls. In its original layout, the Ḥākim mosque maintained the consonance between corner projections and portal already established at Mahdiyya, though the projection was twice as marked. Very soon, however—by 401/1010—each minaret was enclosed by a huge salient some 17m. square which allotted it a revolutionary and portentous role. Finally, in 480/1087, Badr al-D̲j̲amālī enlarged the northern salient to gigantic proportions—some 25m. square. He thereby not only incorporated the principal façade of the mosque into the expanded fortifications of the city—a clear indication of the essentially military flavour of this mosque—but managed to make the minarets play a major part in this process without noticeable strain or incongruity.

Since the minarets of al-Ḥākim survive only in an altered state, it is not easy to see where they belong in the corpus of Egyptian minarets. This is all the more regrettable in view of the once-vigorous controversy over the role of the Pharos of Alexandria, which stood intact until it was partially ruined by an earthquake in 180/796-7, in the evolution of the Egyptian minaret. *Pace* Creswell, who argued against any connection between the two building types, it can scarcely be overlooked that the surviving Egyptian minarets which date before 1100 all attest a pronounced multipartite division of the elevation. Since this feature is absent alike in the Syrian, Iranian and Mag̲h̲ribī traditions (with two significant exceptions), some rationale for this unusual feature must be proposed, and a probability here seems to be the Pharos, with the Egyptian minarets as free variations on the Pharos theme. (One should note that the Pharos was repeatedly rebuilt by the Muslims until its final disappearance between the early 7th/13th and the mid-8th/14th century. Indeed, as Butler noted, the account of ʿAbd al-Laṭīf indicates that in *ca.* 1200 the Pharos comprised successively square, octagonal and round storeys and was crowned by a lantern or small cupola. It may well be, therefore, that this semi-Islamic Pharos rather than the original buiding was the means of establishing the tradition of the multi-staged minaret in Egypt.)

But if the Pharos did, in one or other of its successive guises, exert some influence on early Egyptian minarets, this does not seem to have been continuous. In the early versions of certain towers, the emphasis was on a tall, square shaft of Syrian type, which may be very plain (mausolea of Abu 'l-G̲h̲aḍanfar, 552/1157, and Fāṭima K̲h̲ātūn) or richly decorated (minaret in *madrasa* of Sultan al-Nāṣir Muḥammad), with the so-called *mabk̲h̲ara* (because it resembled the top of an incense burner), a two-storey octagonal pavilion, crowning it. Subsequently, the *mabk̲h̲ara* was accorded more emphasis, and its interior divisions made more marked, with differing ground plans, octagonal and circular, and decorative patterns.

In later times, the principle persisted of altering the ratio of the component tiers. The main shaft was reduced to the point where it was lost in the surrounding walls of the mosque, leaving the visible part of the minaret as an octagonal shaft with a cylindrical superstructure (minarets of S̲h̲ayk̲h̲ūn and Sarg̲h̲atmis̲h̲, both mid-8th/14th century). The transitions between the tiers were often marked by multiple balconies on *muḳarnas* corbelling, recalling Ottoman minarets, and these were indeed used to secure the same antiphonal effects in the chanting of the *ad̲h̲ān* as in Turkey. There was an emphasis on absolute height, with the southeastern corner minaret of the Sultan Ḥasan mosque soaring to 90m., the tallest in Cairo. The *mabk̲h̲ara* was now replaced by the *ḳulla*, so-called because of its resemblance to the upper half of the typical Egyptian water container, pear-shaped and with at least two bronze finials whose crescents are orientated towards the *ḳibla*. In the final decades of Mamlūk rule, the minaret is crowned by a pair of square-plan pavilions crowned by a cluster of *ḳullas* (funerary complex of Ḳānṣūh al-G̲h̲ūrī).

Finally, the popularity of the minaret in Mamlūk architecture invites explanation. In the 8th/14th and 9th/15th centuries, the main building type in Cairo appears to have been the composite ensemble. Its constituent parts could vary from one ensemble to another, but their main functional elements were the mosque, *madrasa*, *k̲h̲ānḳāh* and mausoleum. Similar complexes had already become popular in Sald̲j̲ūḳ Anatolia. In Egypt, however, unlike Anatolia, the minaret was from the first regarded as an integral part of such complexes. Whether this was entirely for functional reasons may be doubted. In the dense urban fabric of Cairo, nothing could more appropriately designate such a complex from afar than a minaret; and in this sense, it could be regarded as a public affirmation of its patron's munificence. Their placing varied. Sometimes they were located at the two corners of the principal façade, or flanking a gateway (e.g. Bāb Zuwayla); these were traditional locations. But many of the locations were unusual or even unprecedented. The *madrasa* of al-Ṣāliḥ has a single minaret above the central porch of the façade, and the two minarets in the mosque of al-Nāṣir Muḥammad on the citadel are at the corner of the *ḳibla* wall and to one side of the main entrance. The latter location recurs in the funerary complex of Ḳāʾit Bay. In this unpredictable positioning of the minaret, one may recognise similar concerns to those of Ottoman architects. Now the minaret was, it seems, valued less for its actual or symbolic religious function and more for its role as a marker or articulating feature, both within the complex to which it belonged and more broadly within the cityscape itself. Once again, then, the flexibility of the forms developed by Islamic architects asserted itself.

2. In India.

The *manāra* in India, commonly referred to by the *imāla* form *mīnār*, may be either (a) free-standing or (b) an integral part of a mosque or other building. In the second category, it is convenient to distinguish the (actually or potentially) functional from the non-functional forms. With rare exceptions, in some regional styles [see HIND. vii. Architecture] no form of the *mīnār* is used at all; Djawnpur; Mālwā; the Dihli sultanates and the pre-Mughal Pandjāb; Sind; Kashmīr; the ʿImād Shāhī, Niẓām Shāhī and Barīd Shāhī sultanates in the Deccan. (It might be objected that the non-functional forms do not properly qualify to be called *mīnārs* at all; but these forms, with others to be mentioned below, are certainly derived from *mīnār* prototypes, and there is no other recognised term by which they may conveniently be described. The term *mīnār* is regularly applied to towers of many types and functions.)

(a) The free-standing *mīnār* first appears in India as an adjunct to the earliest mosque ("Ḳuwwat al-Islām") in Dihlī, standing outside the original mosque compound, commenced by Ḳuṭb al-Dīn Aybak (whence, possibly, its sobriquet of "Ḳuṭb Mīnār" [*q.v.*]) about 595/1199, and completed before 634/1236 by Iltutmish [*q.v.*] to a height of some 230 feet. The taper of its profile is very pronounced, nearly 5° from the vertical and it was divided into four stages by encircling balconies supported by *muḳarnas* corbels; the three lower stages show different designs of vertical fluting, the flutes on the lowest stage being alternately rounded and angular, those in the second all rounded, those in the third all angular (the original fourth stage was rebuilt into two storeys in 770/1368 under Fīrūz Shāh the Tughluḳid). The occurrence of the Ḳurʾān, LXII, 9-10, in an inscription on the second storey affords presumptive evidence for the use of the *mīnār* as a *miʾdhana*. The assertions s.v. DIHLĪ (II, 260) and HIND (III, 441) above, that the fluted storeys develop the polygonal outline of the *mīnārs* of Ghazna, taken as the prototype of the Dihlī *mīnār*, now need modification in the light of later research: A. Hutt, in *Three minarets in the Kirman region*, in *JRAS* (1970), 172-80, shows that the section of the base of the minaret of the Masdjid-i Djāmiʿ of Zarand shows precisely the same disposition of alternate rounded and angular flutes; this is therefore a more exact exemplar for the Ḳuṭb Mīnār than the *mīnārs* at Ghazna, whose section is stellate, based on two interlaced squares. A *mīnār* in the Sīstān region, described by K. Fischer in *Afghanistan*, xxii/3-4 (1970), 91-107, of similar form, suggests a nearer prototype on the probable line of transmission to India. (There is thus now even less need to cite the form of the Doddabasappa temple in Dambal, Dharwar district, as a possible prototype of the Ḳuṭb Mīnār plan, as has been advocated by some Hindū enthusiasts.) The characteristic taper of the Kirmān examples, and of the minaret of Djām in Afghānistān, is also closer to that of the Ḳuṭb Mīnār than are the Ghazna examples. These details are emphasised here because of their persistence in certain aspects of mosque architecture, described under (b) below. Other free-standing *mīnārs* stand or stood at Kōʾil (ʿĀlīgarh) (inscr. 652/1254; erected by Balban as governor to commemorate victories of the sultan Nāṣir al-Dīn Maḥmūd; tapering with square base and external galleries supported by cornices, with internal spiral stair, but demolished in 1862 without adequate record; Bayānā, cylindrical with slight entasis but unfinished, in city near Ukhā mandir and Ukhā masdjid, 9th/15th century, and tall *mīnār* in hilltop fort, tapered with corbelled balcony, inscr. 871/1466 (?), possibly with a double staircase (entrance blocked on my visit in 1972); Dawlatābād, "Čānd Mīnār" in inner city, *ca.* 849/1445, three encircling galleries supported by elaborate brackets, similar profile to *mīnārs* of *madrasa* in Bīdar, see below; Bīdar town, "Čawbāra", low cylindrical tower at crossing of main thoroughfares, early 9th/15th century; Čhoṭā Paṇḍuʾā Bengal: massive *mīnār* 50m. from Bar̄ī masdjid, early 8th/14th century, five diminishing tiers resembling half-drawn-out telescope, lowest three fluted; Gawr̄: Fērōz Mīnār, *ca.* 895/1490, no taper, polygonal section. Both Hiran *mīnār* at Fatḥpur Sīkrī and "Nīm safāʾī" *mīnār* at old Māldā, Bengal, tapered with stone projections resembling elephant tusks (on which to display heads of rebels?), Mughal, late 10th/16th century; Dihlī "Čōr Mīnār", early 9th/15th century, many holes for same purpose; Shaykhūpūra, Pandjāb, Hiran Mīnār, 30m., tapering 1044/1635, popularly sometimes supposed to commemorate Djahāngīr's favourite elephant, but often attributed to Dārā Shukōh. Finally, the Kōs Mīnārs of the early Mughal period, solid towers of similar profile to the Ḳuṭb Mīnār but only 6-8 m. high, were set at intervals of a *kōs* [see MIṢĀHA. 2. India] along the major thoroughfares. Many purposes are involved in the above: *miʾdhana*; observation post to command dead ground; possibly, following Hindū examples, "victory tower"; other commemoration; platform for shooting or observation game; execution displays; distance markers. The purposes are frequently combined.

(b) *Mīnārs* attached to a mosque or other building, however, are provided primarily as *miʾdhanas*, although since they are almost always multiplied symmetrically, they obviously have also an important aesthetic function (the single *mīnār* in the south-east corner of the courtyard of the Bahmanī Ék mīnār kī masdjid at Rāyčur [*q.v.*] is a striking exception). Only in Gudjarāt under the Aḥmad Shāhī

sultanate, and in Burhānpur in Khāndēsh, are paired functional *mīnārs* used regularly before the Mughal period; here they are cylindrical, their internal staircases opening on to one or more encircling balconies supported on heavy corbels as well as to the mosque roof, and are capped by conical roofs with no suggestion of an open turret. The earliest Aḥmad Shāhī examples flank the central arch of the *līwān*, although later they may be placed at the north and south ends of the façade. The latest mosques of the Aḥmad Shāhī period, e.g. Rānī Sabarī's mosque and the Īsānpur one, have solid pseudo-*mīnārs* at the ends of the façade.

This sudden reintroduction of the *miʾdhana-mīnār*, with an immediate secondary aesthetic function, is not fully explained. Gudjarāt mosques in Dihlī Sultanate times such as Hilāl Khān's one at Dhōlkā, the Djāmiʿ mosque at Cambay, have only solid conical or cylindrical pillars over the parapet flanking the central bay of the *līwān*; but earlier Dihlī Sultanate examples outside Gudjarāt may show the connection with the Ḳuṭb Mīnār; e.g. the Aṛhāʾī din ká djompṛā mosque at Adjmēr carries two cylindrical turrets, solid and some 2m. tall, over the *maḳṣūra* arch, with vertical flutes alternately circular and angular exactly as on the lowest storey of the Ḳuṭb Mīnār (similar fluting occurs on the external corner buttresses of the mosque courtyard). In Dihlī itself, the Ḳuṭb Mīnār profile is perpetuated in the solid buttresses which flank mosque gateways, the central bay of the *līwān* façade, the external *miḥrāb*-projection, and external corners of courtyards, in the Tughluḳ and Lōdī periods; these show at least one band of Ḳuṭb Mīnār-like fluting, and their profile is carried up above parapet level to end in a *guldasta*; especially when flanking the central propylon-like arch of the *līwān* façade, these suggest paired *miʾdhana* towers, and may thus have a psychological purpose. This would seem to be the explanation for many of the examples which follow. In the Bahmanī Sultanate, the *mīnār* is not used regularly with mosques; that at Rāyčūr mentioned above is an exception, and the Čānd Mīnār at Dawlatābād is doubtless sited with the old Djāmiʿ mosque in mind although physically separated by some 100 metres—doubtless also to enable a view of broken ground to the east. The profile of both resembles that of the remaining one *mīnār* of two at the ends of the entrance façade of the *madrasa* of Maḥmūd Gāwān [*q.v.*] at Bīdar, inscr. 877/1472, although the balconies of the latter are carried out from the main shaft in a curvilinear form rather than being supported on brackets in the usual Indian manner. All are crowned with a dome-shaped cap, with no open room at the top. The old brick *mīnārs* attached to the courtyard of the much later Makkā Masdjid at Bīdjāpur, also of Bahmanī date, have lost their upper parts; their balconies seem to have been supported on wooden brackets. Other Bahmanī *mīnārs*, all of similar profile, are the pairs flanking the gateways of the *dargāh* of Shaykh Sirādj al-Dīn Djunaydī and the so-called house of Gēsū Dārāz, both in Gulbargā, and those flanking both the outer and inner gateways of the *dargāh* at Āland; but these are crowned with foliated domes of three-quarter sphere shape, as in the ʿĀdil Shāhī and Ḳuṭb Shāhī styles, and those of the outer gateway have moreover an encircling band of open arches in the Ḳuṭb Shāhī manner. Of possible relevance to the designs in north India referred to above are the *guldastas* which stand at the corners of the parapets of Bahmanī tombs, starting with the very earliest at Gulbargā: these are fluted, although fluting does not extend to the *mīnārs*. The *mīnār* proper is not used at all in the Bahmanīs' successor states. The skylines of mosques and tombs of the ʿĀdil Shāhīs in Bīdjāpur and elsewhere are so liberally provided with vertical pillars as to resemble a burgeoning asparagus bed, but these are at best pseudo-*mīnārs* which may psychologically suggest the *miʾdhana-mīnār* but whose real function is merely artistic. Turrets, *čhatrīs* and *guldastas* are also freely used, but the relation between these forms cannot be pursued here. The *mīnār*-like structures of the Ḳuṭb Shāhīs of Ḥaydarābād and Golkonḍā, similarly, are usually solid shafts, cylindrical, with characteristic encircling arcaded galleries, although in a late offshoot of the Ḳuṭb Shāhī style in the Djāmiʿ mosque of Srīrangapaṭṭana [*q.v.*] ("Seringapatam") an internal staircase is provided. That the bases of the pseudo-*mīnārs* of the Tōlī Masdjid (1082/1671) outside Ḥaydarābād city stand in pot-shaped bases should not be taken as representing any connexion with ancient Indian pillars.

Under the Mughals, the functional *mīnār* returns to north India; this is possibly inspired by Gudjarāt examples, since other typically Gudjarātī features are introduced into Mughal architecture after the conquest of Gudjarāt in 980/1573. The first example is that of the four *mīnārs* at the corners of the gateway of Akbar's tomb at Sikandra, completed in the early years of the 11th/17th century: tapering, white marble (the lowest stage fluted), two intermediate balconies supported on corbel brackets, topped by an open *čhatrī* with slender columns. With some variation in the patterns of the intermediate balconies, and of the material, section and decoration of the shaft, this type is the model for the major later *mīnārs*: at Djahāngīr's tomb in Lāhawr; the Djāmiʿ mosque (Shāhdjahānābād) Dihlī; the Tādj Maḥall at Āgrā (but not the Djāmiʿ mosque); the mosque of Wazīr Khān at Lāhawr; the Bādshāhī mosque of Lāhawr, which has also short *mīnār*-like corner turrets; the tomb of Rābiʿa Dawrānī ("Bībī kā maḳbara") at Awrangābād; Awrangzīb's mosques in Banāras, Mathurā, etc.; short corner staircased *mīnārs* also at the tomb of Iʿtimād al-Dawla at Āgrā, little more than turrets, seem to be the model for engaged corner turrets at e.g. the tomb of Safdar Djang at Dihlī, and Mughal mosques in Bengal e.g. Dhakā, Murshidābād, etc. Since there is no necessity for the *ādhān* at tombs, many of these Mughal *mīnārs* are thus also principally decorative.

3. In East Africa, the word (Swahili, *mnara*, pl. *minara*), has three connotations:

(1) Before the late 19th century minarets were of extreme rarity. The Great Mosque of Kilwa in Tanzania, the largest of all, did not have one. The only examples are the Great Mosque (1238) and the Mosque of Arbaʿa Rukūn (1268) at Mogadishu, and the Friday Mosque at Merca (1609), all in Somalia and dated by inscriptions; a late 14th century mosque at Ras Mkumbuu, Pemba Island; and the Malindi Mosque in Zanzibar Town built in 1831, of which the minaret is reputedly of greater age. Many mediaeval mosques, however, possess an external staircase, sometimes part of the structure of the ablutions, from which the call to prayer was given. The earliest such example is at Kaole, near Bagamoyo, Tanzania, while the Great Mosque at Kilwa, Tanzania, has two such staircases outside the mosque proper in its north and south courts respectively.

(2) The word is also used, both in Arabic and Swahili, for the pillar tombs which are an architectural peculiarity of the eastern African coast. Situated generally on the north of *ḳibla* side—for Mecca lies almost due north of the eastern African coast—these tombs are formed by a roofless square or rectangular walled structure, providing space for two up to five or six burials, the distinguishing pillar being cylindrical or tapered, square, hexagonal or octagonal, and usually with a string course or some other form of decoration near the top that markedly suggests a phallic origin. (In this connection it should perhaps be noted that at Mtitimira, some 12 miles north of Kilwa, a representation of a phallus the size of a man's forearm surmounts the *miḥrāb* arch in a mosque that was abandoned in the 14th century.) The height of the pillars varies greatly from some 10 to 20 feet, but at Mombasa an extreme example reaches some 60 feet and has a base which actually spans the entire tomb. It is alleged today by some Sunnī Muslims amongst the Swahili that these pillar tombs are the work of Shīʿīs, but this has never been confirmed. The only reference to a pillar tomb in literature is in the Arabic *History of Kilwa*, B.L. Or. ms. 2666, which refers to the burial *ca.* 1364 of sultan Ṭālūt b. al-Ḥusayn of Kilwa in a pillar tomb on Mafia Island which was already occupied by the burials of two *faḳīhs*. This is the earliest date that we possess for these structures, but regrettably the tomb in question seems to have fallen into ruin and disappeared. Pillar tombs are distributed from as far north as Koyama in the Bajun Islands off the east coast of Somalia to as far south as Mboamaji, a few miles south of Dar es Salaam, Tanzania. Their walls are frequently panelled and often elaborately decorated with different motifs sculptured in coral, and sometimes inlaid with plates of Chinese porcelain, rarely celadon, but chiefly blue-and-white of the Ming dynasty. This practice already existed in the 14th century, as witness Yüan porcelain inlaid in the pillar of a pillar tomb at Kaole, near Bagamoyo, Tanzania. In 1954 the Zumbe (chief) of Mkwaja regretted to the present writer that no porcelain plates of Chinese origin were available for the decoration of the Zumbe's father's tomb. In default of porcelain, a group of early 20th century tombs at Moa, Tanzania, is decorated with blue enamel plates.

(3) A structure on Songo Mnara Island near Kilwa, which gives the island its name, is built on a platform of four steps some sixteen yards offshore. Visiting it in 1950, the late Gervase Mathew found the skeletal remains of a goat which had apparently been sacrificed on top of it. It is described by P. S. Garlake as a mosque, but an Arabic treaty between the then Sultan of Kilwa and a French slave-trader, Jean-Vincent Morice, dated 12 Shaʿbān 1190/4 November 1776, clearly refers to it as *bayt manār (sic)*. Garlake prints a plan of the structure showing a small mosque with a ruined *miḥrāb*, but H.N. Chittick, who partly cleared the building in 1961, founds it to be "a truncated pyramid with stepped sides, surmounted by a rectangular chamber", with doors at the north and south. The present writer did not distinguish the remains of a *miḥrāb* when he visited it in 1955. Morice's two maps of *ca.* 1776 show it as a three-storeyed building, the three storeys tapering towards the top; he refers to is as *la pagode*. Chittick found only two storeys remaining, the second storey being decorated with numerous late 15th century celadon bowls. J. Crassons de Medeuil, another slave-trader, writing in 1784, says that *la pagode* which "was very curious looking", had fallen down at some time during the preceding three years. This sentence follows immediately upon the description of a mosque, thus clearly differentiating it therefrom. M. H. Dorman thought it to have been a lighthouse, but this is unlikely because these are unknown in eastern Africa at the period indicated by the celadon bowls, and indeed until the later 19th century. The elaborate decoration suggests rather that the building was domestic, even if the lowest of the three rooms was used for prayer, and that perhaps it was a tower kiosk built so as to take advantage of the evening breeze on what is a hot sticky island. This explanation would satisfy the meaning both of *mnara* and that of *pagode* in 18th century French.

(G.S.P. FREEMAN-GRENVILLE)

MANAS, the name of the paramount hero of the Kïrghïz oral epic tradition and also of the totality of the epics which accreted about him and his kindred by the process of cyclisation, in this case very marked.

Some 4,000,000 lines of *Manas* are said to have been recorded in Kirgizia in this century, but not one scholarly edition of a self-contained performance has appeared, or, if it has, has yet reached the West. A recording of an episode from *Manas* was made by R. Dor in the Pamir in 1973, of which a philological edition, with translation and commentary, is imminent; and recordings of *Manas* in Xinjiang by members of the Institute for Minorities, Peking, are reported to

have been made during the last decade. In 1911-12, G. von Almásy published 72 lines critically, with translation and commentary. Thus the importance of the 15,705 lines of *Manas* recorded by W. Radloff (V. V. Radlov) and Ch. Ch. Valikhanov between 1856 and 1869 cannot be overestimated: it is obligatory in method that the earliest extant specimens of an heroic tradition be studied before the later, and the later Kïrghïz epics can scarcely be available in acceptable editions within a hundred years from now.

What follows here is largely based on close study of the mid-19th century recordings. The disordered renarration from *Manas* in the Tādjīk *Madjmūʿ al-tawārīkh* of Sayf al-Dīn, attributed to the 16th century, has been accepted as evidence of the flourishing of *Manas* at that time; yet the two mss. of the *Madjmūʿ* so far cited are dated respectively 1792-3 and 19th century, so that the (very likely) possibility that the *Manas* passage was interpolated to serve the political ends of Khoḳand requires convincing disproof before it can be considered as evidence for *Manas* in Kïrghïz at so early a date. However, *Manas*, as it appears in Kïrghïz verse for the first time in the Valikhanov recording of *Kökötöydün ashï* ("The memorial feast for Kökötöy") in 1856, reflects a mature and truly epic tradition which is obviously the product of many generations. Surprisingly, if one goes back to this earlier tradition from the patriotic and at times stridently nationalistic material of the 20th century, one finds that the heroes are not Kïrghïz but Noghay; on the very rare occasions when "Kïrghïz" are named, it is with irony. Nevertheless, the connection between the mid-19th century epic tradition and the life of the Kïrghïz as then lived is supplied by the situation of Manas, his son Semetey and his grandson Seytek: all are only sons forming a fragile line of *khāns* that is threatened with extirpation in manhood, boyhood, in the very womb. And such, *mutatis mutandis*, was the situation of the scattered Kïrghïz tribes themselves, dangerously hemmed in as they were on their high pastures by the Chinese, the Kalmïk, the Khoḳanders and the Russians. The "Noghay" of mid-19th century Kïrghïz epic are, as were the Kïrghïz themselves, only superficially touched by Islam, their treacherous Kalmïk antagonists even less by Lamaist Buddhism. The plots of the various self-contained episodes of the abstraction *Manas* that were recorded in 1856-69 are clear-cut, stark and existential. The style is rapid, graphic and abounding in beautifully-structured epithets and formulae aimed at connoisseurs. It provides a touchstone by which the published 20th-century material, despite its enrichment by Persian narrative poetry and the European novel, must be pronounced inflated, distorted and, *qua* epic, decadent.

(A.T. HATTO)

AL-MANĀṢĪR, BANŪ (sing. AL-MANṢŪRĪ), the name of half-a-dozen tribes, or branches of a single tribe, residing in eastern and southern Arabia, ʿIrāḳ, Jordan, the Sudan and Algeria. The Arabian tribe or branch, at least, claim descent from Ḳaḥṭān through Ghuwaynim, and they are thus, in the Arabic genealogical scheme, *al-ʿArab al-ʿāriba*, or true Arabs. Both they and the Jordanian branch boast of having been originally Christian, hence the derivation of the name from Naṣārā. Presumably therefore, the tribe originated in the Yemen, although the name does not appear in any of the South Arabian genealogical works.

Little has been written about those residing in the Fertile Crescent or in the Sudan, aside from the statements that those in Jordan (al-Balḳāʾ) are affiliated with the Banū Djarūmiyya and those in ʿIrāḳ with the large and important Banū Shammar. In Algeria, the al-Manāṣīr, living along the coast between Ténès and Cherchell, have apparently been Berberised.

In eastern and southern Arabia, the Banu 'l-Manāṣīr share the entire southern edge of the Rubʿ al-Khālī from the border of ʿUmān to Nadjrān, a distance of about a thousand miles, with the Banū Murra, noted, until modernisation, for their particularly fine herds of camels. Although supporters of the Suʿūdī family, the al-Manāṣīr are not Wahhābīs and follow the Mālikī school of law.

MANĀSTĪR. The name Manāstīr (Greek *monastírion*) is not an uncommon toponym (cf. Goljam Manastir in Bulgaria and Manastïr near Beyşehir in Turkey). However, it usually occurs as the Turkish designation for the modern town of Bitola in the Socialist Republic of Macedonia in Yugoslavia. Bitola is situated near the site of the ancient town of

Heraclea where the eastern foothills of the 2,601m. high Mt. Pelister merge with the Pelagonian Plain. The town, already mentioned as an episcopal see in the 5th/11th century, had developed into an important urban centre as a result of its advantageous situation on the old Via Egnatia even before it was conquered by Tīmūrtas̲h̲ Pas̲h̲a in the eighth decade of the 8th/14th century. While documents pertaining to the history of the town under Ottoman rule are extant from as early as the first half of the 9th/15th century (H. Kaleši, *Najstarija arapska vakufnama u Jugoslaviji*, in *POF*, x-xi [1961], 55-75), statistical data reflecting the development of Manāstîr are extant only since the seventh decade of the century, and only last (as far as is known) until the seventh or eighth decade of the following 10th/16th century (M. Sokoloski, *Turski izvorni podatoci od XV i XVI vek za gradot Bitola*, in *Glasnik INI*, vii/1 [1963], 127-56; idem (ed.), *Turski dokumenti za istorijata na makedonskiot narod. Opširni popisni defteri od XV vek*, ii, *Turksi dokumenti za makedonskata istorija*, 5 vols. Skopje 1973, 141-5). The *sid̲j̲ills* of the *ḳāḍīs* of Manāstîr, which offer a penetrating view into almost all aspects of urban life, document the period from 1016/1607 to the end of Ottoman rule in Macedonia (1912) and beyond. They also witness the development of Manāstîr first into a residence of the *wālīs* of Rūmeli (in the course of the second half of the 12/18th century), and then to the official seat of the provincial government of the *eyālet* of Rūmeli which was redefined in 1836 (M. Sokoloski, A, Starova, V. Boškov and F. Ishak (eds.), *Turksi dokumenti za istorijata na makedonskiot narod, Serija prva: 1607-1699,* 4 vols. Skopje 1963-72: i (1607-23), ii (1627-35), iii (1636-9), iv (1640-2); A. Matkovski (ed.), *Turski izvori za ajdutstvoto i aramistvoto vo Makedonija*, 5 vols. Skopje 1961-80: i (1620-50), ii (1650-1700), iii (1700-25), iv (1725-75), v (1775-1810); P. Džambazovski, and A. Starova (eds.) Skopje 1951-8: i (1800-3), ii (1803-8), iii (1809-17), iv (1818-27), v (1827-39)). In addition, documents from the archives of the metropolitan of Manāstîr pertaining to the first half of the 13th/19th century have been published (I. Snegarov, *Grăcki kodeksi na Pelagonijskata mitropolija/Griechische Kodexe der Pelagonischen Metropolie*, in *Godišnik na Sofiskija universitet, Bogoslovski fakultet*, xxv [Sofia 1948], 2-58). Since the middle of the 13th/19th century, when numerous European consulates were established in Manāstîr, consular reports comprise one of the most important historical sources. As a result of its importance, Manāstîr became the capital of a *wilāyet* of the same name in 1874 and again in 1879 (A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976, 71 f.). Its population in 1900 was 37,000, and in 1971, 65,035 (M. Panov, *Geografija na SR Makedonija*, i, Skopje 1976, 303).

Bibliography : A first, uncritical, sketch of the history of Manāstîr from its beginning is given by Meḥmed Tewfīḳ, *Manāstîr wilāyetiniñ tārīk̲h̲česi ve istātistīḳ-i ᶜumūmīsi*, Manāstîr 1327/1909, Serbo-Croat tr. Gliša Elezović, *Kratka istorija bitolskog vilajeta*, in *Bratstvo*, xxvii (1935), 190-244. Although no comprehensive, scientific treatment of Manāstîr's history has been undertaken as yet, a general abstract, based in part on more recent research, has been undertaken by Apostolos E. Vacalopoulos, *History of Macedonia 1354-1833*, Thessaloniki 1973 (cf. index s.v. "Monastir"). The first, tentative, contributions to a bibliography of "Bitola and environs up to World War I" have been begun by Kočo Sidovski, *Prilog kon bibliografijata za Bitola i Bitolsko do prvata svetska vojna*, in *Istorija*, ix/1 (Skopje 1973), 264-70; x/1 (1974), 405-8; x/2 (1974), 571-5; xii/1-2 (1976), 323-7. (M. URSINUS)

MANĀSTÎRLÎ MEḤMED RIFᶜAT (1851-1907), Ottoman Turkish officer, writer, poet and playwright of the younger *Tanẓīmāt* generation. Born in Monastir [see MANĀSTÎR], son of a regimental secretary, Res̲h̲īd Efendi, who had migrated from Athens and settled there, he attended the local military school and then was trained at the War College (*Mekteb-i Ḥarbiyye*) in Istanbul and graduated in 1872 as a staff captain. He and his class mate, a close friend (and future collaborator in many plays) Ḥasan Bedreddīn (Bedr al-Dīn) were both appointed teachers at the War College where they attracted the attention of Süleymān Pas̲h̲a [*q.v.*], director general of military schools (*makātib-i ᶜaskeriyye nāẓirî*) who thought highly of them and protected them.

When Ḥüseyn ᶜAwnī Pas̲h̲a, the Minister of War (*Serᶜasker*) and his close friends in the government (including the great liberal Midḥat Pas̲h̲a [*q.v.*]) who strongly disapproved of Sultan ᶜAbdülᶜazīz (ᶜAbd al-ᶜAzīz)'s régime, decided to dethrone the Sultan, they secured the help of their trusted man, Süleymān Pas̲h̲a, a convinced liberal and prominent soldier-scholar. On the night of 30 May 1876, the Dolmabahçe Palace was surrounded by troops led by Süleymān Pas̲h̲a. They consisted of two battalions of War College cadets commanded by Meḥmed Rifᶜat and his colleague and friend Ḥasan Bedreddīn respectively. ᶜAbdülᶜazīz commited suicide on 5 June, six days after his dethronement.

During the Russian-Turkish War of 1877-8, Meḥmed Rifᶜat, now a major, was sent to the Eastern Anatolian front and fought under G̲h̲āzī Aḥmed Muk̲h̲tār Pas̲h̲a [*q.v.*]. He was taken prisoner, sent to Russia and returned home after the peace (July 1878). But the new absolutist régime which was inaugurated after the dissolution of Parliament (13 February 1878) marked down Meḥmed Rifᶜat and Ḥasan Bedreddīn as *persona non grata*, having collaborated with "dangerous" liberals.

When in 1882 ᶜAbdülḥamid II (ᶜAbd al-Ḥamīd) decided to get rid of Midḥat Pas̲h̲a, "the Father of the Constitution" (*Eb-i Mes̲h̲rūṭiyyet*) who was at the time in Izmir as governor of the *wilāyet* of Aydîn, he accused him of having arranged the "assassination" of Sultan ᶜAbdülᶜazīz in 1876, had him arrested and sent to the Yîldîz Palace, where he and fourteen others were sentenced. All soldiers and civil servants involved in the dethronement, or simply thought to have liberal ideas, were banished from Istanbul. True to Ḥamīdian methods of dealing with undesirable soldiers and civil servants, Meḥmed Rifᶜat was first promoted to lieutenant-colonel, then posted to a division in Damascus and later transferred to Aleppo, whence he never returned. He died in Aleppo in this same rank, in 1907, one year before the restoration of the Constitution.

A prolific writer, Manāstîrlî Rifᶜat was both an author and also the translator of more than thirty books: text-books on mathematics, military science, religion, poetics, letter writing, Arabic and Persian grammar and plays, particularly during the theatre boom of the 1870s. While teaching in the War College, he founded the periodical *Čanta* ("Satchel, bag") in which he published mainly epic-patriotic essays, largely for the benefit of the cadets and his fellow officers, which prompted enthusiastic response from the great patriot Nāmîḳ Kemāl [*q.v.*] from his prison at Famagusta in Cyprus (for the text of his letter, see Ebüzziya (Abu 'l-Ḍiyāʾ) Tewfīḳ, *Nümūne-yi edebiyyāt-î ᶜOt̲h̲māniyye*ᶦ, Istanbul 1292/1875).

Manāstîrlî Rifᶜat's poems, written mostly in the old style and published in various newspapers and periodicals, his *sīra* and *Ḳiṣaṣ-î enbiyāʾ* in verse and his

verse translations of many Arabic and Persian *ḳaṣīdas*, etc., have not been collected into book form. His other poems, mostly of a personal nature, which he collected in a small *dīwān* (*dīwānče*) remain unedited.

Manāstîrlî Rifᶜat is mainly remembered because of his remarkable contribution to the Turkish theatre in writing, translating and adapting many plays. Some of these plays were written in collaboration with this close friend, Ḥasan Bedreddīn (later Pas̲h̲a) [*q.v.* in Suppl.].

Although it is customary to begin the modern Turkish theatre with Ibrāhīm S̲h̲ināsī's *S̲h̲āᶜir evlenmesi* (1859), there are many indications that an earlier date should be adopted (see Fahir Iz, *Pabuççu Ahmed'in garip maceraları*, Istanbul 1961, and Metin And, *100 soruda Türk tiyatrosu*, Istanbul 1970), However, modern Turkish theatre had a speedy development soon after S̲h̲ināsī's play, and reached the proportions of a boom, particularly in the late 1860s and early 1870s, one which lasted until the inauguration of the anti-liberal, reactionary period after 1878. Nāmiḳ Kemāl, S̲h̲emseddīn (S̲h̲ems al-Dīn) Sāmī, ᶜĀlī Bey, Aḥmed Wefīḳ Pas̲h̲a, Teodor Ḳaṣāb and others contributed to this activity. Early modern plays were considerably inspired by the Turkish traditional or folk theatre (Karagöz, Orta oyunu, Meddāḥ [*q.vv.*]) and used, to some extent, the techniques of French comedy and farce (Molière being the favourite author). Often Western (mainly French) plays were translated or adapted.

Manāstîrlî Rifᶜat and Ḥasan Bedreddīn joined this movement and published together, in fascicules, between 1875 and 1879, 16 plays, under the general title *Temās̲h̲ā* ("Spectacle"), which eventually made up two volumes (Vol. i, fasc. 1-9. vol. ii, fasc. 1-7) of nearly a thousand pages. The majority of these plays, including two comic-operas and one opera-bouffe, of little interest, are translations from the French or via French. The following 7 plays are original: Vol. i, Fasc. 2, *Delīle yāhūt ḳanlî intiḳām* ("Delīle or bloody vengeance"), 1875, an historical drama of Eastern Anatolia; fasc. 4, *Ebu 'l-ᶜAlā yāhūt mürüwwet* ("Abu 'l-ᶜAlāʾ or humaneness"), 1875, a play on Islamic history; fasc. 6, *Ebu 'l-Fidā* ("Abu 'l-Fidā"); a comic opera, in three acts, 1975; fasc. 7, *Nedāmet* ("Repentance") 1875, a comedy; Vol. ii, fasc. 1, *Kölemenler*, a historical drama in five acts; fasc. 4, *Faḳīre yāhūt mükāfā-î ᶜiffet* ("The poor girl, or the reward of virtue"), 1876; fasc. 6, *Aḥmed-i yetīm yāhūt natīd̲j̲e-yi ṣadāḳat* ("Aḥmed the orphan, or the result of loyalty"), 1879, an historical drama of the Egypt under the Ṭūlūnids.

All these plays were performed in the famous Gedik Pas̲h̲a Theatre in Istanbul. Apart from these plays, written in collaboration, Manāstîrlî Rifᶜat published the following plays independently: *Görenek* ("Social practice, custom"), 1873, social criticism satirising over-lavish weddings, where families try to outdo one another; *ᶜOt̲h̲mān G̲h̲āzī*, 1873, *Yā g̲h̲āzī yā s̲h̲ehīd*, 1874, two patriotic plays, possibly inspired by the enthusiastic reception of the performance of Nāmiḳ Kemāl's famous *Waṭan* ("Fatherland"), which caused such a furor at the time; and *Pākdāmen* ("The chaste one") which seems to have been inspired by Red̲j̲āʾi-zāde Ekrem's [*q.v.*] *ᶜAfīfe Anz̲h̲elik* (1870), with non-Turkish dramatis personae, about a married woman's resistance to the valet's overtures during her husband's absence. Manāstîrlî Rifᶜat's other works worth mentioning include: *Med̲j̲āmiᶜ el-edeb*, in four volumes, 1890, a detailed treatise on the art of literature, rhetoric, poetics, prosody, etc., and *Ḥikāyāt-î müntak̲h̲abe* ("Selected stories"), 1876, a striking example of the spoken Turkish of the time used as written Turkish.

(Fahir İz)

MANĀT, name of one of the most ancient deities of the Semitic pantheon, who appears in the Pre-Sargonic period in the form Menūtum and constitutes one of the names of Ishtar (J. Bottéro, *Les divinités sémitiques anciennes en Mésopotamie*, in S. Moscati (ed.), *Le antiche divinità semitiche*, 30; Tallqvist, *Götterepitheta*, 373-4); the Ḳurʾānic *scriptio* of her name preserves the primitive *w*, which also appears in the Nabatean *mnwtw* (Lidzbarski, *Handbuch*, 313; Wellhausen, *Reste*², 28). The *w* changes to *i* in the Bible (Isa. lxv, 11), as in the Sallier IV papyrus, *verso*, i, 5-6 (in J.B. Pritchard, *Ancient Near Eastern Texts relating to the Old Testament*, Princeton 1950, 250), where Meni is presented as a Semitic deity forming part of "the Ennead which is in the house of Ptaḥ". The difference of gender poses no obstacle to this identification, due to the fact that the *t* is not radical in the two forms and that the Arabic sources regard it as a feminine termination referring to *ṣak̲h̲ra*, the stone or rock embodying the deity (cf. Yāḳūt, iv, 652, 1. 15; *TA*, x, 351 *in fine*; Ibn al-Kalbī speaks of Manāt in the masculine (*K. al-Aṣnām*, ed. and Fr. tr. W. Atallah, Paris 1969, 9), thinking in this case of *ṣanam*). Originally, the two names had the root *mnw/y* which is to be found in all Semitic languages with the meaning of "to count", "to apportion", being applied in particular to the idea of "to count the days of life", hence death (*maniyya*), and "to assign to each his share", hence, lot, destiny (cf. C. Bezold, *Babylonisch-Assyriches Glossar*, ed. Götze, Heidelberg 1926, 176; Gesenius-Buhl, *Hebräisches und aramäisches Handwörterbuch über das Alte Testament*¹⁷, Berlin 1949, 436 ff.; *TA*, x, 347 ff.; Yāḳūt, iv, 652.

The Greco-Roman equivalents given to Manāt testify to this meaning, since she is identified with Τύχαι or the Fortunae, the dual reflecting the form Manawāt (a false plural used for the dual *manawān* (Yāḳūt, iv, 652, 1.12), as in Thamudic, where she is called *st slm* "the Lady of Peace", see A. van den Branden, *Les inscriptions thamoudéennes*, 110 (Huber, 193), and in Nabatean (CIS 198). In Palmyra she is represented on a mosaic, seated and holding a sceptre in her hand, after the fashion of Nemesis, goddess of destiny (J. Starky, *Palmyre*, Paris 1952, 103 and pl. xii, nos. 5 and 6).

Like al-Lāt [*q.v.*] and al-ᶜUzzā [*q.v.*] who form with her the Arab triad (Ḳurʾān, LIII, 19-20), Manāt was worshipped by all the Arabs". It was [originally] a rock for Hud̲h̲ayl in Ḳudayd" (Yāḳūt, iv, 652, 1.15 f.). ᶜAmr b. Luḥayy [*q.v.*], who substituted for the cult of betyls that of idols, erected for her, in Ḳudayd, a statue imported from the north, like that of Hubal [*q.v.*]. The sacred site of al-Mus̲h̲allal in Ḳudayd, about 15 km. from Yat̲h̲rib, became the gathering place of the Aws and K̲h̲azrad̲j̲, who were the most ardent worshippers of Manāt, to such an extent that they considered their pilgrimage to Mecca as incomplete if they had not been to her to shave their

heads. All the tribes of the surrounding area took part in her cult. Before the arrival of the Aws and Khazradj, coming from the south, she was worshipped by the Hudhayl who led a nomadic life in the region of Yathrib and by the Khuzāʿa in that of Mecca.

Also, from being a simple rock in Ḳudayd, the third divinity of the Arab triad, following the normal evolutionary process, ended up by being sculpted to suit the root from which she derives her name, representing one of the faces of the Asiatic Venus, i.e. Fortune, who, according to the testimony of Pausanias (vi, 2,4), was worshipped by the Syrians on the banks of the Euphrates. Al-Lāt, with whom Manāt shared the title of Ṭāghiya (Yāḳūt, i, 236, 1.11), and al-ʿUzzā represented the two others volets of the triptych.

The destruction of the sanctuary of Manāt in Ḳudayd gave rise to a legend of the same interpretation as that which is associated with the destruction of al-ʿUzzā (cf. T. Fahd, *Panthéon*, 173).

Saʿd b. Zayd al-Ashhalī (Ibn Saʿd, ii/1, 106, and al-Ṭabarī, i³, 1649, whereas Yāḳūt states that it was ʿAlī b. Ṭālib who found in his treasury the two famous swords, Mikhdham and Rasūb, which Ibn Saʿd, ii/1, 118, places in the treasury of al-Fals), ordered by the Prophet to go to destroy Manāt, in the year 8/629, accompanied by twenty horsemen, appeared before the *sādin* and announced to him his intention to destroy her. "Go on", he said to him in an ironic tone. Saʿd went towards her and at once saw a nude black women rise up with her hair dishevelled, uttering curses and beating her breast. The *sādin* called out: "Come on! O Manāt, show the anger of which you are capable!". Saʿd began to beat her to death; then he approached the idol with his companions and they destroyed it.

MANĀZGERD [see MALĀZGIRD]

AL-**MANĀZIL** (A.) or more fully *manāzil al-ḳamar*, the lunar mansions, or stations of the moon (sing. *manzil* or *manzila*), a system of 28 stars, groups of stars, or spots in the sky near which the moon is found in each of the 28 nights of her monthly revolution.

The system seems to be of Indian origin (see Scherer; Pingree [1] and [2]; Billard). Babylonian origin has sometimes been suggested (cf. Hommel), but could never be established from the documents. The "stars in the moon's path", in the ^{mul}APIN text (cf. van der Waerden [1], 77; recently re-dated to 2300 B.C., cf. van der Waerden [2]) are 17 or 18 in number and rather represent an early stage in the development of the zodiac. The system of the lunar mansions was adopted by the Arabs, through channels as yet unknown, some time in the pre-Islamic period, since the term *manāzil* is already mentioned in the Ḳurʾān (X, 5; XXXVI,39). To the single mansions, the Arabs applied names already found with them previously, and originally used to designate their *anwāʾ* [see ANWĀʾ]. A complete list of the 28 mansions is reported by ʿAbd al-Malik b. Ḥabīb (d. 238/852) on the authority of Mālik b. Anas (d. 179/795); nearly contemporary to this is the list drawn up by the astronomer al-Farghānī. Items of information concerning the lunar mansions were collected by the Arabic philologists in their *kutub al-anwāʾ* (see the printed works of Ibn Ḳutayba al-Marzūḳī, Ibn Sīda, Muḥammad al-Muḳriʾ, al-Ḳazwīnī, Ibn al-Adjdābi, Ibn Manẓūr/al-Tīfāshī, and Aḥmad b. Mādjid), and by astronomers, who took pains in identifying these mansions astronomically (see al-Farghānī, al-Battānī, al-Ṣūfī, al-Bīrūnī [1], [2], and [3]). Whereas the scientific astronomers of the Arabic-Islamic period did not actually use the lunar mansions, these apparently were of some importance for the distribution of the ecliptic (besides of the zodiac) in earlier times. Later, they were often used by astrologers and others for different systems of divination (see e.g. *Picatrix*, and ʿAlī b. Abi 'l-Ridjāl; cf. also Savage-Smith, for the lunar mansions in relation to geomancy). Hence they were engraved, together with other calendric and astrological items, on the back of many Islamic and some western astrolabes (cf. Hartner, 2549 f.; Michel, 42; Mayer, pls. XV, XVIB, XX, XXII-XXV). Through Latin translations of Arabic works, the list of the 28 lunar mansions and their Arabic names known to mediaeval Europe from the late 10th century onwards (see Millás, 251 ff.), and, later, were much used for divinatory purposes (see e.g. Steinschneider, Vian, Svenberg, Weidemann, Lutz and Müller). Lists of the 28 lunar mansions, with their Arabic names, have also penetrated Byzantine astrological texts (see CCAG).

The names of the 28 mansions, and their astronomical identifications, are as follows (for the names, see the individual entries in Kunitzsch [1], where sources and further details are given):

1. *al-sharaṭān* (also: *al-naṭḥ*), βγ, or βα Arietis.
2. *al-buṭayn*, εδρ Arietis.
3. *al-thurayyā*, the Pleiades.
4. *al-dabarān*, α Tauri.
5. *al-haḳʿa*, $\lambda\phi^{1.2}$Orionis (according to the *Almagest*, one nebulous object, the first star of Orion; but registered as three individual stars by al-Bīrūnī [3]). Alternatively also, *al-maysān*, which properly would be one of the two stars of no. 6.
6. *al-hanʿa*, γξ Geminorum; also *al-taḥāyī*, ημν Geminorum (either separately, or together with γξ Geminorum). Al-Bīrūnī [3] has it νγξ Geminorum.
7. *al-dhirāʿ*, αβ Geminorum. There is confusion in the sources as to whether this *dhirāʿ* is *al-dhirāʿ al-maḳbūḍa* or al-*dhirāʿ al-mabsūṭā.*
8. *al-nathra*, ε Cancri, or εγδ Cancri (Ibn Ḳutayba, and al-Bīrūnī [3]).
9. *al-ṭarf*, δ Cancri + λ Leonis.
10. *al-djabha*, ζγηα Leonis (included with this station is the star α Leonis, "Regulus", which had no individual name in the classical Arabic star lore).
11. *al-zubra* (also: *al-kharātān*), δθ Leonis.
12. *al-ṣarfa*, β Leonis.
13. *al-ʿawwāʾ*, βηγε Virginis, sometimes δ Virginis is also added to these.
14. *al-simāk* (i.e. *al-simāk al-aʿzal*), α Virginis.
15. *al-ghafr*, ικλ Virginis (al-Bīrūnī [3] has ικ only).
16. *al-zubānā*, αβ Librae.
17. *al-iklīl*, βδπ Scorpii.
18. *al-ḳalb*, α Scorpii.
19. *al-shawla*, λυ Scorpii. Sometimes, *al-ibra*, or *ibrat al-ʿaḳrab*, is given as an alternative designation, but some authors refer this name to a different ob-

ject, viz. the nebulous cluster following behind *al-shawla*, i.e. M 7 Scorpii.
20. *al-naʿāʾim*, the two groups of four stars each, γδεη + σφτζ Sagittarii; alternatively, *al-waṣl*, the space between these two groups.
21. *al-balda*, a region void of stars, between stations nos. 20 and 22.
22. *saʿd al-dhābiḥ*, $\alpha^{1,2}$ νβ Capricorni.
23. *saʿd bulaʿ*, με Aquarii, to which some authors add Fl. 7, or ν Aquarii, as a third star.
24. *saʿd al-suʿūd*, βξ Aquarii + c^1 Capricorni.
25. *saʿd al-akhbiya*, γπζη Aquarii.
26. *al-fargh al-muḳaddam* (also *al-fargh al-awwal*), αβ Pegasi.
27. *al-fargh al-muʾakhkhar* (also *al-fargh al-thānī*), γ Pegasi + α Andromedae.
28. *baṭn al-ḥūt* (also *al-rishāʾ*). β Andromedae.

Some authors additionally register the names of some stars, or spots in the sky, near which the moon is seen when failing to reach her proper mansion, whereas the interstices between two mansions, generally, are called *furdja* (see Ibn Ḳutayba, 86; al-Marzūḳī, 196 f.; Ibn Sīda, 12; Ibn Manẓūr, 1800 = al-Tīfāshī, 205; al-Bīrūnī [1], 351 f., tr. 353 f.).

The knowledge of the 28 lunar mansions has lived on into modern times, and agricultural calendars formed according to them are still today found in various regions of the Arabic-speaking world and its neighbourhood (cf. Landberg, Cerulli, Monteil, Serjeant, Hiskett, Galaal, and the literature cited there; less so consistent are the observations reported by C. Bailey, *q.v.*). Such calendars are already known from mediaeval times (see *Liber anoe* [= *Kitāb al-anwāʾ*, Spain, 961 A.D.; translated into Latin by Gerard of Cremona], and Ibn al-Bannāʾ); they appear to continue older astro-agricultural traditions as paralleled in Ptolemy's *Phaseis* and the Babylonian mulAPIN texts.

(P. Kunitzsch)

MANĀẒIR, or **ʿILM AL-MANĀẒIR**, the science of optics. The term *al-manāẓir* (pl. of A. *manẓar* or *manẓara*, from *naẓara*, "to look at") was used by the Arabic translators of Greek scientific writings as equivalent to τὰ ὀπτικά, optics or the theory of vision. The feminine *manẓara* in the sense of "aspect" or "appearance" (the way a thing or a group of things looks) is attested in *al-Shāmil fī uṣūl al-dīn* of Abu 'l-Maʿālī al-Djuwaynī (d. 478/1085), where the plural *manāẓir* is also used in the same sense (ed. ʿA.S. al-Nashshār *et alii*, Alexandria 1969, esp. 476-7, 479, 483-4).

The *kalām* literature, to which al-Djuwaynī's *al-Shāmil* belongs, adopted *shuʿāʿ* both for the light rays emanating, for example, from the sun, and for the visual rays (i.e. rays emanating from the eye) which, according to Muʿtazilī and Ashʿarī *kalām*, were the vehicles of vision (see the relevant sections in al-Ḳāḍī ʿAbd al-Djabbār's *al-Mughnī*, iv (*Ruʾyat al-Bāriʾ*), ed. M.M. Ḥilmī and Abu 'l-Wafāʾ al-Taftāzānī, Cairo 1965, esp. 59-79). However, in the medical literature deriving from Galen, we find the word *manāẓir* used in the sense of visual rays (Galen's ὄψεις), and it is in this sense that Ḥunayn b. Isḥāḳ speaks of "the reflexion (*inkisār*) of *al-manāẓir*" (cf. M. Meyerhof, *The book of the ten treatises of the eye ascribed to Hunain ibn Is-hâq (809-977 A.D.)*, Cairo 1928, Ar. text 109; Meyerhof translated *manāẓir* here as "images" — see p. 36 of his English translation in the same volume — but cf. the Arabic version of Galen's *De usu partium*, Escorial ms. 850, fol, 29b). It may be noted that the Greek writers on optics, including Euclid, Hero and Theon, used ὄψεις and ἀκτῖνες interchangeable to designate visual rays (cf. A. Lejeune, *Euclide et Ptolémée*, Louvain 1948, 18-21).

In the scheme of the sciences inherited by mediaeval Islamic scholars from the Greeks, optics was considered a mathematical science. But Aristotle had already characterised optics as one of "the more physical of the mathematical disciplines", a group of enquiries which also included astronomy and harmonics (*Physica*, II.2). And although Euclid's book on *Optics* (*ca.* 300 B.C.) was formulated almost exclusively in geometrical terms, physical, physiological and even psychological elements tended increasingly to mingle with geometrical considerations in the writings of later Hellenistic mathematicians. Thus for example, Hero of Alexandria (1st century A.D.) compared the reflexion of visual rays to the behaviour of projectiles when they strike a hard surface (cf. his *Catoptrica*, iii, in *Herons von Alexandria Mechanik und Katoprik*, ed. and German tr. L. Nix and W. Schmidt (*Heronis Alexandrini opera quae supersunt omnia*, i/1, Leipzig 1900), 322-5). The (lost) first book of Ptolemy's *Optics* (2nd century A.D.) expounded a theory of luminous radiation as distinguished from the emission of visual rays; the same work dealt with binocular as well as monocular vision; and it mentioned a *virtus discernitiva* (or *regitiva*), a psychological faculty to which was assigned a certain vague role in visual perception (cf. *L'Optique de Claude Ptolémée dans la version latine d'après l'arabe de l'émir Eugène de Sicile*, édition critique et exégétique par Albert Lejeune, Louvain 1965, index and 22, n. 22; and 62, n. 81).

In the Islamic period, this tendency shows itself early in a work by Abū Yūsuf Yaʿḳūb b. Isḥāḳ al-Kindī (3rd/9th century [*q.v.*]), which survives in a 12th century Latin translation entitled *De aspectibus* (*Al-Kindi, Tideus und Pseudo-Euclid: drei optische Werke*, ed. A.A. Björnbo and S. Vogl, Leipzig and Berlin 1912 [= *Abhandlungen zur Geschichte der Mathematischen Wissenschaften mit Einschluss ihrer Anwendungen*, Heft, XXVI. 3]). Here al-Kindī considers optics to be a mathematical science (*ars doctrinalis: ʿilm taʿlīmī*), but one which must satisfy physical as well as geometrical principles (*ibid.*, 3); and he opens his book with a treatment of rectilinear *light* radiation and the formation of shadows, thus departing from Euclid's presentation but in agreement with Ptolemy and, it appears, Theon of Alexandria (see the Introduction to Theon's *Recension* of Euclid's *Optics in Euclidis Optica, Opticorum recensio Theonis, Catoptrica, cum scholiis antiquis*, ed. I. L. Heiberg, Leipzig 1895, 144 ff.; French. tr. P. Ver Eecke, in *Euclide: l'Optique et la Catoptrique*, Paris 1959, 53 ff.).

With Ibn al-Haytham [*q.v.*] in the 5th/11th century, we reach an entirely new stage in the conception of the nature of optics. His great *Kitāb al-Manāẓir* ("Book of Optics", of which several manuscripts are extant) begins with the assertion that optics is a synthetic branch of inquiry that combines mathematical and physical considerations. But this was not merely to continue the trend that had already started in late antiquity. Ibn al-Haytham's position implied a complete break with the visual-ray hypothesis which had been consistently maintained by the entire mathematical tradition from Euclid to al-Kindī and by the medical tradition of Galen and his Islamic followers. Ibn al-Haytham opted instead for the view of "physicists" (*ṭabīʿiyyūn*) or natural philosophers, according to which vision consisted in the eye's reception of a form (*ṣūra*) emanating from the object seen. But again, this was not a mere imitation, and his theory was the first attempt to treat this view mathematically. The result was, therefore, not only a new doctrine of vision, but also a new methodology. In other words, Ibn al-Haytham was led to formulate problems which either would not have made sense from the standpoint of the visual-ray theory or had been ignored by philosophers aiming primarily to give an account of *what* vision is rather than an explanation of *how* it takes place.

Ibn al-Haytham was also convinced that an intromission explanation of visual perception was essentially incomplete without a theory of the psychology of perception, and he accordingly devotes a considerable part of his *K. al-Manāẓir* to such a theory. His argument is that since the eye can only receive impressions of the light and colour in the visible object, all other properties of the object, including the fact that it is situated in outer space, must somehow be "inferred" from the received visual material. His theory then consists in describing the models of inference (*ḳiyās*) which the "faculty of judgement" (*al-ḳuwwa al-mumayyiza*) employs in achieving the perception of such visual properties (*maʿānī mubṣara*) as distance, size, shape, opacity, transparency, beauty—in fact, all properties other than light and colour as such.

Ibn al-Haytham wrote substantial treatises on the burning sphere and burning mirrors of various

shapes, on the formation of shadows, on *camera obscura* phenomena and on the halo and the rainbow. Yet none of these phenomena is treated in the *K. al-Manāẓir*. The book thus illustrates a restricted conception of optics as primarily a theory of vision by means of direct, reflected or refracted light rays. (A discussion of the rainbow would not have been out of place in a book on optics in this narrow sense, since the phenomenon depends on the position of the eye. But the rainbow had been traditionally treated since Aristotle in books on meteorology—*aḥdāth al-djaww* or *al-āthār al-ʿulwiyya* [*q.v.*]. The force of this tradition continued into the 17th century: Descartes, for example, offered his explanation of the rainbow in a work entitled *Météores*, and not in his *Dioptrique*.) But since these are luminous (not visual) rays, Ibn al-Haytham's explanations are presented on the basis of an experimental examination (*iʿtibār*) of the relevant properties of light as objective phenomena existing independently of a seeing eye. Because of its highly-sophisticated character, combining physical, mathematical, experimental, physiological and psychological considerations in a methodically-integrated manner, the influence of Ibn al-Haytham's book upon later writers on optics both in the Muslim world and (through a mediaeval Latin translation) in the West can hardly be exaggerated.

It is remarkable that two centuries-and-a-half had to elapse before the *Optics* of Ibn al-Haytham began to exert any appreciable influence in the Islamic world, by which time the book had already made a deep impression in Europe (especially on Roger Bacon, John Pecham and Witelo). Towards the end of the 13th century, the Persian Kamāl al-Dīn al-Fārisī [*q.v.*] rescued the *Optics* from near oblivion by writing a large and critical commentary on it, entitled *Tanḳīḥ al-Manāẓir li-dhawī 'l-abṣār wa 'l-baṣāʾir*, which survives in many manuscript copies testifying to its wide use (printed at Hyderabad, Dn., in two volumes in 1347-8/1928-9). In this work, Kamāl al-Dīn went beyond discussion of the matters treated in the *K. al-Manāẓir*, adding, among other things, recensions (sing. *taḥrīr*) of Ibn al-Haytham's treatises "On the halo and the rainbow", "On the burning sphere", "On the formation of shadows" and "On the shape of the eclipse". We have here, then, a book on optics that is not entirely restricted to questions related directly or indirectly to vision. And yet the book does not include a discussion of burning mirrors, a subject which Ibn al-Haytham had thought fit to include in a (non-extant) treatise "On optics, according to the method of Ptolemy". (As for gnomon shadows, these were generally considered a separate subject to be treated in a separate category of writings sometimes referred to as *Kutub al-Aẓlāl*, "books on shadows".) But the narrower conception of optics proved tenacious; when in the 10th/16th century Taḳī al-Dīn Ibn Maʿrūf (d. 993/1585) wrote his *Nūr ḥadaḳat al-ibṣār wa-nūr ḥadīḳat al-abṣār* (Bodleian ms. Marsh 119) for the Ottoman sultan Murād III, he based himself directly on Kamāl al-Dīn's *Tanḳīḥ*. But rather than include the topics appended by the Persian mathematician to his commentary on Ibn al-Haytham's *K. al-Manāẓir*, he limited himself to the subjects treated in the earlier work.

Bibliography: In addition to works, cited in the article, see the bibls. to the articles on Ibn al-Haytham, Kamāl al-Dīn al-Fārisī and al-Kindī in *Dictionary of scientific biography*, ed. C. Gillispie, New York: vi (1972), 189-210; vii (1973), 212-19 and xv (1978), 261-7. The mediaeval Latin translation of Ibn al-Haytham's *K. al-Manāẓir* was published in 1572 by Friedrich Risner at Basel in a volume entitled *Opticae thesaurus*, which also included Witelo's *Perspective* and a treatise on dawn and twilight which is wrongly attributed in this volume to Ibn al-Haytham. An edition of the Arabic text of *K. al-Manāẓir* is in progress; see A. I. Sabra, ed., *Kitāb al-Manāẓir I-II-III* (*On direct vision*), Kuwait 1982. This includes an introduction, Arabic-Latin glossaries and concordance tables for comparing the Arabic and Latin texts. An English translation is forthcoming.

(A. I. SABRA)

MANBIDJ, an ancient town of Syria which was situated to the north-east of Aleppo.

It appears that an urban settlement with the name Nappigi or Nampīgi existed on this site in the Assyrian period. In the time of Shalmaneser, it was known as Lita Ashūr. The Syriac appears to refer back to the Assyrian root; in fact the name became Mabbog or Mambog which signifies "gushing water", linked, according to Yāḳūt, to the root *nabadja* "to gush", which would hardly be surprising in a region of abundant springs. The following spellings are encountered: in the Greek texts of the Byzantine period βέμπετξ, Μέμπετξε (Leo the Deacon, iv), βαμσύχη; elsewhere Manbadj (*Ṣubḥ*, iv, 127), Manbidj (Yāḳūt, v, 205), Mambedj (Volney, 279), Mambidj (Honigmann), Menbidj (Dussaud, *Topographie*, 474), Meenbidj (Baedeker and Wirth), Membîdj (*Guide Bleu*, 1932). On the origin and orthography of the name, see E. Honigmann, *Ostgrenze*, 16; K. Ritter, *Erdkunde* 1057 ff.; E. Honigmann, *EI*[1], s.v. On the various traditions regarding the origin of Manbidj, see Pauly-Wissowa, Suppl., iv, 732-42 and *Der kleine Pauly*, ii, 1130.

The Arab geographers are agreed in placing Manbidj in the middle of the fourth climatic region to the north-east of Ḥalab; on the other hand, there are variants for the geographical coordinates. Yāḳūt (s.v.), quoting Baṭlamiyūs [*q.v.*] gives the longitude of 71°15′ and presents the horoscope of the town, then he mentions the *Zīdj* of al-Battānī, where the longitude is 63°45′ and the latitude is 35°. In the *Taḳwīm al-buldān* of Abu 'l-Fidāʾ, the corresponding figures are 62°50′ and 36°50′.

This oasis is situated at an altitude of 1310 feet (398 m) in a zone of annual rainfall greater than 250 mm, bordering on two contrasting economies: to the north-north-east, a region of sedentary inhabitants, crop-growers or craftsmen; to the south-south-west, the domain of the nomadic shepherd or stock-breeder.

To the north of Manbidj, along the Sadjūr, the plateaux are covered with flints from the Acheulian and Middle Palaeolithic epochs which enabled prehistoric man to manufacture tools; the presence of numerous springs permitted, as early as the Assyrian period, the organisation of a system of irrigation (*sakya*) and the installation of *ḳanāts* [*q.v.*] which established the renown of the region (*ʿamal*) to the west of the elbow of the Euphrates in Syria and of which, some 15-20 m. under ground, numerous remains have been found and are mentioned by all the Arab or foreign geographers and travellers who have visited the area.

The abundant supply of water also facilitated the development of the cultivation of cereals (corn and barley), as well as cotton and hemp, and the exploitation of orchards and plantations of mulberries for the rearing of silk-worms from the early Middle Ages. To the south of Manbidj, there also exists a hot water spring marked by a cupola in a place called "Hama".

For the demography of the region from Neolithic times to the birth of Islam, see the results of two archeological excavations conducted in the region of the

Nahr Sadjūr and on the Syrian Higher Euphrates, published in *Holocene settlement in North Syria* by Paul Sanlaville and others in the *BAR International Series*, Oxford 1985, no. S 238. Under the Umayyads, a section of the Banū Taghlib [*q.v.*] settled on the east bank of the Euphrates and led a nomadic existence near Manbidj, although the bulk of the tribe was established between the Khābūr [*q.v.*], the Euphrates and the Tigris. They were to distinguish themselves at the end of the 7th/13th century in the struggle against the Tatars. Palgrave (*Narrative*, London 1865, i, 118) mentions in the region the presence of a modern tribe, the Shammār, who are said to be related to the Banū Taghlib. According to A. Musil (*Middle Euphrates*, 281), the tribe of the Tarleb (*sic*) was still leading a nomadic existence at the beginning of the 20th century in the arid plain between Manbidj, Ruṣāfa and the heights of the Djabal Bishrī.

After having been "the mustering point of the Roman expeditions directed against the Sāsānid Empire which followed the route of the Euphrates", the latter being a military communication route parallel to the river on the western bank, Manbidj was an important centre of the *limes* of Chalcis, linked to Aleppo by a Roman causeway, before becoming the capital of the *ʿAwāṣim* in the ʿAbbāsid Golden Age. In the Middle Ages, it continued to play an important strategic and commercial role in north-south and east-west communications, the town being not only a staging-post, but also a major road-junction to the west of the Euphrates, on the route which maintained connections between the Mediterranean world and the Asiatic world, between the valley of the Orontes and that of the Euphrates.

Manbidj, of which mention is made in the *Antonine itinerary*, features on the 16th century *Tabula* of Peutinger. It was a military base of the Romans against the Persians, of the Byzantines under Justinian and his successors against the Sāsānids, of the ʿAbbāsid caliphs and the Syrian princes against the Crusaders, and a stronghold against Turkish invasions from the east. Its role was not only to safeguard the frontier posts (*thughūr*), but also to watch over the Syrian desert to the south as far as the region of Bālis-Maskana. Situated in a fertile plain furrowed with ravines, placed in the centre of a *ghūṭa* [*q.v.*], Manbidj also owes its importance to the presence there of abundant drinkable water for caravans. The site was of vital significance, because it controlled all the access routes from northern Syria towards the Djazīra [*q.v.*] and ʿIrāḳ and, in particular, three junctions leading to crossing-points (ζεῦγμα, *djisr*) on the great bend of the Middle Euphrates: to the north, up-stream from Biredjik [*q.v.*], a crossing protected by the Ḳalʿa Bayḍāʾ; or downstream from the confluence of the Sadjūr, opposite Tell Aḥmar, at Djarāblus, the ancient Caeciliana; or 29 km. to the north-east, at Ḳalʿat Nadjm [*q.v.*], which protected Djisr Manbidj, the bridge of boats permitting access to the Upper Djazīra. A further crossing-point was further south at Sūriya, opposite Ḳalʿat Djaʿbar [*q.v.*].

In the time of al-Muḳaddasī (4th/10th century), Manbidj was reached from Ḥalab in two days' journey, passing through Bāb and crossing the Wādī Buṭnān [*q.v.*], a distance of ten *farsakhs* [*q.v.*] (approximately 80 km.); from this point a single stage (*marḥala*) remained to be covered; Yāḳūt gives a figure of three *farsakhs* to arrive at Djisr Manbidj, where the Euphrates could be crossed by means of a bridge of boats, a crossing made today by ferry-boat. From Manbidj, ʿAynṭāb or Ḳūrush (Cyrrhus) could be reached in two days and Malaṭiya in four.

It seems that the *darb sulṭāniyya*, which passed through Manbidj on the way to ʿIrāḳ, changed direction at the end of the 8th/14th century, crossing the Euphrates at the latitude of Ṣiffīn and Raḳḳa [*q.v.*], and the route was shifted further to the south. At the beginning of the 20th century, as Franz Cumont testifies, "caravans or *ʿarabas* [*q.v.*] setting out towards Ourfa (Edessa) and Mossoul still pass through Manbidj towards the same crossing, where ferry-boats transport them to the left bank of the Euphrates".

There also existed in the Ayyūbid period a route from Ḥamā towards the north-east. Protected against the Franks by Bārin, Fāmiya and Kafar Ṭāb, it permitted access to Djazīra by way of Manbidj, avoiding Ḥalab.

Today, the road from Ḥalab to Manbidj via Bāb (78 km.) is well-asphalted, as is that leading from Manbidj to Djarāblus (37 km.), where the Euphrates is crossed by a metal bridge.

Shortly before the reign of Alexander the Great, in the 4th century B.C., the town was in the hands of a dynast surnamed ʿAbd Ḥadad (= worshipper of Ḥadad, the god of thunder), who had coinage struck there. For a long period of Antiquity, Manbidj was a religious centre dedicated to the cults of Atargatis and her consort Ḥadad.

In the Hellenistic period, Manbidj played an important military role in countering invasions from the east. The Greeks endowed it with a double rampart and a temple owning an important treasure, which Crassus sacked before setting out with his legions to fight the Parthians and dying, the victim of an assassin, in 53 B.C.

From the 3rd century onwards, through the good offices of Septimus Severus, the town became, in its role as a bulwark against the Sāsānid Persians, one of the principal bases of the "*limes* of Chalcis". From there, in 363, Julian the Apostate led an expedition against Ctesiphon, in the course of which he was mortally wounded.

Manbidj was part of the Cyrrhestian province, before being promoted by Constantine II, in the middle of the 4th century, to the status of capital of Euphratesian Syria. In 451, the metropolitan of Manbidj was Stephen of Hieropolis. At the end of the 5th century there lived there an innovative theologian, the Monophysite bishop Philoxenus of Mabbugh, who had a Syriac translation made of the New Testament and published a commentary to it; he died in exile in Thrace in 523. In April 531, Kawādh, Emperor of Persia, occupied Hierapolis; Belisarius arrived to resist the invasion and in the same year inflicted a defeat on the Sāsānid army at Callinicos, near the confluence of the Balīkh and the Euphrates. In 532, Kisrā Anūshirwān, the new Persian sovereign, offered Justinian a treaty of "permanent peace" which was to be commemorated by a monument at Manbidj, but in 540 he attacked the town, which was obliged to pay a ranson for its liberation. It was in this period that a temple of fire was built in the town by the Sāsānid Emperors. Kisrā gave the town the name of Manbik, which was arabised into Manbidj.

During the 5th and early 6th centuries, the Byzantine emperors, including Justinian, maintained Hierapolis/Manbidj as a front-line stronghold against the East. In 612, the Persians invaded Syria, took Jerusalem on 5 May 614 and occupied Alexandria (617-19). Heraclius reacted and succeeded in restoring the situation and, in March 630, he came to Manbidj to receive the True Cross which the Persians had carried off from Jerusalem in 614. The chronicler

Pseudo-Dionysius mentions in Manbidj a church of Saint Mary and a church of Saint Thomas. According to Ibn Khurradādhbih, in the 3rd/9th century there was there a very fine church built of wood.

In the time of the caliphs ʿUmar and of ʿUthmān, after the conquest of Syria, Manbidj was one of the *ʿawāṣim*, fortified posts which marked the frontier between the *Dār al-Islām* and the Byzantine province of Antioch.

In 16/637, the inhabitants of Manbidj were attacked by ʿIyāḍ b. Ghānim, who had been sent as vanguard by Abū ʿUbayda b. al-Djarrāḥ [*q.v.*]. They capitulated, and the treaty was ratified by Abū ʿUbayda when he appeared before the town. The surrounding areas of the town were at this time occupied by Yemeni tribes and, in particular, the Banū Taghlib.

Under the Umayyads, according to the testimony of the Monophysite Christian poet al-Akhṭal (20-92/640-710), the Banū Taghlib, his own tribe, were settled between the Tigris, the Euphrates and the Khābūr and led a nomadic existence towards the west as far as the fertile region of Manbidj. Situated in the frontier zone of northern Syria, Manbidj seems to have enjoyed a degree of independence, in view of the fact that its inhabitants had requested permission from ʿUmar to practise commerce in the interior of the caliphate. When Yazīd b. Muʿāwiya constituted the *djund* of Ḳinnasrīn, he incorporated Manbidj into it. In 131/748 the town was devastated by a violent earthquake in the course of which the church of the Jacobites (Monophysites) collapsed during a service, entombing the faithful. In 170/786, Hārūn al-Rashīd reorganised the northern frontier of the ʿAbbāsid caliphate with the intention of reviving *djihād*. He detached Manbidj from the *djund* of Ḳinnasrīn and made it the capital of the new zone of *ʿawāṣim*, which combined the frontier posts of Syria and of the Upper Djazīra. From 173/789-90, the caliph appointed as local governor ʿAbd al-Malik b. Ṣāliḥ b. ʿAlī [*q.v.*], an ʿAbbāsid who was later (196/811-12) to be promoted governor of Syria and of Upper Mesopotamia by al-Amīn, who had many new buildings constructed in Manbidj. It was henceforward to serve as a starting base for summer expeditions (*ṣāʾifa*) directed against the Byzantines by the caliph of Baghdād. The good condition of its fortifications in this period contributed to its designation as capital. "A vast area of land was attached to it, stretching from the limits of the territory of Ḥalab to the Sadjūr and the Euphrates".

Implicated in an abortive plot against his uncle, the caliph al-Muʿtaṣim, a pretender to the ʿAbbāsid caliphate, al-ʿAbbās b. al-Maʾmūn, died in the prison of Manbidj in 223/838. Forty years later, in 264/877-8, Aḥmad b. Ṭūlūn occupied Syria under the pretext of conducting *djihād*, and Manbidj then passed under Egyptian domination. In the 4th/10th century, under the Ḥamdānids, Manbidj owed its importance to its agricultural wealth, to its location in the region forming the junction of the Mesopotamian and Syrian frontiers and also to its proximity to Ḥalab and the Euphrates close to a crossing over that river, Djisr Manbidj or Ḳalʿat Nadjm. In the middle of this century, the region was subjected to raids on the part of the ʿUḳayl, Kalb, Kilāb and Numayr tribes [*q.v.*]. According to al-Hamadhānī, Manbidj was shared between the Kalb and the Kilāb.

In 334/945 the Ḥamdānid prince Sayf al-Dawla signed a peace treaty with the Ikhshīdid [*q.v.*] ruler of Egypt and took possession of a vast area comprising the *ʿawāṣim* of Anṭākiya and of Manbidj. Two years later, the eastern part of this zone was entrusted to the poet Abū Firās [*q.v.*], a cousin of the prince of Ḥalab, who was, in 336/947, only sixteen years of age. In 343/late summer 954, a major expedition was launched from Manbidj with the object of combating the Nizārī tribes of Diyār Muḍar [*q.v.*] and of the Syrian Desert. In 351/962, Nicephorus Phocas seized Manbidj from Sayf al-Dawla's viceroy, Abū Firās, and took him prisoner. The latter was obliged to spend seven years in captivity in Constantinople, evoking Manbidj in his *Rūmiyyāt*.

In 355/966, Nicephorus Phocas, who had now become emperor, camped before Manbidj from where he removed the sacred tile bearing the portrait of Christ (*al-Ḳirmīda*, κεραμέδιον). According to Leo the Deacon, it was John Tzimisces who is said to have procured this "portrait of Christ" when in 363/974 he took the citadel of Manbidj, where he found the sandals of Christ and some hairs of St. John the Baptist, which he carried away as relics to Byzantium. During the second half of the 4th/10th century, Manbidj was to remain one of the primary objectives of the Byzantines.

At the end of the 4th/10th century, Ibn Ḥawḳal writes: "Not far from Bālis is situated Manbidj, a fertile and fortified town where there are numerous very ancient markets, rich in Greek relics. One of the local products is a kind of nougat (*nāṭif*) of dried grapes, made with nuts, pistachios and sesame ... Spread among the farms of Manbidj there is a very great number of non-irrigated vineyards. The dried grapes are exported to Ḥalab and to other places. This town is located in a desert plain without water-courses, but its soil is humid, red in colour and turning yellow saffron-colour, and the greater part of its land is not artificially irrigated. It is surrounded by an ancient rampart". Already at this time, thanks to water mills on the Ṣadjūr, manufactured paper could be found there.

Although the Fāṭimids were occupying northern Syria in 406/1015, Ṣālih b. Mirdās became master of Ḥalab in 414/1023; he took Manbidj in the autumn of the following year. An agreement having been made between the Mirdāsid Rashīd al-Dawla Maḥmūd and his uncle Abū Duʿāba ʿAṭiyya, lord of Raḳḳa, Manbidj reverted to the latter between 456/1063 and 457/1064. In early 461/late 1068, Romanus IV Diogenes took possession of Manbidj and reinforced the citadel, thus securing communications between Anṭākiya and al-Ruhā [*q.v.*]. Subsequently, the town was to be entrusted to the Armenian prince Philaretos. Taken prisoner after his defeat at Malāzgird [*q.v.*] (Mantzikert) in Dhu 'l-Kaʿda 463/August 1071, Romanus ceded Manbidj to Alp Arslān [*q.v.*], who was already occupying the town. A small mosque was built there in the same year by Ṣāliḥ, son of Muḥammad Sharīf al-Adhamī. In 468/1075, under the caliphate of al-Muḳtadī, Manbidj was entrusted to Saldjūḳ Turkish *amīrs* who are said to have restored the citadel. Ten years later (477/1085), it formed part of the territory subject to the authority of the ʿUkaylid *amīr* Sharaf al-Dawla Muslim b. Ḳuraysh [*q.v.*], a domain which extended from al-Mawṣil to the Euphrates, including the districts of Diyār Rabīʿa and of al-Djazīra.

In 479/1086, the Saldjūḳ sultan Malik Shāh placed Manbidj under the authority of Abū Saʿīd Āḳ-Sunḳur ʿAbd Allāh Ḳasīm al-Dawla al-Ḥadjib, one of his Turkish officers, who, the following year, took over the government of Ḥalab, of Ḥamāt and Lādhiḳiya. In 485/1092, on the death of Malik Shāh, the situation changed; two years later, his brother Tādj al-Dawla Tutush defeated Āḳ Sunḳur, whom he put to death, and occupied Manbidj in his turn.

In the early years of the 6th/12th century, Manbidj

was to be coveted by the Atabeg of al-Mawṣil, Djawālī, by Riḍwān b. Tutush of Ḥalab and by the Franks. In Ṣafar 502/September 1108, after Djawālī seized Bālis from the prince of Ḥalab, the latter appealed to Tancred for aid. Baldwin and Joscelin restored Djawālī to Manbidj where Ṣadaḳa, chief of the Banū Mazyad Bedouins, was also present. In 503/1110, at the time of the attack on the principality of Antioch by Riḍwān, the troops of Joscelin descended from Tell Bashīr, attacking Manbidj and Bālis. The following year, the Franks seized and ravaged Manbidj; they joined it to the archbishopric of Tell Bashīr, subject to the Latin Patriarchate of Antioch. Shortly afterwards, the Franks lost the town, to which they were never to return, but there was to be for a long time a Latin prelate consecrated bishop of Manbidj *in partibus*.

In 514/1120, the territory of Manbidj was attacked from Tell Bashīr by Joscelin who, barely released from captivity by Djawālī, had crossed the Euphrates on his way to Antioch and, arriving at Manbidj, was unable to resist pillaging the lands belonging to Riḍwān of Ḥalab. In spring 517/1123, after the *amīr* Ḥassān b. Gümüshtigin, a Turkish lieutenant of Balak at Manbidj, had taken prisoners in the territory of Edessa, Joscelin returned to pillage the region by way of reprisal. In 518/1124, the Artuḳid Nūr al-Dawla Balak b. Bahrām b. Artuḳ [*q.v.*], the nephew of Il-Ghāzī, having become master of Ḥalab on the death of the latter in Ramaḍān 516/November 1122, resolved to attack Tell Bashīr. He entrusted an army to his cousin Ḥusām al-Dīn Tīmūr-Tāsh and asked him to invite Ḥassān to accompany him. Suspicious of Ḥassān's lukeward response, Tīmūr-Tāsh arrested him and occupied Manbidj, while ʿĪsā, the brother of Ḥassān, took refuge in the citadel of Manbidj and appealed for help to Joscelin of Edessa, offering him the town in return for driving away the troops of Balak. Joscelin marched towards Manbidj with Geoffrey the Monk, lord of Marʿash, and in Ṣafar 518/March-April 1124, was confronted by Balak as the latter was preparing to attack Manbidj. The Franks suffered a grave defeat; Geoffrey was killed, Joscelin fled and took refuge at Tell Bashīr. Balak occupied Manbidj and tried to take possession of the citadel, which he wished to hand over to his cousin Tīmūr-Tāsh, but on 19 Rabīʿ I 518/6 May 1124 an arrow shot from the citadel wounded him fatally. His troops disbanded, Tīmūr-Tāsh brought the body back to Ḥalab and took power there, while Ḥassān, released from detention, returned to Manbidj.

In 520/1126, the Atabeg Bursuḳī of al-Mawṣil, on a journey through Syria, passed beneath the walls of Manbidj. The following year, in Rabīʿ I 521/April 1127, ʿImād al-Dīn Zangī, having become Atabeg of al-Mawṣil and master of Ḥalab, did not hesitate to seize the important road junction of Manbidj. In 525/1131 Joscelin de Courtenay besieged Tell ʿArān, a site between Ḥalab and Manbidj. Injured by a collapsing undermining, he was carried to Tell Bashīr, where he died. The governor of Manbidj, accompanied by the *amīr* Sawār of Ḥalab, took advantage of the situation by attacking the knights of Edessa.

When the Byzantine John Comnenus attacked the region of Manbidj in 536/1142, he did not take the town. Two years later, Manbidj contributed a contingent of Turkomans to the army of Zangī. On the death of the latter, in 541/1146, his son Nūr al-Dīn, on his way from Ḥalab to lay siege to al-Ruhā, passed through Manbidj with his siege machinery. It was the *amīr* of Manbidj, Ḥassān, loyal ally of Nūr al-Dīn, who by taking Tell Bashīr in 546/1151, put an end to the County of Edessa.

In 553/1158 Madjd al-Dīn Abū Bakr, foster-brother of Nūr al-Dīn, governor of the province of Ḥalab, warned by the *amīr* in command of Manbidj of a conspiracy against Nūr al-Dīn, foiled the plot which had been hatched during the illness of the latter and was to have been put into effect in Muḥarram 554/February 1150. When Ḥassān al-Manbidjī died (562/1167), Nūr al-Dīn gave Manbidj in *iḳṭāʿ* to Ghāzī b. Ḥassān, but the latter rebelled and the sovereign then came in person with Madjd al-Dīn Abū Bakr b. al-Dayā and Asad al-Dīn Shirkūh, in spring 563/1168, to take the town after a full-scale siege. He deposed Ghāzī and gave the place in *iḳṭāʿ* to Ḳuṭb al-Dīn Ināl b. Ḥassān, the rebel's brother. Nūr al-Dīn consolidated the defences of Manbidj, constructing there, as at Ḥalab, a protective outer wall. After 563/1167 he also built there a Shāfiʿī *madrasa* for Ibn Abī ʿAṣrūn, while Ḳuṭb al-Dīn built one for the Ḥanafīs.

On 14 Shawwāl 571/April 1176, Ṣalāḥ al-Dīn (Saladin) launched an offensive in northern Syria against Sayf al-Dīn of Ḥalab. He headed towards the north-east, in the knowledge that Manbidj was held by Ḳuṭb al-Dīn Ināl b. Ḥassān, a resolute enemy of the Ayyūbid sovereign; the siege-engineers had already begun their work when Ināl offered to surrender, giving up his citadel and his treasury, in exchange for safe-conduct. The prospect of taking Manbidj without bloodshed and gaining precious time persuaded Ṣalāḥ al-Dīn, who permitted Ināl to make his way to al-Mawṣil. Manbidj was taken on 29 Shawwāl 571/11 May 1176, and the victor found significant spoils there. Ṣalāḥ al-Dīn recalled his nephew Taḳī al-Dīn ʿUmar b. Ṭurān Shāh, who was seeking to impose his authority in Egypt, and gave him fiefdoms in Syria, including Manbidj. In 577/1181, Taḳī al-Dīn al-Muẓaffar ʿUmar, prince of Ḥamāt, while in Manbidj, attempted to bar the road from Ḥalab to ʿIzz al-Dīn Ibrāhīm Ibn al-Muḳaddam, but he failed and was forced to retreat to Ḥamāt. In Ramaḍān 579/June 1179, Ṣalāḥ al-Dīn appointed his brother al-Malik al-ʿĀdil governor of Manbidj and, two years later, he added a minaret to the Great Mosque.

It was during this period (Rabīʿ I 580/June 1184) that Ibn Djubayr, coming from Ḥarrān, mentioned the purity of the air, the beauty of the landscape, the abundance and quality of the water of Manbidj. He described its broad streets and markets, noted the piety of the Shāfiʿī inhabitants, mentioned the ancient defensive wall as well as the remains of Roman buildings, and referred to the separate and isolated citadel.

In 586/1190, Manbidj, then ruled by Nāṣir al-Dīn, son of al-Muẓaffar Taḳī al-Dīn ʿUmar, was an important rallying-point for troops setting out to fight Frederick Barbarossa.

In 588/1192, al-Malik al-Ẓāhir, third son of Ṣalāḥ al-Dīn, sought to assert control of Manbidj, appealing to al-Malik al-Manṣūr of Ḥamāt to lend him his support against al-Malik al-ʿĀdil. But al-Manṣūr refused to give up the town which controlled the communication routes towards the north-east, the valley of the Upper Euphrates and Diyār Muḍar. In Radjab 589/April-May 1193, al-Malik al-Ẓāhir and al-Malik al-Afḍal attacked Manbidj; al-Ẓāhir destroyed the citadel to prevent it being used by an enemy and the town, deprived of defences, was given in *iḳṭāʿ*.

In 591/1195, Manbidj was dependent on al-Manṣūr of Ḥamāt; al-Malik al-Ẓāhir came from Ḳinnasrīn to attack it, but he was obliged to return in haste to Damascus and he abandoned the operation. In Dhu 'l-Ḳaʿda 595/September 1199, al-Malik al-Manṣūr

Muḥammad took Bārin from ᶜIzz al-Dīn Ibrāhīm Ibn al-Muḳaddam and gave him Manbidj by way of compensation. Several months later, at the request of al-Malik al-ᶜĀdil, he also gave Fāmiya and Kafar Ṭāb to ᶜIzz al-Dīn in recompense for Bārin. Meanwhile, ᶜIzz al-Dīn Ibrāhīm died at Fāmiya, and Manbidj reverted to his younger brother Shams al-Dīn ᶜAbd al-Malik. In 598/1202, al-Malik al-Ẓāhir undertook restoration work on the Great Mosque.

Ca. 600/1204, Manbidj was a much-frequented place of pilgrimage. At the end of the 6th/12th century, al-Harawī refers to "the tomb, no longer to be seen, of al-Ḥakam b. al-Muṭṭalib b. ᶜAbd Allāh b. al-Muṭṭalib", an eminent Ḳurashī who lived at the end of the Umayyad period and is said to have died in Syria. This author mentions the *mashhad* of al-Khaḍir and "the *mashhad* of the light (*mashhad al-nūr*), where it is claimed that there lies the tomb of some prophet". Ibn Shaddād (*Aᶜlaḳ*, 57) confirms the existence of this monument; "*Mashhad* with the cenotaph of Khālid b. Sinān al-ᶜAbsī" [*q.v.*], a personage of the *fatra* [*q.v.*]; this tomb was situated to the east of Manbidj. There was also a *masdjid al-mustadjāb*, an oratory where vows were fulfilled. Also mentioned is a "Temple of the Moon which was a place of pilgrimage for the Sabians".

In 597/1201 al-Malik al-Ẓāhir Ghāzī who, like al-Malik al-Afḍal, did not recognise the authority of al-Malik al-ᶜĀdil, sent al-Mubāriz Aḳdjā, one of his senior *amīrs* of Ḥalab, with troops to take possession of Manbidj and of Ḳalᶜat Nadjm. Shams al-Dīn was taken prisoner and incarcerated in the citadel of Ḥalab. Henceforward, Manbidj was incorporated among the territories of Ḥalab, and the domination of the Banu 'l-Muḳaddam came to an end.

Al-Malik al-Ẓāhir was not slow to acknowledge al-Malik al-ᶜĀdil as overlord, and the latter, in 598/-1202, granted Manbidj in *iḳṭāᶜ* to ᶜImād al-Dīn b. Sayf al-Dīn ᶜAlī Aḥmad b. al-Mashṭūb. Soon afterwards, al-Malik al-Ẓāhir, who struck coinage at Ḥalab, took it back from al-Mashṭūb in Djumādā II 598/March 1202 and dismantled the walls and the citadel, while ᶜAbd al-Malik b. ᶜAlī b. ᶜAbd al-Malik b. Abī Shaybā contributed to the restoration of the Great Mosque. Manbidj was the object of numerous attacks on the part of al-Malik al-Ẓāhir, who died in 613/1216.

In Rabīᶜ II 615/July 1218, the vanguard of the troops of the Saldjūḳ Kaykāwūs b. Kaykhusraw [*q.v.*] having invaded the territory of Manbidj, the town opened its gates to him. But the Saldjūḳ sultan of Rūm was forced to evacuate the place, which was taken by al-Malik al-Afdal; the latter spared the population and appointed as governor of the town one of his officers, Ṣārim al-Dīn al-Manbidjī, who restored the defensive walls. At the approach of al-Malik al-Ashraf, who had succeeded al-Malik al-ᶜĀdil as head of the Ayyūbids, Ṣārim al-Dīn advanced against the Ayyūbid army, suffered a decisive defeat and lost the town. In 625/1228, the army of Djalāl al-Dīn Khʷārazm-Shāh [*q.v.*] advanced to Manbidj, but withdrew at the approach of winter. In 631/1234, al-Malik al-ᶜAzīz Muḥammad received orders from the Ayyūbid supreme ruler al-Malik al-Kāmil to muster troops at Manbidj in preparation for an assault on Tell Bashīr; as a result, the chieftains assembled on the plain of Manbidj included al-Malik al-Ashraf Mūsā, Kayḳubād b. Kaykhusraw, al-Malik al-Mughīth of Ḥimṣ, al-Malik al-Muẓaffar of Ḥamāt and al-Malik al-Nāṣir of Karak; the commander of the operation was al-Malik al-Muᶜaẓẓam Ṭūrān Shāh, cousin of the prince of Ḥalab,who was reponsible for bringing these leaders together.

In 634/1236-7, at the end of the reign of al-Malik al-ᶜAzīz ᶜUthmān, further construction work was done to the Great Mosque of Manbidj. In 636/1238, al-Muᶜaẓẓam Ṭūrān Shāh brought his army to occupy the town, which gave shelter to refugees from Raḳḳa and Bālis fleeing before the Khʷārazmians. In 637/1240-1, the latter, crossing the Euphrates once more, routed the troops of Ḥalab and marched against Manbidj; on Thursday 20 Rabīᶜ II/8 November 1240, the population took refuge within the fortifications, but the town was taken by assault three days later and burnt. The Khʷārazmians massacred a great many of the inhabitants before recrossing the Euphrates. Al-Malik al-Manṣūr retrieved the town. In Djumādā I 640/November 1242, on their way from Ḳalᶜat Djaᶜbar, al-Malik al-Manṣūr and al-Malik al-Muẓaffar stopped at Manbidj before reaching Ḥalab.

When the Mongols of Hūlāgū [*q.v.*] crossed the Euphrates in their turn, in the course of their headlong invasion of the West, having taken Bālis in Dhu 'l-Ḥidjdja 657/November-December 1259, they turned towards the north and sacked Manbidj, and then attacked Tell Bashīr before returning to their base at al-Ruhā.

With the arrival of the Mamlūk sultans, the post of *ḳāḍī* of Manbidj, which had been occupied by Awḥad al-Dīn, was entrusted to Shams al-Dīn Abū ᶜAbd Allāh Muḥammad b. Maḥmūd al-Iṣfahānī (616-88/1219-89).

In the treaty which the sultan Ḳalāwūn concluded with Leo of Armenia on 1 Rabīᶜ II 684/6 June 1281, Manbidj is mentioned among the "Egyptian" towns. According to Ibn al-Shiḥna, it contributed to the sultan's *dīwān* a sum of approximately 500,000 *dirhams* per year, composed of various levies.

At the end of 699/1299, Manbidj was destroyed by the Tatars, but in the vicinity, numerous pastures and gardens were still to be seen; the majority of the trees were mulberries.

In the period of Abu 'l-Fidāʾ (first half of the 8th/14th century) Manbidj was replaced by Anṭākiya as capital of the *ᶜAwāṣim*. It became a small *niyāba*, but remained an important place in the region of the Syrian Upper Euphrates. It is known from al-Ḳalḳashandī (1418), who summarised the *Taḳwīm* (1321), that the region was dependent then upon the *nāʾib* of Ḥalab and that its governor was a *djundī, muḳaddam* of the *ḥalḳa* [*q.v.*], appointed by *tawḳīᶜ karīm* and enjoying an *iḳṭāᶜ*. In Dhu 'l-Ḥidjdjâ 721/November 1321, the place became the objective of the Turkoman *amīr* Minṭāsh, who came to attack it; the siege lasted several days, and finally Manbidj was taken and burnt, and a large section of the population massacred. A few weeks later, *the amīr* of al-Ruhā joined battle with Minṭāsh, who was defeated, taken prisoner and sent to Djulbān, viceroy of Ḥalab (early 722/late 1321).

In 748/1349, a major plague of locusts infested the region, which, the following year was to be smitten by a serious outbreak of the Black Death. In this period, the town had as its *wālī* the poet and historian ᶜUmar b. Muẓaffar al-Maᶜarrī Zayn al-Dīn al-Wardī, author of a sequel to the chronicle of Abu 'l-Fidāʾ. In the 8th/14th century, following changes to the road network, Manbidj played no further part in the postal system (*barīd*); Ibn Baṭṭūta did not pass this way, and the mail between Ḥalab and the Euphrates, routed furhter to the south, crossed the river opposite Ḳal ᶜat Djaᶜbar.

At the beginning of the 9th/15th century, Manbidj, like many other places, suffered great damage as a result of the invasion of the Tīmūr Lang. However, in

the middle of this century, according to Ibn al-S̲h̲iḥna of Ḥalab (in his *al-Durr al-muntak̲h̲ab*), it was contributing 40,000 *dīnār*s in annual taxation to the sultan's treasury, a fact which testifies to a degree of economic activity. For his part, the Egyptian K̲h̲alīl al-Ẓāhirī, in his survey of the province of Ḥalab in the *Zubdat kas̲h̲f al-mamālik* (mid-9th/15th century), makes no mention of Manbid̲j̲.

In 922/1516, Syria passed under the authority of the Ottoman sultans; the re-organisation of the eastern provinces of the empire and changes in the road network placed Manbid̲j̲ on the periphery of the major commercial processes.

In 1784 Volney visited the *pas̲h̲alik* of Ḥalab, and wrote: "Two days' travel to the north-east of Aleppo is the small town of Manbid̲j̲, formerly renowned under the name of Bambyce and Hierapolis. There remains no trace of the temple of that great goddess, whose cult is described by Lucian."

For the 19th century, two important sources of evidence are worthy of mention, those of Chesney and of Yanovski. In his account of an exploration of the valley of the Euphrates, Chesney provides valuable information concerning the state of Manbid̲j̲ at the beginning of the century. He refers to the town and the castle, which were then called Kara Mambuche or Büyük Munbad̲j̲, and mentions remains of surrounding walls, square Arab towers and a trench which marked the limits of the Muslim city. He describes four large cisterns, a fine sarcophagus and the sparse ruins of the acropolis, the remains of two temples, in the smaller of which were an enclosure and the traces of seven columns. In the larger, which could be that of Atargatis, there are, he mentions specifically, traces of massive architecture: eleven arches alongside a paved court, in which there lie the shafts of columns and lotus-shaped capitals. Slightly to the west of the defensive walls there is a necropolis containing many Turkish tombs as well as some which are pagan, Sald̲j̲ūḳ and Syriac, the last-named bearing inscriptions with illegible characters. Two roads leave this site, leading to two bridges of boats (ζεῦγμα). Towards Sād̲j̲ūr, there are the remnants of a *ḳanāt*, partially abandoned, which has supplied Manbid̲j̲ with water perhaps since the Assyrian, if not the Persian period. To the east of the town there is an aqueduct carrying water from the hills of the D̲j̲abal Dana Tag̲h̲ situated 7 miles to the south-south-east. Two miles to the south is the encampment of the Banū Saʿīd Bedouins, whose herds roam the pasture-lands stretching from Bālis to the Sād̲j̲ūr.

Some years later, J. Yanovski and J. David note that "as throughout the pachalik of Aleppo, subterranean water-courses abound in the territory of Mambidj, relayed by communication channels and thousands of reservoirs". In this region, Yanovski stresses the contrast between "the natural magnificence and the human squalor." From Manbid̲j̲ to the southern limits of the land of Ḥalab, the author describes "massive plains, which although laid out in the form of fertile steppes, already resemble desert and which are variegated only by a series of low hills with derelict citadels on their summits". Yanovski also speaks of "once luxuriant prairies ruined by the disorderly encampments of nomadic tribes."

As for the remaining vestiges of the ancient Manbid̲j̲ at the beginning of the 20th century, according to Baedeker (French edition, 1912, 411), "the extensive ruins of the ancient town are barely visible above the surface of the ground; however, it is possible to recognise the contours of a theatre and of a stadium". The *Guide Bleu* (1932 edition, 165) states for its part: "besides the perimeter wall, nothing is visible of the remains of the ancient town, the ruins of which have been used as a stone quarry of centuries". In the first third of the century, there still existed there a large pool, still stocked with carp similar of those which had been dedicated in Antiquity to the cult of Atargatis. This was, in fact, an ancient sacred lake which, like its equivalent at Marathus (Amrīt) on the Syrian coast, was originally flanked by a rectangular stone wall, and in the centre of which there rose an altar of marble, (*maʿābid*). In the middle of the 20th century all that remained of it was a deep unwalled depression without water, the dried-up sacred pool being used as a playground, while its spring supplied a bathing pool from which water was also drawn off to irrigate gardens. Of the successive ramparts surrounded by a broad trench which, since Antiquity had protected the town, there remained nothing but a circular earth embankment and a few vestiges on the north-west side.

Since the 16th century, Manbid̲j̲ had been incorporated into Ottoman Turkey. At the beginning of the 20th century it was a regional centre of a *ḳaḍāʾ* of the *wilāyet* of Ḥalab, joined to the latter since 1913 by a telegraph cable. The region was then inhabited by groups of Kurdish and arabised Turkish families, among whom there were settled, after the Treaty of San Stefano put an end to the Russo-Turkish war of 1877-8, a number of Circassians, Ḥanafī Muslims [see ČERKES]. In 1915, at the time of the Russian offensive against eastern Turkey, the Circassians were obliged, as a precautionary measure, to join their kinsmen established at K̲h̲anāzīr, 50 km to the south-south-east of Ḥalab at the northern limit of the Syrian desert.

In 1921, after the imposition of French authority in the Levant, Manbid̲j̲ was incorporated into the third region of the provincial government of Ḥalab.

In 1924, the agricultural zone of Manbid̲j̲ was part of the *sand̲j̲aḳ* of Ḥalab; later, it was to contribute one of the seven *minṭaḳa*s of the *muḥāfaẓa* of Ḥalab. In this region, in the first half of the 20th century, there existed a tripartite association between the owner of the land, the owner of the irrigation equipment and the farmer, the supply of water being linked to the exploitation of the land. In this period, irrigation was still operated by the system of *ḳanāts*. Since before 1914, Manbid̲j̲ had been an important staging-post for the convoys of humped cattle which, coming from al-Mawṣil, made a halt there, which explains the presence in the town, from this period onwards, of a veterinary surgeon who inspected the beasts before they set out for Ḥalab by way of Bāb. In the region of Manbid̲j̲ itself, there was livestock, comprising in 1924, according to Ch. Parvie, 386 oxen, 414 calves and 4,182 cows, which made the town an important centre of dairy production. There were also herds of sheep and goats.

In 1930, Manbid̲j̲, where there existed a police station and a magistrate's court, was incorporated into the *ḳaḍāʾ* of the D̲j̲abal Samaʿān, which was dependent on Ḥalab. Two years later, the population of the town numbered 2,000, including 800 Circassians and 100 Armenians. In 1945, a census counted 4,653 inhabitants, including the population of the regional centre of the *ḳaḍāʾ*. According to the official statistics of the Syrian Arab Republic (1982), the population of the town was estimated in 1960 at 8,577, in 1970 at 14,635 (the *minṭaḳa* or district then numbered 102,730), and in 1981 at 30,844. The significant demographic growth of the region in the course of the last decade is due to electrification made possible by the barrage of Tabḳa on the Euphrates, to the im-

provement of the road network and to a re-structuring of the hydraulic system, measures which have led to a spectacular development of agriculture in the region and to an improvement of the habitat.

(N. Elisséeff)

MĀND (Mūnd, Mund), the longest river in Fārs (*Nuzhat al-ḳulūb*; 50 *farsakhs*; E.C. Ross: over 300 miles in length).

The name. As a rule in Persia, sections of a river are called after the districts through which they flow. Mānd is the name of the last stretch near its mouth. The name seems to appear for the first time in the *Fārs-nāma* (before 510/1116), but only in the composite Māndistān (cf. below).

The old name of the river is usually transcribed in Arabic characters Sakkān (al-Iṣṭakhrī, 120; Ibn Ḥawḳal, 191; al-Idrīsī, tr. Jaubert, i, 401), but the orthography varies: Thakān, *Fārs-nāma*, GMS, 152; *Nuzhat al-ḳulūb*, 134; Zakkān or Žakkan, *Nuzhat al-ḳulūb*, 217; Sitāragān, *Djihān-numā*, 247; cf. also Ṣayḥkān in Ḥasan Fasāʾī.

The identification of the Sakkān with the Σιταχός mentioned in the *Periplus* of Nearchus (Arrian, *Indica*, xxxviii, 8) is generally recognised. The identity of Sitakos with the Sitioganus (Sitiogagus) mentioned by Pliny, *Nat. Hist.*, vi. 26, is also usually admitted (Weissbach, 1927), but Herzfeld (1907) relying on the existence of another river, the Shādhkān (= Sitioganus?), has suggested doubts about the identification of the Sitakos with the Sitioganus. Now according to al-Iṣṭakhrī, 119, the Shadhkān flows into the Persian Gulf at Dasht al-Dastaḳān (north of Būshīr?). This Shadhkān must be identified with the river Shāpūr. The *Fārs-nāma*, ed. Le Strange, 163, mentions Rūdbāl-i Sittadjān ("the banks of the S.") as a station on the road from Shīrāz to Tawwadj. From this fact and especially from the name, Sittadjān seems to have applied to the left bank tributary of the Shāpūr. Pliny, who follows Onesicritos, adds that by the Sitioganus one reaches Pasargades in 7 days. Whatever be the identity of the Sitioganus, the exaggaration in this statement is evident (especially in the direction of the sea to Pasargades) and the waters of Pasargades (Mashad-i Murghāb) do not flow into the Persian Gulf. But there is nothing to prove the absolute impossibility of using the Sakkān as a subsidiary means of transport in the season of floods (the winter). According to Arrian, Nearchus found at the mouth of the Sitakos large quantities of corn which Alexander had brought there for the army. Al-Iṣṭakhrī, 99, places the Sakkān among the rivers of

Fārs which are navigable at need (*al-anhār al-kibār allatī taḥmil al-sufuna i͟dh͟ā ud͟j͟riyat fī-hā*).

Another question is the phonetic identity of the names Sitakos (Sitioganus?) and Sakkān. According to C.F. Andreas, Σιταχός is a nominative restored from a supposed genitive *Σιταχων (Sitakān); Sitiogan-us is a mistake for Sittagan-us; lastly, the peculiarity of the Arabic script could explain the change of Sittakān to Sakkān. Here we may add that Ḥasan Fasā ʾī gives one of the stretches of the river the strangely written form Ṣayḥkān (*Stkān?). Al-Iṣṭak͟h͟rī, however, derives the name of the river from that of the village of Sakk (*Nuzhat al-ḳulūb*: Zakān) in the district of Karzīn considerably below the Ṣayḥkān stretch of the river.

To sum up, the identification of the Sitakos with the Sitioganus does not seem sufficiently established.

The course of the river. The Sakkān (Mānd) describes a great curve. At first it runs in the direction N.W.-S.E., to the northern base of the Kūh-i Marra-yi S͟h͟ikaft, which separates it from the valley of the river S͟h͟āpūr. It follows this direction (*ca.* 100 miles) to the end of the Āsmāngird mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles).

The Sakkān (Mānd) and its tributaries drain and irrigate a considerable area (the Kūh-i Mānd and the Kūh-i Darang). Al-Iṣṭak͟h͟rī says that its waters contribute the largest share to the fertility of Fārs (*akt͟h͟ar^u ʿimārat^in*).

The sources of the river (Kān-i Zand, Čihilčas͟h͟ma and Surk͟h͟-rag) rise in the mountains of Kūh-i Nār and Kūh-i Marra-yi S͟h͟ikaft to the northwest and west of S͟h͟irāz. These streams unite before K͟h͟an-i Zinyān in the district of Māṣarm on the great S͟h͟irāz-Kārrūn-Būs͟h͟īr road. Al-Iṣṭak͟h͟rī, 120, places the sources of the Sakkān near the village of S͟h͟ād͟h͟farī (?) in the district of Ruwayd͟j͟ān (?). In the same author, 130, K͟h͟ān al-Asad on the Sakkān corresponds to the modern K͟h͟ān-i Zinyān. The *Fārs-nāma* (and the *Nuzhat al-ḳulūb*) places the sources of the Sakkān near the village of Čatrūya (?). Under the Turkish name of Ḳara ag͟h͟ač, i.e. "[the river of] the elm", the combined streams flow through the districts of Māṣarm (= Kūh-i Marra-yi S͟h͟ikaft), Siyāk͟h͟ (al-Iṣṭak͟h͟rī, 120: Siyāh) and Kawār. In this last district, Rivadaneyra, iii, 81, going from S͟h͟īrāz to Fīrūzābād, crossed the river by a "substantial bridge". It is in the district of Kawār that Ḥasan Fasā ʾī gives the river the name of Ṣayk͟h͟ān. In Kawār (Ḥasan Fasā ʾī) there used to be the barrage of Band-i Bahman, where by a subterranean channel (*ḳanāt*) part of the water was led into reservoirs (*čāh*) and then to the fields. In the *bulūk* of K͟h͟afr (al-Iṣṭak͟h͟rī, 105: K͟h͟abr), which must be distinguished from the district of the same name in the *kūra* of Iṣṭak͟h͟r, the river turns south. Aucher-Eloy, who crossed the river on the road from Fīrūzābād to D͟j͟arrūn (D͟j͟ahrum) calls it "Tengui Tachka" (= Tang-i Ḳas͟h͟ḳay?) and speaks of its "beautiful valley". Rivadaneyra continuing his journey from Fīrūzābād to Dārāb crossed the river by a ford between the villages of Tadwān and "Assun-Dscherd" (Āsmāngird?). He also admires the pleasant and flourishing aspect of K͟h͟afr. Below the latter, the river enters the *bulūk* of Ṣimkān where, near the village of Sarḳal, it receives on its left bank, the brackish (*s͟h͟ūr*) river of D͟j͟ahrum, and then flows through the ravine of Kārzīn, and waters the *bulūk* of Ḳīr-wa-Kārzīn. Abbott coming from Fasā crossed the river by a ford between ʿAlī-ābād and Lifard͟j͟ān (cf. the name of the *ramm* of Kurds in Fārs al-Liwāld͟j͟ān, al-Iṣṭak͟h͟rī, 113), where it was 100 yards wide and the water rose up to the horse's belly. Farther down below the ford, Stack, going from Ḳīr to Kāriyān crossed the river, here 60 yards broad, by the bridge of ʿArūs, built in a zig-zag and in two stories ("the queerest structure in the way of a bridge"). Near the village of Nīm-dih, the river enters the *bulūk* of Afzar. After having wound round the fort of Ḳal ʿa-yi S͟h͟ahriyār the river receives (near the place called Čam-i Kabkāb) the name of Bāz and then irrigates the *bulūk* of K͟h͟und͟j͟ (cf. Ibn Baṭṭūṭa, ii, 241: K͟h͟und͟j͟bāl = K͟h͟und͟j͟ + Bāl). In the district of Diz-gāh of the *bulūk* of Galla-dār, the river has two tributaries: near the village of Gabrī, the Dār al-Mizān, and two *farsak͟h͟s* lower, that of Dihram. The Dār al-Mīzān comes from the left (east) side of the *bulūk* of Asīr. The Dihram, much more important, comes from the right side after watering the historic district of Fīrūzābād (the ancient Gūr, capital of Ardas͟h͟īr-K͟h͟urra; cf. the details in Le Strange, 256, and also FĪRŪZĀBĀD). Al-Iṣṭak͟h͟rī, 121, makes this tributary come from Dārd͟j͟ān (of Siyāh) and water first K͟h͟unayfg͟h͟ān and then Gūr (in place of the name of the river Tirza, al-Iṣṭak͟h͟rī, 99, 121, one should probably read Burāza; cf. the *Fārs-nāma*, 151, *Nuzhat al-ḳulūb*, 117-18: Ḥakīm Burāza was the sage who dried up the Lake of Gūr).

After Diz-gāh, the river enters the district of Sanā-wa-S͟h͟umba of the *bulūk* of Das͟h͟tī, and near the village of Bāg͟h͟ān receives on the right bank the river Čanīz which comes from the district of Tasūd͟j͟-i Das͟h͟tī. Finally, near the village of Dūmānlū the river enters the coast district of Māndistān and receives the name of Mānd. It flows into the sea near the village of Ziyārat, halfway between the old harbours of Nad͟j͟īram (to the north and Sirāf (to the south).

Māndistān. The district forms part of the *bulūk* of Das͟h͟tī (which is to be distinguished from Das͟h͟tistān to the north of Das͟h͟tī up to Būs͟h͟īr). Das͟h͟tī (36 × 18 *farsak͟h͟s*) is composed of 4 districts: 1. Bardistān, the part of the coast in which is the port of Dayyir. 2. Māndistān in the coast to the north of Bardistān and the two banks of the river Mānd. 3. Sanā and S͟h͟umba on the river above Māndistān. 4. Tasūd͟j͟-i Das͟h͟tī, a very narrow valley (11 × ½ *farsak͟h͟s*), watered by the Čanīz and separating Sanā and S͟h͟umba from the *bulūk* Arbaʿa (on the lower course of the river of Fīrūzābād).

The whole of the *bulūk* belongs to the torrid zone (*garmsīr*) of Fārs. Māndistān (12 × 5 *farsak͟h͟s*) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 40 villages. The capital of the district and of the *bulūk* is Kākī. There used to be two rival families in Māndistān: the S͟h͟ayk͟h͟iyān and the Ḥād͟j͟d͟j͟iyān. During the disturbances under Afg͟h͟ān rule (1722-9) the Ḥād͟j͟d͟j͟ī Raʾīs D͟j͟amāl exterminated the S͟h͟ayk͟h͟iyān and founded a little dynasty of hereditary governors, who were able to annex the district of Bardistān through matrimonial alliances. One of his descendants, Muḥammad K͟h͟ān (d. at Būs͟h͟ir in 1299/1881), was noted as a poet under the pen-name of Das͟h͟tī.

Ḥasan Fasāʾī explains the name Māndistān by a popular etymology: "the place where the water flows slowly (*wāmānda*)". Names in *-stān* are common in Fārs (Lāristān, Bardistān), but even if such a formation was possible in a river-name, the element Mānd would still be a puzzle. It is curious that Ḥasan Fasāʾī sometimes writes it Mānd (read Mūnd) and sometimes Mund (read *Mŏnd*). It might be suggested as a

pure hypothesis that there is a connection with the people Mnd (cf. Mēd) of which there might have been a colony in Māndistān.

(V. Minorsky)

MANDA, an island off the coast of Kenya. It lies in approximately 2° 12' S, 41° E, on the east side of Lamu Island [*q.v.*] in the Lamu Archipelago. There is a small modern settlement at Takwa Milinga, near the ruins of the ancient walled town of Takwa in the centre of the island, a small, deserted and allegedly ancient settlement at Kitau at the south-west corner of the island, and, in the extreme north, not far from a small modern settlement, the remains of the ancient walled town of Manda, which gives the island its name. It was finally destroyed by Fumo Luti, Sultan of Pate, in 1806. Its sole mention in Arabic literature is as Mandakhā or Manda Khā in the *History of Kilwa* [see kilwa], as one of the settlements at which a son of the founder was set up; the Arabic form presumably represents the Swahili Manda Kuu, or Great Manda, recorded by A. Voeltzkow. Al-Idrisi's reference *M.l.n.da.* more probably refers to Malindi [*q.v.*]. According to the traditional *Habari za Pate* ("History of Pate"), it was founded earlier than Pate, by which it was conquered later. However, it was of sufficient importance to pay tribute to the Portuguese separately from Pate, and it was its failure to do so that led to reprisals by the Portuguese in 1569, when many houses and some 2,000 palm trees were destroyed. In 1637 it was required to demolish its defensive walls.

H.N. Chittick carried out excavations at the site between 1966 and 1982. (These have been entirely filled in, and there is scarcely anything to be seen, other than the remains of two mosques.) There are massive stone walls on the western and northern sides abutting on the shore, and the remains of later walls on the south-west and south-east of the site. These walls are distinguished by Chittik as mega-walls and maxi-walls: the mega-walls are of blocks of stone weighing up to one ton each. The stone used, in both cases, is coral, quarried from a nearby reef which can still be identified. The walls provided stability for the sand dunes, so that houses could be built on the resulting terraces. These constructions are similar to ones observed by the writer at S͟hiḥr in South Yemen. The houses were built of coral, but also used brick. Very similar bricks have been found at Ṣuḥār, ʿUmān, and were probably brought from there as ships' ballast unloaded here in order to take on cargoes of mangrove timber. Certain houses have brick cisterns, and one, with a sunken courtyard, is similar to one known in Sīrāf. *Per contra*, the lay-out of the houses, however, is compared by M.C. Horton rather to types known from the Red Sea. Glazed and unglazed imported Islamic pottery, in which the earliest period of the site abounds, can be paralleled closely in D. Whitehouse's excavations at Sīrāf [*q.v.*], and some was certainly made in the Sīrāf vicinity. It need not be concluded, however, that Manda was a colony of Sīrāf. Rather, its connections with the Red Sea, and also with Ṣuḥār, suggest that it served both the Red Sea and the Persian Gulf as a trading port, already in existence in the mid-8th century, busied chiefly in the ivory and mangrove trades, in a region in which they abound naturally. A curiosity is an arcaded building with open sides, probably of the 13th-14th centuries, and most likely to have been a covered market, albeit it has been fancifully described as a "kiosk". There is a Friday mosque and another mosque, of 14th-15th century date. Only six coins have been found, two of them Fāṭimid, and apparently from Sicilian mints, an illustration of the wide dispersal of coinage. (The plate published by Chittick is illegible.) There is no trace of there having been a local currency.

At Takwa there is a well-preserved Friday Mosque and quite a number of houses in what was a walled town of some 12½ acres. The mosque appears to be of the late 15th or early 16th century, and was cleared by J.S. Kirkman, *Pace* the latter author, the pillar that rises above the roof of the *miḥrāb* is not of religious significance. Examination of the side walls discloses stumps of what were a series of pillars that originally provided an open clerestory below the roof, a feature still perpetuated in domestic architecture on Pate Island. A curiosity in the mosque ablutions is the decoration of the cistern with three plates: that in the place of honour in the centre is of Portuguese manufacture, and bears the Cross that is the emblem of the Portuguese Order of Christ. Outside the walls an inscription on a pillar tomb is read by Kirkman *ʿAbd Allāh Muḥammad ʿAlī al-mutawaffā sana 1094.* Local tradition, nevertheless, claims it as the tomb of S͟hayk͟h Aḥmad Manṣūr b. Aḥmad or "S͟hayk͟h Fakīhi Manṣūr", honouring it with an annual pilgrimage from Shela on Lamu Island. The Friday Mosque also enjoys the reputation of being a place of sanctuary. The inability to read the inscription can be taken as an indication of the local level of literacy in Arabic.

MANDATES. The mandate (Arabic *intidāb*; Turkish *manda*, from the French) was essentially a system of trusteeship, instituted by the League of Nations after the end of the First World War, for the

administration of certain territories detached from the vanquished states, chiefly the Ottoman and German Empires. The concept of the mandate has been variously understood as either a new world order or, contrariwise, merely as a façade for neo-colonialism, with other interpretations ranging between these two extremes. Essentially, the option of establishing mandates in conquered territories was largely intended to defuse (if not quite resolve) three foci or conflict: (1) Among the Powers themselves, particularly the victorious Allies, regarding domination of areas formerly administered by the vanquished - according to their respective global and regional interests and in consideration of secret agreements drawn up during the war years. (2) Between each Mandatory Power and the populations of the to-be-mandated territories — whose élites had become at least partially suffused with assertive patriotism — in an attempt to find methods of fulfilling promises expressed during the war. (3) Among rival sectors within each of these populations, some of which rejected mutual accommodation.

The mandate was not only a response to the real or potential threat of the above conflicts, but also a compromise between the desire of the victors — chiefly France and Great Britain — to maintain their hold on certain territories and the demand for self-determination raised by idealists, among whom President Woodrow Wilson and General Jan Smuts were most prominent. The guiding principle essentially agreed upon was to adopt a system of Great Power administration, intended to foster not only material welfare and cultural advancement but also progressive development of the mandated territory towards independence and statehood as well. The degree of development varied among the territories, which were classified accordingly into three categories. Category A, the highest level, comprised three mandates (out of a total of fourteen), all in ex-Ottoman territories: ʿIrāḳ; Syria and Lebanon; and Palestine and Transjordan. We will consider only these mandates herein, as they included sizeable Muslim populations (mandates in Category B were located in Africa and those in Category C in Africa and the Pacific area; for both, a more paternal type of rule was envisaged). For a brief while (1918-19) there was some discussion of a British and then an American mandate over Anatolia — the latter mooted separately by K͟hālide Edīb [*q.v.*] in Turkey and Henry Morgenthau, former U.S. ambassaor of Istanbul, in *The New York Times*. These projects were soon dropped, however, due to the Turkish nationalists' flat rejection, at the Sivas Congress (1919) of any mandate idea and their success in Turkey's war of independence. Similarly, projects of mandates for Armenia and Albania failed to materialise (the United States Senate debated the former, which received insufficient support because of majority opposition to the Treaty of Versailles. Furthermore, no other state was willing to assume a mandate over Armenia).

The victorious Allies first agreed in principle about mandates, in a formal manner, in a resolution of the Council of Ten on 30 January 1919, which became Article 22 of the Covenant of the League of Nations signed in Paris in April 1919 and incorporated into the Versailles Peace Treaty two months later. Concerning the "A" areas, the Covenant stated, in part, that "Certain communities formerly belonging to the Turkish Empire have reached a state of development where their existence as independent nations can be provisionally recognised, subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory."

The above formulation reflected the feelings of humanity and justice prevalent in the wake of the First World War and well suited the principle of efficiency in public administration, better served by a defined Mandatory state whose commitment to the local population could be safeguarded by the control and criticism of international public opinion. However, not all the above principles were fully acceptable to France and Great Britain; hence the final texts of the mandates introduced certain modifications (e.g. in allowing local populations a share in selecting "their" Mandatory). At the San Remo Conference, in April 1920, the Allies definitively allotted ʿIrāḳ and Palestine to Great Britain, and Syria and Lebanon to France. The final versions of the mandates and the respective specifications of each were worked out within the League of Nations and approved in July 1922 for Palestine and Syria; those relating to ʿIrāḳ, however, were never ratified as such and consisted instead of a British-ʿIrāḳī Treaty — a modified version of the original draft of the mandate — signed on 12 October 1922 and approved by the Council of the League of Nations in September 1924. The mandates became valid only since September 1923, after the Republic of Turkey (at the Lausanne Conference) had officially renounced all claims on the non-Turkish territories of the defunct Ottoman Empire. Even then, certain frontier issues remained to be ironed out subsequently.

From a legal point of view, the appointment of a Mandatory took the form of an agreement between the League of Nations and the relevant Power, in which the latter was enjoined to promote the interests of the population in the mandated territory and prepare it for self-rule, under the control of the international body — a new conception in political science. The Mandatory had to report annually to the League of Nations' Permanent Mandates Commission, whose Constitution was approved by the League's Council in December 1920. The Commission was first appointed in February 1921 and formally supervised the application of the mandates. This Commission, numbering at first nine members (the number subsequently varied), comprised a majority of representatives from countries other than the Mandatory. It usually met in Geneva twice a year, diligently examining reports from the Mandatory and petitions by the local population, generally insisting upon the presence of representative officials of the Mandatory for cross-examination. Consequently, the commission's functions were simultaneous control of and collaboration with each of the Mandatories. It was hampered, however, by the lack of direct contact with people in the Mandated territories and by an absence of any power other than that of relaying observations to the Council of the League of Nations, whose duties included overall observance of the system and its modification where required. In addition, the International Court of Justice at the Hague served as a court of appeals, in certain cases, for the people of the mandated territories.

On a practical basis, the Mandatory thus had considerable latitude in its day-to-day governing and even in much of its decision-making. Nevertheless, there remained certain basic juridical differences between mandates and colonies. The Mandatory lacked exclusive rights and possessed merely a delegated — and consequently limited — authority; hence it was not the sovereign power of the mandated territory,

nor even its protector, in an international sense. Rather, it constituted merely a trustee for international society and a tutor appointed by the League of Nations to take care of the interests of the country's population. Legally, this implied both rights and obligations for the Mandatory. In actual practice, much depended upon the interests involved and the forces applied in each case.

ᶜIrāḳ. The mandates offered differing degrees of autonomy to the local populations — to ᶜIrāḳ the most, to Palestine the least, and to Syria an intermediate degree — apparently dependent upon the level of homogeneity of the population (assuming that too much autonomy might be unsuitable for a heterogeneous population). The case of ᶜIrāḳ is rather special, however, on other grounds as well. In 1921, even before final approval of the mandate, the British, who had already assumed effective control, invited Fayṣal b. Ḥusayn (who had been ejected from Syria by the French) to reign over ᶜIrāḳ under their aegis, assisting him in setting up the institutions of government [see FAYṢAL I]. True to their conception of the mandate, the British created directors' posts at the top level of every Ministerial office and appointed advisers in various administrative departments, as well as local judges. In 1921, an ᶜIrāḳī army was set up; in 1923, a Constituent Assembly was elected, which met in March of the following year and approved ᶜIrāḳ's constitution of July 1924. The assembly also approved the October 1922 British-ᶜIrāḳī Treaty which, without explicitly supplanting the Mandate, constituted official legal recognition by Great Britain of ᶜIrāḳ's sovereignty, provided the former offered binding advice in international and financial matters. Great Britain indeed successfully represented and defended ᶜIrāḳ's interests in the delicate negotiations held with Turkey since 1925 concerning the area of Mawṣil [*q.v.*] which the League of Nations eventually allotted to ᶜIrāḳ. Although the 1922 Treaty did not mention the mandate at all, it was nonetheless approved by the Council of the League of Nations, on 27 September 1924, as the instrument of mandate.

These moves only satisfied the ᶜIrāḳī nationalists for a brief while, however, if at all. Largely due to their pressures, a new British-ᶜIrāḳī treaty was signed in 1930, one which practically terminated the mandate; Great Britain reserved for itself certain rights, largely in the military domain, for another twenty-five years. The League of Nations, however, was the only institution which could terminate a mandate officially — and this was the first time the issue had arisen. Thus the Permanent Mandates Commission set up five pre-requisites for ending a mandate: a settled government and administration capable of running all public services; ability to maintain territorial integrity and political independence; capability of keeping internal peace and order; adequate financial resources for governmental requirements; and a legal and judicial system affording regular and equal justice to all. The Commission had some doubts about the suitability of conditions in ᶜIrāḳ for ending the mandate, primarily those relating to the judicial system and minority rights. After lengthy debates, however, in autumn 1932 the Permanent Mandates Commission voted to recommend termination of the mandate for ᶜIrāḳ to the Council of the League of Nations. The Council approved and in October 1932 admitted ᶜIrāḳ to the League of Nations (the first Arab state to join); thus the 1930 Treaty came into force and the mandate ended definitively. All formal restrictions on ᶜIrāḳ as a sovereign state were abrogated, although Great Britain did exercise its rights to intervene in crucial state and security matters until the end of the Second World War.

Syria and Lebanon. The French mandate in Syria and Lebanon, also imposed in 1922, continued to exist for a much longer period that that of ᶜIrāḳ, ending only in 1945. The Mandatory was charged with framing an organic law for Syria and Lebanon within three years and then to lead them into developing as independent states. It was further enjoined to levy taxes, develop natural resources, and establish judicial and educational systems, as well as military forces, these last to be eventually handed on to the local people. All this was conditional on the Mandatory's promoting the well-being of the population and refraining from granting monopolies and concessions to its own nationals to the detriment of the local people or those of those states. The French in Syria accordingly allowed Arab Syrians and Lebanese to staff the administration — although it was headed (as in ᶜIrāḳ) at its highest echelons by advisers delegated by the Mandatory. The French had a parallel organisation of their own, led by the High Commissioner; furthermore, they not only managed foreign and military affairs themselves, but often intervened in internal matters as well, through their officials. As with the British in ᶜIrāḳ, the French in Syria and Lebanon found Francophile Arabs willing to co-operate with them, simultaneously incurring the hostility of the nationalists.

On the whole, the Mandatory had greater success in Lebanon than in Syria. In the former, a representative council was prompted to prepare an Organic Law, in 1925, which was adopted by the Mandatory in the same year; in the following year, Lebanon became a republic with its own constitution, president and government — supervised by the Mandatory (as in ᶜIrāḳ). In Syria, however, a serious uprising (called a "revolt" by the nationalists and an "insurrection" by the French) occurred in the Druze region 1926-7, probably brought about by a combination of local grievances and patriotic aspirations; this uprising spread and the Mandatory forces put it down stronghandedly. An attempt to set up a Constituent Assembly, 1928, to prepare a constitution, foundered largely because of tensions between the above groups. In 1930, the assembly was dissolved and the French authorities unilaterally proclaimed a constitution, with the proviso that it could not contradict the responsibilities entailed in the Mandate. In principle, it resembled the Organic Law in ᶜIrāḳ, although it was republican rather than monarchical in intent and comprised variations for Syria's different units. An assembly was elected two years later and, in 1936, a French-Syrian treaty was agreed upon. This would have recognised Syria's sovereign independence (in three years' time), while allowing France to maintain its military forces there. However, the Government and Parliament in France did not ratify the treaty and Syria reverted to Mandatory rule, with the French High Commissioner increasing his authority.

All this exasperated the nationalists who, although divided among themselves, were antagonised by the French division of the mandated territory into separate units and by the changes repeatedly introduced. The nationalists were particularly irritated by what they interpreted as the Mandatory Power's actions to increase autonomy in Druze and ᶜAlawī districts, carve out a "Great Lebanon" and hand over the *sandjak* of Alexandretta (Hatay) to Turkey. Even the declaration of General Catroux (commander of the Free French forces which entered Syria, together with the British, in June 1941), in September 1941,

that the French mandate had ended hardly convinced the Syrian nationalists, as France insisted on a "predominant position" there. Only at the end of the war, in 1945, did France recognise Syria's independence, thus ending the mandate (the League of Nations had been inactive during the war and was considered defunct, for practical purposes; hence it had no part in this decision).

The mandate in Lebanon developed along parallel although not identical lines. As early as August 1930, the French carved out a "Great Lebanon" which did away with the area's former Christian hegemony and turned Lebanon into an even more complicated mosaic of religious communities. The division of the main official positions, as well as the composition of the elected representative assemblies since 1926, have reflected and institutionalised this complexity. The 1926 Constitution accorded a high degree of home rule to the Lebanese, while granting France important decision-making privileges. A Franco-Lebanese treaty, similar to the Franco-Syrian one of 1936, was drawn up during the same year, but likewise failed to obtain ratification in France. Nevertheless, the difference between Lebanon and Mandatory France led to less violence in Lebanon than in Syria; Lebanon's independence (and termination of the mandate), attained in 1945, demanded fewer struggles that did Syria's.

Palestine and Transjordan. The mandate for Palestine was *sui generis* in several respects. Unlike the drafts of the mandates for ʿIrāḳ and for Syria and Lebanon, the text of the mandate for Palestine did not charge the Mandatory with drafting an organic law, but rather with promoting political, administrative and economic conditions to ensure the establishment of a national home for the Jewish people, while protecting the civil and religious rights of the rest of the population. The Balfour Declaration of 2 November 1917 was inserted into the preamble of this text and certain privileges were granted to the Jews, sc. the formation of an official Jewish Agency to represent them as well as provisions concerning land settlement, Palestinian nationality, the establishment and operation of public works, services and utilities, the development of national resources and the recognition of Hebrew as an official language (along with English and Arabic)

Considering the terms of the mandate and, even more so, the increasing rivalries between Arabs and Jews in Palestine, the British authorities found it difficult to accommodate communities; many official measures antagonised one community, or the other, or both. One of the first such British decisions was to separate Transjordan from Palestine, in 1922, and endow it with a separate administration (to be headed, however, by the same High Commissioner). Relations between the Mandatory and Transjordan were then formalised, in 1928, by a treaty and a Constitutional Law, both patterned on British-ʿIrāḳī ones and confirmed by the Permanent Mandates Commission.

In both Palestine and Transjordan, the British instituted an administration essentially differing from the colonial ones they had established elsewhere. Its legal authority was based on *The Palestine Order in Council, 1922*, providing the British administration in Palestine with executive, legislative and judicial powers. The administration was led by the High Commissioner, assisted by a Chief Secretary and other British heads of various departments. Some of the middle-rank positions and most of the lower ones were staffed by local Arabs and Jews — one of their few and highly competitive meeting grounds. All British efforts to establish joint Arab-Jewish bodies, such as a Legislative Council, were doomed to failure. Even when reluctance was overcome, mutually acceptable terms could not be agreed upon: the Arabs wanted such bodies to reflect their statistical majority, while the Jews wished guarantees that they would not be voted down on every single issue. In consequence, both Arabs and Jews in Palestine developed their own separate systems for self-rule, the latter enjoying greater success in virtually developing "a state within a state" in such domains as education, self-defence, elections, trade unions, religious, social and cultural affairs. Many of these were taken care of within an "Assembly of Israel" (*Kneset Israʾel*) and co-ordinated by its elected "National Council" (*Vaʿad Lʾūmī*). The Arabs, on the other hand, were more divided among rival factions, of which the most important was the "Arab Higher Committee" (*al-Hayʾa al-ʿArabiyya al-ʿulyā*), led by the Muftī al-Ḥādjdj Amīn al-Ḥusaynī [*q.v.* in Suppl.], which succeeded in co-opting a number of Christian Arabs as well.

The 1920-1 and 1929 flare-ups, directed mostly against the Jews, culminated in a large-scale Arab uprising which continued sporadically during 1936-9, against both the Jews and the British. Each was followed by British Commissions of Inquiry, which resulted in official White Papers duly laid before both the British Parliament and the Permanent Mandates Commission. The Royal Commission headed by Lord Peel proposed the partition of Palestine, but this was rejected by both Arabs and Jews. The 1939 White Paper limited Jewish immigration and restricted land sales to Jews, thus appeasing the Palestinian Arabs during the Second World War. After the war, however, it was the Palestinian Jews who acted against the 1939 White Paper policy: in steps initiated by the Jewish Agency and the National Council, they smuggled in Jewish immigrants from amongst the survivors of the Nazi Holocaust, while small groups, disobeying the above bodies, physically attacked British officials and soldiers in Palestine. When neither strong military reprisals nor additional commissions proved to be of any avail, the British, undergoing a process of decolonisation in any case, bowed to local wishes and world opinion. American pressure played a particularly prominent role in this respect, as did the United Nations, before which the issue had been brought in 1947 (and which had decided on partition). Thus the British terminated the mandate for Palestine on 15 May 1948. They had already granted Transjordan formal independence by a treaty concluded in March 1946 and amended in March 1948 in Transjordan's favour (equalising relations, although, in practice, Great Britain remained the new state's preferred ally).

Conclusion: The mandate system was far from a signal success; nor was it a total failure, however. First of all, it succeeded in providing a formula, acceptable to both idealistic statesmen and *Realpolitik* partisans, for dividing the spoils of the First World War; and, secondly, it represented a *modus operandi* for the victorious Allies, chiefly Great Britain and France, to maintain their interests in the Middle East without blatantly contradicting their mutual agreements during the war and their promises to Arabs, Jews and others. On the other hand, it failed to provide either a solution to tensions between local nationalists and the respective Mandatories, or a permanently satisfactory *modus vivendi* among the various local population groups within each of the mandates. It was nationalist pressure, escalating into violence, which hastened termination of the physical presence of the

Mandatories in ʿIrāḳ, Syria and Lebanon, Palestine and Transjordan. The process itself was part of the new world order following the Second World War, one which witnessed decolonisation and the founding of numerous new states, not unrelated to the political, military and economic relinquishing of Great Power status by the British and French. The tensions between Arabs and Kurds, Sunnīs and S̲h̲īʿīs in ʿIrāḳ, various ethnic and religious coomunities in Syria and Lebanon, Arabs and Jews in Palestine, or Bedouins and other groups in Transjordan, erupting into violence or even war, were among the more unfortunate aspects of the unresolved legacies of the mandates.

It may be that the Mandatories had neither the time nor the opportunity required to tackle these tensions and to set up a lasting accomodation. They were too busy with forging unitary countries and nations in the mandated territories, which had been disparate units in the sprawling Ottoman Empire. Although thè Mandatories' fostering of local culture was tempered by a desire to export their own civilisation, they did succeed in encouraging education, setting up a more impartial judiciary, instilling law and order, promoting a national economy, establishing a more adequate taxation system, improving agriculture and irrigation and assisting with public health, roads and communications — all of which led to significant advances towards modernisation.

Bibliography : *Publications issued by the League of Nations*, n.p. [Geneva] 1935, and its supplements list materials about the mandates. Updated bibliographical information is in A.C. de Breycha-Vauthier's *La Société des Nations centre d'études et source d'information: ce que contiennent ses publications*, Paris 1937. The League's Permanent Mandates Commission regularly published its *Minutes*, 4 Oct. 1921 to 21 Dec. 1939, which, with their detailed subject-indexes, form a voluminous body of primary sources; so does *The League yearbook*. Among other League publications: League of Nations — Mandates, *Statistical information regarding territories under mandate* (also in French: Société des Nations, Mandats, *Reneignements statistiques relatifs au territoires sous mandat*), Geneva 1933; Nachrichtenabteilung — Sekretariat des Völkerbundes, *Der Völkerbund und das Mandatssystem*, Geneva n.d. [1926]; The League of Nations, *The mandate system*, Geneva 1927; idem, *The mandate system: origin, principles, application*, Geneva 1945 (of particular interest, as it summed up the whole issue before dissolving). Considerable archival materials on the Mandates are located in the Public Record Office (London), especially the Foreign Office and Colonial Office series, the various Cabinet files, and the private correspondence and papers of key personalities; and the Ministère des Affaires Etrangères (Paris), particularly the series E-LEVANT 1918-1929 and E-LEVANT 1930-1940, sub-series SYRIE-LIBAN, as well as E-LEVANT, sub-series TURQUIE, vols. 262-77. Many others are located in the states which were formerly mandated territories (see below). Some important American materials, both manuscript and printed, are listed in S.R. Dorr's *Scholar's guide to Washington, D.C. for Middle Eastern studies*, Washington, D.C. 1981. A useful general bibliography on the countries under mandate is the American University of Beirut's *A post-war bibliography of the Near Eastern mandates: a preliminary survey of publications on the social sciences dealing with Iraq, Palestine and Trans-Jordan and the Syrian states, 1919-1930*, i-viii, Beirut 1932-6. More updated are Jalal Zuwiyya's *The Near East*, Metuchen, N.J. 1973, and G. Feuer's *Le Moyen Orient contemporain. Guide de recherches*, Paris 1975. For a detailed chronology of events, see M. Mansour, *Arab world. Political and diplomatic history 1900-1967: a chronological study*, Washington, D.C. 1972, i (for 1900-41), ii (for 1942-52). A selection of additional materials follows (first the general ones and then by country), with bibliographies and primary materials preceding, respectively, a sample of the more representative among the numerous studies available, scholarly or political-minded.

ʿIrāḳ. For bibliographies, see *Publications issued by the League of Nations*, 159, 172-3, 190; National Library, Cairo, *A bibliography of works about Iraq*, Cairo 1960; Abdul Jabbar Abdulrahman, *A bibliography of Iraq*, Baghdād 1977. The Permanent Mandates Commission's *Minutes*, 1921-39, are important, as are the Société des Nations' *La question de Mossoul à la 35me session du Conseil de la Société des Nations*, Lausanne 1925, and its *L'activité politique*, Geneva n.d., ii, 7-53 ("Affaire de Mossoul"). For archival material in ʿIrak, see references in Diana Grimwood-Jones *et alii* (eds.), *Arab Islamic bibliography*, Hassocks, Sussex and Atlantic Highland, N.J. 1977, 194. The draft of the text of the mandate was printed as a British parliamentary paper, *Draft mandates for Mesopotamia and Palestine as submitted to the approval of the League of Nations*, London 1921 (= Cmd. 1176). The final text of the mandate may be found in *ibid.*, London 1921 (= Cmd. 1500). It was reprinted several times, e.g. in Q. Wright, *Mandates....*, 593 ff. Instead of the mandate, a series of treaties was entered into by the British and ʿIrāḳīs. The most important of these, published as preliminary papers and presented to the League of Nations (and approved by it) are the following: *Iraq. Treaty with King Feisal*, London 1922 (= Cmd. 1757); *ʿIraq. Protocol of the 30th of April, 1923 and the agreements subsidiary to the treaty with King Feisal, signed 10th of October, 1922*, London 1924 (= Cmd. 2120); *Treaty of alliance between Great Britain and Irak signed at Bagdad, October 10, 1922; and protocol to treaty of alliance between Great Britain and Irak of October 10, 1922, signed at Bagdad, April 30, 1923*, London 1925 (= Treaty Series no. 17 (1925), Cmd. 2370); *ʿIraq. Treaty with King Feisal, signed at Bagdad, 13th january, 1926, with explanatory note*, London 1926 (= Cmd. 2587); *Treaty between the United Kingdom and Iraq regarding the duration of the treaty between the United Kingdom and Irak of October 10, 1922, signed at Bagdad, January 13, 1926*, London 1926 (= Treaty Series, no. 10 (1926), Cmd. 2662); *ʿIraq. Treaty between the United Kingdom and ʿIraq, signed at London, December 14, 1927*, London 1927 (= Cmd. 2998); *Treaty of alliance between Iraq and Great Britain, signed on 30th June, 1930*, Baghdād 1930, whose Arabic title is *Muʿāhadat al-taḥāluf bayn al-ʿIrāḳ wa-Barīṭāniya al-ʿUẓmā*. Of special relevance is yet another British parliamentary paper, *ʿIraq. Papers relating to ʿIraq of the principles of article 22 of the Covenant of the League of Nations*, London 1925 (= Cmd. 2317). The British official reports, first entitled *Report on ʿIraq administration*, were later issued annually by the Colonial Office, as *Report by his Britannic Majesty's Government to the Council of the League of Nations on the administration of ʿIraq*, London 1920-31. A general 330-page report by the Colonial Office appeared as *Special report by His Majesty's Government in the United Kingdom of Great Britain and Northern Ireland to the Council of the League of Nations on the progress of ʿIraq during the period 1920-1931*, London 1931 (= Colonial no. 58). Special documents were published as Command Papers, which included *Reports to the Council of the League of Nations*. Several relevant documents appeared in Arabic in the officials *al-Waḳāʾiʿ al-ʿIrāḳiyya* (published since 1922), then in Fārūḳ Ṣāliḥ al-ʿUmar's *al-Muʿāhadāt al-ʿIrāḳiyya wa-atharuhā fi 'l-siyāsa al-dākhiliyya*, Baghdād 1977. Other primary sources are Fahmī al-Mudarris, *Maḳālāt siyāsiyya, taʾrīkhiyya, idjtimāʿiyya*, Baghdād 1351/1932, esp. 117 ff.; H. Bowman, *Middle-East window*, London 1942, 163-248; Mudīriyyat al-Diʿāya al-ʿĀmma, *Fayṣal b. Ḥusayn fī khuṭabihi wa-aḳwālihi*, Baghdād 1945, 231-325; C.J. Edmonds, *Kurds, Turks and Arabs: politics, travel and research in Near-Eastern Iraq, 1919-1925*, London 1957, chs. 26-7 ("The Mosul Commission"); ʿAbd al-ʿAzīz al-Ḳaṣṣāb, *Min dhikrayātī*, Beirut 1962; Muḥammad Mahdī Kubba, *Mudhakkirātī fī ṣamīm al-aḥdāth, 1918-1958*, Beirut 1965, 26ff.; Ṭaha al-Hāshimī, *Mudhakkirāt 1919-1943*. Beirut 1967; Abū Khaldūn Sāṭīʿ al-Ḥuṣarī, *Mudhakkirātī fi 'l-ʿIrāḳ, 1921-1941*, i, Beirut 1967; Tawfīḳ al-Suwaydī, *Mudhakkirātī: niṣf ḳarn min taʾrīkh al-ʿIrāḳ wa 'l-ḳaḍiyya al-ʿArabiyya*, n.p. [Beirut] n.d. [1969], 53 ff. See also Khairallah, *Le problème....*; Acito, 49 ff.; D.C. Syria and Lebanon. For bibliographies, see *Publications issued by the League of Nations*, 158-60, 172-5; R. Patai, *Jordan, Lebanon and Syria: an annotated bibliography*, New Haven, Conn. 1957; National Library, Cairo, *A bibliographical list of works about Syria*², Cairo 1965; C.H. Bleaney (ed.), *Modern Syria: an introduction to the literature*, Durham n.d. [1978]; Shereen Khairallah, *Lebanon*, Oxford 1979; Maurice Saliba, *Index Libanicus: Analytical survey of publications in European languages on Lebanon*, Beirut 1979; The Permanent mandates Commission's *Minutes*, 1921-32, are important, as is the Ligue des Nations, *La France en Syrie et au Liban: le mandat devant les faits*, n.p. n.d. [1921] (documents sent to the League and to France's High Commissioner). For the text of the mandate, see League of Nations, *Mandate for Syria and the Lebanon*, Geneva 1922. This has been reprinted several times, e.g. by Q. Wright, *Mandates...*, 607 ff., and Hourani, *Syria and Lebanon*, 308-14. For archival materials in Syria and Lebanon, see the references in Grimwood-Jones *et alii* (eds.), 1932; and, for Lebanon, M.H. Chéhab, *Les archives historiques du Liban*, in A. Raymond (ed.), *Les Arabes par leurs archives*, Paris 1976, 57-62. Essential sources are also the official Haut Commissariat de la République Française en Syrie et au Liban, *La Syrie et le Liban en 1922*, Beirut 1922, 46 ff., followed by République Française, Ministère des Affaires Etrangères, *Rapport à la Société des Nations sur la situation de la Syrie et du Liban*, annual, 1924-39 (for 1923-38). This is supplemented by Haut Commissariat de la République Française en Syrie et au Liban, *Recueil des actes administratifs du Haut Commissariat de la République Française en Syrie et au Liban*, i-xiv, Beirut 1919-32. An official general survey of the mandate's early years is [France, Haut Commissariat en Syrie et au Liban], *La Syrie et le Liban sous l'occupation et le mandat français, 1919-1927*, Nancy n.d., 26 ff. Useful collections of documents are Alfred Tabet (ed.), *Les actes diplomatiques intéressant les États du Levant sous mandat français*, Beirut 1935; [France] Ministère de l'Information, Directions des Informations, *La France et les États du Levant*, Paris 1945 (= Notes Documentaires et Études, 74, Série Internationale, xxvi); the magazine *Correspondance d'Orient*'s *Le Livre jaune sur la crise syrienne et libanaise*, Paris 1945; and Munīr Taḳī al-Dīn (ed.), *al-Djalāʾ: wathāʾiḳ khaṭīra tunshar li-awwal marra takshif al-niḳāb ʿan asrār djalāʾ al-ḳuwwāt al-adjnabiyya ʿām 1946*, Beirut 1946. Palestine and Transjordan. Bibliographies in *Publications issued by the League of Nations*, 158, 160, 172-3; Patai, *Jordan, Lebanon*...; National Library, Cairo, *A bibliographical list of works about Palestine and Jordan*[2], Cairo 1964; Walid Khalidi and Jill Khadduri, *Palestine and the Arab-Israel conflict: an annotated bibliography*, Beirut 1974; *Palestine and Zionism*, New York, i-viii (1946-53), is a detailed bibliography, published periodically, of books, pamphlets and magazine articles. A recent review article by R.W. Zweig, on *The Palestine mandate*, appeared in the *Historical Jnal.* (Cambridge), xxiv (1981), 243-51. For archival materials in Israel, see P.A. Alsberg (ed.), *Guide to the archives in Israel*, Jerusalem 1973; for others, particularly in Britain, but also in Jordan and elsewhere, the best guide is by P. Jones (ed.), *Britain and Palestine, 1914-1918: archival sources for the history of the British mandate*, Oxford 1979. See also references in Grimwood-Jones *et alii* (eds.), 193. For the draft of the text of the mandate, see *British Parliamentary Papers*, *Draft mandates for Messopotamia and Palestine as submitted to the approval of the League of Nations*, London 1921 (= Cmd. 1176). For its final draft, see *ibid.*, London 1921 (= Cmd. 1500); for the definitive text, see *ibid.*, London 1922 (= Cmd. 1785) and in the League of Nations' *Mandate for Palestine and memorandum by the British Government relating to its application to Transjordan, approved by the League of Nations of September 16th, 1922*, Geneva 1926. The last comprises an official French version as well, Société des Nations, *Mandat pour la Palestine et Mémorandum du gouvernement britanique relatif à l'application de ce mandat à la Transjordanie, approuvé par le Conseil de la Société des Nations le 16 septembre 1922*. The text itself has been reprinted frequently, e.g. in Wright, *Mandates*..., 600 ff., and J.C. Hurewitz, *Diplomacy in the Near and Middle East*, Princeton, N.J. 1956, ii, 106-11. A Hebrew translation appeared, e.g., in M. Medzini (ed.), *Ḳōvets mismakhīm bĕ-tōlĕdōt ha-mĕdīna* (Hebrew, *A collection of documents in the history of the state*), Jerusalem 1981, 23-7; an Arabic one in Ṭabāra, *al-Intidāb*..., 240-52; a German one as *Das Mandat für Palästina, vom Völkerbundsrat am 24. Juli 1922 genehmigter geltender Text*, Berlin n.d. [1922], and an Italian one as *Il mandato inglese per la*

Palestina, tradotto dal testo ufficiale publicato dal ministero degli esteri inglese, Florence 1921. The Permanent Mandates Commission's *Minutes*, 1921-39, comprise firsthand material. The British have published numerous papers, both Parliamentary and non-Parliamentary ones, some as *Reports* in the 1920s, *Statements of policy* during the 1930s, and *Proposals for the future of Palestine* in the 1940s. The first appeared as Government of Palestine, *Report on Palestine administration, July 1920-December 1921*, London 1922; later ones as Colonial Office, *Report by his Majesty's government in the United Kingdom of Great Britain and Northern Ireland to the Council of the League of Nations on the administration of Palestine and Transjordan*, annually, London, until 1939. Among the others, the following are particularly important: *Palestine. Correspondence with the Palestine Delegation and the Zionist Organization*, London 1922 (= Cmd. 1708); *Report of the High Commissioner on the administration of Palestine*, London 1925 (= Colonial no. 15); *Report of the commission on the Palestine disturbances of August, 1929*, London 1930 (= Cmd. 3530); *Report of the Palestine royal commission (July 1937)*, Geneva 1937; *The political history of Palestine under British administration (memorandum by His Britannic Majesty's Government presented in July, 1947, to the United Nations Special Committee on Palestine)*, Jerusalem 1947; Government of Palestine, *Memorandum on the administration of Palestine under the mandate*, Jerusalem 1947; *Proposals for the future of Palestine*, London 1947 (= Cmd. 7044); *Palestine: Termination of the mandate, 15th May 1948. Statement prepared for public information by the Colonial Office and Foreign Office*, London 1948. For Transjordan, see *Agreement between His Majesty and the Amir of Trans-Jordan, signed at Jerusalem, February 20, 1928*, London 1930 (Treaty Series, no. 7) (= Cmd. 3488); *Treaty of alliance between His Majesty in respect of the United Kingdom and His Highness the Amir of Trans-Jordan, London 22nd March, 1946*, (= Cmd. 6779). For the Order-in-Council of 1922 and others, ordinances, proclamations and regulations of the Mandatory, see N. Bentwich (ed.), *Legislation of Palestine 1918-1925*, i-ii, Alexandria 1926. For Transjordan, see C.R.W. Seton (ed.), *Legislation of Transjordan 1918-1920, translated from the Arabic, including the laws, public notices, proclamations, regulations, etc.*, London n.d. [prob. 1931]. For some official documents of the Arab case, see The Executive Commitee, Palestine Arab Congress, *Report on the State of Palestine during four years of civil administration submitted to the mandate commission of the League of Nations through H.E. the High Commissioner for Palestine*, Jerusalem n.d. [1947]; idem, *Two memoranda submitted to the Council & Permanent Mandates Commission of the League of Nations respectively through the High Commissionner for Palestine*, Jerusalem 1925; idem, *Spoliation in Palestine*, Jerusalem 1925 (also in Arabic, *Ig̲h̲tiṣāb ḥukūmat Filasṭīn*); idem, *Memorandum on the Palestine white paper of October 1930*, Jerusalem 1930; *Ḥukm Allāh taʿālā fi 'l-bāʿa wa 'l-samāsira: Mad̲j̲mūʿat al-fatāwī al-k̲h̲aṭīra allatī aṣdarahā ʿulamāʾ al-Muslimīn fī Filasṭīn wa-fī g̲h̲ayrihā min al-aḳṭār al-Islāmiyya*, Jerusalem n.d. [A.H. 1353-4]; The Arab Higher Committee, *A sample of the methods adopted by the government of Palestine in the administration of the country*, Jerusalem n.d. [1936]; idem, *Memorandum submitted to the Permanent Mandates Commission and the Secretary of State for the Colonies*, n.p. 1937; idem, *The Palestine Arab case*, Cairo 1947; The Arab Office, London, *The future of Palestine*, London 1947, 12-166. For some official documents of the Jewish case, see Zionist Organisation, *The mandate for Palestine: memorandum submitted to the Council of the League of Nations*, n.p. 1922 (also in French, *L'organisation sioniste, Le mandat sur la Palestine, mémorandum soumis à la Société des Nations*, s.p. 1922); Waad Leumi (National Council) of the Jews in Palestine, *Memorandum submitted to the Permanent Mandates Commission of the League of Nations*, Jerusalem 1926; The Jewish Agency for Palestine, *Memorandum on the "Report of the Commission on the Palestine disturbances of August 1929", submitted to the Secretary-General of the League of nations, for the information of the Permanent Mandates Commission*, London 1930; idem, *Memorandum submitted to the Palestine Royal Commission on behalf of the Jewish Agency for Palestine*, London 1936; idem, *The Jewish case against the Palestine White Paper: documents submitted to the Permanent Mandates Commission of the League of Nations*, London 1939; idem, *Documents relating to the Palestine problem, London 1945;* idem, *Reply to the Government of Palestine's memorandum on the administration of Palestine under the mandate*, Jerusalem 1947; idem, *The Jewish case before the Anglo-American committee of inquiry on Palestine*, Jerusalem 1947. For representative collections of documents, see Department of State, Division of Near Eastern Affairs, *Mandate for Palestine*, Washington, D.C. 1927; *Kas̲h̲f al-ḳināʿ: mad̲j̲mūʿat muʿāhadāt wa-ḥakāʾiḳ ʿan aḥwāl al-iḍṭirābāt al-ak̲h̲īra fī Filasṭīn*, Haifa 1937; M.M. Laseron (ed.), *On the mandate: documents, statements, laws and judgements relating to and arising from the mandate for Palestine*, Tel-Aviv 1937; *British labour policy on Palestine: a collection of documents, speeches and articles, 1917-1938*, London 1938; Mamun al-Hamui (ed.), *Die britische Palästina-Politik*, Berlin 1943; M. Moch (translator), *La Palestine de Balfour à Bevin: déclarations et documents*, Paris n.d. MANDE, a term which simultaneously possesses geographical, political and ethnic connotations. Mande is a region situated between the upper Niger to the East, Beledougou to the North and the upper Bakhoy to the West. Mande is also applied, however, to the whole of an enormous ethnic family comprising, according to some West African traditions (Dogon, Bambara, Malinke in particular), more than forty population groups currently inhabiting the Republics of Guinea, the Ivory Coast, Ghana, Mali, Upper Volta, Niger and even Nigeria (see D. Zahan, *Aperçu sur la pensée théogonique des Dogon*, in *Cahiers Internationaux de Sociologie*, vi [1949], 113-33; S. de Ganay, *Notes sur la théodicée bambara*, in *RHR*, cxxxv [1949], 212-13; G. Dieterlen, *Essai sur la religion bambara*, Paris 1951, 13; the same, *Mythe et organisation sociale au Soudan français*, in *Journal de la Société des Africanistes*, xxv/1-2 [1955], 40-2).

More precisely, Mande designates the "motherland" of one of the ethnic groups which originated there, the Mandingos. According to dialectal variants, the latter pronounce the term *Mande* or *Mandeng*, *Mandi*, or *Manding*, while the Bambara of Ouassoulu (South of Bamako) say *Mane* or *Mani*, the Soninkes *Malle* or *Malli*, the Foulbe *Melle* or *Melli* (cf. M. Delafosse, *Haut-Sénégal-Niger* (*Soudan français*), 1st series, i, 121). All these forms constitute variants of one word which in phonetic notation should be transcribed as *Mādẽ* or Mādẽ.

This phonetic rendering illustrates the uncertain etymology of the morpheme, *Mādẽ* could signify either "child" (*dẽ*) of the mother *ma*", i.e. uterine issue or "child (*dẽ*) of the master of the soil (*mā*)", i.e. indigenous (cf. M. Delafosse, *La Langue mandingue et ses dialects* (*Malinké, Bambara, Dioula*), Bibl. de l'ENLOV,

Paris 1929, i, 11). There is no basis for deciding in favour of either of these hypotheses.

In the current state of knowledge, little is known of the early history of the Mande. The first written information on this subject derives from Arabic sources, it being understood that the first scholars to transmit in writing their knowledge of sub-Saharan Africa lived in North Africa and were directly or indirectly in contact with the negroes of the Sudan of their period. Among the latter, the Mandingos were, doubtless from an early period, the suppliers of gold (the *tibr* of the Arab authors, signifying "unrefined gold" and "gold dust") to the Italian, Portuguese and Spanish merchants who acquired it in North Africa through the intermediary of local traders. But it is logical to suppose that the tracks crossing the Sahara and bearing this precious metal towards the Mediterranean did not become "trade routes" until after the conquest of North Africa by the Arabs. Furthermore, it was subsequent to this invasion that there appeared the first written testimonies relating to the Mande.

The earliest in date, known today, is given by al-Yaʿḳūbī (d. 284/897) in his *Taʾrīkh*, 28: "There is also another kingdom called Mallal, which is at war with the sovereign of Kānim (Kanem). Their king is called Mayusī (Mai Wasī?)" (cf. J.M. Cuoq, *Recueil des sources arabes concernant l'Afrique Occidentale du VIII^e au XVI^e siècle (Bilād al-Sūdān)*, Paris 1975, 48). Mallal is in fact Mali [*q.v.*], the future rival, then destroyer, of Gh̲āna [*q.v.*]. Al-Yaʿḳūbī knew of it only by hearsay, never having travelled himself in the Bilād al-Sūdān. If his orthography is to be believed, the information that he provides is without doubt of Soninké origin, the Soninkés (or Sarakolés) constituting the predominant group, from a political and economic point of view, in the kingdom of Gh̲āna, situated between the Magh̲rib and the valleys of Senegal and of the upper Niger (otherwise known as the "Nile" by the Arab historians and geographers).

It is difficult to say what was the nature of Mallal at the time of this ancient historical testimony; a modest local chiefdom, no doubt, situated in the region of the confluence of the Niger and the Sankarani, but one which was beginning to make itself known because of its deposits of gold, coveted by the Arabs and the peoples living to the north of the Mediterranean.

Some time ago, having understood the cultural importance of the historical evidence, traditional story-tellers (*griots*) or minstrels of the present-day Republic of Mali began to reveal their knowledge concerning Mali. Certainly, this information is to be taken with the caution appropriate to oral testimonies separated from the events that they describe by a considerable period of time. But caution is not the same as rebuttal, far from it. According to these story-tellers, then, at the time of the foundation of the empire of Mali (beginning of the 13th century), the Manding comprised 34 clans, lineages and socio-professional groups: 16 clans of warriors (Konâté, Coulibaly, Traoré, Koné, Doumbya (or Koroma, or Kourouma, or Sissoko, or Fakoly), Kamara-Komagara, Bagayogo-Sinayogo, Dèrèba-Kamissoko, Dannyoko, Magassouba, Diawara, Dâbo, Diallo, Diakité, Sidibé and Sangeré); 5 Keïta lineages belonging to the family of Soundyata, founder of the empire; 5 maraboutic families (Cissé, Touré, Berété, Diâné and Sânogo)(according to some, the Kouma constituted the fifth maraboutic family of the Manding); 4 Dyâbi families, related to the afore-mentioned maraboutic families; 4 families of people of "caste": the *griots* or minstrels (Kwaté (Kouyaté), Kamissoko, Dyabaté, Soumano); the blacksmiths: Doubya, Bagayogo, Sinayogo, Sinaba, Kanté; the shoemakers: Kamare, Garanké; the descendants of slaves and slaves themselves (SCOA, *L'Empire du Mali*, 1976, 413).

Originally, however, the number of Manding clans was smaller. The memories of the story-tellers mention twelve of them, as having constituted the nucleus of what was later to become the Manding "world", the difference (between this number and 34) consisting of new elements coming in from the exterior, either from the empire of Gh̲āna, or from Sosso Mande, in fact, attracted these "immigrants", as they would now be called, for two reasons: first, the gold of Bouré, with all that this metal offered in terms of opportunity for work and wealth, and second, the paganism of the animist religion which was seen as virgin territory for Islamic missionary effort. The first of these attractions was more of a lure to the inhabitants of Sosso, almost all of whom practised the extraction and casting of iron; the second appealed to natives of the kingdom of Gh̲āna, among whom Islam was already beginning to be implanted on a wide scale and who were seeking, at the same time, to migrate towards the south, as a result of increasingly frequent droughts.

It is evident that available knowledge concerning Mande before the foundation of the empire represents fragments of little importance. If to these there is added an item from al-Bakrī (*K. al-Masālik wa 'l-mamālik*, tr. de Slane, 1965, 333, quoted by Cuoq, *op. cit.*, 102-3), mentioning the conversion to Islam of a king of Mallal (*ca.* 442/1050) with the aim of putting an end to the drought which was devastating his country, then in a passage from al-Idrīsī (548/1154) on the subject of Mallal, "a small town without walls (*Opus geographicum*, i, Naples-Rome 1970, 22; Cuoq, *op. cit.*, 132), the sensation of "historicity" may perhaps be reassuring, but our knowledge relating to Mande gains nothing in substance. It is not until the beginning of the 13th century, and again with recourse to the oral tradition relayed by the minstrels, that a "history" is discovered in which Mande becomes a kind of stage, upon which actors, half-real and half-mystical, play a role in events of interest and significance.

At this period there was in Mande a certain Naré-Famaghan, who was only one of forty or more Manding princelings all of whom bore the title of *mansa* (chief). He had twelve sons, his potential successors, of whom the youngest, Soundiata (the Mari-Diata of Ibn Kh̲aldūn) was to have a historic destiny: it was he who was soon to found the empire of Mali. Meanwhile, Mande was tributary to the neighbouring kingdom of Sosso.

This destiny was, in reality, dependent on three factors: (a) the decline of the neighbouring empire to the north, Gh̲āna, threatened by the king of Sosso, as well as by Arabo-Berbers descending from the north who were ultimately to destroy it (469/1076-7); (b) the lack of unity in Mande, where each princeling was master of his own territory; and (c) the victory of Soundiata over his rival Soumangourou Kanté, king of Sosso.

This last factor constitutes a remarkable example of the oral history of Mande. The narration of the events which took place in the confrontation between the two protagonists takes the form of an epic account in which the real, the miraculous, the serious and the comic are mingled in an apparently inextricable manner, but where a guiding thread is detectable throughout. The story-tellers have seized with relish on these events and, in general, accord little importance to the other two factors.

The plot of the account in question may be sum-

marised in the following manner. Soumangourou, king of Sosso and suzerain of Mande, massacres the eleven sons of Soundiata. The latter is spared only on account of his disability, which renders him inoffensive in the eyes of his suzerain. His disability is significant and makes him the opposite of his rival, the blacksmith of Sosso, the archetypal "man of action", dressed in garments of iron; he has crippled legs, as a result of which he lives for seventeen years in a hole in the ground, only his head and shoulders being visible. But Soundiata is cured of his infirmity in an equally significant manner: with the aid or two enormous bars of iron (used by him successively), of which the first becomes his bow and the second his royal sceptre, he hoists himself out of his "hole", permanently cured, takes to arms, rallies his warriors and goes to fight Soumagourou in a decisive battle, at Krina. The latter escapes from his pursuer only by disappearing into a cave, at Koulikoro, the opening of which is blocked by a slab of stone immediately after the entry of the unlucky hero. Traditionists and historians agree in making these events coincide with the foundation of the Manding empire, *ca.* 1235, and the dispersion of the blacksmiths across West Africa, subsequent to the destruction of their "empire".

It has not been possible to include all the details of the famous encounter between the two protagonists. The elements of the account supplied here have the purpose only of giving an impression of the structure of the narrative and an "introduction" to its eventual interpretention.

This structure and its interpretation have as their starting point the idea that the status of the hunter-cultivator is superior to that of the blacksmith; but this superiority only emerges and becomes evident from the moment that the first masters the products of the technology of iron possessed by the second. Soundiate is in subjection to Soumangourou until the day that he takes possession of arms, of which the raw material has been supplied to him by his rival, the blacksmith. This could, conceivably, be translated into more modern terms as an assertion that strategy and skill in the manipulation of arms (traits characteristic of the hunter-cultivator) represent a knowledge more profound than that which concerns metallurgy and the science of the armourer. The story summarised above also refers, undoubtedly, to the type of knowledge acquired through initiation. The blacksmith is, on account of his skill, a "natural" and it could be said, initiated being. The hunter-cultivator, on the other hand, acquires this knowledge only after a long period of initiation corresponding to a "death". Soundiata remains "buried" for seventeen years, and emerges from his "hole" to conquer. Soumangourou, on the contrary, is the archetype of life and strength, but, beaten, he descends into bowels of the earth. One comes out of the earth to defeat his adversary, the other enters the earth, vanquished by his enemy. This gives an explanation not only of the dispersal of blacksmiths across Africa, but especially of their place in society.

Soundiata, rich in exploits and in wisdom, occupies a position of eminence in the memory of Malinké story-tellers. He has no equal in the history of Mande other than in the person of one of his successors at the beginning of the 8th/14th century, Mansa Mūsā [*q.v.*], whose reign marked the highest point of the Manding empire. In his time, this extended from Gao to the estuary of the Gambia, and from Oualata (in the north) to the jungles of Guinea. But Mansa Mūsā owes his place of honour in the work of Arab historians, particularly in that of al-ʿUmarī (*Masālik al-abṣār fī mamālik al-amṣār*, quoted by Cuoq, *op. cit.*, 275-9), to the pilgrimage which he made to Mecca and to the fast which he observed during the journey. This sovereign dominated the whole of the 8th/14th century in West Africa. Even Europe was aware of him and he was featured on the Catalan maps of Dulcert (1339) and of Cresques (1375). Ibn Baṭṭūṭa (iv, 376-48), who passed through Mande in 753/1352-3, was unable to make the acquaintance of the Manding emperor who died *ca.* 1337, but his journey coincided with the last years of prosperity of the great empire. From about the year 1380 onwards, this empire entered upon a period of decadence concerning which Ibn Khaldūn gives some interesting information (cf. Cuoq, *op. cit.*, 339-50). The 15th century marked the beginning of the death-throes of Mande, harassed by the Touareg, the Songhai and the Mossi; the second half of the 17th century saw its disappearance. In 1670, Mande, as a political entity, was reduced, under the onslaught of the Bambara kings of Segou, to the small province from which it had originated, in the region of the Upper Niger; it had survived for approximately three and a half centuries.

Situated in a zone of commercial contacts between North Africa and Black Africa, Mande has, on account of its rich gold deposits, throughout its history attracted much covetousness, on the part of its immediate neighbours as well as of the Arabo-Berber tribes of the Mediterranean coast. In view of the facts, it is quite astonishing that this great kingdom, born out of the victory of strategy over technology, could have lasted so long. This would not, in the opinion of the present writer, have been possible had not those who presided over the affairs of the country, as well as the people themselves, been particularly conscious of the values which permit the realisation of human potential. The initiatic societies of the Malinkés, so closely linked to the monarchy, are instructive in regard to the "spiritual" preoccupations of the kings of Mande. Such concerns are not rare in African history, but in this case they take on a particular dimension in view of the zone of insecurity in which the Manding empire was located from the very beginning of its existence.

MANDĪL, normalised *mindīl*, from Latin/Greek *mantēl(e, -um, ium)*, entered Arabic speech in pre-Islamic times, presumably through Aramaic, and has remained in use to this day. Its principal meanings were those of handkerchief, napkin, and towel. *Mandīl* was, however, understood generally as "piece of cloth" and used for many other purposes, such as covering or carrying something or serving, attached to the body, as an untailored part of dress. Numerous other words were available in Islamic languages as synonyms of *mandīl* in both its specific and its generalised meanings. Arabic thus had

ma<u>sh</u>ū<u>sh</u> and *min<u>sh</u>afa*, while *<u>kh</u>irḳa* was often substituted as an inferior sort of *mandīl*. Persian had *dastār* (dimin. *dastārča*), *rūmāl*, and many other words; some were used in Arabic contexts such as *<u>sh</u>ustad<u>j</u>a* (al-Ṭabarī, i, 1048, also Glossary, CCCXI, and below) and *dastad<u>j</u>a* (Ku<u>sh</u>ād<u>j</u>im, below, although the meaning of handkerchief for *dastad<u>j</u>a* seems unusual, read *<u>sh</u>ustad<u>j</u>a*?). Turkish *buḳča* was frequent in later Arabic texts (*buḳd<u>j</u>a*, for instance, al-<u>D</u>jawbarī, *Ka<u>sh</u>f*, Cairo 1316, 24; Ibn Abī Uṣaybiʿa, ii, 178). The diminutive *munaydīl/īl* is attested (Ibrāhīm b. Yaʿḳūb [*q.v.*], in al-Bakrī, *Masālik* in connection with Prague; Ibn Sūdūn, *Nuzhat al-nufūs*, ms. Brit. Mus. or. 6517, fols. 70a, 110a). Philologists invented *kunyas* for *mandīl*: Abu 'l Hānī, Abū Ṭāhir, Abu 'l-Naẓīf (Ibn al-A<u>th</u>īr, *Muraṣṣaʿ*, Ba<u>gh</u>dād 1972, 230, 323, 344, 373). Construct formations indicated function, such as *m. al-<u>gh</u>amar* ("grease"), *al-ṭaʿām* ("food"), *al-<u>sh</u>arāb* ("drink"), *al-wad<u>j</u>h* ("face"), *al-ʿu<u>dh</u>ra* ("virginity"), *al-amān* ("safe conduct"). *M. al-kumm* (cf. German *Taschentuch*) got its designation from the wide sleeve in which it was carried.

Mandīls were made of many textile fibres. Often they were outstanding products of the weaver's and embroiderer's craft. This applied in particular to handkerchiefs, but also, in a more modest way, to napkins and towels. Handkerchiefs were praised for their sheerness and beauty. The qualities of their different makes were compared (al-Mubarrad, *Kāmil*, repr. Cairo *ca.* 1968, ii, 146). They came in many colours and had colourful embroided borders. Many localities, especially in Iran and Egypt, produced, and gave their names to, special kinds of *mandīls*. Depending on quality, they could be very costly; even badly worn *mandīls* could still be sold for cash (al-Tanū<u>kh</u>ī, *al-Farad<u>j</u> baʿd al-<u>sh</u>idda*, Cairo 1357/1938, i, 55 f., cf. also *Ni<u>sh</u>wār*, Cairo 1391-3/1971-3, iii, 67). They shared with other textiles the fact that they were often not within the reach of the poor. Not having a *mandīl* was part of the definition of poverty (al-<u>Gh</u>azālī, *Iḥyāʾ*, Cairo 1352/1933, i, 198). Conversely, the wealthier classes took considerable pride in them and counted them among their prized possessions, to which a person might become unduly attached (*Iḥyāʾ*, iv, 426, 1. 23) and which had to be taken good care of. But even among ordinary people, it was customary to carry a handkerchief when going out, as is shown, for instance, by the curious story of the trained donkey in al-<u>Gh</u>uzūlī, *Maṭāliʿ al-budūr*, Cairo 1299-1300, ii, 183 (for the use of *mandīls* in tricks, cf. also al-<u>D</u>jawbarī, 16, etc.). A complete outfit of clothing (*Iḥyāʾ*, iv, 185, 200) or a proper trousseau would include *mandīls*. Since they were thought to be indispensable, they were assumed to exist in Paradise (according to the *ḥadī<u>th</u>*, cf. also Abu 'l-Lay<u>th</u> al-Samarḳandī, *Ḳurrat al-ʿuyūn*, on the margins of al-<u>Sh</u>aʿrānī, *Mu<u>kh</u>taṣar*, Cairo 1358/1939, 159; Ibn Ḳayyim al-<u>D</u>jawziyya, *Ḥādī al-arwāḥ*, Cairo 1381/1962, ch. 50). Angels had *mandīls* of fire (al-Nuwayrī al-Iskandarānī, *Ilmām*, Hyderabad 1388-96/1968-76, i, 123, 1. 6). Fire-resisting *mandīls* in this world were described as curiosities.

Many uses of *mandīls* are attested, for instance: covering the face to conceal crying (al-Yūnīnī, *<u>Dh</u>ayl*, Hyderabad 1374-80/1954-61, i, 364; al-<u>D</u>jawbarī, 23, speaking of a trained monkey); wiping off tears (*Taʾrī<u>kh</u> Ba<u>gh</u>dād*, xi, 185) or sweat (al-Ṣābiʾ, *Rusūm dār al-<u>kh</u>ilāfa*, Ba<u>gh</u>dād 1383/1964, 75, using *<u>sh</u>ustad<u>j</u>a*, tr. Salem, Beirut 1977, 61); blowing the nose, which had to be done in a refined manner, and the *m. al-ṭaʿām* was not to be used for it (al-Nuwayrī, *Nihāya*, iv, 126, 1. 18; al-<u>Gh</u>uzūlī, i, 146, 1. 3); stilling a nose bleed (al-Yūnīnī, i, 354); cleaning hands and mouth after eating and drinking; wiping off spittle, to be done delicately with the end (*<u>dh</u>uʾāba*) of a folded *mandīl*, as was the custom of the great al-Ṭabarī (Yāḳūt, *Udabāʾ*, vi, 459); drying parts of the body; covering the loins (*izār*) after bathing (cf. H. Grotzfeld, *Bad*, Wiesbaden 1970, 67, 93); wrapping it around the body like a *wi<u>sh</u>āḥ* (al-<u>Sh</u>ābu<u>sh</u>tī, *Diyārāt*, Ba<u>gh</u>dād 1951, 133; al-Ṣanawbarī, *Dīwān*, Beirut 1970, 486); covering the head as *ʿimāma* (al-Za<u>dj</u>d<u>j</u>ād<u>j</u>ī, *Amālī*, Cairo 1382, 171 f.); covering dishes and tables; carrying practically anything, money, sandals (Ibn al-Ṣuḳāʿī, *Tālī*, Damascus 1974, 111), the medicines of a visiting physician (Ibn Abī Uṣaybiʿa, i, 158, 1. 28, and, using *<u>sh</u>ustad<u>j</u>a*, i, 217, 1. 2); massaging and serving as hot compresses (al-Rāzī, *Tad<u>j</u>ārib*, ms. Istanbul, Topkapısarayı Ahmet III 1975, fols. 72a, 93a); wrapping objects, even heavy ones in large *mandīls*; strangling (al-Mubarrad, *Kāmil*, iv, 8) or poisoning (al-Masʿūdī, *Murūd<u>j</u>*, viii, 211 = § 3354); using it in *futuwwa* installation ceremonies (cf. F. Taeschner, *Zünfte und Bruderschaften*, Zürich-Munich 1979, 222), etc., etc.

Literature speaks of handkerchiefs as convenient for writing on, or concealing in, billets-doux (Ibn al-<u>D</u>jawzī, *<u>Dh</u>amm al-hawā*, Cairo 1381/1962, 532 f.). In general, littérateurs considered them worthy of notice as art objects whose mention conveyed special moods and aesthetic impressions. A poem by Ku<u>sh</u>ād<u>j</u>im [*q.v.*] mourning a *mandīl* of his that had been pilfered by a lover gives a graphic description of their use and the esteem in which they were held (*Dīwān*, Ba<u>gh</u>dād 1390/1970, 86-8; al-Ḥuṣrī, *Zahr al-ādāb*, Cairo 1389/1969, 868 f.). Blood covering a wolf's head from between the ears to the shoulder blades suggested a *mandīl* to the *mu<u>kh</u>aḍram* poet Ibn Muḳbil [*q.v.* in Suppl.] (Ibn Ḳutayba, *Maʿānī*, Hyderbad 1368-69/1949, i, 184). The elephant's ear was compared to it (al-<u>D</u>jāḥiẓ, *Ḥayawān*, ed. Hārūn, vii, 173), as was the flame of a candle spread by the wind's blowing (Ḍiyāʾ al-Dīn Ibn al-A<u>th</u>īr, as quoted by al-<u>Gh</u>uzūlī, i, 81). *Mandīl* was used metaphorically to indicate low status, commonness, and abuse (al-Tawḥīdī, *A<u>kh</u>lāḳ al-wazīrayn*, ed. al-Ṭand<u>j</u>ī, 232; al-ʿImād al-Rā<u>gh</u>ib al-Iṣfahānī, *Muḥāḍarāt*, Cairo 1287, i, 313; al-ʿImād al-Iṣfahānī, *<u>Kh</u>arīda*, iv, Cairo *ca.* 1951, ii, 134; see also al-Rāʿī al-Numayrī, *Dīwān*, ed. Weipert, Beirut 1980, 235, Steiger and Keller, 126 f.). All this shows that the *mandīl* was always an object that engaged the human fancy.

Most, if not all, of the uses of *mandīls* antedated Islam (cf. H. Kindermann, *Über die guten Sitten*, Leiden 1964, 99-102). The widespread use of handkerchiefs, however, shows a high degree of general cultural refinement, much in advance of mediaeval Europe (cf. N. Elias, *The civilizing process*, Eng. tr. New York 1978, 143 ff.).

Fundamental earlier studies are R.B. Serjeant, *Material for a history of Islamic textiles*, in *Ars Islamica*, ix-xvi (1942-51), repr. as *Islamic textiles*, Beirut 1972, and A. Steiger and H.-E. Keller, *Lat. Mantēlum*, in *Vox Romanica*, xv/1 (1956), 103-54, where *mandīl* is followed in its forms and uses through the European languages and Arabic. More recently, Geniza studies have enriched our knowledge of the *mandīl*, cf. the publications by S. D. Goitein and, especially, Y. K. Stillman, for instance, *The wardrobe of a Jewish bride in Medieval Egypt*, in *Studies in marriage customs*, iv (1974), 297-304. See also LIBĀS.

(F. ROSENTHAL)

MANDĪL, AWLĀD or BANŪ, a chiefly family of the Maghrāwa [*q.v.*], prominent in what is now western Algeria in the 7th-8th/13th-14th centuries, taking its name from Mandīl, grandson of one Abū Nās, a scion of the Banū Khazrūn, rulers of Tripoli (391-540/1000-1 to 1145-6) and descendants of the 10th-century Spanish Umayyad Maghrāwī chief, Khazrūn b. Falfūl.

Abū Nās, whose forbear from Tripoli had made his way to kin in the Chélif (Shalaf) basin and finally established himself among the local Maghrāwa, had received an *ʿiḳṭāʿ* there for his services to the Almohads in ʿAbd al-Muʾmin's [*q.v.*] day. His son ʿAbd al-Raḥmān thereafter united the Maghrāwa behind him and garnered the rewards of loyalty to the Almohads. On his death, he was succeeded by Mandīl, the elder of two sons, whose expansionism won him the Ouarsenis (Wansharīs), Médéa (al-Madiyya) and the fertile Mitidja (Matīdja) plain, which he devastated with unswerving pro-Almohad zeal. Subsequently he lost Mitidja itself [see BULAYDA] to Yaḥyā, the last of the Banū Ghāniya [*q.v.*], and around 623/1226 Yaḥyā had him killed. Mandīl was the founder of the stronghold of Marāt on the Riou (Wādī Rahyū), a tributary of the Chélif.

Mandīl's eldest son, al-ʿAbbās, was accepted by his brothers as the new chief. As such, he looked to his father's example, but in fact lost all Mandīl's gains to his rivals, the Banū Tūdjīn, and fell back with his tribe on their heartlands in the lower Chélif. There he remained for a time as ruler of a modest principality. A change came with the intervention of the Ḥafṣids [*q.v.*] in the Central Maghrib following the repudiation of Almohad authority by the ʿAbd al-Wādid [*q.v.*] Yaghamrāsan, *de facto* ruler of Tlemcen. Tribal appeals to the Ḥafṣid Abū Zakariyyāʾ for aid against Tlemcen's aggression met with success: in 640/1242 Tlemcen was taken and Yaghamrāsan made a Ḥafṣid vassal. On his way back, the Ḥafṣid set up, on the basis of tribal support for him, three small buffer dependencies, each with an accredited ruler. One such ruler was al-ʿAbbās, chief of the Maghrāwa with sway over Miliana (Milyāna), Ténès (Tanas), Brechk (Barishk) and Cherchell (Sharshāl). During the chieftaincy of al-ʿAbbās, the Maghrāwa founded Mazouna (Māzūna). On his death in 647/1249-50 he was succeeded by his brother Muḥammad. The latter's assassination in 662/1263 by his brothers Thābit and ʿĀʾid disrupted family unity, With ʿAbd al-Wādid aid, their brother ʿUmar eventually won the day (668/1269-70) and, till his death in 676/1277-8, remained chief to the Maghrāwa. Thereafter the chieftaincy reverted to Thābit.

From Muḥammad's murder to Thābit's death the salient feature of the family's history is its involvement with Tlemcen, ending with its début on the Marīnid stage in Fez. Briefly, the facts are as follows. After an accord with Tlemcen, then a quarrel that cost him Miliana, Muḥammad regained the town with the aid of the Ḥafṣid Mustanṣir and ruled it in his name. But ʿUmar, resenting Thābit's position as chief of the Maghrāwa, conspired with Yaghamrāsan to put Miliana under Tlemcen's suzerainty in return for its governorship and command of the Maghrāwa. To spite ʿUmar and to curry favour with Yaghamrāsan, Thābit and ʿĀʾid then sold to the latter Ténès (672/1273-4). Thābit's attempts after ʿUmar's death to retrieve Miliana for himself and his tribe, though initially successful, ended in disaster. Tlemcen did not allow his disloyalty and rebellion to go unpunished: Yaghamrāsan began a campaign which, after his death, his son ʿUthmān was to complete. Within a few years, ʿUthmān had taken Médéa, Mazouna and Ténès and finally forced the Maghrāwa to take to the mountains. Thābit tried in vain to hold Brechk and sailed for Morocco (694/1294-5) to enlist Marīnid support. In his absence, his son Muḥammad usurped his chieftaincy of the Maghrāwa, but did not live long to enjoy it. Thereafter, the Awlād Mandīl of the Central Maghrib disintegrated in a welter of fratricidal and internecine quarrels.

For his part, Thābit was warmly welcomed by the Marīnid sultan Yūsuf b. Yaʿḳūb, but died in an unfortunate incident in Fās before attaining his goal. His family, however, was cared for by Yūsuf, who in fact came to marry the sister of Thābit's grandson, Rāshid b. Muḥammad. The alliance gave Rāshid reason to hope for the retrieval of his birthright in the Maghrāwa homeland. But it was not to be: during the long Marīnid siege of Tlemcen (689-706/1290-1306), it was to ʿUmar b. Wīghran b. Mandīl that Yūsuf assigned chieftancy of the Maghrāwa and, later, command of the army that was to take Miliana, Ténès and Mazouna in 699/1299-1300. Resenting his kinsman's preferment, Rāshid deserted the Marīnids. From the Mitidja mountains he won a Maghrāwa following, provoked a rising in Mazouna, and, having eliminated his rival ʿUmar, gained united Maghrāwī support. Leaving Mazouna strongly garrisoned, he entrenched himself in the mountain fastness of the Banū Bū Saʿīd between Mazouna and Ténès. For the Marīnids he was a scourge: it took them two years to regain Mazouna, and in 704/1304-5 they sustained heavy losses in attempting to dislodge him. After his withdrawal to the Mitidja mountains they regained control of Maghrāwī territory, but readily agreed to end their pursuit of Rāshid when he sued for peace.

Peace between Tlemcen and Fās came in 706/1307 on terms restoring to the former all that the latter had taken. Thinking to retrieve his homeland, Rāshid marched on Miliana, but, finding the ʿAbd al-Wādids in control, banished the thought. Around 707/1307-8 he took up with Abu 'l-Baḳāʾ, the Ḥafṣid ruler of Bougie (Bidjāya) and, later, of Tunis. An initially successful and promising alliance between Rāshid and his Maghrāwa, on the one hand, and the Ḥafṣid and the Ṣanhādja, on the other, collapsed a few years later with the death of Rāshid in a heated personal quarrel with a new chief of his allies, the Ṣanhādja (between 709 and 711/1309 and 1311; date unclear). Dismayed at Rāshid's death, the Maghrāwa left their Chélif heartlands, and many took refuge in places as far apart as Andalusia and Ifrīḳiya. Rāshid's young son, ʿAlī, found safety with his aunt in Fez, the sultan's wife, and the Awlād Mandīl migrated to Marīnid soil and married into Marīnid tribes.

ʿAlī b. Rāshid grew up at court as a Marīnid by adoption and, in adult life, took part in the sultan Abu 'l-Ḥasan's ambitious campaigns that toppled Tlemcen, but on the sultan's defeat at Kairouan (al-Ḳayrawān) in 749/1348 he took over Miliana, Ténès, Brechk and Cherchell and re-established his ancestors' principality. He requested, but was refused, Marīnid recognition in return for support against ʿAbd al-Wādid resurgence. ʿAlī's subsequent reliance on the ʿAbd al-Wādids to respect his principality proved misplaced, and brought him to disaster and suicide (752/1351-2). His young son, Ḥamza, was taken to Fās and, like ʿAlī, was reared as a Marīnid.

As an adult, Ḥamza deserted the Marīnids on the grounds of an alleged injustice when in the field against Tlemcen (772/1370). Taking to the mountains of the Banū Bū Saʿīd, he won Maghrāwa support and

held out till a vast Marīnid army terrified his allies into surrender. With few followers he next established himself among the Arab tribe of Ḥuṣayn, then in revolt against the Marīnids with ʿAbd al-Wādid backing. His style "ruler of Titteri" suggests that the tribe's *ḥiṣn Tītarī* was his stronghold. His subsequent failure to rally the Banū Bū Saʿīd drew him into a rash exploit at Timzought (Tīmzūg͟hat), north-west of Miliana, which ended in disaster. Both he and his friends were captured, and the Ḥuṣayn fled to the Titteri mountains from their plain below. From the fortress they made their last stand—an event actually witnessed by Ibn K͟haldūn. Ḥamza and his friends were executed, and early in 1372 their headless corpses were crucified outside Miliana. Thereafter the Awlād Mandīl disappear from history.

MANDINGO [see MANDE]

MAND͟JANĪḲ, (A., ultimately from Greek μαγγανικόν, via Aramaic, cf. Fraenckel, *Die aramänische Fremdwörter*, 243, passing into Spanish as *almajaneque*, cf. Dozy and Engelman, *Glossaire*, 153), a general term for any kind of stone-throwing siege-engine. The expressions *mand͟janīḳ* and *ʿarrāda* [*q.v.*] are both used for this kind of machine, and although the *ʿarrāda* may have been the smaller of the two, the expressions often seem to be interchangeable. *Mand͟janīḳ* occurs more frequently than *ʿarrāda*, but their presence at a siege is often confined to a mere mention, without any description of the machines being given. The earliest reference to the *mand͟janīḳ* in Muslim times is the machine used to bombard the walls of al-Ṭāʾif when the town was besieged by the Muslims in 8/630 (al-Balād͟hurī, *Futūḥ*, 55). We are not told what kind of machine this was; it may well have been of the type used by the Greeks and Romans, which was operated by the release of energy stored in twisted fibres or large bows. These weapons were characterised by the high velocity and low trajectory of the missiles, which were fairly light. They were therefore of more use on the battlefield than against the strong walls of cities and fortresses. From some time in the 1st/7th century onwards, however, the siege-engines used by the Muslim armies were of beam-operated type, first the traction trebuchet and, much later, the counterweight trebuchet.

The traction trebuchet originated in China no later than the 4th century B.C. and was in common use in Chinese armies from that time onwards (J. Needham, *China's trebuchets, manned and counterweighted*, in *Lynn White Festschrift, Humana civilitas*, i [1976], 107-45). It consisted of a beam, composed of a single spar, or of several spars bound together, which was supported on a fulcrum on top of a timber tower. The tower was often provided with wheels, to assist in the emplacement and aiming of the weapon. The beams were from 5.60 to 8.40 m. in length, with diameters at the extremities of 12.5 and 7 cm. At the narrower end was a copper "nest", attached to the beam by iron wires, thus forming a short sling. The missile, which could weigh up to 60 kg. was placed in the sling. At the other end of the beam there was a special attachment to which a number of ropes were attached. A team of men, ranging in number from 40 to 250 or more, pulled in unison on these ropes to discharge the missile, to distances of up to 150 metres (D.R. Hill, *Trebuchets*, in *Viator*, iv [1973], 99-114). Although the range of these machines was less than that of the classical weapons, the greater weight of the missiles made them much more effective against fortifications.

The traction trebuchet was diffused from China, through the Turkish areas, to the Middle East during the 1st/7th century. At the siege of Mecca in 64/683 there was a *mand͟janīḳ* called *Umm Farwa* ("Mother of the hair"). This description may well have been derived from the appearence of the ropes hanging down from the end of the beam. A poet added his own description: "swinging its tail like a foaming [camel] stallion" (al-Ṭabarī, ii, 426). At the siege of Daybul in Sind in 92/711-12, the Muslims had a siege-machine called *al-ʿArūs* ("The Bride"). It was operated by 500 men, and was under the control of a skilled operator who took charge of the aiming and shooting (al-Balād͟hurī, *Futūḥ*, 437). There was a battery of machines at the siege of Bag͟hdād in 261/865-6: men were assigned to every *mand͟janīḳ* and *ʿarrāda*, and pulled on ropes to discharge the missiles (al-Ṭabarī, iii, 1551 f.).

The counterweight trebuchet, which came into use at the end of the 6th/12th century, was a much heavier machine. It consisted of a heavy wooden beam resting on a fulcrum, which was supported on a massive timber tower. The beam, typically about 20 m. long, was divided by the fulcrum in the ratio of 5:1 or 6:1. At the end of the short arm, the box containing the counterweight was suspended, and filled with lead, iron or stones; the total weight was from 10 to 30 tonnes. A long sling—about as long as the beam itself—was attached to the end of the long arm, with a pouch to contain the missile. The trebuchet was spanned by a winch, whose rope was attached to the long arm at about the mid-point. When the release mechanism was pulled, the beam rotated and the sling accelerated to a greater velocity than that of the beam. The missile was released when the end of one of the ropes slipped from a hook, at an instant when the combined effect of the sling's velocity and the angle of discharge gave maximum range to the missile. Ranges were of the order of 300 m., and the missiles could be very heavy. During the 8th/14th century sieges of Tlemcen, the *mand͟janīḳ*s were capable of bombarding the town with balls made of marble, some of which have been found there, the largest with a circumference of 2 m. and weighing 230 kg. (see ḤIṢĀR, ii; for characteristics of both kinds of trebuchet, see Hill, *op. cit.*, *passim*).

The question of the point of origin of the counterweight trebuchet has not yet been resolved. The earliest unambiguous description of the machine in Europe refers to its use in northern Italy in A.D. 1199 (Lynn White Jr., *Medieval technology and social change*, Oxford 1962, 102-3). In a treatise on weapons

written a few years earlier than this, Murḍā b. ʿAlī devotes a section to trebuchets, all except one of the traction type. The exception is called a "Persian" *mandjanīḳ*, and although the passage is obscure, it is possible that this was a counterweight machine (Cl. Cahen, *Un traité d'armurerie composé pour Saladin*, in *BEO*, xii [1947-8], 16-18). On present data, we can only locate the origin of the counterweight trebuchet somewhere in Mediterranean Christendom or western Islam, towards the end of the 6th/12th century. Its spread thereafter was very rapid, both in Europe and in the Muslim world. The first report we have of its use in Islam refers to the siege of Ḥimṣ in 646/1248, where the machine in question is referred to as a *mandjanīḳ maghribī*, a western or a North African trebuchet (Abu 'l-Fidāʾ, *Mukhtaṣar taʾrīkh al-bashar*, in *RHC, Historiens orientaux*, i, 1872, 125). Counterweight trebuchets were used in great numbers by the Muslims at the siege of ʿAkkā in 690/1291 (al-Maḳrīzī, *K. al-Sulūk*, ed. Quatremère, *Histoire des sultans Mamlouks*, Paris 1837-42, ii, 125). Almost certainly, the counterweight trebuchet was introduced to China by the Muslims. Two Muslim engineers, ʿAlāʾ al-Dīn and Ismāʿīl, are honoured by a biography in the official history of the Yuan dynasty. They constructed the machines for Ḳubilay for the siege of Fanchhêng towards the end of A.D. 1272. Thus the counterweighted trebuchets acquired the name of "Muslim phao", by which they were long afterwards known (Needham, *op. cit.*, 114).

Bibliography: In addition to the works mentioned in the text, see K. Huuri, *Zur Geschichte des Mittelalterlichen Geschützwesens aus orientalischen Quellen*, Helsinki 1941; information about the construction of traction trebuchets is to be found in Abu ʿAbd Allāh al-Khwārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 247-9. (D. R. HILL)

AL-**MANDJŪR**, ABU 'L-ʿABBĀS AḤMAD B. ʿALĪ AL-MIKNĀSĪ AL-FĀSĪ, a learned Moroccan scholar and teacher, from a family originally from Meknès, born in Fās 926/1520 and died there 16 Dhu 'l-Ḳaʿda/18 October 1587. Endowed with vast learning and a great power of verbal expressiveness, he spent his life teaching, with the methods in use at the time, various Islamic topics, in particular, theology and law, and was considered one of the greatest masters of his age at the Karawiyyīn [*q.v.*]. Between 987 and 993/1579-85, he stayed frequently for periods in Marrakesh, where his most eminent disciple was the sultan al-Manṣūr al-Dhahabī [*q.v.*].

He was the author of commentaries and glosses on well-known and esteemed works of theology and law (see Lévi-Provençal, *Chorfa*, 91), of which various manuscripts are extant (see Hajji, *Activité intellectuelle*, 164-77, *passim*), but above all he has left behind a *Fahrasa* [*q.v.*] of great documentary interest which has not however yet been made the object of a critical edition. It was written in Radjab 989/August 1581 at the request of al-Manṣūr, who wished to get from his master a general *idjāza* [*q.v.*] theoretically authorising him to teach all the topics studied under his direction and further containing the names of his own masters, with biographical notices and items of information of a literary nature. Several manuscripts of al-Mandjūr's *Fahrasa* exist (see Hajji, *op. cit.*, 27, no. 72), whieh was written in two versions, a long and a short one, according to the author's own practice.

Independently of the sultan, this teacher oversaw the intellectual formation of several pupils, who themselves became more or less distinguished subsequently and who filled the office of *ḳāḍī* in various Moroccan towns, unlike their master who, despite his great learning, piety and exalted protection and patronage, never exercised any religious office at all because of his distant Jewish ancestry [see MAYYĀRA]; he was even barred from leading the prayer when he had been thus designated by al-Manṣūr (al-Ifrānī, *Nuzhat al-ḥādī*, 155).

MĀNḌŪ, fortress and town of Central India.

1. History. Once the fortress-capital of Mālwā [*q.v.*] and now a village 34 km. south of Dhār in Madhya Pradesh, in lat. 22° 21' N and long. 75° 26' E. The first rulers took full advantage of a natural outcrop of the Vindhya range, overlooking the Nimar plain to the south. A deep and jagged ravine, the Kakra Khoh, isolates it on the sides. The plateau, well-supplied with lakes and springs, stretches unevenly over 5 km. and more from north to south, and 6 to 7 km. from east to west, at an average altitude of 600 m. with the remains of the inner fort of Songaṛh as one of the more prominent landmarks to the west. *Maṇḍapika* is mentioned on an inscription found at Pratapgadh in Rādjasthān and dated to the equivalent of 946 A.D. *Maṇḍapa-durga* appears on a copper-plate grant of Jayavamadeva dated 1261 A.D. Thus Mānḍū could be a corruption of *Maṇḍapa* or even of *Māṇḍava*.

In the early Islamic days of the subcontinent, the Paramāra king Bhoja deflected Maḥmūd, the Ghaznawid sultan [*q.v.*], from the area. Iltutmish himself did not reach as far as Māndū in his conquests, but Djalāl al-Dīn Khaldjī sacked the neighbouring lands in 1293, and the fort fell to ʿAlāʾ al-Dīn Khaldjī's general Āʾīn al-Mulk in 1303. Thereafter, the local governors ruled from Dhār, where Maḥmūd Shāh Tughluḳ took refuge from the chaos engendered by Tīmūr's onslaught; after his return to Dihlī in 804/1401, Dilāwar Khān Ghūrī proclaimed himself independent, and at his death in 808/1405, his eldest son Alp Khān ascended the throne of Mālwā under the name of Hūshang Shāh, and moved the capital to Māndū. On his coins and until the end of the century, Shādīābād, the "city of joy", appears as the name for the new capital. Although much involved in warfare with the rulers of Gudjarāt, Djawnpur, Dihlī, Uṛīsā and the Dakhan, he fully restored and strengthened the ancient fortifications protecting the access to the extensive plateau, as shown on the inscriptions on the Bhagwānīya *darwāza* (809/1416-17) and the Dihlī *darwāza* (820/1417). he also embarked on the ambitious construction of his Djāmiʿ Masdjid besides, no doubt, an impressive building programme over the 30 years of his liberal reign, in order to enhance the new capital and to rival with his neighbours. After his death, the cruelty of his own son led the son of his trusted relative and *wazīr* Malik Mughīth to accept the throne in 839/1436 under the name of Maḥmūd I Khaldjī [*q.v.*]. During the 36 years of his reign, the fame of Māndū

spread abroad as far as Cairo as well as to Samarḳand; scholars and holy men called at the capital, sometimes on their way to the Bahmanī court of Shams al-Dīn Muḥammad III at Bīdar [*q.v.*]. The buildings of his reign reflect the ever-expanding size of his realm; besides palaces and hospitals, Maḥmūd ordered the start of Hūshang Shāh's tomb in 843/1439, his own *madrasa* and victory tower in 846/1443 after his victories over Chitor (Čitawr), and the completion of the Djāmiʿ Masdjid in 858/1454. In 871/ 1467 the lunar calendar replaced the solar one. Under the generous if orderly rule of sultan Ghiyāth al-Dīn, the town of Mānḍū was further enhanced, one may imagine, by buildings to fit his desire "to open the door of peace and rest, and pleasure and enjoyment on me and those depending on me" after the "34 years at the stirrups" of his father. His large and somewhat eccentric harem never deterred him from his religious duties and from a sober life, unlike his son Nāṣir al-Dīn (906-16/1500-10), who was a dipsomaniac, although for a time a sound ruler, a lover of the arts and a great builder of palaces such as the so-called Bāz Bahādur palace dated 914/1508. During the troubled reign of his son Maḥmūd II, Muslim and Hindu nobles were rivals for power at court, especially Mēdinī Rāy [*q.v.*]. Notwithstanding its architectural highlights, his rule came to a brutal end in 937/1531, when Mānḍū-fell to Bahādur Shāh of Gudjarāt and the Shāh was taken prisoner, with his seven sons, and later killed. In 941/1534, the Mughal Humāyūn [*q.v.*] broke into the fort near the Tārāpūr gate, but not before Bahādur Shāh had been lowered with horses from the inner fort of Songaṛh down into the deep Kakra Khoh. Two years later Mallū Khān, an officer of the defunct Khaldjī retinue, seized Mānḍū and ruled for 6 years under the name of Ḳādir Shāh until submitting in 949/1542 to Shīr Shāh Sūr, who replaced him by his relative Shudjāʿ Khān as governor of Mālwā. In 963/1555 his son Bāz Bahādur seized power, although unable to assert himself for long; when Akbar's general Adham Khān overran Mānḍū in 968/1560, Bāz Bahādur escaped while his favourite Rupmati, of poetical fame, chose poison rather than servitude. He managed to recapture Mānḍū briefly, but finally submitted to Akbar in 978/1570. The latter first visited the fort in 991/1573; further visits were connected with expeditions to the Dakhan. Two inscriptions dated 1008/1600 and 1009/1601 recall the hospitality given by his governor Shāh Budāgh Khān in his palace now called Nīl Kanth. On Akbar's order, the southern Tārāpūr *darwāza* was re-orientated to the west in 1014/1605 and Maḥmūd Khaldjī's tomb was roughly repaired at the same time. Djahāngīr [*q.v.*], according to his memoirs, spent seven months in Mānḍū during the rainy season in 1026/1617; buildings were restored and the whole court enjoyed hunting and feasting; his birthday celebrations took place in Bāz Bahādur's garden next to his palace with the future Shāh Djāhān and Sir Thomas Roe in attendance. Four years later, the young prince spent another rainy season there and held a conference to induce reconcilation between two Jain factions. Awrangzīb [*q.v.*] is represented in Mānḍū by only one inscription on the northern ʿAlamgīr *darwāza* dated 1079/1668-9. After his death 1118/1707, a rapid deterioration of the empire lead to the supremacy of Marāṭhā [*q.v.*] power. In 1734 A.D. Pēshwā Bādji Rao was appointed governor of Mālwā. His deputy Anand Rāo Pūar and his descendants ruled thereafter from Dhār. Mānḍū reverted to its first vocation of a hunting ground until basic restoration was started early this century; it has continued to this day.

2. Architecture. As in Gudjarāt, Djawnpur and Bīdar [*q.vv.*] throughout the 9th/15th century, the newly-independent state of Mālwā competed not only on the battlefield but also in setting up an imposing new capital. It was imperative to modernise the walls and the ten complex gates and to make good use of the expanses of water and springs, as well as to plan the town along a north-south axis with the new Djāmiʿ Masdjid sited at the central east-west crossing. As in Dhār, the master-builders at first drew on the Gudjarātī tradition by adapting Hindu proportions and style to the Dilāwar Khān Djāmiʿ (808/1405-6) measuring about 37 by 45 m., and the Malik Mughīth Djāmiʿ (835/1432), about 42 by 46 m. In both cases, spoils from temples were used to implement an Arab mosque plan, with three domes over the prayer hall in the later building. The Djāmiʿ Masdjid, built of red ochre sandstone like the rest of Mānḍū, was completed by the mid-9th/15th century to include the revered marble tomb of Hūshang Shāh. An inscription dated 1070/1659 recalls the reverential visit of four master builders of the Mughal court. An exalting plinth emphasises the 85m. façade of the mosque, with its eastern domed entrance of metropolitan quality. A similar dome over the *miḥrāb* rests on competent corner arches. A total 150 smaller domes line the *ṣaḥn*. Opposite, the one-time *madrasa* (Ashrafiyya Maḥall) of Maḥmūd I Khaldjī, with its tower of victory once seven storeys high, was changed into a marble-lined imposing tomb, with impressive inscriptions, before his death; but it soon became derelict. A large number of lesser tombs are scattered along the approach road to Mānḍū and across the plateau. Always on a plinth and at most times following a square plan, the domed chamber usually belongs to a complex including a prayer hall also on a plinth, and a tank, as with the Daryā Khān mausoleum (10th/16th century). Geometric bands of glazed tiles enhance the base of drums inside domes, as in the Djāmiʿ Masdjid, as well as outside some of the tombs; they are chiefly turquoise and white, of mediocre quality when compared with those on buildings in Bīdar. Stone carving on elegant projecting windows, arched walls and *djalis* are far more successful.

In secular architecture, an attractive balance is struck between palaces and water expanses: the Djahāz ("ship") Maḥall, on two levels, extends to about 115 m. between the Mundja Talaō and the Kapūr Talaō. Each level has an original stepped bath; moreover, the long terrace of the upper level is dominated by elegant domed pavilions. In the more austere, T-shaped Hindolā ("swing") Maḥall, the broad buttressing outer walls (at an angle of 77° from the horizontal) contain an imposing audience hall with five double and one single-pointed arches. By the north wall of the royal enclosure, a large palace complex once dominated the Mundja Talaō, including a special well, the Champa *bāolī*, with adjacent underground rooms for the summer. Further afield, the Udjālā (bright) *bāolī* and the Andherī (dark) *bāolī* recall the elaborate wells of Gudjarāt and Rādjasthān. Both the Gadā (beggar) Shāh's shop and house hint at a later audience hall and palace. Beyond the large Sāgar Talaō to the south, the so-called Bāz Bahādur palace overlooks the waters of the Rīwā Kund. Once a complex of barracks, the so-called Rupmati pavilions dominate the whole scene. The last important palace to be built was the Nīl Kanth ("blue throat"); it faces westward on the edge of the cliff by a spring. At present it is used as a Hindu temple.

3. Painting. As in architecture, painting in manuscripts for the court evolved along original lines, but drew on two main sources, relating to neighbouring

states. A Jain minister of the Paramāra king Jayasimha founded in Maṇḍapa-durga one of his six *Jnāna-bhaṅḍāras* ("storage of knowledge"), a specifically Jain library, in 1263; the books always contained an important pictorial element. The Māndū *kalpa sutra* of 1439 illustrates the continuity in production. On the other hand, illustrated Islamic texts of the time blend this traditional draughtmanship and vivid colours with the conventions from the 9th/15th century schools of Shīrāz and Harāt, to produce a recognisable Mālwā style; the few manuscripts discovered so far relate to the early part of the 10th/16th century: the *Niᶜmat-namā* (a book of delicacies), (Ethé 2775, India Office Library), the *Miftāḥ al-fuḍalāʾ* (a Persian glossary of rare words), (BL Or. 3299), the *Bustān* of Saᶜdī dedicated to Nāṣir al-Dīn before 916/1510 (National Museum of India, New Delhi, no. 48.6/4), *ᶜAdjāʾib al-ṣanāʾiᶜ* (a Persian translation of al-Djazarī's book on the knowledge of mechanical devices [see AL-DJAZARI and ḤIYAL in Suppl.]) (BL Or. 13718).

(YOLANDE CROWE)

MANDŪB (A.) "meritorious and recommended action", term of Islamic law; see SHARĪᶜA.

MANDŪR, MUḤAMMAD B. ᶜABD AL-ḤAMĪD MŪSĀ (1907-65), the *shaykh* of modern Egyptian and Arab literary critics, was born in Kafr Mandūr, near Minyā al-Ḳamḥ, in Egypt's Sharḳiyya Province, to a rather wealthy family. His semi-literate father was a devout and tolerant Muslim who belonged to the Naḳshbandī dervish order. Mandūr learned many Ḳurʾānic verses from his father, and his religious upbringing in a rural milieu instilled in him moral and spiritual values that he preserved all his life. At the age of five, he was sent to the village *kuttāb* [*q.v.*], and the following autumn he entered the elementary school in Minyā al-Ḳamḥ. In 1921 he transferred to the secondary school in Ṭanṭā, where he studied English and earned the Baccalauréat Littéraire in 1925. He then enrolled in the law school of the newly inaugurated Egyptian University, hoping to become a public prosecutor. He was persuaded by Ṭāhā Ḥusayn [*q.v.*] and another teacher to enrol also in the Departments of Arabic and Sociology. In 1929 he obtained a *Licence* in Arabic Literature, and in 1930 a *Licence* in Law. Immediately afterward, Mandūr was offered a position as a public prosecutor, but he declined it in order to accept a government scholarship to study at the Sorbonne.

After studying for nine years in France, Mandūr graduated both in classical languages and literatures and in law and political economy. The turbulent political situation in France before World War II discouraged him from finishing his doctorate and hastened his return to Egypt in 1939. Without a doctorate, he could not assume a university teaching position in Egypt. Hence he spent the years 1940-1 translating and teaching translation from French and English into Arabic. In 1942, the University of Alexandria was established and Mandūr was appointed a professor of Arabic literature. There the eminent scholar and educator Aḥmad Amīn (d. 1954) encouraged Mandūr to finish his doctorate, which he did in 1943. His dissertation, "Arabic critical trends in the fourth century A.H." (*Tayyārāt al-naḳd al-ᶜArabī fi 'l-ḳarn al-rābiᶜ al-hidjrī*), supervised by Aḥmad Amīn, was later published under the title "Methodical criticism among the Arabs" (*al-Naḳd al-manhadjī ᶜind al-ᶜArab*), 1946, and has since become the most celebrated single work in Arabic on mediaeval Arabic literary criticism.

He resigned his post at the University of Alexandria in 1944 in order to accept a position as Editor-in-Chief of the newspaper *al-Miṣrī*, thus embarking on a tumultuous career of political and literary journalism in the vanguard of opposition to the government of Ṣidḳī Pasha and the British. Mandūr was discharged after only three months, and for a short while he contented himself with publishing a few articles and teaching at the newly-founded (1944) evening Institute of Drama. In 1945 he was appointed Editor-in-Chief of the evening newspaper *al-Wafd al-Miṣrī*, which, with the assistance of some rebellious avant-garde writers, he gradually transformed into a daily revolutionary manifesto against the British and their Egyptian collaborators. Despite his socialist writings and his leadership of the liberal progressive wing within the Wafd party, Mandūr was never a communist. His deep involvement in national politics and his vehement opposition to the Ṣidḳī-Bevin Treaty brought him imprisonment twenty times in 1945 and 1946, and cost him the closing of his own six-months-old newspaper, *al-Baᶜth* ("Resurrection"), as well as eleven other newspaper and magazines. With the fall of Ṣidḳī's cabinet, Mandūr assumed the editorship of the new Wafd newspaper, *Ṣawt al-Umma* ("The voice of the Nation"), where he pursued his political struggle against "colonialism and Western exploitation of Egypt's national resources". Mandūr operated a successful law office from 1948 to 1954, and at the same time continued to write and edit the newspaper *Ṣawt al-Umma*. He was elected to the Egyptian parliament in 1950, and served on several parliamentary committees. In 1953 he embarked on yet another teaching and writing career at the Arab League's Institute of Higher Arabic Studies, and continued until some time before his death in 1965.

Mandūr's copious œuvre consists of specialised and general books treating one or several related subjects or literary genres; translations of diverse works, mostly from French into Arabic; book reviews; hundreds of political and literary articles; some elementary attempts at poetry; and one screenplay.

Despite his prominence as a journalist, political activist and translator, Mandūr's reputation is principally that of eminent literary critic, surpassing in

intellectual vigour and critical insight his teacher Ṭāhā Ḥusayn, but without his fame and versatility. His literary works encompass three basic fields: criticism, theoretical and practical; poetry and poets; and theatre, in both its prose and verse forms. Most notable and enduring of his critical books are *Fi 'l-mīzān al-djadīd* ("In the new balance"), in which Mandūr expounded his theory of *al-shiʿr al-mahmūs* ("whispered poetry"), inspired by the title of Mikhāʾīl Nuʿayma's [*q.v.*] poetry collection *Hams al-djufūn*, n.d. ("The whispering of eyelids"); and *al-Naḳd al-manhadjī ʿind al- ʿArab* ("Methodical criticism among the Arabs"), 1946. Some other books in this category are: *Fi 'l-adab wa 'l-naḳd* ("On literature and criticism"), 1949; *al-Adab wa-madhāhibuh* ("Literature and its schools"), 1958; and *al-Adab wa-funūnuh* ("Literature and its genres"), 1963. Mandūr's major works on poetry and poets comprised a theoretical work on poetry, *Fann al-shiʿr* ("The art of poetry"), 1960, and a renowned series of critical studies on Syro-American poets, Egyptian modernist poets, and the poets of the *vers libre* movement. His principal works on the theatre include *al-Masraḥ* ("The theatre"), 1959; *al-Klāsīkiyya wa 'l-uṣūl al-fanniyya li 'l-drāmā* ("Classicism and the artistic roots of drama"), n.d.; and applied studies of the verse plays of Aḥmad Shawḳī (d. 1932) and the prose theatre of Tawfīḳ al-Ḥakīm (born 1898).

The most distinguished of Mandūr's translations are the two acclaimed critical treatises which greatly influenced his early critical thought and which punctuated his critical writings throughout his career: Georges Duhamel's *Défence des lettres* (1943) and Gustave Lanson's *La Méthode de l'histoire littéraire* (1946), which he appended to the fifth edition of *al-Naḳd al-manhadjī ʿind al-ʿArab*. The other translated works encompass a whole range of literary disciplines, from Flaubert's *Madame Bovary* to E.A. Poe's "The Raven".

His political and ideological writings comprise one major book, *al-Dīmūḳrāṭiyya al-siyāsiyya* ("Political democracy"), 1952?, and innumerable articles, some of which were published in two books.

Mandūr's training in the French critical tradition, especially the then-predominant approach of *l'explication de textes*, was inculcated in his critical writings and eventually evolved into an eclectic theory that underwent, according to him, three distinct stages:

(1) Aesthetic impressionistic, in which precedence is accorded to aesthetic values. This approach is adopted in his two earlier and much celebrated works, *al-Naḳd al-manhadjī ʿind al-Arab* and *Fi 'l-mīzān ad-djadīd*, which also includes his famous theory of *al-shiʿr al-mahmūs* ("whispered poetry"). Mandūr acclaimed poetry that "whispers", that communicates with the listener is an undertone, *à mi-voix*, poetry that is devoid of elocutionary bombast, florid rhetoric and effete sentimentality. Emigré poetry [see MAHDJAR] (especially Nuʿayma's) and Free Verse were grand examples of "whispered poetry" in his judgement.

(2) Descriptive analytic. Here Mandūr undertakes an objective method that strives more for analysis, identification and instruction than for guidance. He generally applied this approach in the thirteen books on poetry and the theatre, including the renowned series "Egyptian poetry after Shawḳī", which he wrote for the Arab League's Institute of Higher Arabic Studies.

(3) Ideological criticism, which conceives of a well-defined social function for literature. His application of this approach was a consequence of his socialist beliefs and of his involvement in national politics, and is attributed to his diversified activities in journalism, law, parliament, and his enduring interest in Egyptian rural life. Ideological criticism, embedded in socialist (New) realism, is equivalent to committed literature, or as Mandūr called it, purposive literature (*al-adab al-hādif*), which he propounded more than he applied it to poetry in his critical works.

Despite the multiplicity of approach, Mandūr's fundamentally eclectic theory espouses the pursuit of beauty in any given literary work, and the ultimate judgment, in his reckoning, lay with cultivated personal taste reinforced by vast and diversified knowledge. He defined criticism as the art of distinguishing between literary style and its function as interpretation, evaluation and guidance. Criticism as such has the capacity to participate in re-creating a literary work.

Mandūr's remarkable literary presence, fecundity, originality and vibrant intellect earned him endless and brutal literary battles with his contemporary critics, especially with al-ʿAḳḳād [*q.v.* in Suppl.] (d. 1964), and with the opponents of modern Free Verse. Both the critics and their psychological, positivistic and dogmatic approaches were the subject of his learned and astute criticism.

Mandūr's precise, elegant and unembellished style enhanced the comprehensibility and accessibility of his rather original writings. Mandūr introduced into modern Arabic critical lore such concepts as whispered poetry, poetic pantheism, purposive literature, objective romanticism, and methodical criticism. Despite his political and socialist undertakings, Mandūr remained all his life a literary, but not an ideological critic.

Bibliography: Mandūr wrote upwards of thirty books and hundreds of articles and book reviews, the majority of which remain uncollected. In 1964, he granted an elaborate and informative interview which was published in Fuʾād Dawwāra's book *ʿAshrat udabāʾ yataḥaddathūn*, Cairo 1965. Another interview was published in the Lebanese literary journal *al-Ādāb* (January 1961), by Fārūḳ Shūsha. Scores of articles about his life and critical writings have been written after his death in such major Arab literary journals as *al-Ādāb*, *al-Ṭalīʿa* and *al-Madjalla*. The most detailed and penetrating expositions of Mandūr's criticism in English are presented by D. Semah in his book, *Four Egyptian literary critics*, Leiden 1974, and in his *Muḥammad Mandūr and "New Poetry"*, in *JAL*, ii (1971). Major Arabic studies of Mandūr include Henri Riyāḍ's *Muḥammad Mandūr, Rāʾid al-adab al-ishtirākī*, Khartoum 1965 and Beirut 1967; and Khayrī ʿAzīz, *Udabāʾ ʿalā ṭarīḳ al-niḍāl al-siyāsī*, Cairo 1970. Works published posthumously, such as *Kitābāt lam tunshar*, Cairo n.d., and more recent editions of Mandūr's work, feature representative lists of his publications. (MANSOUR AJAMI)

MANĒR, a former town, now no bigger than a village, 22 miles/32 km. west of Patnā [*q.v.*] in Bihār state, India, by the junction of the rivers Sōn and Ganges (it was reported to be at the junction in 1722, 3 miles/5 km. south of it by 1812, 7 miles /10 km. south by 1907); it had therefore some strategic and mercantile advantage, and was one of the earliest and most important sites of Muslim colonisation in this part of India.

By Mughal times, it had become the chief town of a *pargana* of some 80,000 *bīghas* [see MISĀḤĀ 2. India] in the *ṣūba* of Bihār (*Āʾīn-i Akbarī*, tr. Jarrett, Calcutta 1891, ii, 151, 153). A copperplate grant from a Hindu

king of Kanawdj (ed. and tr. Pt. R. Sharma, in *JBORS*, ii/4 [1916]) of 1126 A.D. requires its Brahman recipient in "Maniyāra" to pay the tax called *turushka danda* "Turk's duty", which seems to imply that tribute was being paid some seventy years before the Muslim conquest of north India, presumably to a Ghaznawid agent; the early date is strengthened by local tradition, which holds one grave in the great *dargāh* to be that of Tādj al-Dīn Khandgāh, the nephew of Maḥmūd of Ghaznī (local traditions in eastern India may refer to other putative kinsmen of the Ghaznawid rulers; but other early 6th/12th century Sanskrit inscriptions also mention the *turushka-danda*, and references in Bayhaḳī point to sporadic trans-Gangetic Muslim settlement; see K.A. Nizami, *Some aspects of religion and politics in India during the thirteenth century*, Bombay, etc. 1965, 76 ff.). The consolidation of Islam is, however, thus explained: a Yamanī saint Muʾmin ʿĀrif (still of great local repute) had settled in Manēr, but was harassed by the local *rādjā*; he went back to Medina and returned with a raiding party led by Ḥaḍrat Tādj Faḳīh which defeated the local *rādjā* in a pitched battle, destroyed the temple (chronogram, *shud dīn-i Muḥammad ḳawī* = 576/1180) and dismantled the riverside fort. Many "*shahīds*' graves" in Manēr are said to date from this time. Tādj Faḳīh returned to Medina, leaving his kinsmen to rule Manēr; but the rule seems to have been a spiritual one, for his grandson Shaykh Yaḥyā Manērī, d. 690/1291 (chronogram: *makhdūm*!), was the most celebrated saint of Bihār, progenitor of a distinguished line of local saints, whose shrine (in the Baṛī Dargāh; see below) was visited by Sikandar Lodī, Bābur, Humāyūn and Akbar, though his fame has been eclipsed by (and sometimes conflated with) that of his son Sharaf al-Dīn Aḥmad Manērī [see MAKHDŪM AL-MULK, SHARAF AL-DĪN] of Bihār Sharīf, *murīd* of Nadjīb al-Dīn Firdawsī. Eighth in descent from Shaykh Yaḥyā was Abū Yazīd, commonly known as Makhdūm Shāh Dawlat, d. 1017/1608-9, whose tomb (the Čhōṭī Dargāh) is the finest Muslim building in Bihār.

The *khānḳāh* forms a complex of buildings disposed around a vast rectangular tank (*ḥawḍ*), its stepped masonry sides equipped centrally with *ghāṭs* and *bārādarīs*, drawing its water from the river Sōn by a subterranean channel. The tank is said to have been rebuilt in stone at the same time as the Baṛī and Čhōṭī Dargāhs were erected in the early 11th/17th century by Ibrāhīm Khān Kākar (*not* by Ibrāhīm Khān Fatḥ Djang, *ṣūbadār* of Bihār 1023-5/1615-17, as Horn and others assert). The Baṛī ("great") Dargāh west of the tank, on the site of the temple mound, is great in sanctity rather than magnificence. It consists of a great boundary wall enclosing a graveyard and a small mosque, standing to the west of a railed platform containing the simple open grave of Shaykh Yaḥyā (inscription of Ibrāhīm Khān Kākar, 1014/1605-6); also odd stone pillars, and a mutilated statue at the entrance presumably from the old temple. The Čhōṭī ("small") Dargāh is a high square platform in a fortress-like brick enclosure north of the tank, on which stands the square sandstone mausoleum of Makhdūm Shāh Dawlat (inscription with decease chronogram 1017/1608-9, and two construction chronograms 1025/1616), a superb specimen of provincial Mughal architecture. The central square chamber is domed, with lower and upper verandahs (fine carved ceilings: floral, geometric and Ḳurʾānic designs) running round all sides, each corner formed into a square room with arched openings below and an open domed *čhatrī* of similar size above. The lower verandah and the *čhatrīs* are built on the beam-and-bracket principle, and heavy stone corbels support both the lower and upper *čhadjdjā*, contrasting with the arches of the tomb chamber which also has finely carved stone screen openings. A local tradition asserts that the stone was brought from Gudjarāt; certainly, features of Gudjarāt tomb design are apparent here [see further MUGHALS. Architecture.]. West of the mausoleum is a small mosque with curvilinear roof, centrally situated between stone verandahs running along the entire western wall of the enclosure; inscription dated 1028/1619, quoting Ḳurʾān, III, 97-8. An underground chamber in the south-west corner is identified as the *čilla* of Shāh Dawlat. A fine entrance gate, in a more conventional Mughal style, bears two chronograms of 1022/1614-15 and 1032/1622-3. Other minor buildings around the tank are in grave disrepair. The earliest inscription of Manēr, 798/1395-6, records the reconstruction of an older mosque, now disappeared. The Djāmiʿ mosque of Manēr, itself undistinguished, bears two records of renovations, of 1103/1691-2 and 1283/1866 (the last on a marble slab carved in Medina), both mosques thus testifying to a vigorous Muslim population over the centuries; but the grounds around the Manēr tank are also the scene of a doubtfully Islamic fair on the ʿ*urs* of Ghāzī Miyān [*q.v.*].

(J. BURTON-PAGE)

MANF, Memphis, the capital of the Egyptian Old Kingdom, situated on the west bank of the Nile opposite modern Ḥulwān [*q.v.*] about twelve miles south of Fusṭāṭ [*q.v.*], plays a pivotal rôle in mediaeval Arabic geographical and historical writing on Egypt.

Al-Ḳalḳashandī (*Subḥ al-aʿshā*, iii, 316, 6-8; German tr. F. Wüstenfeld, *Die Geographie und Verwaltung in Ägypten*, Göttingen 1879, 41) presents the climate (= the third) and the geographic coordinates of Manf. The Muslims knew about the great antiquity (*madīna ... azaliyya*; *K. al-Istibṣār fī ʿadjāʾib al-amṣār*, Alexandria 1958, 83, French tr. 68) of the formerly huge city (cf. Ibn Zūlāḳ, quoted by al-Ḳazwīnī, *Āthār al-bilād wa-akhbār al-ʿibād*, Beirut 1399/1979, 274). The great scholar and most prominent mediaeval authority on Manf, ʿAbd al-Laṭīf al-Baghdādī (*al-Ifāda wa 'l-iʿtibār*, in Kamal Hafuth Zand *etalii*, *The eastern key*, London 1965, 136-7) speaks of over 4,000

years, a surprisingly exact estimate. Manf was destroyed when ʿAmr b. al-ʿĀṣ conquered Egypt and presented itself to mediaeval visitors in ruins (*kharāb*, cf. e.g. al-Yaʿḳūbī, *K. al-Buldān*, 331,9, and Abu 'l-Fidāʾ, *Taḳwīm al-buldan*, 117), unlike ʿAyn Shams [*q.v.*] (Heliopolis), Manf's traditional rival in the eyes of mediaeval Muslim authors (al-Idrīsī, *Nuzhat al-mushtāḳ*, 135, 4-5; *Opus geographicum*, 326, l. 2; Ibn Ḥawḳal, *K. Ṣūrat al-arḍ*, 160, French tr. J.H. Kramers and G. Wiet, Beirut-Paris 1964, i, 158). The two cities are often mentioned together—as in a poem ascribed to the caliph al-Maʾmūn (cf. Ps.-Ibn Ẓahīra/Ibn Ẓuhayra = Abū Ḥāmid al-Ḳudsī, *al-Faḍāʾil al-bāhira fī maḥāsin Miṣr wa 'l-Ḳāhira*, ed. Muṣṭafā al-Saḳḳā and Kāmil al-Muhandis, Cairo 1969, 69; on the author, see now M. Cook, *Abū Ḥāmid al-Qudsī* (d. 888/1483), in *JSS*, xxviii [1983], 85-97)—and are sometimes confused (Ibn Ḥawḳal, as cited by Ibn al-Djawzī, *Mirʾāt al-zamān*, in Ibn al-Dawādārī, *Kanz al-durar*, i, ed. B. Radtke, Cairo 1982, 124, 1-5).

Despite its decay, however, Manf continued to denominate the northermost *kūra* (district or country) of Upper Egypt for some centuries (see e.g. Ibn Khurradādhbih, *al-Masālik wa 'l-mamālik*, 81; Ibn al-Faḳīh, *Mukhtaṣar Kitāb al-Buldān*, 73; al-Dimashḳī, *K. Nukhbat al-dahr fī ʿadjāʾib al-barr wa 'l-baḥr*, 231-2; and the tables in J. Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, Cairo 1919, 173-84, and A. Grohmann, *Studien zur historischen Geographie und Verwaltung des frühmittelalterlichen Ägypten*, Vienna 1959, appendix ii). Many, though certainly not all, mediaeval authors (e.g. al-Dimashḳī, 232) merge the districts of Manf and of Wasīm-Awsīm into one. A papyrus of 133/750-1 explicitly mentions the *kūrat Manf* (Grohmann, 40b). Al-Dimashḳī counts 54 villages in the district of Manf (232). As late as the early 7th/13th century, Abū Djaʿfar al-Idrīsī [*q.v.*] speaks of a village like Būṣīr as belonging to the *aʿmāl madīnat Manf*, the vicinity of Manf (*Anwār ʿulwiyy al-adjrām*, ms. Munich, fol. 47b). By that time, Djīza [*q.v.*], the provincial capital (*ḳaṣaba*, cf. Ibn Duḳmāḳ, *K. al-Intiṣār li-wāsiṭat ʿiḳd al-amṣār*, iv, 130), had succeeded Manf as the regional centre (ʿAbd al-Laṭīf, 134-5). Until the 4th/10th century at least, Manf remained the see of a bishop (Severus of Ushmūnayn, in *Patr. orient.* vi, 490 [26]; Abū Ṣāliḥ al-Armanī, in B. T. A. Evetts and A. J. Butler, *The churches and monasteries of Egypt and some neighbouring countries*, Oxford 1895, 199), though only a few generations later (al-Idrīsī, *Nuzha*, 135-2, *Op. geog.*, 32b, *l.* 2), it is labelled a village (*ḳarya*).

The Nile posed a constant threat to the fields and pastures around Manf in pre-Islamic and in Islamic times; Ibn ʿAbd al-Ḥakam (*Futūḥ Miṣr wa-akhbāruhā*, 6,8) still speaks of the canal of Manf as one of the seven *khuludj* of Egypt; for al-Wāḳidī (see Ibn al-Zayyāt, *al-Kawākib al-sayyāra fī tartīb al-ziyāra*, 6,8 ff.) it was one out of six. In al-Ḳalḳashandī's time this canal had disappeared, unlike the six others (*Ṣubḥ*, iii,, 297-302). The Christian author Abū Ṣāliḥ al-Armanī (early 7th/13th century), in his remarkably vivid and original chapter on Manf, mentions that since antiquity the Nile gradually changed its bed towards the city (*Churches*, 19; see also Sibṭ b. al-Djawzī, in Ibn al-Dawādārī, *Kanz* , i, 124). In the 9th/15th century finally, the village of Badrashayn (Umm ʿĪsā) flourished, either exactly where (Ibn Duḳmāḳ, 130), or close to where (al-Ḳalḳashandī, iii, 316,14) the old Memphis had stood (see also H. Halm, *Ägypten nach den mamlukischen Lehensregistern*. i, Wiesbaden, 211).

Manf is the accepted rendering of the name of the city (al-Ḳalḳashandī, ii, 316,5), although one also reads Minf (Abu 'l-Fidāʾ, 116), Munf (a variant reading in Ibn ʿAbd al-Ḥalam, 6,5), Munayf (Abū Ṣāliḥ, 200), Manfish (Abū ʿUbayd al-Bakrī, *al-Masālik wa 'l-mamālik*, 21, 11; al-Bakrī was an expert of Greco-Latin toponyms, cf. 21, 10 and 13) and, wrongly, Manūf al-ʿulyā (Ibn Taghribīrdī, *al-Nudjūm al-zāhira*, i, 49, 11 ff). On the confusion of Manf and Manūf [al-ʿulyā/al-suflā], see Maspero-Wiet, 200, 202-4). Ibn ʿAbd al-Ḥakam (8-9), on the authority of his prestigious informants, was the first of many subsequent authors to connect the Arabicised form Manf with Coptic *māfa* (= *maab, maave*), "thirty"; al-Ḳalḳashandī (iii, 316,10) quotes al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, stating a Syriac root. We also find the forms Māf (Ibn al-Zayyāt, 7,6-7) and Manāfa (Abū Ṣāliḥ, 199). As an explanation for this etymology, we learn that the first inhabitants of Manf—in one case described as unruly rogues *djabābira*; cf. al-Maḳrīzī, *al-Khiṭaṭ*, ed. G. Wiet, iii, 29, quoting from Ibn Waṣīf Shāh's legendary history of Egypt—numbered thirty (e.g. al-Nuwayrī, *Nihāyat al-arab*, xv, 44, 8 ff.).

The seventeenth-century Turkish traveller Evliyā Čelebi (*Seyāḥatnāme*, x, 11, 18) vacillates, in his interpretation, between a Coptic (*menûf* = a bride) and an Hebrew etymology ("place of purity").

The Muslims regard Manf as the first settlement (Ibn Duḳmāḳ, 130, offers as an alternative the city of B.d.w. in the province of al-Sharḳiyya) and as the capital city (*miṣr*, *ḳāʿida*) of postdiluvian Egypt, epitomising Egypt as a whole (al-Nuwayrī al-Iskandarānī, *K. al-Ilmām*, iii, 367) until it was destroyed by Nebuchadnezzar (Ibn Khaldūn, *al-ʿIbar*, Cairo 1355/1936, i, 113; *Khiṭaṭ*, iii, 26). He took the city because its king Ḳūmis (Abū Ḥāmid al-Ḳudsī, 69) had given shelter to the Jews who had fled from his oppressive régime (ʿAbd al-Laṭīf, 134-5). According to Ibn Duḳmāḳ (130), there had been an antediluvian settlement named M.z.na in the location of Manf. The earlier Egyptian capitals, Amsūs, off the Mediterranean coast, and B.r.sān (of uncertain location), had perished in the Flood (al-Ḳalḳashandī, iii, 315, 14-20).

There is no consensus about the identity of the founder of Manf. We hear of Bayṣar b. Ḥām (Ibn ʿAbd al-Ḥakam, 9,3) who was the first to be buried in Egyptian soil (Abū Ṣāliḥ, 199), i.e. in the terrain of St. Jerome's—still visible—monastery (*Dayr [Abī] Hirmīs*) in the vicinity of Manf (Maspero-Wiet, 96). Symbolising the continuity of Egyptian history beyond the dividing line of the Flood, Bayṣar married the daughter of Philemon or Polemon al-Kāhin (*al-Khiṭaṭ*, iii, 29-30), the antediluvian sage of Egypt who had warned king Sūrīd of the imminent carastrophe and advised him to erect the Pyramids as a shelter for the secret knowledge of Egypt (cf. Ibn Waṣīf Shāh/al-Waṣīfī—on this latter form, see Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam* ed. L. Cheikho, Beirut 1912, 39; Abū 'l-Ṣalt, *al-Risāla al-miṣriyya*, ed. ʿA. Hārūn, in *Nawādir al-makhṭūṭāt*, i, 24, 14 ff.; *K. al-Istibṣār*, 62; Abū Djaʿfar al-Idrīsī, fols. 22a, 23a *et alia*—in Ps.-Masʿūdī's *Akhbār al-zamān*, ed. ʿA. al-Ṣāwī[3], Beirut 1978, 134-5; on Waṣīfī's hermetic history of pre-Islamic Egypt, see M. Cook, *Pharaonic history in medieval Egypt*, forthcoming in *SI*). Other authors (e.g. al-Dimashḳī, 229) claim Bayṣar's son Miṣr[īm/āyim] to have been the first to leave the security of the Muḳaṭṭam mountain (*al-Khiṭaṭ*, iii, 27) in the company of his grandfather Ḥām b. Nūḥ (Ibn Duḳmāḳ, 130) and to settle in the plains on the other bank of the Nile that could be reached by the clement east winds (ʿAbd al-Laṭīf, 26-7). Abū Ṣāliḥ (199) also mentions

another legendary king, Manfā'ūs b. ʿAdīm, as founder of Manf. In Ps.-al-Madjrīṭī's famous manual of the arcane sciences, *Ghayāt al-ḥakīm*, the inventor of the Indian amulet, Kanka al-Hindī al-Munadjdjim, is presented as the founder of the city where he built castles for his daughters, equipped with wondrous appliances that produced whistling and other sounds (H. Ritter and M. Plessner, *"Picatrix". Das Ziel der Weisen von Pseudo-Mağrīṭī*, London 1962, 285-6; Arabic ed. 278; cf. also Ibn al-Dawādārī, i, 213-14).

The explicit and implicit information on Pharaonic Egypt given in the Ḳur'ān and in the stories of the prophets was the indispensable repertory for mediaeval Muslim reports on the history of the country in pre-Islamic times. The ubiquitous archeological remains of Pharaonic period were eagerly identified with items familiar from the sacred text and the commentaries. In a similar fashion, Manf was given its well-defined and prominent place within salvation history. The reports of traditionists such as Ibn Lahīʿa [*q.v.*], recorded by early historians like Ibn ʿAbd al-Ḥakam and ʿUmar al-Kindī, remained the main corpus of information on Manf well into the modern period. Even in the 19th century the truths of the *ḳiṣaṣ al-anbiyā'* were not easily superseded by the results of enlightened empirical and historical research. ʿAlī Mubārak Pasha's lengthy chapter on Manf is introduced and, so it seems, legitimised by a long verbatim quotation from al-Maḳrīzī's *Khiṭaṭ*, i.e. by an intrinsically Islamic text. Only then does there follow what European scholarship has found out about the factual history of the city (see his *al-Khiṭaṭ al-Tawfīḳiyya al-djadīda*, xvi, 2-8).

Three verses of the Ḳur'ān are interpreted as referring directly to the city of Manf: xxviii, 15, "And he [= Mūsā] entered the city at a time of carelessness of its folk" (cf. also ʿUmar al-Kindī, *Faḍā'il Miṣr*, ed. Ibrāhīm Aḥmad al-ʿAdawī and ʿAlī Muḥammad ʿUmar, Cairo-Beirut 1391/1971, 25); xxviii, 21, "So he [= Mūsā] escaped from thence, fearing, vigilant"; and xliii, 51, "Is not mine the sovereignty (*mulk*) of Egypt and these rivers flowing under me? Can ye not then discern?" (cf. Ibn ʿAbd al-Ḥakam, 6,5; al-Nuwayrī al-Iskandarānī, *Ilmām*, iii, 363, on Hārūn al-Rashīd's symbolic defiance of Pharaoh's claim to the *mulk Miṣr*; Ibn Khaldūn, *ʿIbar*, i, 115). The latter verse posed particular problems to historical and geographical commentators. What to do with the rivers in the plural? It was Manf, 12 miles long, the city of iron (Ibn al-Dawādārī, *Kanz*, i, 124 writes "copper") and brass walls (Ibn al-Faḳīh, 73; Ibn Khurradādhbih, 161 [not 81, as in *EI*[1] art. MANF]) and of 70—or, alternatively, 30 (Abū Ṣāliḥ, 199-200—gates from which the four great rivers of the earth flowed. The numerous dams and bridges (*ḳanāṭir wa-djusūr*) of the lowlands of Manf (Ibn ʿAbd al-Ḥakam, 6,3; *al-Khiṭaṭ*, iii, 27) are also directly linked to this Ḳur'ānic verse.

The dominant Islamic stereotype associated with Manf is its role as the seat of Pharaoh (*madīnat Firʿawn*, see e.g. Ibn al-Faḳīh, 73). Other familiar epithets are *dār al-mamlaka* (*al-Istibṣār*, 83; al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, ed. I. ʿAbbās, Beirut 1975, 551a), *dār al-mulk* (Ibn ʿAbd al-Ḥakam, 20, 14; Abu 'l-Ṣalt, 29; *al-Khiṭaṭ*, iii, 29), *dār al-mulk wa 'l-ʿilm* (Ibn al-ʿIbrī, *Ta'rīkh mukhtaṣar al-duwal*, Beirut n.d. [1978-9], 20, 10), *madīnat al-iḳlīm* (Abū Ḥāmid al-Ḳudsī, 69), *miṣr al-iḳlīm* (Ibn Duḳmāḳ, 130) and, last but not least, *Miṣr al-ḳadīma* (Abū Djaʿfar al-Idrīsī, fol. 34a; al-Ḳalḳashandī, iii, 316, 14). At least five Pharaohs resided there (al-Dimashḳī, 229). Al-Maḳrīzī (*al-Khiṭaṭ*, iii, 25-70) integrates the complete story of Egypt between Mūsā and Nebuchadnezzar into his chapter on Manf. Eight prophets, from Idrīs to Yūshaʿ, lived to see it as the Egyptian capital (Abū Djaʿfar al-Idrīsī, fol. 12b). The famous stories of Mūsā and Yūsuf b. Yaʿḳūb took place in and around Manf (see e.g. Yāḳūt, *Muʿdjam al-buldān*, Beirut 1397/1977, v, 214b, s.v. *Manf*). Miscellaneous monuments are identified with Yūsuf's granary and prison, with Zalīkhā/Zulaykhā's tomb and with the mosques of Yaʿḳūb and Mūsā (see e.g. al-Ḳalḳashandī, iii, 317, 4-12). The village of al-ʿAzīziyya north of Manf is said to go back to Potiphar, the *ʿazīz Miṣr* [*q.v.*]. It was at Manf that Yūsuf's coffin was lowered into the floods of the Nile (only in al-Masʿūdī, *Murudj al-dhahab*, i, 90 = § 83). Manf becomes an important scene of Jewish history. From there the Jews were banished to ʿAyn Shams, as one source maintains (Abū Djaʿfar al-Idrīsī, fol. 57a). Al-Ḥimyarī goes so far as to claim Jewish rule over Egypt after the demise of Pharaoh's troops in the Red Sea (*al-Rawḍ al-miʿṭār*, 551a, cf. the footnote of the editor). According to ʿAbd al-Laṭīf (134-5) and Abū Djaʿfar al-Idrīsī (fol. 35a), both writing in the Ayyūbid era, Mūsā took refuge in the neighbouring hamlet of Dunūh/Dumūya/Dumuwayh. This place remained sacred to the Jews, who erected a synagogue there (ʿAbd al-Laṭīf) and made it a place of public veneration (Abū Djaʿfar al-Idrīsī).

The women's régime established in Egypt after the Pharaoh of Moses had perished in the Red Sea together with the soldiers of the country provided the "historical" nucleus for the hen-pecked predicament of the Egyptian male, to be encountered among non-Egyptian writers from the days of Herodotus to the time when Muṣṭafā ʿĀlī, at the end of the 10th/16th century, visited Cairo. Manf too has an important part to play in this context. The main temple (*birbā/barbā* [*q.v.*]) of Manf, with its four doors, built by the valiant Queen Dalūka, had an apotropaic function in those sad days when Egypt was bereft of men and seemed an easy prey to foreign invaders. If we follow Ibn ʿAbd al-Ḥakam and his sources (27, 16-28, 8), the sorceress Tadūra had prepared images of the riding beasts and of the vessels on which the numerous potential enemies could enter Egypt. In voodoo-like magical substitution, the destruction of the image entailed, whenever the situation arose, the destruction of the object depicted. With the extinction of Tadūra's offspring in Manf, this magic knowledge was irretrievably lost (Ibn Duḳmāḳ, 130; Ibn al-Zayyāt, 11, 14-22). In another tradition of obscure origin, cited by Abū Ḥāmid al-Ḳudsī in his *faḍā'il Miṣr* work (70), it was not the animals and vehicles but rather the enemy kings themselves who were depicted in Manf and who could thus be annihilated from afar whenever they were tempted to attack Egypt. We are reminded of one of the immortal stereotypes connected with Egypt: whomever God wishes to destroy, He lures into Egypt. In our story, Nebuchadnezzar contrived to gain knowledge of the secret, to have his own effigy in the tower (*ḳubba*) of Manf soaked with the blood of pigs, and thus to break the spell and conquer the city and the country. Al-Maḳrīzī, in his chapter on Manf (*al-Khiṭaṭ*, iii, 27), brings Manf into the orbit of Muḥammad's miraculous telepathic powers; the pagan monuments of Manf collapsed at the precise moment when the Prophet victoriously entered Mecca, destroyed the idols and proclaimed the advent of truth from east to west, all around the world.

As we have seen in the case of Manf's epithet "capital city of the Egyptian kings", historical

veracity and pious legend are inevitably and inextricably mixed. Some of the miraculous buildings of the Manf of the magicians may well have had their less conspicuous counterparts in historical reality. Thus we hear of sophisticated gears (*al-daradj al-mudjawwafa*, *al-Khiṭaṭ*, iii, 28) engineered to lift water to the highest buildings on Manf in early postdiluvian times. Manf is—truly or falsely?—mentioned as the location of Egypt's first Nilometer [see MIḲYĀS], (al-Masʿūdī, *Murūdj* ii, 365 = §781; a slightly altered version in al-Ḳazwīnī, 265, who cites al-Ḳuḍāʿī, and in Sibṭ Ibn al-Djawzī, as quoted by Ibn al-Dawādārī, *Kanz*, i, 196, 18-20). Al-Ḳalḳashandī (iii, 317,14) speaks of a place in Manf that up to his own time, the 9th/15th century, was known under the name of *al-miḳyās*. Al-Masʿūdī (*loc. cit.*) and Abū Ṣāliḥ (200) tell us that Yūsuf erected it, together with the Pyramids, and "was the first who measured the Nile in Egypt by the cubit" (see also Ibn ʿAbd al-Hakam 16, 17 on the *miḳyās Manf*). The Nilometers of Ikhmīm or Akhmīm [*q.v.*] and in the "extreme Ṣaʿīd"—the latter, presumably referring to the Nilometer on the island of Elephantine, mentioned only by al-Masʿūdī—were built as the second and third ones much later by Queen Dalūka. Of equally indeterminable historicity is the widespread report of an observation post (*marḳab*) on the Muḳaṭṭam between Manf and ʿAyn Shams (Ibn ʿAbd al-Ḥakam, 157,18 - 158,5, on the authority of Saʿīd Ibn ʿUfayr, quoting Kaʿb al-Aḥbār). Whenever, according to legend, Pharaoh set out from Manf to ʿAyn Shams, his other favourite abode (al-Idrīsī, *Opus geogr.*, 376, l.3), or vice versa, his departure could immediately be signalled to the other city so that the people there had enough time for an appropriate to their ruler. This station on the Muḳaṭṭam was allegedly equipped with a mobile mirror (*mirʾāt tadūr ʿalā lawlab*, al-Idrīsī, *op. cit.*, 326 l.6). Later on, this place became known as "Pharaoh's oven" (*tannūr Firʿawn*) (cf. e.g. al-Idrīsī, *loc. cit.*; Yāḳūt, v, 214b). Ibn Ṭūlūn had a mosque erected there (cf. Zaky Mohamed Hassan, *Les Tulunides. Étude de l'Égypte musulmane à fin du IXᵉ siècle 868-905*, Paris 1933, 295). Ibn Khaldūn's remark that Manf was one of the residences of the Muḳawḳis is also at the borderline of legend and historical truth (*ʿIbar*, I, 114).

The vast and fabulous ruins of Manf—according to ʿAbd al-Laṭīf (176-7) another Bābil—left profound impressions on mediaeval visitors, some of whom declared the city as a whole one of the *ʿadjāʾib* of Egypt (cf. Ibn al-Zayyāt, 11, 13-14). It took ʿAbd al-Laṭīf (134-5) half a day to tour the site of Manf, which is often closely connected with the adjacent Pyramids (sc. of Saḳḳāra, Būṣīr and Djīza), Egypt's greatest *uʿdjūba* (Abū Ṣāliḥ, 200; Abū Djaʿfar al-Idrīsī, fol. 34a, speaking of Manf as the "settlement" [*khiyām*] belonging to the Pyramids). A visit to the Pyramids and to Manf seems to have been the minimum programme for visitors to the area who were interested in Pharaonic archaeology (cf. Abū Djaʿfar al-Idrīsī, 45a, on the envoy of Frederick II to the court of al-Malik al-Kāmil). In striking unanimity, most authors mention the prevalence of the indelible green colour (sc. of the granite monuments) in the ruins of Manf (see Abu 'l-Fidāʾ, 117).

Certain monuments are singled out in the descriptions available to us, though it is not always easy to identify them and to differentiate between their legendary function—in such cases as Joseph's abode or Pharaoh's palace—and the archaeological reality as seen and recorded by the authors. Therefore the detailed scholarly observations of ʿAbd al-Laṭīf al-Baghdādī are of particular value. One building, not mentioned by ʿAbd al-Laṭīf, is the magnificent, monolithic, so-called "bishop's church" (*kanīsat al-usḳuf*); Abū Ḥāmid al-Ḳudsī (150) lists it even as the first among the *ʿadjāʾib* of Egypt. It is not all clear whether this church, the church "spread with mats" mentioned by Abū Ṣāliḥ (200), and, thirdly, the monolithic Dār Firʿawn, with its many halls, rooms and roofs, about which an ʿAlid authority reports full of awe (*al-Istibṣār*, 83; Yāḳūt, v, 214a; al-Ḥimyarī, 55a; al-Nuwayrī al-Iskandarānī, *Ilmān*, iii, 367), all mean the same building or not.

There was certainly one other *kanīsa*—since we have to do with Pharaonic buildings, rather to be rendered as "temple" than "church"—in Manf. It was noted for its small size, for which a hieroglyphic inscription, deciphered by ʿUthmān b. Ṣāliḥ (d. 217/832), the "sage of Egypt" and one of Ibn ʿAbd al-Ḥakam's main authorities, gives a very convincing financial explanation: building with granite on a large scale was just too expensive (ʿUmar al-Kindī, *Faḍāʾil*, 52, quoting Ibrāhīm b. Munḳidh al-Khawlānī; modified in Yāḳūt, v, 214a-b, quoted by al-Ḳazwīnī, 274-5, and Abū Ḥāmid al-Ḳudsī, 70). This temple was allegedly erected on the spot where the irate young Mūsā, at Satan's instigation, had killed an Egyptian (*al-radjul al-ḳibṭī* [!], cf. Ḳurʾān, XXVIII, 15). Again we have the problem of identification. Is this monument the famous monolithic green chapel that was located within the precinct of the great temple of Manf and is described in detail by ʿAbd al-Laṭīf (138-9), al-Ḳalḳashandī (iii, 316, 19-317,3) and al-Maḳrīzī (*al-Khiṭaṭ*, iii, 28)? Its weight was legendary (*ibid.*). Both from the inside and the outside it was covered with hieroglyphic inscriptions (*al-ḳalam al-birbāwī*, *aḳlām al-birbāwiyya*, Abū Djaʿfar al-Idrīsī, fol. 42a), with pictures of the sun, of stars, men in different postures, snakes and other animals—for ʿAbd al-Laṭīf, important proof to his conviction that the old Egyptians used the pictograms not for simple decorative purposes (138-9). The fundament of this building had already been destroyed in his days by some, as he complains, foolish treasure-hunter (*loc. cit.*). Sultan Ḥasan b. Muḥammad b. Ḳalāwūn's generalissimo, the *amīr* Shaykhū, tried to transport the chapel to Cairo after the year 750/1350. It broke into pieces; Shaykhū had them polished and re-used them as sills and thresholds in his *khānaḳāh* and his Friday mosque in the vicinity of the mosque of Ibn Ṭūlūn south of the Fāṭimid city of Cairo (*al-Khiṭaṭ*, iii, 29; al-Ḳalḳashandī, iii, 317, 1-3; see the still important comments by Silvestre de Sacy, *Relation de l'Égypte par Abd-allatiph médecin de Bagdad*, Paris 1810, 248, n. 65; G. Wiet, *L'Égypte de Murtadi*, Paris 1953, 93, n. 2; U. Haarmann, *Die Sphinx. Synkretistische Volksreligiosität im spätmittelalterlichen islamischen Ägypten*, in *Saeculum*, xxix [1978], 377). There they can still be seen in our time. The astronomical reliefs on the green chapel attracted particular attention; Abū Ḥamid al-Ḳaysī al-Gharnāṭī (*Tuḥfat al-albāb*, ed. G. Ferrand, in *JA*, ccvii [1925], ii, 78) mentions them, and according to al-Maḳrīzī (*al-Khiṭaṭ*, iii, 28), the Sabians maintained that this building was dedicated to the moon as one of originally seven such houses, each of which pertained to one of the seven planets. Also, Ps.-Madjrīṭī's remark (286) about a sanctuary dedicated to the planets by the Indian Kanka should be linked with the green chapel at Manf. ʿAbd al-Laṭīf (140-55) goes on to describe the sad remains of the temple terrain within which the green chapel still stood in his time. He displays an expertise on the sophisticated techniques and materials of Pharaonic masonry and on the

harmonious proportions of the huge human statues of limestone and red granite, one of which undoubtedly represents Isis with the child Horus (154-5). Al-Ḳalḳas̲h̲andī (iii, 316, 16-18) speaks of two idols of 20 cubits length each which lie precipitated in the mud as being made of "white granite". Al-Maḳrīzī (*al-K̲h̲iṭaṭ*, iii, 28) attributes them (or two other, similar, monuments) to Potiphar. One of the two statues could well be identical with the monument mentioned by Abū Ṣāliḥ (199) with the surprising name of Abu 'l-Hawl (see Haarmann, *Die Sphinx*, 373) and with the famous statue of Rameses II that was transported from Manf to the Cairo railway staion at the Bāb al-Ḥadīd in this century.

AL-**MANFALŪṬĪ**, MUṢṬAFĀ LUṬFĪ (1293-1343/1876-1924), Egyptian writer and poet.

Born in al-Manfalūṭ (Upper Egypt), then going to live in Cairo, al-Manfalūṭī never attended any teaching institutions except al-Azhar. He later composed poems which appeared in the press; one was published in 1904 by Faraḥ Anṭūn's magazine *al-D̲j̲āmiʿa*. By the very traditional character of his art, he belongs among the great Egyptian poets of the age. Like them, he cultivated the still flourishing genre of occasional poetry. His composition of epic poems cannot even be regarded as original, since K̲h̲alīl Muṭrān, Aḥmad S̲h̲awḳī and Ḥāfiẓ Ibrāhīm had distinguished themselves in this field. (He left no *dīwān*, but only an anthology, *Muk̲h̲tārāt al-Manfalūṭī*, 1912, in which some prose texts accompany several poems.)

Finally, his true originality derived from his doctrinal commitment, and from its quite unexpected literary corollary. His Islamic faith appears strong in the face of any test. For him, Islam is not an old system of values in which he will seek refuge, but a dynamic religion whose constantly renewed force should animate the faithful, allowing them to view the future with optimism. He also believes that everything capable of favouring this dynamism should be encouraged. Thus he took the side of the great reformist Muḥammad ʿAbduh [*q.v.*] and even went to prison for supporting him against the Khedive. His support for the companion of al-Afg̲h̲ānī is often evident in his poems, but being as he is above all a moraliser, he found a more convenient form in which to express himself in the collection of essays in the shape of edifying stories which he published in the weekly *al-Muʾayyid* under the title of *al-Naẓarāt* ("Sketches"). Death, misfortune and tears, represent the essential ingredients of these narratives. At times, destiny, cruel and unjust, besets pure and defenceless beings. But often it is the evolution of society which brings on catastrophes; at the end of the last century and beginning of the present one, the rash Egyptians have repudiated their sound traditions and turned their back on the wise precepts of Islam in order to imitate blindly the European example. This is the message to be drawn from al-Manfalūṭī's fables. We must believe that the content and form of these writings matched the expectations of the public of the period, since they were reprinted in three volumes in 1910, 1912 and 1920.

But in 1915 our author published another collection with the evocative title *al-ʿAbarāt* ("Tears"). The dominant tone remains one of pathos, but it is to be noted that the stories are of two kinds. Only three of them are the original work of al-Manfalūṭī, while the eight others have been translated by him from French or—in one case—from American English. For, paradoxically, despite his admonitions against the Western life style, he admired the literature which it produced. Chateaubriand and Alexandre Dumas the Younger are translated here, and later it was to be the turn of Alphonse Karr (*Sous l'ombre des tilleuls* ["In the shade of the linden trees"], 1919), Bernardin de Saint-Pierre (*Paul et Virginie*) and François Coppée (*Pour la couronne* ["For the crown"], 1920). Are we not to suppose that this pitiful picture of disasters, to which venal, unshared or impossible love leads, constitutes the most eloquent condemnation of the society which attaches such importance to this sentiment? Furthermore, one of the three original stories in *al-ʿAbarāt*, entitled *al-Ḥid̲j̲āb* ("The veil") shows how a young Egyptian, returned from Europe where he has studied, brings on his own misfortune by allowing his wife to spend time in the company of his best friend. However, this interpretation is not always justified. It is clear that the narrator is little concerned to explain the avalanche of misfortunes which befall his heroes. His main concern is to place them in a desperate situation, which he knows how to turn to the best advantage in order to move his readers. For here we have an artist who excelled in appealing to the emotions. The instrument that he used was the Arabic language, on which he played to perfection because he kept it in the register which suited him best: ample periods, sonorities balanced with majesty and the theatrical expression of powerful feelings. All his contemporaries and even some of his successors bore witness to the quality of his style, which they regarded as enchanting. But, quite obviously, the conclusions that they reached could be diametrically opposed.

The novelist Maḥmūd Taymūr [*q.v.*], in the preface of one of his first collections (*al-S̲h̲ayk̲h̲ Sayyid al-ʿAbīṭ*, 1926), believed that the subjects and characters imagined by al-Manfalūṭī lacked consistency, but he did not cease to write eulogies on the quality of his vocabulary and the absolutely classical purity of his language. This testimony is worth bearing in mind when one realises how great an audience at this period in the Arab world such a writer enjoyed. On the other hand, the equally famous Ibrāhīm ʿAbd al-Ḳādir al-Māzinī [*q.v.*] proceeded, for his part, to a definitive execution of al-Manfalūṭī in the book of literary criticism which he published in collaboration with ʿAbbās Maḥmūd al-ʿAḳḳād [*q.v.* in Suppl.] (*al-Dīwān*, 1921). His intrigues, he says, are a tissue of improbabilities, and his pretended virtue is only shoddy sentimentalism nourishing women's fiction; as for the style, let us speak about it in detail! It is characterised by artifice, accumulation of *mafʿūl muṭlaḳ*s, abuse of synonyms, i.e. of tinsel and eye shadow, whereas the art of the real writer resides in the care taken in significant and subtle composition, in the choice of the "mot juste".

Even if al-Manfalūṭī's works are constantly being republished, there is no doubt that from now on they will be merely of historical interest. But at any rate, this interest is undeniable. At a time when Arabic romantic literature was still sought after, al-Manfalūṭī contributed to winning a public for it. In fact, this well-known foreign genre became acclimatised on Arab soil. It did so in the first place thanks to the quality of its language, although some Syro-Lebanese

and Egyptian translators of the period wrote in very mediocre Arabic. It must be noted that, never having left Egypt or studied seriously any foreign language, his expression did not risk being contaminated and debased by foreign idioms. Also, his supposed translations were actually adaptations of pre-existing translations. Thus it is to be understood that they were, probably, not very faithful, and that his original works and translated works might be closely related. Furthermore, the kind of story which he preferred is the same in both cases. This was, moreover, along with the language, the second method of luring the reader. The *romantic*, in the technical and literary sense of the word, had to use the romantic in the emotional and popular sense of the word. He believed that, like himself, his compatriots might have a passion for the unhappy love stories in Europe, while they also might have a passion for the life stories of those who had died or had been driven mad by love, of whom Arab collective memory had preserved the remembrance. It is significant that the modernist al-Māzinī had mentioned, in the above-mentioned work, what a danger al-Manfalūṭī's literature presented for lovers of bad novels, those who put nothing above Platonic love (*al-ḥubb al- ʿudhrī*), i.e. the pure love which made the Ḥidjāzī tribe of the Banū ʿUdhra famous from the 2nd/8th century onwards.

MANGIR [see SIKKA].

MANGISHLAK, a mountainous peninsula on the eastern shores of the Caspian Sea. The northern part of Mangishlak (the Buzači peninsula) is a lowland covered with small salt-marshes. In the central part, the Mangistau mountains stretch from northwest to southeast for *ca.* 100 miles; they consist of three ranges, Southern and Northern Aktau and Karatau, the last one running between the first two. The highest peak (in the Karatau) is only 1,824 feet. To the south of the mountains lies the Mangishlak Plateau. From the east, the peninsula borders the Üst-Yurt Plateau. Mangishlak is now one of the most arid areas of Central Asia, without permanent rivers and with an annual precipitation of *ca.* 150 mm. The most often suggested etymology of the name is from Turkish *ming ḳishlaḳ* "the thousand winter quarters"; another one derives the name from Turkish *man* (*mang*) "four-year-old sheep" (Maḥmūd al-Kāshgharī, iii, 157; cf. *mang* "three-year-old sheep" in Čaghatay and modern Turkmen), so that Mangishlak is, presumably, "sheep's winter quarters". Neither etymology is proven; other etymologies trying to connect the word with its present Ḳazaḳ form Mangistau or with the name of a subdivision of the Nogays, Mang (?), are unacceptable, since the term was registered in the sources long before the emergence of both the Ḳazaḳ and the Nogays with their languages.

The region was first mentioned under the Persian name Siyāh-Kūh ("Black Mountain"; see al-Iṣṭakhrī, 218; *Ḥudūd al-ʿālam*, 60), which, probably, is a translation of the Turkic name Ḳaratau (or Ḳaratāgh) mentioned above. The same name Siyāh-Kūh was given to the mountains (*djabal*; apparently, the steep scarp of the plateau of Üst-Yurt) west of the Sea of Aral (Ibn Rusta, 92). In mediaeval Muslim works, the localisation of the Siyāh-Kūh mountains was not always clear, and sometimes they were located also on the northern shore of the Caspian Sea and even as stretching along the whole eastern shore of this sea.

According to al-Iṣṭakhrī (219), the peninsula used to be uninhabited; it was only shortly before his time (or that of his predecessor al-Balkhi, i.e. in the first half or by the beginning of the 10th century A.D.) that Turks, who had quarrelled with the Ghuzz [*q.v.*], i.e. with their own kin, had come here and found springs and pastures for their flocks. Ships which were wrecked on the cliffs of the peninsula used to be plundered by these Turks, A short mention of the Ghuzz Turks on Siyāh-Kūh in *Ḥudūd al-ʿālam* goes back most probably to the same account of al-Iṣṭakhrī. Al-Muḳaddasī mentions the mountain of Binḳishlah as marking the frontier between the land of the Khazars and Djurdjān [*q.v.*] (see *BGA*, iii, 355); this is, apparently, the earliest mention of the name in literature. The name in its present form appears in the 5th/11th century in the dictionary of Maḥmūd al-Kāshgharī (i, 387, vocalised Mānḳishlāgh), where it is explained somewhat vaguely as "name of a place in the country of the Ghuzz". In almost the same form (B.n.kh.sh.lāgh) the name is mentioned in the *Ḳānūn* of al-Bīrūnī as a harbour, or port (*furḍa*), of the Ghuzz, belonging to the region of the Khazar (see *Bīrūnī's picture of the world*, ed. A.Z.V. Togan, New Delhi 1941, 67; cf. Bīrūnī, *al-Ḳānūn*, ii, Ḥaydarābād 1955, 575, with the spelling Y.n.ḥ.sh.lāgh. The interchangeable initial *m*/*b* probably supports the etymology *ming*/*bing ḳishlaḳ*).

Mangishlak as a region of the Saldjūḳ empire, apparently subordinate to the governor of Māzandarān, was mentioned in Persian documents compiled in the Saldjūḳ chancery in the middle of the 6th/12th century (where the spelling M.n.ḳ.sh.lāḳ and M.n.k.sh.lāgh is given; see Muntadjab al-Dīn Badīʿ, *ʿAtabat al-kataba*, ed. by M. Ḳazwīnī and ʿA. Iḳbāl, Tehrān 1329/1950, 19, 85); here also some unbelievers (*kuffār*) were mentioned in the desert of Mangishlak and the regions of Dihistān [*q.v.*], and the governor of Djurdjān was instructed to wage *djihād* on them. In the very early 7th/13th century, Mangishlak was mentioned by Ibn al-Athīr and Yāḳūt (both vocalised as Manḳashlāgh) and by Muḥammad Bakrān in his *Djahān-nāma* (vocalised Manḳishlāgh). Ibn al-Athīr (x, 183) tells about a Turkic principality on Manḳashlāgh, with a town (*madīna*) of the same name, at the end of the 5th/11th century. In 490/1097 the Manḳashlāgh Turks (their tribal affiliation is not mentioned) unsuccessfully interfered in the fight between the Khʷārazmshāh Ḳuṭb al-Dīn Muḥammad and Toghrīl Tegin, son of Ekinči b. Ḳočḳar [*q.v.* in Suppl.]. According to Ibn al-Athīr, the son and successor of Ḳuṭb al-Dīn Muḥammad, the Khʷārazmshāh Atsïz, conquered the town of Manḳashlāgh when he commanded the army of Khʷārazm during the reign of his father (i.e. before 521/1127 or 522/1128). Yāḳūt (iv, 670) describes Manḳashlāgh not as a region, but only as a strong fortress (*ḳalʿa ḥaṣīna*) near the sea between Khʷārazm [*q.v.*], Saksīn [*q.v.*] and the land of the Rūs; he cites verses by Abu 'l-Muʾayyad al-Muwaffaḳ b. Aḥmad al-Khʷārazmī, where Manḳashlāgh and its conquest by Atsïz are mentioned. Muḥammad Bakrān, a contemporary of Ibn al-Athīr and Yāḳūt, first mentions Manḳishlāgh in his description of the Caspian Sea, as a region lying between Siyāh-Kūh and the Balkhān [*q.v.*] region in the south and the region of the Khazar in the north (*Djahān-nāma*, ed. Yu. Borshčevskiy, Moscow 1960, fol. 5b). In another place (fol. 17a) he

explains Manḳishlāgh as a name of a tribe (*ḳawm*) of Turks who left their former place because of an enmity between them and the Ghuzz and came to live in the region of Siyāh-Kūh near the Caspian Sea, where they found springs and pastures (cf. the account of al-Iṣṭakhrī-al-Balkhī above); they were called the "People of Manḳishlāgh" (*ahl-i Manḳishlāgh*), and their ruler was called *khān*. Immediately after this, speaking about the Turkic tribe (*ḳawm*) Yazîr which lived in the Balkhān mountains, Bakrān adds that two other tribes, one from Manḳishlāgh and the second from Khurāsān, joined the Yazîr, after which the latter became numerous and strong, and at the time of writing (*aknūn*) they consisted of three parts: the Yazîr proper, those of Manḳishlāgh (*Manḳishlāghī*) and of Fārs.

As one can conclude from all accounts cited above, Mangîshlak became inhabited by some Turkic (apparently Oghuz) tribe of tribes about the first half of the 4th/10th century, and the migration of these Turks to Mangîshlak was connected with the internal strife in the Oghuz confederation. The Mangîshlak Turks were apparently hostile to the Oghuz tribes involved in the Saldjūḳ movement, and they were considered pagan as late as in the middle of the 6th/12th century; in the early 7th/13th century they (or at least a part of them) were included into the Yazîr group of the Oghuz, the centre of which was in northern Khurāsān. No permanent settlement on Mangîshlak is again mentioned in the sources after the account of the campaign of Atsîz, and Barthold assumed that the "town" mentioned by Yāḳūt was destroyed by the Khwārazmians (see *EI*[1], iii, 243). However, it is quite possible that the "fortress of Mangîshlak" was in fact not a town, but rather a fortified place where the Oghuz nomads could find refuge in time of danger.

The accounts of written sources are to some extent corroborated by the Turkmen genealogical tradition as rendered by Abu 'l-Ghāzī (*Shadjara-yi Tarākima*, ed. Kononov, text, 61-2), which also connects the migration of the Oghuz to Mangîshlak with the great disturbances in the *el* of the Oghuz in the time of ʿAlī Khān and Shāh Malik (Oghuz rulers, contemporaries of the first Saldjūḳs). It is to this time that the Turkmen tradition relates the migration to Mangîshlak of all those tribes which were also later found on the peninsula, as attested in other sources. The most numerous among these tribes was the Salor [*q.v.*], which in the 10th/16th century was divided into the "inner" (*ički*) Salor" who lived on the coast, and the "outer (*tashḳi*) Salor" who lived farther to the east, on the road from the coast to Khwārazm (see Bartol'd, *Sočineniya*, viii, 148). The "outer Salor" was, in fact, a group of tribes affiliated with the Salor proper, and it was found also in the Balkhān and Khurāsān; among them the tribe Ersarî [*q.v.* in Suppl.] lived partly on Mangîshlak. Other tribes mentioned in *Shadjara-yi Tarākima* as those who came there with the Salor included the Čawdor [*q.v.*] and Igdir, which remained on the peninsula also later.

According to the Turkmen tradition, in the middle of the 8th/14th century Mangîshlak belonged to the Golden Horde, together with the Balkhān and the northern part of Khwārazm (see Abu 'l-Ghāzī, *Shadjara-yi Tarākima*, ed. Kononov, text, 72). Nothing is known about the region in Tīmūrid times. The available sources only clearly indicate that after the Mongol conquest, Mangîshlak remained for several centuries one of the main regions inhabited by the Turkmens, together with the Balkhān and the western part of the Ḳaraḳum desert (see Yu. Bregel, in *CAJ*, xxv/1-2 [1981], 20-2). With the conquest of Khwārazm by the Uzbeks in the early 10th/16th century, the ʿArabshāhid khāns subdued also the Turkmen tribes of Mangîshlak, which were divided between the Uzbek *sulṭāns* as part of their appanages (see Abu 'l-Ghāzī, *Shadjara-yi Turk*, ed. Desmaisons, text, 201, 202, 206; tr., 216, 220). In the 11th/17th century, however, the Turkmens of Mangîshlak seemed to be mostly independent, and the region sometimes served as a refuge for the Uzbek *sulṭāns*, who fled from Khwārazm during internal strife there. Via Mangîshlak there ran a trade route from the Volga basin to Khwārazm. Goods were unloaded in the Ḳabaḳlî landing-place on the Buzači peninsula and taken to Khwārazm by caravans through the plateau of Üst-Yurt. The route became especially important after the conquest of Astrakhan [*q.v.*] by the Russians (1556). Turkmens also profited from this trade, supplying camels and protection to the caravans, extorting presents from the merchants and occasionally plundering them. Mangîshlak also served as the starting point of a sea-route to Shīrwān [*q.v.*], in the late 10th/16th and early 11th/17th centuries used by Central Asian merchants and pilgrims to Mecca wishing to avoid travel through Shīʿī Irān (see Abu 'l-Ghāzī, *Shadjara-yi Turk*, ed. Desmaisons, text, 257, 273; tr., 275, 294). In 1558 the first English traveller to Central Asia, Anthony Jenkinson, passed through Mangîshlak to Khwārazm (see *Purchase his Pilgrimes*, xii, Glasgow 1906, 10-13).

Both the Turkmen tribes on Mangîshlak and the trade caravans were endangered by the raids from the north of the Mangît [*q.v.*], or Nogays, in the 10th/16th century and of the Kalmuk [*q.v.*] in the 11th/17th century. The Kalmuk raids in 1620s and 1630s caused the transfer of the landing-place from the Ḳabaḳlî Bay to the Ḳaragan Bay, near the Sarî-Tash Mountain, farther to the south (see A. Čuloshnikov, in *Materialî po istorii Uzbekskoy, Tadzhikskoy i Turkmenskoy SSR*, pt. 1, Leningrad 1932, 74-6, and the map attached to the book). Already the Mangît raids forced a part of the Turkmens to leave Mangîshlak. Another cause of emigration was, apparently, the growing desiccation of the steppe which began at the same time (see Yu. Bregel, *op. cit.*, 29-30). Later, the Kalmuk pressure had the same effect. In the middle of the 11th/17th century, the Ersarî tribe totally abandoned Mangîshlak, together with a part of the Salor; another part of the Salor probably remained there till the early 12th/18th century. The Kalmuks under Ayuka (1670-1724), or as early as the reign of Puntsuk-Mončak (1667-70) deported parts of the tribes of the Čawdor and Igdir as well as the whole tribe of the Soyinadji to the Volga basin (from where they moved to the Caucasus). In the first half of the 12th/18th century, most of the remaining Čawdors and Igdirs migrated to Khwārazm, and in the early 19th century several groups of the same tribes migrated via the Volga to their tribesmen in the Caucasus; but Mangîshlak was finally abandoned by the Turkmens only in 1840s (a small section of the Čawdor has continued to dwell near the Caspian shore till the present time). The Turkmens were replaced on Mangîshlak by the Ḳazaḳs, who belonged to the clan Aday of the Bayulî tribe (of the Little Horde). There seems to be no historical evidence of the time of this migration; Ḳazaḳ legends relate this movement to the middle or the second half of the 12th/18th century. Assertion of some modern Ḳazaḳ scholars trying to connect the Aday with the ancient Dahae, and thus trying to prove that the Ḳazaḳs were the most ancient inhabitants of Mangîshlak, are totally unfounded. For the Aday, Mangîshlak was the

region of their winter pastures, their summer pastures being about 600 miles from there to the north.

As early as the 1670s, the khān of Khīwa, Anūsha, asked the Russian government to build a fortress on Mangïshlak to protect the trade route between Russia and Central Asia; but the first Russian attempt at establishing a permanent position on the peninsula was made only under Peter the Great, when three fortresses were built near the Caspian coast by the ill-fated expedition of Bekovič-Čerkasskiy (1716); the fortresses were abandoned the next year. During the 12th/18th and early 19th centuries a number of Russian expeditions studied Mangïshlak, and in 1834 the Russians founded a fortress on the southern shore of the Mertvïy Kultuk Bay, named Novo-Aleksandrovskoye, with a permanent garrison. The establishment of Russian power on the Mangïshlak shore was one of the reasons of tensions between her and the Khānate of Khīwa which led to the unsuccessful Russian military campaign of 1839-40. Mangïshlak remained a bone of contention between Russia and Khīwa for another decade, both sides trying to use against one another the Aday Ḳazaḳs, but neither actually extending its sovereignty over the peninsula until in 1846 the Russians built a fortress on Cape Tüp-Karagan, named first Novo-Petrovskoye and then in 1859 renamed Fort Aleksandrovskiy. But the final incorporation of Mangïshlak into the Russian Empire occured only after the occupation of the Krasnovodsk region in 1869 and the submission of Khīwa in 1873.

According to the imperial decree of 1870, the district (*pristavstvo*) of Mangïshlak was subordinated to the Russian vicegerent of Caucasus, and after the Russian conquest of Turkmenia in 1881 this district was incorporated, as an *uyezd*, in the newly-organised Transcaspian region (*Zakaspiyskaya oblast'*). After the revolution of 1917, Mangïshlak (except for its southernmost part around the Ḳara-Boghaz Bay) was separated from the land of the Turkmens and included in the republic of Kazakhstan. Since 1973 it has formed a separate Mangïshlak region (*oblast'*) of Kazakhstan, including also a part of the Üst-Yurt plateau, with an area of 100,000 square miles and its centre at Shevčenko (built only in 1960s; until 1964 Aktau); the population of the *oblast'* was 256,000 in 1978, of which the population of Shevčenko was almost a half (110,000 in 1979); 92% of the inhabitants of the *oblast'* live in cities (see *Sovetskiy éntsiklopedičeskiy slovar'*, Moscow 1980, 1522). The present economic and strategic importance of Mangïshlak is determined by its mineral riches, especially petroleum and natural gas (discovered in 1961) and uranium; details about the uranium mines are kept secret by official Soviet sources, but this uranium is used, apparently, by the atomic power station in Shevčenko.

(Yu. Bregel)

MANGÏT, the name of Mongol and Turkic tribes.

It first appears in Rashīd al-Dīn (in the transcription Mangḳūt; Rashīd al-Dīn, i/1, ed. Romaskevič *et alii*, 87, 501-15, Russ. tr., 78, 184-6; i/2, Russ. tr., 29, 125) and the *Secret history* (§ 46) as one of the tribes belonging to the Nirun branch of the Mongols; its genealogy went back to Djaksu, the first son of Tumbine Khān (the great-great-grandfather of Čingiz-Khān). The Mangït were subjugated by Čingiz Khān together with the tribes of the Tayči'ut. Later they belonged to both right and left wings of the army of Čingiz Khān (Rashīd al-Dīn, Russ. tr., 1/2, 208, 272), and parts of this tribe were found in all major Mongol *uluses*. The Mangït tribe (since the 14th century the name appears in the sources in the forms Mangḳit, Manghūt, Mānghīt, Manghīt; in later Central Asian sources mainly Manḳit and Manghit) became especially important in the *ulus* of Djoči (the "Golden Horde"), where it was completely Turkicised, along with the other Mongol tribes, apparently already by the 14th century. From the 15th century onwards, the Mangïts inhabited the territory in the lower Volga basin and farther to the east, at least to the Emba. At the same time they began to be called in Russian sources Nogai (according to N.G. Volkova, *Etnonimï i plemennïye nazvaniya Severnogo Kavkaza*, Moscow 1973, 78, not earlier than the 1380s). It is believed that this ethnic name was connected with the name of the famous Noḳay Noyan [see NOGAY], a *tümen-begi* and an actual ruler of the *ulus* of Djoči in the end of the 13th and the beginning of the 14th century (cf. on him B. Spuler, *Die Goldene Horde*[2], Wiesbaden 1965, 56-77, with further references). According to this view, the Mangït was the predominant Turkic tribe in the *ulus* of Noḳay. However, there seems to be no evidence of the tribal composition of the *ulus* of Noḳay, which possessed the territory to the west of the Dnieper and formed the right wing of the *ulus* of Djoči, while the later Mangïts, between the Volga and the Emba, belonged to the left wing of the same *ulus*. Thus the connection between these two Turkic groupings remains unclear. The people known to the Russians as Nogai was known in Central Asia and Iran only as Mangït; on the other hand, Crimean and Ottoman sources of the 16th-18th centuries know only the Nogay. In the 14th and 15th centuries, this was a large tribal confederation in the central part of Dasht-i Ḳipčāḳ [*q.v.* in Suppl.] which included, besides the Mangït proper, also a number of other Turkic tribes. Since at least the second half of the 14th century, the confederation was ruled by the chiefs of the Mangït tribe. The most famous among them was the founder of this dynasty Edigü (Yedigey of the Russian sources), a contemporary and adversary of Toḳtamish and Tīmūr and for a long time an actual ruler of the Golden Horde (d. 822/1419). In the middle of the 15th century, the Mangït (under Edigü's grandson Waḳḳāṣ Biy) played an important role in the nomadic state of Abu 'l-Khayr Khān [*q.v.*]. After the dissolution of this empire, the Mangït dominated the western part of Central Asian steppe till the end of the 15th century.

With the decline of the so-called "Great Horde" (the Golden Horde's successor in the lower Volga basin) in the late 15th and early 16th century, a part of the Mangït migrated to the Crimean Khānate, where their chiefs became the senior *begs* (on the Mangït in Crimea, see V. Ye. Sïroyečkovskiy, *Mukhammad-Geray i ego vassalï*, in *Učenïye zapiski Moskovskogo Gosudarstvennogo Universiteta*, lxi [Moscow 1940], 32-4, 36-7). At the same time another part of

the Mangît tribe joined the Uzbek confederacy restored by Shaybānī Khān [see SHAYBĀNIDS] and participated in his conquest of Transoxania; the Mangîts in the troops of Shaybānī Khān are mentioned in the *Shaybānī-nāma* by Muḥammad Ṣāliḥ (ed. Vámbéry, Budapest 1885, 272, 276). Yet the bulk of the Mangît confederacy still remained between the Volga and the Emba rivers for another century, until they were driven from this territory by the Kalmuks [*q.v.*] in the 1620s. After this, the greater part of the confederacy moved to Northern Caucasus, where they have been known only as the Nogays (about the Mangît as one of the tribal units of the Caucasin Nogays, cf. N.G. Volkova, *op. cit.*, 80-3), while another part migrated to the Khānate of Khīwa, where they first established themselves in the Āmū-Daryā delta. Abu 'l-Ghāzī mentions the Mangîts only outside Khwārazm, in their old territory, and as distinct from the Uzbeks (see *Shadjara-yi Turk*, ed. Desmaisons, text, 212-13, 230, 267, 270, 290; tr., 228-9, 246-7, 286, 289, 311). However, the same Abu 'l-Ghāzī is said to have divded all the Uzbek tribes of Khwārazm into four groups, one of which was formed by the tribes Mangît and Nukuz (Muʾnis, *Firdaws al-iḳbāl*, ms. of the Leningrad Branch of the Institute of Oriental Studies, C-571, fol. 65b). Probably, the migration of the Mangîts and other Turkic groups of the Mangît *ulus* to Khwārazm happened in the reign of Abu 'l-Ghāzi (1053-74/1643-63), and it was perhaps this movement that caused the redistribution of the Uzbek tribes and their territories in the khānate.

In Khwārazm, the Mangît tribe contended for power with the tribe of Ḳongrat [see ḲUNGRAT]; the historian of the Ḳongrat dynasty Muʾnis [*q.v.*] traced this rivalry back to the time of Noḳay Noyan (see *Firdaws al-iḳbāl*, ms. cit., fol. 94b). At the end of the 17th and the 18th centuries, the Mangît who inhabit the central part of the Āmū-Daryā delta (Aral) with the fortresses Mangît-ḳalʿa and Shāh-Temir, together with several other Uzbek tribes of the same region, had their local rulers who did not recognise the authority of the khāns of Khīwa. In their struggle with the Ḳongrats, the Mangîts of Khwārazm were supported by their tribesmen in Transoxania, whose chiefs founded a new dynasty in Bukhārā in the middle of the 18th century [see MANGÎTS]. After some success in 1740s (when two chiefs of the Mangît, Artūḳ Înaḳ and then his brother Khuraz Bek, were the actual rulers of the khānate), the Mangît were finally overcome by the Ḳongrat and lost any political importance in Khwārazm. Since the beginning of the 19th century, they have inhabited mainly a region to the south of the Āmū-Daryā delta, where the town Mangît was founded in 1215/1800 (see Muʾnis, *Firdaws al-iḳbāl*, ms. cit., fol. 156b) on a canal of the same name (Mangît-arnā).

In Transoxania, the Mangîts were much more numerous and powerful than in Khwārazm; their main territory was the oasis of Ḳarshi [*q.v.*], in the Ḳashka-Daryā basin, but a greater number of them lived also in the oasis of Bukhārā, as well as near Samarḳand and Ḳatta-Kurghan. It is not clear, whether they all were descendants of the Mangîts who came with Shaybānī Khān, or whether some of them arrived later, as in Khwārazm (and, probably, through Khwārazm), with the dissolution of the Mangît *ulus* (cf. above). According to statistical data of 1923, the total number of the Mangîts in Transoxania was 99,200 (of whom 44,000 were near Bukhārā and 31,000 in the region of Ḳarshi), and in Khwārazm, 10,435. There seem to be no later data.

The Karakalpaks [*q.v.*] also include the Mangît as one of their major tribal subvisions (see T.A. Zhdanko, *Očerki istoričeskoy étnografii Karakalpakov*, Moscow-Leningrad 1950, 123-4; *Dokumentï arkhiva khivinskikh khanov po istorii i étnografii karakalpakov*, ed. Yu. Bregel, Moscow 1967, see index). This may go back to the 15th-16th centuries, when the Karakalpaks were apparently included in the *ulus* of the Mangît.

(YU. BREGEL)

MANGÎTS, a Turkish dynasty which reigned in Bukhārā [*q.v.*] from 1166/1753 to 1339/1920.

It was founded by the chiefs of the Uzbek tribe Mangît [*q.v.*], which was dominant in the central regions of Transoxania after the Uzbek conquest of the 16th century. Khudāyār Biy, the grandfather of the founder of the dynasty Muḥammad Raḥīm, became an *atalîḳ* [*q.v.* in Suppl.] in 1126/1714 under the Djānīd khān Abu 'l-Fayḍ (*Taʾrīkh-i Abu 'l-Fayḍ-Khānī*, Russ. tr. A.A. Semenov, 3). His son Muḥammad Ḥakīm Biy was appointed to the same post in 1134/1722 (*ibid.*, 67), and he became an all-powerful minister of Abu 'l-Fayḍ Khān. He was instrumental in securing the peaceful surrender of Abu 'l-Fayḍ Khān to Nādir Shāh in 1153/1740 and therefore enjoyed special favour of the latter, and began to style himself *amīr-i kabīr*. His son Muḥammad Raḥīm Biy served as the head of a detachment of Bukhāran troops with the army of Nādir Shāh. After the death of Muḥammad Ḥakīm Atalîḳ in 1156/1743 and the subsequent disturbances in the country, Muḥammad Raḥīm was sent by Nādir Shāh to Bukhārā with Iranian troops to restore order. Having firmly established his authority in Bukhārā, he ordered Abu 'l-Fayḍ Khān to be killed several days after the assassination of Nādir Shāh in Mashhad in 1160/1747. During the first years of his actual rule, he enthroned puppet khāns (the first of whom, ʿAbd al-Muʾmin, the son of Abu 'l-Fayḍ, was killed as early as 1161/1748), officially remaining only an *atalîḳ*; but after 1166/1753 he apparently reigned alone with the same title, and in 1170/1756 he was proclaimed khān. After his death in 1172/1758, his uncle and successor Dāniyāl Biy Atalîḳ (1172-99/1758-85; according to some sources, the correct name was Dāniyār; however, the coins give Dāniyāl) again enthroned puppet khāns, grandsons of Abu 'l-Fayḍ. Only Dāniyāl's son Shāh Murād (nicknamed "Amīr-i Maʿṣūm", 1199-1215/1785-1800) finally deposed the Djānīds and accended the throne himself. The latest known silver coin with the name of the last Djānīd khān Abu 'l-Ghāzī is dated 1203/1788-9 (see Davidovič, *Istoriya monetnogo dela*, 51-2; Burnasheva, *Monetî* [I], 120). However, Shāh Murād did not adopt the title *khān*, and instead of this called himself *amīr*, as did all his successors. Shāh Murād ascribed this title even to his father Dāniyāl on the coins which he minted in the name of the latter. The implied meaning was that of *amīr al-muʾminīn* (this title actually appears on the coins of *amīr* Ḥaydar, 1215-42/1800-26), which had to

show that the Mangīt rulers considered themselves Muslim kings par exellence and not continuators of the nomadic state tradition.

A characteristic feature of Mangīt rule was a sharp decline of power of the Uzbek tribal chiefs, with a parallel strengthening of the central government in Bukhārā. The Mangīts could achieve this because of the support which they received from the urban population as well as because of the creation of a small standing army. The tribal aristocracy was finally smashed by the seventh ruler of the dynasty, Naṣr Allāh (1242-77/1827-60), who in a relentless struggle against the aristocratic clans killed many of their members, including those of his own family, and well deserved the nickname "the butcher *amīr*" (*amīr-i ḳaṣṣāb*). As a result, the Khānate of Bukhārā became a despotic monarchy, where the *amīr*, enjoying practically unlimited power, ruled through a huge bureaucratic apparatus. Persons of a mean or at least non-Uzbek origin (former Persians slaves, Turkmens, etc.), tied to the sovereign by personal loyalty, held the key positions in this bureaucracy.

Despite the incessant wars with their neighbours and some military successes, the most important of which were the conquest of Marw by Shāh Murād in 1204/1789-90 and the temporary capture of Khoḳand in 1258/1842, the Mangīts were unable to impose their authority on all the territories which had been included into the Khānate of Bukhārā under the previous dynasties. The regions to the south of the Āmū-Daryā in Afghān Turkestān were lost already under Shāh Murād, and Marw passed under the control of Khīwa in 1238/1823; the principality of Shahr-i Sabz remained independent, under hostile chiefs of the Keneges tribe, until 1272/1855-6; the principality of Ura-Tübe was a bone of contention between Bukhārā and Khoḳand, but mostly was either independent or under Khoḳand rule; and the mountain principalities of the Pāmir also remained mostly independent until the Russian conquest.

Under Naṣr Allāh's son, *amīr* Muẓaffar al-Dīn (1277-1302/1860-85), the Khānate of Bukhārā was defeated by the Russians and in 1285/1868 lost its independence. Samarḳand and its province were annexed by Russia; the *amīr* was slightly compensated by establishing, with Russian help, his firm control over the mountainous regions in the upper Zarafshān valley (1870); in 1895 principalities of the Western Pāmir were also annexed by Bukhārā. The Mangīts retained their throne as the vassals of the Russian Empire. The last two *amīrs*, ʿAbd al-Aḥad (1303-28/1885-1910) and Sayyid ʿĀlim Khān (1328-39/1910-20), maintained close relations with the imperial court in St. Petersburg. They were granted Russian honorary military ranks and high orders, were frequent visitors to Russia and used to spend summer in their villa in Crimea; the last *amīr* was educated during his teens at a Russian cadet corps in St. Petersburg. All this little affected the character of their reign, which remained no less despotic than that of their predecessors. ʿĀlim Khān was deposed and the khānate was formally abolished on 6 October 1920 as a result of a revolution orchestrated by Soviet Russia. ʿĀlim Khān fled to the mountainous regions of Eastern Bukhārā and from there to Kābul (beginning of 1921), where he died in 1934; it is reported that his descendants were living in Kābul in great misery (see B. Hayit, *Turkestan zwischen Russland und China*, Amsterdam 1971, 258, n. 57).

Becker, *Russia's protectorates in Central Asia: Bukhārā and Khīva, 1865-1924*, Cambridge, Mass. 1968 (all these with extensive bibliographies). Also still useful is H.H. Howorth, *History of the Mongols*, ii/2, London 1880, 765-816; A. Vámbéry, *History of Bokhara*, is however outdated and should not be used. For valuable information on the personalities of the last Mangīt *amīrs*, court life and the administration of Bukhārā in the early 20th century, see A. A. Semenov, *Očerk ustroystva tsentral' nogo administrativnogo upravleniya Bukharskogo khanstva pozdneyshego vremeni* (*Materialī po istorii tadzhikov i uzbekov Sredney Azii*, ii), Stalinabad 1954, and M.S. Andreev and O. D. Čekhovič, *Ark (kreml') Bukharī v. kontse XIX - načale XX vv.*, Dushanbe 1972 (esp. pp. 89-127: "The day of an *amīr* of Bukhārā"). (Yu. Bregel)

MANGRŌL, the name of two places in India.

1. A port on the southwestern coast of the Kāthiāwāṙ peninsula, in lat. 21° 28' N. and long 70° 14' E., formerly coming within the native state of Djunāgaṙh [*q.v.*] and with a Muslim local chief there tributary to the Nawwāb of Djunāgaṙh; the mosque there carries a date 785/1383.

Bibliography : *Imperial gazetteer of India*², xvii, 180.

2. A town in the former British Indian territory of Rajputana, within the native state of Kotah, in lat. 25° 20′ N. and long. 70° 31′ E. and 44 miles/70 km. to the northeast of Kotah city. Here there took place on 1 October 1821 the battle between two rival Rajput powers, that of the Maharao Kishōr Singh of Kotah and that of the aged regent of Kotah, the *fawdjdār* [*q.v.*] Ẓālim Singh (1740-1826), the latter aided by British troops, which resulted in a decisive victory for Ẓālim Sing and the retreat of the Maharao to Baroda.

Bibliography : J. Tod, *Annals and antiquities of Rajast' han*, Madras 1880, ii, 5-43; *Imperial gazetteer of India*², xviii, 180-1. (C.E. Bosworth)

MANGŪ-TĪMŪR (thus on his coins: Mong. Möngke-Temür, sometimes written also Mūngkā (e.g. Rashīd al-Dīn, ed. Blochet, 109); in Russian annals Mengutimer and Mengutemer, called also Külük "Glorious", "Famous"), khān of the Golden Horde (665-79/1267-80), grandson of the khān Bātū [*q.v.*] and son of Toḳūkān (Toghon).

His predecessor Berke [*q.v.*] died, according to al-Dhahabī, in Rabīʿ II 665/30 Dec. 1266 - 27 Jan. 1267 (see Tiesenhausen, 210-2; other Egyptian sources mention only the year). In Ṣafar 666/Oct.-Nov. 1267), an embassy left Cairo which was to bring the new khān an expression of sympathy and congratulations from Sultan Baybars I [*q.v.*]. In 667/Sept. 1268-Aug. 1269, an embassy from the khān arrived in Egypt. The exchange of embassies was maintained

throughout the whole of the khān's reign. When in 670/1271-2 an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the sultan's demand. When in 680/April 1282 an Egyptian embassy left for the Golden Horde, nothing was yet known of the death of the khān. Only later did they learn that he was no more, having died in Rabīᶜ I 679/July 1280 in the district of Aḳlūḳiyā (apparently nowhere else mentioned; cf. P. Pelliot, *Notes*, 62); his death is said to have been caused by the unskilful removal of a boil on the neck.

The Egyptian state tried to induce the khān to resume the war against the Persian Mongols begun by his predecessor Berke; but already in 667/1268-9 Mangū-Tīmūr concluded a peace with Abāḳā and never again attacked Persia. At the same time, Mangū-Tīmūr interfered in the affairs of Central Asia, sending an army of 50,000 men under Berkečār, a brother of Bātū, to help his ally Ḳaydū against Baraḳ [*q.vv.*]; as a result of the *ḳuriltay* of 667/1269 on the Talas river under Ḳaydū, one-third of Transoxania (probably one-third of its income) was secured for Ḳaydū and Mangū-Tīmūr together (Rashīd al-Dīn, iii, ed. A. Ali-zade, Baku 1957, text, 108-11). The alliance between Mangū-Tīmūr and Ḳaydū is also mentioned later; when in 1277 two sons of the emperor Ḳubilay Khān were taken prisoner in the war with Ḳaydū; the latter had the princes sent to the court of Mangū-Tīmūr, from which they were later sent back to their father (Rashīd al-Dīn, ed. Blochet, 8; d'Ohsson, *Hist. des Mongols de la Perse*, ii, 452-3).

In Russia, Mangū-Tīmūr continued the policy of his predecessor Berke. Under him a second census of Russian population was taken in the 1270s for tax purposes. The Russian princes of Rostov were close to Mangū-Tīmūr and enjoyed his favour; prince Fedor Rostislavovič of Yaroslavl' was married to his daughter. In winter 1277, a great number of Russian troops, especially those under the Rostov princes, participated in the Tatar campaign against the Alāns [*q.v.*] in the northern Caucasus, during which the Alān city of Dedyakov was captured and destroyed. In 1279 Lev of Galicia received assistance from Mangū-Tīmūr against the Lithuanians and Poles, but the Tatar auxiliaries proved a great burden not only to his enemies, but also to their protégés. From Mangū-Tīmūr dates the earliest extant edict of a khān of the Golden Horde on the privileges of the Greek Orthodox clergy; it is dated in the year of the hare (probably 1267; see M.D. Priselkov, *Khanskiye yarlïki russkim mitropolitam*, Petrograd 1916, 58-9, 83-5, 96-8). The Bishop of Saray, Theognostes, was sent by Mangū-Tīmūr as an ambassador to Constantinople in 1279. This was probably done to counterbalance the growing influence and involvement in Byzantine and Russian affairs of Mangū-Tīmūr's army commander and the chief of the Tatar tribes of the right wing, *amīr* Noḳāy [*q.v.*], who became all-powerful after the khān's death. However, under Mangū-Tīmūr, in contrast to the last two decades of the 13th century, the Golden Horde was a great power, free from internal troubles. Coins were still struck mainly in the old commercial city of Bulghār [*q.v.*] and some also in Crimea, but, unlike those of his predecessors, in his own name and not in that of the Great Khān. On his coins, the seal (*tamgha*) of the Golden Horde appears for the first time.

Mangū-Tīmūr apparently did not embrace Islam as his predecessor Berke had done, despite the facts that Islamic formulae were used on his coins and that some Egyptian historians praised him for "having followed the path" of Berke. On his attitude towards Islam there seems to be no direct evidence; a story is told, however, about his attempt to make the Saldjūḳ prince of Rūm Masᶜūd marry his stepmother upon the death of his father ᶜIzz al-Dīn Kay-Kāwūs, according to the Mongol customary law and in contradiction to the *Sharīᶜa*.

Tiesenhausen, *Sbornik materialov otnosyā shčikhsya k istorii Zolotoy Ordï*, i, St. Petersburg 1884. On the correct forms of the name and the nickname of Mangū-Tīmūr, see P. Pelliot, *Notes sur l'histoire de la Horde d'Or*, Paris 1949, 58-62. (W. Barthold - [Yu. Bregel])

MĀNI (<A. *maᶜnā*), a form of Turkish popular poetry.

The *mani* is, most usually, a piece of poetry made up of heptasyllabic verses rhymed on the pattern *a a b a*; each quatrain may be sufficient to fulfil a certain function or to transmit a certain message. This norm of a self-sufficient unity, as well as those in regard to the ordering of the rhymes, the number of verses and the metre, does not impose an absolutely watertight rule. The use of the *māni*, in certain circumstances, to form a song in dialogue shape (see below) can give it a polystrophic nature. Moreover, a considerable number of folk songs—which are not in dialogue shape—as well as certain lullabies (the *ninnis* of Anatolia and the *lay-lays* of Ādharbāydjān) are made up of a stringing-together of *mānis*, with however the adding of refrains which provide a thematic unity and give them their generic character. There are also *mānis* rhymed *b a c a*, notably those of the northeastern littoral of Anatolia. In the texts of certain poems, the first verse is shortened to 3 or 4 syllables (words which simply set forth the rhyme) or disappears completely; the piece thus reduced to the schema *a b a* is called *kesik māni* "truncated *māni*", a form which is found most frequently in the *mānis* with *djinās*, i.e. in the pieces which play upon the rhyme words of the second and fourth verses. There are also cases where the quatrain is made longer by means of several distichs in *a a b a c a* ... or in *b a c a d a* ... A kind of *māni*, sung by nightwatchmen at the time of their rounds from door-to-door during the nights of Ramaḍān, is octosyllabic. This form, with its variant in *b a c a*, is also that of another genre of popular poetry, the *aghïts* (funeral dirges) of the peoples of Avshar origin in central and southern Anatolia.

The term *māni* is used to denote this form and these poetical genres in Anatolia, amongst the Turkish-speaking Balkan peoples, amongst the Crimean Tatars, in Ādharbāydjān and amongst the Gagaouz of Bessarabia, sometimes with variant forms: in Anatolia, *māna* at Denizli and *maᶜāni* at Urfa; in Ādharbāydjān, *mahni*; and in the Crimea, *māne*. Other terms are also used to denote poetic pieces with the same thematic and formal characteristics: *bayatï* in the two parts of Ādharbāydjān and in the Ādharī-influenced provinces of easter Anatolia; *khoyrat* at Urfa and Diyarbakir; *djïr* amongst the Crimean and Kazan Tatars; and *čïn* amongst the Misher.

On the basis of their themes and the circumstances

in which they are cited or sung, *mānis* can be classified as follows:

(1) *Mānis* about foretelling the future and divination recited at the festival of *hidrellez* [see KHIḌR-ILYĀS], on the occasion of other festivities and on winter evenings by womenfolk;

(2) Work *mānis* recited by women in the course of communal activities, such as the preparation of provisions for the winter, fruit-gathering, hay-making, etc. On the occasion of the latter two types of activity, *mānis* are adressed to passers-by, who are required to reply in the same fashion in order to avoid mockery by the womenfolk;

(3) Declamatory *mānis*, sung by boys and girls at the time of certain festivals and excursions into the countryside;

(4) *Mānis* of the watchmen of town quarters sung during the nights of Ramaḍān;

(5) *Mānis* of certain itinerant sellers of sweetmeats and delicacies who sing out to announce their appearance in the streets;

(6) *Mānis* of café singers in the tradition of old Istanbul;

(7) *Mānis* of letters, inserted as sentimental messages in letters exchanged between relatives, friends or couples; and

(8) *Mānis* of certain *ʿās̲h̲iḳs* [*q.v.*] or reciters and story-tellers, which they improvise and insert between the strophes of the poems which make up the sung part of their prose narratives (see P.N. Boratav, *Halk hikâyeleri ve halk hikâyeciliği*, Ankara 1946, 239-42, 291).

Concerning the origin of the *māni*, one may suggest as a hypothesis an adaption of the model of the *rubāʿī* to the heptasyllabic and octosyllabic metres peculiar to the Turkish languages; a first stage in this process of adaptation of would be the *tuyug̲h̲*, another type of quatrain peculiar to Turkish classical poetry, composed in the *ʿarūḍ* metre and rhymed according to the same schema as the *rubāʿī* and *māni*.

(P.N. BORATAV)

MĀNĪ B. FĀTTIK or FĀTIK, the form found in mediaeval Islamic sources (e.g. al-Masʿūdī, *Murūd̲j̲*, ii 164, 167-8, vii, 12-16, viii, 293, = §§ 589, 594, 2705-7, 3447) for the founder of the dualist religion of Manichaeism, Mani son of Pātik, born in southern Mesopotamia in 216 A.D. and martyred under the Sāsānid Bahrām I in 274, 276 or 277, and whose faith spread from the Persian empire in the 7th century as far as Central Asia, eastern Turkestan (where after 762 it was the chief religion of the Uyg̲h̲ur Turks [*q.v.*]) and northern China. In Islamic sources, the adherents of Manichaeism appear as the Manāniyya (Mānawiyya), as in the important section on them in al-Nadīm's *Fihrist*, ed. Riḍā Tad̲j̲addud, Tehran 1350/1971, 391-402, tr. Dodge, ii, 773-805, and in al-K̲h̲ʷārazmī's *Mafātīḥ al-ʿulūm*, 37, where both forms are however registered.

Although Manichaeism was in the early Islamic centuries largely pushed into Central Asia (thus the *Ḥudūd al-ʿālam*, tr. Minorsky, 113, § 113.25, mentions a "convent of the Manichaeans", *k̲h̲ānagāh-i Mānawiyān*, in Samarḳand in 982, with *nig̲h̲ūs̲h̲āk* or *auditores*) and beyond, it had an important part in the general phenomenon of *zandaḳa* "heresy, unbelief" in early ʿAbbāsid ʿIrāḳ; for a general consideration of this, see ZINDĪḲ, and meanwhile, Spuler, *Iran*, 206-9.

BOSWORTH)

MANISA [see MAG̲H̲NISA].

MANŌHAR, MANŌHARGARH, a fortress on a lofty rock, some 2,500 feet/770 m. high, in lat. 16° N. and long. 74° 1' E., in the Western Ghats range of peninsular India. Formerly in the southernmost part of the British Indian province of Bombay, it is now just within the southwestern corner of the Maharashtra state of the Indian Union.

Bibliography: *Imperial gazetteer of India*[2], xvii, 200. (ED.)

MANSA MŪSĀ, king (*mansa*) of Mali (712-38/1312-37).

He was apparently the grandson of Abū Bakr (Manding Bori), who was the brother of Mārī Jāta (Sunjata), the legendary hero credited with the establishment of Mali in the 14th century [*q.v.*] as a powerful empire. Mansa Mūsā reigned at the pinnacle of Mali's prosperity, and is remembered in the Arabic sources as a pious and virtuous sovereign. Following the example of several earlier Malian rulers, and having appointed his son Mag̲h̲ā (Muḥammad) to rule in his absence, he made a pilgrimage to Mecca in 1324 that made a profound impression on the Egyptians and was chronicled by Arab writers. According to the 17th-century Timbuktu chronicles *Taʾrīk̲h̲ al-Sūdān* and *Taʾrīk̲h̲ al-Fattās̲h̲*, whose authors relied extensively on oral sources, Mansa Mūsā was accompanied by an entourage of thousands, including his favourite wife, Inari Konte, and he travelled via Timbuktu, where he caused to be built one of several mosques constructed during his journey. In Cairo, he flooded the market with so much gold that its value fell throughout Egypt. One of al-ʿUmarī's informants, Ibn Amīr Ḥād̲j̲ib, was often in the company of Mansa Mūsā when he was in Egypt, and among the things told him him by Mansa Mūsā himself was that he came to power when his predecessor (Muḥammad, of a different branch of the same family) appointed him deputy before leaving on a seafaring expedition, from which he never returned, to discover the limits of the Atlantic Ocean. While on pilgrimage, Mansa Mūsā also met the Andalusian poet and architect Abū Isḥāḳ Ibrāhīm al-Sāḥilī, who accompanied him back to Mali where, ac-

cording to Ibn Khaldūn's friend Khadīdja, Abū Isḥāḳ constructed for the *mansa* an elaborately decorated domed building that may have been the first of its kind in that country. Also accompanying Mansa Mūsā were four *shurafā*ʾ from Ḳuraysh who settled in Mali with their families. Upon his return, Mansa Mūsā continued his policy of diplomatically furthering the interests of Mali in the greater Islamic world by corresponding with the sultan at Cairo, sending *ʿulamāʾ* to study in Fās, and exchanging embassies and gifts with the Marīnid ruler of the Maghrib, Abu 'l-Ḥasan. Al-ʿUmarī claims that Mansa Mūsā had returned to Mali from his pilgrimage with the intention of handing over his sovereignty to his son and returning to Mecca to live near the sanctuary; but he died before he could carry out his plan.

Viewed from the local African perspective, Mansa Mūsā and his pilgrimage engendered a western Sudanic oral tradition, the hero of which is Makanta Jigi (Fajigi), "Father of hope who went to Mecca". As an oral record of the local Sudanic interpretation placed on Mansa Mūsā's pilgrimage by his subjects and their descendants, the Fajigi legend reveals attitudes that helped make it possible for an accommodation between indigenous religious practices and Islam to be achieved. The basic narrative line of the legendary oral account tells how Mansa Mūsā/Fajigi was motivated to make the pilgrimage because he was responsible for a regrettable incident involving his mother Gongo (Kankan), possibly resulting in her death. Making a pilgrimage to Mecca, he acquires the most important of the spiritually powerful altars (*boliw*) used in traditional Manding religious ritual, including those of the prestigious Komo society. As Fajigi returns through the land of the Manding, he distributes some of the altars, as well as various potions and amulets to people who help him. When he reaches the rivers of Mali, he uses a magic canoe to transport the altars. The canoe encounters rough waters and some of the cargo falls into the water, where it is transformed into several life forms such as fish and scorpions. On arriving home, the location of which varies according to the informant, the canoe sinks to the bottom of a lake or river where it remains to this day, itself a powerful altar that receives periodic offerings. The most significant feature of this legend is the paradoxical claim that the *mansa* most famous for his devotion to Islam was at the same time the one who provided his subjects with the essential paraphernalia of the ancestral non-Islamic Manding religion. Thus, from the traditional non-Muslim point of view, Mansa Mūsā and his pilgrimage emerge, not as examples of faithful Islamic endeavour and early Sudanic statesmanship, but as the source of an oral narrative that provided a framework on which descendants of the *mansa*'s subjects based their claim that certain features of their autochthonous religion were rooted in the same soil that nurtured the foundations of Islam.

(D.C. CONRAD)

MANṢAB and **MANṢABDĀR**, terms of the military system of the Mughals in India.

The Mughal empire possessed a graded official hierarchy of officers with military and civil duties. The emperor, his *dīwān* or other high officials, assigned to each officer a rank or *manṣab*. The holder of this rank was termed a *manṣabdār*. Personal or *dhāt* rank was expressed numerically in even-numbered decimal increments. Ranks could vary from as low as 20 *dhāt* to a maximum of 7,000 *dhāt* for the highest nobles (*amīrs*). Princes of the blood held *dhāt* ranks as high as 20,000 *dhāt* when they reached maturity. The emperor, or a high-ranking noble acting with the emperor's approval, raised or lowered all *dhāt* ranks on the basis of perceived performance as well as favour at court. *Dhāt* determined the *manṣabdār's* relative status and his pay. Personal rank also set approximate limits upon official assignments, honorific titles and influence. Those five or six hundred *manṣabdārs* who, in the mid-11th/17th century held *dhāt* rank of 1,000 or above, were officially classified as nobles or *amīrs*. This small group comprised the ruling élite of the empire. Usually, lesser-ranked *manṣabdārs* served as subordinates to one of the *amīrs*.

A second numerical ranking system existed alongside that of *dhāt* ranks. *Manṣabdārs* could simultaneously hold trooper or *suwār* ranks. The latter was expressed in multiples of five from as low as five to as much as 7,000 *suwār*. Those *manṣabdārs* receiving *suwār* rank received extra pay. In return, they were obliged to recruit, command and pay a body of heavy cavalry acceptable to imperial standards. The actual number of horsemen brought to the muster in a *manṣabdār's* contingent was not equal to the nominal *suwār* rank, but was instead a fraction determined by a complex series of imperial regulations. All cavalrymen employed by *manṣabdārs* to meet *suwār* rank obligations were subject to periodic inspection and identification. Cavalrymen were identified in muster rolls by name and physical appearance; horses by description and imperial brands. Special *du-asbah suwār* rank obliged the *manṣabdār* to employ men bring two, rather than merely one mount to the muster [see further DĀGH U TAṢḤĪḤA in Suppl.].

Most *manṣabdārs* obtained payment for their fixed *dhāt* and *suwār* ranks in the form of salary assignments known as *djāgīrs* [*q.v.*]. Under this arrangement, the empire transferred to the *manṣabdār* the right of collection of its share of the land tax from a specified area—a village or portion thereof; or a *pargana* [*q.v.*] or portion thereof—in an amount equivalent to his pay claim. Assignment of a *djāgīr* ordinarily did not carry with it any administrative rights or responsibilities in the area assigned. Many lesser-ranked *manṣabdārs* were paid directly in cash from the provincial or central treasuries.

The *manṣabdārī* system formally expressed the uniformity and cohesiveness and discipline of the Mughal administrative and military élites. *Manṣabdārs* were the instruments of imperial unification and expansion. The honorific ranking system tied all the

nobles and lesser *manṣabdārs* to the person and the preference of the emperor. All advancement (and punishment) came directly from the throne. Thus the loyalty of the *manṣabdārs* was bound to the house of Bābur alone. But *manṣabdārs* were also bound by established policies, by precedent, and by written regulations in their conduct of official business.

It is important to note that another body of middling and lesser officers also served the empire without benefit of *manṣabdārī* status or rank. Many private servants of the *amīrs* employed within the massive households and military camps of their masters held responsible positions. Some were slaves; many were free Muslims or Hindu officers in private employ. Acting under the supervision of their master—an *amīr*—and the *manṣabdārs* attached to him, these men performed the essential functions of imperial administration and military service. It is difficult to estimate their numbers, but they must have been at least as numerous as the lesser and middle-ranking *manṣabdārs*.

Between 1119/1707 and 1136/1724 discipline and the integrity of the *manṣabdārī* system began to detoriorate. Ranks rapidly became inflated and, if not meaningless, were very much distorted. By the late 12th/18th century, the *manṣabdārī* ranks so freely given or so readily coerced from the Mug͟hal emperor were merely a travesty of what they had once implied.

Bibliography: It is not possible to find a truly useful or synoptic account of the *manṣabdārī* system in the original sources apart from the passages in the *Āʾīn-i Akbarī*. But these last do not reflect the growth and change of the institution in the 11th/17th century. The student may see the working of the ranking system and the active role of the emperor in such works as the memoirs of D̲j̲ahāngīr, the *Tūzuk-i D̲j̲ahāngīrī*, tr. A. Rogers, ed. H. Beveridge, Dihlī 1909-14, 2nd ed. Dihlī 1968. For a similar impression later in the century, see the *Maʾāt̲h̲ir-i ʿĀlamgīrī* of Mustaʿid K̲h̲ān, ed. Maulawī Ag̲h̲ā Aḥmad ʿAlī, Bibliotheca Indica no. 66, Calcutta 1870-3, Eng. tr. Jadunath Sarkar, Bibliotheca Indica no. 269, Calcutta 1947. Those large archival collections of Mug̲h̲al documents which have survived are filled with references to promotions, demotions, transfers and *d̲j̲āgīr* assignments for *manṣabdārs*. Any official reference to an individual *manṣabdār* invariably appended his numerical *d̲h̲āt* and *suwār* rank. See Yusuf Husain Khan, ed., *Selected documents of Aurangzeb's reign, 1659-1706*, Hyderabad-Deccan 1958, for a sampling of these documents. The indispensable modern discussion of the *manṣabdārī* system, although focussed on the nobility, is M. Athar Ali, *The Mughal nobility under Aurangzeb*, Aligarh 1966. Another systematic description may be found in I. H. Qureshi, *The administration of the Mughal empire*, Karachi 1966. For a discussion of the role of *manṣabdārs* in a particular province, see J. F. Richards, *Mughal administration in Golconda*, Oxford 1975.

(J. F. Richards)

MANS̲H̲ŪR (A.) means literally "spread out" (as in Ḳurʾān, XVII, 14, and LII,3: opposite, *maṭwī* "folded"), or "not sealed" (opposite, *makhtūm*) hence it comes to mean a certificate, an edict, a diploma of appointment, and particularly, a patent granting an appanage (pl. *manās̲h̲īr*).

In Egypt in the early Arab period, *mans̲h̲ūr* seems to be a name for the passes which the government compelled the *fellāḥīn* to have in order to check the flight of colonists from the land, which threatened to become overwhelming (*d̲j̲āliya*). In any case, in the *Führer durch die Ausstellung* (*Papyrus Erzherzog Rainer*), no. 631 (cf. also nos. 601-2), such a certificate of the year 180/796 is called a *mans̲h̲ūr*, and in al-Maḳrīzī, *K̲h̲iṭaṭ*, ii, 493, we are told of the period of the financial controller Usāma b. Zayd al-Tanūk̲h̲ī (104/722-3) that Christians who were found without identification papers (*mans̲h̲ūr*) had to pay 10 *dīnārs* fine (cf. Becker, *Beiträge zur Gesch. Ägyptens*, 104). In the texts of such passports themselves (cf. Becker, *Papyr. Schott-Reinhardt*, i, 40, l.1) however, we have, so far as I can see, not the word *mans̲h̲ūr* but only *kitāb*.

Mans̲h̲ūr seems also to have a quite general meaning of "pass", when we are told in al-Ḳalḳas̲h̲andī, *Ṣubḥ al-aʿs̲h̲āʾ*, xiii, 142, that it was written on an ʿAbbāsid grant of a fief dating from the year 373/983-4) that no one could demand for the holder that he should show a *ḥud̲j̲d̲j̲a* or a *tawḳīʿ* or a *mans̲h̲ūr*.

The Egyptian Fāṭimids usually called all state documents, appointments, etc., by the general term *sid̲j̲ill*, but they had also special terms for partcular diplomas of appointment, including *mans̲h̲ūrs*.

Thus among the examples of Fāṭimid documents given by al-Ḳalḳas̲h̲andī, x, 452-66, there are several which in their texts are described as *mans̲h̲ūrs*. Among these are for example, appointments to the supervision of inheritants (*mus̲h̲ārafat al-mawārīt̲h̲ al-ḥas̲h̲riyya*), of the poll-tax (*mus̲h̲ārafat al-d̲j̲awālī*), to a professorship (*tadrīs*), etc. A grant of an appanage could also be called *mans̲h̲ūr* at this time, as in al-Ḳalḳas̲h̲andī, xiii, 131 [see IBN K̲H̲ALAF, in Suppl.] from the Fāṭimid *Mawādd al-bayān* of ʿAlī b. K̲h̲alaf; and the regulation that the *manās̲h̲īr* must not have an address (*ʿunwān*) and that in place of this, the head of the *Dīwān* must write the date with his own hand, seems to be first found in Ibn al-Ṣayrafī, *Ḳānūn Dīwān al-Rasāʾil*, 113 = al-Ḳalḳas̲h̲andī, vi, 198.

Under the Ayyūbids also, *mans̲h̲ūr* had quite a general meaning. Thus in *ibid.*, xi, 49 f., a "marshall of the nobles" (*naḳīb al-as̲h̲rāf*) is appointed by a *mans̲h̲ūr*, and in 51 ff., governors (*wulāt*) of different provinces. In the text of it, the name *mans̲h̲ūr* is given to the edict on the equation of taxation and lunar years (*taḥwīl al-sinīn*) which is quoted from the *Mutad̲j̲addidāt* of the Ḳāḍī al-Fāḍil for the year 567/1171-2) in al-Maḳrīzī, i, 281, ed. Wiet, iv, 292 (cf. also al-Ḳalḳas̲h̲andī, xiii, 72 ff.), and according to a further quotation, for the year 584/1188 (al-Maḳrīzī, i, 269 = Wiet, iv, 248) the so-called "lord of the new year" (*amīr al-nawrūz*) issued his *manās̲h̲īr*.

The term *mans̲h̲ūr* became limited and specialised in the Mamlūk period, for which we have very full sources. The increasingly complicated system of the administration brought a minute distinction between and special names for the various diplomas of appointment, edicts, etc., and the term *mans̲h̲ūr* was henceforth used exclusively of the grants of appanages. These *manās̲h̲īr* were always written in Cairo in the chancellery (*dīwān al-ins̲h̲āʾ*) in the name of the sultan; only in exceptional cases might they be in the name of the *al-nāʾib al-kāfil* (see al-Ḳalḳas̲h̲andī, iv, 16; xiii, 157). According to the very full description in al-Ḳalḳas̲h̲andī, xiii, 153 ff., and al-Maḳrīzī, ii, 211, the procedure in granting a fief was as follows: if a fief became vacant (*maḥlūl*) in a provincial town, e.g. in Damascus, the governor there (*nāʾib*) proposed a new holder and had a document (*ruḳʿa*, also called *mit̲h̲āl* or *murabbaʿa*) drawn up about his proposal by the inspector of the army (*nāẓir al-d̲j̲ays̲h̲*; cf. al-Ḳalḳas̲h̲andī, iv, 190; xii, 97) in the military *Dīwān* (*dīwān al-d̲j̲ays̲h̲*) of his town. This document was then sent by courier (*barīdī*) or pigeon post (*ʿalā ad̲j̲niḥat al-ḥamām*) to the government (*al-abwāb al-s̲h̲arīfa*) in Cairo. Here it was

received by the postmaster (*dawādār*), later by the private secretary (*kātib al-sirr* = *ṣāḥib dīwān al-inshā*ʾ) who placed it before the sultan in audience (*djulūs fī dār al-*ʿ*adl*) for approval, receive the sultan's signature (*khaṭṭ sharīf*) and the note *yuktab* ("let it be written out"; see al-Ḳalḳashandī, iv, 51). The document then went to the Military *Dīwān* in Cairo (*dīwān al-djaysh*, occasionally also called *dīwān al-iḳṭā*ʿ), where it was filed, after what was called the *murabba*ʿ*a* had been made out. The latter was sent to the *dīwān al-inshā*ʾ, and the private secretary, the head of this *Dīwān*, wrote his requisition (*ta* ʿ*yīn*) for the *inshā*ʾ writer concerned; now finally the patent of the appanage (*manshūr*) proper could be made out in the *dīwān al-inshā*ʾ in Cairo, while the *murabba*ʿ*a* of the army *Dīwān* remained filed in the *dīwān al-inshā*ʾ as *shāhid* (proof) (cf. al-Ḳalḳashandī, vi, 201).

Full particulars are given of the formulae used in these *manāshīr* and of their external form in Shihāb al-Dīn b. Faḍl Allāh, *al-Ta*ʿ*rīf bi 'l-muṣṭalaḥ al-sharīf*, 88 f.; al-Ḳalḳashandī, xiii, 153 ff., and Quatremère, *Histoire des Sultans Mamlouks de l'Egypt*, i/1, 200 f., n. 82. There are many variants of format (*ḳaṭ*ʿ [*q.v.*]) and script according to the military rank of the recipient. Thus *manāshīr* for the *muḳaddamū 'l-ulūf* were written on *ḳaṭ*ʿ *al-thulthayn*, for *the umarā*ʾ *al-ṭablkhānā* on *ḳaṭ*ʿ *al-niṣf*, for the *umarā*ʾ *al-*ʿ*asharāt* on *ḳaṭ*ʿ *al-thulth* and for the *mamālīk al-sulṭāniyya* and *muḳaddamū 'l-ḥalḳa* on *ḳaṭ*ʿ *al-*ʿ*āda*. Many rules were laid down for the wording to be used; the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about service (*waṣāyā*); an original "virgin" (*mubtakarat al-inshā*ʾ) is recommended as the finest form of a *manshūr*. Special formulae are further required for grants of appanages which were concerned with renewal (*tadjdīdāt*), addition (*ziyādāt*) or substitution (*ta* ʿ*wīḍāt*). A regular signature of the sultan, such as is usual on appointments as confirmation (*mustanad*), is not found on the *manāshīr*; instead of this, the sultan writes formulae like "God is my hope" (*Allāh amalī*), "God is my protector" (*Allāh waliyyī*), "God is sufficient for me" (*Allāh ḥasbī*), "To God belongs the rule" (*al-mulk li 'llāh*), or "God alone has grace" (*al-minna li 'llāhi waḥdahu*).

Occasionally, the *manāshīr* for the highest ranks (*muḳaddamū 'l-ulūf* and *muḳaddamū 'l-ṭablkhānā*) had a *ṭughrā* [*q.v.*] at the top. The *ṭughrās* were prepared by a special official beforehand and gummed on to the finished diplomas. In al-Ḳalḳashandī, xiii, 165 f., the *ṭughrās* of al-Nāṣir Muḥammad b. Ḳalāwūn (693-741 with interruptions) and Ashraf Shaʿbān b. Ḥusayn (764-78) are reproduced and described; they differ considerably from the better-known form of the *ṭughrā* of the Ottoman sultans. After Ashraf Shaʿbān, *ṭughrās* were no longer used on the *manāshīr*; these were only used for purposes of representation on letters to infidel rulers.

The completed *manshūr* was then again taken back by a courier from Cairo to the town concerned, e.g. Damascus, and handed over to the tenant of the appanage. The inspector of the army there (*nāẓir al-djaysh*), however, first entered it in his register, for he had to keep a roll of the holders of fiefs in his province. Al-Ḳalḳashandī, xiii, 167-99, gives as examples of *manāshīr* no fewer than 26 texts, beginning with one drawn up by Muḥyī 'l-Dīn b. ʿAbd al-Ẓāhir in the reign of Ḳalāwūn for the latter's son al-Nāṣir Muḥammad, which for its remarkable beauty he calls a regular *sulṭān al-manāshīr*. The other texts are of the above-mentioned military ranks, as well as for sons of *amīrs* (*awlād al-umarā*ʾ) and for *amīrs* of the Arabs, Turkomans and Kurds.

In the Ottoman Empire, certain patents of appointment were called *menshūr*. The *menshūrs* for a vizier, *beylerbeyi* and *sandjaḳbeyi* were issued by the Grand Vizier (*ṣadr-i a*ʿ*ẓam*). But they were also written for the *Ser* ʿ*asker*, *Baḥreyn ḥākimi*, the *mufti*, and even for Christian patriarchs and bishops. All *menshūrs* were controlled and if necessary corrected by the chancellor (*nishāndji*) and registered in the *menshūr defteri* of the *Dīwān-i humāyūn*.

In Persia, many documents, of a great diversity of subject matter, were called *manshūr*, sometimes with additions as *manshūr-i taḳlīd* or *manshūr-i tafwīḍ*. In modern Lahore, Pakistan, the *Manshūrāt-i Iḳbāl* are edited by the Bazm-i Iḳbāl.

In modern Egypt, edicts of the government are called *manshūr*, cf. some texts in *Ma*ʿ*riḍ al-khuṭūṭ al-*ʿ*arabiyya*, 1912, nos. 44, 69, 76, 78, 79, and *Taḳwīm*, 1937, 278, *madjmū* ʿ*at ḳarārāt wa-manshūrāt al-ḥukūma al-miṣriyya*, and 279, *madjmū* ʿ*at al-ḳawānīn wa 'l-ḳarārāt wa 'l-manshūrāt al-khāṣṣa bi-tasdjīl al-*ʿ*uḳūd*. In many Arabic states, serial publications now are called *manshūrāt*. In conclusion, it may be mentioned that *manshūr* in mathematical language means "prism" (varieties: e.g. *M. mā*ʾ*il* "oblique prism", *M. ḳā*ʾ*im* "straight prism", *M. mutawāzi 'l-aḍlā*ʿ "parallel prism", *M. muntaẓam* "regular prism", *M. muthallathī* "triangular prism", *M. nāḳiṣ* "truncated prism"), and that in the language of the Persian poets, the nightingales are called "the *manshūr*-writers of the garden" (*manshūr-niwīsān-i bāgh*).

MANSŪKH [see nāsikh].

MANṢŪR, miniature painter of the Mughal period in India.

Manṣūr had a highly successful career of at least 45 years in the Mughal studio, achieving the distinction of being the only artist who made his reputation by nature painting. His progress is interesting as he was one of few painters whose fortune was improved by changes in the atelier when the amateur naturalist and aesthete Djahāngīr (1014-37/1605-27 [*q.v.*]) succeeded his father Akbar [*q.v.*] as emperor. His evolution demonstrates the fact that the Mughal artist was moulded by his patron's requests, since the painter's earlier work shows he had a proclivity for rendering animals or plants; however, although his talent was apparently known, as this type of subject matter was relatively undeveloped in the 10th/16th century, his ability was without particular significance. Djahāngīr made animal portraiture one of his primary interests and because he had a strong scientific curiosity, he demanded realistic renderings of a very high standard from his artists. Around the time of his accession, it appears from the number of animal portraits signed by other artists that the emperor widely awarded such commissions, but after a few years Manṣūr seems to have been singled out consistently. The painter had to deal particularly with exotic specimens of animals, birds or flowers brought to Djahāngīr's attention in the course of extensive travels or through embassies and presentations.

Although nothing is known of the painter's origins,

Manṣūr was working in Akbar's studio by about 988/1580, when he co-operated as a colourist for many natural history vignettes from the now dispersed earliest *Bābur-nāma* manuscript (E. Smart, *Paintings from the Baburnama*, Ph.D. diss., London University 1977, 327). Since his last dated painting is a work of 1033/1624 (see A. Das, *Ustad Mansur*, in *Lalit Kala*, xvii), it can be ascertained that Manṣūr was probably one of those recruits who began grinding pigments and colouring designs during his teenage years. The memoirs of the Mug̲h̲al dynasty's founder Bābur [*q.v.*] that record the strange flora and fauna of his adopted country were among the few early outlets for Manṣūr's talent; he definitely contributed to three of the four copies of this manuscript and probably also to the remaining volume (now in Baltimore and Moscow) which no longer has artist attributions (Smart, *loc. cit.*). Manṣūr's greatest achievement for the 10th/16th century Mug̲h̲al manuscripts is the colouring of a scene filled with animals which shows Akbar hunting in a *ḳamarg*; this is one of the most spirited miniatures in the *Akbar-nāma* manuscript (998-1003/1590-5), intended to be a uniquely powerful and impressive volume glorifying the dynastic position of the reigning sovereign. Although Manṣūr did not produce the design, much of the painting's impact can be attributed to him and indicates that he may have attracted some attention in the studio by this time.

The animal paintings of the four *Babūr-nāmas* are quite precise, but the challenge of anatomical studies on a small scale was perhaps not significant; a larger picture done about 998/1590 of two birds (rosy pastors, *sturnus roseus* Linnaeus) arranged in front of an imaginary landscape shows the limitations of Akbarī naturalism (E. Kühnel and H. Goetz, *Indian book painting*, London 1926, pl. 10). It is clear that in this period Manṣūr uneasily applied flesh and feathers over a lumpish inner structure without the kind of anatomical knowledge that he had derived from observation of European paintings by about 1021/1612. Manṣūr was not a draughtsman; he acquired modelling skills with more difficulty than some other artists, and throughout his career there are indications in his work that he was forced to master formulae concerning structure. He does produce a few free and imaginative studies of animals poised in motion, such as that of a chameleon on a branch (S. C. Welch, *Indian drawings and painted sketches*, New York 1976, no. 15), but his greatest innate skill seems to be in transcribing patterns or textures. In this 10th/16th century compositions of birds, however, he does not render textures with as much illusionistic ability as he later did under the influence of Renaissance art.

Manṣūr did both the design and colouring of four political and courtly scenes for the first portion of an *Akbar-nāma* begun in 1912/1603. Such commissions indicate that artists were expected to be versatile during the Akbarī period in order to maintain their places in the studio; these compositions, which were the most usual types in an era devoted to historical illustration, were expected to be within the scope of all painters. Manṣūr is just able to manage the figural groups competently. The painter was apparently inconsistent in his ability to render figures, perhaps succeeding in revealing character only when he felt particular interest in his subjects. Of two portraits done in *ca.* 1003/1595, one of a *vina* player skilfully reveals an easy, jocular individual, while the other of a prince on a throne demonstrates the artist's decorative talent (*vina* player in Welch, *Art of Mughal India*, New York 1963, no. 18; prince on throne, private collection, Hyderabad). Since an ornate portrait of D̲j̲ahāngīr seated on a low throne is inscribed to both Manṣūr and his fellow artist Manōhar, who was primarily a portraitist, it is probable that Manṣūr contributed the details of costume and throne which are as intricately as his later bird pictures (A. Ivanova *et alii*, *Albom indiyskik̲h̲ i persidskik̲h̲ miniatur*, Moscow 1962, pl. 17).

D̲j̲ahāngīr began his commissions of hunting and probably animal subjects while still a prince; it is possible that the picture of rosy pastors mounted in an extensive *muraḳḳaʿ* or album prepared for D̲j̲ahāngīr had also been commissioned by him before 1008/1600. No specific evidence, however, remains to show how Manṣūr's special association with the emperor developed. By the time of D̲j̲ahāngīr's accession, Manṣūr had commenced signing pictures Ustād Manṣūr or Manṣūr Naḳḳās̲h̲ (N. Titley, *Miniatures from Persian manuscripts*, London 1977, 4), but despite this assertion of mastery there were many other painters, some younger than Manṣūr, who were more prominent and who had undoubtedly attracted the emperor's attention (e.g. Manōhar, Abu 'l-Ḥasan and Bis̲h̲ndas). There are only a few pictures which stylistically appear to have been done early in D̲j̲ahāngīr's reign because of the combination of delicate drawing and tentative modelling. These compositions are notably Manṣūr's green chameleon creeping along a leafy branch and his portrait of a Himalayan blue-throated barbet (S. C. Clarke, *Indian drawings*, London 1922, pl. 15). The latter composition has very sensitive details, but the bird is awkwardly posed, indicating an early date. By 1021/1612, Manṣūr had acquired a more exact scientific knowledge. In that year, D̲j̲ahangir records that he received several exotic creatures, including a turkeycock, which he ordered to be painted together in a special durbar scene by an unspecified artist (D̲j̲ahāngīr, *The Tuzuk-i-Jahangiri; or Memoirs of Jahangir*, tr. A. Rogers, ed. H. Beveridge, repr. New Delhi 1968, i, 215-17). A single portrait of the rare turkey which has crisp, very sophisticated, decorative details was probably painted by Manṣūr in this same year and demonstrates the evolution of his mature abilities (Clarke, pl. 15).

Both this composition and that of the barbet deserve attention because they are inscribed with Manṣūr's title *Nādir al-ʿAṣr* ("Wonder of the age") which was given to him by the emperor at some indeterminate date. Though such an inscription may have been placed on these miniatures—which are here presumed to be early—at any time, it is worth noting the doubtful possibility that such a tribute had been awarded by *ca.* 1021/1612. The most reasonable assessment, however, seems to be that the encomium was given after this date because the painter has left a large body of consistent work which is slightly more advanced and complex than the turkeycock; it therefore seems logical to assume that it is this corpus which would have won such singular praise from D̲j̲ahāngīr. When in 1027/1618 D̲j̲ahāngīr himself mentions the title in his diary, it is clear from the context that he had bestowed it some time previously, perhaps in *ca.* 1024/1615 (*Tuzuk*, ii, 20). In the diary, the emperor begins with a discussion of Abu 'l-Ḥasan, whom he had also selected for the reception of a similar title and whom he asserts to be his best painter. An implicit comparison of the two artists is made by the emperor as the foremost in two artistic categories; it is apparent from the passage that D̲j̲ahāngīr's appreciation of natural history drawing was profound and that he had elevated the subject by his interest in it.

Of the five artists mentioned by name in Djahāngīr's memoirs (Abu 'l-Ḥasan, Āḳā Riḍā, Bishndas, Farrukh Beg and Manṣūr), Manṣūr receives most attention because the emperor discusses animal portraiture in great detail. Several interesting points emerge from his reminiscences, including the fact that the Djahāngīrī studio functioned with noteworthy artists like Manṣūr on call and ready to be summoned in the manner of news photographers for recording unusual occurences, such as the sighting of a novel bird species. Djahāngīr additionally mentions his habit of taking artists on trips like the 1029/1620 spring journey to Kashmīr during which he requested Manṣūr to paint more than one hundred flowers (*Tuzuk*, ii, 145). Since the artist also seems to have sketched a fish that is found in Gudjarāt (now in the Red Fort Museum, New Delhi), it appears that he accompanied the emperor on this long trip in 1026-7/1617-18 and probably on other journeys, as the studies of birds like the Himalayan barbet, Himalayan cheer pheasant and Bengal florican may imply.

Because of the demand for strict scientific accuracy, Manṣūr generally concentrates on his subjects with only rudimentary landscape forms or with no background. Since he often reconstructed dead animals and was not requested to focus on movement or behavioural patterns, his compositions are generally very still. His work can be divided into slightly different styles which are really treatments suggested by the animal or bird species itself. Among the most sophisticated and decorative of his paintings are those of birds such as the Himalayan cheer pheasant with striking contrasts of feather texture. An attributed painting of a *nilgai* is a much softer study with the fur of the animal done in small slurred brush strokes that create a hazy effect (L. Ashton, *The art of India and Pakistan*, London 1947, pl. 139). A picture of peafowl that is unsigned but attributable to the artist embodies in its design, colour and composition all the exhibitionist, majestic and coldly intense qualities of the species (M. Beach, *The Grand Mogul*, Williamstown, Mass. 1978, no. 47).

The date of Manṣūr's death or retirement is unknown, but it is doubtful that he would have continued in the atelier much beyond 1033/1624; no study done for Shāh Djahān is known by inscription. Most of the painter's work were mounted in the great royal albums commenced in Djahāngīr's reign and continued into Shāh Djahān's one, indicating the esteem in which the painter was held, as the albums include the most significant royal commissions from these two periods. Many of the miniatures originally in these album groups that each contained 60 pictures have been lost; in addition, in the early 19th century, these groups were rearranged and adulterated with copies by contemporary imperial artists. Manṣūr's remaining works can, however, be distinguished by the small folio numbers applied to the original leaves of the Minto and Wantage albums (V. and A., London) and the Kevorkian one (Met. Museum, New York), sometimes before the copies were inserted in the 19th century.

A painting of red tulips which is almost the sole survivor from the Kashmīrī flower group that Manṣūr painted is mounted on an album page like those of the Kevorkian, Wantage and Minto album groups (Red Tulips and Butterfly (Aligarh University) published in N. C. Mehta, *Studies in Indian painting*, Bombay 1928, pl. 31); however, the folio number which appears on the reverse is not positioned as those of the other album leaves, and it thus seems possible that the Kashmīrī flowers were originally placed together in a book of their own very similar to the other albums that were mainly portraits. In the composition of tulips, Manṣūr has blended the colour of the blooms very subtly to express their fragile, waxy quality which he then contrasts with the powdery wings of a butterfly. Clearly, by the end of his career he was interested in the nature of substances and in how the imagination reacts to sensation.

Other paintings by Manṣūr not previously mentioned include early work in the *Djāmiʿ al-tawārīkh*, Tehran; the *Khamsa* of Dihlawī (fol. iv), Baltimore, and Djahāngīr's *Muraḳḳaʿ gulshan* (fol. 53a), Tehran. Additional flowers and birds include an iris and narcissus (Y. Godard, *Un album de portraits des princes timurides de l'Inde*, in *Āthār-è-Īrān*, ii (1937), nos. 80 and 81 (fig. 113), goldfinch (M.A. Alvi and A. Rahman, *Jahangir the naturalist*, New Delhi 1968, pl. XVIIA), falcon (R. Krishnadasa, *Mughal miniatures*, New Delhi 1955, pl. IV) and pheasant (G. Marteau and H. Vever, *Miniatures persanes*, Paris 1932, no. 259, pl. CLXXVII). Unfortunately, because of Manṣūr's reputation, most unsigned flower and bird paintings done in the first half of the 11th/17th century have been ascribed to him without stylistic consideration. Manṣūr's work is quite bold, his compositions are generally simple with few objects, and the atmosphere is often somewhat static, so that it is to great extent possible to distinguish his mannerisms from those of other painters. Not only have inferior unrelated miniatures been atttributed to him, but deliberate copies of Manṣūr's work were done by admiring artists of the 12th/18th and 13th/19th centuries. In a few instances, since it was customary for Djahāngīr to ask several artists to paint the same subject or to request an artist to produce more than one version of a miniature, there are two or more excellent pictures from Djahāngīr's reign that should be equally appreciated; these include another version of the turkeycock, probably by Manṣūr, and two others of the cheer pheasant—one perhaps by Manṣūr's fellow artist Payag. Since Djahāngīr's memoirs show that Manṣūr produced a vast number of paintings that have disappeared, what is known of his output should be evaluated as an accurate but limited indication of his abilities. It is clearly unfortunate that such a large percentage of his work should have been lost.

(LINDA Y. LEACH)

AL-**MANṢŪR**, the sixth ruler of the Ḥammādid dynasty, succeeded his father al-Nāṣir in the year 481/1088. The latter had witnessed the rise to the height of its power of the dynasty and the somewhat artificial development of the Ḳal ʿa of the Banī Ḥammād [see ḤAMMĀDIDS], as a result of the destruction of al-Ḳayrawān by the Arabs. Two years after the accession of al-Manṣūr, the Arabs, who had advanced towards the West and who had spread over all the region adjoining the Ḳal ʿa, began to make existence there difficult. The prince moved his capital from the Ḳal ʿa to Bougie, which he considered less accessible to the nomads; it should be mentioned that his father al-Nāṣir had already made preparation for this exodus by transforming a little fishing port into a regular town, which was called al-Nāṣiriyya but which was to assume the name of Bougie [see BIDJĀYA], while on the other hand, the Ḳal ʿa was not completely abandoned by al-Manṣūr and he even embellished it with a number of palaces. The Ḥammādid kingdom had there-

fore at this time two capitals joined by a royal road.

After taking up his quarters at Bougie, al-Manṣūr had in the first place to quell the revolt of one of his uncles, Balbār, the governor of Constantine. He sent against the rebel another Ḥammādid *amīr*, Abū Yaknī. The latter after his victory was given the governorship of Constantine, but shortly after, he in his turn, together with his brother, who had been given the governorship of Bône, rebelled. These risings over which al-Manṣūr, thanks to his energy, was triumphant, brought to the side of the rebels of the Ḥammādid family the Zīrids of al-Mahdiyya, who wished to get back some power in Barbary, the Almoravids of the Maghrib, who wished to extend towards the east, and the Bedouins, who were, always ready to join in the feuds of their powerful neighbours.

Al-Manṣūr was, on the other hand, led to oppose the advance of the Almoravids who were, somewhat curiously, allied with the traditional opposition of the Zanāta [*q.v.*]. With the probable object of disarming the opposition, al-Nāṣir and al-Manṣūr had married two sisters of Mākhūkh, the chief of the Banū Wamānū, at that time the most powerful of the Zanāta group. This alliance did not hinder the time-honoured feud from breaking out again. It became more acute when al-Manṣūr murdered his wife, the sister of his enemy. The latter then asked for support from the Almoravids.

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had, after many attempts, endeavoured to expand towards the east at the expense of their brethen of the same race, the Ṣanhādja Banū Ḥammād. Al-Manṣūr had twice reduced them to impotence. It was at this time that the murder of the sister of Mākhūkh by al-Manṣūr drove the Wamānū chief into an alliance with the Almoravids of Tlemcen. The alliance formed in this way was a great blow to the Ḥammādid kingdom. Algiers was besieged for two days; Ashīr was taken.

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Manṣūr. He got together an army of 20,000 men, composed of Ṣanhādja, Bedouins and even Zanāta; he marched against Tlemcen, met the governor Tāshīn b. Tīnᶜamer to the north-east of the town and put him to flight. Tlemcen was spared at the supplication of Tāshfīn's wife, who invoked the ties of relationship uniting them with the Ṣanhādja (496/1102).

After the defeat of the Almoravids, al-Manṣūr severely punished the Zanāta and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia.

Thus al-Manṣūr seems on the eve of his death (498/1105) to have thoroughly re-established the power of the Ḥammādids. According to a tradition, which is not above suspicion, recorded by Ibn Khaldūn, the two capitals owed very important buildings to him: Bougie, the Palace of the Star and the Palace of Salvation; the Ḳal ᶜa, the government palace and the Ḳaṣr al-Mannār, the beautiful donjon of which is still in part extant.

(G. Marçais)

AL-**MANṢŪR**, Abū Djaᶜfar ᶜAbd Allāh b. Muḥammad b. ᶜAlī, the second ᶜAbbāsid caliph, reigned 136-58/754-75. He was born in *ca.* 90-4/709-13 at al-Ḥumayma [*q.v.*] to the east of the Jordan, where the ᶜAbbāsid family were living. His mother, Sallāma, was a Berber slave girl. In 127-9/744-6 he joined the unsuccessful revolt of the Ṭālibid ᶜAbd Allāh b. Muᶜāwiya [*q.v.*] against the Umayyads in western Iran. He then returned to al-Ḥumayma and took no part in the early stages of the ᶜAbbāsid revolution, coming to al-Kūfa with his brother Abu 'l-ᶜAbbās (soon to be the caliph al-Saffāḥ) as the ᶜAbbāsid armies were approaching from the east.

After the establishment of his brother as caliph, he was sent to conduct the siege of Wāsiṭ where the last Umayyad governor of ᶜIrāḳ, Yazīd b. ᶜUmar b. Hubayra [see IBN HUBAYRA], was holding out. There he made contact with Khurāsānī generals, including al-Ḥasan b. Ḳaḥṭaba, who was to be one of his most loyal supporters. He also tried to reach an agreement with Ibn Hubayra but was thwarted by Abū Muslim, who demanded that the Umayyad leader be executed. After the fall of Wāsiṭ, he was appointed governor of al-Djazīra and Armenia, where he succeeded in winning the loyalty of some of the most important Umayyad generals, including Isḥāḳ b. Muslim al-ᶜUḳaylī. When al-Saffāḥ died in Dhu 'l-Ḥidjdja 136/June 754, he had already considerable political experience and had attracted a powerful body of supporters.

His brother designated Abū Dja ᶜfar as his heir, to be succeeded in turn by his nephew ᶜĪsā b. Mūsā, the governor of al-Kūfa; Abū Dja ᶜfar, who was on the *ḥadjdj* with Abū Muslim at the time, quickly returned to take control. However, until the defeat of the ᶜAlid rebellions of 145/762-3, he faced a series of challenges to his rule.

The first threat came from his uncle ᶜAbd Allāh b. ᶜAlī, who at the time of al-Saffāḥ's death was preparing to attack the Byzantine Empire with a large army of Syrians and Khurāsānīs, and he decided to use this force to make a bid for the caliphate. Al-Manṣūr was obliged to seek the support of Abū Muslim, who, against his better judgment, was persuaded to lead a large Khurāsānī army against the rebel, and ᶜAbd Allāh's army, by this time composed almost exclusively of Syrians, was defeated near Niṣībīn in Djumādā II 137/November 754. ᶜAbd Allāh spent the rest of his life in disgrace in ᶜIrāḳ, but the caliph typically, was careful to be reconciled to the Syrian leaders who had supported him.

The defeat of the rebels left al-Manṣūr free to deal with Abū Muslim [*q.v.*]. Tension between the two men had been growing since the death of Ibn Hubayra, and a visit by al-Manṣūr to Abū Muslim's court at Marw before he became caliph had convinced him that Abū Muslim was too powerful to be allowed to survive. The conflict was not simply about personalities, but concerned the whole direction of the caliphate: Abu Muslim wished that eastern Iran should be effectively independent, under his rule, and that its revenues should be assigned to his Khurāsānī supporters, while al-Manṣūr insisted that the caliph should appoint governors and collect taxes from the area. The presence of Abū Muslim in ᶜIrāḳ made him vulnerable, and he was murdered at al-Madāʾin in the caliph's presence (Shaᶜbān 137/February 755). His murder was followed by disturbances in Iran, notably the strongly anti-Muslim revolt of Sunbādh, but in the end, al-Manṣūr asserted his control over Khurāsān.

The last major challenge which al-Manṣūr faced was the threat of an ᶜAlid uprising which eventually broke out in Radjab 145/September 762 in Medina, led by Muḥammad b. ᶜAbd Allāh [*q.v.*]. Attempts to

spread the revolt to Syria and Egypt failed, whilst al-Kūfa, the traditional centre of ʿAlid support, was closely watched by the caliph and his troops. Al-Manṣūr ordered that food supplies from Egypt be cut off and Muḥammad, now isolated in Medina, was easily defeated and killed by an ʿAbbāsid force led by ʿĪsā b. Mūsā (Ramaḍān 145/November 762).

Shortly before Muḥammad's death, his brother Ibrāhīm led a rising in al-Baṣra which attracted widespread support in the city. Having taken over the town, he began to march on al-Kūfa, but was met by ʿĪsā b. Mūsā with an ʿAbbāsid army and was defeated and killed at Bākhamrā after a fierce battle (Dhu 'l-Ḳaʿda 145/February 763).

The failure of the revolt left al-Manṣūr free to consolidate his rule in comparative peace. He was a political planner of great skill and had a clear vision of the development of the caliphate. His policy was to establish a centralised, largely secular state, based on a reliable, salaried army and an efficient revenue-gathering system. His models were the great Umayyad rulers ʿAbd al-Malik and Hishām, and he rejected the demands of those groups like the Rāwandiyya [*q.v.*] who launched a short-lived but dangerous revolt in 141/758-9 and who wanted to assume a more messianic role.

His main support came from the Khurāsāniyya, who had formed the army which overthrew the Umayyads and who now became a privileged military group; governors of Khurāsān were always chosen from among their number, and they were appointed to important posts in other parts of the Caliphate. In ʿIrāḳ, garrison cities were established for them at Baghdād and al-Raḳḳa. Al-Manṣūr also relied heavily on members of his own family. They were frequently given key governorates in ʿIrāḳ and in the western half of the caliphate, and some, like Sulaymān b. ʿAlī in al-Baṣra and Ṣāliḥ b. ʿAlī in Syria, came near to establishing semi-autonomous sub-dynasties. The Syrian leaders with whom the caliph had made contact during al-Saffāḥ's reign also proved an important source of support, notably during the ʿAlid rising of 145/762-3. Finally, al-Manṣūr also recruited some leaders of the Yamanī faction in the Umayyad state, notably the Muhallabī family, who were given governorates in Egypt, Ifrīḳiya and Ādharbāydjān as well as their native al-Baṣra. This broadly-based coalition of supporters meant that the caliph retained considerable political autonomy within the system, since he was never dependent on any one group; and it also assured a broad base of support for the régime.

The government of Khurāsān remained a problem, and demands for local autonomy led to a series of rebellions. After the rebellion of ʿAbd al-Djabbār al-Azdī in 140/757-8, al-Manṣūr solved the problems of the province by sending his son Muḥammad, later the caliph al-Mahdī [*q.v.*], to al-Rayy as viceroy. This allowed Khurāsān a wide measure of autonomy while ensuring overall ʿAbbāsid control. There were still sporadic rebellions in the remoter parts of the province, notably that of Ustādhsīs in Bādhghīs [*q.v.*] from *ca.* 147/764 to 151/768, but they did not seriously threaten ʿAbbāsid power.

Other frontier areas of the caliphate also saw continuing disturbances. In 147/764 the Khazars [*q.v.*] attacked through the Caucasus and briefly took Tiflis before being driven out. The Byzantine frontier was the scene of settlement and fortification rather than important campaigns. In North Africa, Ifrīḳiya was threatened by continuous Khāridjī uprisings, until in 155/772 Yazīd b. Ḥātim al-Muhallabī finally established ʿAbbāsid rule. In al-Andalus, power was seized by a member of the Umayyad family, ʿAbd al-Raḥmān b. Muʿāwiya [*q.v.*], who established an independant amīrate in 138/756

Al-Manṣūr's most lasting achievement was the foundation of the new ʿAbbāsid capital at Baghdād. Al-Saffāḥ and al-Manṣūr lived at a variety of sites in central ʿIrāḳ until in 145/762, the caliph decided to build a new capital at Baghdād. Part of the reason for this was the need for security, and the outbreak of the Rāwandiyya had shown how vulnerable the caliph was to even small-scale rebellions. Baghdād was also developed as a centre for the Khurāsānī soldiers who had come westwards and could not be settled in existing cities like al-Kūfa without arousing the hostility of the local population. At first, the city was essentially administrative and military in character, but the building of the al-Karkh commercial district to the south from 151/768 onwards and settlement on the east bank of the Tigris meant that, by the end of his reign, the new capital was already a thriving metropolis. On the Euphrates in al-Djazīra, al-Raḳḳa was also developed from 155/772 onwards, as a Khurāsānī base to supervise the affairs of Syria and the Byzantine frontier.

In 147/764, al-Manṣūr forced the resignation of ʿĪsā b. Mūsā from his position as heir apparent and designated his own son Muḥammad al-Mahdī, who enjoyed the support of the bulk of the Khurāsāniyya, who now obliged ʿĪsā to content himself with being heir to al-Mahdī.

Al-Manṣūr died on the road to Mecca in Dhu 'l-Ḥidjdja 158/October 775 in his mid-sixties. The twenty-one years of his reign had seen the establishment of the ʿAbbāsid caliphate as a centralised state under the caliph's control. He was a politician of genius who pursued his aims with a single-minded but prudent determination. He cannot be considered a popular ruler; he was noted for his hard work and his almost proverbial meanness (cf. his nickname Abu 'l-Dawānīḳ "Father of farthings"), and many felt that his autocratic style of government had betrayed the hopes of the ʿAbbāsid Revolution. Yet without his firm hand, the Muslim world might well have become prematurely fragmented in the mid-2nd/8th century.

AL-**MANṢŪR** [see YAʿḲŪB AL-MANṢŪR]

AL-**MANṢŪR, AḤMAD** [see AḤMAD AL-MANṢŪR]

AL-**MANṢŪR** (MADĪNAT-) [see BAGHDĀD]

AL-**MANṢŪR**, AL-MALIK MUḤAMMAD B. ʿUMAR B. SHĀHANSHĀH, local ruler of Ḥamāt [*q.v.*], historian and patron of letters, b. 567/1171-2 (al-Maḳrīzī, *Sulūk*, i, 205), son of Ṣalāḥ al-Dīn's nephew al-Malik al-Muẓaffar Taḳī al-Dīn ʿUmar [*q.v.*], and paternal grandfather of Abu 'l-Fidā [*q.v.*] (but not Tūrānshāh's grandchild, as in vol. i, 805, above).

According to autobiographical remarks in his *Miḍmār* (see below), al-Manṣūr was still a child when taking part in campaigns and sieges of Ṣalāḥ al-Dīn and Taḳī al-Dīn. When in 579/1183 the latter was appointed governor of Egypt by Ṣalāḥ al-Dīn, al-Manṣūr accompanied him (*Miḍmār*, 158, 227), and in Alexandria he studied *ḥadīth* with Abū Ṭāhir al-Silafī [*q.v.*] (al-Ṣafadī, *Wāfī*, iv, 259, no. 1790), and with Abū Ṭāhir b. ʿAwf [*q.v.*] (al-Dhahabī, *ʿIbar*, v, 71). Already in 580/1184, when his father had to leave Cairo temporarily (*Miḍmār*, 200), he became his official representative in Egypt. After his father's death in Ramaḍān 587/September-October 1191, he became ruler of the city state of Ḥamāt and its dependencies, Ma ʿarrat al-Nuʿmān, Manbidj, Ḳalʿat al-Nadjm and Salamiyya [*q.vv.*]. The fiefs on the eastern side of the Euphrates, however, which Ṣalāḥ al-Dīn had granted to his father in 586/1190, he had to restore to the sultan, who passed them on to his brother al-ʿĀdil [*q.v.*] (Ibn al-Athīr, xii, 82-3; Ibn al-ʿAdīm, *Zubda*, iii, 121-3; Abu 'l-Fidā, *Mukhtaṣar*, iii, 85). Eight years later in 595/1199, al-Manṣūr conquered the fortress of Bārīn (*mons ferrandus*) (Ibn Wāṣil, *Mufarridj*, iii, 101), but was forced by al-ʿĀdil to substitute for this fortress Manbidj and Ḳalʿat al-Nadjm (Ibn al-ʿAdīm, *Zubda*, iii, 148; Ibn Wāṣil, *Mufarridj*, iii, 114; Abu 'l-Fidā, *Mukhtaṣar*, iii, 132). Thus his territory was at least a compact unit.

Ḥamāt and its surroundings held a key position against the Crusaders on the one hand, and on the other they were, after Ṣalāḥ al-Dīn's death, a buffer state between the main opposing rulers of the Ayyūbids, especially between al-Malik al-Ẓāhir Ghāzī in Aleppo and al-Malik al-ʿĀdil in Damascus (see AYYŪBIDS].

Al-Malik al-Manṣūr succeeded in maintaining his sovereignty and keeping his territory together through all the dangers of the internal struggles of the Ayyūbids. Moreover, for thirty years to come, i.e. until his death in 617/1220, he made it into a centre of *adab* and the sciences. In and around Ḥamāt he engaged in a busy building activity (Abu 'l-Fidā, *Mukhtaṣar*, iii, 132; Yāḳūt, *Muʿdjam*, ii, 300), and made the town into an almost impregnable fortress. The results of these activities proved useful during his victorious battles against the Crusaders (599-601/1203-4), as well as during the difficulties with his father's cousin and his temporary overlord al-Ẓāhir. For the battles against the Crusaders and the relations with them, see F. J. Dahlmanns, *al-Malik al-ʿĀdil*, 118 f.; Ibn Wāṣil, *Mufarridj*, iii, 141-50; Abu 'l-Fidā, *Mukhtaṣar*, iii, 111-2; al-Maḳrīzī, *al-Sulūk*, i, 164; Ibn al-Furāt, *Taʾrīkh*, v/1, 22-4. The sources do not agree in the details: Ibn Wāṣil, *Mufarridj*, iii, 163 f.; Ibn al-Athīr, xii, 195; Ibn Naẓīf, *al-Taʾrīkh al-Manṣūrī*, 15 (= Gryaznevič, Moscow 1960, fol. 122b); Sibṭ b. al-Djawzī, *Mirʾāt*, viii/2, 523. For his difficulties with al-Ẓāhir, see Ibn Wāṣil, *Mufarridj*, iii, 121-3; Abu 'l-Fidā, *Mukhtaṣar*, iii, 99; Ibn al-ʿAdīm, *Zubda*, iii, 149. Differing from each other are: Ibn al-ʿAdīm, *Zubda*, iii, 152; Ibn Naẓīf, *al-Taʾrīkh al-Manṣūrī*, 8 (= Gryaznevič, fol. 111b); Ibn Wāṣil, *Mufarridj*, iii, 132, and after him Sibṭ b. al-Djawzī, *Mirʾāt*, ms. Topkapı Sarayı Ahmed III 2907 /xiii, fol. 292b, l. 11 (this line lacking in ed. Ḥaydarābād, viii/2, 510).

During the unrest after Ṣalāḥ al-Dīn's death, al-Manṣūr officially took the part of al-Ẓāhir. In 595-6/1199-1200, he even declared himself ready to enter into a loose alliance with the latter against al-ʿĀdil (Ibn al-ʿAdīm, *Zubda*, iii, 144. Ibn Wāṣil, *Mufarridj*, iii, 101). However, at an early stage he had also recognised the political advantage of an alliance with Ṣalāḥ al-Dīn's brother; already in 590/1194 he openly showed his sympathy for al-ʿĀdil (al-Maḳrīzī, *al-Sulūk*, i, 124). But this again did not prevent him from playing the Ayyūbid rivals off against each other to his own advantage. Both al-ʿĀdil and al-Ẓāhir wanted control over northern Syria, while al-Manṣūr was able alternately to promote or to foil their plans. In 596/1200, after al-ʿĀdil had become sultan of Egypt, al-Manṣūr swore allegiance to him (Ibn Wāṣil, *Mufarridj*, iii, 114) and the sultan confirmed him as ruler of Ḥamāt. In 598/1201-2 he married one of al-ʿĀdil's daughters, and in 603/1206 and 606/1209 he supported the sultan in his attacks on the Crusaders' territory and in al-Djazīra (Ibn Wāṣil, *Mufarridj*, iii, 172 f., 192; Ibn al-Furāt, *Taʾrīkh*, v/1, 86-90).

In politics, al-Manṣūr did not have much room for direct manoeuvring. However, his decision not to engage in politics on his own account whenever possible, but rather to keep a balance between the competing forces of the Ayyūbids, benefited not only his own city state but in the end also the state as a whole. He was the first ruler of Ḥamāt to have copper coins struck with his own name (Balog, *The coinage*, 249-52). They also bear the name of the ʿAbbāsid caliph al-Nāṣir li-Dīn Allāh [*q.v.*], whose *futuwwa* [*q.v.*] he had joined with great pomp (Ibn al-Furāt, *Taʾrīkh al-duwal*, in *JA*, 5th ser., vi [1855], 285 f.) His escort (*mawkib*) was so large that it was compared with the ones of al-ʿĀdil and al-Ẓāhir (Ibn Wāṣil, *Mufarridj*, iv, 81). The ruler of Ḥamāt was not only an important Maecenas and an *ʿālim* in his own right (Abu 'l-Fidā, *Mukhtaṣar*, iii, 132) but also *imām* and *muftī* in several fields (al-Maḳrīzī, *al-Sulūk*, i, 205). His illness and death in 617/1220 threw the whole state considerably out of balance (see Gottschalk, *al-Malik al-Kāmil*, 103-4, 167-70). The pretender to the succession, al-Manṣūr's middle son Ḳilidj Arslān, as well as the crown prince, his elder son al-Muẓaffar, who in the end secured his rights, were no more than dependents on al-ʿĀdil's son al-Malik al-Muʿaẓẓam of Damascus and al-Malik al-Kāmil of Egypt [*q.vv.*].

Works. 1. *Miḍmār al-ḥaḳāʾiḳ wa-sirr al-khalāʾiḳ*, a chronicle originally in ten volumes, preserved in parts (see *Bibl.*). The full title is given by Shihāb al-Dīn al-Ḳūṣī (d. 653/1255), one of the author's pupils who studied part of the work with him (al-Ṣafadī, *Wāfī*, iv, 259-60, no. 1790), as well as by Ibn Wāṣil who knew a part of the *Miḍmār* which is lost today (*Mufarridj*, iv, 78,84), and by Ḥādjdjī Khalīfa, who apparently saw only a *mukhtaṣar* of the *Miḍmār* (*Kashf al-ẓunūn*, ii, 1713). Ḥādjdjī Khalīfa's remark that some historians were sceptical about the authorship of this chronicle is refuted by al-Ḳūṣī's direct information. The exact size of the *Miḍmār* cannot be determined, the preserved part apparently being only a final section of the whole work (see *Miḍmār*, 4). The text starts with the year 575/1180 and ends abruptly in 582/1186, and there are moreover lacunae (see 41, 115, 208). The text shows (38, 72) that the work was to be continued at least until 583/1187 (*Miḍmār* 122, 144). The *Miḍmār* was composed after the siege of Jerusalem (Radjab 583/ Oct. 1187), or even after the death of Ṣalāḥ al-

Dīn (Ṣafar 589/Feb. 1193), with the purpose of glorifying the deeds and character of the Ayyūbid sultan. It thus stands in the tradition which began with ʿImād al-Dīn al-Iṣfahānī, was continued by Ibn Shaddād and came to its completion in the work of Abū Shāma [*q.vv.*], in whose eyes Ṣalāḥ al-Dīn played the role of a saviour in Islamic history.

The *Miḍmār* is one of the principal primary sources of its time. It contains numerous autobiographical data as well as reports of eye-witnesses, which are also of importance for the biography of the author's father al-Malik al-Muẓaffar [*q.v.*], to whom the son devoted two chapters. He explaines why his father was unable to take part in the battle of Mardj ʿUyūn (*Miḍmār*, 18 ff.) and deals with his nomination as governor of Egypt (*ibid.*, 154-8). Here (*ibid.*, 155-8) the certificate of investiture (*taklīd*) as granted by Ṣalāḥ al-Dīn is for the first time edited in its full context. The work contains numerous official documents, several of which can only be found here. Amongst them are letters of Ṣalāḥ al-Dīn's famous secretaries al-Ḳāḍī al-Fāḍil and ʿImād al-Dīn al-Iṣfahānī [*q.vv.*] (*Miḍmār*, 114, 149 f., 224 f.). The main figures are al-Nāṣir li-Dīn Allāh, Ṣalāḥ al-Dīn and Ḳarāḳūsh [*q.vv.*], to each of whom the author assigns a section for every year. Ṣalāḥ al-Dīn's politics are described as exemplary, with the caliph as his direct antagonist. In this context, al-Manṣūr's anti-Shīʿī attitude supports the claim to legitimacy which was so important for the usurper Ṣalāḥ al-Dīn.

Two different groups of sources, an ʿAbbāsid one and an Ayyūbid one, may underly the *Miḍmār*, although there are only scanty indications of informants (see A. Hartmann, *an-Nāṣir*, 14-17, and Index, *s.v.* Miḍmār; L. Richter-Bernburg, in *JAOS*, cii/2 [1982], 278 f.; A. Hartmann, *al-Malik al-Manṣūr*, in *ZDMG* cxxxvi (1986), 570-606). For the events in Baghdād, Ibn al-Māristāniyya is mentioned once (*Miḍmār*, 122), while the informants for Ṣalāḥ al-Dīn and Ḳarāḳūsh remain anonymous (139, 226), although al-Manṣūr received some information on the last-mentioned from himself or from participants in his campaigns (e.g. 54). A direct source for much of the information on Ṣalāḥ al-Dīn in the *Miḍmār* is found in ʿImād al-Dīn al-Iṣfahānī's *al-Barḳ al-Shāmī*. Since the *Barḳ* exists only in ms., with its greater part lost anyway, the *Miḍmār* is of interest for the reconstruction of several passages of the *Barḳ*, together with the text of al-Bundārī and Abū Shāma (see Hartmann, *al-Malik al-Manṣūr*). The author must have been in very close contact with the state chanceries, but his sources have still to be investigated, as does also the influence of the *Miḍmār* on later chronicles. The work was denied a large circulation, as remarked by Ḥādjdjī Khalīfa (*Kashf al-ẓunūn*, ii, 1713) who calls it something precious which could only have been composed by someone who belonged to the learned men of his time.

2. *Akhbār al-mulūk wa-nuzhat al-mālik wa 'l-mamlūk fī ṭabaḳāt al-shuʿarāʾ*, a lexicon in 10 volumes on poets from the Djāhiliyya period down to the author's time (*GAL* I, 324; S I, 558; Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, ii, 1102, ll. 27-9). Only the ninth volume, composed in 602/1205-6, has been preserved (ms. Leiden, Or. 639). It contains selections from poems and very short biographies of poets from ʿIrāḳ, Syria, Egypt, Transoxania and al-Andalus of the 4th-6th/10th-12th centuries. The poets are arranged according to their functions: kings, *amīrs*, viziers, judges and secretaries (see M. ʿAwīs, *Kitāb Ṭabaḳāt al-shuʿarāʾ li-'l-Manṣūr b. Shāhanshāh Ṣāḥib Ḥamāt*, al-Minyā: Dār Ḥirāʾ [1983]).

3. *Durar al-ādāb wa-maḥāsin dhawī 'l-albāb*, an *adab* anthology, composed in 600/1203-4, preserved only in fragments (ms. Leipzig 606; Brockelmann, I, 324; S I, 558; not mentioned in Ḥādjdjī Khalīfa).

(ANGELIKA HARTMANN)

AL-MANṢŪR BI'LLĀH (Almanzor in the mediaeval Spanish chronicles) is the name by which is known the man who was, *de facto*, the real master of al-Andalus from 368/978 to 392/1002. Since no new source is available, except as regards the military campaigns, to expand upon the major features of the biography of ABŪ ʿĀMIR MUḤAMMAD B. ʿABD ALLĀH B. MUḤAMMAD B. ABĪ ʿĀMIR AL-MAʿĀFIRĪ, as revealed through the works of R. Dozy (*Histoire des musulmans d'Espagne*) and E. Lévi-Provençal (*Histoire de l'Espagne musulmane*), this article will be confined to a summary of this material.

Born in 326/938 into a minor aristocratic family which had settled after the conquest at Torrox, in the district of Algeciras, and which had fulfilled various posts in the judicial administration, Ibn Abī ʿĀmir studied, in Cordova, *ḥadīth* and *fiḳh* as a pupil of Abū Bakr b. Muʿāwiya al-Ḳurashī, and Arabic language and literature as a pupil of Abū ʿAlī al-Ḳālī and of Ibn al-Ḳūṭiyya [*q.vv.*]. He began his career in the service of the *ḳāḍī* of Cordova, Muḥammad b. al-Salīm, and subsequently, in 356/967, became steward of the eldest son of *al-Sayyida al-kubrā*, the sultana Ṣubḥ [*q.v.*]. He skilfully acquired the friendship and support of the latter, according to some accounts, through

the giving of presents and according to others, through the exercise of his personal charm. This relationship was by no means unconnected with the rapid advance of his distinguished administrative career: director of the *sikka* [*q.v.*], treasurer, curator of intestate property, *ḳāḍī* of Seville and Niebla, etc. After a brief interlude (he had embezzled from the coffers of the mint, but his friend Ibn Ḥudayr made good the loss before the enquiry), he continued his advance and was appointed to the functions of chief of *al-s̲h̲urṭa al-wusṭā* [see SHURṬA] in 361/972. The construction of his palace at al-Ruṣāfa dates from this period, and it was also at this time that he set out to court popularity among the Cordovans. The fact that he had been sent, as inspector of finances, to verify the sums by G̲h̲ālib [*q.v.*] during his campaign against Ḥasan b. Gannūn enabled him to forge solid links with the army.

The death of al-Ḥakam II [*q.v.*], in 366/976, opened a new phase. The caliph had named as his successor his son His̲h̲ām II [*q.v.*], who was only eleven years old, under the tutelage of the vizier al-Muṣḥafī. The party of palace slaves (*ṣaḳāliba* [*q.v.*]) wished to appoint his uncle, al-Mug̲h̲īra. Al-Muṣḥafī, foreseeing that this would be the end of his political career, sent Ibn Abī ʿĀmir to strangle the latter. The ʿĀmirid was already closely linked to the vizier, through his personal ambitions and through his relationship with Ṣubḥ. It was thus that there fell to him the task of drafting the act of allegiance (*bayʿa* [*q.v.*]) to al-Muʾayyad bi 'llāh and of accepting the oaths of various Cordovan social groups. The new caliph appointed al-Muṣḥafī as *ḥād̲j̲ib* [*q.v.*] and Ibn Abī Āmir as vizier. These two succeeded totally in destroying the political influence of the slaves' party and declared a remission of taxes as a means of ensuring popular support.

In 366/977, Ibn Abī ʿĀmir left to repel an attack by the Christians and captured the suburb of al-Ḥamma (Baños of Ledesma, in the province of Salamanca). The campaign was of little importance but, skilfully exploited, it served to increase the prestige of the new vizier, attracting to him the sympathy of military men and especially that of the commander in chief of the Middle March (*al-t̲h̲ag̲h̲r al-wusṭā* [*q.v.*]), G̲h̲ālib, who soon afterwards received the title of *d̲h̲u 'l-wizāratayn*. As the popularity of al-Muṣḥafī declined on account of his lack of political vision and his nepotism, Ibn Abī ʿĀmir succeeded in taking to wife the daughter of the old general, appointed himself *ṣāḥib al-madīna* [*q.v.*], accused the *ḥād̲j̲ib* of malpractice, imprisoned him in 978 and caused his disappearance.

Having become *ḥād̲j̲ib*, Ibn Abī ʿĀmir foiled a conspiracy against him but was forced to make concessions to the opinion of the *ʿulamāʾ* who criticised his conduct, private and public, under the pretext of lack of orthodoxy. He therefore decided to "censor" the splendid library of al-Ḥakam II, and works of philosophy, astronomy, etc., were destroyed. It was in the same spirit of ostentatious piety that he made his own manuscript copy of the Ḳurʾān and ordered the final expansion of the Great Mosque of Cordoba in 377/987. In order to strengthen his control of the administration of the state, he transferred the offices of Madīnat al-Zahrā [*q.v.*] to his new residence at Madīnat al-Zāhira and obtained from the young caliph a "delegation of all his powers, so as to permit him to devote himself to pious observances". He took advantage of these powers to seclude the latter in his palace and to prevent all contract with him. This delegation thus supplied him with legal ratification of his *de facto* authority. But thereby he overstepped the limits and he was obliged to confront G̲h̲ālib, who died at Torre Vicente in 371/981. The *ḥād̲j̲ib* then took the title of al-Manṣūr bi 'llāh.

Al-Manṣūr conducted 52 expeditions against the Christian states of Spain (a partial list—the first 25—with dates of departure and return is given in the *Tarṣīʿ al-ak̲h̲bār* of al-ʿUd̲h̲rī; a list of 56—including two enagements at Algeciras, but undated—is given in the *D̲h̲ikr bilād al-Andalus*). On these campaigns, the reader is referred to the substantial and well documented article by Ruiz Asensio, *Campañas de Almanzor* (for the sake of completeness, attention is also drawn to the very unreliable and presumptuous article by L. Molina, *Las campañas de Almanzor*) and only the principal ones are mentioned: Zamora 981, Simanacas 983, Sepúlveda 984, Bracelona 985, Coimbra 987, Léon 988, Clunia 994, St. James of Compostella 997 and Cervera 1000. The last, in 392/1002, destroyed San Millan de la Cogolla; but on the return journey, al-Manṣūr fell ill and died at Medinacelli, and it was this which gave rise, two centuries later, to the legendary "defeat of Calatañazor".

The king of Léon, Ramiro III, was forced to surrender to him in 984; Sancho Garcès Abarca of Navarra had been his client since 982; Vermudo II of Léon asked and obtained from the ʿĀmirid an army which helped him to re-establish his authority; and the Castilian Count Garci Fernandez surrendered in 990. Sancho Garcès and Vermudo II gave their daughters in marriage to al-Manṣūr, who became the true arbiter of the Spanish situation. It is equally certain that these campaigns ruined a major part of the work of "reconquest" and almost the entire effort of repopulating Léon in the 9th century; the whole of Estramadura was devastated. The effects seem to have been still more in those eastern states which had no "frontier" (cf. P. Bonnassié, *La Catalogne du milieu du X^e à la fin du XI^e siècle*, Toulouse 1978).

The *Mafāk̲h̲ir al-Barbar* [*q.v.*], which reproduces the chapter of Ibn Ḥayyān [*q.v.*] on Hispano-Mag̲h̲ribi relations, is the principal source for the study of his North African activity. Al-Manṣūr inherited the policy of ʿAbd al-Raḥman III [*q.v.*] and of al-Ḥakam II; rather than seeking conquests, he preferred to obtain submissions and vassalages. This had the double advantage of not immobilising too many troops while allowing the recruitment of large numbers of colonial troops for the purposes of his Spanish campaigns. There were numerous dangerous moments: when the pro-Fāṭimid Buluggīn b. Zīrī [*q.v.*] advanced as far as the gates of Ceuta in 980; the insurrection of Ḥasan b. Gannūn in 985 (he was executed in defiance of the guarantee of security given by Ibn ʿAsḳalād̲j̲a, which aroused a considerable degree of resentment); and the rebellion of Zīrī b. ʿAṭiyya [*q.v.*] in 998, suppressed by ʿAbd al-Malik al-Muẓaffar [*q.v.*], who went on to install a sort of "viceroyalty" of Fās.

Almost all the authors stress the politico-military activity of al-Manṣūr, which was brilliant, and pass too quickly over his internal policy. The famous military reforms have not been correctly assessed and are generally considered an innovation, whereas they were in fact simply a systematic application of the policy inaugurated by the caliph al-Nāṣir, when the latter drew conclusions from the disaffection and subsequent rout of his troops during the campaign of 327/939, that of al-K̲h̲andaḳ (on this expedition and its setbacks, see Chalmeta, *Simancas y Alhandega*, in *Hispania* [1976], 397-464). Al-Manṣūr confined himself—in regard to the ethnic basis of recruitment—to intensifying the policy already applied by al-Nāṣir in 328/939-40 (see Chalmeta, *Simancas-Alhandega: al-año siguiente*, in *Actas Jordanas Cultura Arabe* [1978]) and to enlisting only non-Andalusians. This was therefore an army without attachment to the country, or to its people; a "neutral"

force, a "Foreign Legion". These professional warriors, mercenaries, required payment and were expensive to maintain. The ʿĀmirid novelty consisted in taxing heavily *all* the Andalusians, even the Arab *adjnād*. The desired effects were achieved. Powerful opponents were estranged from the army (thus deprived of prestige, of command, of access to information and to weapons), the considerable sums raised compensated the troops, who could be mobilised at 24 hours notice and who were entirely in his pay. The effect of his action was, primarily (*Tibyān*), 17) to forge for himself an instrument of internal repression and, subsequently, an army which by its very nature constituted an offensive machine of quality, but whose numbers and composition made it unsuitable for use as an occupying force (hence for the consolidation of captured positions). This policy also had unforeseen and undesirable effects in the long term: the impoverishment of the local population; its indifference towards the government; and its lack of military training. The otherwise incomprehensible phenomenon of the collapse of the caliphate, when confronted by the Christians of the north at the time of the *fitna* [*q.v.*], thus becomes understandable and almost inevitable.

The impact of the orthodox "purge" of the library of al-Ḥakam II on the intellectual life of Arab Spain is difficult to assess. It seems inevitable that it took a heavy toll. Many volumes must have been unique in al-Andalus, and their destruction must have prevented, or at the very least delayed, their dissemination. In an indirect fashion, the library of al-Ḥakam also performed, in part, the function of a public library, and it was dispersed during the siege of Cordova; furthermore, the economic crisis which accompanied the *fitna* was hardly propitious for the constitution or enrichment of private libraries.

The campaigns of al-Manṣūr, which assumed a change in relations between al-Andalus and the Christian kingdoms, were to bring about, in the long term, the birth of a new attitude, a new sense of unity in the popular Christian consciousness. Hitherto the Muslim campaigns had only been responses to Christian initiatives. In order to avoid conflict, it was sufficient to abstain from provocation. These campaigns had also been relatively benign, without too drastic effects in terms of destructions and death. After all, the frontier-dwellers had relatives on the other side; they could be caught unawares in their turn; etc. The Christian states had hardly ever struck in any depth, and the danger had never affected the majority of the population. However, the ʿĀmirid raids were not responses, but attacks, and thus difficult to foresee. They were conducted with a ferocity unprecedented in the Spanish context, and left behind a long trail of destruction, of death and of rancour. The Muslims were no longer Hispano-Arabs, but foreigners, different people. These campaigns affected the hinterland, it was no longer simply a matter of frontier-dwellers, of people who had chosen, in exchange for certain fiscal and social advantages, to "live dangerously". All sectors of the population, including those people who preferred a peaceful existence, far from the exposed territories, were affected, capital cities were plundered, etc. Since survival was at stake, any likelihood of coexistence must have seemed absurd. These destructive raids provoked a defensive reflex and a much greater sense of solidarity between the various Spanish Christian kingdoms—Cervera is the proof of this—faced with what was coming to be regarded as a common enemy.

The ʿĀmirid campaigns, which employed a number of Christians, either as mercenaries or as vassal troops, for example in the famous raid against St. James of Compostella, enabled the latter to acquire, from the inside, a useful knowledge of the roads, the resources and the structure of the Cordovan state. This was to prove advantageous, some years later, when the Christians put into effect, in the reverse direction, the ʿĀmirid policy. By this time the damage had been done. The bitterness accumulated as a result of al-Manṣūr's 52 expeditions had engendered the notion that it was essential at the earliest possible opportunity to settle accounts with the adversary, an adversary whose lack of reaction aroused contempt. The new identification between the concepts of Christendom and Spain required the expulsion of the "other Spain" (Chalmeta, *Historiografiá hispana y arabismo: biografía de una distorsion*, in *Rev. Infor. Esp. UNESCO* [1982]).

The systematic policy of infiltration, destabilisation and then reconstruction of the Cordovan state which had enabled al-Manṣūr to seize power and above all to sustain it, led to the annihilation of all the structures constituting a system: political, economic, social, ethnic, cultural, etc. After him, there was to be no more caliphate, great families, surplus budgets, social or ethnic coexistence. The Andalusians were henceforward aware of only one enemy: the Berbers. They forgot the Christians, or saw them as their allies. In view of the fact that al-Andalus did not constitute a feudal society, its chances of resisting the advance of a society which had the necessary mechanics for waging war were limited. According to the *Chronicle of Silos*, "In the year 1002, Almanzor died; he was entombed in Hell". Such was the Christian verdict. It could be extended to the whole of Muslim Spain, for the policies of al-Manṣūr engendered the mental attitude which spelled the doom of Hispano-Arab Islam.

(P. Chalmeta)

MANṢŪR B. NŪḤ, the name of two *amīrs* of the Sāmānid dynasty of Tranoxania and Khurāsān.

1. Manṣūr b. Nūḥ I, Abū Ṣaliḥ, ruler of Khurāsān and Transoxania (350-65/961-76), succeeded his brother ʿAbd al-Malik b. Nūḥ I. Ibn Ḥawḳal is able

to describe the internal conditions of the Sāmānid kingdom under Manṣūr as an eye-witness; cf. especially BGA, ii, 341: *fī waktinā hādhā*; 344 on the character of Manṣūr "the justest king among our contemporaries, in spite of his physical weakness and the slightness of his frame". On the vizier Abū ʿAlī Muḥammad Balʿamī, see BALʿAMĪ, where also information is given about the Persian version of al-Ṭabarī's history composed in 352/963 by or by orders of this vizier. On the rebellion of the commander of the Sāmānid bodyguard, Alp-Tegīn, and the independent kingdom founded by him in Ghazna and on the establishment of Sāmānid rule there in the reign of Manṣūr and the son and successor of Alp-Tegīn, Isḥāḳ (or Abū Isḥāḳ Ibrāhīm) see ALP-TEGĪN and GHAZNA; in Barthold, Turkestan, 251, n. 4, Abū Isḥaḳ Ibrāhīm should be read for Isḥāḳ b. Ibrāhīm (this passage is misunderstood in the Russian original). In other directions also in this reign, the Sāmānid kingdom prospered in its foreign affairs; the fighting with the Būyids [see BUWAYHIDS] and Ziyārids [*q.v.*] was as a rule successful.

2. MANṢŪR B. NŪḤ II, Abu 'l-Ḥārith, ruler in Transoxania only (387-9/997-9). His father Nūḥ II b. Manṣūr, to whom out of all the Sāmānid empire only a portion of Transoxania was left, died on Friday, 14 Radjab 387/July 23, 997 but it was not till Dhu 'l-Ḳaʿda/November that homage was paid to Manṣūr as his successor. The Ghaznawid historian Bayhaḳī, ed. Morley, 803, ed. Ghanī and Fayyāḍ, 640, Russian tr. Arends[2], 776, talks highly of his courage and eloquence; on the other hand, he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to instil terror into any one. The last Sāmānids were quite helpless against the rulers and generals who were quarrelling over the inheritance of the dying dynasty. One of these generals, Fāʾiḳ, succeeded even in taking Bukhārā at the head of only 3,000 horsemen; Manṣūr had to fly to Āmul [*q.v.*], but was called back by Fāʾiḳ. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of the governorship of Khurāsān, which was claimed by various parties; but before the problem had been settled by force of arms, Manṣūr was dethroned on Wednesday, 12 Ṣafar 389/1 February 999, by his generals Fāʾiḳ and Begtūzūn, blinded a week later and sent to Bukhārā.

Frye, Cambridge, Mass. 1954, 98-9; Frye, in *Cambridge history of Iran*, iv, 152-9; C.E. Bosworth, *The Ghaznavids...*, Edinburgh 1963, 45-6; art. SĀMĀNIDS. For the chronology of these reigns, see Zambaur, *Manuel*, 202-3.

(W. BARTHOLD)

AL-**MANṢŪR BI'LLĀH** ʿABD ALLĀH b. ḤAMZA b. SULAYMĀN b. ḤAMZA, Zaydī Imām of the Yemen. Born in Rabīʿ I 561/January 1166, he became *Imām* in 583/1187-8 (some sources have 593/1196-7). He was not a direct descendant of al-Hādī ilā 'l-Haḳḳ Yaḥyā [see ZAYDIDS], but of the latter's grandfather al-Ḳāsim al-Rassī b. Ṭabāṭabā (Kay, *Yaman*, 184-5, 314; Van Arendonk, *Débuts*, 366). Between 532/1137-8 and 566/1170-1, the *Imām* al-Mutawakkil ʿalā Allāh Aḥmad b. Sulaymān had tried to assure Zaydī power over al-Djawf, Nadjrān, Ṣaʿda, al-Ẓāhir and Zabīd (Kay, *Yaman*, 317; *EI*[1] s.v. AL-MAHDĪ LI-DĪN ALLĀH AḤMAD), but his influence had been seriously challenged by Ḥamīd al-Dawla Ḥātim and his son ʿAlī b. Ḥātim [see HAMDĀNIDS] (Smith, *Ayyūbids*, 71-5). When al-Manṣūr bi'llāh was proclaimed *Imām* in Maʿīn al-Djawf (Smith, *Ayyūbids*, ii, 94-5), according to Tritton [*EI*[1] s.v. RASSIDS] after a year of probation, the Ayyūbids had already started to interfere in Yemeni affairs. Tūrānshāh [*q.v.*] had arrived from Egypt in 569/1173-4 and had left in 571/1175-6, while his brother Ṭughtakīn [*q.v.*] had entered the country in 579/1183-4. He came to Ṣanʿāʾ in 585/1189-90, thus limiting the influence of the *Imām* to the north-west. Al-Manṣūr bi'llāh took up his residence in Ṣaʿda, then moved southwards and succeeded in entering Ṣanʿāʾ in 594/1197-8 or the beginning of 595/1198. In the same year, he took possession of Dhamār [*q.v.*] and its neighbourhood, but in 597/1200-1 he was defeated by al-Muʿizz Ismāʿīl, son of Ṭughtakīn, and forced to retreat northward (Ibn al-Athīr, xii, 113). He nevertheless extended his power into the Ḥidjāz, and in 600/1203-4 he restored the fortress of Ẓafār. In 601/1204-5 he ordered Sayyid Ḳatāda b. Idrīs (cf. al-Ḥabshī, *Muʾallafāt*, 47, no. 77) to restore the *mashhad* of al-Ḥusayn (Van Arendonk, *Débuts*, 58/65). About 611/1214, Badr al-Dīn al-Ḥasan b. ʿAlī, grandson of Rasūl (Muḥammad b. Hārūn) who gave the Rasūlid dynasty its name (see Smith, *Ayyūbids*, ii, 85 ff.), made contact with the *Imām*, who had occupied Ṣanʿāʾ for a second time, in an attempt to dislodge the Ayyūbid al-Muʿaẓẓam Sulaymān, grandson of Tūrānshāh. In the end, however, the Rasūlid came to terms with the Ayyūbid. Meanwhile, the *Imām* had also regained possession of Dhamār, and was trying to subject the *Muṭarrifiyya*. According to Kay (*Yaman*, 318, repeated in *Ghāyat al-amānī*, i, 371, n. 4; cf. *ibid.*, 390), this term, very generally accompanied by the epithet *shaḳiyya* "vile", may designate the Sunnīs (cf. B. L. Suppl. 210 II, IV), but see also R. Strothmann, *Die Literatur der Zaiditen*, in *Isl.*, ii, 67-9. Ibn Khaldūn—whose statements on the Yemen need some caution (Kay, *Yaman*, 284)—relates that al-Manṣūr bi'llāh displayed a hostile demeanour towards the ʿAbbāsid caliph al-Nāṣir li-dīn Allāh [*q.v.*], with whom he affected a tone of equality. He sent his *dāʿīs* to the Daylamī [see DAYLAM] and to Djīlān [*q.v.*], with the result that the *khuṭba* was recited among these people in his name (the Caspian Zaydiyya had been merged into the Nuḳtawiyya [see ṬABARISTĀN and AL-ZAYDIYYA in *EI*[1], and cf. *EI*[2], art. ḤURŪFIYYA]. The caliph al-Nāṣir endeavoured to raise the Arabs of the Yemen against the *Imām* by means of subventions, and in 612/1215-16 al-Masʿūd, the last Ayyūbid in the Yemen (see on him Smith, *Ayyūbids*, ii, 88 ff.), sent Kurdish and Turkish troops, headed by ʿUmar b. Rasūl, to meet the Hamdānīs and Khawlānīs of the *Imām*. Al-Manṣūr bi'llāh retreated to the neighbourhood of Kawkabān, where he built a substantial house for himself and quarters for his followers, and even set up a mint. After frequent engagements, a truce was agreed upon in 613/1216-17. Having removed to Kawkabān and then to Ẓafār, al-Manṣūr bi'llāh died in Muḥarram 614/April 1217 in Kawkabān (Redhouse, *El-Khazraji*, 80). For a more detailed survey of the intricate situation in the Yemen during the life of al-Manṣūr bi'llāh, see *Ṣanʿāʾ*, ed. Serjeant, 61-3.

Al-Ḥabshī, *Muʾallafāt*, 37, mentions four *sīras* of al-Manṣūr bi'llāh : one anonymous, one by Muḥyī al-Dīn Muḥammad b. Aḥmad al-Walīd, a third one by ʿAlī b. Nashwān b. Saʿīd al-Ḥimyarī, and a fourth one by Abū Firās Daghtham (= Duʿaym) al-Ṣanʿānī, the *Imām*'s secretary (see Smith, *Ayyūbids*, ii, 8, 78 n. 4, 98). Al-Manṣūr bi'llāh is also the last *Imām* treated by his companion Ḥamīd b. Aḥmad al-Muḥallī in his *Kitāb al-Ḥadāʾiḳ al-wardiyya fī dhikr (manāḳib) aʾimmat al-Zaydiyya* (Brockelmann, I, 325; S I, 560; Strothmann, *Die literatur*, in *Isl.*, i, 361).

Like many other Zaydī *Imāms* before and after him,

al-Manṣūr bi'llāh developed a great literary activity. Besides the 21 titles mentioned in Brockelmann (*GAL*, I, 403, S I, 701; cf. also Ahlwardt, *Verzeichnis*, iv, 4950, XI), al-Ḥabs̲h̲ī, *Muʾallafāt*, 38-48, lists 62 other titles, some of which may be the same as those summarised in B.L. Suppl. nos. 210, 211, 1230 IV-VII. In his *Kitāb al-S̲h̲āfī* (Brockelmann, I, 403, S I, 701; al-Ḥabs̲h̲ī *Muʾallafāt*, 44, no. 53), the *Imām* often quotes from the *Kitāb al-ʿUmda* by al-Ḥillī al-Wāsiṭī (Brockelmann, S I, 710; Van Arendonk, *Débuts*, 15/17 n. 1) and makes use of the *kutub al-ʿāmma*, i.e. collections of traditions favourable to the descendants of Fāṭima and ʿAlī (Strothmann, *Die Literatur*, in *Isl.*, i, 358, ii, 64). Of historical interest might be the following numbers, mentioned by al-Ḥabs̲h̲ī, *Muʾallafāt*. No. 23 is a *daʿwa* to Sunḳur of the year 599/1202-3. This Sunḳur is probably the *atābeg* Sayf al-Dīn Sunḳur, a *mamlūk* of Ṭug̲h̲takīn (cf. Smith, *Ayyūbids*, 97, 98; *G̲h̲āya*, i, 356 ff.). No. 24 is a *daʿwa* to the ʿIrāḳī *amīr al-ḥad̲j̲d̲j̲* Ṭas̲h̲kīn (= Ṭas̲h̲tikīn? cf. A. Hartmann, *an-Nāṣir*, 146), while no. 64 is a *kitāb* to (the same?) *amīr ḥād̲j̲d̲j̲ al-ʿirāḳī*. No. 25 is a *daʿwa* of the *Imām* to (al-Muʿizz) Ismā ʿīl b. Ṭug̲h̲takīn when the latter came down (*ḥaṭṭa*) to Kawkabān, of the year 599/1202-3. (According to *Ṣanʿāʾ*, ed. Serjeant, 62, al-Muʿizz was murdered in 598/1201-2, but see *G̲h̲āya*, i, 380). No. 56 is a *ṣūra kitāb* to the *ʿāmil* of the Banū ʿAbbās in the Yemen, and no. 60 is a *ḳaṣīda* sent to the ʿAbbāsid caliph = al-Nāṣir li-dīn Allāh (see *G̲h̲āyat*, i, 400 n. 1). According to al-Ḥabs̲h̲ī, part of this *ḳaṣīda* is mentioned in Muḥammad Yaḥyā Zabāra, *Aʾimmat al-Yaman*, Taʿizz 1375/1955-6, (but see *Ṣanʿāʾ*, ed. Serjeant, 572), 139-41, and there is a commentary on it by Ḥamīd b. Aḥmad al-Muḥallī, d. 652/1254, entitled *Maḥāsin al-azhār* (Brockelmann, I, 325, S I, 560). No. 63 is a *kitāb* to al-Malik al-ʿĀdil Abū Bakr b. Ayyūb [*q.v.*] of the year 598/1201-2, while no. 79 contains correspondence between the *Imām* and the Banū Rasūl.

(E. VAN DONZEL)

AL-MANṢŪR BI'LLĀH, ISMĀʿĪL, third caliph of the Fāṭimid dynasty in Ifrīḳiya (334-41/946-53). His personality shines with an unparalleled brilliance under the pens of the Ismāʿīlī authors, who, as also the Sunnī chroniclers, show great wonder in relating his exalted deeds and who dwell at length on giving accounts of the battles, rebellions and other bloody events, especially as his name is linked with the defeat of the "man on the donkey", the celebrated K̲h̲ārid̲j̲ī rebel Abū Yazīd [*q.v.*], whose remarkable revolt almost put an end to the caliphate and the ʿAlid line.

Sunnī and Ismāʿīlī authors are at one in acknowledging his exemplary bravery and tenacity in the face of all odds, shown by him during the long and dangerous campaign which he had to lead, at the head of his troops, against the rebel leader, as far as the massif of the Zāb. According to their accounts, Ismāʿīl possessed only good qualities: he was generous and benevolent, level-headed and perspicacious; above all possessing a brilliant eloquence; since his youth, he had devoted himself to piety and study, and was deeply conscious of his high calling as impeccable *Imām* and of his grandeur as a monarch.

Ismāʿīl was born at Raḳḳāda in the first ten days of Ramaḍān 301 January 914, the son of an Ifrīḳiyan slave concubine called Karīma, who had been left by the last Ag̲h̲labid *amīr* Ziyādat Allāh III [*q.v.*] and received as his share by his father, the second Fāṭimid caliph al-Ḳāʾim bi-amr Allāh [*q.v.*]. He was thus an Ifrīḳiyan Arab, for there was as much Ifrīḳiyan blood in his veins through his mother as eastern blood. It was at the death of his grandfather al-Mahdī bi'llāh [*q.v.*] that, in accordance with a rule of Ismāʿīli doctrine, he was secretly designated successor (*ḥud̲j̲d̲j̲a*) of al-Ḳāʾim. He had accordingly to wait a dozen years with no involvement in the great civil and military responsibilities before he became heir presumptive; his public designation took place only on 7 Ramaḍān 334/12 April 946, a mere five weeks before his father's death, with great suffering, in an al-Mahdiyya besieged by Abū Yazīd.

Thus he had to face up to, immediately, the heaviest responsibilities without having served any apprenticeship as ruler. He did not wait for his father's death to engage with ardour in the task awaiting him, sc. to defeat the "accursed one", the K̲h̲ārid̲j̲ī rebel; he sent reinforcements to Sousse, which was undergoing siege, on 11 S̲h̲awwal 334/16 May 946. Two days later, his father died, but Ismāʿīl concealed his death for fear lest Abū Yazīd derive profit from the news and, without announcing his own accession, buried his father secretly, and then, on 19 S̲h̲awwāl 334/24 May 946, began his campaign against the rebel. His lieutenant Kābūn b. Taṣūla soon relieved Sousse, whose siege Abū Yazīd had to relinquish in order to fall back towards al-Ḳayrawān. Encouraged by this victory, Ismāʿīl decided to undertake personally the pursuit of his enemy; he required less than five months to subjugate him.

Having reached the southern part of the town, whose shame-faced notables had rushed out to meet him and to ask for *amān* and pardon for support which they had given to the K̲h̲ārid̲j̲ī chief, Ismāʿīl deployed his troops behind the shelter of a trench (*k̲h̲andaḳ*), from which he doggedly repelled the repeated attacks of the enemy, undertaken from the time of his camp being set up at Mams. Abū Yazīd, accustomed for two years to fighting dispirited troops led by timorous officers, found himself now up against a young *amīr* full of fighting spirit, always ready to expose himself to danger under his ceremonial parasol at the head of troops still weak, but determined to fight fiercely.

The battle for al-Ḳayrawān began at the end of S̲h̲awwāl 334/beginning of June 946, and ended after two months of fierce fighting in the crushing defeat of the K̲h̲ārid̲j̲ī leader, now driven to retreat into the region of the Zāb, the original seat of his revolt. But even though this batle allowed the Fāṭimid ruler to save his kingdom, it did not mean the end of the revolt, but only the beginning of the decline of K̲h̲ārid̲j̲ism. It remained for the Fāṭimid ruler, in order to extirpate the roots, to continue and subjugate its adherents the Kamlān, Birzāl, Huwwāra and other Zanāta elements in their fastnesses of the Aurès and

the Zāb. Also, he still had to kill Abū Yazīd. But to put an end to his formidable enemy, Ismāʿīl was going to need less than one year of untiring warfare.

Thus after an interval of two months used to regroup his forces and to take suitable measures for restoring a country ravaged by war,—sc. a tax holiday for the current year, exemption of his subjects, including the tributaries, from all legal and extraordinary levies, and the undertaking by the state only to levy, during the ensuing years, the tithe and the *ṣadaḳa* in kind—Ismāʿīl went off in pursuit o the enemy. On the spot of his encampment marked off by the trench, in order to immortalise his brilliant victory, he had just marked out a new city, appropriately called Ṣabra al-Manṣūriyya, his future capital.

The rebel had withdrawn into the massif of Sālāt, so that Ismāʿīl had to dislodge him from there and force him to fall back to the north of the Zāb mountains, into the massif of ʿUḳbār, the Dj̲abal Maʿādid. Thus harassed, Abū Yazīd retired into the strongholds of S̲h̲ākir and Kiyāna. It was in this last, which was taken by storm, that he was at last taken prisoner, before dying of his wounds a few days later, in the night of Wednesday-Thursday 28 Muḥarram 336/ August 947. Having suppressed the rebellion and killed the "accursed" K̲h̲āridj̲ī, Ismāʿīl could now make public his father's death and his own accession to the throne with the title of al-Manṣūr bi 'llāh. Then having pacified the Zāb from Masīla [*q.v.*] onwards, where the Banū Kamlān, previously uncompromising participants in the revolt but now submissive, had come to give him their submission, he proceeded to Tāhart in order to re-establish his authority there and to punish the rebellious tribes, notably the Lawāta [*q.v.*]. Did he then dream of leading his troops still further towards the central Mag̲h̲rib with the intention of making an impression of his rival in al-Andalus, ʿAbd al-Raḥmān III and his Zanāta allies? Some Ismāʿīlī sources suggest this. In any case, a serious illness reduced him to inactivity, and when he at last recovered, he took the road towards Ifrīḳiya, on Saturday, 18 Rabīʿ II 336/6 November 947. He only arrived there two months later after a long stay at Sétif amongst his faithful adherents the Kutāma, from whom 14,000 families now accompanied him in order to settle in the new capital al-Manṣūriyya.

It was on Thursday, 27 Dj̲umādā II 336/13 January 948 that Ismāʿīl entered there. His return was celebrated with great pomp, and in his presence was held a parade in the course of which the crowd was amused by the comic spectacle of the "man on the donkey", his skin stuffed with straw and hoisted on to the back of a camel and handed over to the tricks of an ape and monkey.

Thus only 15 months had been necessary for al-Manṣūr to finish off the leader of the K̲h̲āridj̲ī insurrection. But hardly had he got back when he had to go personally to pacify the provinces of the Ḳasṭīliya region and the southern part of the Aurès and to reduce to obedience the Manāwa, Mag̲h̲rāwa, Ḳalāla and other Yafran tribal elements stirred up by Faḍl, a son of Abū Yazīd. The death of Faḍl put an end to all Ibāḍī threats to the Fāṭimid kingdom. For the remainder of his all-too-short reign, less than seven years, al-Manṣūr devoted himself to dealing with internal and external affairs of his realm, which had suffered considerably from the revolt of the "man on the donkey". He resumed the wars of prestige undertaken by his predecessors in the central Mag̲h̲rib against the Muslim Spanish ruler, who had not failed to support Abū Yazīd; and also in Sicily against Byzantium, which had, during the opening stages of the revolt, caused a deterioration of the authority of the Fāṭimids there. Order was soon re-established in Sicily, and rule there was entrusted to the faithful family of the Kalbids [*q.v.*], whilst in the farthest Mag̲h̲rib, the influence of the Spanish Umayyads was contained and the Zanāta held in check by the tragic death of Abū Yazīd, which intimidated them. In the east, al-Manṣūr endeavoured equally to re-establish the prestige of his dynasty; he found time, before his demise, to give further weight to the Ismāʿīlī *daʿwa* against his ʿAbbāsid rivals and in support of its supporters in the Yemen and amongst the Ḳarāmiṭa of al-Aḥsā. It was on his orders that the chief of these last, Aḥmad al-Dj̲annābī, was made in 340/951 to restore to Mecca the Black Stone which his father had carried off after seizing Mecca.

Before dying in his capital, hardly having reached the age of 40, on 28 S̲h̲awwāl 341/18 March 953, Ismāʿīl al-Manṣūr could justly pride himself on having restored in a short period of time, the tottering edifice of the Fāṭimid caliphate in Ifrīḳiya.

Bibliography : The main sources for the campaign of al-Manṣūr against Abū Yazīd are Ibn ʿIdh̲ārī, *Bayān al-mug̲h̲rib*, i, ed. G.S. Colin and E. Lévi-Provençal, Leiden 1948-51; the chronicle of Ibn Ḥammādo, ed. and tr. Vonderheyden as the *Histoire des rois Obeidites*, Algiers 1927; Maḳrīzī, *Ittiʿaẓ al-ḥunafāʾ*, Cairo 1948; Ibn K̲h̲aldūn, *Kitāb al-ʿIbar*, tr. de Slane as *Histoire des Berberes*, ii, 355 ff., iii, 209 ff.

The Sunnī and Ibāḍī sources have been used by R. Le Tourneau, in an exhaustive fashion, in *La révolte d'Abū Yazīd au X^e^ siècle*, in *CT*, no. 2, Tunis 1953. For his part, S.M. Stern has the advantge of having utilised the Ismāʿīlī sources ignored by Le Tourneau in his *EI*² art. *Abū Yazīd.* F. Dachraoui has used all these sources in his *Le Califat fatimide au Maghreb. Histoire politique et institutions*, Tunis 1981, 183 ff., and has especially used the works of the Ḳāḍī al-Nuʿmān, *K. al-Madj̲ālis wa 'l-musāyarāt*, at that time in ms., now ed. Chabbouh, Fequih and Yaalaoui, Tunis 1983, and *K. Iftitāḥ al-daʿwa*, ed. Dachraoui. But the basic source remains the *K. ʿUyūn al-ak̲h̲bār wa-funūn al-at̲h̲ār* of the *dāʿī* Idrīs, from which Dachraoui has published extracts from vol. v as *Taʾrīk̲h̲ al-dawla al-fāṭimiyya bi 'l-Mag̲h̲rib,* Tunis 1981, and M. Yaʿlāwī has published a complete edition of the section devoted to the Mag̲h̲rib, Tunis 1985. (F. DACHRAOUI)

AL-MANṢŪR BI'LLĀH AL-ḲĀSIM B. ʿALĪ AL-ʿIYĀNĪ (d. 393/1003), Zaydī *imām* of Yaman, and a descendant of al-Ḳāsim b. Ibrāhīm al-Rassī [see RASSIDS] but not of the latter's grandson al-Hādī ilā 'l-Ḥaḳḳ, the founder of the Zaydī imāmate in Yaman.

The dates given by late sources for his birth (310/922 or 316/928) are unreliable. More likely he was born between 330/941 and 340/951. Before his arrival in Yaman, he lived in Tardj̲, south of Bīs̲h̲a, in the country of K̲h̲at̲h̲ʿam [*q.v.*]. He gained early a reputation as a religious scholar and was visited for over twenty years by Zaydīs from Yaman urging him to revolt. In 383/993 he rose in the Ḥidj̲āz, claiming the imāmate. The revolt was quickly subdued by the *amīr* of Makka, ʿĪsā b. Dj̲a ʿfar al-Ḥasanī, who arrived together with the rebel in Cairo in Muḥarram 384/February-March 994. The Fāṭimid caliph al-ʿAzīz treated him well, and after a few months permitted him to return to the Ḥidj̲āz together with the *amīr* (al-Maḳrīzī, *Itti ʿāẓ al-ḥunafāʾ*, ed. al-S̲h̲ayyāl, i, Cairo 1967, 278, 281-2). In his first invasion of Yaman, which occured probably in 387/997 or 388/998, he occupied Ṣa ʿda, the stronghold of the descendants of al-

Hādī, and brought Nadjrān and the territories of Khawlān, Wādaʿa and Bakīl under his control. After his departure to Tardj, however, his administration quickly crumbled. In Muḥarram 389/January 999 he returned permanently to Yaman. During the next two years, he extended his sway over much of the highlands of Yaman. In the heyday of his reign, his rule extended from the Bilād Khathʿam to Ṣanʿāʾ and Dhamār, and included the territory of Khawlān al-ʿĀliya, ʿAns, Alhān, Ḥimyar with Shibām Aḳyān, Kuḥlan, Lāʿa, Djabal Maswar and Djabal Tays. His extensive kingdom, however, had no outlet to the sea, and his hopes to gain control of the Red Sea port of ʿAththar, ruled by two, presumably Ziyādid, slave *amīrs*, by diplomacy or military means, came to nought. For his residence in Yaman he came to prefer the town of ʿIyān, a two days' trip south-east of Ṣaʿda, in the territory of the Banū Salmān, who were among his most loyal supporters. He also acquired an estate which he brought newly under irrigation in Wādī Madhāb, between ʿIyān and Ṣaʿda, and built a castle there. In Ṣaʿda he restored the ruined castle of the *Imām* Aḥmad al-Nāṣir, son of al-Hādī, which lay outside the town, for his own use.

His position in the old capital of the Zaydī state was, however, precarious, as the population and the tribes of the neighbourhood were predominantly loyal to the descendants of al-Hādī, whose allegiance to his imāmate proved to be fickle. After his failure to reduce the rebellious Banu 'l-Ḥārith in Nadjrān to obedience in two successive campaigns, the latent opposition came out into the open, led by Ibrāhīm al-Malīḥ b. Muḥammad b. al-Mukhtār b. Aḥmad al-Nāṣir and Yūsuf b. Yaḥyā b. Aḥmad al-Nāṣir. The latter had claimed the imāmate before the arrival of al-Manṣūr with the regnal name al-Dāʿī ilā 'l-Ḥaḳḳ and had relinquished his claim only under duress. Al-Manṣūr's cause was lost when his governor of Dhamār, al-Ḳāsim b. Ḥusayn al-Zaydī, turned against him and captured his son Djaʿfar, governor of Ṣanʿaʾ, in Dhu 'l-Ḥidjdja 391/October 1001. When al-Zaydī voluntarily released his son, al-Manṣūr consented to a peace agreement in Ṣafar 392/January 1002. He declined al-Zaydī's offer to let him keep the rule over Bakīl and Wādaʿa because of the lack of support he had received from them, and withdrew to private life in Madhāb and ʿIyān. Al-Zaydī now supported the imāmate of Yūsuf al-Dāʿī, who gained wide recognition, As al-Manṣūr's qualifications for the imāmate were now impugned by many, he wrote an "Answer to the rejectors" (*Radd ʿalā 'l-rāfiḍa*) against his critics. After a severe illness, he died on 9 Ramaḍān 393/11 July 1003 in ʿIyān. His shrine there was left unharmed in the razing of the town of ʿIyān by the *Imām* al-Manṣūr al-Ḳāsim b. Muḥammad [*q.v.*], in Dhu 'l-Ḳaʿda 1026/November 1617. Later Zaydīs generally recognised him as a full *imām*, no doubt on account of his scholarship, and denied this title to his rival Yūsuf al-Dāʿī.

Of his writings, only excerpts from his *Kitāb al-Tafrīʿ*, a collection of legal opinions, are known to be extant, besides letters and poems quoted in his *Sīra*. Other works are known by title (see A. M. al-Ḥibshī [al-Ḥabshī], *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 21-3). In his teaching, he generally followed the doctrine of al-Ḳāsim b. Ibrāhīm and al-Hādī, although strict followers of the doctrine of al-Hādī like the *faḳīh* ʿAbd al-Malik b. Ghiṭrīf accused him of deviation and stirred up opposition to him.

AL-**MANSŪR BI'LLĀH** AL-ḲĀSIM B. MUḤAMMAD, the *imām* and eponymous founder of the Ḳāsimī dynasty (*al-dawla al-ḳāsimiyya*) of Zaydī *imāms* which dominated much of Yemen from the early 11th/17th century to the outbreak of the republican revolution in 1962. Like almost all recognised Rassī *imāms*, he was descended from al-Hādī ilā 'l-Ḥaḳḳ Yaḥyā b. al-Ḥusayn b. al-Ḳāsim al-Rassī (d. 298/911), who established the temporal authority of the Zaydī imāmate in Yemen. Their aristocratic pedigree notwithstanding, al-Ḳāsim's forbears from the death of Yūsuf al-Dāʿī, the great-grandson of al-Hādī Yaḥyā, kept a low political profile, while members of other branches of al-Hādī Yaḥyā's descendants filled the imāmate. Al-Ḳāsim's greatest claim to history is his initiation of the lengthy but sporadic rebellion against Ottoman rule in Yemen, which rule had been continuous since 945/1538-9 and ended in 1045/1645 with the expulsion of the last Turks from Yemen by al-Ḳāsim's son, Imām al-Muʾayyad bi'llāh Muḥammad.

Al-Ḳāsim was born during Ṣafar 967/November 1559, probably in the northwestern Zaydī district of al-Sharaf. Recognising a strong *imām*-like potential in his noble origins and his marked propensity for scholarship, and having for some time forestalled any serious claimant to the imāmate, the Turks pursued the young al-Ḳāsim into a peripatetic life of secluded study, authorship and preparation for leadership. Formal proclamation of his claim to the imāmate (*daʿwa*) in late Muḥarram or early Ṣafar 1006/September 1597 occured at Ḥadīd (possibly Djadīd) al-Ḳāra, a village in the northern district of Ḥudjūr. It was coupled with an appeal to all Yemenis to rebel against the Ottoman Turks for their irreligious and corrupt rule. At the time, Yemen was governed by Ḥasan Pasha, during whose remarkably long term (989-1013/1581-1604) local Ottoman fortunes had reached a high point: he had secured the loyalty of several Zaydī aristocrats, especially among those descendants of Imām al-Mutawakkil ʿalā 'llāh Sharaf al-Dīn Yaḥyā (d. 965/1558) who survived the mass exile of their family to Istanbul in 994/1586.

The rebellion began modestly in the Zaydī heartlands northwest of Ṣanʿāʾ, in the districts of Ḥudjūr, al-Ahnūm and Ḥadjdja, and spread quickly southwards into the regions of al-Ḥayma, Sanḥān and Ānis, as local chiefs joined, if often more out of personal grievance with the Ottomans than loyalty to the new *imām*. After about a year of demoralising reverses, however, the Turks and their native allies, led principally by Ḥasan Pasha's capable commander, the *ketkhudā* Sinān, regained their balance and turned the tables on al-Ḳāsim. The latter lost all of his earlier gains, including Shahāra, his principal base, where he was besieged for 15 months before escaping to Baraṭ, in the remote north, leaving his eldest son Muḥammad to surrender it and to enter Ottoman captivity at Kawkabān (Muḥarram 1011/June-July 1602). When local support for the Turks was eroded during the governorship of the harsh Sinān Pasha (1013-6/1604-8), al-Ḳāsim resumed the offensive and recaptured many places.

Matters became settled for a time after 11 Dhu 'l-Ḥidjdja 1016/28 March 1608, when, on petition from Djaʿfer Pasha, Sinān Pasha's successor, al-Ḳāsim agreed to a ten-year peace treaty, by which the Ottomans recognised his control over much of northern Yemen and undertook to release his son Muḥammad.

Serious disorders within the Ottoman ranks during 1022/1613 induced al-Ḳāsim to breach the peace with a new offensive in the northern sector. Although at first it succeeded, with even Ṣaʿda falling to the *imām* for a time, Djaʿfer Pasha was able to restore Ottoman unity and achieve some modest gains, including the capture of al-Ḥasan, another of al-Ḳāsim's sons. Thereafter, each party tasted victory and defeat, until Djaʿfer Pasha, learning of his recall and wishing to depart with his province in order, obtained from al-Ḳāsim a one-year truce by which each side recognised the other's gains (1 Radjab 1025/15 July 1616). Hostilities recommenced the following year when Meḥmed Pasha, Djaʿfer's overconfident replacement, declined al-Ḳāsim's offer to extend the truce. Nevertheless, by Djumādā I 1028/April-May 1619 the Turks, dismayed at how well supplied with firearms were the *imām*'s supporters, agreed with al-Ḳāsim to another ten-year peace based upon the mutual recognition of each party's possessions and the release of all prisoners except al-Ḥasan b. al-Ḳāsim.

When the Imām al-Ḳāsim died and was buried at Shahāra in mid-Rabīʿ I 1029/February 1620, he controlled substantial territories in almost all directions from Ṣanʿāʾ, the Ottoman provincial capital. At least five of his sons survived him, and two of them succeeded as *imām*—al-Muʾayyad bi'llāh Muḥammad (1029-54/1620-44) and al-Mutawakkil ʿalā 'llāh Ismāʿīl (1054-87/1644-76). It was during al-Ḳāsim's time that English and Dutch ships first secured limited commercial privileges in Yemen, although negotiations were conducted with Ottoman rather than imāmic officials.

In view of his numerous impressive military gains against four Ottoman governors over more than two decades, it is hardly surprising that most accounts of Imām al-Ḳāsim dwell on his role as a warrior *imām*, so much so that one of his biographers (al-Djurmūzī) arranged the history of his imāmate according to his four "risings (*nahaḍāt*)" against the occupying power. But this should not obscure the fact that he commanded wide respect among fellow-Zaydīs for his scholarly attainments and extensive knowledge of Islamic law and religious practice. Al-Ḥabshī's study of the literary output of the various *imāms* attributes to al-Ḳāsim's authorship some 41 works, a productivity surpassed apparently by only four of his peers. His compositions, both in poetry and in prose, range in length from one or two folios to several hundred and deal mainly with jurisprudence and Zaydī dogma. Although some were produced prior to the proclamation of his *daʿwa*, others must have been composed during the military off-season in his wars with the Turks. Among the more frequently mentioned are *al-Iʿtiṣām*, a substantial work on *ḥadīth* uncompleted at his death; *al-Asās li-ʿaḳāʾid al-akyās*, concerning the fundamental principles of the faith and widely commented upon; *al-Irshād ilā sabīl al-rashād*, a collection of articles; and several compilations of his answers to questions regarding law and dogma.

Bibliography : The principal source for the life of al-Ḳāsim is a biography by Aḥmad b. Muḥammad al-Sharafī (d. 1055/1645-6), an early supporter of the *imām* and one of his officials. A ms. of the second part of this *sīra* (title unknown) at Edinburgh formed the basis for A. S. Tritton's *The rise of the Imams of Sanaa*, London 1925; it is possible that this *sīra* and another title attributed to the same author, *al-Laʾālī al-muḍiyya fī akhbār aʾimmat al-zaydiyya*, are one and the same. However, the best known account of al-Ḳāsim's imāmate remains *al-Durra al-muḍiyya fi 'l-sīra al-Kasimiyya* (and its abridgement, *al-Nubdha al-mushīra*) by al-Djurmūzī (d. 1077/1667), who freely acknowledges his debt to al-Sharafī. Yet a third biography is the anonymous *Sīrat al-Manṣūr bi 'llāh al-Ḳāsim* described by Ayman Sayyid (*Maṣādir taʾrīkh al-Yaman*, Cairo 1974, 332) as a history of Yemen 985-1085/1577-1674. Also rich in details are the *Rawḥ al-rūḥ* by ʿĪsā b. Luṭf Allāh b. al-Muṭahhar (d. 1048/1638), *Ghāyat al-amānī* by Yaḥyā b. al-Ḥusayn (d. *ca.* 1100/1688), al-Ḳāsim's grandson (ed. Saʿīd ʿAbd al-Fattāḥ ʿĀshūr, Cairo 1968, ii, 770-814), and *al-Iḥsān* by al-Mawzaʿī (d. *ca.* 1031/1621), unique among these accounts for its anti-Zaydī bias. For other ms. source materials, especially those of the 12th/18th century, consult al-Ḥabshī, *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 127 f., which work also identifies, describes and locates the mss. of all works attributed to al-Ḳāsim's authorship (pp. 128-36). Ottoman archival materials for al-Ḳāsim's era are extensive.

An important monograph on this figure is by al-Maddāḥ, *al-ʿUthmāniyya wa 'l-Imām al-Ḳāsim*, Djudda 1982. Other published secondary materials include Muḥibbī, *Khulāṣat al-athar*, Cairo 1284/1867-8, i, 485-7, ii, 73-6, 217 f., iii, 293-7, iv, 296-9; Aḥmed Rāshid, *Taʾrīkh-i Yemen we Ṣanʿāʾ*, Istanbul 1291/1874-5, i, 170-223; Wüstenfeld, *Jemen im xi (xvii) Jahrhundert*, Göttingen 1884, 38-48; ʿĀṭif Pasha, *Yemen taʾrīkhi*, Istanbul 1326/1908, 86-96; Zabāra, *Itḥāf al-muhtadīn*, Ṣanʿāʾ 1343/1924-5, 78 f.; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, ii, 47-51; Djurāfī, *al-Muḳtaṭaf min taʾrīkh al-Yaman*, Cairo 1951, 141-4; ʿArshī, *Bulūgh al-marām*, ed. al-Karmalī, Cairo 1939, 65 f.; Muṣṭafā Sālim, *al-Fatḥ al-ʿUthmānī*, Cairo 1969, 338-69; Bayḥānī, *Ashiʿʿat al-anwār*, Cairo 1391/1971-2, ii, 244, n.l.

(J. R. Blackburn)

MANṢŪR al-NAMARĪ, Arab poet of the 2nd/8th century.

1. *Life*. Abu 'l-Faḍl or Abu 'l-Ḳāsim Manṣūr [b. Salama] b. al-Zibriḳān al-Namarī, from the Namir b. Ḳāsiṭ, one of the tribes of Rabīʿa b. Nizār, was born at Ra's al-ʿAyn probably at the beginning of the 2nd/8th century. Since the sources give no precise information regarding the various stages of life, it is useful, indeed essential, to examine his relations with the poets and leading political figures of his time. In fact, Manṣūr al-Namarī knew Muslim b. al-Walīd (d. 208/823) whom he met at a poetry symposium at the home of al-Faḍl b. Yaḥyā b. Khālid al-Barmakī (d. 193/808), Marwān b. Abī Ḥafṣa (d. 182/797), Salm al-Khāsir (d. 186/802) and al-Khuraymī (d. 214/829), whom he met at the court of the caliph Hārūn al-Rashīd (d. 193/809). Two other poets should be mentioned here: the first is a certain Manṣūr b. Bādja, who was sufficiently wealthy to avoid the need to court and praise the great and who, according to some sources, was allegedly the author of the *ḳaṣīda ʿayniyya* dedicated to al-Rashīd by al-Namarī. The second, who is far the most important in the life of al-Namarī is Kulthūm b. ʿAmr al-ʿAttābī (d. 220/835 [*q.v.*]). In fact, it is stated in the sources, and notably in the *Ṭabaḳāt* of Ibn al-Muʿtazz and in the *Aghānī*, that al-ʿAttābī was the "teacher in verse composition" of al-Namarī, who admired him "for his sobriety, his dedication, his vast knowledge and his general erudi-

tion in literary subjects". Moreover, these contacts were not limited to the poetic sphere. It was al-ʿAttābī who introduced al-Namarī to al-Faḍl b. Yaḥyā, who persuaded him to come from al-Djazīra to Baghdād and introduced him to al-Rashīd. Subsequently, rivalry broke out between the two poets, and it was through the good offices of the celebrated Ṭāhir b. al-Ḥusayn (d. 207/822 [*q.v.*]) that they were reconciled.

Besides these poets, Manṣūr al-Namarī was acquainted with numerous political figures. In addition to the Barmakids and especially al-Faḍl Yaḥyā and his brother Djaʿfar (d. 187/803) and the afore-mentioned Ṭāhir b. al-Ḥusayn, he knew al-Faḍl b. al-Rabīʿ b. Yūnus (d. 208/824 [*q.v.*]), an enemy of the Barmakids and himself the vizier of al-Rashīd. Al-Faḍl b. al-Rabīʿ intervened with the caliph to secure the release of the poet, who had been imprisoned for his proclaimed Shīʿī tendencies. A similar intervention was was assured him, we are told, by Yazīd b. Mazyad al-Shaybānī (d. 185/801), the governor of Adharbāydjān. Al-Namarī knew al-Maʾmūn (d. 218/833) then heir to the throne, at whose court he met numerous poets. But according to all the evidence, it was the caliph al-Rashīd who influenced the life and who signed the death warrant of the poet. In fact, al-Rashīd invited al-Namarī to his court, where the latter addressed eulogies to him and received gifts from him. However, when the caliph became aware of his pro-ʿAlid tendencies, he cast him into disgrace, imprisoned him and ordered Abū ʿIṣma, a pro-ʿAbbāsid Zaydī, to torture and execute him. But the latter was only able, on arriving in Mecca, to attend the obsequies of the poet, probably in 190/805.

2. *Works*. Of the hundred-page *Dīwān* attributed by Ibn al-Nadīm (d. 385/995) to the poet and of the anthology or *Ikhtiyār shiʿr al-Namarī* attributed by Yāḳūt (d. 622/1225) to Aḥmad b. Ṭāhir, it has been possible to assemble only 57 fragments totalling 386 verses gleaned from various historical or literary sources, of which the most important are the *Aghānī* (14 pieces), the *Amālī* of al-Ḳālī (d. 356/979) and *al-Tibyān* or *Sharḥ dīwān al-Mutanabbī* by al-ʿUkbarī (d. 616/1219) (10 pieces), the *Ṭabaḳāt* of Ibn al-Muʿtazz, the *Zahr al-adab* of al-Ḥuṣrī (d. 413/1022), the *Muwāzana* of al-Āmidī (d. 371/981) and the *K. al-Ṣināʿatayn* of al-ʿAskarī (d. 395/1005) (7 pieces). On the other hand, two modern authors, al-Rifa-ʿī in *ʿAṣr al-Maʾmūn* (10 pieces) and especially al-ʿĀmidī in the *Aʿyān al-Shīʿa* (15 pieces) have taken an interest, among many others, in Manṣūr al-Namarī.

These 57 fragments, of which 14 may be disregarded since they are also attributed to other poets, are of unequal length; only 15 contain 7 verses or more and may thus be considered *ḳaṣīdas*, 16 others contain one verse, 11 others three verses, and 8 two verses.

The poet uses 10 different metres and, in particular, *ṭawīl, basīṭ, kāmil* and *wāfir* (respectively 20, 8, 8 and 6 fragments) which are the "noble" classical metres; *ramal, munsariḥ, hazadj* and *mutaḳārib*, the "light" metres, are used only once. For rhyme, al-Namarī uses 14 of the 28 letters of the alphabet: most prominently used are *lām, bāʾ, rāʾ, mīm, dāl* and *nūn* (respectively 14, 9, 8, 5 and 4 times), a common phenomenon in Arabic poetry. *Hamza, hāʾ, fāʾ, ḳāf* and *kāf* are used only once.

Moreover, in his poetry (or in that portion of it which is available to us) al-Namarī makes use of the principal poetic genres. While he reserves for satire (*hidjāʾ*), description (*waṣf*), boastfulness (*fakhr*) and lament (*rithāʾ*) only respectively 1, 2, 3 and 4 pieces, on the other hand he devotes to erotic poetry (*ghazal*) 17 fragments which are in fact nothing more than amorous preludes, where the poet evokes youth and looks forward with foreboding the old age. But, according to all the evidence, it was laudatory poetry (*madḥ*) which al-Namarī practised most prominently. In fact, 20 pieces or 200 verses are devoted to *madḥ*, 6 of them for the above-mentioned viziers and governors and 14 for al-Rashīd; noble lineage, munificence, courage, dedication, competence in handling the affairs of the state, in other words the socio-politico-religious qualities commonly recognised, are the principal themes of the laudatory poems and especially of those which are dedicated to the caliph. However, some authors make the remark that al-Namarī is not at all pro-ʿAbbasīd and that he only praises al-Rashīd with prudent dissimulation (*taḳiyya*) as do many poets. Moreover, he displays his Shī-ʿism in 9 pieces totalling 69 verses, emanating exclusively, admittedly, from Shi-ʿī sources. The poet expresses his deep affection for the ʿAlids, mourns al-Ḥusayn (d. 61/681), displays his hatred of the Umayyads and the ʿAbbāsids to whom he denies all merit, and calls for armed revolt with the purpose of avenging the sons of Fāṭima.

In conclusion, in poems of classical structure and in a pure language and a sometimes quite virulent style, al-Namarī practises the principal genres, distinguishing himself in "political" or "opposition" poetry in spite of the contradictions which the majority of classical Arab poets display.

Bibliography: In addition to the works mentioned in the article, see T. al-ʿAshshāsh, *Shiʿr Manṣūr al-Namarī*, Publications of the Arab Academy of Damascus, 1401/1981, and the reviews by Shākir al-Faḥḥām, in *MMIA*, lvi (Oct. 1981), and M. Yaʿlawī, in *Ḥawliyyāt al-Djāmiʿa al-Tūnisiyya*, xxi (1982). (T. EL-ACHÈCHE)

MANṢŪR AL-YAMAN ABU 'L-ḲĀSIM AL-ḤASAN B. FARADJ B. ḤAWSHAB B. ZĀDHĀN AL-NADJDJĀR AL-KŪFĪ, often known as IBN ḤAWSHAB, was the founder of the Ismāʿīlī *daʿwa* in Yaman. Other forms of his name and genealogy are less well attested; later Ismāʿīlī tradition considered him a descendant of Muslim b. ʿAḳīl b. Abī Ṭālib.

He was a Kūfan Imāmī Shī ʿī, probably from Nars, a canal near Kūfa, learned in the religious sciences, and was won for the Ismā ʿīlī cause by a *dā ʿī*, who is identified in a Fāṭimid source as the chief *dā ʿī* Fīrūz and by the Ḳarmaṭī account as Ibn Abi 'l-Fawāris, an assistant of ʿAbdān, the chief *dāʿī* in ʿIrāḳ. According to his own account, as related by Ḳāḍī al-Nuʿmān, he was introduced by the *dāʿī* to the *imām* who, after a training period, sent him together with the Yamanī ʿAlī b. al-Faḍl al-Djayshānī to Yaman. They arrived there early in 268/late summer 881 and separated. Ibn Ḥawshab passed through Ṣanʿāʾ and Djanad and stayed some time in ʿAdan before establishing himself, allegedly in accordance with the instructions of the *imām*, in the village of ʿAdan Lāʿa in territory under the rule of the Ḥiwālids (Yaʿfurids). In 270/883-4 he began his mission, publicly proclaiming the imminent appearance of the Mahdī, and quickly attracted a large following. After an attack on his followers by a local Ḥiwālid garrison he occupied the stronghold of ʿAbr Muḥarram on a mountain below Djabal Maswar (*ca.* 272/885-6). Later, he captured Bayt Fāʾis on Djabal Tukhlā and fortified Bayt Rayb on Djabal Maswar as his residence. He sent the *dāʿī* Abu 'l-Malāḥim as governor to Djabal Tays and conquered Bilād Shāwir, ʿAyyān and Ḥumlān. His first campaign against Shibām, the residence of the Ḥiwālids, failed. Later, he took the town aided by the

treason of a Ḥiwālid client, but was soon forced to leave again. These events took place before 290/903, though their exact dates are unknown. It is evident, however, that he was firmly established before 278-9/892-3 when the *dā*ʿ*ī* Abū ʿAbd Allāh al-Shīʿī [*q.v.*] was sent to him from ʿIrāḳ to be trained for his mission in the Maghrib. He sent *dā*ʿ*īs* also to other countries: al-Haytham, cousin of his wife who was the daughter of a local Shīʿī, to Sind; ʿAbd Allāh b. al-ʿAbbās al-Shāwirī to Egypt; Abū Zakariyyāʾ al-Ṭamāmī (al-Ẓamāmī?) to al-Baḥrayn; and others to al-Yamāma and Hind (presumably Gudjarāt). His *laḳab* al-Manṣūr or Manṣūr al-Yaman, which he was given after his early successes, implied ideas both of a restorer of Yamanī glory and a precursor of the Mahdī (see B. Lewis, *The regnal titles of the first Abbasid caliphs*, in *Zakir Husain presentation volume*, Delhi 1968, 16-18).

In 282/905 ʿAlī b. al-Faḍl, who had initially established himself further south in the Bilād Yāfiʿ, seized the territories of Djaʿfar b. Ismāʿīl al-Manākhī, including the mountain stronghold of al-Mudhaykhira, and thus became a powerful rival of Ibn Ḥawshab. He had acted independently of the latter from the outset, and doubts about his loyalty to the Fāṭimid cause seem to have induced ʿUbayd Allāh al-Mahdī to go to the Maghrib rather than to Yaman as previously planned. ʿAlī's conquest of Ṣanʿāʾ from the Ḥiwālid Asʿad b. Abī Yaʿfur in Muḥarram 293/November 905 gave Ibn Ḥawshab the opportunity to occupy Shibām. ʿAlī came to meet him there; reports that Ibn Ḥawshab met him in Ṣanʿāʾ seem unreliable. The meeting was evidently uneasy, and Ibn Ḥawshab warned his rival against overextending himself by further campaigns. The latter did not heed the advice and had to be rescued by Ibn Ḥawshab when he ran into troubles in a raid to al-Bayāḍ. Ibn Ḥawshab lost Shibām during the occupation of Ṣanʿāʾ by the Zaydī *imām* al-Hādī and his allies, but regained the town before the end of 293/906. He held it during the following years while Ṣanʿāʾ was under the rule of ʿAlī b. al-Faḍl. In Shawwāl 297/June-July 910 his followers briefly entered Ṣanʿāʾ after the withdrawal of the army of al-Hādī, but left again because of their small number. Asʿad b. Abī Yaʿfur occupied Ṣanʿāʾ and repeatedly raided Shibām, but failed to dislodge the followers of Ibn Ḥawshab permanently. In Muḥarram 299/August 911, ʿAlī b. al-Faḍl retook Ṣanʿāʾ and publicly repudiated his allegiance to the Fāṭimid caliph al-Mahdī. He wrote to Ibn Ḥawshab demanding his allegiance. When the latter reproached him for his break with the Fāṭimid cause, he marched against him, taking Shibām and Djabal Dhukhār. After a few battles, he besieged Ibn Ḥawshab in Djabal Maswar for eight months. In Ramaḍān 299/April 912, Ibn Ḥawshab was forced to sue for peace and to surrender his son to ʿAlī b. al-Faḍl as a token of his submission. The latter returned the son to him a year later with a golden necklace. Ibn Ḥawshab died on Djabal Maswar on 11 Djumādā II 302/December 914. This date, given by the continuation of the *Sīrat al-Hādī*, is to be preferred to accounts of later sources suggesting dates two or three decades later. The dispute about the succession which these accounts describe as immediately following Ibn Ḥawshab's death was evidently considerable later.

Ismāʿīlī tradition ascribes to Manṣūr al-Yaman a *Kitāb al-Rushd wa 'l-hidāya*, of which fragments are extant, and a *Kitāb al-ʿĀlim wa 'l-ghulām* also ascribed to his son Djaʿfar. The authenticity of both, and especially the latter, must be considered uncertain, although both appear to belong to pre-Fāṭimid Ismāʿīlī literature. A *Risāla* of an otherwise unknown Ibn Ḥamdūn which "he ascribed to Manṣūr al-Yaman" is quoted by the Yamanī *dā*ʿ*ī* Ibrāhīm al-Ḥamidī (d. 557/1162).

(W. MADELUNG)

AL-**MANṢŪRA**, the principal city of the province of Sind under the Arabs. It was founded by ʿAmr b. Muḥammad b. al-Ḳasim, the son of the celebrated conqueror of Sind, in 120/738 or shortly afterwards (al-Balādhurī, *Futūḥ*, 444; al-Yaʿḳūbī, ii, 389; Caetani, *Chronographia Islamica*, 1507), 47 miles to the north-east of modern Haydarabad [see HIND]. i. Geography, at iii, 407], Al-Bīrūnī's statement, according to which Manṣūra is merely a Muslim name given by Muḥammad b. al-Ḳāsim to the ancient city of Brahmanābād at the time of its conquest (*al-Djamāhir fī maʿrifat al-djawāhir*, Ḥaydarābād, Deccan 1355, 48; *al-Ḳānūn al-Masʿūdī*, Ḥaydarābād, Deccan 1954, 552), is at variance with the earlier traditions, though the sites of the two cities were certainly close to each other. The attribution of the founding of Manṣūra to the Umayyad governor and adventurer Manṣūr b. Djumhūr (Hidayet Hosain, in *EI*[1], s.v.; al-Masʿūdī, *Murūdj*, i, 379; Yāḳūt, *Muʿdjam al-buldān*, s.v.) or to the ʿAbbāsid caliph Abū Dja ʿfar al-Manṣūr (al-Yaʿḳūbī, *Buldān*, 238; al-Idrīsī, *Opus geographicum*, Naples-Rome 1970, i, 169; al-Ḳazwīnī, *Āthār al-bilād*, ed. Wüstenfeld, Göttingen 1848, ii, 83; Elliot and Dowson, *The history of India as told by its own historians* London 1867, i, 136; M. Ikram, *Āb-i kawthar*, Lahore 1968, 28-9) stems from the desire to forge a connection between the name of the city and the name of its founder. There is, however, no need to seek such a connection: Abu 'l-Fidāʾ correctly observed that numerous cities were named Mansūra "as an omen for victory and durability" (*tafāʾulan lahā bi 'l-naṣr wa 'l-dawām*) (Abu 'l-Fidāʾ, *Taḳwīm al-buldān*, ed. Sehier, Dresden n.d, 194; cf. al-Bīrūnī, *al-Ḳānūn al-Masʿūdī, loc. cit.*) Manṣūra was founded in order to provide the Arab conquerors with a secure base from which they could attempt to expand their rule in the hostile Hindu environment.

Classical Arab geographers of the 3rd/9th and 4th/10th centuries describe Manṣūra as a flourishing city, which served as a centre for a number of smaller towns. It was surrounded by a branch of the Indus and therefore looked like an island. Its land was fertile, and it was the scene of both agricultural and commercial activity. The ruler, who is said to have been a scion of Ḳuraysh, bore allegiance to the ʿAbbāsid caliphs and during the second half of the 4th/10th cen-

tury also recognised the authority of the Buwayhids (al-Muḳaddasī, 485). It seems, however, that the central government was unable to exercise effective control over Sind and the rulers of Manṣūra therefore enjoyed considerable independence.

The importance of Manṣūra diminished in later periods. It is briefly mentioned in connection with the conquests of Maḥmūd of Ghazna [*q.v.*] (in 416/1025-6; Ibn al-Athīr, ix, 243) and with the Khwārazmian incursions into India in 623/1226 (Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, Calcutta 1864, 143). Abu 'l-Fidā', who completed his *Taḳwīm al-buldān* in 721/1321, says that all cities called Manṣūra, including that in Sind, were in ruins despite their auspicious name (*loc. cit.*, cf. Badāyūnī, *Muntakhab al-tawārīkh*, Lucknow 1868, 154; tr. W. H. Lowe, Patna 1973, ii, 70). Though this is a reflection on the futility of human endeavour rather than a statement of reliable historical fact, Manṣūra was indeed ruined around Abu 'l-Fidā''s period. The fact that it is not mentioned by Ibn Baṭṭūṭa is an indication in this direction.

The exact location of Manṣūra, the question whether it was built on the site of Brahmanābād or at some distance from it, as well as the precise date and circumstances of its destruction and abandonment, are inconclusively discussed by several authors. (see *Bibl.*).

AL-**MANṢŪRA**, a town in Lower Egypt near Damietta (Dimyāṭ [*q.v.*]), and chief place of the *mudīriyyat al-Daḳahliyya*. The town was founded in 616/1219 by the Ayyūbid sultan al-Malik al-Kāmil [*q.v.*] as a fortified camp against the Crusaders, who had conquered Dimyāṭ in Sha'bān 616/November 1219. Situated at the fork of the branches of the Nile near Dimyāṭ and Ushmūm Ṭannāḥ, the town dominated the two most important waterways of the eastern delta and served as an advanced outpost of Cairo. In July/August 1221, the advance of the Crusaders under King John of Jerusalem and the Cardinal-Legate Pelagius was checked before al-Manṣūra. When al-Malik al-Kāmil ordered the dikes to be pierced and the land flooded, the Franks, who had pitched their camp in the angle between the two branches of the Nile, were forced to surrender and to purchase an unhampered retreat by giving up their Egyptian conquests (7 Radjab 618/27 August, 1221).

During the reign of the last Ayyūbid Tūrānshāh, the Crusade of Louis IX of France came to its end before al-Manṣūra in exactly the same way. In December 1249 the Franks, approaching from Dimyāṭ, appeared before the town and pitched camp again in the angle between the branches of the Nile. On 5 Dhu 'l-Ḳa'da 647/10 February, 1250, they forced the crossing of the Baḥr Ushmūm and penetrated into al-Manṣūra, but were driven back after heavy street fighting. During the ensuing battle before the gates of the town, King Louis found himself facing Baybars I al-Bunduḳdārī [*q.v.*]. After hesitating for several weeks, the Franks beat a retreat, but did not reach Dimyāṭ. On 3 Muḥarram 648/7 April 1250, the King and the remainder of his army were taken prisoner, and on 3 Ṣafar/7 May of the same year were ransomed in exchange for Dimyāṭ.

During the reign of the Mamlūk sultans, the town belonged to the province of al-Daḳahliyya, whose chief place was Ushmūm Ṭannāḥ, the present Ushmūm al-Rummān (Ibn Duḳmāḳ, *Intiṣār*, ed. Vollers, v, 71; Ibn al-Djī'ān, *Tuḥfa*, ed. Moritz, 50; Halm, *Ägypten nach den mamlukischen Lehensregistern*, Wiesbaden 1982, ii, 728). In 933/1527, the ottoman *wālī* of Egypt, Sulaymān Pasha al-Khādim, transferred the provincial court (*dīwān al-ḥukm*) from Ushmūm to the more conveniently situated al-Manṣūra, and made this town into the capital of the al-Daḳahliyya province, which it has remained until today. In 1826, al-Manṣūra also became the centre of a *ḳism* (an administrative subdivision of a *muḥāfaẓa*, renamed *markaz* in 1871) with 60 villages. As a staple place of cotton, harvested in the Delta, al-Manṣūra witnessed an important increase in population: 27,000 inhabitants in 1900: 49,000 in 1917; and 218,000 in 1970.

AL-**MANṢŪRA**, the name of a town, now in ruins, constructed on two occasions by the Marīnid sultans about 3 miles/5 km. west of Tlemcen, during the sieges of that town. The desire to control the commerce in gold from Black Africa terminating at Tlemcen was a continuing concern of the North African policy of the Marīnids and explains their efforts to control this place. The account given by Ibn Khaldūn enables us to reconstruct the history of this typical camp-town. In the year 698/1299, the Marīnid Abū Ya'ḳūb Yūsuf, who had come to lay siege to the capital of Banū 'Abd al-Wād [*q.v.*], which he closely surrounded with entrenchments, set up his camp on the plain which stretches to the west. As it was a long drawn-out blockade, he built a few dwellings for

himself and the leaders of his army and laid the foundation of a mosque. In the year 702/1302 the "Victorious Camp" (*al-Maḥalla al-Manṣūra*), was given the form of a regular town by the construction of a rampart. In addition to the mosque, the dwelling of the chiefs, the storehouses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, al-Manṣūra, or New Tlemcen, as it was called naturally attracted the business of the besieged town. Documents in the archives of the Crown of Aragon attest to the fact that it was visited by Christian merchants, and that a Majorcan consul lived there. After a siege of eight years and three months, the Marīnids in 706/1307 withdrew from Tlemcen following the death of sultan Yaʿḳūb, and al-Manṣūra was methodically evacuated under the direction of Ibrāhīm b. ʿAbd al-Dj̲alīl, the vizier of the sultan Abū T̲h̲abit. The people of Tlemcen were compelled, by the terms of the treaty made by the Marīnids, to respect the rival town for some time later; then, when the entente between the two empires had collapsed, they demolished its building and rendered uninhabitable the entrenchments left at their gate by their hereditary enemy.

The second phase of al-Manṣūra's existence began 30 years afterwards, in 735/1335, with the Marīnid drive eastwards under the great ruler Abu 'l-Ḥasan ʿAlī. Tlemcen, once more besieged, was compelled to surrender (27 Ramaḍān 737/1337). Al-Manṣūra was splendidly restored, according to the indications of Ibn Marzūḳ, Abu 'l-Ḥasan's historian, who had accompanied him to the town, and provided with a *ḳaṣba* and mosque, a *mes̲h̲war*, a house of justice, palaces, baths and caravanserais. It was probably at this time that the great mosque was completed and that the "Victory Palace" was built (747/1344-5). The Marīnid court installed itself there and conducted the affairs of state thence until the defeat of al-Ḳayrawān and the re-installation of the Banū ʿAbd al-Wād at Tlemcen (Dj̲umādā II 749/September 1348).

After the retreat of the Marīnids, al-Manṣūra, once more abandoned, fell gradually into ruins. Today the rampart of terre pisée flanked by square towers is still comparatively intact, but the interior is land under cultivation. There still exists, however, the ruins of a palace, no longer distinct, a section of a paved street, and probably the surrounding wall in terre pisée of the mosque with half of the great stone minaret which rose above the principal entrance. Although the inlaid ceramic work has almost entirely disappeared, the façade of the square tower, which is 120 feet high, is one of the finest pieces of Mag̲h̲ribī art of the 8th/14th century that survives. The columns and the capitals in marble of the mosque are preserved in the Museums of Tlemcen and Algiers.

(G. Marçais - [M. Shatzmiller])

MANṢŪRIYYA, an extremist S̲h̲īʿī sect of the 2nd/8th century named after its founder Abū Manṣūr al-ʿIdj̲lī. The latter is also called al-Mustanīr in some sources, but the reading is uncertain.

Abū Manṣūr was a native of the *sawād* of Kūfa and, a tribesman rather than a peasant, grew up in the desert. Later, he owned a house in Kūfa. The statement of some sources that he belonged to ʿAbd al-Ḳays is not necessarily wrong, since ʿIdj̲l is often counted as a branch of ʿAbd al-Ḳays. His following came chiefly from he traditionally S̲h̲īʿī tribes of ʿIdj̲l, Badj̲īla and Kinda, and included also *mawālī*. Initially, Abū Manṣūr supported the imāmate of Muḥammad al-Bāḳir, exalting him and the *imāms* preceding him to the rank of divinely-inspired Messenger prophets. He taught that the line of such Messengers could never be interrupted. After the death of al-Bāḳir (*ca.* 117/735), he claimed to be his successor and justified this claim, asserting that the Family of Muḥammad were heaven and the S̲h̲īʿa, earth, while he, Abū Manṣūr, was the miraculous "fragment" (*kisf*) fallen from heaven which is mentioned in Ḳurʾān, LII, 44; thus he belonged spiritually to the Banū Hās̲h̲im. He identified those who, according to the Ḳurʾānic verse, would not recognise the miracle and claimed that it was merely "piled up clouds", with the followers of al-Mug̲h̲īra b. Saʿīd, his chief rival among the S̲h̲īʿī *g̲h̲ulāt*. He claimed that he had been raised to heaven and that God had wiped his head with his hand and had told him in Syriac or Persian, "My son, go and teach on my behalf". Abū Manṣūr taught that the first being to be created by God was Jesus and the next ʿAlī. The rest of mankind was composed of light and darkness. He maintained that God had sent Muḥammad with the revelation (*tanzīl*) of the Ḳurʾān and himself with its interpretation (*taʾwīl*). Like other S̲h̲īʿī *g̲h̲ulāt*, he interpreted the Ḳurʾān allegorically, identifying heaven and hell, religious commandments and prohibitions with man, friends and enemies of God in the struggle between good and evil, and repudiating all religious laws.

Abū Manṣūr was vainly sought by K̲h̲ālid al-Ḳasrī, governor of Kūfa, during his campaign of repression against S̲h̲īʿī extremists. He was seized and killed by K̲h̲ālid's successor, Yūsuf b. ʿUmar al-T̲h̲aḳafī (120-6/738-44). After his death, the Manṣūriyya split into two groups. One of them, known as the Ḥusayniyya, recognised his son al-Ḥusayn as his designated successor. They seem to have held that the imāmate would continue among his descendants, since there were to be seven prophets from Ḳurays̲h̲ and seven from ʿIdj̲l. the other group, known as the Muḥammadiyya, recognised the Ḥasanid Muḥammad b. ʿAbd Allāh al-Nafs al-Zakiyya (d. 145/762) as their *imām*. They maintained that al-Bāḳir had appointed Abū Manṣūr to succeed him merely as a temporary depositary (*mustawdaʿ*) in order to forestall discord between the descendants of al-Ḥasan and al-Ḥusayn, just like Moses had appointed Joshua before the succession reverted to the offspring of his brother Aaron. They reported that Abū Manṣūr had stated "I am only a depositary, and have no right to transfer the imāmate to anyone else. The Ḳāʾim is Muḥammad b. ʿAbd Allāh." Al-Ḥusayn b. Abī Manṣūr was captured under the caliph al-Mahdī (158-69/775-85) and put to death by him. Much money was confiscated from him, and many of his followers were now sought out and killed. The sect evidently disintegrated quickly.

The Manṣūriyya were particularly notorious as stranglers of their religious opponents. They are said to have considered murdering them a meritorious act

and to have used the method of strangling or stoning, because they held that iron weapons must not be employed before the coming of the Mahdī. They considered all belongings of their victims as booty and turned over a fifth (*kh̲ums*) to their leader. Al-D̲j̲āḥiẓ describes them as living and travelling together in groups and acting together, beating their drums and tambourines and making their dogs bark in order to cover up the cries of their victims. Abū Manṣūr's "foster mother" (*ḥāḍina*), Maylāʾ, is named as a head of the stranglers in a poem of Ḥammād al-Rāwiya.

(W. Madelung)

MANṬIḲ (a.), a technical term denoting logic.

1. Etymology.

The *LA* gives *manṭiḳ* as a synonym of *kalām* in the sense of "language"; a book is described as being *nāṭiḳ bayyin* as if it does itself speak; God says in the Ḳurʾān (XXII, 62): "And before Us is a Book which tells the truth (*yanṭiḳu bi 'l-ḥaḳḳ*)". This telling of the truth also has a quality of judgment; thus (XLV, 29): "This is Our Book; it pronounces against you in all truth (*yanṭiḳu ʿalaykum bi 'l-ḥaḳḳ*)". Metaphorically, *manṭiḳ* expresses the language of all things, for example the language of birds (Ḳurʾān, XXVII, 16: *manṭiḳ al-ṭayr*). But idols do not speak (XXI, 63, 65). On the Day of Judgment, the accused will not speak (*lā yanṭiḳūn*, LXXVII, 35). It is God who makes every thing speak (*anṭaḳa kulla s̲h̲ayʾ*, cf. XLI, 20-1). It is thus seen that the Ḳurʾān uses this root with a normative quality; it is linked to the expression of truth and to justification. Although man can speak in order to tell lies and nonsense, this is not the case of the Prophet and of those to whom God gives the power of telling the truth. God says of the Messenger (LIII, 3): "And he does not talk through passion (*lā yanṭiḳu ʿan al-hawā*)". The man who has received wisdom (*ḥikma*) speaks according to reason. It is understandable that this root should have been chosen to translate the Greek λόγος (word, reason) and λογικος (reasonable). Man is defined as *ḥayāwān nāṭiḳ*, a reasonable animal, although the *LA* gives a broader sense to the word *nāṭiḳ*, opposing it to *ṣāmit* (that which is silent): every thing which has a voice (*ṣawt*) is *nāṭiḳ*. But it is certain that the articulate language of man distinguishes him from all other animals on the vocal level, just as reason distinguishes him on the spiritual level.

2. Definition of logic (*ʿilm al-manṭiḳ*).

Al-Tahānawī, in his *Dictionary of technical terms*, comments that this is also called the science of balance (*ʿilm al-mīzān*), "because this is a means of weighing arguments (*ḥud̲j̲ad̲j̲*) and demonstrative proofs (*barāhīn*)". Ibn Sīnā calls it "the servant of the sciences" (*k̲h̲ādim al-ʿulūm*), "because it is not a science in its own right, but a means (*wasīla*) of acquiring sciences". But al-Fārābī called it the "mistress" (*raʾīsa*) of sciences "on account of its efficacity (*nafād̲h̲*) in the practice of them". This science, al-Tahānawī continues, "was called *manṭiḳ* because the root *nuṭḳ* (action of speaking, elocution) applies in a general fashion to statement (*lafẓ*), to the perception of universals (*idrāk al-kulliyyāt*) and to the reasonable soul (*al-nafs al-nāṭiḳa*); since this art reinforces the first of these concepts, through the second it follows the path of rectitude (*sadād*), and by its means the perfection of the soul is realised, a word has been derived from this root to designate it, sc. the word *manṭiḳ*. It is the science of rules (*ḳawānīn*) which explains the methods for passing from that which is known to that which is unknown, and the conditions that they pose (*s̲h̲arāʾiṭ*) so that error (*g̲h̲alaṭ*) will not survive in thought (*fikr*). The known extends to the necessary truths of intuition (*ḍarūriyyāt*) and to speculative truths". It may be noted that this distinction corresponds to that made by Aristotle (*Anal. Pr.* i, 10, 76 b 10) between "common axioms" and "entirely demonstrated conclusions".

As for the unknown, "it extends to that which is derived from concepts and to that which is derived from judgments (*taṣawwuriyyāt* and *taṣdīḳiyyāt*)". This definition is, according to al-Tahānawī, preferable to that which holds that the rules of logic "supply knowledge of the methods permitting a passage from the necessary truths of intuition to speculative truths, because this expression at first sight gives the impression of a passage which is effected [directly] by itself (*intiḳāl d̲h̲ātī*), while the more general sense is that this is a passage which is either made directly by itself or through an intermediary (*bi 'l-d̲h̲āt aw bi 'l-wāsiṭa*)". This being so, al-Tahānawī points out the difference between logic and grammar (*naḥw*) on the one hand, and logic and geometry (*handasa*) on the other. Grammar "only explains the general rules which apply to the quality of elocution in Arabic terms, and that in general manner; when one wishes to propound a discourse appropriate to a particular subject (*makhṣūṣ*) in a correct fashion, there is a need for particular modalities (*aḥkām d̲j̲uzʾiyya*) which are drawn from these rules as are normally the derivations (*furūʿ*) of principles (*uṣūl*). But this does not apply in the passage of thought from a known to an unknown. Grammar is of absolutely no assistance in making passages of this kind. The name is true of geometry; it is in posing normative problems (*masāʾil ḳānūniyya*) that it tackles objects of research on configurations, in the sense that it makes these problems the principles of the demonstrations whereby it reasons on these objects. As for the particular notions which intervene in these demonstrations, geometry does not in any way contribute to their understanding." Al-Tahānawī is no doubt thinking here of the Euclidian method which proceeds from problems to arrive at theorems: the given data of the problems serving as a base for the demonstrations. As for the particular notions, they relate to the terms of the syllogism, in particular the middle term which is the cause of the conclusion in the minor. Thus Aristotle writes (*Anal. Post.*, ii, 11, 94 a 27-34): "Why is the angle drawn in the semi-circle a right-angle? Or, from what given information does it follow that is is a right angle?" J. Tricot explains Aristotle's argument in these terms: "We have here the following *Barbara* syllogism, in which B, the middle term, is the cause of the conclusion: Every angle which is the half of two right-angles (B) is a right-angle (A); Every angle drawn in the semi-circle (r) is

the half of two right-angles (B); Every angle drawn in the semicircle (r) is a right-angle (A)." But it is evident that the role of geometry is precisely to show that every angle drawn in the semi-circle is the half of two right-angles. Although it implicitly uses the preceding syllogism, it is not by means of the syllogism that it achieves the end which it seeks. Consequently, the science of logic is different from the demonstrative science of geometry. Logic is definitely defined as one of the instrumental sciences (*min al-ʿulūm al-āliyya*). But if it plays a role in the treatment by each particular science of its own object, what is the object of logic itself?

"It is said," al-Tahanāwī states, "that it has its object (*mawḍūʿ*) concepts (*taṣawwurāt*) and judgments (*taṣdīḳāt*)". It is a process of passing from known concepts or judgments to unknown concepts or judgments, by short or long steps: short when a concept is defined through *ḥadd* or through *rasm*, or when judgment is by analogy (*ḳiyās*), induction (*istiḳrāʾ*), or comparison (*tamthīl*); long, when there is the added consideration that a concept is universal or particular, essential or accidental, or when a judgment is proved by a contrary or contradictory judgment (*ḳaḍiyya wa-ʿaks ḳaḍiyya wa-nāḳiḍuhā*). The logician also enquires into concepts in as much as they give access to judgment when they are considered as subjects (*mawḍūʿāt*) and attributes (*maḥmūlāt*). Those who are concerned with the precise meaning of words (*ahl al-taḥḳīḳ*) reckon that the object of logic is constituted by secondary intelligibles (*al-maʿḳūlāt al-thāniya*) not as such and taken in themselves, nor as existing in thought, for it then becomes an issue to be dealt with by philosophy; but in as much as they give access to the unknown. "In fact, when the universal intelligible notion (*al-mafhūm al-kullī*) exists in thought and it is compared with particular things which are beneath it, it becomes either essentiality (*al-dhātiyya*) because it becomes a part of their quiddity, or accidentality (*al-ʿaraḍiyya*) because it is exterior to them, or specificity (*al-nawʿiyya*) because it is their quiddity itself. That which becomes essentiality is the genre (*djins*) relative to its different individuals, and the specific difference (*faṣl*) relative to another thing. Similarly, that which becomes accidentality is either an attribute (*khāṣṣa*), or a common accident (*ʿaraḍ ʿāmm*), according to two differing points of view". These "intentions" (*maʿānī*), i.e. the fact that the universal notion is essential, accidental or specific, do not belong to exterior entities; they are what becomes of the universal natures (*al-ṭabāʾiʿ al-kulliyya*) when they are found in thought. The same applies to the fact that a judicative proposition is attributive or conditional, that an argument is an analogy, an induction or a comparison, for this is what becomes of the nature of particular relation (*al-nisab al-djuzʾiyya*) in thought. Consequently, these secondary intelligibles are indeed the object of logic. Finally, al-Tahānawī comments that logic is also concerned with "intelligibles of the third degree" (*al-maʿḳūlat al-thālitha*) which are essentially what becomes of secondary intelligibles. Thus the judicative proposition (*ḳaḍiyya*) is a secondary intelligible. But inquiry can be made as to its divisibility (*inḳisām*), on the fact that it contradicts another (*tanāḳuḍ*), or that it is convertible (*inʿikās*), or that a conclusion may be drawn from it (*intādj*); these are intelligibles which fall to the third rank (*al-daradja al-thālitha*). These questions are tackled by Aristotle in *De Interpretatione* and the *Prior Analytics*, whence this separation of intelligibles into three degrees seems to be derived. As for the purpose (*gharaḍ*) of logic, it is the discernment of truth and falsehood (*tamyīz al-ṣidḳ wa 'l-kidhb*) in speech, of true and false (*al-ḥaḳḳ wa 'l-bāṭil*) in beliefs (*fī 'l-iʿtiḳādāt*), of good and bad in actions (*al-khayr wa 'l-sharr fī 'l-aʿmāl*). Its utility (*manfaʿa*) is thus to give access to the theoretical sciences (*al-ʿulūm al-naẓariyya*) and to the practical sciences (*al-ʿamaliyya*).

Such is the survey of logic made by al-Tahānawī at a late date (12th/18th century). It shows the ideas which were current in the Muslim world, following a long history in the course of which it was both attacked and defended, and cultivated in a more or less fruitful fashion. It is necessary now to go further back in time.

3. Discussions of logic among Arab-Muslim thinkers.

A. *Grammar and logic*. It is undeniable, and the work of Aristotle proves this, that there is a connection between logic and language in general, and with the spoken language and its grammar in particular. But can logic, which aspires to be universal to all men, be reduced to the grammar of a language spoken by a particular people? This question was posed in the course of a famous debate described by Abū Ḥayyān al-Tawḥīdī, between the Christian logician Abū Bishr Mattā b. Yūnus and the grammarian and commentator of Sībawayh, Abū Saʿīd al-Sīrāfī. Mattā defines the purpose and utility of logic in the same terms as those employed by al-Tahānawī. Logic is an instrument comparable to a balance, giving awareness of "healthy" discourse (*kalām ṣaḥīḥ*) and distinguishing it from "sick" discourse (*saḳīm*). Abū Saʿīd replies then that, for the Arabic speaker, the quality of discourse is known by the laws of grammar; but if enquiry is to be made by means of intelligence (*ʿaḳl*), it is through reason that that which is false in an idea (*fāsid al-maʿnā*) is to be distinguished from the genuine (*ṣāliḥ*): As for the balance, it gives awareness of what weighs the most, but not the nature of that which is weighed. Furthermore, in bodies, not everything is evaluated by weights; there are measures other than weight. The same applies to intelligibles. This reply is evidently an argument *ad hominem* which does not explain how, alongside the grammar which regulates discourse, reason would pronounce, in intellectual problems, on the truth and falsehood of ideas.

Whatever the case, Abū Saʿīd returns to his thesis: it was a Greek who instituted logic according to the language of his people, on the basis of the technical terminology (*iṣṭilāḥ*) applied to it by the grammarians and of knowledge of the traits which characterise it. How could this logic be imposed upon Turks, Indians, Persians and Arabs? Mattā replies that logic is concerned with intelligibles and ideas; on this level all men are equal. For all men, two and two make four; the same applies to the rules of logic, which is denied by Abū Saʿīd, who declares that these intelligibles are only reached by the language with its nouns, verbs and particles. To preach the study of logic is to preach the study of the Greek language, seeing that the people who spoke it have disappeared and it is known only through translations into Syriac, then into Arabic. But, Mattā replies, the translations preserve intentions and ideas. Abū Saʿīd does not insist and does not pose the problem of the difficulties of translation, unlike al-Djāḥiẓ (*K. al-Ḥayawān*, i, 75-9). Even admitting, he says, that these translations may be accurate, there is no reason to think "that there is no proof other than the intelligence of the Greeks". To claims of the importance of their contribution to the sciences, he replies that "knowledge of the world is dispersed throughout the world among all the inhabitants of the world", without perceiving that by this reasoning there could be a logic common to all.

If the Greeks do not occupy a privileged position, it is also true that Aristotle is not the whole of Greece; he borrowed from his predecessors, and moreover, not all Greeks are in agreement with him. Here Abū Saʿīd touches on a central problem. Logic should suppress differences in opinions and in speculation; it should, as certain *falāsifa* (including al-Fārābī) believed, form a basis of agreement for all philosophers. How could a single man suppress all these differences "which are fundamental and natural"? It seems that Abū Saʿīd has not seen the gravity of his words, for they pose the question of knowing if there are diverse mentalities irreconcilable in their diversity, and if there are among men one or several truths. Should the existence be admitted of as many logics as there are languages and grammars and people? Whatever the implications, he concludes: "The world has remained the same after the logic of Aristotle as it was before." This being so, he attempts to explain that it is by grammar and not by logic that one can understand, for example, all the uses of the particle *wa* (and), which is undeniable, but proves nothing. Mattā replies that the logician has no need of grammar, although the grammarian needs logic: it is by accident that the logician is concerned with words, as it is by accident that the grammarian hits upon an idea (*maʿnā*); but the idea is more noble than the word. On the contrary, for Abū Saʿīd, "grammar is a logic, but it is derived from Arabic; logic is a grammar, but it is included in the language". The difference between the word and the meaning (*maʿnā*), is that the word is a "natural reality" which is effaced with time, while the meaning is a "reality of intelligence" which remains fixed across time. He then shows that, in order to express his logic, Mattā needs the Arabic language and its grammar; ignorance of the meanings of a single particle can invalidate any kind of reasoning.

This being so, Abū Saʿīd leaves the consideration of words in order to turn towards the intellectual content of their meanings. What is to be made of the statement "Zayd is the most virtuous of *his* brothers"? Mattā believes that this is correct. Abū Saʿīd retorts that he is mistaken and that the statement should be: "Zayd is the most virtuous of *the* brothers". Zayd is one of the brothers, but he is not one of his brothers. In fact, "the brothers of Zayd are other than Zayd, and Zayd is exterior to their group." Abū Saʿīd claims that Mattā does not know why one of the propositions is correct and the other false. But he himself does not explain how grammar demonstrates this, and his own explanation, based on the logical notions of inclusion and exclusion, has nothing grammatical about it. It is true that Aristotle does not deal directly with this type of proposition. Nevertheless, Mattā should have been able to reply, for the notion of a brother is relative and according to Aristotle (*Categories*, 7, 6 a 36) relatives "refer to another thing." Zayd, as a brother, is thus the brother of his brothers who are other than him: he is not one of them.

Finally, Abū Saʿīd criticises the logicians for having done nothing more than "frighten people" with the technical terms of genre, type, specific difference, attribute, accident, individual, and especially with the neologisms in *iyya*, such as *ḥalliyya*, *ʿayniyya*, *kayfiyya*, *kammiyya*, *dhātiyya*, *ʿaraḍiyya*, *djawhariyya*, etc. Ibn Ḳutayba had already made a similar critique in the *Adab al-kātib*. Abū Saʿīd mocks the "magical" formulae of the syllogism and concludes, "All of this is nonsense, trifles, incomprehensible and confused propositions. Anyone possessing fine intelligence, good discernment and refined insight, can do without it altogether."

This critique poses more problems than it resolves, in particular that of a grammatical logic. Abū Saʿīd's performance is that of a debater seeking only to have the last word, unperturbed by his self-contradictions and avoidance of questions. But his critique is interesting, in that it shows the existence of a certain Arabism opposed to all things Hellenic, based no doubt on the religious belief that God has revealed the Ḳurʾān in clear Arabic language (XVI, 103).

B. *The doctrine of Ibn Ḥazm*. The Ẓāhirī views of Ibn Ḥazm leads him to deliberate on the nature of languages and to lay the foundations of a Ẓāhirī grammar which takes account only of the linguistic intentions expressly contained in the forms of the language and the speech which makes use of them. He excludes any psychological intention which might remain implied, having no clear indication (*dalīl*) in what is said or written. His object is to understand precisely the Word of God, without the intervention in the exegesis of any consideration, any human interpretation. The reason given to Man has no other purpose than to identify and attest to the revealed truth. Under these conditions, what role remains for logic? In the *K. al-Taḳrīb li-ḥadd al-manṭiḳ*, Ibn Ḥazm justified logic by means of Ḳurʾānic testimonies, in particular the verse LV, 3: "And the Merciful has created man; He has taught him *bayān*". *Bayān*, Ibn Ḥazm explains with reference to the verse II, 31, "And he taught Adam all the names", is "the exposition of all existing beings according to their different manners of being (*wudjūh*), and the account of their meanings (*maʿānī*), the differences of which are the cause that their names necessarily differ; it is the awareness of the way in which the denominated things are allotted their names". It is by this that God distinguishes Man from the beast: "He that does not know the qualifications (*ṣifāt*) of the denominated things which make necessary the distinction of the names, he that does not define all things by their definitions (*ḥudūd*), ignores the greatness of this precious gift... From him that ignores logic, the structure (*bināʾ*) of the language of God remains hidden". Thus the utility of logic is to make understood the Word of God and , thereby, the works of God in creation. However, Ibn Ḥazm recognises that there were formerly sages who wrote books on the connection between denominated things and their names, names "on the meanings of which all peoples are in agreement, even though they use different names to express them, for [human] nature is unique, but the choice [of words] is diverse and varied". Ibn Ḥazm also cites the eight books which constitute the *Organon* of Aristotle, among which he includes the *Rhetoric* and the *Poetics*, giving precedence to the *Isagoge* of Porphyry. But he declares at once, "As for us, our resolution is that of the man who wishes to have his Creator, the Unique and First One, to guide him, who attributes to himself no power or strength except through Him, and who has no knowledge except that which He has taught him". With regard to these books, men are divided into four groups. The first are those who, without having read and studied them, judge them as impious and tending towards heresy. The second see in them nothing but nonsense, but censure those who ignore them. In third place are those who have read them, but with defective intelligence and poor understanding. The fourth group includes those who study them with clear intelligence and with impartial ideas. They establish the oneness of God by necessary demonstrative proofs (*bi-barāhīn ḍarūriyya*); they see the diversity of creators and the action of the Creator in them. The last-mentioned group find that these books have a worth and a utility like that of a "friend of good counsel"

(*al-khadīn al-nāṣiḥ*). Unfortunately, translations render them in obscure terms and arcane usage: "Nor every expression is right for every notion." Consequently, "we shall discuss these meanings in simple, not complex terms, equally comprehensible to the common man and the educated, to the scholar and the ignorant, in the same measure as we have understood them".

This being so, Ibn Ḥazm surveys the eight books of logic. As regard the *Isagoge*, it is sufficient to mention what he says of names which can designate several individuals, or a single one, as the case is presented in Arabic. For example. God says (CIII, 2): "In truth, man is in distress". Here, the name indicates the species (*nawʿ*). A phrase such as "The man whom you know has come to see me", refers to an individual. But the ambiguity can be removed by the use of the collective: *al-nās* instead of *al-insān* (the man), *al-khayl* instead of *al-faras* (the horse). This reference to the Ḳurʾān and to Arabic is worthy of note. Ibn Ḥazm then tackles the works of Aristotle: first the book "of isolated names" (*al-asmāʾ al-murfrada*), i.e. the *Categories* (*Ḳāṭāghūriyās*); these are the ten *maḳālāt*.

He begins by defining synonyms (*al-asmāʾ al-mutawāṭiʾa*) and homonyms (*al-asmāʾ al-mushtarika*), for example, *nasr* which denotes the vulture, a star of the constellation of the Eagle and the shoe of a horse. In this he follows Aristotle, but he gives a different definition to paronyms which he calls "derivations" (*al-asmāʾ al-mushtaḳḳa*), the word πτῶσις used by Aristotle having the sense of a word formed from another. It is thus that one speaks of several denominated things, such as white-clothing, white-bird, white-man. "Each of these denominated things has a definition other than that of the other, and a name which, in its kind, is other than the name of the other; but they are associated in that they are all called "white". They thus concur in one of their qualifications which unites them "in a name derived from these denominated things". To these three types of names, Ibn Ḥazm adds "different names" (*al-asmāʾ al-mukhtalifa*) when the things denominated differ although their meanings concur, as is the case with *sinnawr*, *daywār* and *hirr* which all signify the cat. These names are distinguished from synonyms which are, according to Aristotle, "that which has both community of name and identity of notion, for example, the animal which is both man and ox (*Cat.* 1, 1 a 5)". Then Ibn Ḥazm develops in an independent fashion what Aristotle says about expressions that bear a liaison (*Cat.* 2, 1 a 16 ff.) and which he calls "composed discourse" (*kalām murakkab*). He introduces the very Arab notion of *khabar* (cf. below), as an informative or enunciatory discourse to which corresponds only imperfectly the predicative judgment, and he adds other forms of discourse: the interrogative, the vocative, the optative and the imperative (a useful point of view for the interpretation of the legislative texts of the Ḳurʾān). For example, in order to determine the *aḥkām* of the Law, it is important to know that an enunciative, in the form of a promise or a threat, can have the weight of a command or a prohibition. It is necessary also to distinguish the different qualities of verbal imperatives: the obligatory and constraining imperative (*al-wādjib al-mulzim*); the imperative of incitement (*al-maḥdūd ʿalayhi*) which is not constraining; in addition, the imperative which gives an accord (*al-masmūḥ fīhi*); that which leaves the subject free (*al-tabarruʾ*) as in "Do as you wish"; threat (*waʿīd*) as in the verse (XII, 40): "Do as you wish: truly God sees that which you do"; irony (*tahakkum*), as when God mocks the damned in Hell with the words (XLIV, 49): "Taste [the boiling water]: you are the powerful, the noble one"; the imputation of powerlessness (*taʿdjīz*), as in "Be stone or iron" (XVII, 50); and the prayer, the request, the appeal (*duʿāʾ*). Finally, there is the imperative *kun* (Be!) which brings beings into existence and which is the prerogative of the Creator. On the other hand, where Aristotle speaks of the affirmed or not-affirmed beings of a subject, existing or not existing in a subject, Ibn Ḥazm speaks of a division of names into four groups: bearers (*ḥāmila*) and qualifiers (*nāʿita*), bearers and qualified (*manʿūta*), born and qualified, born and qualifying. "Things" (*ashyāʾ*) of which the names belong to the first group, are like Man as a universal or taken in general (*al-insān al-kullī al-muṭlaḳ*). It is the bearer of all its attributes and it qualifies all the individuals denominated by it; but it is never "born", for "the substance (*djawhar*) bears and is not born ". Here there is estblished the ambiguity which results from the substitution of names for beings. Aristotle had stated clearly, "Among beings, some are affirmed by a subject, while not being in any subject' (*Cat.*, 2 1 a 20). Ibn Ḥazm should have specified that Man, in the sense of a secondary substance (cf. *Cat.*, 5, 2 a 10 ff.) is not in a subject, but as a universal, he can be the predicate of an individual subject: Zayd is a man. The names of the second group are the "substantial individuals" (*al-ashkhāṣ al-djawhariyya*) who bear their qualifications or attributes, but are not born, for example Zayd. The names of the third group are like the knowledge of such a man; it is born in his soul and is qualified by knowledge. The names of the fourth group are like the knowledge which is a kind of quality relative to the soul and which includes such studies as medicine, jurisprudence, etc., particular types of knowledge which it qualifies. What is of interest to Ibn Ḥazm is names, their meanings and their relationship within the language and their usage. The thing denominated is only considered in terms of the name which renominates it.

Turning to the ten categories, Ibn Ḥazm follows Aristotle, while simplifying him. With regard to the substance which is that which exists in itself, he does not say that the primary substance is neither in a subject (ʾεν ʿνποχειμένῳ), not attribuable to a subject (καθʾ ʿνποχειμένον), while the secondary substance, once it has been seen, is not in a subject, but is attributable to a subject. He insists above all on the fact that the substance has no contrary (*ḍidd*). When two substances are taken to be contraries, the contrarity derives from their qualities (*kayfiyyāt*). Consequently, God, having no qualities, is in no sense contrary to His creation. It is no longer possible to talk of more and of less: an ass is not more than another ass in "the-nature-of-the-ass" (*fi 'l-ḥimāriyya*), nor is a goat more than another goat in "the-nature-of-the-goat (*fi 'l-taysiyya*): it is interesting to note this use of abstract terms in *-iyya* which in principle Ibn Ḥazm rejects since they evoke ideas of the Platonic type existing in reality. But here there is little risk of "realism", since the context shows quite clearly that *ḥimāriyya* and *taysiyya* are nothing more than conventional terms which designate the ass and the goat in the sense of secondary substances. Without pursuing further this analysis of the categories, it is evident that logic has so far been presented as a means of classifying words, of specifying their usage and thus developing a method of explaining the Ḳurʾānic text which is often quoted to illustrate, or to support, such-and-such a signification. Nevertheless, in his chapter on the *De Interpretatione*, which he calls "Book of Enunciations" (*K. al-Akhbār*), where there is a discussion of "names joined

to express a new signification (*al-madjmūʿa ilā ghayrihā*)", in other words "composites" (*al-murakkaba*), he denounces pure "nominalism". "All qualifications and enunciations bear on the things denominated, not on the names, for the things denominated are the significations (*al-maʿānī*) and the names are the expressions of them (*al-ʿibārāt ʿanhā*): it is thus well established that the name is other than the thing denominated." Those of a contrary opinion seek support from the verse (LXXXVII, 1), "Praise the Name of your Master...". But they are mistaken, since a thing denominated can only be reached through the name which expresses it; these are the two inseparable relatives.

It is worth paying attention to what Ibn Ḥazm says concerning speech, in order to show how he understands Aristotle in relating him to the notions of Arabic grammar. He renders the word ῥῆμα by *kalima* and says that it is what the grammarians call qualifications (*naʿt*) and the theologians attribute (*ṣifa*). The Greek word in fact primarily signifies speech and discourse (and in second place "verb" in the grammatical sense). J. Tricot writes (*De l'Interprétation*, 81, n. 1), "In the language of Aristotle and also that of Plato (cf. *Sophist*, 262 c; *Cratylus*, 399 b), the word ῥῆμα espresses the act of qualifying a subject or the qualification which is given to it, in a more general sense that which is stated on a subject." The Arab grammarians describe it as "a name derived from a verb (*fiʿl*)". For example: *ṣaḥḥa, yaṣiḥḥu, fa-huwa ṣaḥīḥ* (sense of being in good health). *Kalima* indicates a determined time. Thus *ṣaḥīḥ* is a statement (*ikhbār*) on the present state of health of a person; *ṣaḥḥa* indicates an action in the past (*fi 'l-māḍī*); *yaṣiḥḥu*, a future action (*mustaḳbal*). The word *ṣiḥḥa* (act of being in good health) is a name (*ism*), not a *kalima*. It is what the grammarians call *maṣdar* (verbal noun). These are of two types: (1) the *maṣdar* can express the action of an agent (*fāʿil*) or the movement of a mobile, for example the blow (*ḍarb*) of one who strikes (*ḍārib*); or (2) that which is a qualificative for what is qualified, for example the fact of being in good health (*ṣiḥḥa, maṣdar* or *ṣaḥḥa*) for someone who is in good health and is one of his qualificatives". There are thus two enunciative propositions: (1) Zayd strikes (*ḍaraba*), and (2) Zayd is in good health (*ṣaḥḥa*), which means that Zayd is the agent-subject of the act of striking which is his effectiveness (*taʾthīr*), and that he is the qualified-subject of the fact of being in good health which is "borne" *maḥmūl*) on him. With this incursion into Arabic grammar, Ibn Ḥazm deviates considerably from what Aristotle says.

In his study of the first part of the *Prior Analytics*, Ibn Ḥazm follows Aristotle fairly closely. He speaks of defined propositions (*ḳaḍāyā maḥṣūra*), "those which are preceded by a word (*lafẓ*, cf. below: *sūr*) which explains that they are intended to signify a global extension (*al-ʿumūm*): these are universal propositions; or else a limited extension (*al-khuṣūs*): these are particular propositions. Next come undefined propositions (*muhmala*), "in which the one who enunciates them does not state explicitly that he means a part (*baʿḍ*) of what is offered by the sense of the noun which they contain, or in which nothing prevents them from receiving a signification of global extension". It is evident that it is always the verbal expression (*lafẓ, ism*) which interests Ibn Ḥazm, where Aristotle speaks of attribution to such or such a subject (ὑποκειμένῳ). Furthermore, when he employs the words *mawḍūʿ* (subject) and *maḥmūl* (predicate), he always explains them by terms borrowed from Arabic grammar: *mukhbar ʿanhu* (that on which an enunciation bears) and *khabar* (enunciative). He stresses the means of concluding in an always true and necessary fashion (*intādjan ṣaḥīḥan abadan*). Logical necessity has posed a problem for theologians (cf. below). But here it is reduced to evidence supplied by the sense of words themselves. If the noun "man" denotes living beings, and if the noun "substance" is applied to living and to inanimate beings, it is evident that the noun "substance" applies to man. If this is formalised, the result is a first-figure syllogism of the *Barbara* type: Every living being is substance; man is a living being; thus every man is substance. (N.B. This syllogism is giving in the order major, minor, conclusion, whereas Arab logicians enunciate first the minor, then the major.)

Ibn Ḥazm devotes several paragraphs to judgments and to conditional syllogisms (*sharṭiyya*). Aristotle does not deal with these in the *Prior Analytics*. As in the case of al-Fārābī and Ibn Sīnā, a Stoic influence is evident here. The conditional proposition is either conjunctive (*muʿallaḳa*), or disjunctive (*muḳassama*). Conjunctives are divided into connected propositions (*muttaṣila*): if A, therefore B; and into propositions with exception (*istithnāʾ*) : A (or not A) unless if B. The disjunctive enumerates cases, two or several, exclusive of one another, in a manner which is exhaustive (therefore perfect) or non-exhaustive (therefore imperfect): either A, then B; or C. then D...; now A, thus B. Ibn Ḥazm gives examples, well-known as instruments of the Stoics: if the sun has risen, it is day. The rising sun is the cause (*sabab*) of the day. But he also gives judicial examples, which is to be expected since in the *K. al-Muḥallā*, among other texts, he stresses the obligation to take account of the conditions which are in the Book of God (*al-shurūṭ fī Kitāb Allāh*), without excision or addition. Thus a fornicator who is married, adult and healthy of mind, is punished by flogging; that which intoxicates is forbidden; now the wine of figs, when (*idhā*) it is fermented, intoxicates; thus the wine of figs if fermented is forbidden. The conditional particles are if (*in*), as soon as (*matā mā*), when (*idh mā*), whenever (*mahmā, kullamā*). This being so, Ibn Ḥazm examines the different conditional syllogisms, according to whether their premisses are universal or particular, affirmative or negative.

This brief appraisal shows that, without rejecting logic in general, and that of Aristotle in particular, Ibn Ḥazm reduces it to an instrument for the evaluation of names and of their meanings, whether they are isolated or connected in speech. By this means, genres, types, differences, particulars and accidents serve first to classify names, then, through them, the things denominated, to define the relations between names, and thereby between things denominated. While laying the foundations of a Ẓāhirī grammar, he has transformed the logic of Aristotle into a Ẓāhirī logic. It makes no attempt to advance a theory of quiddities and essences, being designed above all to serve in commentaries on Ḳurʾānic and prophetic texts, and the truth that it propounds is that of legal maxims and of *aḥkām*. It is for this reason that it is illustrated essentially by examples drawn from "Islamic law", and the nature of the work in question is clearly indicated by the full title, *al-Taḳrīb li-ḥadd al-manṭiḳ wa 'l-madkhal ilayhi bi'l-alfāẓ al-ʿāmmiya wa'l-amthila al-fiḳhiyya*.

C. *The theologians and logic.* (a) The Ḥanbalīs. Very attached to the notion that all knowledge comes from God, they admit however that reason (*ʿaḳl*), being a gift of God, is something of which use should be made. This is stated, for example, by al-Barbaharī

[*q.v.*], although he denounces personal and arbitrary use of reasoning. He attacks innovations (*bidaʿ*) as also does Ibn Baṭṭa [*q.v.*], who denounces those "who take ignorant and deluded beings as their masters, although the Lord has given them knowledge" and thus adopt "ideas which have no proof in the Book of God" (*Profession de foi*, introd., ed. and tr. H. Laoust, Damascus 1958). There is no doubt that logic is envisaged in this attack on *bidaʿ*.

But the most important text written by a Ḥanbalī on this subject is the "Refutation of Logicians" (*K. al-Radd ʿalā 'l-manṭiḳiyyīn*) by Ibn Taymiyya [*q.v.*]. The author is at pains to show the uselessness of the logic of Aristotle. For example, a theory of definition teaches nothing about the defined object to those who do not already have knowledge of it: "There is nothing more clear than 'man', but his definition as a reasonable animal encounters objections". There is no need for a definition in forming a concept (*taṣawwur*) of the defined object and of its reality. "All men of good sense in all nations know the realities of things without being taught them by the school of Aristotle." However, Ibn Taymiyya admits nominal definitions which "distinguish between the defined object and that which is other than it". But he reproaches al-G̲h̲azālī for having introduced Greek logic into the *uṣūl al-dīn* and *fiḳh*; he denounces his works *al-Mustaṣfā, Miḥakk al-naẓar, Miʿyar al-ʿilm* and *al-Ḳisṭās al-mustaḳīm*. On the other hand, when the logicians declare that knowledge of judgments can only be formed by the syllogism (*ḳiyās*), this is a negative proposition (*ḳaḍiyya salbiyya*) which is not known through evident intuition (*badīha*), and they have no proof (*dalīl*) of this negation. How can they claim that no man can acquire knowledge of a non-intuitive judgment except through the intermediary of a logical syllogism based on the universal (*bi-wāsiṭat al-ḳiyās al-manṭiḳī al-s̲h̲umūlī*)? The difference between the intuitive and the speculative is relative. A judgment is intuitive when it is sufficient to observe the two terms (subject and attribute) in order to recognise that it is true. But in this men are very different from one another. Some are capable of understanding a conceptual representation with great rapidity. "In such cases the two terms of a perfectly accomplished representation are presented so well that it serves to clarify the concomitants (*lawāzim*) which are not clarified by any other..." It is an error to believe that the medium (*wasaṭ*) is in the thing qualified itself and that it is through its intermediary that the concomitant qualifications are actually established. This logical realism is evidently diametrically opposed to Ḥanbalī doctrine. But if by *wasaṭ* is meant the proof (*dalīl*) on which the conviction of thought (*al-t̲h̲ubūt al-d̲h̲ihnī*) is based, not a conviction bearing on that which is exterior to thought, the differences between men are seen to reappear. "There is no doubt that the thing by which one shows (*mā yustadall bihi*) can be the cause (*ʿilla*) in thought of an affirmation of existence bearing on the thing itself, whether this demonstration is called *ḳiyās* [*q.v.*] or *burhān* [*q.v.*] or any other name; it is then what is called *ḳiyās al-ʿilla* or *burhān al-ʿilla*, or *burhān limā*." But it can be otherwise, and it is then indication pure and simple (*dalīl muṭlaḳ*), called *ḳiyās* or *burhān al-dalāla* and *burhān inna*. "It is a reasoning based on verification by evidence." As Ibn Sīnā expressed it, "it gives the why of judgment, not the why of being" (*Is̲h̲ārāt*, 84). But in this too men differ. It is an error to claim that every speculative item of knowledge must have two premisses: a *dalīl* can have only one, or two, or more than two "according to the need of the one who speculates and demonstrates". In short, logical operations which are the operations of thought in the interior of thought, even when they form judgment of things, are relative to the strength or weakness of the faculty of thought of different individuals. In this sense, the logic of Aristotle, indeed all logic, will be nothing other than methods of exposition of known truths, not rules for transference from a known to an unknown.

In matters of religious tradition, there may be a need for unversal propositions. If, for example, the prohibition of *nabīd̲h̲* is to be explained, the statement will be that *nabīd̲h̲* is an intoxicating drink and every intoxicating drink is prohibited (or, *nabīd̲h̲* is a form of *k̲h̲amr* (fermented drink), and all *k̲h̲amr* is prohibited). Each of these propositions is known through a text (Ḳurʾānic or prophetic) or through consensus (*id̲j̲māʿ*). It there is objection to the minor premiss, the reply will be that it is established in the *Ṣaḥīḥ* of Muslim that the Prophet said, "All intoxicating drink is fermented drink, and all intoxicating drink is forbidden". Those who believe that there is a demonstration by means of two premisses display enormous ignorance, "for the Prophet is of too eminent a rank to have recourse to such a method in the dissemination of knowledge". But it appears that this method may be applied to the purpose of those whose intelligence is of a less eminent rank.

Furthermore, universal propositions are known, in a general manner, not by demonstrative proof (*burhān*), but by an analogy of comparison (*ḳiyās tamt̲h̲īlī*). If the demonstration of the logicians requires a universal proposition, the knowledge that is had of them must have a cause. If one advances the consideration of that which is absent by that which is present (*iʿtibār al-g̲h̲āʾib bi 'l-s̲h̲āhid*, cf. below), or the principle that the judgment borne on a thing is identical to that which is borne on a similar thing, then one has recourse to the analogy in question. If it is said that at the time of particular perceptions, there is produced in the soul a universal knowledge by the grace of the Giver of Intellect (*Wāhib al-ʿaḳl* = *Wāhib al-ṣuwar, dator formarum*; cf. the theory of the Intellect of al-Fārābī) who is the Agent Intellect (*al-ʿaḳl al-faʿʿāl*), or further, that in perceiving particular things, the soul is "disposed" to receive from the Agent Intellect the influx of the universal, the reply will be that it is discourse (*kalām*) on particular things which shows that the universal judgment is knowledge and not opinion or ignorance. Finally, if demonstrative proof supplies only a knowledge of the universal, as the universal is only in thought and there is nothing at the exterior but the determined existent (*mawd̲j̲ūd muʿayyan*), it follows that, through *burhān*, no existent can be absolutely known. The above are a few of the many criticisms levelled by Ibn Taymiyya against the logicians.

(b) The As̲h̲ʿarīs. In his *K. al-Tamhīd*, al-Bāḳillānī distinguishes between various kinds of demonstrations (*istidlāl*): (1) those which divide a thing in the intelligence (*fi 'l-ʿaḳl*) into two or more parts which cannot all be true or all false; proof (*dalīl*) shows that these divisions are false, except one; the intelligence judges as necessarily true that which remains; (2) that which states in that which is presently given (*fi 'l-s̲h̲āhid*), that it is necessary to judge and to qualify a thing by reason of a cause: it must therefore be judged that that which has the same qualification in that which is not presently given (*al-g̲h̲āʾib* = the absent), must have it by reason of this cause (cf. Gardet and Anawati, *Introduction à la théologie musulmane*, 365 and n. 3). "In fact it is impossible (*mustaḥīl*) to establish a proof which shows that which

justifies the qualification by an attribute in the absence of that which renders this attribute necessary." Thus it is known that a body is qualified as a body only by reason of the fact that it is composite; it must therefore necessarily be judged that everything qualified as a body has a composition; (3) that which demonstrates the truth or the falsehood of a thing according to (*ʿalā*) the truth or the falsehood of another thing which is similar to it and included in the same notion. For example, it is shown that God can give back life to the dead by the fact that this is the same thing as giving it to the living. Other types of demonstration depend on the exigencies of lexicography, or on the Ḳurʾān, the Sunna, *idjmāʿ* and the analogical reasoning of jurists (*al-ḳiyās al-sharʿī*) which, likewise, is linked to a "cause" (*ʿilla*, cf. below). "All these traditional proofs (*adilla samʿiyya*) have the same role in the unveiling of truth through *ḳiyās* as have judgments based on reason."

In his *Irshād*, al-Djuwaynī defines just reasoning (*al-naẓar al-ṣaḥīḥ*) as "everything which leads to an understanding of the manner in which the proof proves (*al-ʿuthūr ʿalā 'l-wadjh alladhī minhu yadull al-dalīl*)". As for proofs, "they are that which, through just reasoning with regard to them, lead to the knowledge of that which is not known in a necessary manner by deep-rooted practice." Muslim theologians are confronted here by an important problem, which al-Djuwaynī explains clearly. "Reasoning (*naẓar*) does not engender knowledge as a derived effect (*lā yuwallid al-ʿilm*); it does not necessitate it (*lā yūdjibuhu*) in the way that the efficient cause (*ʿilla*) necessitates its effect. "He thus expresses, on the one hand, the opposition of the Ashʿarīs to the Muʿtazilī doctrine of *tawallud*, and on the other hand, their opposition to the doctrine of the *falāsifa* who, following Aristotle, consider that the minor clause of a syllogism is the cause of its conclusion by the route of essential necessitation. According to the Ashʿarīs, it is God who immediately creates knowledge of the conclusion as soon as the premisses have been posed. This is an application to logic of the doctrine of occasional causes. Logical laws, like the laws of nature, are for God a custom (*ʿāda*), a rule of conduct (*sunna*) which He freely decides to observe, and the correlation between premisses and conclusion is purely *ʿādī*. Nevertheless, for al-Djuwaynī this correlation is rational (*ʿaḳlī*) in the sense that God has created reason and its necessary principles; they cannot be incumbent on Him, since He creates them freely, and it is by the same free act that, having created them, He decides to observe them habitually. (On this question, cf. Luciani, *El-Irchad*, ed. and tr. Paris 1938, 14-15, n. 2.) This problem of logical necessity (*al-ḍarūrī*) is of prime importance to theologians. According to al-Bāḳillānī, in his *Tamhīd*, a knowledge is necessary in two senses. First, it is a knowledge which is attached to the creature itself "by a connection (*luzūm*) of which it cannot rid itself". Doubt is not possible; here there is an act of violence done to the one who knows, for, in the language, the word *iḍṭirār* signifies *ikrāh* (violence), i.e. *ildjāʾ* (constraint). It is in this sense that there is talk of a necessary knowledge. Subsequently, a knowledge can be said to be necessary when there is a need for it, for, in the language, *ḍarūra* signifies *ḥādja* (need). In the first sense, sensible knowledges are necessary, since they are imposed on the five senses. But there is a sixth necessity "which has been originally created in the soul", arriving through none of the senses, such as the knowledge that the soul has of itself, and the knowledge of the principles of necessary intuition, such as that a statement is true or false; two statements posing two contrary objects cannot be simultaneously true or simultaneously false; and this applies in all cases where the intelligence makes a division by which is applied the principle of the excluded third. It is this necessity which renders the conclusion necessary. Here, too, there is recourse to the notion of the *ʿaḳlī* connection. (On the tripartite division of knowledge, cf. *Irshād*, 25, and n. 1.)

In his *Munḳidh min al-ḍalāl*, al-Ghazālī writes that questions of logic have no reference to religion, either to refute it or to prove it. "They are a rational examination (*naẓar*) of methods of proof and of criticism, of conditions relating to the premisses of the demonstrative syllogism (*burhān*) and the manner of disposing them, of the conditions of correct definition and the manner of organising it." However, misuse of this science leads to the belief that the conditions of demonstrative proof necessarily engender certitude (*al-yaḳīn*). On the level of religious problems, it is not possible to unite these conditions in an exhaustive manner. If al-Ghazālī thus warns the theologian against the dangers of logic, he does not fail to recognise in the *Iḥyāʾ ʿulūmʾ al-dīn* that logic, as "enquiry into the manner and conditions of proof and of definition", enters into the science of *kalām*. A branch of philosophy, it is placed in the second rank, after mathematics and before metaphysics (*al-ilāhiyyāt*) and the philosophy of nature (*al-ṭabīʿiyyāt*). In *al-Ḳisṭās al-mustaḳīm*, al-Ghazālī has shown that there are syllogistic demonstrations in the Ḳurʾān, which he is concerned to set in form.

4. The logic of the *falāsifa*.

(a) *Preliminary comment*. The logic of Aristotle depends on judgments of attribution which express the inherence of the predicate in the subject (*omne praedicatum inest subjecto*) when it is a case of essential attributes, or its simple presence in the subject, when the predicate is accidental. The link between the predicate and the subject is marked by the copula "is" ('εστι). But the Arabic language disregards the copula. The verb *kāna* indicates a state at which the subject has arrived, a manner of being; this is why it is followed by the direct case (*naṣb*) such as a *ḥāl*. Grammarians recognise only the relation of the *mubtadaʾ* (inchoative) and of the *khabar* (enunciative). In his commentary on the *Mufaṣṣal* of al-Zamakhsharī, Ibn Yaʿish [*q.v.*] explains that the *mubtadaʾ* is definite in order to show that it is known to the two interlocutors who are in accord in discussing it, while the *khabar* is indefinite in order to show that one of the two is ignorant of that which the other intends to tell him regarding the *mubtadaʾ*. It is thus not a case of a discussion expressing the relation of a predicate to a subject, but of an informative discourse (*ikhbār*) of one who addresses a second person regarding something which is the object of the information (*al-mukhbar ʿanhu*). This concept is close to that of the Stoics in regard to the λεκτόν, that which can be said of a thing. Their dialectic concerns true or false statements relating to things; these statements or judgments ('αξιώματα) comprise a subject (substantive or pronoun) and an attribute expressed by a verb. They never express the relation of two concepts. Although the *khabar* can be something other than a verb (even an entire proposition, e.g. Zayd, his father has come) there is evident kinship between the notions of the Stoics and those of the Arab grammarians. There is even a relic of this where Muslim thinkers, especially in matters of *fiḳh* (cf. below) adopt formulae of the Aristotelian type. It may further be noted that for Ibn Yaʿīsh, the true agent of a proposition is not the grammatical subject, but the one who enunciates

it: before every statement, there is an understood "I say that". Now the verb *ḳāla* (say) is constructed with the particle *in* or *inna* (that). Consequently, it may be said that phrases commencing with *inna*, the particle normally introducing the consecutive of *ḳāla*, testify to the reality of this understood preface.

This being so, the *falāsifa*, under the influence of Aristotle, were obliged to find an equivalent of the copula. The particle adopted for this purpose was *huwa* (he; Zayd, he [is] wise), although its copulative usage is incorrect. As is shown by A. Taha (*Langage et philosophie*, Rabat 1979, 25), "in its ordinary usage, the pronoun *huwa* serves to establish a relating of identity between the subject and the noun (or rather the nominal description) attributed to it, for example, *Ibn Khaldūn huwa muʾallif al-Muḳaddima* (Ibn Khaldun is the author of the *Prolegomena*)". But it is also admitted, for example by al-Fārābī in his commentary on *De Interpretatione* (*Sharḥ K. al-ʿIbāra*, Beirut, 103) that the copula is "potentially" contained in the statement, since the verb to be is "either expressed in a word, or contained in the idea" (*ibid*, 46).

(b) *The commentaries.* The work of the *falāsifa* rests on translations and commentaries on a major, medium and minor scale, of the books of the *Organon*. In the article *Manṭiḳ* in *EI*[1], Van den Bergh wrote, "The Arabic philosophers did not develop this logic, but they have summarised, reproduced and commented on it, often with felicity". But this judgment assumes a positive contribution on their part. It should first be stated, with N. Rescher, that the first generations of Arab writers on logic, including al-Kindī, Abū Zakariyyāʾ, al-Rāzī and al-Fārābī, were in a true sense "the products of Syriac schools". "The Arab logicians thus continue the tradition of the Greeks of the Hellenistic period, and the Muslim Aristotelians, like al-Fārābī and Averroes, are the last link in a chain of which the first members are the masters of the Greek language, such as Alexander of Aphrodisias, Porphyry, Themistius, Ammonius and Joannes Philoponus" (*Al-Fārābī's Short Commentary on Aristotle's Prior Analystics*, Pittsburgh 1963, Introd., 23). Nor should the influence of Galen, and through him of Stoic ideas, be forgotten. Thus in his Short Commentary on the Prior Analytics, al-Fārābī introduces the conditional syllogism which Aristotle does not discuss, although he has promised to do so (*Pr. Anal.* 50a 40 - B 1). On the other hand, the theory of propositions- and modal syllogisms to which Aristotle devotes more than a half of his treatise, is entirely ignored (cf. Rescher, *ibid.*, 38). It is true that al-Fārābī has dealt with this in his *Major Commentary*. In his disdain for modal syllogisms, Rescher sees the influence of the Syriac theologian-logicians. It may be noted that Galen, in his *Institutio Logica*, does not speak of them either.

One original step taken by al-Fārābī in this short commentary is the use of ecthesis (ἔχθεσις: *iftirāḍ*, *apax*, which D. M. Dunlop suggests should be amended to *iftirāḍ* or *ifrāḍ*) in the reduction to the first figure of syllogisms of the second of the Baroco system and the third of the Bocardo. The following is an example of the Baroco system (with the major moved to the head):

Every mobile (M) is corporel (C) Major A
Some existent (X) is not corporel (C) Minor O
Some existent (X) is not mobile (M) Conclusion O.

If some C is not C, it may be said that a part of the Xs is not C. Let this part be called P. We then have: No P is C (E), which provides a second figure syllogism of the Camestres type:

All M is C Major A
No P is C Minor E
No P is M Conclusion E.

But "no P is C" is converted into "no C is P", and by inverting the premisses the result is a definitive reduction from Camestres to Celarent of the first figure, with the second concluding:

No C is P Major E
All M is C Minor A
No P is M Conclusion E.

It is thus proved by this reduction to the first figure that no P is M. But it is given that P is some X. Therefore, it is true that some X is not M.

Rescher also draws attention to the originality of the chapter on analogy or transfer, in relation to what Aristotle says (*Pr. Anal.* ii, 25, 69 a 20 f.) on this reasoning which he calls ʾαπαγωγή. Of the latter, the following is typical: there is an evident major and a minor which is uncertain, but more probable or at least no less probable than the conclusion which is to be demonstrated. For example: Every science can be taught; justice is a science, therefore justice can be taught (syllogism of the first figure in the Barbara system). But al-Fārābī's analysis is different. He revives the distinction between *shāhid* and *ghāʾib* (cf. above). Rescher analyses this reasoning as follows: when A and B are two similars relative to S, and when T is present in A, it may be concluded that T is present in B. Thus experience seems to teach us that bodies, such as animals and plants, are created. This character of being created is transferred from these bodies to the celestial bodies. But al-Fārābī adds, the resemblance must be "relative to that which characterises animals as created," in other words, "a similarity between animals and the heavens on a point which gives truth to the judgment that the character of being created belongs to all these beings", for example the fact that they are all contingent. This requirement recalls a passage in the *Topics* concerning resemblance (i, 17, 108 a 14-17): "it is in the measure that they possess an identical attribute that things are similar." Therefore the bodies of animals and plants are created because they have this character of being contingent. The result is a first figure syllogism of the Barbara type:

All contingent bodies are created
The celestial bodies are contingent bodies
Therefore the celestial bodies are created.

Al-Fārābī is not the only one to achieve originality in his commentaries. Ch. E. Butterworth has also drawn attention to the originality of Ibn Rushd, although the latter is reputed to have followed Aristotle to the letter. He had "the onerous task of introducing the thought of a pagan philosopher to a somewhat closed Muslim community..." And, since he conceives that "teaching by means of demonstration is the apogee of what Aristotle has said on the art of logic, he sees no objection to presenting everything which precedes the exposition of this teaching as preliminaries based on general opinion, provided that this tactic induces his readers to revise their attitude towards the philosophy ... of Aristotle" (*La valeur philosophique des commentaires d'Averroès sur Aristote*, in *Multiple Averroès*. Paris 1978, 117-26). Also worth consulting is the same author's very interesting introduction to the edition of the Middle Commentary on the *Topics* (*Averroes' Middle Commentary on Aristotle's Topics*, Cairo 1979).

(c) *The original treatises.* It is with Ibn Sīnā that logic is genuinely detached from commentary to become an integral part of the great treatises. The *Shifāʾ*, the *K. al-Nadjāt* and the *Ishārāt* all begin with a section devoted to logic. In the *Shifāʾ*, moreover, Ibn Sīnā

follows the order of the treatises of the *Organon* while making them precede the *Isagoge* (*al-Madkhal*), then moving on from the Categories as far as the *Poetics*. Ibrahim Madkour has well demonstrated that this treatise is not a commentary in the manner of those of Ibn Rushd; it presents an original development with "personal hypotheses and analyses of great breadth" (*Le Shifâʾ*, ed. Cairo, General Introd. 16-17). The connections between the *Shifāʾ* and the *Nadjāt* are close. Both respond to the same principal idea: " to combine together logic, physics and metaphysics" (*ibid.*, 19). The *Ishārāt*, which are subsequent to them, further display "the originality and the personality of Avicenna. This is why the work is associated with the ʿOriental Philosophyʾ" (*ibid.*, 22). There has been much discussion of this philosophy, which Ibn Sīnā himself evokes at the beginning of the *Madkhal*. That which remains of the *Manṭiḳ al-Mashriḳiyyīn* (the Logic of the Orientals) offers no new ideas in relation to the other works. Ibn Sīnā shows himself here closely attached to Aristotle. But he himself indicates the sense in which this philosophy is different. "We have revealed in this book the philosophy conforming to that which is in the nature of the spirit (*fi 'l-ṭabʿ*) and to that which expresses the correct point of view (*al-raʾy al-ṣaḥīḥ*) without concessions to those who are associated in this discipline. There is no hesitation in diverging from their authority, as there is hesitation in other books" (*Madkhal*, 10). In fact, he specifies that the *Shifāʾ* is more in agreement with the Peripatetics (*al-Mashshāʾūn*). It could thus be considered, as a result of the works of S. Pinès on the *K. al-Inṣāf*, that the Orientals are the thinkers of Khurāsān who are represented by Ibn Sīnā and that the Occidentals are the Peripatetics of Baghdād; it is the latter that Ibn Sīnā opposes and it is their interpretation of Aristotle that he criticises, on account of the fact that it is marked by the influence of "those Christian simpletons of Baghdād". It is certainly a fact that these Christians, Nestorians in the main, had pursued their studies of logic "in close association with their theological studies, since Greek philosophy provided a rational conceptual analysis, in which the theology of these churches found its articulation" (*The development of Arabic logic*, Pittsburgh 1964, 16).

Nevertheless, in the *Shifāʾ*, there is already a debate conducted with various logicians. Nabil Shehaby (*The propositional logic of Avicenna*, Dordrecht 1973) has sought to discover whether these are Ancient Greeks, contemporary Muslims or Christian Arabs. The author refers to Aristotle, to the Stoics (Chrysippus), to Galien, and he uses information supplied by Diogenes Laertius, Sextus Empiricus, etc. In the posterity of Avicenna, Fakhr al-Dīn al-Rāzī [*q.v.*] and Naṣīr al-Dīn al-Ṭūsī, who both commented on the *Ishārāt*, differ on their interpretation. Al-Rāzī wrote numerous critiques of Avicenna, while acknowledging the scale of his debt to him. Rescher writes with reference to him: "In principle, Fakhr al-Dīn was not only a critic, but also an interpreter and a continuer of the work of Avicenna. He may, nevertheless, be considered the founder of an important 'western school' of Persian logicians ... since it constitutes a focus of opposition to the tradition of Avicenna" (*Development*, 184). On the other hand, al-Ṭūsī (597-672/1201-74) criticised the writings of the "westerners", specifically those of al-Rāzī (*ibid.*, 197). In Spain, the influence of al-Fārābī was dominant, and there are seen perpetuated there the concepts of the school of Baghdād which had been introduced by Muḥammad b. ʿAbdūn (4th/10th century). Worthy of mention among the logicians of this country are Abu 'l-Ṣalt [*q.v.*] and Ibn Ṭumlūs [*q.v.*]. Many of these logicians had maintained an ancient tradition dating back to the Syrians, that of associating the study of logic with that of medicine.

Among the successors of Ibn Sīnā, mention should also be made of Abu 'l-Barakāt al-Baghdādī [*q.v.*] who constructed his *K. al-Muʿtabar* on the tripartite division of logic, physics, metaphysics. He sometimes follows Ibn Sīnā and sometimes attacks him. His method is based on immediate, evident *a priori* forms of knowledge, which, as S. Pinès writes, "disparage the *a posteriori* theses" accepted by the Peripatetics.

This arrangement of treatises poses the problem of deciding whether logic forms an integral part of philosophy (the Stoics), or is only a methodological introduction to it (the Peripatetics). Many Arab logicians support the latter point of view. Ibn Sīnā and the Muslim Neoplatonists reconcile these two concepts: logic is a part of philosophy to which it constitutes an introduction.

There is room here only to draw attention to the interest in the study of logic on the part of scholars of the Arabo-Muslim world in the Middle Ages. Thus it is known that the great mathematician, astronomer, [optical] physicist and physician, Ibn al-Haytham (d. 430/1039 [*q.v.*] wrote on the "seven books". Al-Bīrūnī, a centemporary of Avicenna, considered that the perfect language of science was the mathematical language characterised by the bi-univocity of signifiers and signified. Nevertheless, he mentions in the introduction to his *Pharmacopoeia*, the interesting quality of the *Isagoge* and the four treatises, from the *Categories* to the *Secondary Analytics*. It may be wondered what use would have been made of it in cases where the mathematical language does not apply. In these matters, much research remains to be done.

(*d*) *The logic of the Ikhwān al-Ṣafāʾ*. It is from the 10th to the 14th Epistle that questions of logic are dealt with, after mathematics (arithmetic and geometry), astronomy, geography and music. The Ikhwān speak of the *Isagoge* and the first four books of the *Organon*. Men, being tied to a body, require for its comprehension an elocution formed of articulated words (*nuṭḳ lafẓī*). But, having access to intelligibles, they also possess an elocution formed of thought (*nuṭḳ fikrī*). There are thus two logical sciences to be distinguished: (1) *ʿilm al-manṭiḳ al-lughawī*. and (2) *ʿilm al-manṭiḳ al-falsafī*. It is necessary to start with the first in order to make the second comprehensible; this is the object of the *Isagoge*, the *Madkhal*. Then the logic of thought (*al-manṭiḳ al-fikrī*) is approached. "Terms (*alfāẓ*) are only the signs which designate ideas, which are in the thought of souls: they have been instituted between men, so that each may express to other men what he has in his soul". These ideas are forms which are given to the individual soul by the Creator, through a series of intermediary emanations: from God to the Agent Intellect, then to the universal Soul, then to the primary Matter, then to the human soul. "They are that by which men express themselves in their thought relative to knowable things, having seen material testimony to them by means of the senses." Logical philosophy is thus fundamentally linked to a cosmology in which man is a microcosm (*ʿālam ṣaghīr*) and the world a *makros anthropos* (*insān kabīr*). But he requires verbal logic (*manṭiḳ lafẓī*) in order to convey knowledge to others and to question them. This logic is thus not an art of discovery, but an art of revealing and of answering questions. Its object is to inform and to "popularise" (Rescher).

Lexicographers recognise several senses for the word "genre". For the philosophers, there is only

one: that which is applied "to the ten terms studied in the categories (*al-ʿas͟hrat al-alfāẓ allatī fī Ḳāṭīg͟huriyās*)", which they call *maḳūlat*. Each of these terms is the name of one of the existent genres. All ideas belong within these ten terms. From the starting-point of sensible experience, the philosophers define as matter the things anterior in existence, and as form the posterior things (this is evidently a case of logical anteriority and posteriority; if there is no matter, there is no form for a matter). Then they perceive that form is of two kinds, the one constitutive (*mukawwina*), the other perfective (*mutammima*); they call the first substance and the second accident. They declare that substances, having a unique status (*ḥukm*), constitute a single genre, unlike accidents which vary according to nine genres corresponding to the nine unities. Thus the logical expression of the reality of beings is in harmony with their arithmological expression, fundamental among the Ik͟hwān. Furthermore, this presentation of categories is intimately linked to sensible experience on the one hand, to the terms of the language which express it on the other.

On the *De Interpretatione*, the Ik͟hwān follow Aristotle only approximately. They abridge the work considerably and even mutilate it. On the other hand, they present some original features. E.g. their analysis of propositions which "enunciate universally of a universal" (*De Int.*, 7. 17, a 36-17 b 15); they speak of enunciations of which the truth or falsehood is manifest, and which do not lend themselves to interpretation (*taʾwīl*), as opposed to those which require this, an important issue in Ḳurʾānic exegesis. A proposition is not subject to *taʾwīl*, "when it is delimited (*maḥṣūr*); delimited things are those which are determined by a *sūr*". This word denotes an enclosing wall. Al-Tahānawī explains that it indicates the quantity (*kammiyya*) of individuals in an attributive judgment, such as "every" or "some". This is the προσδιορισμός of Aristotle. This *sūr* can be universal or particular. Thus: Every man is animal (evidently true); no man is animal (evidently false), etc. Propositions which do not have a *sūr* are either indefinite (*muhmal*), for example, the man is (or is not) a writer, or specific, for example, Zayd is (or is not) a writer; the latter is neither true or false, since it is not known which Zayd is being discussed. These ideas (which have already been encountered above) can be traced back to the *Topics* (iii, 6, 120 a 5 f.). It is worth quoting further from this typically Muslim passage, which no doubt refers to what Aristotle says of future contingents, "things which do not yet exist, but have only the potential of being or not being" (*De Int.*, 9, 19 b 2); in this case, affirmation and negation are mutually exclusive, they can be united in the true or the false when care is taken to say for example, of a young child, that he is potentially a writer but not so in fact. This is the sense which is to be given to the statement of the Messenger of God, "I was a prophet when Adam was between the water and the clay". He was a prophet in potential, but not in fact.

As for the syllogism, the Ik͟hwān note that from two judgments united as premisses, a conclusion can only result if there is a common middle term, and they use the analogy of sexual union (*izdiwād͟j*), the conclusion being like the child which is the object and the result. But the presence of a middle term does not suffice; hence the existence of inconclusive modes. The Ik͟hwān explain the syllogism (*ḳiyās*) on the basis of the root *ḳāsa*, which means to measure a thing by using a yardstick of the same type. Thus the scales measure that which has weight (*t͟hiḳl*) with weights (*ṣand͟jāt*). It is the combination of two planes, of an axis, of threads and weights. The same applies to the logical balance which is demonstrative reasoning (*burhān*). What it is composed of and what it is capable of weighing are both shown in the *Categories*; then in the *De Interpretatione*, how it is arranged and adjusted to form a balance and a scale of measure (*miḳyās*); then in the *Prior Analytics*, how this balance should be observed in such a way that it will not be falsified and twisted; finally, in the Secondary Analytics, how the weighing is to be performed and used, with the aim that it will be just and faultless.

In more than one respect, the ideas of Ibn Sabʿīn [*q.v.*] on logic are close to those of the Ik͟hwān. Like them, he insists on term and names. Ideas are that which is produced in the spirit as a result of sensible perceptions. But the absolute monism of Ibn Sabʿīn condemns their plurality; knowledge thus obtained cannot be other than inadequate. In *Budd al-ʿārif*, the beginning of which is devoted to a critical survey of Aristotelian logic, he takes issue with the plurality of terms used by the logicians, in relation to the plurality of perceptions, those of genre, type, difference, particular, accident, and *a fortiori*, of individual. Thus, definition serves no purpose in the acquisition of genuine knowledge, that of the *ʿārif*. "There is no need of it for explaining to another that which one knows". If there is removed from definition everything which belongs to discourse expressed between men, all that remains is the affirmation of an existence. Thus, the defined is the existent (*fa ʾl-maḥdūd huwa ʾl-mawd͟jūd*). Now existence cannot be defined, at least, Ibn Sabʿīn adds ironically, "unless one wishes to call existence definition; we do not discuss these expressions, we seek only true realities". In a word, logic is in relation with the thought of men enclosed in a multiple world, with their awarenesses which bear on the multiplicity of finite and defined beings. But it is useful, as are the sciences which follow its rules, to show the inadequacy of this type of knowledge and the need to pass beyond it to acquire the awareness of the Absolute One which is sought by the *mustars͟hid* under the guidance of his master.

5. Logic in the judicial sciences.

There developed very early in Islam a science of the principles of law (*ʿilm uṣūl al-fiḳh*) of which it could be said that its function in the law was the same as that of logic in philosophy and the sciences. There is thus already a doctrine of reasoning among the *uṣūliyyūn*. From the Ḳurʾānic verse IV, 83, there has been drawn the notion of *instinbāṭ*, elucidation of the divine word, closely related to *istik͟hrād͟j* with the sense of deduction. The commandment in LIX, 2, *fa- ʿtabirū yā ūlī ʾl-abṣār* ("Draw the lesson from this, you who are of clear vision") is also interpreted in the sense of an obligation to reflect by means of analogy. There has thus been from the start the practice of informal modes of reasoning which constitute what is called in a general fashion *id͟jtihād* (personal effort). The great problem was to apply the revealed Law, often "approximately" (*ʿalā ʾl-id͟jmāl*), to detailed questions and to particular cases. First to be used were the *ḥadīt͟hs* of the Prophet which gave clear guidance in detail (*ʿalā ʾl-tafṣīl*). But when this was insufficient, there was recourse to analogy.

It is with the *Imām* al-S͟hāfiʿī that analogy (*ḳiyās*) was properly constituted as a form of reasoning more rigorous than the simple comparison of similar cases (*tamt͟hīl*). Al-S͟hāfiʿī proceeds from the notion that every order given by God has a cause (*ʿilla*), which is more general than the order itself. When a case is presented on which there is no particular text, if it resembles a case dealt with by a text, it falls under the

name judgment on account of this same cause. In his *Risāla*, al-S̲h̲āfiʿī employs the word *maʿnā* in the sense of cause or reason; the *ḳiyās* which is not based on a simple resemblance is that which rests on the fact that "God or his Messenger have in a text (*manṣūṣ*[an]) forbidden or permitted some thing *li-maʿnā* (for a reason). Consequently, when we find some thing similar to this *maʿnā* in a case which in itself is the object of no text of the Book or of the Sunna, we permit it or forbid it, because it is in the *maʿnā* of the permitted of the forbidden" (*Risāla*, ed. A. M. S̲h̲ākir, Cairo 1357/1938, 40). In order to extend the application of the Law, there are disinctions drawn between reasonings *a minori ad majus* (*ḳiyās al-adnā*), *a majori ad minus* (*ḳiyās al-awlā*), *a pari* or *a simili* (*ḳiyās al-musāwāt* or *al-mit̲h̲l*) and *a contrario* (*dalīl al-k̲h̲iṭāb*). But these first elaborations of a judicial logic are contemporaneous with the translation of Greek philosophy. Also no doubt perceptible, in this distinction of arguments, is the influence of the *Topics*, ii, 10 and iii, 6, for example, "An argument may be drawn from more or from less or from the same degree (119 b 16)". The influence of the methodology of Roman law is indisputable, and comparisons could also be drawn with the methods of Rabbinic law.

It is with al-G̲h̲azālī, in his introduction to the *Mustaṣfā*, that Greek logic is genuinely introduced into judicial speculations. For him there is no logic peculiar to the science of law, and therefore use is made of categorical syllogisms as well as conjunctive and disjunctive conditional syllogisms. Jurists reason only on texts or on cases which may be subjected to texts. The conclusion must demonstrate under which of the *aḥkām* (prescribed, forbidden, advisable, inadvisable and permitted) the case being considered falls. But on this point there is a certain parallelism between the logic of the jurists and that of the philosophers. Thus the modality of necessity corresponds to that of obligation; that of the impossible to that of the forbidden; and that of the possible to that of the permitted.

The *uṣūliyyūn* accept other principles such as *istiḥsān* and *istiṣlāḥ* [*q.vv.*]. There is debate on the one hand as to their value (some reject them), and on the other as to whether these are forms of reasoning or simply more or less subjective principles of evaluation without genuine logical foundation. In a thoroughly documented article, based in particular on the testimony of the Ḥanafīs al-Bazdawī and al-Sarak̲h̲sī and of the Ḥanbalī Ibn Taymiyya, G. Makdisi has arrived at the conclusion that "*istiḥsān* can be the abandonment or modification of reasoning by analogy, being based either on a disposition in the Ḳurʾān, the *sunna* or consensus which is opposed to it, or on another reasoning by analogy which contradicts it" (*Legal logic and equity in Islamic law*, in *The American Journal of Comparative Law*, xxxiii/1 [1985]). *Istiḥsān* is thus not a subjective preference in favour of what is considered equitable; it is a preference based on an *ʿilla* which is either a text, or the fact that one analogical reasoning has more force than another. But this point is controversial.

Bibliography: In addition to the works mentioned in the text, attention is due above all to the work of N. Rescher, *The development of Arabic logic*, Pittsburg 1964, of which the second part consists of a list of the Arab logicians, with biographical data, lists of logical works, bibliography and assessment of their status in Arab logic. By the same author, who is in fact the chief promotor of studies in Arabic logic, see also *Studies in the history of Arabic logic*, Pittsburg 1964; *Studies in Arabic philosophy*, Pittsburg 1966; *Galen and the syllogism* (containing the Arabic text with an annotated English translation of *Treatise on the fourth figure of the syllogism* by the mathematician Ibn al-Ṣalāḥ), 1966; *Al-Farabi, an annotated bibliography*, Pittsburg 1962; R. MĀNŪ (and also Ḳaṣr Mānū or Tīn Mānū), ancient locality situated on the Mediterranean coast, in the western part of the plain of D̲j̲afāra, between Ḳābis (Gabès) and Aṭrābulus (Tripoli), and on the old route leading from Ifrīḳiya to Egypt.

In our opinion it should be identified with *[Ad] Ammonem* of the Ancients, a place situated about 30 km. west of the town of Sabratha, Ṣabra of the old Arabic sources. It was here that there took place, in 283/896-7, a great battle between the army of the Ag̲h̲labid *amīrs* and that of the great Ibāḍī Berber tribe of Nafūsa [*q.v.*]. The latter people who lived in the D̲j̲abal Nafūsa to the south-west of Tripoli (it was already called Nauusi by Corippus towards the middle of the 6th century A.D.), were already dominating the western part of the D̲j̲afāra before the Arab conquest, having their main centre in the town of Sabratha. The Nafūsa, being Christians in this period, made their influence felt as far as Tripoli, whose inhabitants appealed for their help, in the year 22/642-3, against the Arab general ʿAmr b. al-ʿĀṣ. Later on, after the Arab conquest of Tripolitania, the Nafūsa, who became orthodox Ibāḍī Muslims and transferred their political centre to the D̲j̲abal Nafūsa, continued to extend their domination over the plain of the Western D̲j̲afāra, thus assuring themselves of control of the communication routes running along the coast between Ifrīḳiya and Egypt. In 267/879-80 Abū Manṣūr Ilyās, chief of the Nafūsa and at the same time governor of this tribe nominated by the Rustamid *imāms* of Tāhart, was called upon for help, as the true master of the hinterland of Tripoli, by the inhabitants of this town, which was besieged by the Ṭūlūnid al-ʿAbbās b. Aḥmad b. Ṭūlūn [*q.v.* in Suppl.]. Sixteen years later, in 283/896-97, the Nafūsa barred near Mānū the

passage of the Aghlabid *amīr* Ibrāhīm b. Aḥmad who was leading an expedition against Egypt. In the bloody battle between the two armies, the troops of Nafūsa were annihilated, and the power of his people broken. From this time onwards, they were to withdraw into the mountains of the Djabal Nafūsa.

MANŪČIHRĪ, Abu 'l-Nadjm Aḥmad b. Ḳawṣ b. Aḥmad, Dāmghānī, was the third and last (after ʿUnṣurī and Farrukhī [*q.vv.*]) of the major panegyrists of the early Ghaznawid court.

Very little is known of his life, and that little is derived exclusively from his poetry. Later *tadhkira* writers have expanded and distorted this modicum of information with a few, readily refuted speculations. What can be ascertained with reasonable certainty is that he spent his youth, presumably in Dāmghān, acquiring an encyclopaedic knowledge of Persian and Arabic poetry and otherwise honing his poetic skills in preparation for a career as a court panegyrist. Nineteenth-century scholars speculated that Manūčihrī's first patron was the Ziyārid prince Falak al-Maʿālī Manūčihr (d. 420/1029 [see ziyārids]), from whose name the poet took his own pen name. Yet there is no mention of Falak al-Maʿālī in what survives of Manūčihrī's *dīwān*, nor any evidence that he was ever a patron of poets.

Between the years 422/1031 and 424/1033 he dedicated poems to deputies of Sultan Masʿūd then at Ray, and he appears to have gone to the court of Ghazna some time after Aḥmad b. ʿAbd al-Ṣamad Shīrazī had replaced Aḥmad b. Ḥasan Maymandī [*q.v.*], who died in the spring of 424/1033, as Masʿūd's vizier. He remained at Ghazna until the death of Masʿūd in 432/1041, subsequent to his defeat at Dandānḳān [*q.v.* in Suppl.] at the hands of the Saldjūḳs. He may himself have died about this time. Certainly, no poems of his survive that refer to events or persons after that date. (There is a detailed examination of Manūčihrī's biography in ch. 2 of J.W. Clinton, *The Divan of Manūchihrī Dāmghānī*, see Bibl.).

The latest and best modern edition of Manūčihrī's works (Dabīr-Siyāḳī, Tehran 1347/1968) contains some 2,800 *bayts*, of which the majority are in the form of panegyric *ḳaṣīdas* (57) and *musammaṭs* (11) — the latter a form which Manūčihrī introduced to the canon of Persian forms — and the remainder make up a handful of *ghazals*, *rubāʿīs*, brief fragments and individual lines. There are no indications that Manūčihrī ever attemped the *mathnawī*. Of the panegyrics, roughly a third are addressed to Masʿūd, and most of the remainder to major officials of his court. A few of Manūčihrī's patrons cannot be identified, or can be identified only with difficulty, and several of his poems either identify no patron at all or do so only with the ambiguous *shahriyār* "ruler" (Dabīr-Siyāḳī, introd.).

Manūčihrī's poetry has several qualities which distinguish it from the work of his contemporaries. His enthusiasm for Arabic poetry, expressed in imitations of *djāhiliyya* style *ḳaṣīdas* and frequent allusions to Arab poets, was unknown among the Persian-writing poets of his day. Even more distinctive, however, is his delight and great skill in depicting the paradisial beauty of the royal garden at *Nawrūz* and *Mihrgān*, and the romantic and convivial scenes associated with them, in the exordium (*naṣīb*, *tashbīb*) of the *ḳaṣīda*. Moreover, he displays a gift for mythic animation in elaborating such concepts as the battle of the seasons (poem 17) and wine as the daughter of the vine (poems 20, 57, 58, 59 and 60). Though it is not unique to him, Manūčihrī's engaging lyricism is remarked upon by all commentators.

MANŪF, name of two towns in the Nile delta.

1. Manūf al-Suflā, near the present Maḥallat Manūf in the *markaz* of Ṭanṭā, in Byzantine times a bishopric in Coptic Panouf Khīt, in Greek Ὀνοῦφις ἡ κάτω. After the Arab conquest, the town became the centre of a *kūra* [*q.v.*] (Ibn Khurradādhbih, 82; Ibn al-Faḳīh, 74; al-Yaʿḳūbī, 337), but seems to have disappeared already in the Fāṭimid period (cf. al-Ḳalḳashandī, *Ṣubḥ*, iii, 384). It was replaced by Maḥallat Manūf which, since the administrative reform of the caliph al-Mustanṣir and the latter's vizier Badr al-Djamālī [*q.vv.*], has belonged to al-Gharbiyya province (Ibn Mammātī, *Ḳawānīn*, ed. ʿAṭiyya, 183). In Mamlūk times, the tax-farm lands of the town were given as *iḳṭāʿ* [*q.v.*] to Mamlūks of the sultan and to officers of the guard (Ibn Duḳmāḳ, *Intiṣār*, ed. Vollers, v, 97), but later revoked in favour of the *dīwān al-mufrad* (Ibn al-Djīʿān, *Tuḥfa*, ed. Moritz, 91; Halm, *Ägypten nach den mamlukischen Lehensregistern*, Wiesbaden 1982, ii, 523 and map 34).

2. Manūf al-ʿUlyā, the modern Manūf/Minūf, in Byzantine times a bishopric, in Coptic Panouf Rīs, in Greek Ὀνοῦφις. After the Arab conquest, the town became the centre of a *kūra* (Ibn Khurradādhbih, 82; Ibn al-Faḳīh, 74). According to Ibn Ḥawḳal (*BGA*, ii, 128) there was a tax official (*ʿāmil*) and a *ḳāḍī* in the town in early Fāṭimid times. At the administrative reform of the caliph al-Mustanṣir and Badr al-Djamālī, the *kūras* were united into greater provinces (*aʿmāl*, sing. *ʿamal*). The southern point of the Delta then became the *aʿmāl al-Manūfiyya*, with the town of Manūf as the residence of the *wālī* (Ibn Mammātī, 188; Yāḳūt, *Muʿdjam*, *s.v.*). During the Mamlūk period, the municipal lands of the town were divided into several *iḳṭāʿs* (Ibn al-Djīʿān, 100; Halm, *Lehensregister*, ii, 372 and map 23). Al-Ḳalḳashandī gives the name "Munūf", and mentions the ruins of the older town to the west of the new settlement (*Ṣubḥ*, iii, 405; cf. iv, 66). Under the jurisdiction of the *wālī* of al-Manūfiyya, there came also the small province of Ibyār (Djazīrat Banī Naṣr), neighbouring on the north-west. In 1826, under Muḥammad ʿAlī Pasha, the town was replaced by the larger Shibīn al-Kūm as chief place of the *mudīriyyat al-Minūfiyya*. At present, Manūf is the centre of the *markaz* of the same name.

Bibliography: ʿAlī Pasha Mubārak, *al-Khiṭaṭ*

al-djadīda, 47 ff.; Muḥammad Ramzī, al-Ḳāmūs al-djughrāfī li 'l-bilād al-Miṣriyya, Cairo 1954-5, ii/2, 107 f., 190, 222 ff.; Maspéro-Wiet, Matériaux, Cairo 1909, 202 ff. (H. Halm)

al-MANŪFĪ, a nisba referring to the Egyptian town of Manūf [q.v.]. The vocalisation of the name of the town and the nisba varies. In the older texts (cf. Mubārak, Khiṭaṭ, xvi, 47) the name is vocalised as Manūf. The recent official vocalisation is Minūf; cf. Wizārat al-Māliyya (Maṣlaḥat al-Misāḥa), al-Dalīl al-djughrāfī li-asmā' al-mudun wa 'l-nawāḥī al-miṣriyya, Cairo [Būlāḳ], 1941, 220, and Muḥammad Ramzī, al-Ḳāmūs al-djughrāfī li 'l-bilād al-miṣriyya, Cairo 1958, i/2, 222. The biographical dictionaries of Kaḥḥāla and al-Ziriklī give the old vocalisation, and this is adopted here. Many persons carried the nisba of al-Manūfī, of whom, in chronological order, the following deserve mention:

1. ʿAbd Allāh al-Manūfī al-Mālikī (d. 7 Ramaḍān 748/11 December 1347), alleged founder of al-Manūfiyya (al-Manāyifa) al-Aḥmadiyya, one of the oldest branches of the Aḥmadiyya order [q.v.], which are collectively known as al-bayt al-kabīr (F. De Jong, Ṭuruq and ṭuruq-linked institutions in nineteenth-century Egypt, Leiden 1978, 14 f.). He was the nephew of Ramaḍān al-Ashʿath al-Manūfī, one of the disciples of Aḥmad al-Badawī [q.v.], and appears third in the silsila [q.v.] of the present-day Manāyifa order. His shrine is in the Ḳarāfat al-Mudjāwirīn, near the mosque of Sultan Ḳāyitbāy (ʿAbd al-Wahhāb al-Shaʿrānī, Ṭabaḳāt, ii, 2; Yūsuf b. Ismāʿīl al-Nabhānī, Djāmiʿ karāmāt al-awliyā', ii, 119; Mubārak, Khiṭaṭ, xvi, 48).

2. Muḥammad b. Ismāʿīl b. Ibrāhīm b. Mūsā b. Saʿīd b. ʿAlī al-Shams b. Abi 'l-Suʿūd al-Manūfī (d. 856/1452), head (shaykh al-mashāyikh) of the important khānaḳāh Saʿīd al-Suʿadā' [q.v.] in Siryāḳūs near Cairo. Later in his life, he became head of the khānaḳāh al-Shaykhūniyya (cf. Mubārak, Khiṭaṭ, xvi, 49 f.) which is also known as takiyyat Shaykhūn (cf. De Jong, op. cit., 17).

3. Abu 'l-ʿAbbās Aḥmad b. Muḥammad b. Muḥammad b. ʿAbd al-Salām b. Mūsā Shihāb al-Dīn al-Manūfī (847-927/1443-1521), once head of the khānaḳāh al-Ẓāhir Baybars (al-Ẓāhiriyya). He was born and died in Manūf, where he was for some time ḳāḍī, and lived and studied in Cairo and in Mecca. On his works, see Brockelmann, I, 380, S II, 406. For a French translation of sections of his al-Fayḍ al-madīd fī akhbār al-Nīl al-sadīd, by the Abbé Bargès, see JA, iii/3 (1837) 97-164; iv/7 (1846), 485-527; ix/9 (1849) 101-31 (compilatory; contains fragments from lost texts). For short biographies and additional references, see al-Ghazzī, Kawākib, i, 154; al-Ziriklī, i, 232; and Kaḥḥāla, Muʿdjam, ii, 184.

4. Abu 'l-Ḥasan ʿAlī b. Naṣr al-Dīn b. Muḥammad... b. Khalaf b. Djibrīl al-Manūfī al-Mālikī al-Shādhilī (857-939/1453-1532), author of a number of tracts of Mālikī fiḳh (Brockelmann, II, 316; S II, 434; Sarkīs, Muʿdjam, 1807). He was born in Cairo, where he studied under ʿAlī al-Sanhūrī [q.v.] and Djalāl al-Dīn al-Suyūṭī [q.v.]. He also wrote on ḥadīth and grammar. For additional biographical data, see Mubārak, Khiṭaṭ, xvi, 49, and al-Ziriklī, v, 11.

5. ʿAbd al-Djawwād b. Muḥammad b. Aḥmad al-Manūfī al-Makkī (d. 5 Shawwāl 1068/6 July 1658), once ḳāḍī and muftī of Mecca and author of numerous tracts in the fields of the traditional sciences (ʿulūm naḳliyya). He was born in Manūf and lived for prolonged periods of time in Mecca, where in his later life he became the protégé of its ruler and attained high office. He died in al-Ṭā'if; cf. Mubārak, Khiṭaṭ, xvi, 48; al-Muḥibbī, Khulāṣat al-athar, ii, 303.

6. Manṣūr b. ʿAlī b. Zayn al-ʿĀbidīn al-Manūfī al-Baṣīr al-Shāfiʿī (d. 1135/1722-3), jurist and ḥadīth scholar who studied, and later taught, at al-Azhar mosque in Cairo. He was born and died in Manūf (al-Djabarī, i, 74; Mubārak, Khiṭaṭ, xvi, 50; Kaḥḥāla, Muʿdjam, xiii, 16).

7. Maḥmūd Abu 'l-Fayḍ al-Manūfī (1892-1972), founder of al-Fayḍiyya, a Shādhiliyya [q.v.] branch, and author of more than a dozen books on Islam and Islamic mysticism in the modern age. He was a disciple of Ḥasanayn al-Ḥiṣāfī [q.v. in Suppl.] and had also been initiated into al-Fāsiyya, a branch of al-Madaniyya [q.v.]. In 1918 he founded the Djamʿiyyat al-Fayḍiyyīn al-Mubashshirīn al-Islāmiyyīn, which was active in combating Christian missionary activity in Egypt, and from around 1920 he presented himself as head of his own distinct ṭarīḳa [q.v.], al-Fayḍiyya al-Shādhiliyya (cf. Maḥmūd Abu 'l-Fayḍ al-Manūfī, Maʿālim al-ṭarīḳ ilā Allāh, Cairo 1969, 445-7; and idem, Djamharat al-awliyā' wa-aʿlām ahl al-taṣawwuf, Cairo 1967, i, 323-5). His early writings, which were published and distributed under the aegis of the Djamʿiyya, present a modernist conception of Islam in conjunction with a reformist version of Shādhilī mysticism. In the main works, all written after 1950, he elaborates an intellectualised conception of Islamic mysticism which is presented as Islam itself. He was the original founder, owner and editor-in-chief of the Cairene monthly Liwā' al-Islām, which was later bought from him by Aḥmad Ḥamza (d. 1980), and of the monthly al-ʿĀlam al-Islāmī which appeared from 1949 until his death in 1972. For further references and additional details, see De Jong, Aspects of the political involvement of Ṣūfī orders in 20th-century Egypt (1907-1970). An exploratory stock-taking, in G. Warburg and U. Kupferschmidt (eds.), Islam, nationalism and radicalism in Egypt and Sudan, New York 1983; and idem, The Ṣūfī orders in post-Ottoman Egypt, 1911-1981 (in preparation), ch. 4.

Bibliography: Given in the article. For the biographies of other, but insignificant, scholars from Manūf, see Mubārak, Khiṭaṭ, xvi, 47-8.

(F. de Jong)

MANZIKERT [see malāzgird]

MANZIL (a., pl. manāzil), noun of place and time from the root n - z - l, which expresses the idea of halting, a temporary stay, thence stage of a journey.

1. In the central and western Islamic lands.

In the Ḳur'ān (X,5; XXXVII, 39), it appears only in the plural, designating the lunar mansions (manāzil [q.v.]). Manzil may also be a stage in the spiritual journey of the soul, in the mystical initiation, see e.g. in the title of ʿAbd Allāh al-Anṣārī al-Harawī's K. Manāzil al-sā'irīn.

According to the LA, it is the place where one halts (mawḍiʿ al-nuzūl), where the traveller dismounts after a day's march (marḥala, pl. marāḥil), of from 6 to 8 farsakhs [q.v.], sc. ca. 35 to 48 km. A stage through the desert could reach 60 km, with a travelling span of 11 hours. In the terminology of itineraries given by Arab authors, manzil corresponds to the mansio of Latin texts, "halting place, resting place", not to be confused with mutatio, "place where one changes mounts, staging-post".

In setting up a manzil, a place of transit, on a road (darb [q.v.]), account has to be taken of the topography and relief for the distances between the manāzil, the presence of a watering-place, spring, well (bi'r [q.v.]) or cistern (birka [q.v.]) and the possibilities of pasture [see marʿā] for the beasts and camping for the men. In the 1001 Nights, the manzil al-ḳabā'il is the place

where the tent [see KHAYMA] are erected, and in general, this term is a synonym for the encampment of nomadic Arabs and then for the halting place of caravans.

In the geographical works and travel accounts of Arabic authors from the mediaeval period, this term is used for the site or encampment of caravans on the fringes of some settlement or equally, at the side of a *khān* [*q.v.*] along the highway which might be fortified to a greater or lesser degree according to the needs for security. At the opening of the 7th/13th century, the Ayyūbid al-Malik al-Muʿaẓẓam built a lodging-place (*maḳām*) at each *manzil* on the Pilgrimage Road (*darb al-ḥadjdj* [*q.v.*]), according to Aḥmad b. Ṭūlūn in his *Ḳalāʾid*. Ibn Baṭṭūṭa mentions a *funduḳ* [*q.v.*] at each stop (*manzil*) along the Cairo-Damascus road; these must be the foundations of Nāṣir al-Dīn, Tankiz's *dawādār*. According to Sauvaget, there was, during the Mamlūk period, a lodging-place (*manzila*) at each posting-stage (*manzil*) of the *barīd* [*q.v.*] network. It could also happen that a *manzil* could be the origin of a village, as at Khān Shaykhūn in central Syria.

Manzil is thus the equivalent of a *dār al-manzila*: a house where one halts, whence a place where one offers hospitality, a "hospice", for travellers. Along the routes through Arabia used by the pilgrims, the *manzil* was often a pious foundation, with a *waḳf*; this is probably why Niebuhr mentions the "free hostelries" in his *Description of Arabia*, and why Burckhardt says, in his *Travels in Syria*, that these existed all through the countryside to the south of Damascus and that they did great credit to the Turks' sense of hospitality.

At the end of the Mamlūk period, at certain stages there were fortified caravanserais, with kitchens and farriers attached, which could accomodate military detachments. In the Ottoman period, Lālā Muṣṭafā Pasha, governor of Damascus, built in 971/1563-4 to the north of the citadel, in the Taḥt al-Ḳalʿa quarter, a *khān* and also independent lodging-places in its vicinity; the *manzil* in this way became an inn meant for travellers without either mounts or merchandise. Al-Khiyarī (d. 1083/1672), who in 1080/1669 travelled from Medina to Istanbul, states that there was, at one stage (*marḥala*) from al-Ḳunayṭira [*q.v.*] in the Djawlān, a *manzil* where one could stay in tents in summer but live in a *khān* during the winter. In 1081/1671, the stage of Madāʾin Ṣāliḥ [see AL-ḤIDJR], one of the centres where the pilgrims assembled on the Pilgrimage Road to the south of Tabūk [*q.v.*], suffered a serious attack by the Bedouins. The frequency of such attacks against this *manzil* led Asad Pasha to construct, in the middle of the 12th/18th century, a fort in order to protect the religious caravans. At the end of the Ottoman period, there were, according to Tibawi, two types of hostelries: the *maḍāfa*, which was communal, and the *manzil*, which was private. In the first, lodging and food were offered free to travellers by the better-off members of the community, on a rota system. In the second, similar hospitality was given in private houses situated along the roads constantly used by travellers; the owners who offered this hosptality had to pay reduced taxes.

At the present time, *manzil* denotes a lodging, a house and even an appartment. It is sometimes accompanied by a term which pinpoints its function more exactly, e.g. *manzil al-ṭālibāt* "home for female students", the title of a work by Fawziyya Mahrān which appeared in Cairo in 1961.

The term *manzil* forms part of certain place names. We find mention of the main halting-places considered to be *manāzil* in such authors as Ibn Khurradādhbih (272/885), al-Yaʿḳūbī (287/900), Ibn Ḥawḳal (366/977) and al-Muḳaddasī (390/1000), or later, the Andalusian ones al-Bakrī (487/1094) and al-Idrīsī (561/1166), who give us the itineraries of the main commercial routes of the *Dār al-Islām* and the Pilgrimage ones. Thus along the *darb al-ḥadjdj* of Egypt, between Fusṭāṭ and Mecca, one finds the Manzil Ibn Bunduḳa (BGA, vi, 111, 149, 190, vii, 183), which al-Muḳaddasī (215, 249) and al-Idrīsī (*Opus geographicum*, 345) call Manzil Ibn Ṣadaḳa, between Buwayh and ʿAdjrūd; at the next stage, there was a *manzil* at Biʾr al-Hudhā, but with merely a well and no provision for travellers. Going westwards from Egypt, Ibn Khurradādhbih (223) mentions in Cyrenaica, on the track connecting Barḳa with Sulūḳ, in the Wādī ʾl-ʿArab, the Manzil Shaḳīḳ al-Fahmī, which de Goeje translated as "territoire". Amongst the best-known *manāzil* of mediaeval Ifrīḳiya should be mentioned Manzil Bashshū [*q.v.*]; the Manzil of Ḳābis [*q.v.*] (Brunschvig, *Ḥafṣides*, i, 313), which in the 7th/13th century was outside the walls and which Victor Guérin visited in the mid-19th century in the course of his travels through the Regency of Tunis; and on the coast, at the end of the 7th/13th century, to the north of Sousse, Manzil Abī Naṣr and Manzil Tamīm, a fishing port with a fertile hinterland [see DJAZĪRAT SHARĪK]. The dependencies of al-Mahdiyya [*q.v.*] included Manzil Khayra and Manzil Banī Maʿrūf (Brunschvig, *op. cit.*, i, 309). In Sicily, there existed a Manzil al-Amīr which al-Harawī (55/125) calls Ḳaṣr al-Amīr (the present Misilmeri), a famed pilgrimage place, where, according to some, was the tomb of Galen (Ḳabr Djālīnūs) and according to others, that of Aristotle. Numerous place names in al-Andalus recorded by al-Idrīsī as being in the 4th clime are made up of Manzil followed by a proper noun, e.g. Manzil Aban (573), Manzil al-Amīr (603), Manzil Yūsuf (606) and Manzil Maldjaʾ Khalīl (615) in a fertile and populous region. In the province of Valencia, one finds Manzil ʿAṭāʾ (= Mislata) and Manzil Naṣr (= Masanasa); Lévi-Provençal (iii, 318) mentions a *manzil* at Diezma and one at Mondújar, these being "kinds of inns". In the province of Cordova, there was a lodging-place at one of the stages, Manzil Hānī, two days' journey from the capital (*ibid.*, i, 478); and on the nearby site of Manzil Ibn Badr was to be constructed, from 368/979 onwards, al-Madīna al-Zāhira [*q.v.*].

(N. Elisséeff)

2. In the eastern Islamic lands.

In Iran and, especially, in Hindūstān, it came to designate a camp, characteristically the royal camp, with corresponding verbs like *nuzūl kardan* and *manzil giriftan* meaning "to encamp".

This usage is distinct from the sense of *urdū* [*q.v.*], properly "the royal precinct in camp" from Mongolian *ordo*, and of *yūrt* [*q.v.*] meaning "camp site, territory" as in Turkic, from the time of Djuwaynī onwards. The camp centre had already been organised as a rectangle by the Kʾi-tan, with the emperor's screened precinct differentiated into an outer and an inner area, as a mobile extension of the palace. The concept appears to have been inherited by the Mongols, but with the orientation shifted from east to south. The sides were defined by lines of carts and tents, the royal guard was quartered to the rear, forming the battle guard, *yeke ḳol,* and in front stood the standards, drums and ceremonial drinkling vessels (*tuḳ, güʾürge, ayaḳa saba*); a horse park, *kirüʾe*, for visitors was set at a considerable distance on the approach, while the khān's own horses were probably behind his tents. The remaining disposition reflected the division into right wing, *baraʾun ḳar*, and left wing, *djewün ḳar.* This corresponds to the late Īlkhānid arrangement described by Nakhčiwānī (sec *Bibl.*) ii, 62-3, where a further distinction appears in the placing of princes, *umarāʾ-yi ulūs*, and Turanian nobles close to the ruler on the right, and viziers, chancellors and Iranian (*Tāzīkī*) nobles on the left. The select company of *īnāḳs* [*q.v.*] remained in his immediate neighbourhood. A *masdjid-i djāmiʿ* had supplanted the earlier shamans' tents opposite his own site, i.e. to the south, with its complement of clerics and secretaries. Al-ʿUmarī (see *Bibl.*), 98-100, adds that so many scholars, jurisconsults and students accompanied Abū Saʿīd's camp that they were known as the "travelling academy", *mudarrisī 'l-sayyāra*; there were all kinds of craftsmen and tradesmen, a fully stocked market, *urdū-bāzār*, and tents could even be hired by travellers. At the head of the approach was the court gate, *bāb al-kiryās* or *bāb al-khān*, where the *amīrs* assembled daily. The administration of this establishment required special officers, notably the quartermaster, *yūrtčī*, and the lost-property keeper, *bulārghučī*, whose tent was placed conspicuously. The early 7th/13th century *Ādāb al-ḥarb* (see *Bibl.*), 286, provides comparative plans of camps, including one of "the infidels of Khiṭā"which may represent the Mongol form. Behind the stables are the kitchens, to their right the treasury, and to their left the wardrobe; the market is at the very rear. The wings curve out like bull's horns, a formation later referred to in the *Altan tobči*, 116, as *buḳa*. The Iranian (*ʿAdjam*) form differs mainly in grouping the wings compactly on either side of the royal enclosure and bedchamber, *sarāy-parda wa khʷabgah*, and placing the *ḥaram* behind it, with treasury and wardrobe to the right, and saddlery and amoury to the left; the bazaar is now in front, beyond a triangular area for stables, standards, and drums. A rather similar Indian form groups the treasury and wardrobe with the *ḥaram*, with the armoury on its right and the saddlery to its left, and after an interval, musicians and vintners to the rear: the chief divergence is in an advance guard placed forward of the bazaar, with ranks of infantry and sentinels on either side. In spite of this, it seems that by the 10th/16th century, the usual Indian camp enclosure was rounded, and Humāyūn made a point of demonstrating a *sarāparda* to Ṭahmāsp "like a watermelon" in 951/1544, in contrast to the Iranian practice of leaving it open behind (Gülbadan, see *Bibl.*, 58b). The arrangements under Akbar, described in detail by Abu 'l-Faḍl (*ʿAʾīn*, bk. i, nos. 16, 17, with plan datable to *ca.* 1006-13/1597-1605), shows an arrangement closer to the Iranian plan (*ʿAdāb al-ḥarb*) than the Indian: the basis is strictly rectangular, with a highly elaborated system of service departments on either flank of the royal enclosure, and a new defence for the private area consisting of a folding wooden trellis, the *gulāl-bār*, covered with red sheeting (red tentage had remained a royal prerogative since Saldjūḳ times). The guard was still behind the royal enclosure, as in the Mongol plan, and indeed much of the camp terminology was still Mongol-Čaghatay, as in *urdū, yūrt, ḳol, baranḳār, djuwānghār*, and *keshik-dār* for the guard itself, though the terms for tentage were by now Persian, as in *bargāh, khargāh, khayma* [*q.v.*], *sarāparda* and *sarāča.* Akbar's main innovation was probably the combination of bazaar streets along the perimeter of his own precinct with diagonal ones at its corners, dividing the army into manageable corps corresponding to tactical units. The space required for the centre alone was 1,530 *gaz* (1,275 metres if *ilāhī gaz*) [see misāḥa. 2. India], with a security zone around the precinct 300 *gaz* (250 m.) wide. European reports confirm the huge size of such camp cities, at about 3 *ḳos* across, or 6 English miles, and 20 miles circuit; even so, they could be pitched in four hours, the tents of the nobility being pitched in advance of their arrival as a *pīsh-khāna* or duplicate set. The movement on royal progresses was relatively slow, at 4-5 *ḳos* or 10 miles a day, or every other day (Roe, see *Bibl.* 324-5, 329, 334, 341, *et passim*). The camp defences were later modified by Ṣalābat Khān for Awrangzīb, to protect the precinct as much from the vast number of camp followers in moments of panic as from the enemy. Such numbers (Gemelli-Careri claims half-a-million at Bīdjāpūr in 1695, iii, 153) led to self-destruction through the inadequacy of supplies, and immobility, as at the defeat of Muḥammad Shāh at Karnāl in 1151/1739. In the earlier Mughal period, a high degree of order had been maintained by the *mīrān-i manzil* or *khʷush-manzilān*, with inspectors (*ṣāḥib-i ihtimāmān*), a superintendent (*dārūgha*), an auditor (*mushrif*), and workmen and labourers from the tent department, *farāsh-khana*, who levelled the ground and built platforms for the main tents (Čandar-Bhān, see *Bibl.*, fol; 155b). Royal tentage was carried on elephants, camels, and mules; eight mules were loaded with tents for meals and short rests while on the move. The mobility achieved through such camps, though nomadic in origin, came to be essential to the administration of an ever-expanding empire, yet moves remained seasonal, and Shāhdjahān regularly moved northward in summer for a change of climate alone.

In the nomadic camps of Central Asia, the greatest

change was from the cart tents which had been characteristic of the Golden Horde and were still used as *köterme üy* (Mongol *ger tergen*) by the Ḳazaḳ in 915/1509, but survived to this century only among the Noghay, with their auxiliary baggage carts, *küyme araba*; elsewhere, they have been supplanted by trellis tents. The protective circular camping formation is already defined by Rashīd al-Dīn (Mongol *güreʾen*) (see *Bibl.*, i, 21).

(P. A. ANDREWS)

MANZIL BASHSHŪ, a place in Ifrīḳiya whose site has been identified as the place called Djadīda.

Under the Aghlabids [*q.v.*] it was the chief town of the administrative district of the peninsula of Cape Bon or Djazīrat Sharīk [*q.v.*], which al-Idrīsī (*Opus geographicum*, 293, 302) calls moreover Djazīrat Bashshū. In the 4th/10th century, it was "an extensive and fertile region", concerning which Ibn Ḥawḳal (tr. Kramers-Wiet, 69-70) further says: "... The tax yield and the population are both numerous. A small province is attached to it; there are various kinds of harvests there, and the merchants come there to get supplies. At more than one spot, there are polluted waters, whose impurity is obvious; hence all outsiders entering the town fall ill, with the exception of Blacks, who retain their good health. These Blacks can be used in all conditions and perform their tasks with good humour. All sorts of fruit are to be found there. Each month, Bashshū has a market which is held on a fixed day".

A century later, al-Bakrī mentions at Bashshū a place, the Ḳaṣr Ibn Abī Aḥmad, probably constructed in dressed stone, according to the remains still on the site, and whose marble columns were re-used in the Djāmiʿ al-Ḳaṣaba in Tunis in 630-4/1232-6. The town had a Great Mosque, baths, three open places (*riḥāb*) where the markets and bazaars were situated, but it lacked ramparts, even though it occupied a strategic site on the ancient highway linking Tunis to the main centres of the Sahel and the south. This urban centre was destroyed in 582/1186-7 by the governor of Mayūrḳa [*q.v.*] ʿAlī b. Isḥāḳ b. Ghāniya. Al-Tidjānī, who in 706/1306-7 visited this *manzil* one stage away (*marḥala*) from Tunis, gives a description of it in his *Riḥla*. The region remained abandoned from the end of the 6th/12th century to the opening of the 11th/17th one.

AL-MANZILA BAYN AL-MANZILATAYN, a theological term used by Wāṣil b. ʿAṭāʾ [*q.v.*] and the later Muʿtazila [*q.v.*] for designating the salvational status of the mortal sinner (*fāsiḳ* [*q.v.*]). The word *manzila* alone is attested, in the technical sense of "salvational status", in *Ḥadīth* (cf. Muttaḳī al-Hindi, *Kanz al-ʿummāl*, i, 28, no. 519) and, later than Wāṣil, in the *K. al-ʿĀlim wa 'l-mutaʿallim* which was probably composed by Abū Ḥanīfa's pupil Abū Muḳātil Ḥafṣ b. Salm al-Samarḳandī in the second half of the 2nd century (cf. ed. Hyderabad 1349, 20, 11. 4 ff. and Schacht, in *Oriens*, xvii [1964], 111). It was used together with, and perhaps derived from the corresponding verb *anzala* (cf. a story told in Murdjiʾī circles at Kūfa where Nāfiʿ b. al-Azraḳ asks somebody: "Where do you locate [*ayna tunzilu*] the unbelievers in the Hereafter?" and gets the answer: "In Hell"; Abū Ḥanīfa, *Risāla ilā ʿUthmān al-Battī*, ed. Kawtharī, Cairo 1368/1949, 38 n.). The dual *al-manzilatānⁱ* is used, with respect to Paradise and Hell, in a *ḥadīth* preserved by Ibn Ḥanbal (*Musnad*, iv, 438, 1. 7 from bottom; for the context, cf. Van Ess, *Zwischen Ḥadīṯ und Theologie*, 47 ff.). The idea of a *manzila bayn al-manzilatayn* is prepared in a saying attributed to the Baṣran ascetic Yazīd al-Raḳāshī (d. between 110/729 and 120/738): *laysa bayn al-djanna wa 'l-nār manzila* (in the presence of ʿUmar II; cf. Ibn ʿAbd al-Ḥakam, *Sīrat ʿUmar b. ʿAbd al-ʿAzīz*, ed. Aḥmad ʿUbayd, Damascus 1374/1953, 90, 1. 9). The Muʿtazilī phrase appears for the first time in the title of one of Wāṣil's books (cf. Ibn al-Nadīm, *Fihrist*, ed. R. Tadjaddud, Tehran² 1393/1973, 203, 1. 5). But whether he coined it for the purpose of his own theology must remain doubtful, for all the reports which we possess agree that, in reality, he did not dissociate from two positions only, namely those who regarded the *fāsiḳ* as a "believer" and those who called him an "unbeliever", but from three, he equally rejecting Ḥasan al-Baṣrī's definition of the *fāsiḳ* as a "hypocrite" (*munāfiḳ*) which was taken over by numerous Baṣran ascetics and especially by the so-called Bakriyya, the adherents of Bakr b. Ukht ʿAbd al-Wāḥid b. Zayd (*fl.* probably in the second third of the 2nd century). It is possible that this third standpoint did not become relevant, and also vexing, through explicit opposition, for the early Muʿtazila, until the Bakriyya entered the scene, for even they—and *a fortiori* Ḥasan al-Baṣrī—ultimately considered the *munāfiḳ* as a "believer", though as a believer who will be eternally punished in Hell (cf. al-Ashʿarī, *Maḳālāt al-Islāmiyyīn*, 286, 11. 2 ff.).

The discussion about the different *manzils* had always been connected with an attempt to specify the juridical or theological consequences attached to them. This is how the Muʿtazilī position is proven in most of our testimonies (which are all much later than Wāṣil: cf. al-Djāḥiẓ, *Risāla fi 'l-ḥakamayn*, in *Mashriḳ*, lii (1958), 460, 11. 5 ff.; al-Khayyāt, *Intiṣār*, ed.

Nader, 118, 11. 2 ff.; Pseudo-Ḳāsim b. Ibrāhīm, *K. al-ʿAdl wa 'l-tawḥīd*, in *Rasāʾil al-ʿAdl wa 'l-tawḥīd*, ed. Muḥammad ʿImāra, i, Cairo 1971, 125, 11. 4 ff.): the unbeliever must be fought and cannot be inherited from, the believer is loved by God, the *munāfiḳ* should be summoned to do penance or otherwise be executed; all this cannot be said about the *fāsiḳ*. Therefore, since these juridical regulations (*aḥkām*) cannot be applied to him, the corresponding designations (*asmāʾ*) are not valid in his case either. In this presentation of the problem which became common in the future, the term *manzila* was replaced by *ism*; thus it slowly lost its significance for the theological vocabulary. Ḍirār b. ʿAmr (2nd century [*q.v.*]) and Bishr. b. al-Muʿtamir (d. 210/825 [*q.v.*]) still wrote treatises about the *manzila bayn al-manzilatayn* (cf. *Fihrist*, 215, 1. 13 and 205, 11. 23 f.). Abu 'l-Hudhayl included it among the *uṣūl al-khamsa*; Ibn al-Rēwandī [*q.v.*] refuted the Muʿtazila in this point (cf. *Fihrist*, 217, 1. 10). The terms *ism* and *ḥukm* are already found, though perhaps not yet systematically linked with each other, in Abū Ḥanīfa's *Risāla ilā ʿUthmān al-Battī* (ed. Kawtharī, 35, 1. 16 and 36, 11. 12 f.). The disputation between Wāṣil and ʿAmr b. ʿUbayd preserved by al-Sharīf al-Murtaḍā (*Amālī*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1373/1954, i, 165, 11. 8 ff.) where Wāṣil uses *ism* but not *ḥukm*, is apparently a retrojection or a recast possibly taken from the *K. Mā djarā baynahū* [sc. *bayna Wāṣil*] *wa-bayna ʿAmr b. ʿUbayd* (cf. *Fihrist*, 203, n. 1) which may have been composed in the second half of the 2nd century; nevertheless, it remains our oldest testimony for the Muʿtazilī position and shows archaic features in part of its argumentation.

Similarities with Christian speculations about penitence have been pointed out by E. Gräf (in *OLZ*, iv [1960], 397; cf. also R. Strothmann, in *Isl.*, xiv [1931], 215). There is, however, to date no proof for any influence.

(J. VAN ESS)

MAPPILA, standard Western form of Malayalam Māppila, the name of the dominant Muslim community of southwest India, located mainly in the state of Kerala, primarily in its northern area popularly known as Malabar, Significant numbers of Mappilas are to be found also in southern Karnataka and western Tamil Nad, as well as in diaspora groups scattered throughout India, including the Laccadive Islands, Pakistan, the Gulf States and Malaysia. In 1971 there were 4,162,718 Muslims in Kerala, almost all Mappilas, and of these 2, 765,747 (est.) were concentrated in Malabar. Mappila growth in the past century has considerably outpaced that of the general population. If the rate of increase in the decade 1961-71 (37.5 %) was maintained, the size of the community in 1981 would exceed 5,700,000. Mappilas share the language (Malayalam) and the culture of the inhabitants of Kerala (Malayalis), as well as the unique religious blend of its 25 million people (59,5% Hindu, 21.0% Christian, 19,5% Muslim). Not only because of its size but also because of its particular historical experience, the Mappila community represents a significant segment of Indian Islam.

1. *The Name*

The name Māppiḷa (= Māppila, Moplah) is a direct transliteration of the current Malayalam term. Its origin is not settled, but it appears to have been a title of respect formed by a combination of *mahā* "great" and *piḷḷa* "child"; it was referred to visitors and immigrants from abroad, both Christians and Muslims, either in the broad sense of "honoured ones" (Logan, i, 191; Innes, 186; Hameed Ali, 265; Kareem, 61) or in the more specific meaning of "bridegroom" and "son-in-law" (Miller, 33; Thurston, iv, 458; Gough, 442; Gundert, *A Malayalam and English dictionary*). The latter meaning points to a process of intermarriage and is supported by contemporary usage in colloquial Malayalam and Tamil. Other derivations, including Arabic, have been suggested, but none so persuasive as the above. In time, the term became the distinctive appellation of the indigenous Muslim community of Malabar, although it is still occasionally applied also to Syrian Christians in South Kerala.

2. *The origin of the Mappilas*

Mappila culture is the Malayalam culture of Kerala with an Arabian blend, a fact that points to the ancient intercourse between Kerala and southern Arabia, founded on the great spice trade. The Mappila community traces its origin to that well-documented relationship. Arab trade with Malabar [*q.v.*] was going on for centuries prior to the advent of Islam, becoming particularly energetic from the 4th century A.D. and continuing until the European era. Islamicised Arab traders brought their faith with them to Kerala, where some settled and intermarried with the native Malayalis. The earliest generally accepted epigraphic evidence of Muslim presence in Kerala is represented by the Tarisapally copper plates dated 235/849 (Kunjanpillai, 370), which contain Muslim names in Kūfic script; however, a Muslim tombstone at Irikkalur dated 50/670 was observed by Mappila scholar C.N. Ahmed Moulavi before it was washed away, and another tombstone inscription at Pantalayini-Kollam dated 166/782 was legible in the 19th century (Logan, i, 197; but note the criticism of Burgess in Logan, i, p. ix). Because of the Kerala climate and the impermanence of palm leaf writing materials, there are no known literary manuscripts in Malayalam predating the 14th century. Nevertheless, despite the paucity of material proof, I.H. Qureshi's (p. 11) balanced opinion that Islam entered Kerala "within a few years of the proclamation by the Prophet of his mission" is very probably correct and Mappilas, in that light, may be regarded as the first settled Muslim community of South Asia.

Another view favouring a later 3rd/9th century dating for Mappila beginnings is dependent on an unreliable passage of the *Akhbār al-Ṣīn wa 'l-Hind* [*q.v.* in Suppl.]. Arab geographers, who provide the available materials for the 3rd-6th/9th-12th centuries of Mappila history, were compelled to rely on such reports (only al-Masʿūdī travelled to India, and he to the north; cf. Nainar, 3 ff.). The point of view, however, is also related to the persistent and much-debated tradition of the conversion of an important Hindu ruler, Čēraman Perumāl. The form of the tradition that is generally accepted by Mappilas is that reported by Shaykh Aḥmad Zayn al-Dīn (904-89/1498-1581) (referred to as Zainuddin), who was the earliest known Kerala Muslim to deal with the subject of Mappila origins and whose *Tuḥfat al-mudjāhidīn* became the basis for later Indian Muslim writings on the subject (Firishta, iv, 531). Zainuddin dates the conversion event to 207/822, but most Mappilas prefer an earlier dating, that of 3/624. According to the story, Čēraman Perumāl's missionary followers

led by Mālik b. Dīnār established a series of mosques, thus facilitating the expansion of Islam. While there is no historical evidence for the strongly-held tradition, there can be little doubt of the hospitality and toleration of native Hindus toward the Arab visitors and their faith.

The direct relation of Mappilas with Arabian Islam is as significant as their relative isolation from Indo-Persian Islam. That original relationship continued over the years, furthered in recent times by the extensive employment of Mappilas in the Gulf region, and it has affected the Mappilas more profoundly than any other Indian Muslims.

3. *Mappila development to 1921*

(i) Beginnings to 1498

Through eight centuries from their origin to 1498, the Mappilas and Islam in Kerala experienced an apparently calm and peaceful development. Mutual economic interest and religious tolerance, expressed in the direct support of Arab traders by the Zamorin of Calicut, the leading figure in Malabar commerce, paved the way. Immigration, intermarriage and missionary activity were inter-woven strands in the Mappila growth. While occasional stress must be assumed, there is no record of overt abrasiveness or militant encounter between the religious communities; the long period of harmonious relationships, including as it did the delicate areas of religion and marriage, stands as a model development in the history of the subcontinent. Mappilas flourished under these conditions, especially in coastal areas, as noted by Ibn Baṭṭūṭa (704-79/1304-77) during his three stops in Malabar; Zainuddin estimates that 10% of the population of Malabar was Muslim by the midpoint of the 10th/16th century (p. 59).

(ii) The European period

Vasco da Gama's arrival in Calicut in 1948 ushered in the European era and signalled a sharp change in Mappila fortunes. A participant in the events, Duarte Barbosa (p. 78), summed up the history when he said: "Thus they continued to thrive until the Portuguese came to India". The imperialist aims of the newcomers, embracing both economic and religious interests and exercised through military means, introduced a new tone into Kerala life. They succeeded in cutting off the Arab trade, and Mappilas who had been prevented from becoming landowners by the hereditary system of land tenure and who depended on commerce, were cast into reduced economic straits which eventually became a pattern of poverty. As new alliances developed the warm relationships between Hindus and Mappilas were also disturbed, and in the end cordiality was replaced by antipathy. Extreme cruelty, chiefly on the part of the Portuguese, produced an inevitable reaction. The Portuguese attitude reflected the mediaeval European tradition and was well represented by the governor of Goa, Afonso Albuquerque (d. 1515), who dreamt of destroying Mecca and who bitterly persecuted his Mappila opponents.

The volatile combination of commercial rivalry and religious animus produced long-lasting negative effects on the Mappila community: economic retrogression, estrangement from Hindus, bitterness against Christians and a new spirit of militancy. These trends continued in the ensuing period of "pepper politics" as the Portuguese were replaced by the Dutch (1656), the British (1662) and the French (1725). Power remained in the hands of a coalition of Christian foreigners and their Hindu allies, while the Mappilas gradually became a society of small traders, landless labourers and poor fishermen. The Mappila community experienced psychological gloom and distress, and defensive attitudes developed.

During the period 1755-99 the Muslim leaders of neighbouring Mysore [see MAHISUR], Ḥaydar ʿAlī (d. 1782) and Tīpū Sultān (d. 1799) [*q.vv.*] briefly interrupted the European hegemony over Malabar. Their suzerainty provided fresh hope for the Mappilas, who for the first time in their history were under Muslim rule. Mappilas were now able to obtain some land rights and administrative positions. There was a sharp increase in the community's growth, especially through accessions from the outcaste society. The fanatical religious policy of the Mysore rulers, however, served to intensify the spirit of militancy in the whole region, and the Muslim-Hindu alienation that had been born in the Portuguese period now became an established pattern.

The British assumed full power in 1792 (continuing till 1947), and the newly-raised Mappila hopes were dashed. The British restored the old order, adopting a policy of deference to Hindu leadership and maintaining a wary eye toward the Mappilas. The latter, disappointed and embittered, displayed their resentment in a series of 51 militant outbreaks during the century 1821-1921. The formal causes of the outbreaks included agrarian discontent, poverty, religious zeal and resentment toward the rulers, but underlying these was the emotion of an oppressed people, who responded to a seemingly hopeless situation with often unreasoned and self-destructive violence. Not all Mappilas shared in the depression-agression syndrome, and only a small portion of the populace actively participated in the outbreaks. Those who did participate, however, did so in the tradition of militant *d̲j̲ihād*, resulting in violent activities against those whom they perceived as their oppressors, whether British administrators or Hindu landlords (*jenmis*), and they very willingly accepted martyrdom.

This course of events reached its final dénouement in the Malabar Rebellion of 1921, frequently called the Mappila Rebellion. This was a spontaneous uprising (not one of "systematic preparation", as stated by T.W. Arnold, *EI*[1], MĀPPILAS) that included the establishment of a temporary "Moplastan" in Ernad, South Malabar, under V.K. Kunyahamad Haji. The new factor that helped to provoke this major upheaval was Mappila involvement in the K̲h̲ilāfat movement [*q.v.*], an organised effort within Indian Islam and the Non-cooperation Movement, to help restore the caliphate in Turkey [see K̲H̲ALĪFA]. This ill-fated cause had helped to generate temporary Hindu-Muslim unity in the Indian freedom struggle. The message that came to the Mappila community through the visits of leaders such as M.K. Gandhi and S̲h̲awkat ʿAlī was clear: only a free India could effectively plead this cause, and Malabar must join the struggle. Their intention to promote a non-violent cooperative effort of Hindus and Mappilas was initially honoured, but the message had an explosive effect and a sudden violent uprising resulted. Distressed by the violence, most Malabar Hindus withdrew from the struggle which, by default, became the Mappila revolt. A minority of Mappilas continued the hopeless battle against superior British forces, particularly in South Malabar. Disappointed and resentful they also vented their anger of the Hindu community in several ways, including vendettas against landlords and forced conversions (estimates vary widely from "a few" to 2,500). In wider India, this series of events helped to sunder the newly-established Hindu-Muslim entente.

The immediate results for the Mappila community

were disastrous. The Rebellion was put down after six months of bitter fighting in which thousands lost their lives. Severe reprisals followed: 252 Mappilas were executed, 502 were sentenced to life imprisonement, thousands were jailed or transported to the Andaman Islands, and large fines were levied. A special force named "The Malabar Special Police" was organised to provide a permanent solution to the "Mappila problem". The community was recumbent in defeat, ist relations with Hindu neighbours at an all-time low, its reputation for uninformed zealotry unparalleled on the sub-continent. The fundamental implication was that Mappilas were at the end of the kind of road that had been followed; a fresh philosophy needed to be developed, and a new life forged. Contemporary evaluation within India tends to the view that the Malabar Rebellion was a war of liberation, and in 1971 the Kerala Government granted the remaining active participants in the revolt the accolade of *Ayagi*, "freedom fighter".

4. *From 1921 to the present*

Subsequent events have dramatically altered the shape of the Mappila community from a defeated and closed society to a community marked by recovery, change and positive involvement in the modern world. Factors producing the change include: the new political situation in India, involving Mappilas in the democratic process; the necessity to deal with economic problems, as well as the Communist challenge to traditional forms or belief and response; the development of modern education and the growth of a new generation of leaders who press for dynamic progress; and theological reform movements that provide a basis for conservative rapprochement with the modern spirit. This reshaping of the Mappila community has involved it in severe inner conflicts and has introduced a series of unresolved dilemmas. In the process, however, Mappilas have been transformed from a negative symbol to a positive force in contemporary Indian Islam.

(i) The political factor

In the post-Rebellion period, 1921-47, Mappilas began to draw away from the Congress Party, although Mappila leaders such as the highly-esteemed Muhammad Abdurrahiman Sahib and E. Moidu Moulavi continued to struggle for the nationalist cause. Most Mappilas were convinced that a Muslim party must speak for them, and they aligned with the Muslim League. They were led by the inspirational K. M. Seethi Sahib (1898-1960), the chief architect of the Mappila revival. In the Partition controversy, these Mappilas upheld the two-nation theory and put forward an abortive proposal for a separate Muslim-majority province in the Malabar region, to be called "Moplastan". Although the Muslim League suffered a demise in the rest of India, it continued to remain a serious political factor in Malabar, and Mappilas eventually provided the leadership for its resurgence on a national level.

It was after the linguistic state of Kerala was formed in 1956 (including Malabar District, formerly part of Madras State) that Mappilas became a strong political force, giving the community a new sense of confidence and importance. Mappila political views covered a broad spectrum, and Mappilas were associated with every major party. Under its able leaders Syed Abdurrahiman Bafaki Tangal (d. 1973), P. M. S. A. Pukkoya Tangal (d. 1975) and C. H. Muhammad Koya (b. 1928), the state Muslim League, however, held the allegiance of the majority of Mappilas, and it played a king-making role in the state. Although never gaining more than 14 seats in the legislature, through clever alignments it participated in several governments. This success not only created a taste for power politics, but also encouraged the conviction that the welfare of the Mappila community depended on political prowess. Their participation in Kerala politics further gave rise to a psychology of accommodation that took Mappilas into co-operative relationships with all segments of society, including coalitions with Marxist parties. The strong Mappila support for a Muslim party, however, gave rise to the charge of "communalism", a criticism that rose from both within and outside the Mappila community. It was noted that Pukkoya Tangal, much revered for his saintly qualities, was at the same time the President of the Samastha Kerala Jamiat-ul-Ulema and President of the Kerala Muslim League. The criticisms increased when the Marxist-led state government granted the wish of the League for the formation of a Muslim-majority district in 1969 (Malappuram District, 64% Muslim, the fifth largest Muslim-populated district in India), over vigorous protests of the Jan Sangh and other right-wing Hindu organisations. In 1975 the contention of the Muslim League that it represented the sole legitimate Muslim voice was seriously weakened when the party, largely as the result of personality conflicts, split into a continuing division. In 1983, the two Muslim parties held 12.8% of the seats in the state assembly (Indian Union Muslim League, 14; All India Muslim League, 4).

(ii) The economic factor

Mappila material strength recovered very slowly during the period 1921-47 and there was only slight improvement thereafter. Economic disabilities were keenly felt (e.g. by 1947, only 3% of *taluk* officers in Malabar were Muslim, though one-third of the population was Muslim; in 1971 Muslims held only 30% as many state government posts as did Hindu Nayars, whose numbers they exceeded). The problems of poverty and unemployment, endemic in densely-populated Kerala, were felt in a special way by the educationally-backward Mappilas. The situation produced within the community an emphasis on material concerns, self-critical attitudes, a thirst for education, and an open door to the influences of Communism.

Traditional Mappila leaders appeared baffled by the magnitude of their community's problems, and many disadvantaged Mappilas were gradually attracted to the arguments of Comunists that promised a better life. Communist parties, strong in Kerala, had down-played religious issues and had become accepted as ordinary political alternatives. As did many Hindus and Christians, Mappilas began to mark their ballots "Communist" without any sense of contradiction. It has been suggested (by Mappilas; precise data unavailable) that more than a fifth of Mappila voters may have made this choice at one time or another. For most, it was a statement of protest rather than a affirmation of ideology; some, however, were influenced by the ideas of the Communist movement, others became doctrinaire proponents of Marxism, and a few became prominent Party leaders and officials. Typifying the latter is Ayesha Bai, the first Muslim woman to rise to public fame in modern Kerala, who illustrates the startling impact of Communism on this conservative Islamic society. Joining the Communist Party in 1953, she became Deputy Speaker of the Kerala Assembly (1957), an organiser of the State Women's Society (Mahila Samajum), and an aggressive advocate for the forward progress of Mappila women.

Within the past five years, a dramatic turn-around has taken place in Mappila prospects as a result of the great influx of funds from the earnings of Mappilas employed in the oil production centres of the Middle East. The sudden and unevenly distributed wealth is creating a new set of circumstances, within which the interplay of economics and religion will take new forms.

(iii) The educational factor

Pre-independence governments had made special efforts to advance Mappila education, but Mappilas had maintained a generally suspicious attitude toward those efforts (the community's literacy rate was only 5% in 1931). By the 1950s, however, the Mappila community had accepted the state programme of universal education, especially at the elementary level, and by 1960 nearly half the eligible Mappila children in Kerala were attending schools: by 1972 almost all were enrolled. Higher education experienced slower growth. In 1922, the Aikya Sankhum society was founded in Cochin State to promote higher education, and it provided strong impetus for the establishment of Mappila-managed schools. In 1936 a special Mappila high school was founded at Malappuram under the pioneering C.O.T. Kunyipakki Sahib. Another significant event was the founding of Farook College in 1948, through the efforts of Maulavi Abussabah Ahmedali (d. 1971) who had spent some years in Egypt in association with Taha Husayn. The Islamic context was deliberately maintained in the College, but modern disciplines were placed in the foreground. Under the leadership of K.A. Jaleel (b. 1922), later Vice-Chancellor of Calicut University, the institution had great impact on the Mappila community. By 1974 there were over 700 elementary schools, 36 high schools, nine first-grade colleges, and several technical institutions conducted under Muslim management. The spirit of modern education was still the subject of controversy in the Mappila community, but not the value of schools.

The explosion of education fostered an increasing sense of individual independence and intellectual freedom. The Muslim Educational Society (MES), founded in 1964 by a group of Mappila professionally trained men, headed by P. K. Abdul Ghafoor, a professor of medicine, typified the new Mappila spirit and brought into sharper focus the increasing conflict between the old and the new. The MES was characterised by intense dissatisfaction with the slowness of the community's forward progress, by the call for "revolutionary change", by its attack on what it regarded as superstition, and by a burst of philanthropic activity. In addition to promoting new colleges and providing support for students, it began social service activities, including the founding of 14 hospitals. Its influential periodical, *MES Journal*, led the cry for change. The response of the Mappila community was broadly supportive, and the success of the MES gave it a wiser prominence in Indian Islam. The movement, however, came into conflict with traditional approaches, and major controversies within the Mappila community followed in its wake. After initially supporting the new dynamism, the Muslim League and Jamiat-ul-Ulema each issued calls to Mappilas to dissociate themselves from the popular cause, charging it with advocating changes in the *S̲h̲arīʿa*. As a result, Mappilas began to be polarised between progressive and conservative views, but did not break into sharp and formal division. The MES itself, however, experienced a schism in 1982; dissatisfied with its leadership some members formed a new, parallel organisation called the Muslim Service Society.

5. *Mappila theology*

(i) General features

Mappila theological development followed a path independent of trends in other areas of Indian Islam, a phenomenon accounted for by the origins of the community and by its linguistic and geographical situation. It was the conservative pattern of Arabian Sunnī orthodoxy that provided the major external influence. Mappila development has not been merely imitative, however, but it has been affected by its living experience in the Malayalam cultural context, especially after 1947.

Mappila isolation from Urdu-speaking Islam is notable, although never total. Contacts in the post-Independence period have increased significantly as Mappilas assumed leadership roles in the Indian Union Muslim League, as well as in other all-India Muslim organisations, but these have been primarily of a political and social rather than theological nature. The only Malayalam translation (1967) of a major Indian Muslim work on theological themes is that of Sayyid Amīr ʿAlī's *Spirit of Islam*. The views of Sir Sayyid Aḥmad K̲h̲ān, of Sir Muḥammad Iḳbāl, and even of Mawlānā Abū 'l Kalām Āzād, remain relatively unknown. Mawlānā Abū 'l ʿAlāʾ al-Mawdūdī's work is better known as a result of the translation efforts of the D̲j̲amāʿat-i-Islām. A few Mappilas have studied at Aligarh or Osmania universities, and Urdu is offered as a language option in Kerala schools. These factors, combined with societal mobility, indicate a probable deepening of relationships in the future.

The basic Mappila theological orientation is summed up in the two statements: All Mappilas are Sunnis ... The majority of Mappilas are Sunnīs. Both statements may be understood correctly. The former refers to the absence of S̲h̲īʿa in the Mappila community. The latter refers to ordinary Mappila usage of the term Sunnī: in common parlance it signifies the traditionally orthodox in contrast to adherents of other movements. Chief among the latter are the Mud̲j̲āhids; the D̲j̲amāʿat-i-Islām party has some influence, and there are a few Aḥmadiyya. In this secondary connotation, about two-thirds of the community are Sunnīs, who represent popular Mappila religious belief marked by conventional doctrine and practice, and alligiance to S̲h̲āfiʿī law.

(ii) Mappila religious leaders

The major categories of authoritative religious figures are maulavis, mullas, tangals and *ḳāḍīs*. Maulavis (= musaliar, the earlier term) are the true leaders, combining in effect the functions of *imām* and *k̲h̲aṭīb*, and to some extent those of *faḳīh* and *muftī*, the latter being dependent on the community's esteem. A maulavi must have graduated from an acceptable training program. Mullas are religious workers of lesser standing and slight education, whose functions are primarily Ḳurʾān reading and home visitation. Tangals (Mal. pers. pron.; honorific) are individuals descended from saintly families; not necessarily engaged in religious vocations, they are generally respected and occasionally revered. *Ḳāḍīs* are fewer in number, and though their sphere of influence is limited, they are well regarded; they may be hereditary tangals or appointed.

Mappila theological progress is closely related to the pattern of maulavi training. The older form was set by the S̲h̲ayk̲h̲ Mak̲h̲dūm institution at Ponnani. Said to have been founded in the 6th/12th century, it reached its peak under S̲h̲ayk̲h̲ Zayn al-Dīn b. S̲h̲ayk̲h̲ ʿAlī

(872-928/1467-1521), known as the "senior Makhdūm", who wrote religious treatises, and his famed grandson, Shaykh Aḥmad Zayn al-Dīn b. Shaykh Muḥammad al-Ghazālī, historian and legal scholar. The office of the Makhdum was hereditary, the style of education personal and the curriculum narrowly traditional. Although the institution has lost its earlier importance, its spirit lives on. It houses the Maunathul-Islam Sabha, whose key purpose is "instructing new converts to Islamism" (*The Maunathul-Islam Association—Articles of Association*, Ponnani 1949, 1).

Contemporary maulavi training follows two paths. The Ponnani tradition is carried forward by the Djamīʿa Nūriyya College at Pattikad (founded 1965) led by T.K. Abu Bekr Musaliar, which has rapidly become the premier Sunnī training college for Mappilas. Some Mappilas still attend al-Bāḳiyat-us-Ṣāliḥat College at Vellore, Tamil Nad, and a few have gone to Deoband. The curriculum at Djamīʿa Nūriyya follows the Deoband model, substituting Shāfiʿī law for Ḥanafī; theological authorities studied include al-Bayḍāwī, al-Maḥallī, al-Nawawī and al-Ghazālī. The basic intent of this educational stream is that the student becomes a true proponent of *taḳlīd* and obtain basic vocational skills, and the educational style combines the lecture method with memorisation. The narrow and concentrated learning experience instils the dedication for which the Mappila maulavi is noted, and assures that he will remain the symbol of continuity. Its lack of foundation in modern knowledge, however, has also made the system the focus of vehement criticism from within the Mappila community, and many Mappilas regard the reform of religious education as the key to Mappila forward progress. Reflecting this view a second track of maulavi training has developed that emphasises a basis in modern education. A high school degree, and desirably a college degree in Arabic is a prerequisite, in addition to the traditional Islamic disciplines. Within this stream the Rouzathul-Uloom at Feroke is a representative institution; the Djāmiʿa-i-Dār-us-Salaam College at Umerabad, Tamil Nad, has long served the Mudjāhid movement, while the Djamāʿat-i-Islām maintains its separate centre at Shantapuram Pattikad.

(ii) Mappila theological reform

Mappila theology remained in a fairly constant mould until the present century when Wakkom Muhammad Abdul Khader Maulavi (1873-1932) of Quilon sparked the beginning of the modern reform movements. He was influenced by the Egyptian reform of Muḥammad ʿAbduh and Rashīd Riḍā through *al-Manār* [*q.v.*], and was to some degree aware of the ideas of Djamāl al-Dīn al-Afghānī [*q.v.*] and Muḥammad b. ʿAbd al-Wahhāb [see IBN ʿABD AL-WAHHĀB]. Wakkom Maulavi exhorted Kerala Muslims to abandon un-Islamic practises, to respect reason, to adopt English education, and to develop progressive movements. He spread his views through the short-lived but influential Arabic-Malayalam periodical, *al-Islām* (1919) and by his Malayalam books *A literary view*, *Progress and literature* and *The rights of man*. He inspired a group of students at Trivandrum who carried forward his ideals, including K.M. Seethi Sahib in the socio-political realm and Khatib Muhammad Maulavi (1886-1964) in the religious field. A Malabar scholar respected for his skill in *tafsīr* and *fiḳh*, for his important *fatwās*, and for his efforts to establish the all-Kerala Jamiat-ul-Ulema, Khatib Muhammad's integrity and personality enabled him to transmit the southern reform to the more traditional north. To help express the spirit of the reform, "K.M." also joined with his colleagues, E. K. Maulavi and M. K. Haji, in establishing the major Mappila orphanage at Tirurangadi.

The *iṣlāḥ* initiated by Wakkom Maulavi and carried forward by his followers was basically a conservative reform, marked by an insistent call to return to the fundamentals of Islam and a positive reaching out to the new world. It is this fact, taken together with the quality of its leaders and their effective teaching and writing, that accounts for its wide impact. In the end, the movement affected a broad spectrum of Mappila leaders: orthodox maulavis, teachers and other professionals, and business men. It took on an organisational form in 1952 when some Mappilas formed the Nadvat-ul-Mujahideen as "a progressive" organisation to enlighten the Muslim masses "on scientific lines," to further "the true injunctions of Islam" and to promote harmonious relationships" with other religionists" (cf. imprints on Mudjāhid invitations). Sunnī leaders felt compelled to resist many of the new trends; they called the Mudjāhids "Wahhābīs" as a term of reproach and criticised the Mudjāhid practice of establishing separate mosques. Mappila Mudjāhids place strong emphasis on *tawḥīd*, accompanied by severe criticism of saint veneration and other "superstitious" practices. They lay stress on the Ḳurʾān in contrast to Ḥadīth, and they argue for the validity of translations and the use of the vernacular in mosque and *madrasa*. They support the use of reason in the interpretation of the Ḳurʾān ("how it promotes thinking and discourages imitation", C.N. Ahmed Moulavi, *Religion of Islam*, Calicut 1979, 53) and its appropriate application to modern conditions. In that connection, the principles of *idjmāʿ* and *taḳlīd* are attacked, and *idjtihād* is affirmed. Modern education is to be promoted and should include women. C.N. Ahmed Moulavi (b. 1906), the premier Mudjāhid scholar and the most profilic Mappila theologian writing today, represents this approach. His six-volume translation of the Ḳurʾān (1951-61) was the first in Malayalam. His translations and other interpretative works (cf. *Bibl.*) comprise an important body of reformist literature and have made "C.N." the subject of controversy in the Mappila community.

The final stream in the contemporary Mappila theological development was added by the social reformers represented by such organisations as the MES (see above). Communist Mappilas had criticised what they viewed as "other-wordly" religion, but the orthodox tendency was to resist the critique in view of the source. The lay leaders of the Mappila social reform from a stronger base declared in effect that theology must be judged by its ability to respond to human problems. Their treatment of *zakāt*, which produced a major controversy, is illustrative. Traditional charitable giving practices should be altered, and a portion of *zakāt* should be diverted to revolving funds that will help establish productive enterprises and so deal with the roots of economic hardship. Science is to be respected, for there is no conflict with religion, and co-operation with people of other faiths for mutual uplift is enjoined. The fundamental emphasis of the Mudjāhids and MES is the same: it is not Islam but Muslims that need change and reform.

As a result of these influence, Mappila theology displays an increasingly divided face. Sunnī theology, which has both resisted and absorbed, is no longer a solid block. There is considerable inner movement and diversity of approach. The possibility of a new theological synthesis exists, but may be difficult to realise.

6. *Mappila religious and social custom*

(i) Religious practice

Formal religious life centres on the mosque, of which there are 5, 350 in Kerala, an estimated one for every seventy Muslim homes (*Kērala Muslīm Directory*, 668). The architecture is unique, following the general pattern of Kerala Hindu temples, with peaked roofs and no minarets, Mappilas believe that the oldest mosques were originally Hindu temples, setting the pattern for later construction. Newer mosques tend to an amalgam of style; the explosion of mosque construction in the early 1980s reflected both Arab cultural and financial influence. A defined geographical area will include a *djamāᶜat* mosque, other mosques and a number of small prayer halls (*niskarapalli*). Each mosque has a maulavi assisted by a *mukri* (= *muʾadhdhīn*), and other staff, depending on its size and affluence. Arabic continues to be the primary language of the *khuṭba*, with Malayalam making some inroads. Women do not ordinarily attend mosque services. The popular Ramaḍān night services, however, are open to all and are well attended. Since only a minority of Mappilas attend the Friday mosque service, religious leaders look to a combination of Ramaḍān programmes and *madrasa* instruction to nurture the community.

Advanced Arabic studies are conducted at the more than 25 Arabic Colleges in the state. The majority follow the older method of rote instruction, but seven are chartered to grant the Afzal-ul-Ulama degree which is based on modern language study and which qualifies the bearer to teach the subject in secondary schools. The art of chanting has been drawn into public rhetoric and has created a special Mappila art form. The *iᶜdjāz* of the Ḳurʾān is taken with great seriousness, and it has led to the protective use of Ḳurʾānic phrases in amulet form, usually blessed by a person possessing the grace of *karāmāt*, and used especially to ward off sickness.

Mappilas commonly observe the basic practices of *dīn*, and a disproportionately high percentage of the annual pilgrims from India to Mecca are Mappilas. *Mawlūd* readings are common in Mappila homes. Even more important are the Arabic-Malayalam *mālas*, religious song-stories, which celebrate the lives of Muslim saints or heroic events in the history of the community. The most popular is the *Moideen Māla* representing the life of al-Djīlānī (470-561/1078-1167), closely followed by *Rifaᶜīn Māla* commemorating al-Rifāᶜī (500-78/1106-83). Sunnī Muslims also revere local saints, who are regarded as having miraculous powers, although the practice of shrine visitation is falling into some disrepute as the result of community criticism and the relentless pressure of modern views. The best-known is Syed Alavi of Mambram (1749-1843), whose shrine is still frequently visited; "by the foot of the Mambram Tangal" is a sacred verbal seal to a Mappila agreement. Other important shrines are those of Shaykh Zainuddīn at Ponnani and the Kondotti shrine of Muḥammad Shāh Tangal. The latter was an 18th century saint, possibly an itinerant Ṣūfī, whose followers have always denied the Sunnī allegation that he was a Shīᶜī. In addition to Baḳr ᶜĪd and ᶜĪd al-Fiṭr, special festivals called *nerčas* are connected with particular localities. The most famous of these, the Malappuram *nerča*, recalls the deaths of 44 Mappila martyrs (1141/1728). These celebrations were traditionally accompanied by much fanfare and with very high emotional expression, but are increasingly regarded by the educated populace as outmoded expressions of religious fervour. A number of Sunnī leaders are waging a determined battle to validate the concept of *waliyat*, which is the most hotly debated issue in contemporary Mappila religion.

(ii) Social custom

Mappila social custom is governed by the *Sharīᶜa*, subject to the retraints of national law and the conditioning influences of Malayalam culture. Mappilas have generally stood for the inviolability of the *Sharīᶜa* in the area of personal law. Birth, marriage and burial ceremonies are strongly traditional, but in other areas, Mappila customs have been relatively open to change, including the area of family planning. Mappila women are experiencing a quiet revolution; some are joining professional vocations and assuming leadership roles. Polygamy was never common, but the divorce rate is high. Social classes in the Mappila community are nor sharply defined, but there is a continuing distinction of Mappilas of Arab descent, which is maintained through marriage practice and special regard for descent from the Prophet's line.

Mappila adaptation from the Hindu environment is not pronounced. The most striking example is the matrilinear system called *marumakkathayām*, indigenous to the Nayar caste, which played an influential role in Mappila history. Although in South Malabar accessions to Islam were primarily from outcaste groups, in North Malabar many Nayars joined Islam through conversion or intermarriage. Through this process, *marumakkathayām* took its place alongside the patrilinear system in Mappila Islam. The practice traces descent through the female side, assigns authority to the eldest sister, and controls property through the joint family system. This pattern, unusual in Islam (but cf. the Minangkabau Muslims of Sumatra) is progressively yielding to the development of nuclear families and to the pressure to conform to the more traditional Islamic order.

Other elements of Kerala culture, ranging from dress habits to architecture, have become part of the Mappila tradition. It is not possible, however, to speak of a fundamental cultural inter-penetration between Mappilas, Hindus and Christians. Mappila religious practice and theology, in particular, remaining relatively unaffected. The notable example of syncretistic practice—that associated with the Muslim saint, Vāvār, at the Hindu Sabarimala shrine in South Kerala—is an isolated exception to the general rule.

7. *Mappila character*

The key element in Mappila character is devotion to Islam. Although there is controversy within the community over the answer to the question "What is Islamic?", the importance of the issue is not doubted. The intensity of this commitment has given rise to the Mappila reputation for excessive religious fervour. The assessment that Mappilas are "religious fanatics" has followed as a more or less accepted assumption in many scholarly writings, particularly Western, contributing to the development of a caricature that bears little resemblance to reality.

As a result of the stress and reverses of the European period, Mappila reactions were extreme from time to time. The emotional and untutored response of some Mappilas to conditions that seemed hostile to Islam, however, did not represent an innate disposition characterising the entire community, which for centuries had co-existed with Hindu and Christian neighbours in practical harmony. Even those who maintained the "fanatic" assessment were forced to recognise variations between Mappilas of north and south Malabar, and in the south between coastal and inland Mappilas; these generalisations were too

broadly sweeping, however, to be accurate or helpful. Since 1947, Mappilas have turned their backs on the kind of reactions that produced the caricature; nothing so clearly illustrates that fact as the Mappila restraint in the anti-Muslim riots that took place in Cannanore District in 1971.

Mappilas share the emotional traits of Malayali personality, but Mappila character is especially marked by simplicity of faith; loyalty to friends, Muslim and non-Muslims; fortitude and patient endurance; honest and frugality; industriousness, marked ability in commerce; a sense of community pride and oneness; and the readiness to follow recognised leaders. Various influences are modifying the traditional character. Community loyalty is no longer blindly granted, and there is a new sense of individual freedom, as well as more impatience with unsolved problems. Although displaying remarkable vitality, religious faith is neither so simple nor so stable as it once was, and as the public attention is more and more directed to social progress, there is a growing tendency to view it as a purely private matter.

8. *Mappila literature*

For much of Mappila history, the number of Mappila writers and their influence upon the community was severely limited by the lack of education. As Mappila literature developed, religious publications dominated the field. These continue to increase rather than decrease in quantity, and the Ḳur'ān itself remains as the best-seller. More recently, however, Mappila writers have expanded their interests to general themes, and secular literature is being written and published in abundance.

The special, and still largely hidden, Mappila literary achievement is the Arabic-Malayalam body of religious materials, narrative poetry and songs. It is estimated (P. Seyd Muhammad, *Farook College Annual*, 1974, 56) that less than 10% of these materials are translated into Malayalam. This literary form emerged about five centuries ago as a complex blend of Malayalam language, Arabic script with special orthographic features, and some Arabic, Tamil, Urdu and Persian vocabulary. Particularly loved are the *khissa paṭṭukal*, comprising a series of romantic ballads and battle songs. These heroic epics represent the private Mappila folk annals, which are memorised and sung on special occasions, particularly by women. The poet laureate of the Arabic-Malayalam song literature is Moyinkutty Vaidyar (1857-91). With the rise of general education, the Arabic-Malayalam literary genre is on the decline, although religious literature is still being produced in considerable quantities at the publishing centre of Parappanangadi for use in *madrasas*.

Mappila periodical literature is extensive and wisely read, and is especially influential in the religious sphere. Almost one hundred periodicals have appeared during the past half-century, the majority in Malayalam, but many have died an early death. There are currently about a dozen significant publications, representing different points of view. A Mappila newspaper which played a significant role in the community's development is the *Chandrika* (founded 1934). For a more natural picture of Muslim life and emotion, the works of contemporary Muslim novelists must be considered. They represent Mappila culture, views and feelings with realism, freshness, honesty and a sense of humour. Generally uninterested in politics, the novelists also tend to be secular in spirit and deal lightly with religion, showing little hesitation to smile at its pretensions or to mock its idiosyncrasies. Drawing on universal human issues, they project a paradoxical mood of hope and pessimism. Leading authors include U.A. Khader, K.T. Muhammad, N.P. Muhammad and Moidu Padiyath, but the outstanding Mappila novelist is the widely honoured Vaikom Muhammad Basheer (b. 1910). His most noted work, *Nduppuppakkoranentarnnu* ("My grandfather had an elephant", 1951), follows the interaction between a conservative and progressive Mappila family, the elephant symbolising unrealistic traditionalism; the story illustrates a dilemma that faces Mappilas both in the present and in the future.

Bibliography (the non-English titles listed are Malayalam publications): Full studies of the Mappilas are rare; the only work in English that seeks to treat critically the whole Mappila tradition is Roland E. Miller, *The Mappila Muslims of Kerala. A study in Islamic trends*, Madras 1976. The single major investigation of the community's history by a Mappila is P.A. Syed Mohammad, *Kērala Muslīm charitrum* ("Kerala Muslim history"), Trichur 1961; other useful (uncritical) studies are C.N. Ahmed Moulavi, *Mahattāya Māppila sāhitya pārambariyum* ("The illustrious literary tradition of the Mappilas"), Trichur 1976, and K. Muhammad's thoughtful *Māppilamār engoṭṭu* ("Whither the Mappilas"), Trichur 1956. V. Abdulla, *The Moplahs*, in *The Illustrated Weekly*, 1 Feb. 1970, is an example of a popular presentation by a knowledgeable Mappila leader. *The Kerala Muslim directory* (Mal.), ed. P. A. Syed Mohamed, Cochin 1960, assembles a mass of information of varying quality. I. H. Qureshi, *The Muslim community of the Indo-Pakistan sub-continent*, New York 1962, correctly positions the Mappilas in the wider Indian Muslim context. Brief older articles include T. W. Anold, *EI*[1], iii, 250 f., who uses mainly British sources, while Hamid Ali, *The Moplahs*, in *Malabar and its folk*, ed. T. K. Gopal Panikkar, Madras 1929, and G. Tokinam, *Moplah-Nad*, Calicut 1924, represent Muslim and Hindu points of view respectively. For Mappila statistics, see India Census Reports, 1891-1971, especially the useful *Census of India, 1961, Paper no. 1 of 1963, Religion*, Delhi 1963; the statistical tables in Miller, Appx. A; H. A. Gleason, Jr., *Religious communities in the Indias*, a regional survey, Fancy Gap, Va. 1946; and N.A. Siddiqui, *Population geography of Muslims in India*, New Delhi 1976.

In general, western studies of the Mappilas from the British period must be used with great care because of frequent bias and inadequate sources, but see P. Holland-Pryor, *The Mappilas or Moplahs*, Calcutta 1904, a caste handbook of the Indian Army; W. Crooke, *The Moplahs of Malabar*, in *Edinburgh Review* (1922), 181-93; G. MacMunn, *The martial races of India*, London 1933. Much more useful are the Madras and Kerala government-published *District gazeteers*, and of these the best is William Logan's oft-quoted *Malabar manual*, 3 vols., Madras 1887, a mine of information, meticulously gathered by a relatively objective civil servant, and generally reliable; C. A. Innes, *Malabar*, ed. F. B. Evans 1933, is an up-dating of this classic. E. Thurston, *Castes and tribes of Southern India*, Madras 1909, iv, 455-501, provides ethnographic information, much of which is now outdated.

For the immediate cultural context, cf. A. Sreedhara Menon, *A survey of Kerala history*, Kottayam 1967. K. P. P. Menon, *A history of Kerala*, ed.

T. K. K. Menon, 4 vols., Ernakulam 1934-7, and L. K. Anantha Krisha Iyer, *The Cochin tribes and castes*, 2 vols., Madras 1912, include materials for central Kerala; *Travancore State manual*, ed. K. K. Velu Pillai, 4 vols., Trivandrum 1940, and *The Travancore castes and tribes*, Trivandrum 1937-9, deal with the southern area. L. W. Brown, *The Indian Christians of St. Thomas*, Cambridge 1956, studies the parallel "Mappila" community. A. Basham, *The wonder that was India*, London 1954; H. G. Rawlinson, *Intercourse between India and the Western world*, Cambridge 1916; A. Das Gupta, *Malabar in Asian trade*, Cambridge 1967; and G. Hourani, *Arab seafaring in the Indian Ocean in ancient and early medieval times*, Princeton 1951, study commercial relationships between Malabar and Arabia. H. Yule, *Cathay and the way thither*, rev. H. Cordier, iv, 72 ff., provides an exhaustive note on Malabar ports. T. W. Arnold, *The preaching of Islam*, London 1913, and S. Nadvi, *Religious relations between Arabia and India*, in *IC*, vi, 129-39, 200-11, and idem, *The Muslim Colonies in India before the Muslim conquests*, in *IC*, viii, 478-89, are dependable sources for the Arab Muslim expansion and Mappila origins. For Ḥaḍramawt, especially Tarim, to which many Mappilas trace their origins, cf. D. Van Der Meulen, *Aden to the Hadhramaut*, London 1947, and Van Der Meulen and H. von Wissmann, *Hadramaut, some of its mysterious unveiled*, Leiden 1932, and ḤAḌRAMAWT in Suppl. For the Tarisapally plates, see E. Kunjanpillai, *Studies in Kerala history*, Kottayam 1970. S.M.H. Nainar, *Arab geographers*, Madras 1942, is a valuable outline of references to Malabar; see also *Ibn Baṭṭūṭa, Muḥammad ibn Abd Allāh, Travels in Asia and Africa*, 1325-1354, tr. H.A.R. Gibb, New York 1929. The Čeraman Perumāl conversion tradition was first reported by Barbosa, *The Book of Duarte Barbosa*, tr. M. Dames, London 1918; for the form accepted by Mappilas, cf. Shaykh Zaynu'd-Dīn, *Tohfut-al-Mujahidin*, tr. S. M. H. Nainar, Madras 1942. K. P. P. Menon, i, 429 f., criticises the tradition, and K. V. Krishna Ayyar, *The Zamorins of Calicut*, 1938, treats it as legendary.

The Portuguese incursion into Kerala is surveyed by K. M. Panikkar, *Malabar and the Portuguese*, Bombay 1929; F. C. Danvers, *The Portuguese in India*, 2 vols., London 1894; R. S. Whiteaway, *The rise of Portuguese power in India*, London 1899; Barbosa, *op. cit.*; and G. Correa, *The three voyages of Vasco da Gama*, tr. H. Stanley, London 1849. The Dutch period is dealt with by Panikkar, *Malabar and the Dutch*, Bombay 1931; T. I. Poonen, *A survey of the rise of Dutch power in Malabar (1603-1675)*, Tiruchirapalli 1947; and P. Baideaus, *A true and correct description of the most celebrated East India coasts of Malabar and Coromandel*, tr. A. and J. Churchill, London 1745. Scholarly writing on the Mysorean interlude tends to widely differing interpretations. For the Muslim perspective, cf. C. K. Kareem, *Kerala under Haidar Ali and Tipu Sultan*, Cochin 1973, which includes a helpful bibliography, and M. H. Khan, *History of Tipu Sultan*, 2nd ed., Calcutta 1971; for the variation in European views, see *Reports of a Joint Commision ... Malabar in the years 1792-1793*, 3 vols., Bombay *ca.* 1794; M. Wilks, *Historical sketches of South India*, 3 vols., Madras 1869; and M. De La Tour, *The history of Haydar Ali Khan*, London 1784; C.H. Rao, *History of Mysore*, 2 vols., Bangalore 1946, is a standard gazetteer.

The complex Malabar land tenure system that has played a major role in Mappila history is introduced in Sreedhara Menon, *The evolution of the Jenmi system in Kerala*, *op. cit.*, 325-69 and P. N. Kunyan Pillai, *Jenmi systems in Kerala*, Kottayam 1966. For observation of the Mysorean impact, cf. F. Buchanan, *A journey from Madras through the countries of Mysore, Canara and Malabar*, 3 vols., London 1807. The development through the British period may be traced in the *Guide to the records of the Malabar District, 1714-1935*, 9 vols., Madras 1936. For a British opinion favourable toward Mappilas, see Logan, i, 621-70, while Innes, 304-72, summarises the different types of land rights. L. Moore, *Malabar law and custom*, Madras 1905, and A. Mayer, *Land and society in Malabar*, Oxford 1952, provide systematic overviews. M. A. Oomen, *Land reforms and socio-economic change in Kerala*, Madras 1971, outlines the recent dramatic changes.

Aspects of the British period are analysed by S. F. Dale, *Islamic society on the South Asian frontier: the Mappilas of Malabar, 1498-1922*, London 1981, with special attention to the 1921 Rebellion and with notes on similar Muslim communities. For another view, stressing economic factors, cf. C. Wood, *The Moplah Rebellion of 1921-22 and its genesis*, unpubl. Ph.D. diss., University of London 1975. Cf. also Wood-Dale, *Correspondence of the Moplah outbreaks*, in *Journal of Asian Studies*, xxxvi (1977), 391-400. Pertinent materials are found in the Kozhikode (Calicut, Kerala) and Madras (Tamil Nad) Archives, in the Madras Record Office, and in the Record Department of the India Office, London; but for the British viewpoint, cf. especially *Correspondence on Moplah outrages in Malabar, 1848-1853*, 2 vols., Madras 1863, while *Proceedings of the Legislative Council of the Government of Madras*, 1921-2, report a broader range of views. On the Rebellion itself, Mappila sources include K. M. Maulavi, *Khilāfattu anusmarana kurippukal* ("Khilafat reminiscences") Calicut 1981; K. Koyatty Maulavi, *1921 Malabār lahala* ("Malabar Rebellion"), Calicut 1953, and C.K. Kareem, ed., *Charitrum: Malābar lahala* ("History: Malabar Rebellion"). Trivandrum, 1971; Hindu observers were: K. Madhaven Nair, *Malābar kalapūm* ("Malabar Rebellion"), Manjeri 1971, and K. P. Kesava Menon, *Karinya kālum* ("The Past"), Calicut 1969; a Marxist opinion is found in E. M. S. Namboodiripad, *The national question in Kerala*, Bombay 1952; the primary British source is R.H. Hitchcock, *A history of the Malabar Rebellion*, Madras 1925; see also J. J. Banninga, *The Moplah Rebellion of 1921*, in *MW*, xii (1923), 379-89. The post-Rebellion period is treated by E. Moidu Maulavi through a biography of Muhammad Abdurrahiam, *Ende Kūttukūran* ("My companion") Calicut 1964. Raza Khan, *What price freedom?* Madras 1969, traces the Muslim League and Partition questions, see also *Debates of the Madras Legislative Assembly*, 1947, Madras 1947, Aboosidique, *Seethi Sahib*, Calicut 1966 (Mal.). Miller, *op. cit.*, 158-314, outlines the contemporary development.

Orthodox Sunnī beliefs are found in short Malayalam or Arabic-Malayalam writings such as *Muslim prārambha čatangl* ("Basic Muslim tenets") Ponnai, 1950; Madrasa textbook, *Classes I to V*. Parappanangadi 1972; K. Umar Maulavi, *Tarjumān-ul-Khurān*, Tirurangadi 1971; and the *al-Munir Annual*, publication of the D̲jāmiʿa Nuriyya College. The classic *S̲h̲arīʿa* manual is Shaikh Ahmed Zainuddīn, Fathul Muīn, Trichur 1968. Uncritical hagiologies of Muslim saints include M.A.

Kareem, *Sayyid Alavi Tangal*, Tirurangadi 1970, and I. Mitankutty, *Hazrat Muhammad Shah Tangal*, Kondotti 1964. For Wakkom Abdul and Khader's views, cf. his *Islāmile čintāprasthanangl* ("The progress of ideas in Islam") Perumbavoor 1954, and for his impact, cf. Muhammad Kannu *Vakkam Maulavi*, Calicut 1981. For the development of the Mudjāhid reform, see *K.M. Maulavismāraka grantham* ("K. M. Maulavi Memorial volume"), Tirurangadi *ca.* 1965, and the biographies of Seethi Sahib. The extensive writings of C. N. Ahmed Moulavi include his translation and commentary of the Ḳurʾān, *Pariśuddha Khurān*, 6 vols., Perumbavoor 1951-61, and of al-Bukhārī, *Saheelhul Bukhāri*, 2nd ed., Calicut 1970; idem, *Islām, oru samagrapāthanum* ("Islam, a comprehensive study"), Calicut 1979; idem, *Principles and practice of Islamic economy*, tr. K. Hassan, Calicut 1964. Vernacular publications such as *Chandrika* (League-oriented newspaper), *Al-Amīn* (Congress-oriented tabloid), *Sunni Times* (traditionalist weekly), *Muslim Education Society Journal* (progressive monthly), and *Prabōdhanum* (Djamāʿat-Islām journal), report on the clash of views on an broad range of subjects.

Neither Mappila religious practice nor social custom are well documented. For both, cf. *Kerala Muslim Directory* (*op. cit.*). The unique Mappila mosque architecture is studied by J. Fergusson, *History of Indian and Eastern architecture*, London 1876. The Malappuram *nērča* is reported on in *Manōrama*, 7 April 1972, p. 8. See also S.F. Dale and M.G. Menon, *Nērccas: saint martyr worship among the Muslims of Kerala*, in *BSOAS*, xli/3 (1978), 523-38. For Mappila songs, cf. K. K. Abdul Kareem's introduction to *Moyinkutty Vaidyar, Malappuram khissa pāttukal* ("Malappuram ballads"), Alwaye n.d.; O. Abdu, *Mappila pāttukal* (Mappila songs"), Chandrika Republic Day Edition, Calicut 1961; F. Fawcett, *A popular Mappila song*, in *Indian Antiquary*, xxviii (1899), 64-71; *idem, War songs of the Mappillas of Malabar*, in *IA*, xxx (1901), 499-508, 528-37; and C. N. Ahmed Moulavi, *Mahattāya Māppila Sāhitya Pārambariyum*, *passim*. Mappila marriage practice is treated in V. S. D'Souza, *A unique custom regarding Mahr (Dowry) observed by certain Indian Muslims of South India*, in *IC*, xxix (1955), 267-74, and *Kinship organization and marriage customs among the Moplahs on the south-west coast of India*, in Imtiaz Ahmad, ed. *Family, kinship and marriage among Muslims in India*, Columbia, Mo. 1976, 141-67; see also D. M. Schneider and K. Gough, *Matrilinear kinship*, Berkeley 1961. Mappila literature is discussed in K. Chaitanya, *A history of Malayalam literature*, New Delhi 1971, and in I. V. Ittiavar, *Social novels in Malayalam*, Bangalore 1968. In 1983 Farook College, Kerala inaugurated a Mappila Studies cum Research Centre, issuing a draft version of *Mappila Muslims of Kerala, a select bibliography*, ed. A.P. Abdurahiman, with the intent of developing a complete bibliography of Mappila materials.

(R.E. MILLER)

AL-**MARʾA** (A) Woman.

1. In the Arab world.

For a long time, the problem of woman has been avoided or dealt with only partially or in a biased way, but now a general twinge of conscience has brought it to the focus of our attention. Not just one but many different problems confront the Arab woman and affect how she is seen by society. There is the legal aspect, defining the precise relationship between divine and human law; there is the collection of "distorted pictures" (the expression used by Etiemble) with which literature in particular presents the "myth" of woman; and there is feminine behaviour reported by contemporary witnesses since the beginning of the *Nahḍa*, to which she adds her own version.

Woman and the law. Problems arise within the systematic framework of law because of the ambiguity of legal phraseology and because of the growing confusion over the centuries between human and divine law with regard to the personal status of women. The major principles are outlined in the Ḳurʾān, two sūras of which are especially relevant: the one concerned with women (IV, *al-Nisāʾ*), and the other to divorce (LXV, *al-Ṭalāḳ*). Other verses deal with different problems such as adultery, modesty and inheritance (II, V, VII, XXIV, 31, 60/59, XXXIII, 30-3, 55, 59, XLIX, 11). Most of the hierarchies of human relationships are established in the Ḳurʾān; for Muslims it is a revealed morality rather than a *corpus iuris*. "Men have authority over women ... reprimand those you fear to be unmanageable! Confine them to their sleeping quarters! Beat them! If they then obey, you do not look for any other method [of constraint]! "(IV, 34/38) "Men have pre-eminence over them" (II, 228). A woman is "worth" approximately half a man, and there must be two female witnesses where one man will suffice (II, 282). The woman's share of an inheritance is generally half that of a man who has the same rights of succession (IV, 11-12/12-13). Polygamy is lawful (IV, 3). Great divine indulgence is promised to men, for "you could not be fair in your dealings with your women even if you wanted to; but do not be too partial!" (IV, 129, 128). But there are limits: "Do not force your slaves into prostitution....!" and certain taboos: "Your mothers your daughters, your sisters .... are unlawful for you [to have as wives]" (IV, 23-4, 26-7).

A free wife is described as a "field for ploughing (*ḥirth*); come to your ploughing as you wish!" (II, 223). In the hierarchy, she is placed along with children and the weak in need of protection. Over the centuries she has been kept in a state of almost total subjection by Ḳurʾānic "paternalism". Her attitude ("lowered eyes"), her gait and the chaste attire are all defined whether she is young (XXIV, 31) or old (XXIV, 60). Even more strict attention is paid to the "wives of the prophet", *yā nisāʾ al-nabī* (XXXIII, 30-3, 55, 59), and, as models of reference, caused women to be more rigorously restricted, through the veil and certain other prohibitions.

Rigorous interpretation has made the Ḳurʾān very severe. For example, according to the Ḳurʾān, marriage dowries, *ṣadukāt* in Ḳurʾān, IV, 4/3, translated *muhūr* in the *Tafsīr* of al-Bayḍāwī (Cairo 1947, 102), had to be paid "spontaneously" (*niḥlat^an^*) to the woman, but in practice this did not happen. The act of marriage, in origin stripped of all religious overtones, and purely "a civil act" concluded by *īdjāb* and *ḳabūl*, offer and acceptance, without any obligatory presence of a religious authority, according to Santillana, Schacht and Chehata, acquired a sacralised aura in law and became for the population at large an act subject to the divine law, contrary to the principles stressed by legal historians.

The constraints on women have become progressively worse. Adultery (*zinā*) punished in the Ḳurʾān (XXIV, 2) by a hundred lashes of the whip, applied to the offending woman and also to the man, eventually acquired legal sanction for the stoning of the women to death. What is perhaps even worse is that the Ḳurʾān stipulated that there should be four witnesses to an act of adultery before punishment could be authorised (XXIV, 4, 13 and IV, 15/19), but

later practice allowed the husband or the brother to put the suspected woman to death more expeditiously. Divorce (II, 226-32 and LXV *in toto*) is an absolute right reserved to the husband (LXV, 2), who must nevertheless refer to "the evidence of honest men among you" at all times. But in practice, this control has been neglected over the centuries. In the end, a new legal right evolved, allowing a man to use the police authorities to bring back a wife who has left the conjugal home (*bayt al-ṭāʿa*). Nevertheless, there had been constant reference to the Ḳurʾān even when irrelevant (*bayt al-ṭāʿa*, stoning the adulterous woman) and this was used as an argument for "sacralising" the status imposed on a woman.

This sacralising of her inferiority is perhaps the main reason for the problems of the Arab woman. She is regarded from an ontological point of view as a second-rate human being, coming after man in the order of God's creatures. She submits to her duties, is limited in her powers and is mistress neither of her own development nor of her own body. Everything about her is considered taboo, so that "marriage is dealt with in the same way as a man thinks about correct behaviour"

However, in the early stages of Islam "correct behaviour" was still flexible. Verses were revealed at the appropriate time to allow the Prophet to marry the divorced wife of his adopted son (XXXIII, 37) or, according to the exegetes, to expose the depraved character to public abuse for having accused ʿĀʾisha of adultery (XXIV, 11-19; see note in Blachère's translation). Later, after the death of the Prophet, the conquests increased the number of marriages between Muslims and Jews and Christians. Although there was clear authorisation for this in the Ḳurʾān, the caliph ʿUmar temporarily prohibited this type of marriage for the sake of the welfare of the state. The revealed text was distorted or even contradicted to justify the need of the moment (cf. Muḥammad Muṣṭafā Shalabī, *Taʿlīl al-aḥkām*, 244).

In fact, the law was to become the battleground for two opposing factions. There were the literalists with their rigorous interpretation, who claimed to take their stand on the Ḳurʾān and the Sunna (*al-tafsīr bi 'l-manḳūl*) as well as on "consensus" (*idjmāʿ*) and "precedent" (*taḳlīd*), methods essentially formalist or literalist. On the other hand, there was a body of rationalist or liberal opinion from the Muʿtazilīs to Avicenna and to Khālid Muḥammad Khālid in the 20th century who have tried to take into account the original historical setting of the statutes and the development of individual interpretation, especially concerning woman. However, over the period of the Arab-Muslim evolution, it has been the literalist tendency which has carried weight, even where in one region or another of the Muslim world some traditional customs favoured women's rights (cf. G.-H. Bousquet, 161 ff.).

In modern times, Muslims jurists, influenced by reformist ideas, have tried to make a distinction between "human law" and "divine law"; the "*ʿibādāt*, religious acts which bring the creature into contact with his creator", and the "*muʿāmalāt*, relations between individuals" (Chehata, 11). Since 1897, the institution of marriage (which is included in the *muʿāmalāt*) has been a written contract in Egypt and, therefore, has implied some means of protection for women, even though traditionally "it is not advisable to write it down" (Linant de Bellefonds, ii, 40). It has become more and more the general rule to draw up a legal document (in Ottoman law, 1911; in the Tunisian statute book, 1956; in Morocco, 1958; etc.). By borrowing from articles drawn up by the most liberal judicial schools, the modernists have followed a parallel course and tried legally to restrain the practice of polygamy; they include a "monogamy clause" taken from the Ḥanbalī school. This is why the Ottoman law of 1917 allows a wife to obtain the annulment of her marriage contract if her husband marries someone else. The Jordanian legal code of 1951 is similar. The Syrian (art. 14.3) and the ʿIrāḳī (art. 3.4) codes do not include the monogamy clause, but insist that the second marriage is given preliminary authorisation by a judge. The Tunisian code of 1959 (art. 18) was the first in an Arabic-speaking country, and until now (1982) the only one, to prohibit polygamy completely. As with marriage, there has been a gradual tendency to embody the procedure in a written document. It happened in Egypt in 1931 and in Syria in 1953 where, as also in Morocco, the judge may sentence the husband to pay costs and alimony. Several Islamic countries have forbidden "triple repudiation" in any circumstances. There has been a complete break with tradition in Tunisia, where (arts. 31 ff.) the act of repudiation is not reserved just for the husband, but it is possible to have "legal divorce", granted by the court "at the request of either husband or wife", each having equal statutory rights.

In Syria the law of 31 December 1975 (art. 60) stipulates that "the dowry must be paid to the woman herself" and almost everywhere, legal limits are imposed on the minimum age of marriage for young women and young men.

Although in most Arab-Muslim countries, it remains true that the witness of two women is worth that of one man; a marriage between a Muslim woman and a non-Muslim is null and void; and rights of inheritance are always regulated in an unjust way, improvements cannot be systematically denied. The wishes of a woman herself about her own future are now being taken into account. For example, the woman who marries a man with a different nationality is no longer obliged to lose her own nationality if she acquires that of her husband. In ʿIrāḳ (*J.O.* no. 2217. 1973), she may choose the nationality she wishes. In Lebanon (document dated 11 January 1968), she may have dual nationality and will lose her own only if she makes an official request to have her name removed from the registers of her native country. In Libya (Law no. 7, 1963), she keeps her nationality unless she is able and wishes to assume that of her husband; it is the same for Egyptian women (Nationality law, 1958) and for Syrian women (1969, art. 12). In Tunisia and the Sudan, the husband's nationality has no effect on that of the wife, who always keeps her own. It is also of note that in two decrees by the Supreme Court of Appeal in Egypt, in 1972 and 1975, equal weight was given to the testimony of women and men, and thereby the principle of the charter of 1962, "Woman must be equal with man", was introduced into the judicial system. Such examples indicate the tendency in recent times to concede a much greater autonomy in legal matters to a woman.

Distorted images of women in literature. From earliest times to the *Nahḍa*, poetic and literary compositions present their heroines with two sides to their character. Poetry of the archaic type always praises the hard life of the Bedouin with their historical records of events, their virtue and their sweethearts, who were not only ravishingly beautiful but were sometimes perfidious, were small-waisted and heavy-hipped, mendacious and inconstant (cf. Kaʿb b. Zuhayr's

Bānat Su^c^ād). They were always moving about, wandering with their tribes, seeking watering places as fleeting as the mirages. Later, love poetry evolved with society and a new image was added to the traditional one; there appeared the townswomen of the holy cities of Islam, Mecca and Medina, and of the Islamic capitals like Damascus and Baghdād. Pilgrims from Byzantium and Persia, both conquered territories, brought with them the first musical slave-girls, who were to play a considerable role in the creation of a new female image [see ḲAYNA]. Though them and the popular story-tellers [see ḲĀṢṢ], foreign influences reached different circles of Muslim society. The inspired stories from the Bible and from folklore frequently described queens like Zenobia, queen of Palmyra, and Bilḳīs [*q.v.*], queen of Sheba. The poets describe her as a silhouette surrounded by social prohibitions. The love aroused by woman in one group (Djamīl) is chaste and sad because it is always thwarted. For others (like ^c^Umar b. Abī Rabī^c^a), love has become a game which is always spurred on by desire. It is played outside marriage with a woman who is conversant with the art of teasing. She becomes the object of a demanding "courtship", she must set aside her inferiority and inflame the man's passion, using her mind, her beauty and her talents. Since a wife has become the property of her husband (his "field"), she cannot be his equal and has lost this power, which is why in literature love affairs outside marriage were seen to be necessary. Ribald and mischievous poetry portrays a gallery of free-mannered women, even libertines. There were two types of women that could be described in this way in the early centuries of Islam. There were the beautiful, cruel slave-singers, and the so-called "free" women who tried first to imitate the free manner of the former and then allowed much more boldness in their behaviour than their successors under the ^c^Abbāsid régime were able to tolerate (Lammens, *Mo^c^âwia I^er^*, 259, 440). Both groups display strong intellectual qualities, for countless passages from the *Kitāb al-Aghānī* represent free-women and slaves as being wise and good, firm advisers as well as well as mocking, insolent and cunning (i, 75, 76, 89, 126; ii, 86; viii, 133-4, 135, etc.). Again, this shows the dual image of woman described.

With the development of cities, these two female types finished on opposite sides of the social hierarchy. The urban Arabs adopted the values and ways of life of the peoples with whom they mixed, but they wanted to "preserve" their wives from them. This policy resulted in the practice of shutting up the so-called free townswomen of the wealthy and generally better-off social groups, especially after the transfer of the capital to ^c^Irāk. Consequently, the influence of the slave singer became greater since she alone could mix with the men of the élite classes. She was shrewd, witty, cultured and often a poetess. She frequented all the places of social entertainment and constituted herself as a civilising influence on the sensitivity, the mind and the tastes of an expanding society throughout the Muslim empire, from al-Andalus to Persia.

Perhaps it was under the influence of the Manichaean beliefs of Persia or of Śatkism and Tantrism in Hindu and Buddhist India, that these same women of such great cultural importance gradually became a source of spiritual joy and a way of salvation. Such an apotheosis is evident in Shī^c^ī poetry which hails Fāṭima, the daughter of the Prophet, as "the mother of her father", according to her *kunya* [see FĀṬIMA], "an angel of knowledge"; thus al-Suhrawardī says, referring to the *ḥadīth*, "He who knows Fāṭima as she is, knows himself". Now "he who knows himself, knows his God".

When she is transformed into such an icon, woman is the idealisation of the qualities of the slave-singer as well as those of the inaccessible free-woman. Poetry and prose alike express the sexual frustrations experienced by writers who have accepted the social prohibitions and who respect the traditional hierarchies. In love with his goddess, (whose social standing has been questioned by biographers), al-^c^Abbās b. al-Aḥnaf claims only to "adore" a free woman. He says, "Only slaves can love servants" (*Dīwān*, ed. Khazradjī, 86, poem 161, verses 3, 4, 5). The same contempt was expressed later by al-Djāḥiz concerning slave prostitutes (cf. Ch. Pellat, *Le milieu baṣrien*, 253-4).

Theologians were appalled at the sacralisation of woman before she became this symbol of mystery. Al-^c^Abbās b. al-Aḥnaf is said to have "added apostasy to debauchery in his poetry" (*ya^c^ḳud al-kufr wa 'l-fudjūr fī shi^c^rihi*), according to Abu 'l-Hudhayl al-^c^Allāf, the Mu^c^tazilī (*Aghānī*, viii, 15; concerning Ibn al-Aḥnaf, the poet at the court of Hārūn al-Rashīd, and his love poetry, see N. Tomiche, *Réflexions sur la poésie de ^c^Abbās b. al-Aḥnaf*, in *Arabica*, xxviii/3 [1981], 275-99). In fact, poetic writing had become an expression of submission to social prohibitions and a sublimation of unattainable romantic desire. A poet like Ibn al-Aḥnaf really tortured himself in order to tell of his desire in a way that none of his predecessors had. Probably it was at this stage of literary development that the myth of Madjnūn, "the fool of love", became established (see Blachère, *HLA*, i, 122) and was anachronistically projected back to the beginnings of Islam. The poet makes an ideal of his frustration, and through his metamorphoses (the ground trodden on by the feet of the beautiful woman, or the linen encircling her beautiful body) he declares an impossible love.

Despite an apparent sacralisation, this poetry also carries the connotation of the suppression of the "game" of love and of reciprocal pleasure. It undoubtedly represents the woman as an idol beyond man's reach, but also as an erotic yet passive object, flattering the fantasies of the poet and of the story teller. This is why she was also a passive object of physical pleasure for poets like Abū Nuwās or Ibn al-Ḥadjdjādj, who spoke of her in less mystical and less guarded terms. There was, therefore, an adoration and total submission of one group before woman, and a libertine attitude, an ethical debauchery and a revolt against social prohibitions of another; all these characteristics feature in the "man of high birth", the *ẓarīf*, the ideal man of the most illustrious centuries of the empire.

For centuries there has been a fixed dual image of woman as angel and demon. In Arab literature of the modern era, since the beginning of the *Nahḍa* and in later audio-visual media, feminine characters retain some of their traditional aspects. In current art forms, like modern novels and the theatre, the mediaeval contrast between angel and demon appears in familiar guise with the mother and wife on the one hand, and on the other, the "femme fatale", with eroticism aroused by the female form. Sexuality may, of course, be used to stimulate a wider circulation (magazine stories and films taken from the works of Iḥsān ^c^Abd al-Ḳuddūs or Yūsuf al-Sibā^c^ī). In the avant-garde novels, however, or in the new poetry, it may also convey a message of revolt against Society and the Establishment. Eroticism has a structural function

just like that of violence in works like those of Ghīṭānī or Madjīd Ṭūbiyā in Egypt or Ḥaydar Ḥaydar and Zakariyyā Tāmir in Syria.

Old feminine images still persist. Sometimes they are used to guarantee the old established order (proud, strong mothers and wives who keep the man on the right path in social behaviour); but they may also have an evil effect, threatening the dominant position of man, his virility, the family and the social structure (mistresses of restaurants, and brothels, treacherous women, real Delilahs capable of stripping any Samson of his vigour). Details are borrowed from real life and known events in order to bring these images up-to-date and to allow the stereotypes to be used again and again. New images show the changing life experience of women and enrich the discussion of novels, poetry, theatre and the cinema. There is the woman who has regained part of her independence by working and becoming entirely responsible for her own affairs. Her autonomy is accompanied by portraying a sexual emancipation in the artistic image of her, which is on the whole badly tolerated by the writer and the media. There is also the female student who is potentially emancipated and who often preaches looser morals than she practises. In contrast, there is the peasant woman, the worker and the servant, who have left their familiar countryside, are exploited for their work and their sex, and are all fighting to survive. And there is the freedom fighter, who struggles beside men for the liberation of the homeland in Palestinian literature. No judgment is made on her sexual behaviour, usually.

When issues of daily political and social life are involved, these images of woman are moulded to suit the artistic work in which they are used. Real events are set in a fictional world and then become symbolic elements within it. It is often difficult to discern what is true experience and what has been imagined, so they should not be taken seriously as historical documents. They do remain as important disclosures of their authors' aspirations and ultimately of the attitudes of their social groups, but not as a real description of the situation of woman in the Arab-Muslim society to-day.

Woman in real life. It is hard for official laws and idealising images in literature to reveal the true life style of Arab women. We can obtain a much better description by observing how historians and biographers from the past portray her, and then how the press and audio-visual media of to-day continue to do so. In ancient texts, she only appeared when some noteworthy event occurred, like her being expelled from the harem. But in early Islam she could win a measure of respect and even evoke fear. There were frequent political alliances made between the powerful to ensure the loyalty of influential tribes; and when wives were selected from a tribe, it gave the woman a distinctive prestige and respect (see Lammens, *Moʿâwia*, i, 324, 318). There seems to have been no need for her to be confined or veiled for several decades. One Amazon, who exposed the calves of her legs, took part in the horse racing at Medina, and women with uncovered faces received strangers and went out at night to visit friends or to discuss poetry within the precinct of the mosque (see *Aghānī*, x, 58, i, 150). Khadīdja, the Prophet's wife, would not allow her illustrious husband to marry again while she was alive, and his daughter, Fāṭima, imposed the same restriction on ʿAlī. These two men became polygamous only after the death of their first wives. The Ḳurʾān imposed the wearing of the veil only on the wives of the Prophet (XXXIII, 53, 59), for originally it was a mark of flattery and distinction.

In the course of time, after the conquests and the beginning of urbanisation, confining women and obligatory wearing of the veil became general among the leisured classes. Generally speaking, women ceased to participate in social life and only rare glimpses of a woman's life are provided. Some of the most suggestive scenes are found in the autobiography of Usāma b. al-Munḳidh (see H. Derenbourg, *Femmes musulmanes et chrétiennes de Syrie au XII^e s., épisodes tirés de la biographie d'Ousāma*, in *Mélanges Julien Havet*, Paris 1895, 305-16; also N. Tomiche, *La femme en Islam*, 136-7). There women are seen who exemplify the poetic myth of the "brave woman"; they help warriors in their struggles against the Crusaders and they help to maintain the social order. These are, of course, exceptional exploits, and apart from them, women make only rare appearances, whilst their slaves had less restrictions on their freedom and could be followed for a longer time in their movements.

In ʿIrāḳ, Syria, Egypt, and even in al-Andalus, in the large towns of the Muslim empire of ʿAbbāsid times, higher-class women ceased to appear in public, and they concealed themselves under copious layers of diaphanous material. The female world retracted into a fringe society and escaped observation. It was only common women that went about unveiled. They were no longer accepted in mosques under the pretext that they would defile them in their periods of impurity or that they would distract the minds of men who were over-sensitive to the gracefulness of their form and movement.

As the Ottoman Empire expanded, the confinement of free, well-to-do women became severe from the 14th century onwards, and woman's position in society weakened. Isolated in the harem, she deployed remarkable qualities in order to dominate her husband (see Creasy, *History of the Ottoman Turks*, repr. 1961, 225-6, 230-1; M. Gaudefroy-Demombynes, *Le monde musulmane*, 387; Clot, i, 331). There was a mystery surrounding woman, her underhand activities and her ambitions, which produced in man a deep distrust of her and an imperious insistence on her local submission.

Lower-class women were not considered worthy of interest until the 19th century and afterwards. Then, many European travellers, especially in Egypt, gave precise information about their situation (see Mengin, *Histoire de l'Égypte*, ii, 305; Michaud and Poujoulat, *Correspondance d'Orient*, v, 13; vii. 83; 85-6; P.-S. Girard, in the monumental *Description de l'Égypte*, xvii, 36; Schoelcher, *L'Égypte en 1845*, 160-1, 305; Clot; etc.). Such a woman seemed lively and active, working in the factories of Muḥammad ʿAlī or as an *almeh*, "dancing girl". She endured "a type of circumcision" performed in Egypt (Clot, i, 321-3) [see KHAFḌ], and in the Sudan, infibulation, probably through the influence of pagan practices from black Africa. Following the occupation of Egypt by the French (1798-1801), the growing influence of the West, the development of the Arab bourgeoisie, the modernisation of towns and reformist ideas all had a disturbing effect on the family and social structures as well as on general attitudes. Any attempt to defend the earlier *status quo* brought about a deterioration in female segregation and increased restrictions. However, crises are sometimes salutary in the way they precipitate a liberation movement.

The year 1839 saw the beginning of the *Tanẓīmāt* [*q.v.*], a period of social reform when many schools were opened for girls in Turkey, but not in the other Arab regions of the empire. There had been a school for girls in Beirut opened by the American missionaries in Beirut in 1835, but it was the only one of

its kind for a long time. The first primary school for girls in Egypt was opened in 1876, and in ʿIrāḳ in 1899; tuition was given in Turkish.

The First World War brought about a growing need for labour, especially female labour, in these countries: they worked in the spinning and weaving industries, in companies manufacturing cigarettes and in factories making preserves, matches, etc. Women used to work side-by-side with men for the same pittance. In 1921 the first proto-trade union organisations demanded equality for men and women before the law. These rights, though often only existing in theory, like the nine-hour day and maternity leave on half pay, were granted from 1933 onwards. They led in turn to the setting up of a legal labour code in Iraq (1936), Syria and Lebanon (1946). These laws and guarantees, rarely respected at first, gradually and slowly are becoming customary.

It was not only in industry that women were employed. They worked in greater numbers (as they always have done) in craft and family enterprises. The patriarchal structure of the family favours an almost closed economy, and there the woman's fight for independence has almost no room to develop. The development of female education and the formation of a female consciousness has undoubtedly been made possible because of the wealth generated by oil and commerce.

The Arab woman's evolution was inevitably accompanied by a development of conscience, in the absence of which, in spite of lengthy periods of common conflict, she finds herself excluded from trade union activities through what is in effect discrimination. Furthermore, because of ignorance she did not avail herself of the rights which the law allowed her. Perhaps the quickest stirring of female consciousness was brought about by the fruitful activities of the feminist organisations. They were formed after the First World War and were mostly philanthropic, although some were definitely political; they were constantly active despite the sarcasm of the media.

Of all the Islamic countries, Turkey had the largest population of literate women, and it led the way in major changes. Developments in female education led to the propagation of more liberal thought. With the revolution of Atatürk in 1923, the country was laicised, and the wildest dreams of female liberation were realised—a model for other Arab states. At the end of the 19th century in Egypt, the first theorist of eastern feminism, Ḳāsim Amīn [*q.v.*], published a book entitled *Taḥrīr al-marʾa*, "The emancipation of the [Egyptian] woman" which, in the name of the law of the Ḳurʾān itself, protested against the breaking of the law, the obligatory wearing of the veil, unjustified polygamy, and repudiation without the arbitration of a judge. He claimed equality of teaching for both sexes. Egyptian feminists supported him. From 1911 Bāḥit͟hat al-Bādiya demanded that women should have free access to the mosques and that there should be compulsory primary education for everyone. After the First World War, Hudā S͟haʿrāwī, a member of the Turkish aristocracy, opened her salon in Cairo and in 1923 appeared in public with an uncovered face.

At the end of the last century, feminist claims were expressed only by some women of the aristocracy, but now they have become increasingly urgent. They have been taken up by the upper and middle classes, by writers and journalists of both sexes and they have been organised into various unions or associations. The right to vote is now denied only to women in the Arabian peninsula, and since this right has become general, women's groups have assumed an electoral significance and have been recognised by the political authorities. In Egypt, the "Organisation of Arab Women" was formed by the female Minister of Social Affairs in 1962. In Syria, in 1968, the "General Union of Women" was directed by the Baʿt͟h. The "Women's Union" was created by law in Libya in 1975 and in ʿIrāḳ the "General Federation of ʿIrāḳī Women" is one of the organisations (*munaẓẓamāt*) of the Baʿt͟h party.

Trade unions and feminist activity have a value, but a general spread of education provides a much more favourable climate for female consciousness. Laws established after the achieving of independence have democratised education. The Declaration of Human Rights signed by the United Nations (art. 26) decreed that primary education should be free. Despite this, compulsory education is far from being generally accepted. Little schooling is available in the rural areas (in Morocco, Jordan, ʿIrāḳ and even Egypt, for example), but elsewhere only half the population of female school age reaches a primary school. In Saudi Arabia, the proportion is a third, with absolute segregation of the sexes (cf. *Maghreb-Machrek*, Paris, Doc. française, no. 78 (Oct.-Dec. 1977); *L'Islam*, Doc. fr. photogr. 27). The situation is the same in Syria. These difficulties arise because of an insufficient number of schools and qualified teaching staff. There are added problems because families use their children to work in the fields, in small industries, or in the home to eke out their resources.

Even when they are given the chance of a place at school and they pursue their studies, girls are subconsciously moulded by the cultural outlook fostered by the school and their view of the world is not necessarily different from that of their society, at least not until the final stages of secondary school. Official Syrian statistics for 1975 can act as a guide for the rest of the Arab world. In 1970, out of a population of 65,925 women who held certificates of primary education, 8,758 were pursuing an occupation other than that of housewife (= 13.4%); for secondary-modern (secondary and technical levels combined) diploma holders, the figures were 7,176 out of 8,059 (= 89.03%); for higher education diploma holders it was 3,365 out of 4,482 (= 75.07%); and for doctorate holders it was 108 out of 151 (= 71.5%) most of whom came from the middle classes or were the wives of diplomats living abroad. Very often (in 38% of the cases), the women were working for relatives or private individuals without receiving any payment. In 1970, this was the situation for 64,088 of them. It is also interesting to compare figures for married and unmarried women in the same year; there were 1,067,073 married women and 515,751 single, divorced or widowed, but although there were nearly twice as many married women, the number of active unmarried women (71,996) was well over the number of active married ones (58,886).

Often women agree to sacrifice their career in order to respond to the wishes of a husband or family. Such behaviour cannot simply be explained as due to the state of her mind, but must be influenced by the almost complete lack of necessary social infrastructures like crèches, canteens, etc. Pedagogic activity, therefore, cannot exist without educational activity, and they must complement each other. At the present time, there is insufficient integration of the different claims for equality of the sexes and for the liberation of women. Deep disturbances can be felt

even in the socialist universities of Damascus and Mawṣil concerning the actual segregation of women and concerning the wearing of the veil on the head or over the face. It has been an erratic path of development, and any progress that has been achieved by the work of cultured women, heroines in the fight for freedom, and trade unionists have been followed by some spectacular steps backwards, even in the so-called progressive countries.

The struggle goes on in the Arab-Muslim world between those who used to be called "literalists" but now "integrists" and the liberals; old arguments have been rekindled. The rise of Muslim "integrationism" has been made possible by the new-found power of the *āyatallāhs* in Iran through the success of their revolution against the Shah's régime, and above all by their resistance against the unfortunate ʿIrāḳī aggression. Even if the Arab-Muslim world accepts modern techniques in the hope of bettering its way of life, it still remains attached to the values and religious beliefs by which it hopes to preserve its identity. The threats and fulminations of the *ʿulāma'* conservatives of Syria, ʿIrāḳ, Egypt and Algeria exploit this religious attachment and encourage the observance of passivity and submissive attitudes in the societies concerned. This has led to a spectacular return to the veil and long dress, the symbols of female submission.

Once they had given up the signs of their bondage, the cultured middle-class heroines of the Arab resistance movement became submerged in the fear of "integrationist" opposition. In Egypt, the law upholds the right of the husband to beat his wife and a legal official will even go so far as to stipulate what length of stick to use. In Kuwayt, members of the assembly have refused to grant women the right to vote in February 1982, even though the Dean of the Faculty of Law at Kuwayt University was a woman (*Le Monde*, 14 February 1982). The project for a "family code" in Algeria maintains the legal inferiority of the woman: she is always considered a minor and must pass from the guardianship of her father to that of her husband, brother or uncle, or even to that of her eldest son. Polygamy and repudiation are allowed and any professional activity a woman undertakes must be sanctioned by her husband (*Le Monde*, 9 January 1982). In the Assembly, Algerian officals have had to face up to the disagreements between those of the liberal tendency, who recognise the equality of men and women, and the traditionalists, who are faithful to the "Arab-Muslim heritage".

When the conflict moves to the political level, "progressive" and "modernist" tendencies within Arab socialism are opposed by totalitarian and theocratic tendencies, legitimised by religious tradition. Because of the overlap between politics and social life, the degree of freedom a present-day Muslim woman enjoys can be seen as an accurate indication of the degree of political change the society in which she lives has undergone. In the past, she was given a role which allowed her to consolidate the family unit and to perpetuate habits, modes of thought and the cultural heritage; even so, to-day she has a role which, depending on whether it is in a society reflecting archaic attitudes or one belonging to the secular liberal viewpoint, indicates a stagnant stage of civilisation or a modern attitude in harmony with the principles of the "rights of man"—and of woman. A solution will have to be found, but it is hardly likely to consist of a total victory for either side, or in its complete crushing. Too many political interests and deep-seated attachments are involved. Dialogue between the "integrationists" and the modernists will probably have to be re-established. To reach this end, however, it is essential for the liberal debate no longer to be resented as a much-hated innovation.

Bibliography: The *Kitāb al-Aghānī*, ed. Shanḳīṭī, 21 parts in 7 vols., Cairo n.d., and four parts in two vols. of index, Cairo 1323, has been used. Although it would be impossible to record all the poets, prose writers and theorists from the classical period of Arab-Muslim writing who have discussed love and women, the following should be mentioned: Anṭāḳī, *Tazyīn al-aswāḳ*; Djāḥiẓ, *Risāla fī l-ʿishḳ wa 'l-nisā'* and *Risālat al-Kiyān* (see Ch. Pellat, *al-Djāḥiẓ wa 'l-mar'a*, in *Ḥawliyyāt al-Djāmiʿa al-Tūnusiyya*, 1986); Ibn Dāwūd, *Kitāb al-Zuhra*; Ibn Ḥazm, *Ṭawḳ al-ḥamāma*; Ibn Ḳayyim al-Djawziyya, *Rawḍat al-muḥibbīn* and *Kitāb Akhbār al-nisā'*; Masʿūdī, *Murūdj al-dhahab*; Washshā', *Kitāb al-Muwashshā*. The 19th-century writers that have been mentioned are A.B. Clot, *Aperçu général sur l'Égypte*, 2 vols., Paris 1840; E. W. Lane, *An account of the manners and customs of the modern Egyptians*, London 1830; Mengin, *Histoire de l'Égypte*, 2 vols., Paris 1823; Michaud and Poujoulat, *Correspondence d'Orient*, 7 vols., Paris 1835; Schoelcher, *L'Égypte en 1845*, Paris 1846; Volney, *Voyage en Égypte et en Syrie*[1], 1789. These sources, as well as the monumental *Description de l'Égypte* compiled by scholars in Bonaparte's army, second ed., Paris 1822 (xi-xxi) and *ʿAdjā'ib al-āthār* by Djabartī, 4 vols., Cairo 1879-80, have been used exhaustively by N. Tomiche in *The situation of Egyptian women in the first half of the nineteenth century*, in W. R. Polk and R. L. Chambers (eds.), *The beginnings of modernisation in the Middle East*, Chicago 1968. More recent important works of reference are: Blachère, *HLA*; M. Borrmans, *Statut personnel et familie au Maghreb de 1940 à nos jours*, Paris 1977; G.H. Bosquet, *La morale de l'Islam et son éthique sexuelle*, Paris 1953; idem, *Le droit musulmane*. Paris 1963; C. Chehata, *Études de droit musulmane*, Paris 1971; E. Doutté, *Magie et religion dans l'Afrique du Nord*, Paris 1909; *Femmes et politiques* [collective work] Paris 1980; R. Höll, *Die Stellung der Frau im Zeitgenössischen Islams: dargestellt am Beispiel Marokkos*, Frankfurt 1979; Kaḥḥāla, *Aʿlām al-nisā' fī ʿālam al-ʿArab wa 'l-Islām*, 3 vols., Damascus 1959; Ḳāsim Amīn, *Taḥrīr al-mar'a*, Cairo 1899; H. Lammens, *Études sur la règne du calife omayyade Moʿâwia Ier*, Paris-Beirut 1908; Y. Linant de Bellefonds, *Traité de droit musulmane comparé*, ii, Paris 1965; L. 2. The Arab woman in customary law and practice.

a. *The material and the problems raised.*

The noun *mar'a* is relatively rarely used in the Qur'ān. Although it occurs only 26 times, women are frequently alluded to as believers, wives, mothers, daughters, sisters, aunts, cousins, slaves, or simply as "females", *unthā*. Traditional usages and customs about women are often mentioned in the *ḥadīth* as well as in pre- and post-Hidjra poetry. Research by ethnographers into both ancient and modern Arab societies has produced much information on the rights and obligations of a woman, her social status, her daily life and her conduct on important occasions in her life. From the rich and varied material available, from pre-Islamic sources to contemporary Arab societies, we can present a reasonably precise account of her status as it emerges from an analysis of customs and usages.

Unfortunately, the material is not all of the same value, and what is found in pre-Islamic poetry must be treated with special care. It is even more important to remember that there is a serious gap in the material. Whereas the different sources all provide, by a sort of complicity between informants, information on the women of the North (the Bedouin), there is hardly any mention of the women of the South (sc. the Yemeni) ones), who have grown up in an environment appreciably different from that of Mecca or the desert, in religious texts, literature or ethnographic research work. Here and there references to customs presumably of South Arabian origin can probably be found in pre-Islamic sources, but these can be identified in one way only, the origin of the tribes where they were practised. Such information was collected well after the Hidjra when most of the Yemeni tribes, like the Ṭayyi', ʿAws, Khazradj, Madhhidj, Murād, ʿUdhra, Kinda, Ḥaḍramawt, etc., had adopted customs which were fundamentally Bedouin. To judge from their poetry, they also spoke the same language as the Arabs from the North.

It would thus be unwise to consider as Yemeni one particular custom which does not fit into a group of well-established customs, just because it was observed in a society which originated in the South of Arabia. It could easily have arisen through the external influence on a tribe in the course of its many wanderings, or it could be the relic of behaviour characteristic of earlier social conditions and subjected to internal evolution within the tribe. Starting out from this hypothesis, the most plausible and generally accepted one, one could artificially bring into a unity an essentially disparate group of customs, which will then appear as landmarks in a long cycle of evolution.

That is how Robertson Smith suggested, under the influence of 19th century evolutionary theory, that family relationships among the ancient Arabs were primarily polyandrous. This system gave way to matriarchy, which was in turn followed by patriarchy. It is true that just before the birth of Islam, relationships were centred on the males of the family, although the old matriarchal system had not disappeared and many relics of it persisted. It is proper to mention this idea in the introduction to this article because of the role it gives to women in the evolution of the Arab kinship system; it has been the cause of much discussion and is still accepted by more than one orientalist. It assumes that the whole of the Arabian peninsula before the Hidjra enjoyed a cultural and linguistic unity and consequently a unity of behaviour patterns also. There is a reason to believe that the theory of evolution devised by this distinguished British scholar strays noticeably from the facts; the cultural unity of Arabia probably emerged only during the first century of Islam.

It is well known that Southern Arabia was regarded as a separate region from the rest of the country for a long time. Though moderately influenced by the desert, it developed a civilisation based on agriculture and commerce with more leanings to India and the Mediterranean than to the steppes of the interior. It seems certain that, before Islam, an area of Arabia experienced a system based on maternal rights. But this régime must have existed somewhere in *Arabia felix* rather than in *Arabia deserta*, where exogamy would seem incompatible with the warring nomads. It would have reached to other parts of the peninsula through Southern tribes emigrating, then gradually being absorbed by the customs of the Bedouin, and ultimately abandoning their traditional behaviour which had survived until just before the Hidjra. The cultural and linguistic unity, which came much later than Robertson Smith suggested, would have followed the decline of the kingdoms of the South and the progress of desertification. The language of the North, close to but different from the South Arabian which it ended up by supplanting, finally imposed itself on the whole peninsula, spreading with itself the customs and manners of the desert.

Robertson Smith's serious error has finally led to a regrettable confusion. At the time of the Hidjra, Classical Arabic (that of the Ḳur'ān) although not prevalent, was understood in almost all areas of Arabia. From this fact, he assumed that there was a linguistic unity long before Islam. Furthermore, having identified the relics of the old matrilinear customs in particular tribes, he concluded that these customs were prevalent in the whole of Arabia, without taking into account the question of migration.

What was the status of Arab women prior to Islam? It is quite clear from what has been said that the inhabitants of Southern Arabia (the "Southern Arabs") must be distinguished from those of the North. Even so, it is not necessary to agree with the genealogists who suggest a double lineage, Ḳaḥṭānī for the one and ʿAdnānī for the other, for they have merely translated into the language of their own particular discipline the ever-present rivalry between cultivators and pastoralists. Nonetheless, there were the well-established agricultural traditions of the southern Arab farmers. The Northern Arabs were traditionally dependent on a pastoral economy for their sustenance; they developed for themselves a distinctive nomadic civilisation marked by the stamp of the desert. Research into the South Arabian area has proceeded, but there is still only fragmentary and inadequate information on many aspects of social life. On the other hand, the abundance of information about the Arabs of the steppes is such that it is extremely difficult to synthesise.

b. *The status of the South Arabian woman*

Little is known about the customary status of woman (*' n th t, m r ' t*) in South Arabia before Islam.

In a recently discovered inscription, anyone of the Dhū Matāra is forbidden to kill their daughter (Chr. Robin, *Mission archéologique et épigraphique française au Yémen du Nord en automne 1978*, 185, *CRAIBL*, April-Jule 1979: this scholar has helped to provide some of the bibliography in this study of the South Arabian woman). This practice may quite properly be compared with *wa'd*. It always denotes an inferior attitude to girls as compared to boys. In the same text, it is similarly forbidden to hand over girls by way of reparation, which leads one to suppose that the man had control of the woman. As in other Semitic societies, so here it is probable that the husband regards his wife as a chattel. Some inscriptions group wives and possessions together (A. F. L. Beeston, *The position of woman in pre-Islamic South Arabia*, in *Proceedings of the 22nd Congress of Orientalists, Istanbul, 1951*, ii, Leiden 1957, 104). However, it would not be correct to infer from this that the wife was in a state of slavery.

In other inscriptions, it is stated that she had a rôle in questions of inheritance. Rhodokanakis even dared to suggest that in South Arabia, the women were financially independent. Beeston does not share this point of view, but he does admit that the widow could acquire economic independence in certain conditions, as, for example, when the male heirs were too young to exercise their rights (Beeston, *op. cit.*, 105). He also draws attention to the fact that the woman could assume high office, especially that of priestess, a role in which she would have practised sacred prostitution (idem, *The so-called harlots of Hadramawt*, in *Oriens*, [1952]; cf. J. Ryckmans, *Les "hierodulenlisten" de Ma^cin et la colonisation minéenne*, 152). She also had access to high administrative offices. In one inscription a woman bore the title *maktawiya*, fem. of *maktawī*, a senior official who came under the direct orders of the king. Could it be that a woman may even have held the office of the highest magistrate, as suggested by the legend of the Queen of Sheba? However, the inscriptions do not mention the name of any sovereign or *kayla*. Nevertheless, after the *ridda*, the Banū Mū'āwiya in the Ḥaḍramawt, who were called the royal Kinda, were ruled by four brothers as joint kings in association with their sister, the famous al-ʿAmarrada, who was a famous and despotic as they (Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, Cairo 1962, 428).

Information provided by the inscriptions about the system of family relationships might well lead to confusion. In most cases, the line of descent is through the father. However, in every age there are isolated instances of descent through women. In one text there is even a case of both types of descent side-by-side (see the inscription on the statue in Chr. Robin, *L'Arabie du sud antique*, in *Bible et Terre Sainte*, 177 [Jan. 1976], 19). Two other inscriptions record a concession granted by a king to men and women of the same class Now it seems that the transmission of the concession was made by the women to their descendants (Ahmed Fakhry, *An archaeological journey to Yemen*, ii, *Epigraphical texts*, Cairo 1952, inscrs. 3 and 76). In other inscriptions, women are mentioned only in terms of their lineage; even their ascendants are considered from the point of view of the female line. From there to the conclusion of the existence of a system of matriliny in South Arabia before Islam is one step only, easily made. One can even go on to affirm that polyandry may also have been known to the South Arabians. The observations of Strabo already mentioned are relevant here, and certain scholars like Glaser, Winckler and more recently Müller, consider that the views of the Greek geographer have been confirmed by the inscriptions (for further discussion and bibliography, see J. Chelhod, *Du nouveau à propos du matriarcat arabe*, in *Arabica*, xxviii [1981], 99 ff.; Chr. Robin has drawn our attention to a Hasaean inscription where the line of descent is traced exclusively through women; it reads "Burial place and tomb of Ghabya, daughter of Mālikat, daughter of Shibām, daughter of Ahadhat, of the lineage of Yankhāl"). However, documents where this type of union is mentioned are rare so that it is wise to treat them with caution. On the other hand, it is clear that polygamy was practised in ancient Yemen and, according to Beeston, they even practised temporary marriage (*Temporary marriage in pre-Islamic South Arabia*, in *Arabian Studies*, iv [1978], 21-5).

The inscriptions so far discovered do not contain any reference to the existence of a system of maternal rights in ancient Yemen before Islam, but the discussion must necessarily remain open, for ethnographers have produced several examples of matrilinear succession in contemporary Yemen society. Some sexual freedom before and after marriage has also been noted as prevalent in some tribes in Yemen. This is no recent innovation but, as will be shown, has its roots in the past.

c. *The status of women in customary law in modern South Arabia.*

As a rule, the *sharīʿa* governs the status of both men and women in the whole of South Arabia, with slight modifications in the case of South Yemen. Its successful application relies on the central government maintaining effective control. Outside the large urban societies of Ṣanʿā', Taʿizz, ʿAdan, Say'ūn, Shibām, etc. it is well known that the semi-sedentary and village Yemenis observe customs which do not always conform to Islamic law. Girls are often disinherited and marriages are contracted by exchange. This customary practice is known as *ṭāghūt*, or also *aḥkām al-salaf*. It is inspired by strongly-held desert values, and in accordance with Bedouin customs promotes an idea of honour among the Yemenis, related to the "whiteness of the face".

The law decrees that woman should be completely submissive to the will of the man; father, brother, husband, uncle, paternal cousins, and even her own adult children. She is considered to be a feeble being, whose defence depends entirely on the man. In his eyes, she symbolises his own virility: every thoughtless action is interpreted by her strong protector as a challenge to his power, an outrage to his dignity. A whole mystique has grown up around the concept of honour which decrees that the modesty of the women whom he guards should be a sacred object. Any assault or attempted assault on their chastity is classed as murder and may be punished extremely severely. This is the conventional attitude to the love life of Yemeni women. Among the Ḥumūm of the Ḥaḍramawt, however, despite her unfavourable position, the woman enjoys a certain amount of sexual liberty. Indeed, tradition even permits a girl to conceive a child outside marriage. If the child is not recognised by its natural father it will take the name of its mother or that of its maternal uncle. Even a married woman can take a lover without fear of her life and without the risk of being molested.

A girl wanting to take a lover would have to take him from among the people of her tribe. As a rule, the lucky man should exhibit all the physical and moral qualities which a woman would like to find in the father of her child. The aim of such a liaison is,

presumably, to produce an ideal child, but the custom is disappearing; it is called *kasb* or *iktisāb*. A similar type of union was known to the Arabs before Islam by exactly the same name. The Arabs were supposed to do this to raise children of pure Arab stock, so that the man who was to father the child should be especially good. There is some similarity between the two customs, but here it was the husband who asked the wife to have relations with another man, whereas among the Ḥumūm it is the girl who takes the initiative. Within this tribe, as among the ancient Arabs, no one is at all embarrassed to announce the birth of a child conceived outside marriage. The child born this way is called *al-farkh*, "the chicken", a harmless nickname which indicates the "illegitimate" nature of his birth, even if his father recognises him as his own. If he does not, he will take the name of his mother and be raised by her. She may subsequently be sought in marriage, and the intentions of her suitor will be judged by asking him if he will take her *bi-ḥamli-hā wa-shamlihā*, "with her burden and her coat". If he takes both mother and child, then the dowry would be more significant; but if he will take only the girl, the child will be brought up by her maternal uncles.

Custom likewise allows to Ḥumūm married women the right to have affairs during the prolonged absence of their husbands; when a husband returns, he cannot inflict reprisals on the unfaithful spouse. He has the choice of accepting the situation or repudiating his wife. If he nevertheless ill-treats his wife, he risks legal proceedings by his parents-in-law, and this appears to be an old custom. According to Ibn al-Mudjāwir, a woman among the Saru could take a lover called a *mukhlif*, "a replacement", when her husband was on a journey (Ibn al-Mudjāwir, *Taʾrīkh al-mustabṣir*, Leiden 1951-4, 26).

Whatever the cause of trouble, the Ḥumūm never punish an adultress; but a woman who takes a lover while her husband is at home is severely condemned. Despite this, she is generally in a favourable position, for she can ask her husband to repudiate her so that she can start a new life, and he cannot deny her this privilege. All that is necessary is for the dowry and any wedding expenses to be returned. If she is repudiated at her own request, the unfaithful wife has no rights regarding her children; they will remain with their father and keep his name. Despite this freedom enjoyed by women in Ḥumūm society, the family is patrilocal and patrilinear, as elsewhere in Yemen.

How can these obviously matrilinear customs be reconciled with the prevailing patriarchal way of life? They seem to be the relics of a system of matrilinear rule which once was to some extent normal in South Arabia. It seems that neither virginity nor chastity was considered as important as modern Arabs unusually consider them. Ibn al-Mudjāwir states that among the Bahīmiyya, the "fiancée" was tried out by her suitor. If he was satisfied, he left his sandals behind at her father's house and the marriage could then be settled; if he were to put them on when leaving the house, it meant that he did not want the girl (Ibn al-Mudjāwir, *op. cit.*, 54). The custom of giving a traveller a girl for the night goes back to the 3rd/9th century. The founder of the Zaydī state opposed certain sexual liberties practised in the village of al-Aʿsūm. It was situated in the high plateaux, and there a host would honour his guest by offering him his daughter or his sister after he had dressed her up in her most beautiful clothes. She would then be subjected to the most intimate caressing but not extreme sexual behaviour (C. van Arendonck, *Les débuts de l'imamat zaydite au Yemen*, 165). Similar observations were made by Ibn Mudjāwir, but in his account the wife was offered to the traveller (Ibn al-Mudjāwir, *op. cit.*, 53). After fourteen centuries of Islam, it is only recently that a similar custom was observed in Yemen in the region of Mārib, though it is true that the guest there was made to respect his partner under the threat of reprisals (private investigation. Cf. K. al-Iryāni, *L'organisation social de la tribu des Hashid*, in *COC*, lxx [1968], 8).

This sexual liberty has ensured that sufficient scholarly attention has been paid to women in Yemen, and it seems that in some areas she has been able to impose her will on her husband. It is public knowledge among the Yemenis that in the Djabal Ṣabir, the pleasant mountain overlooking Taʿizz, the village women rule the roost in financial matters. They have even gone so far as to send back lazy husbands. It is still only the man who has the right to repudiate, but he must nevertheless obey his wife's commands. Among the Dihm in the region of the Djawf, a woman will put a piece of red cloth on the entrance to her tent when she is displeased with her husband. He knows from this that he is in disgrace, and does not dare to cross the threshold of his home until his wife has removed the sign of the quarrel with her own hand (A. Fakhrī, *al-Yaman māḍīha wa-ḥāḍiruhā*, Cairo 1970, 110). A similar custom existed among the Ṭayyʾin pre-Islamic Arabia. To show Ḥātim that he should leave, Māwiya simply moved the entrance to the tent (*Aghānī*, Beirut 1956, xvi, 207). She was thus mistress of her own fate, since she could separate at will from her husband when the latter displeased her. Among the ancient Arabs, a number of high-society ladies seem to have enjoyed the same privilege. There is, for example the case of Salma bint ʿAmr from Medina, who belonged to the Nadjdjār, originally from Yemen. The chroniclers say that she agreed to marry her husband only on condition that she could leave him if she wished.

Other accounts confirm how common these matrilocal customs were. Ezzé, Botta's guide, entered into a marriage contract, the principal clause of which stated that the wife could live with her own people and not follow the husband to his village (Botta, *Relation d'un voyage dans le Yémen*, Paris 1880, 125). According to Ibn Baṭṭūṭa, at Zabīd marriage to a stranger was freely accepted, but if the husband decided to leave the town the wife would not follow him under any circumstances (Ibn Baṭṭūṭa, *Riḥla*, ii, 168). The child of such a marriage would be brought up by his mother or some other relative. Ibn al-Daybaʿ of Zabīd, the Yemeni historian, was abandoned by his father in his infancy and entrusted to his maternal grandfather. When this relative died, the boy was looked after by his maternal uncle (Ibn al-Daybaʿ, *al-Faḍl al-mazīd ʿalā bughyat al-mustafīd fī akhbār madīnat Zabīd*, ed. J. Chelhod, Ṣanʿāʾ 1983, 217).

When this discussion is analysed, the following facts emerge:

(a) A Yemeni woman is not required to follow a strict sexual morality, as is generally the case in the Arab East.

(b) The sexual freedom enjoyed by the women of the Ḥumūm dates back to ancient times.

(c) In some tribes, the woman controls her own destiny, having the right to take a lover and to dismiss her husband.

(d) Children conceived apart from the husband belong to the maternal side of the family.

(e) Such matrilocal customs are still to be observed in some parts of Southern Arabia.

Although it cannot be assumed at all that South

Arabia exerted an influence on North Africa (Helfritz, *L'Arabie heureuse*, Paris 1961, 116), there are certain similarities between the customs described above and those observed in Kabylia. The Berber woman is generally known to enjoy more sexual freedom than the Arab woman, and many monographs have been devoted to describing her love life. Its luxuriance and diversity of customs make any attempt at synthesis problematical. Prenuptial chastity is certainly not expected of any girl, but once married they must be faithful to their husbands. But if they are freed from their marriage ties by widowhood, repudiation or the prolonged absence of the husband, they are allowed to take lovers. Their sexual freedom is even more marked than that of the Ḥumūm. Many of them still work as prostitutes, and this is not thought in any way dishonourable. Many courtesans belong to high-class families and subsequently end up with good marriage arrangements (E. Dermenghem, *Le pays d'Abel*, Paris 1960, 69). Children born of these temporary unions belong to the mother's line.

When the life of the Yemeni woman is compared to that of her sister in the North, it seems very similar, except for the sexual freedom, limited in any case to certain districts, she enjoys. The Northern girl is also married very young (often before the age of ten) and her paternal cousin holds the right of preemption. She will not usually be consulted initially about her choice of husband; only after she has been widowed or divorced will she be free to reject a suitor. Analogies between her situation and that of the Bedouin women will be discussed later.

d. *The Arab woman in traditional law just before the Hid̲j̲ra and during the first century of Islam.*

The status of women in Western Arabia before the Hid̲j̲ra again raises the question of different customs in different areas. Clear differences in male attitudes can be detected, when comparing evidence from nomadic tribes, from the sedentary population, from a trading city or from a village community, even though at this particular time almost the whole peninsula was Bedouin in character. The word Bedouin clearly refers not only to the Arab of the steppe, *al-aʿrābī*, but also to anyone who follows the desert customs and conforms to its code of honour. Poets like al-Ak̲h̲ṭal and D̲j̲arīr called themselves Bedouin (*Ag̲h̲ānī*, vii, 134), and from this point of view, just before the Hid̲j̲ra, the Meccans practised Bedouin customs.

Most of those Arab tribes which, by their nomadic and war-like life style set great store by their virility, consider that women are feeble and almost irresponsible beings and in need of constant help. At the same time, she embodies man's ideals and is sometimes almost venerated as sacred. This ambivalence naturally leads to the paradoxical description of her as *ʿawra*, nude, shameful and needing concealment and *ḥurma*, sacred, to be defended and protected. This two-fold attitude gives rise to a series of prohibitions for women and obligations on men, and failure to observe them casts a slur on their honour. Female chastity together with conjugal fidelity, *inter alia*, constitute *ʿirḍ* [*q.v.*]. Licentiousness is severely punished and brings disgrace to a family and to a tribe. In satirical poetry, the mother of the person being mocked is often spoken of disparagingly (for examples, see the *dīwān* of Ḥassān b. T̲h̲ābit; cf. *Ag̲h̲ānī*, iv, 8,10,11,81). Even the custom of *waʾd* is attributed to the fear of dishonour (*Ag̲h̲ānī*, iv, 248). In attempting to safeguard the rights of the female believer from an economic point of view, Islam confirms the pre-Islamic arrangements in everything touching her love life.

In fact, it would be unwise to make generalisations. Epinal's picture of a humble Arab woman submissive to the wishes of her *baʿl*, her lord and master, might well be the masculine ideal for a wife, but this is not the picture painted by our evidence. Many tales of the pre-Islamic and even the Islamic period show woman as a refined but mischievous creature, resisting supervision and enjoying sufficient freedom to enable her to embark on a few amorous adventures. The belief in the child sleeping peacefully in his mother's bosom is the incontestable proof of this. We shall see later that, in sexual matters, traditional customs are not adhered to so rigidly as is often believed.

The birth of a daughter was not welcomed at all, for families believed it could bring dishonour (*Ag̲h̲ānī*, iv, 248) or even poverty (Ḳurʾān, VI, 151; XVII, 31). Fathers sometimes buried their daughter alive, even though this custom was condemned in the Ḳurʾān (XVI, 58; LXXXI, 8). Among the Ḳuraysh, this custom was common, and they buried their daughters at a place called Abū Dulāma, a hill above Mecca (*Ag̲h̲ānī*, xi, 246). But for the most part, fathers seemed to accept the inevitable and to find consolation in counting up how much the infant girl would bring him on the occasion of her marriage.

K̲h̲afḍ [*q.v.*] "excision" was practised everywhere. It is not certain whether this happened soon after birth or just before marriage, but if the latter, it can be seen as a rite of passage. The girl would be married when she was scarcely nubile, and often she was promised from birth; sometimes her father or brother would exchange her for a wife without spending any money. This type of union was known as *s̲h̲ig̲h̲ār* (*LA*, s.v. *s̲h̲.-g̲h̲.-r*) and even applied to married women. A man would repudiate his wife and exchange her for another man's (*Ag̲h̲ānī*, xviii, 356). Marriage by exchange was forbidden in Islam (Muslim, *Ṣaḥīḥ*, Cairo 1334, iv, 136), but nonetheless practised even to the present day. This emphasises the lack of real concern shown for the girl's own wishes, regarding her future partner. Her father, brother or guardian would draw up an agreement without even consulting her (*Ag̲h̲ānī*, x, 104; xix, 131-2, 275) which is not surprising considering how young she was when first married. ʿĀʾis̲h̲a was married to the Prophet at the age of six, and the marriage was consummated when she was nine (Muslim, *Ṣaḥīḥ*, iv, 142). A widow or a divorced woman (*t̲h̲ayyib*), not so much in demand as a virgin (*bikr*), would generally make her own arrangements. This was probably what happened when a woman offered herself to Muḥammad (Ḳurʾān, XXX, 50); he declined the offer. The Ḳurʾānic reforms tried to protect the young girl when her parents abuse the right to be consulted (but see D̲J̲ABR in Suppl.).

Arab dictionaries use the same word *nikāḥ* to denote stable and temporary unions, which often do not last long and border on prostitution. According to a *ḥadīt̲h̲*, attributed to ʿĀʾis̲h̲a and recorded by al-Buk̲h̲ārī, pre-Islamic society recognised four forms of marriage. (1) A man may marry the daughter or sister of another man on payment of a dowry. (2) A man asks his wife, after her menstruation, to have intercourse with someone he names so that she can have a child of good pedigree. He himself avoids all contact with her until her pregnancy is evident. (3) A group of less than ten men assemble at a woman's house and all have intercourse with her. For the child which is subsequently born, the mother chooses one of the ten she prefers to be the official father. (4) A woman gives herself to any man as a prostitute. If she becomes pregnant, she

waits until the child is born and then consults a physiognomist to decide which of her clients is to be the father of the child. Once he has been selected, that man must accept paternity. To these four types, others can now be added. (5) *s͟hig͟hār*, a marriage by exchange described above. (6) *nikāḥ al-maḳt*, a marriage to the father's widow, which was prohibited by the Ḳurʾān (IV, 22). (7) *nikāḥ al-mutʿa*, temporary marriage, which was authorised at the beginning of Islam but forbidden by the *sunna*, apparently on the initiative of the caliph ʿUmar; tolerated however by the S͟hīʿa. (8) *nikāḥ al-k͟hidn*, concubinage, which is also prohibited by the Ḳurʾān (IV, 25, V, 5).

On examination, the various types of "marriage" listed show two different attitudes to the relationship. Types 1,2,5 and 6 clearly betray the influence of the patriarchal system. The woman is completely subjugated to the man and has apparently little freedom. He may use her as he wishes, even to the point of making her share another man's bed; this is done either to honour the man or to raise a child of good stock. Moreover, he can "reserve for himself" a close relation (a sister or a daughter for example), not to marry himself but to exchange for a wife. The domination of women by men in this family system is absolute, and it is nowhere illustrated better than in the Arab preferential marriage. Now as before, it occurs between a man and the daughter of his paternal uncle, the well-known *bint ʿamm*, a word which has now become synonymous with "wife". Similarly *ibn ʿamm* means both paternal cousin and "husband" (*Ag͟hānī*, xv, 263, 275). The son of a father's brother has by tradition a preemptory right over the daughter of his uncle. He is therefore required only to pay a symbolic dowry imposed by Islam. The *mahr* [*q.v.*] recouped by the father is in inverse proportion to the degree of the relationship. Strangers to the tribe pay more than fellow tribesman who are in an unfavourable position in regard to the *ḥamūla*; the *ibn ʿamm* would be absolved from payment and could even compel his uncle to give him his daughter. More distant cousins were equally favoured, but could not press their demands. Nevertheless, this unwritten right is not absolute; the more sedentary the community, the more it is contested. In literature, there are many examples of an uncle refusing his nephew through greed. The fear of weak progeny is an equally common reason for advising against marriage to the *bint ʿamm*. But the woman who is called to live in a strange tribe naturally evokes sympathy. She will be far away from her agnates, her natural protectors. Once relieved of the constraints imposed on her, the girl need no longer submit to the will of her cousin. When the poet al-Farazdaḳ became the guardian of his *bint ʿamm* Nawār, he had to devise a plan to get her to marry him after she had refused many times (*Ag͟hānī*, xix, 12ff.).

Though the nomadic life, which condemns its followers to an indrawn existence, may favour endogamy, it does not explain a man's domination of his *bint ʿamm*. Robertson Smith likens this type of marriage to the right of inheritance. It is as though the woman forms part of the patrimony and many other customs confirm this point of view.

Marriage to the step-mother was quite widespread among the ancient Arabs. Al-Shahrastānī tells the story of three brothers who succeeded to their father's widow. It was recorded in both Medina and Mecca, and can be connected with the levirate, which was known to the Arabs then and is known now. Greed was the main reason for marrying a father's widow. The Ḳurʾān considered it an abominable practice (IV, 22), and contemporaries of Muḥammad maligned anyone who resorted to it; they called him a *ḍayzan*, which means one who is callous to his father and, not content to have his goods, wants to have his wife as well. On this point the Ḳurʾān expressly says: "O you who have believed! You are forbidden to inherit wives against their wishes, or to prevent them marrying in order that you may appropriate from them a part of what you gave them" (IV, 19). Commentators have observed that when a man dies, leaving a widow, his heir covers her with his cloak to show the right he has over her. Having done this, he may either keep her for himself without spending any money, for the dowry was paid by the deceased; or he can marry her off on condition that a new dowry is paid, which will come to him. He can also prevent her from marrying until she has bought back her freedom with what she received from her husband; if she does not, she will remain in his possession until she dies, and he will become her heir. Such a greedy attitude is found not only in the son but in the other male agnate relations, especially when the deceased left behind very young daughters. Here again the Ḳurʾān (IV, 127) plainly refers to orphaned girls whose guardians refuse to give them what has been bequeathed to them; they would rather keep them in order to marry them or force them to buy their freedom. In the same way, the paternal cousin, who is the first claimant able to marry the girl without committing incest, tries to seize what will ultimately come to him by inheritance, even during the lifetime of his uncle. Al-Wāḥidī, in his commentary on verse xix of the Sūra on Women, refers to this. A woman called Kubays͟ha complained to Muḥammad about the behaviour of her stepson who had inherited her; he did not support her financially, he did not cohabit with her nor would he grant her her freedom. Once they knew of her complaint, all the women of Medina searched for the Messenger of Allāh and told him, "All of us are in the same situation as Kubays͟ha, except that the right to marry us is not inherited by our sons but by the children of our paternal uncles" (al-Wāḥidī, *Aṣbāb al-nuzūl*, Cairo 1315, 108). Thus in the minds of the women of Medina, marriage to a parallel cousin was similar to that of a son to his father's widow, sc. a right of succession. In neither case did the woman have any free will; at one time, she could belong to her husband's heir, and at another to her father's future heir.

All this raises the question of the status of the Arab woman regarding inheritance before Islam, a much-debated issue. It is generally thought that at Medina she was disinherited for the same reason as children: "Only those who fight and defend property can inherit." At Mecca. a trading town, the system of succession may have been more favourable, although the sources contradict each other. The words of the caliph ʿUmar are often quoted: "We Ḳurays͟hites dominate our wives; at Medina we find the men are dominated by their wives" (al-Buk͟hārī, *Ṣaḥīḥ*, Cairo 1376, vii, 25). Obviously, the writer here is not concerned so much with the system of inheritance as with e.g. the behaviour of the women. It is difficult to imagine that a woman who behaves like a virago to her husband will display docility when her property is under attack. In any case, whether the woman was from Mecca or Medina, she would receive presents from her *k͟hidn* "friend", her husband, and her relatives. She could even have a personal fortune and administer it as she pleased, as did K͟hadīd͟ja, who ran her own business. She might even receive part of the inheritance by will.

Many orientalists feel that the reforms introduced by the Ḳur'ān to help women were inspired by the system of inheritance used in Mecca; but that thesis cannot be discussed here. We shall simply observe that in several verses of the Ḳur'ān it clearly states that the woman, be she mother or wife, had wealth which on her death reverted to her husband or children (IV, 12,37,175). In the circumstances, the Ḳur'ān must only have recorded what was a known fact. It would be difficult to explain in any other way the compulsion brought to bear on a widow to make her buy back her freedom by giving up part or all of what she had received from her husband. Besides what money she could earn from her own work (weaving, husbandry, beauty care, singing and dancing), she had other opportunities to be materially independent, thanks to matrimonial customs approaching free unions.

The four other types of marriage mentioned above (types 3,4,7 and 8) could assure the woman of a more or less comfortable existence. They are rooted in a matrilinear conception of relationship, and assume that the woman enjoys a fairly large amount of sexual freedom. In a society founded on the code of honour of the desert, even prostitution would be interpreted as a sign of tolerance in sexual matters, since the woman can indulge in this activity without fearing for her life. Furthermore, she is able to take a *khidn* who pays for the services thus rendered by a *ṣadāḳ*. Group marriage and *mut'a* also confirm the existence of matrilinear customs. In a temporary union, while still living within the group of relations, she grants her favour to a man and receives a payment in kind (a dress, a measure of dates or flour), and it lasts for a fixed time, usually three days (Muslim, *Ṣaḥīḥ*, iv, 130 ff.). The texts say nothing about any child born of this union; probably he would belong to his mother's clan and take her name, as was the case with the child born to a prostitute. The famous Ziyād b. Abīhi [*q.v.*] was better known by the name Ibn Sumayya in Arab literature, and many men used their mother's name. One cannot for certain whether they were all born from cohabitation; it simply implies that the system of matriliny was well-known to the ancient Arabs. There are several examples: the king 'Amr b. Hind, the poets Sulayk b. Sulaka, Ibn al-Dumayna (*Aghānī*, xv, 350), Ibn al-Ṭathriyya (*ibid.* xv, 385), Ibn al-Ḥaddādiyya (*ibid.* xiii, 3), Ibn Ḍabba (*ibid.*, vi, 307), etc.

Very many tribes have a woman as eponymous ancestor, such as the 'Āmila, Badjīla. Khindif and Ḳayla. There are also numerous examples of matrilocality. The poet Ma'n b. Aws [*q.v.*] took advantage of a visit to Baṣra to marry a woman whose guest he was. He spent a year with her and then asked her permission to go back to his first wife (*Aghānī*, x, 352).

Whatever interpretation is put on these customs, they certainly show that the pre-Islamic Arab woman enjoyed much more freedom, even in sexual matters, than is generally supposed. Whenever the outcome of a battle seemed uncertain, the chief would place his daughter in a litter among the warriors in the hope that it would stimulate their excitement, and the prospect of such a marvellous reward would lead to victory. On the day of *taḥāluk*, the two daughters of Find al-Zimmānī, like she-devils, undressed among the warriors and sang love songs to give them more courage (*Aghānī*, xx, 345). On the day of Uḥud, the same song was taken up by Hind bint 'Utba among the ranks of Ḳuraysh (*Aghānī*, xi, 238).

It was the custom, especially for the tribes from the South, like the Kinda, the Djarm and the Banū 'Udhra, to let a man speak to the girl he loved of his sentiments (e.g. *Aghānī*, vii, 218, 219, 234, 263). However, when the suitor pressed his claim, the girl's father, fearing a scandal, might ban him from the house and decline his offer of marriage. The most famous example is that of Tawba b. al-Ḥumayyir and Laylā al-Akhyaliyya [*q.v.*]. Imru' al-Ḳays celebrated his love affairs in his *Mu'allaḳa*. Al-Farazdaḳ once surprised some girls bathing in a pool and exclaimed, "By God! It's like the day of *djārat djuldjul*" (*Aghānī*, xix, 52). Men and women might meet on many occasions, in the pasture lands, at wells and even in the tents. A woman would converse with men and have guests when the master of the house was away. The big annual fairs, which served well for arranging marriages, were frequented by women, poetesses, tradeswomen, inquisitive women and those eager for a sexual relationship, whether regular, temporary or licentious. In the first century after the Hidjra, while pursuing beauty, 'Umar b, Abī Rabī 'a took advantage of the pilgrimage season to embark on some amorous adventures. On the question of the veil, see ḤIDJĀB. Not only could the pre-Islamic woman converse with men (cf. *Aghānī*, xix, 306) but by tradition she had the right to protect them. Fugitives from the battle of the Fidjār found sanctuary in the tent of Subay'a bint 'Abd Shams (*ibid.*, 161). When hard-pressed and in danger of his life, the well-known *ṣu'lūk* Sulayk b. Sulaka sought refuge with a woman who belonged to his enemy's clan. Without hesitation, she defended him from his pursuers, covered him with her mantle and took up a sword to drive off those pursuing him; but, being outnumbered, she uncovered her hair and called her brothers to the rescue. The fugitive thus escaped death (*Aghānī*, xviii, 320; cf. xx, 380 ff.).

However a man might behave himself towards his wives and female relatives, he expected strangers to show them the greatest respect. To cast a slur on a woman's honour was to throw down the gauntlet. Chroniclers say that the cause of the war of the Fidjār (*Aghānī*, x, 152) can be attributed to a joke in very bad taste. The victim of the joke was a woman of the Banū 'Āmir who let herself be courted by the young men at the *sūḳ* of 'Ukāẓ.

There is considerable evidence of a considerate attitude to women, but nevertheless they did not escape the hazards of war with the risk of captivity. Her conqueror would rarely spare her the ultimate humiliation of making her grace his bed (*Aghānī*, xix, 340 ff.). Islam permits sexual relations with prisoners of war (Muslim, *Ṣaḥīḥ*, iv, 158; 170; cf. *Aghānī*, xii, 370); married women are not excluded (*Aghānī*, xix, 25, supported by a verse of al-Farazdaḳ); but pregnant women must not be approached (Muslim, iv, 161).

Even before Islam repudiation (*ṭalāḳ*) was known to the Arabs. A man could send away his wife simply by unilateral decision. All he had to do was to recite the formula *anti ṭāliḳa*. Another formula, with incestuous overtones, lent more gravity to the situation, but it belonged to the *ẓihār* and was forbidden by Islam (Ḳur'ān, LVIII, 2). The man would say to his wife, *anti 'alayya ka-ẓahri ummī*, "To me you are like my mother's back". When the woman desired to separate, the man had recourse to *khul'*; he would agree to restore her freedom on condition that she gave him back all or most of the property he had given her (cf. Ḳur'ān, II, 229; the arrangement is not prohibited provided the financial agreement is mutually acceptable). There were two other ways, rather more exigent, by which a man could force a woman to

return to him what she had been given by him. The *īlāʾ* was a temporary interruption of the marriage and could last for up to two years. The Kurʾān reduced the period to four months (II, 226). There was also the *ʿaḍl*, which was prohibited by the Ḳurʾān (IV. 9).

In the face of all this oppression the woman seemed helpless, yet there are records of women wanting to safeguard their independence, who only agreed to marry if they were granted the right to leave their husbands. Such women appear to have belonged to the higher social levels, and appear at Medina as well as at Mecca, among the sedentary communities as well as among the nomads. One cannot speak in this connection of polyandry, but they certainly changed their husbands very frequently. Al-Maydānī has recorded the names of some of them, the most famous one being Umm Khāridja, who is said to have married about forty times and whose hastiness in marriage became proverbial (*Amthāl*, proverb no. 1871, Cairo 1959, i, 348; according to Ibn Ḥabīb, *Muḥabbar*, 436, she married only about eight times).

Islam, it is true, allowed only men the right of repudiation, but the women of the Ḳuraysh aristocracy sometimes behaved like their independent sisters of the old régime. Because of their nobility, they were much in demand, and so they married many times; in this way, they were able to amass large fortunes (*Aghānī*, xiv, 37; x, 110 ff.) and make life hard for their husbands (*Aghānī*, xviii, 468). One of these women, the famous ʿĀʾisha bint Ṭalḥa [*q.v.*], even repudiated her husband by using the ancient formula of the *ẓihār*; she would not go back on her oath until she was convinced that it was invalid (*Aghānī*, x, 106).

In the pre-Islamic period, a widow would observe a delay before remarrying. When her husband died she would be shut away, wear her oldest clothes and use no perfume. After a year, she would come out from her place of withdrawal and throw a clod of mud. From that time onwards, she could lead a normal life (al-Bukhārī, *Ṣaḥīḥ*, vii, 52). This period was shortened by Islam to four months and ten days (Ḳurʾān, II, 234), during which she might not use perfume or *kuḥl*. When she received condolences, if she wished to remarry she remained seated; otherwise she would stand (*Aghānī*, x, 114).

These details have been given so that the status of women during the period of the Hidjra can be understood in the light of tradition, but these customs do not necessarily have any legal force. There are many problems still to be solved about the position of women in traditional law, and the pre-Islamic material is too scanty to help in solving them. The Ḳurʾān and the early *fiḳh* accord a considerable part to traditional customs, but Islam also provided a new outlook here by giving women a legal position, even though it is a diminished one, for she only counts as half the value of a man. It is not clear whether this is new legislation, or merely an adaption of old customs. Rather than waste time in conjecture, it seems worthwhile to study the behaviour of present-day Arab nomads.

Being Muslims, they have probably been influenced by that faith, notably in regard to what concerns their personal status, even though its influence may not be very deep. More than one modern custom is in direct contravention of the *sharʿ*. Woman is systematically disinherited and her evidence is often disregarded; marriage by exchange is frequently practised, and in blood revenge, equality is demanded. Clearly, the permanence of pre-Islamic customs here proves the lasting influence of the *ṭāghūt*. Traditional rights are still decided this way in the Yemen. Not all the pre-Islamic customs still thrive in Bedouin society, but the prevailing legal framework observed by them has been inspired by that tradition. They bear the mark of the desert, the same influence that has shaped all the Semitic nomads.

c. *The legal status of Bedouin women.*

The birth of a daughter is no cause for rejoicing. She is of so little account that if a Bedouin is asked how many children he has, he deliberately misses out the females. For the same reason, the strength of a tribe is measured purely by the number of warriors it can muster.

A girl's education is left entirely in the hands of her mother. From the time she is able to be of the smallest service, she is made to help with the domestic chores. From infancy onwards, excision is practised; sometimes it occurs just before marriage, which can take place when the girl is very young, often before she is ten. This occasion is of great importance for the father, for it falls to him to fix the amount of the dowry which he generally keeps for himself. It usually happens that the girl, whose opinion is rarely sought, has been promised from birth to an agnate relative, notably to her first paternal cousin, who has a preemptory right over her. He often uses this right and abuses it, for he can carry off his *bint ʿamm* on the day she is married to someone else if he disapproves of the union. He also has the right to "reserve" her for himself, although he is not required to follow up his expressed matrimonial intention. There is only one restriction to this excessive right, that is, the prohibition of marriage by exchange, *badal*, when the girl's father or her brother try to get themselves a wife thus. One should add that the traditional prerogatives of the *ibn ʿamm* are being contested more and more.

Because she is regarded as a source of wealth, the woman is jealously guarded, if not for the members of her *ḥamūla*, at least for own clan. Marriage outside the tribe is rare; generally it will take place only for political reasons or to stifle revenge. Of all the different types of union mentioned above, there remain only the marriage union as it is practised by the Muslims, marriage by exchange, profit, and finally, a special type of matrilocal union which will be discussed below.

Marriage by exchange, though condemned by Islam, is much practised, even among the sedentary Yemeni people. To conform to the *sharīʿa*, each side must offer the other exactly the same *mahr*. But things become complicated when one of the husbands repudiates his wife, since the other is then pledged to follow his example or to pay back a suitable dowry. It is not hard to envisage that law suits and angry scenes are bound to follow as a consequence of this custom in a society where the husband has only to repeat a set formula in order to dissolve his marriage.

Abduction must be carefully distinguished from taking captive. It is severely condemned in Bedouin society, even when it is done with a view to marriage. When it becomes known that a woman has been taken off, all the agnate relatives set off in pursuit of the culprit. If they catch him, he does not usually escape death, and the ravished woman may suffer the same fate. In fact, the treatment they each receive depends on the intentions of the abductor and the civil status of the woman he has taken.

A man who wishes to marry may encounter opposition from the girl's parents, and so he may, with her consent, resort to abduction. Provided it is carried out in good taste, his actions are looked on somewhat indulgently, but it must take place in the presence of

a trustworthy witness who has been enlisted to help in the operation. He must guard the girl, bring her to a safe place and vouch for the fact that everything was conducted honourably. With such pressure on the father, the latter will usually give his consent but ask for a high dowry. If the abduction is followed by illicit sexual relations, the man and the girl will be punished with the same severity as lovers who are caught in the act. If the abduction has been carried out against the wishes of the girl, the action is treated as rape. The man must offer to make amends by marrying the girl, and considers himself lucky if he is accepted. A dowry will then be required of him equal to the price of her blood. In addition, he is required to offer in marriage a girl who is a close agnate relative to the father, brother or paternal cousin of his future wife without a dowry.

To abduct a married woman, even with her consent, brings severe disapproval from Bedouin society. It can lead to reprisals, often violent from the husband in the first place, but also, and above all, from the agnate relatives of the unfaithful wife. Death awaits the lovers. They will escape their fate only if they can find refuge with some powerful person or influential leader. In order to save his guests, this person must bring the husband to recite the repudiation formula in exchange for the dowry he paid. He must also gain the parents' consent to the marriage. The abductor in turn must give one or more girls in exchange for the wife.

If any woman is suspected of having an illicit sexual relationship, whether she is a girl or a married woman, widowed or divorced, she finds herself in great danger. If gossip about her continues, she runs the risk of being killed by a close agnatic relative, her brother, cousin or uncle. Absence of proof of the alleged misconduct is not regarded as proof of innocence. It is customary to exonerate her or to condemn her by adopting one of the following procedures. Her father or guardian may request that a court of justice summon her lover, about whom the rumours are circulating, and that they make him swear that the accusations being made against him are untrue. It is remarkable that the woman stays away from this judicial action, even though her life depends on it. Her presumed partner must stand before the judge, and it is he who must take the oath. Women are considered to be legally incapable, and so are seldom authorised to appear before a Bedouin court even as simple witnesses. Certainly, if it should happen that there are no male witnesses in a particular case, a judge might agree to hear a woman's evidence, but solely for his own information. A woman's evidence is only acceptable in law when it concerns another woman. A quicker way to judge a woman's guilt is by subjecting her to the ordeal of *bas͟hʿa*. If the evidence according to this procedure is against her, it is not uncommon for her to be put to death by a close agnatic relative.

The reputation of a woman for whom he is responsible evokes an uncompromising attitude among the Bedouin. Abduction, adultery and rape all taint her honour, and their guilt can be washed away only by a blood-bath. But it always appears to be the woman who pays the price, and there is a quick, private system of justice to punish any girl who has compromised her reputation. Traditional Bedouin law relating to illicit love affairs is so complex that it is impossible to survey the main features briefly and accurately. Consideration must be given to the civil status of the woman or girl, whether she is married, widowed or divorced, her religious status, her connivance with or opposition to her ravisher, the resistance she displaced, the circumstances under which the crime occurred, and the time and place of the rape or attempted rape. It would obviously be tedious to dwell on these points. However, the culprits caught in the act are generally put to death. Their blood has been spilled, which means that the one exacting justice will not be pursued for that action and the *diya* will not have to be paid. The agnate relations may be less severe with a young girl who is seduced, and may let her off with her life, but the abductor must then marry her and must give a girl from his close family without asking for a dowry. He will also be forbidden to repudiate his wife because of these special circumstances.

It is probably unnecessary here to struggle through the labyrinthine procedure of the *ʿurf* on matters of illicit love affairs, but two of the previously-mentioned points are worthy of note: the place and the time of the crime. It may have been committed near the camp at dusk after the flock had returned; or in grazing land when the shepherdess was naturally far away from her family. In the first case, the woman is described as *ʿāḳibat al-sarḥ*, "the one who returns behind the livestock" and she is entirely responsible for what has occurred. At that time of day, it is thought that she should be at home, and the fact that she was far from her house proves that she was conniving with her seducer. But if she was away at her place of work, then her guilt is somewhat lessened, but she must cry for help (hence the expression *muṣayyiḥat al-ḍuḥā* "the girl who cries in the morning"). She is therefore spared by her family.

In several places previously, we have mentioned that an abductor must hand over a girl from his close family, without a dowry, to a member of the injured family. This custom is sometimes observed in a case of murder, when the blood relative forgoes his right of vengeance and accepts a compromise. The wergeld that the family of a murderer must give as compensation may include a young girl, called a *g͟hurra* in these circumstances. She must be a virgin, white and free. She is given in marriage without *mahr* to a near relative of the victim, and is reduced in effect to a state of semi-slavery. Although she is legally united to the man whose life she shares, she is not completely granted the status of a wife. She is liable to all the oppressions that a husband metes out to his womenfolk and endures his ill-treatment without being able to have recourse to the protection of her family. The most she can do is to seek refuge with an influential person and ask for his help. Her role is to correct the wrong inflicted on the injured family, by giving birth to a male child to replace the deceased. When the boy is old enough to bear arms, her mission is completed. At that time she ceases to be a *g͟hurra*, a servant, and becomes *ḥurra*, free. She can leave her husband, who has no further right over her; if he tries to keep her he must pay the dowry. She is not thought of as belonging permanently to the man who takes her, but is handed over by her family against a guarantee that she will be returned to them when she has finished her task. Even when the conditions of a woman's marriage are perfectly normal, she is still legally dependent on her own family. It is their responsibility to defend her, and it also falls on them in the end to avenge her blood.

One point of interest here is often passed over in silence, but deserves to be mentioned. Although by marriage a woman must be entirely submissive to her new master's will and must follow him and live together with him, for all that, she is not his property.

She is like a precious investment placed in his hands and which is entirely at his disposal. He may rebuke her, he may even hit her, but he is not allowed to injure her or to atttempt to take her life, for he is answerable to his parents-in-law for his conduct. He is perfectly within his rights to kill her if he actually catches her in the act of adultery, but then he may not ask for the return of the dowry he has paid. He would be entitled to a return of the dowry if he simply repudiated her, and he would then leave her relatives to wash away their shame in the culprit's blood.

The married woman depends, legally speaking, on her own family in most situations. It falls to her father, brother, uncle or paternal cousin to chastise her if she is at fault, and to avenge her blood if she is a victim of murder. Unless the husband is also the paternal cousin, he must restrain himself from any violent action and be content to have the dowry paid back to him.

The Bedouin woman is not handed over defenceless to the despotism of her husband. It is even probable that she often exerts a good influence on him. In his absence, she may offer hospitality and shelter to a fugitive. Even if her natural defenders, her agnatic close relatives, disappear or are at a distance, she is not left entirely without defence. If she is ill-treated by her husband she can put herself in the protection of a distinguished person as a *dakhīla*, a refugee. It is then up to her husband to ask her if she will resume married life. To do this, he arranges a delegation of at least three witnesses to inform her of his wishes. This procedure can be repeated three times. If, despite his insistence, his wife remains obstinate in her refusal the husband then has the right not to support her financially any more, if he does not want to dissolve the marriage. If he does not make any of these customary approaches, a Bedouin court can condemn him to pay his wife substantial financial compensation.

The dissolution of a marriage contract may occur in two different ways: repudiation or widowhood. Only the man has the right to divorce his spouse. If he does this without an adequate motive, he cannot reclaim the dowry, as custom enables him to if the fault is the wife's. This financial aspect to marriage plays an important role when the woman seeks to regain her independence and her husband refuses to recite the liberating formula on his own. There is, however, one circumstance where he is obliged to grant her her freedom, sc. in the case of his impotency. Since a woman's legal incapacity forbids her to appear before a law court, a relative representing her brings the action against her husband. The latter then has the right to only one-half of the dowry he paid. The divorced woman, like the widow, must observe a period of restraint before remarrying. The *ʿidda* for the Jordanian Bedouin is normally one hundred nights, but often the woman is put back into circulation before the expiry of the minimal legal delay, for she is considered a source of wealth.

Like repudiation, widowhood grants a woman some freedom in her choice of further husband. She may return to her own family, leaving behind all the property left by her husband, or she may stay with her husband's family and her children. If she is of remarriageable age, the dead man's brother may marry her. But if the widow has the role of guardian according to the wishes of the *de cujus*, in which case she can neither rejoin her paternal home nor remarry. It is her responsibility to remain at home looking after the children and administering the property which she inherited and which will pass to them when they attain the age of majority. Since remarriage is unavailable, she may ensure that she enjoys a normal sexual life by taking a *zawdj musarrib* "visiting husband" This type of union is very rare and runs counter to the principle of patrilocality on which Bedouin society is built. Instead of following her new partner, the widow receives him at her house almost as a guest. Whether the man is married or single, he must have his own home to which he returns after visiting her. In this way, the woman retains her freedom since she can dismiss her visiting husband if she no longer wants him. However, it is still he who has the right of repudiation. This is one of the very rare times that a Bedouin woman enjoys much economic independence.

The *ʿurf* is very strict with women in financial matters. It especially disregards the teaching of the Ḳurʾān which decrees that a daughter shall inherit exactly half the portion inherited by a son. It says that the only people who are allowed to inherit are the agnate males. On the father's death, the sons possess the property. The heirs must first attend to the needs of the mother and the widows of the deceased. Daughters are in their brother's care until their marriage. They must also help their sister both financially and morally if she is divorced, widowed or ill-treated. In return for these services, not only do these brothers exclude them from the inheritance but they also keep their dowries and exchange their sisters when they barter for wives. Custom is no more favourable to daughters in the case of a subsequent inheritance from the mother's side. No matter how important the total, they receive only the jewelry and the clothes. Even if the price of their mother's blood is involved, they do not receive anything more.

The problem of the *diya* for the murder of a woman brings many related complexities. From a purely formal point of view, the *ʿurf* decrees that a woman's blood is worth half of a man's. It is exactly the *diya* of an unemancipated slave. In reality, this applies when the murder was committed by a person of the same sex or when it happened purely by accident and not as the result of war or raid. A complete *diya* is required when a woman is unfortunately hit by a stray bullet in a brawl between two families or clans. On the other hand, the blood money can in effect quadruple in nominal value, i.e. double that for a man, when the death follows a struggle with a man, even if that man was only defending himself. If a woman dies at or after an attempted rape, the *diya* becomes from eight to twelve times its original value. In addition, the *ʿurf* makes a subtle distinction between a single and a married woman. In the latter case, it seeks to establish whether she is pregnant or not. If her pregnancy is confirmed, the sex of the foetus must be determined. Whatever the cause of death, a pregnant woman counts as two people. The culprit will have to pay either the *diya* for two women or for a man and a woman; of course, the case can be made worse depending on the circumstances and prevailing conditions at the time of the crime.

In conclusion, two comments should be made on the legal status of the Bedouin woman. First, it would be erroneous to pretend that the situation is the same for all the desert Arabs. Customs more or less local may vary, and important variations may be seen from one region to another. But there is good reason to suppose that these variations reflect differences in the letter of the traditional law rather than in its spirit, the perpetuity of the law being firmly guaranteed by its environment. The *ʿurf* represents one kind of mentality, that of the nomadic Semite, and there are

many similar customs to those described above attested among the ancient Hebrew nomads. Secondly, it would be equally wrong to suggest that this law, even where women are concerned, is as alive today to the extent it was at the opening of this century. The evolutionary process, less or more active according to the different regions, seems to develope in two directions. There is a marked return to the *s̲h̲arʿ*, and many persons have tried to prove, in a contradictory fashion, that there is no break in the continuity of tradition between *ʿurf* and *s̲h̲arʿ*. On the other hand, central governments have, in a rather more discreet manner, endeavoured to move towards a more modern conception of justice to accord with the general trends in the country. Despite all this pressure, there appears to be a part of *ʿurf* which seems secure against all modern reforms: that of whiteness of the face, honour and *ʿirḍ*, which in its very essence is symbolised by woman.

3. In Persia. a. Before 1900.

The following will not be concerned with the legal position of women—this has been discussed above in sections 1 and 2—but will focus on their position and role in society. The sources are meagre. Women did not normally leave written accounts of their lives. We know little of their motives and characters from their own accounts, and it is not to be expected that others should write of them except in very general terms. So far as women are mentioned, they belong for the most part either to the ruling classes or to those who are believed to have made some contribution to the religious life of the community. Among the latter are women of the family of the Prophet and saints. Their lives are recorded in biographical dictionaries and hagiographical works. Their characters are seldom delineated in any but the broadest terms, and the virtues ascribed to them are usually characteristic Islamic virtues. This is to some extent true of the women of the ruling class also. They are mentioned in histories and chronicles because they either played a prominent part in events as regents or in some other capacity and because marriage alliances were an important element in state policy. Women of the middle and lower classes are seldom mentioned and peasant women are virtually ignored. Much incidental information on women is, however, to be found in the historical literature of the 5th-8th/11th-14th centuries. The anonymous *Tārīk̲h̲-i s̲h̲āhī-i Ḳara-K̲h̲iṭāʾiyān* written in the 7th/13th century (ed. Muḥammad Ibrāhīm Bāstānī Pārīzī, Tehran S̲h̲āhins̲h̲āhī 2535/1976-7), and the *Simṭ al-ʿulā* of Nāṣir al-Dīn Muns̲h̲ī, written between 715/1315-16 and 720/1320-1 (ed. ʿAbbās Iḳbāl, Tehran AHS 1327/1949-50) contain lively accounts of the women of the Ḳara-K̲h̲iṭay (Ḳutlug̲h̲-K̲h̲ānid) dynasty of Kirmān, and the *D̲j̲āmiʿ al-tawārīk̲h̲* of Ras̲h̲īd al-Dīn Faḍl Allāh gives much information on the women of the Īlk̲h̲ānid family. The sources for the later centuries are less rich, until the 19th century, when there are several important works which give a picture of the activities of women of the ruling class, notably the *Tārīk̲h̲-i ʿAḍudī* of Sulṭān Aḥmad Mīrzā ʿAḍud al-Dawla b. Fatḥ ʿAlī S̲h̲āh (ed. ʿAbd al-Ḥusayn Nawāʾī, Tehran S̲h̲āhins̲h̲āhī, 2535/1976-7) *Yāddās̲h̲t-hāʾī az zindagānī-i k̲h̲uṣūṣī-i Nāṣir al-Dīn S̲h̲āh* by Dūst ʿAlī Muʿayyir al-Mamālik, who grew up as a page in the Ḳād̲j̲ār court (Tehran n.d.); and vol. i of *S̲h̲arḥ-i zindagī-i man* by ʿAbd Allāh Mustawfī (3 vols., Tehran AHS 1324-5/1945-6), which gives an intimate picture of life in an upper class family in Tehran; while Tād̲j̲ al-Salṭana, the daughter of Nāṣir al-Dīn S̲h̲āh, who was born in 1301/1883-4, wrote an autobiography entitled *K̲h̲āṭirāt-i Tād̲j̲ al-Salṭana* in 1343/1924-5) (ed. Manṣūra Ittiḥādiyya and Sīrūs Saʿdwandiyān, Tehran AHS 1361/1982). From the 10th/16th century onwards, Persian sources are supplemented by the accounts of European travellers. These, by the nature of things, are the accounts of outsiders, but as intercourse increased in the 19th century and European women began to come to Persia, the information on the position of women and their daily life becomes fuller.

At all periods, there was a difference between townswomen, peasant women and tribal women. The general consensus of the settled population was against the participation of women in public affairs. Townspeople were secluded and played no part in public life; and little is revealed of their influence in family affairs. All houses, other than those of the very poor, were divided into the women's apartments, the *andarūn*, public apartments, the *bīrūn*, where business was transacted and male guests entertained. In the richer houselholds, it was customary for eunuchs and female slaves to be employed in the *andarūn*. Peasant women worked in the fields. They did not, however, usually appear unveiled in public before the opposite sex.

In tribal society, great weight was given to the bond of blood relationship, and the woman's role in establishing this was of great, perhaps paramount, importance. Marriage alliances consolidated tribal federations and marked the entry of new tribes into existing federations. The exchange of women was also a method of terminating blood feuds. The nature of tribal society was such that women enjoyed a status and function which was, on the whole, denied to them in settled society. Tribeswomen did not normally veil. They played an active part in the daily life of the tribe and often in the management of tribal affairs (cf. Sir John Malcolm, *Sketches of Persia*, London 1845, 154-5).

In all classes and sectors of society, child marriage and the marriage of cousins were normal practice.

Among the richer classes, polygamy was common. Rivalry between the inmates of the *ḥaram* to secure favour for their own sons was of frequent occurence. Remarriage of widows and divorced women was also common [see MUTʿA and NIKĀḤ].

With the rise of the Saldjūḳs [*q.v.*] in the 5th/11th century, women of the ruling class began to play a more active role in political life. The reason for this is probably to be sought in their Turkic tribal background, even though the Saldjūḳs were to some extent separated from this once they had become the rulers of an empire. From the time of Ṭoghrïl Beg onwards, marriage alliances with local ruling families and with the caliphate were an important aspect of Saldjūḳ policy. This was also true of the succession states. The sons of Saldjūḳ mothers do not appear to have had precedence over the sons of other wives, nor, in general do the sons of free women appear to have had precedence over the sons of slave women or concubines. Some of the wives of the sultans had their own *dīwāns* and establishments; some held *iḳṭāʿ*s [*q.v.*] and landed property; and some disposed of considerable wealth. The office of *wazīr* to the wife of the sultan was sometimes a stepping-stone to important office under the sultan. Several "royal" women played a prominent part in public life. Ṭoghrïl Beg is reported to have consulted his chief wife Altun Djan in affairs, Sibṭ b. al-Djawzī states that she was a religious woman, much given to charitable works, of good judgement and firm determination (*Mirʾat al-zamān*, ed. Ali Sevim, Ankara 1968, 75; cf. also Ibn al-Djawzī, *al-Muntaẓam*, Ḥaydarābād, Deccan 1938-40, viii, 218). Terken Khātūn, the chief wife of Malikshāh, was a masterful and ambitious woman. She and Zubayda Khātūn, another of Malikshāh's wives, vied with each other in order to secure the succession of their respective sons after the death of Malikshāh. The former appears to have had a sizeable force of military slaves at her disposal.

Some of the wives of the *amīrs* and atabegs were also women of character; and several of them were noted for their charitable benefactions. One such was Zāhida Khātūn, who ruled Fārs for twenty-one years after the death of her husband Boz Aba in 541/1146-7. Another was the mother of Arslan b. Ṭoghrïl b. Muḥammad, who was married after the death of Ṭoghrïl to Ildegüz, the Atabeg of ʿĀdharbāydjān, under whose tutelage Arslan was installed as nominal ruler in Hamadān in 556/1161. Recording her death, which occurred in 571/1175-6, Ẓahīr al-Dīn Nīshāpūrī states that "it was as if the good order of the kingdom and the dynasty depended upon the existence of that lady" (*Saldjūḳ-nāma*, Tehran AHS 1332/1953-4, 82). Abish Khātūn, the daughter of the Atabeg Saʿd of Fārs, had a lively though short life. After the death of the last of the Atabegs of Fārs, Saldjūḳ-Shāh b. Salghur-Shāh b. Saʿd in 662/1263-4, she was put on the throne with the support of the Shūl and Turkoman *amīrs*, although she was only 4 or 5 years old, because no direct male descendant of the Atabegs survived. She had apparently already before that been betrothed by her mother to Tash Möngke, Hülegü's son. In due course, she became his chief wife. Her daughter Kürdüdjin received a contract (*muḳāṭaʿa*) in 719/1319-20 for the taxes of Fārs from Abū Saʿīd, the last Īlkhān. She was married first to Soyurghatmïsh, the Ḳutlugh-Khānid ruler of Kirmān, and secondly and thirdly to Mongol *amīrs*.

In Khwārazm, Terken Khātūn, the wife of the Khwārazmshāh Tekesh, played a turbulent role in the politics of Khwārazm during the reign of her son Muḥammad (596-617/1199-1220). She finally fell into the hands of the Mongols, and was sent to Ḳaraḳorum where she died in 630/1232-3 (see Barthold, *Turkestan*, index under *Turkān-Khātūn*). Another Terken Khātūn, who was also known after her marriage in 632/1235 to Ḳuṭb al-Dīn Muḥammad, the Ḳara Khiṭay (Ḳutlugh-Khānid) ruler of Kirmān, by her *laḳab* Ḳutlugh Terken, was an outstanding woman. She ruled Kirmān after her husband's death in 655/1257 because her two sons, Soyurghatmïsh and Ḥadjdjādj Sulṭān, were minors. She was a capable and vigorous woman, who in addition to her attention to affairs of state, was also given to charitable works and generous patronage of the *ʿulamāʾ*. Her daughters Pādishāh Khātūn and Bībī Khātūn also played a prominent part in the political affairs of the day; the former was married to the Īlkhān Abaḳa (see *Tārīkh-i shāhī-i Ḳara Khiṭāʾiyān* and Nāṣir al-Dīn Munshī, *Simṭ al-ʿulā, passim*).

The Mongol conquest brought changes in the position and status of women of the ruling class. The Īlkhāns for the most part appear to have taken their wives from the Mongol tribes, and through them to have retained their links with the Mongols in Central Asia and China. They also concluded marriage alliances with local ruling families, whose daughters they took into their *ḥarams*. Such alliances had benefits for both parties: the local rulers assured their own positions, even if only temporarily, while the Īlkhāns were able through such unions to bring outlying provinces more closely under their control. But while local women were taken into the establishments of the Īlkhāns, women of the Īlkhānid family and of Mongol *noyans* are seldom recorded as having been given to local rulers. The women of defeated enemies, so far as they escaped massacre, were regarded as part of the booty and were taken into the establishment of the Mongol princes and army commanders.

The wives and daughters of the Īlkhāns and Mongol princes enjoyed a privileged position vis-à-vis the rest of society. They received a share of the booty and took part in the *ḳuriltays* [*q.v.*] held to acclaim or appoint a new Īlkhān. Many of them accumulated great wealth. Ögedey's chief wife Töregene and Güyük's chief wife both acted as regent on the death of their respective husbands, pending the appointment of a new Great Khān. There are no instances of women acting as regents in the Īlkhānate, but after the death of Abū Saʿīd, the last Īlkhān, his sister Sati Beg was put on the throne with the help of Shaykh Ḥasan, the grandson of the Amīr Čopan, in 799/1338-9, on the grounds that the right of the throne was hers since no male member of the house of Hülegü remained. In fact, however, the kingdom passed to the Čopanids and the Djalāʾirids. In spite of the prestige and authority enjoyed by the women of the Īlkhānid house, their freedom was limited by custom and their position was, in many respects, one of subjection. On the death of an Īlkhān, his wife passed to his successor or to one of his uncles, brothers or sons. If accused of plotting against the Īlkhān or of some other misdemeanour, Īlkhānid women were not immune from trial by *yarghu* [*q.v.*], the bastinado and even execution, whether guilty of the crime of which they were accused or not.

The senior wives of the Īlkhānids had their own *ordus*. Junior wives were often placed in the *ordu* of a senior wife. Imperial concubines were distributed among the *ordus* of the Īlkhān's wives. Some were in due course promoted to the status of a "full" wife. On the death (or disgrace) of one of his wives, the Īlkhān would give her *ordu* to another of his wives. It is difficult to determine exactly the composition and size

of the *ordus* of the Mongol princesses. By the time of Ghazan, many of them were large and powerful establishments. The Mongol princesses also took part in the activities of the trading and money-lending partnerships known as *ortaks*. Ghazan apparently sought to bring the *ordus* of the princesses under control and to use their revenues for military and other expenditure (see further Lambton, *Continuity and change in medieval Persia: aspects of administrative, economic and social history 5th/11th to 8th/14th century*, forthcoming; Spuler, *Die Mongolen in Iran*[3], Berlin 1968, see index under *Frau*; Shīrīn Bayānī, *Zan dar Īrān-i ʿahd-i Mughul*, Tehran AHS 1352/1974).

The position of women under the Tīmūrids resembled in many ways their position in the Īlkhānate. Tīmūr himself seems to have chosen wives mainly of Mongol origin for himself and his family (H. Hookham, *Tamburlaine the conqueror*, London 1962, 72). They had their own quarters in the royal camp (*Clavijo: embassy to Tamerlane*, tr. G. Le Strange, London 1928, 242-3, 268, 271). They appeared in public at royal feasts and on occasion gave banquets themselves, at which they appeared only lightly veiled before their male and female guests (*ibid.*, 237, 244 ff., 275; cf. also Muʿīn al-Dīn Natanzī's account of a great feast given by Tīmūr in 806/1403-4 at which women were present, *Muntakhab al-tawārīkh* ed. J. Aubin, Tehran AHS 1336/1957, 398 ff.).

Under the Ḳara Ḳoyunlu and Aḳ Ḳoyunlu, women of the ruling class continued to play an influential role, especially through the establishment of kinship links (see J. E. Woods, *The Aqquyunlu: clan, confederation, empire*, Minneapolis and Chicago 1976). Marriage alliances in the early Ṣafawid period also were an important means of consolidating the ruler's influence. Ṭahmāsp was allied in this way with powerful *amīrs* and local rulers (see Iskander Munshī, *ʿĀlamārā-yi ʿAbbāsī*, Tehran AHS 1334/1956, 2 vols., i, 125 ff., for mention of his wives); his sister was married to the religious leader, Islām Shāh Ni ʿmat Allāh Yazdī, and a daughter of this union was married to Ṭahmāsp's son, Ismā ʿīl Mīrzā (*ibid.*, 132). Zaynab Begum, one of Ṭahmāsp's daughters, whose mother was a Georgian woman, was, according to Iskandar Munshī, highly intelligent and acquired great influence with ʿAbbās I, into whose *ḥaram* she passed. She was known for many charitable works and benefactions (*ibid.*, 135). Parī Khān Khānum, another of Ṭahmāsp's daughters, played an influential part on her father's death in promoting the accession of Ismāʿīl Mīrzā. After his accession, she fell from favour, but after his death, on the accession of Muḥammad Mīrzā, she exercised great influence in the government of the country. Great rivalry existed between her and Muḥammad Shāh's wife, Mahd Awliyā' Khayr al-Nisā' Begum. Parī Khān Khānum's high handed behaviour aroused the enmity of the Ḳīzīlbash *amīrs* and she was eventually murdered by them. Khayr al-Nisā' Begum then took upon herself the government of affairs because of her husband's defective eyesight. She too was murdered by the Ḳīzīlbash *amīrs*, who resented her interference (see *ibid.*, index under *Parī Khān Khānum* and *Mahd Awliyā' Khayr al-Nisā' Begum*, and Maḥmūd b. Hidāyat Allāh Afushta'ī, *Naḳāwat al-āthār*, ed. Iḥsān Ishrāḳī, Tehran AHS 1350/1971-2, 21, 72, 250). Khadīdja, another of Ṭahmāsp's daughters, was married to Djamshīd b. Sulṭān Aḥmad, the ruler of Biyā Pas in Gīlān (see ʿAbd al-Fattāḥ Fūminī, *Tārīkh-i Gīlān*, ed. M. Sotoodeh, Tehran AHS 1349/1970, 54-6).

As the Ṣafawids moved away from their tribal background, the influence of their women was increasingly confined to *ḥaram* intrigues. Already under Ṭahmāsp, large numbers of concubines and slaves, especially Georgians and Circassians, were introduced into the royal *ḥaram*. This trend continued, and with it the power of the eunuchs of the palace greatly increased. The general deterioration in the position and status of the royal women in all probability spread among other ranks of society also (cf. Jean-Baptiste Tavernier, *Voyages en Perse*, Geneva 1970, 282-4; Du Mans, *Estat de la Perse*, Paris 1890, repr., 1969, 27-8; Chardin, *Sir John Chardin's travels in Persia* with an introduction by Brig. General Sir Percy Sykes, London 1927, 222). The status of the mother appears to have had little influence on the choice of the *walī ʿahd*. The mother of the shah was the most important lady in the *ḥaram*; after her came the shah's wives and then his favourite concubines (E. Kaempfer, *Am Hofe des persischen Grosskönigs 1684-1685*, tr. W. Hinz, Tübingen and Basel 1977, 232). When the ladies of the royal *ḥaram* went out, the district through which they were to pass was declared *ḳuruḳ* (a reserve), and those who inadvertently strayed into the road were beaten and sometimes done to death by guards and eunuchs (cf. Tavernier, *op. cit.*, 284; Du Mans, *op. cit.*, 95-6; Chardin, *The coronation of Solyman the III*, published with *The travels of Sir John Chardin into Persia and the East Indies*, London 1691, 77; Thévenôt, *The travels of Monsieur de Thévenôt into the Levant*, London 1687, repr. 1971, pt. 2, 99). The practice of *ḳuruḳ* continued in a modified form under the Ḳādjārs. Males were expected to turn their faces to the wall when the royal women passed by (see Curzon, *Persia*, 2 vols., London 1892, i, 404).

The accession of Shāh Sulṭān Ḥusayn (1105-55/1694-1722), the last of the Ṣafawids, was largely secured by his great aunt Maryam Begum, a masterful lady who exercised great influence. The shah took an inordinate pride in his *ḥaram*, the scale and magnificence of which became a drain on the treasury. It was not uncommon for beautiful women to be seized by his officers and sent to his *ḥaram*, as they had been in the reign of his predecessor, Shāh Sulaymān (L. Lockhart, *The fall of the Ṣafavī dynasty and the Afghan occupation of Persia*, Cambridge 1958, 36, 41, 47-8). Muḥammad Hāshim Āṣaf Rustam al-Ḥukamā' alleges that there were nearly 1,000 beautiful girls of varying provenance in Shāh Sulṭān Ḥusayn's *ḥaram* (*Rustam al-tawārīkh*, ed. Muḥammad Mushīrī, Tehran AHS 1348/1969-70, 70-1).

Āḳā Muḥammad Khān (1193-1211/1779-97), the first of the Ḳādjārs, took the daughters and women of defeated enemies and rebels into the royal *ḥaram* as hostages to lessen the likelihood of rebellion and to consolidate his rule. He also sought to heal the breach which had occurred between the Ḳoyunlu branch of the Ḳādjār tribe, to which he himself belonged, and the Develu branch, by the marriage of his nephew and successor Fatḥ ʿAlī to the daughter of Fatḥ ʿAlī Khān Develu [see ḲĀDJĀR]. On one occasion, when Āḳā Muḥammad Khān, was absent from Tehran, it was arranged that his sister should receive an envoy from one of the khāns of Turkistān, sitting behind a curtain to do so. This, however, gave great offence to the head of the Afshār tribe, either because of its supposed impropriety or because he had not been consulted (Mustawfī, *op. cit.*, i, 23-4).

From the reign of Fatḥ ʿAlī Shāh onwards, there was a great increase in the size and expenses of the royal *ḥaram* and in the number of black and white eunuchs employed in the palace (ʿAḍud al-Dawla, *op. cit.*, 54 ff. See also Malcolm, *Sketches of Persia*, 220; J.

Morier, *A journey through Persia, Armenia, and Asia Minor to Constantinople, in the years 1808 and 1809*, London 1812, 225, 239; Mustawfī, *op. cit.*, i, 40-1). Muʿayyir al-Mamālik puts the inmates of the *ḥaram* of Nāṣir al-Dīn Shāh (1848-96) at over 3,000; when the shah moved to summer quarters in the hills near Tehran, he was accompanied by a vast cavalcade (*Yāddāsht-hā'ī az zindagānī-i khuṣūṣī-i Nāṣir al-Dīn Shāh*, 106, 127. See also Docteur Feuvrier, *Trois ans à la cour de Perse*, Paris 1906, 142). Fatḥ ʿAlī apparently abandoned the practice of ranking the princes in his audience according to their mother's birth (ʿAḍud al-Dawla, *op. cit.*, 47). As in Ṣafawid times, the mother of the ruler was the most important lady in the royal *ḥaram*. The mothers of Fatḥ ʿAlī Shāh, ʿAbbās Mīrzā, Muḥammad Shāh and Nāṣir al-Dīn Shāh were, in succession, known as *mahd awliyā'*. Fatḥ ʿAlī's mother attempted in vain to mediate between Fatḥ ʿAlī and his full brother Ḥusayn Ḳulī Khān after the former's accession (Fasā'ī, *Fārs-nāma-yi nāṣirī*, Tehran lith. 1895-6, 2 vols. in 1, i, 245-6). ʿAḍud al-Dawla describes the hierarchical order in the royal *ḥaram* and the rivalries of the royal ladies (*Tārīkh-i ʿAḍudī*, 12 ff. Cf. also Malcolm, *History of Persia*, 2 vols., London 1829, ii, 394, 396; Morier, *op. cit.*, 369. See also the introduction by ʿAbbās Iḳbāl to *Sharḥ-i ḥāl-i ʿAbbās Mīrzā Mulk-Ārā*, ed. ʿAbd al-Ḥusayn Nawā'ī, Tehran AHS 1325/1946-7, pp. iii ff., on the jealousy and rivalry between the mother of Nāṣir al-Dīn and the mother of his half-brother Mulk-Ārā).

The female establishment of Fatḥ ʿAlī Shāh is in some ways reminiscent of that of the Īlkhāns. One of his wives, the daughter of Imām Ḳulī Khān Afshār Urūmī, gave Fatḥ ʿAlī several of her serving maids with appropriate outfits and in due course they bore him children (ʿAḍud al-Dawla, *op. cit.*, 15). Lady Sheil relates how one of the wives of Muḥammad Shāh, when he was still *walī ʿahd*, bought a Circassian slave-girl as a present for her husband (*Glimpses of life and manners in Persia*, London 1856, 203-4). Several of Fatḥ ʿAlī Shāh's wives were very rich and had their separate establishments outside and independent of the royal *ḥaram*, notably Tādj al-Dawla Ṭāwūs Khānum Iṣfahānī (ʿAḍud al-Dawla, *op. cit.*, 18-19) and Ḍiyā' al-Salṭana. The latter's mother, Maryam Khānum, was a Jewess. She had been in the *ḥaram* of Āḳā Muḥammad Khān, and after his death was married to Fatḥ ʿAlī. Ḍiyā' al-Salṭana was a good calligrapher and copied many books of prayers and *ziyārat-nāmas*. She enjoyed Fatḥ ʿAlī's confidence, and during his lifetime remained unmarried. She often acted as his scribe and wrote his secret letters (*ibid.*, 25). Another of Fatḥ ʿAlī's wives, Sunbul Khānum, was among the prisoners taken by ʿĀḳā Muḥammad Khān during his Kirmān campaign. She enjoyed great favour with Fatḥ ʿAlī, and repeatedly interceded with him for the subjects (*ibid.*, 20). Her daughter, Ḥusn Djahān Khānum, was a poetess and a Ṣūfī. She was married to Amān Allāh Khān, the governor of Kurdistān, and for several years exercised great authority in that province (*ibid.*, 67). Another of Fatḥ ʿAlī Shāh's daughters, Zubayda, who was married to ʿAlī Khān Nuṣrat al-Mulk Ḳara Güzlü, was also a Ṣūfī. She lived for many years in Hamadān, where she enjoyed great authority. She went on the pilgrimage and made several visits to shrines in ʿIrāḳ and Mashhad. She gave many gifts to the poor, *sayyids* and *mullas*, and was noted for her charitable benefactions. Every year, she set aside a sum for her personal expenses from the income of her estates and gave the rest to the poor and orphans (*ibid.*, 30-2). Badr-i Djahān Khānum, the mother of Fatḥ ʿAlī Shāh's sons Ḥasan ʿAlī and Ḥusayn ʿAlī, the former of whom became governor of Fārs and the latter governor of Tehran, lived principally in Shīrāz, where she exercised great influence over her son, interfering in the administration of affairs and enriching herself greatly by commerce and monopolies. She was believed to have made a corner in corn with an accomplice in *ca.* 1810. Nevertheless, she was reputed to be charitable to the poor and ready to do justice for the oppressed. From time to time, she negotiated a visit to the capital, for which she was generally obliged to make a considerable present to the king, who then permitted her to return and reside with him as a wife (Morier, *A second journey through Persia, Armenia, and Asia Minor to Constantinople, 1810-16*, London 1818, 61; idem, *A journey through Persia ... in the years 1808 and 1809*, 154-5).

Mustawfī describes in detail the *ḥaram-khāna* of Nāṣir al-Dīn Shāh and the discipline exercised in it (*op. cit.*, i, 510 ff.). Nāṣir al-Dīn's mother, who presided over it, was a capable woman. She was a granddaughter of Fatḥ ʿAlī Shāh; her father was Muḥammad Ḳāsim Khān b. Sulaymān Ḳādjār (see Muʿayyir al-Mamālik, 172-6; Sheil, *op. cit.*, 9). Munīr al-Dawla, one of Nāṣir al-Dīn Shāh's wives, used to hold a feast for women in Tehran on the birthday of Fāṭima, after her son Kāmrān Mīrzā Nā'ib al-Salṭana became governor of the city in 1277/1860-1 (Abu 'l-Ḥasan Buzurg Umīd, *Az māst kih bar māst*, Tehran ASH 1335/1957, 79). On the occasion of Nāṣir al-Dīn's first journey to Europe, which took place in 1873, it was finally agreed that only one of his wives should accompany him. In the event, the lady returned to Persia from Moscow. The only other of his wives to go to Europe was Amīna Aḳdas, one of his favourite wives, who went blind towards the end of her life. She was sent to Vienna for treatment, which, however, proved fruitless. She was accompanied by the eunuch Bahrām Khān Khʷādja and several women nurses and attendants (Muʿayyir al-Mamālik, *op. cit.*, 159; Feuvrier, *op. cit.*, 185).

Although women might exercise great authority within the *ḥaram*, their liberty outside was gravely circumscribed. However, Lady Sheil remarks that the practice of veiling enabled them to move freely in the streets, the princess being indistinguishable from the peasant (*Glimpses*, 212; cf. also Feuvrier, *op. cit.*, 144). She also notes that the mission doctor's door and house was crowded with women of all ages and ranks (*Glimpses*, 212-13). Women, other than tribal women, when they went on journeys normally travelled in panniers carried by mules or in litters suspended between two mules. The panniers carrying women of the higher classes were canopied by semi-circular tops covered with cloth hanging down like a curtain (Sir Robert Ker Porter, *Travels in Georgia, Persia, Armenia, ancient Babylon ... during the years 1817, 1818, 1819, and 1820*, 2 vols., London 1821-2, i, 398-9). Tribal women and some of the royal women rode and were often accomplished horsewomen (cf. *ibid.*, 259; Muʿayyir al-Mamālik, *op. cit.*, 127).

There was in general opposition to the education of women. So far as provision existed, it was of a rudimentary kind, though some women achieved competence in religious studies and were known for their learning. Girl's schools were not founded until the 20th century, apart from the small girls' school opened by the American Board of Foreign Missions of the Presbyterian Church in the United States in Tehran in 1874, in Tabriz (1879) and Hamadan (1885) (R.E. Waterfield, *Christians in Persia*, London 1973, 135, 136, 137). Some girls were educated at

home by private tutors (cf. Mustawfī, *op. cit.*, i, 296-7, 298). Girls up to the age of seven were allowed to attend a *maktab*, but the number who did so was small; when they were then too old to go unveiled, their education was sometimes finished at home by female *mullās*. Girls in well-to-do households were taught to sew and embroider and such other accomplishments as were necessary for the running of the *ḥaram*. Spinning was the ubiquitous occupation of the poorer classes. Carpet weaving was also carried on by women and children, mainly as a house industry, in many districts, and also in tribal areas. Textiles were also woven by women in many towns and villages. Little is known of the condition of those so employed until modern times [see BISĀṬ, in Suppl.].

The recreation of women was largely confined to visiting relatives. Marriages, births, deaths and other anniversaries also broke the daily round. The weekly visit to the bath was an occasion which offered the opportunity of intercourse with female friends. Visits to shrines and cemeteries, especially on Thursday evenings, were other recognised outings (see Du Mans, *op. cit.*, 93-4; Sheil, *op. cit.*, 145 ff.; Morier, *A second Journey*...., 137, 166). *Rawḍa-kh^wānīs*, especially in Ṣafar and Muḥarram, were other occasions for visiting and recreation. Female *rawḍa-kh^wāns* usually conducted those held for women (Mustawfī, *op. cit.*, i, 373, 711-12) and also the assemblies for women in Ramaḍān (Muʿayyir al-Mamālik, *op. cit.*, 111, 113). So far as women attended mosques, they sat curtained off from the men. They were also segregated at *taʿziyas*. In the Tikiya-yi Dawlat in Tehran, the shah's women and women of the upper classes had their own separate boxes, while poorer women sat in a separate part of the "pit" (Sheil, *op. cit.*, 127-8; Buzurg Umīd, *op. cit.*, 157-8, and see p. 106 for a description of the procession taking the shah's standard (*ʿalam*) from the royal *ḥaram* to the Tikiya-yi Dawlat). Women of the Prophetic family figured prominently in several of the passion plays, but their roles were normally played by men and boys (see P.J. Chelkowski, ed., *Taʿziyeh: ritual and drama in Iran*, New York 1976).

Gradually in the second half of the 19th century, changes took place in the position of women, partly as a result of increased intercourse with Europe. Emancipation was slow, but women began from time to time to take part in public demonstrations (cf. the account of a bread riot in Tehran in 1861 during the famine, E.B. Eastwick, *Journal of a diplomat's three years' residence in Persia*, London 1864, repr. Tehran 1976, 2 vols., i, 288-91). The most notable case was their participation in the movement against the Tobacco Régie in 1891. They supported the boycott declared against the use of tobacco, and urged their menfolk to do the same; some also took part in public protests against the Régie. It is reported that the movement spread even to the shah's *ḥaram* (Muʿayyir al-Mamālik, *op. cit.*, 177). New trends among women were also to be found in the Bābī movement [*q.v.*], who numbered among their leaders the beautiful and brilliant woman Ḳurrat al-ʿAyn [*q.v.*], who was martyred in their cause in 1852.

b. After 1900

The end of the 19th century marked the beginning of a long struggle for emancipation by Iranian women, which culminated in a short-lived success in the 1970s. The participation of women in the public demonstration against the Tobacco Concessions in 1893 was a watershed for their political activities; for the first time women, a hitherto invisible sector of society, had taken part in Iranian street politics. In these demonstrations, women proved themselves valuable to the *ʿulamāʾ*, who subsequently encouraged them to participate in the uprisings that led to the 1906 constitution. Women mobbed Nāṣir al-Dīn Shāh's carriage, organised public meetings and even marched to the *Madjlis* brandishing guns and weapons. But although their activities provided actual and moral support, women were not granted the vote by the ensuing constitution. The opposition of the *ʿulamāʾ* to female suffrage was extreme: when Ḥādjdjī Wakīl al-Raʿāyā proposed their enfranchisement in 1911, the President of the *Madjlis* moved that no record be made "of this unfortunate incident" (Mangol Bayat 1978).

The active participation of women in the constitutional revolution, however, served to heighten their political consciousness and in the years that followed, women formed a number of secret societies and organisations seeking three main objectives: access to education, freedom from the *ḥidjāb* (veil) and suffrage. It was in the field of education that women had their first success.

Since women were physically and socially confined to the sphere of domesticity, few had had the opportunity of obtaining any formal schooling before 1900. There were, however, exceptional women, some related to the *ʿulamāʾ*, who had been educated at home, or, in a few cases, attended schools and were thus able to educate other women. In 1910 one of these, Mrs Ṭūbā Azimūda, opened the first private girls' school in Iran, Nāmūs. Three years later Mrs Yazdī, the wife of a leading *mudjtahid*, opened a second girls' school, ʿIffatiyya. Despite considerable hostility and repeated attacks by mobs, more schools were set up, and finally in 1918 the government capitulated and opened ten state schools for girls as well as a women's training college, the *Dār al-Muʿallimāt*. This college was subsequently expanded and its courses extended from three to five years. In 1934 it was renamed the Preliminary Teachers' Training College for Girls, *Dānishsarā-yi Muḳaddimatī-yi Dukhtarān*. Much of the material taught in the 1920s at the college was subsequently compiled in text books and used for teaching in secondary schools (Badr-ol-Moluk Bamdad, *From darkness to light*, ed. and tr,

F.R.C. Bagley, New York 1977, 60). The increasing secularisation of education and the growing power of the state administration in this sector was an important factor in enabling women to gain access to education. The next major campaign was directed against compulsory seclusion and the veil.

In the 30 years that followed the constitutional revolution, many dedicated women participated in the prolonged battle for emancipation. Middle-class and upper-class women, some of whom had been educated at the foreign schools in Iran and many of whom were taught by their male relatives at home, formed secret societies and women's groups such as *Andjuman-i Āzādī Zanān* ("Women's Freedom Society"), which included a member of the royal family. In 1910, one of these groups published the first journal to be edited by a woman, *Dānish*, and other journals followed. Some, such as *Shukūfa*, edited by Maryam Umīd Muzayyin al-Sulṭān, which began publishing in 1913, were devoted to literature and education. Others were more overtly committed to political emancipation. One such was *Zabān-i zanān* edited by Ṣiddīḳa Dawlatābādī which began publication in Iṣfahān in 1919. Despite repeated threats to her life and attacks on her newspaper, Dawlatābādī remained a powerful force in the women's movement.

By 1930 there were a number of women literary figures, the best known among whom were Parwīn Iʿtiṣāmī [*q.v.*] (1906-41) and Sīmīn Dānishwar, as well as more than 10 women publishers and journalists. In the face of hostility, exile and imprisonment, women such as Shahnāz Āzād, editor of *Nāma-yi banūwān* ("Women's letter") and Āfāḳ Pārsā, publisher of *Djahān-i zanān* ("Women's world"), continued to oppose the religious establishment and its more restrictive dicta, and in the event, finally found an unexpected ally in Riḍā Shāh Pahlawī. (For a detailed discussion of women journalists and writers, see Parī Shaykh al-Islāmī, *Zanān-i rūznāmanigār wa andīshmandī-yi Īrān* ("Women journalists and women intellectuals of Iran"), Tehran 1351/1972, and in Elizabeth Sansarian, *The Women's rights movement in Iran*, New York 1982, 32-7).

After the overthrow of the Ḳādjārs in 1924, Riḍā Shāh embarked on an extensive programme which initially did not benefit women very much. For example, the Civil codes of 1930, although intended to curtail the judicial control of the *ʿulamāʾ*, in fact incorporated much of the Twelver Shīʿa *Sharīʿa* laws (Bagley, *The Iranian Family Protection Laws*, in C.E. Bosworth (ed.), *Iran and Islam*, Edinburgh 1971, 50). women continued to inherit only half as much men on the death of a spouse and that of parents. Paternal consent was needed for marriage of spinsters; the husband remained the legal head of household and his formal consent was required before a wife could take employment or travel abroad. Men also retained their right to polygamy and temporary *ṣīgha* marriages, as well as the right to divorce their wives at will with the custody of their sons at the age of two and daughters at seven. Divorced women were required to keep the *ʿidda* and remain unmarried for two months in case of *ṣīgha* and three for permanent wives. The only departure from the *Sharīʿa* was the stipulation of a minimum age for marriage: 15 for girls and 18 for boys.

The Penal Code of 1940, though almost wholly European in conception, retained the *Sharīʿa* laws for adultery. The killing of one's wife, daughter or sister caught *in flagranti delicto*, is not considered murder and carries either no sentence at all or a short discretionary term of imprisonment. Retribution against an adulterous husband, father or brother, however, is not sanctioned in the same way.

Nevertheless, by 1936 Riḍā Shāh felt sufficiently confident to include women's education and the banning of the veil in his modernisation process. He began in 1935 by giving state recognition to women's groups and setting up a women's centre, *Ḳānūn-i bānuwān*, with a budgetary allocation from the Ministry of Culture and under the patronage of his daughters Ashraf and Shams, and headed by Ḥadjar Tarbiyat. In 1937 Ṣiddīḳa Dawlatābādī was appointed as the head of the *Ḳānūn* and it was reorganised into an educational and craft training centre for women. In 1936, Tehran University began admitting women. It was, however, the outlawing of the veil in the same year and rigorous enforcement of this measure until Riḍā Shāh's abdication in 1941 which proved a historical landmark for Iranian women. Along with access to education, the abolition of the *ḥidjab* finally ended their physical and mental segregation and enabled them to participate openly in the public sphere (see Bamdad, *op. cit.*, 80-3; Sansarian, *op. cit.*, 62-6; Avery, *Modern Iran*, London 1965, 291-2).

After the departure of Riḍā Shāh, there was something of a backlash against women. Nevertheless, organisations such as the Women's League, *Djamʿiyyat-i Zanān*, and the Tūdeh (Communist) party's *Tashkīlat-i Zanān-i Īrān*, continued to agitate for legal reforms and female suffrage. In this, they met with the resolute opposition of the *Madjlis*, which in 1934 had voted and again in 1959 was to vote against the emancipation of women. Middle-class Iranian women, many of whom had been educated abroad, saw the religious establishment as the main opposition and sought to circumvent the legislature by taking to the streets. In this they had the tacit support of the Shāh's twin sister, Ashraf Pahlawī, who headed the influential High Council of Women's Organisation, *Shūrā-yi ʿĀlī-yi Djamʿiyyat-i Zanān*.

In January 1963, women organised a widely-publicised and well-supported one-day strike, refused to celebrate the anniversary of the unveiling of women, marched to the Senate and insisted on voting in the Shah's White Revolution referendum. Although their vote was counted separately, the high turnout, the extensive publicity given to the women's protests and royal patronage finally enabled them to obtain the vote in February 1963. A year later, there were two women senators and four women deputies in the *Madjlis*. In the struggle between the secular and the religious establishment, the state scored a temporary gain and acquired the wholehearted support of middle-class women.

Once enfranchised, the campaign for legal reforms was intensified. Assisted by the Women Lawyers' Union and the newly formed Iranian Women's Organisation (*Sāzamān-i zanān*) headed by members of the royal household, Iranian women succeeded in securing radical changes. By 1978 abortion was legalised and, through the Family Protection Laws of 1967 and 1975, the husband's right to *ṣīgha* and polygamous marriages was curtailed, as was his discretionary right of divorce and custody of children. Family Courts were set up and empowered to allow divorced women to claim an alimony over and above the customary *mahr*. Conditions for working women were also improved, and they gained an entitlement to twelve weeks' maternity leave and nurseries in work places with more than ten nursing mothers.

On the whole, it was the urban middle-class women who benefited from these measures; rural women, though theoretically entitled to nurseries and legal protection, were generally unaffected by these laws and were unable to get to such law enforcement agen-

cies as the town-based Family Courts. There were, however, a number of programmes intended specifically for rural women. For example, the Literacy Corps, the Extension Corps and the Health Corps, were set up in 1968, and despatched women conscripts to teach village women respectively to read, produce handicrafts and instruct them in family planning. Of these, by far the most successful was the Extension Corps which taught women to improve on their traditional crafts of weaving and sewing and embroidery and which facilitated the marketing of these products through a network of urban shops. Ironically, the ability of rural women to gain their livelihood as craft workers reinforced the parental reluctance to allow them to go to school, since schooling merely deprived the family of their daughter's all-too-valuable labour without giving them any substantial returns (for a case study on this, see Haleh Afshar, *The position of women in an Iranian village*, in *Feminist Review*, no. 9 [Autumn 1981], 76-8). Thus despite numerous literary campaigns, nearly 95% of rural women remained illiterate (J. Rudolph Touba, *Relationship between urbanisation and the changing status of women in Iran*, in *Iranian Studies*, v/1 [Winter 1972], 29, and *Bārrassī sōsialistī*, in *Asnād-i Djunbish-i Trotski-yi Īrān* [New York, Summer 1357/1978], 191).

Even for urban women, successes of the 1970s were short-lived. Although the Shāh appointed one women minister, an ambassadress and nearly 40 women judges, his modernisation policies did not benefit the mass of the poor rural and urban dwellers, male and female. Welfare legislation remained unimplemented and the bulk of Iranian women continued working in the informal sector without security and for minimal wages. It was the combination of poverty and illiteracy that made poorer women so responsive to the extensive campaigns waged by the religious establishment against the Shāh. In the early seventies, Āyatallāh Khumaynī emerged as the charismatic leader of this opposition. Khumaynī appealed directly to women to abandon their unrewarding tasks given to them by the Shāh and return to the sphere of domesticity, reminding them that the Muslim husband must fulfil his duty of supporting his wife and family "whether he has the means or not" (Āyatallāh Rūḥ Allāh Khumaynī, *Tawḍīḥ al-masā᾽il*, ed. Ḥawza-yi ᶜIlmī, Ḳum n.d., *mas᾽ala* 2412).

The prospect was an alluring one for the many women who earned a pittance and often supported an idle husband or son. Some middle-class women among the intelligentsia also feared the total breakdown of the family. The high rate of divorce—Īrān ranked fourth in the world (*Iran Almanac*, published by *Echo of Iran*, Tehran 1974, 434)—and the predominance of divorce among working women, (40%), were seen by this group as evidence of social disintegration, and they espoused the cause of Islamic fundamentalism. They expected the Islamic Republic to bestow the dignity of motherhood and domesticity on women (Zahrā Rāhnaward, *Ṭulūᶜ-i zan-i muslimān*, Nashr-i Maḥbūba n.d., 85). In the event, women appear to have lost everything but the vote. Their wholehearted support of Khumaynī and active participation in the street demonstrations marked women as an important support base and secured them the vote (H. Afshar, *Khumayni's teachings and their implications for Iranian women*, in A. Tabari and N. Yeganeh (eds.), *In the shadow of Islam*, London 1982, 75-90). But all women judges were dismissed, and women were expelled from the Faculty of Law. Female education has been segregated; given that only about 3% of women had any tertiary education, this measure has condemned them to an inferior education. In addition, the reversion to the *Sharīᶜa* laws has meant that husbands have gained the discretionary right to polygamous and *ṣīgha* marriages as well as the custody of children on divorce. Women are now required to wear the *ḥidjāb*, and the implementation of the new *ḳaṣāṣ* laws has deprived them of equality before the law. A man who murders a woman has a *khūnbahā*, blood money; this must be paid by the woman's guardian before the murderer is punished. Women have a *khūnbahā* only half that of a man. Iranian women have opposed these measures with street demonstrations, a refusal to wear the *ḥidjāb* and collaboration with the resistance movement. It is too early to judge whether the restriction placed on women will prove any more long lasting than the liberalisation of the Pahlawīs; what is certain is that Iranian women will not easily concede defeat.

4. In Turkey [see Supplement].

5. In the Indo-Pakistan sub-continent. The evolution of Muslim social polity in India, from the earliest date of advent of Islam in the subcontinent in the 2nd/8th century, has been constantly affected and acculturated by the indigenous cultural environment. In this process, the status and role of Muslim women also underwent significant changes throughout the ages. The earliest accounts indicate that among the Turkish settlers women enjoyed a respectable position; they even took an active part in state affairs. Seclusion was not strictly enforced during the earlier centuries, but began as a rigid practice after the 4th/10th century.

During the Dihlī Sultanate period (7th/13th century), despite strict seclusion of women, ambitious ladies of royal households often played decisive roles in intricate affairs of succession to the throne. Shāh Turkān (wife of Iltutmish and mother of Rukn al-Dīn Fīrūz Shāh I) and Malik-yi Djahān (wife of Djalāl al-Dīn Fīrūz Shāh II) had succeeded in effectively outmanoeuvring the male-dominated courts by installing on thrones the princes of their choice and wielding absolute power in their behalf. Iltutmish's daughter, Raḍiyya Sulṭāna, even succeeded in ascending to the throne herself and ruled for four years (634-7/1236-40). The records of the Tughluḳ and Lōdī dynasties are also full of accounts of royal ladies often playing leading roles in state politics.

The harem life from the Sultanate period down to the Lōdī dynasty (i.e. in the pre-Mughal era) was centred around the ladies of royal households. with their dependents, maids, slaves and eunuchs. Seniority in rank among royal ladies was a major factor in commanding both respect and power. Seclusion was so strictly observed that even outside women were not permitted to enter the harem enclosures. The princesses and girls of higher classes received Ḳurʾānic and literary education at home from learned tutors (ladies as well as elderly men). In regard to literary and artistic talents, there are numerous instances of outstanding achievements by ladies. Raḍiyya Sulṭāna was a noted poetess; Dukhtar Khāṣṣa, Nuṣrat Bībī and Mihr Āfrūz had mastered the art of dancing; Futūḥa and Nuṣrat Khātūn were famous musicians of their times.

During the Mughal period (932-1161/1526-1748), although the practice of seclusion had become more intensive and was considered as a sign of respect—even royal decrees were issued for observing strictly the rules of *parda/purdah* (seclusion)—women of the royal households and upper classes played perceptible roles in state politics and achieved high merits in literary accomplishment. On occasion, Nūr-i Djahān (wife of Djahāngīr) broke the *purdah* convention and did not mind coming out in public. In fact, she was the real power behind the Djahāngīrī throne. She also led an army expedition against Mahābat Khān [*q.v.*]. In southern India, during the same period, Sulṭāna Čand Bībī personally defended the fort of Aḥmadnagar against the mighty forces of Akbar, and Makhdūma-yi Djahān ruled the Deccan as a regent on behalf of Niẓām Shāh of the Bahmanī family.

In literary achievement, the Mughal period provides a long list of ladies of distinction. Djahānārā (second wife of Shāhdjahān) was a noted biographer; Gulbadān Begam was the author of the *Humāyūn-nāma*. and Djān Begam (daughter of Khān-i Khānān) wrote a commentary on the Ḳurʾān, for which she received from Akbar an award of 50,000 *dīnārs*. Among the famous poetesses of this period, Salīma Sulṭāna, Nūr-i Djahān, Sitt al-Nisāʾ and Zīb al-Nisāʾ (eldest daughter of Awrangzīb) were outstanding.

The decline of the Mughal dynasty towards the middle of 12th/18th century heralded the emergence of the modern era in Indian history. The incoming European powers (Portugese, Dutch, British) were in the process of consolidating in the subcontinent their political and military powers, which eventually weakened the power bases of Muslim courts in northern as well as southern India. With this shift of power, new socio-economic groups gradually emerged in which the élites of the long-established courts lost their hold and their dominant status. The centralised feudal power fragmented into the holdings of local feudal lords, who started aligning themselves with the European powers. This basic shift in social organisation ultimately had its impact on women's rôle in society. The central harems of the past gradually lost their hold on political manoeuvrings, whilst the artistic and literary pursuits of these élite ladies also lost much of their significance as the popularity of Western-type education gradually spread. For almost a century, virtually all contributions of Muslim women in art and literature, and their active participation in education or politics, came to a standstill. It was not until the second half of the 19th century that a gradual revival of Muslim women's participation in active life of education and artistic and literary manifestations became visible.

In 1886 Sir Syed Ahmad Khan [see SAYYID AḤMAD KHĀN] founded the Anglo-Mohammedan Educational Conference for the general advancement of Western education among Muslim in India. Under the auspices of this organisation, the provision of Western education for Muslim girls was envisaged also. At the beginning of this century, the first Muslim women's college was established at ʿAlīgaṙh (now a constituent college of the Muslim University); the basic aim of this college was to provide facilities for higher Western education for Muslims girls under the strict rules of seclusion. Almost at the same time, Ḥakīm Adjmal Khān opened an exclusive section for women in his Yūnānī College (centre of Greco-Arab medical education) at Dihlī. The ʿAlīgaṙh College, in particular, contributed a great deal in giving a new direction to the role of Muslim women in modern India. It was followed by the establishment of educational institutions for Muslim girls in Bombay in the 1920s, and in other parts of the subcontinent in the 1930s.

During the 1920s, two monthly magazines in Urdu for Muslim women started their publication: *ʿIṣmat* from Dihlī and *Tahdhīb-i-Niswān* from Lahore. The objectives of both these periodicals were to publish reformist material for the average, middle-class Muslim woman. Their circulation was throughout the Urdu-speaking region of the subcontinent. The main themes on which the contributors (male and female) concentrated were: the stability of family life, children's upbringing, women's role as wives and

mothers, religious education, domestic economy, and light social fiction. Ḥidjāb Imtiyāz ʿAlī was the first Muslim woman writer of the modern era who earned an all-India fame in the late 1920s; most of her writings appeared in *Tahd̲h̲īb-i-Niswān*.

The 1935 Government of India Act had awarded separate electorates for Hindus and Muslims; female members of the two communities were also given the franchise. According to the terms of the new Act, general elections were held in 1936. By this time, a few Muslim women of the upper middle class had come out of seclusion and were actively participating in various fields: politics, medicine, education, social welfare, literary pursuits, etc. Thus they had demanded and were granted a reserved seat for Muslim women in the United Provinces legislature. In the 1936 elections, Begam Ḥabībullāh won the reserved seat and entered the U.P. Legislative Assembly as the first Muslim woman member.

During the Second World War, India witnessed an unprecedented political upheaval which had its bearing on Muslim women's increasing participation in political activities and literary expressions. Saleha Abid Husain, Rasheed Jahan and Ismat Chughtai emerged as leading Urdu writers of that time. Begam Mohammad Ali, maintaining her seclusion, fought and won a seat in U.P. legislature in 1946. Rasheed Jahan and Hajira Begam were Communist activitists; both of them were among the organisers of several industrial strikes, and were imprisoned for a considerable time in 1949.

In 1947, after Partition, two separate commonwealth states came to exist: India with Hindu majority provinces, and Pakistan consisting of Muslim majority regions, sc. the North-West Frontier Province, Sind, West Punjab (as the western wing) and East Bengal (as eastern wing). Among the remaining Muslim population in India, after independence, Muslim women came out of seclusion in greater number; they started entering the institutions of higher education in ever-increasing numbers and competed for specialised jobs. Although up to higher secondary level, seclusion of sexes has been maintained in college and university education, the predominant majority of Muslim girls have been enrolling in institutions of co-education. Their participation in active educational, professional and political fields has been of great significance. At ʿAlīgaṙh Muslim University, several Muslim women professors have chaired various academic departments. There have been a number of Muslim women holding administrative positions in various government establishments. In the political sphere, the traditions of Muslim women's participation have been continuous. Begam Anis Kidwai was the first Muslim female minister appointed in the 1970s in the Uttar Pradesh cabinet, and later on she was elected as President of Congress (I) of the U.P. Branch. In Assam, during the most politically troubled period, in the early 1980s, Begam Anwara Taimur took up the charge as Chief Minister of that state and headed the Congress (I) cabinet for several months.

At present, Muslim women are found throughout India as eminent medical practitioners, educationists, administrators, and political activists. In all these fields their status for all practical purposes is equal to men without significant discrimination.

Soon after the establishment of Pakistan as a Muslim state in 1947, women's emancipation became a key factor in all walks of life and especially in the provinces of West Punjab and Sind. Muslim women of the Punjab were already far advanced in education; a large number of well-educated families from the U.P. and Hyderabad had migrated after the partition to Sind province, and women of these families were demanding better opportunities for themselves in the newly-established state. Muslim women in the North-West Frontier Province and East Bengal had not been able to advance beyond average primary education in those early years. Thus the establishment of the All-Pakistan Women's Association (APWA) during early 1950s drew upon female activists mostly from Lahore and Karachi. It remained a middle-class dominated organisation which aimed at a better deal for women: it organised meetings and demonstrations against polygamy and the maltreatment of women, and it presented a mild programme of social reforms in favour of women. But any active participation of women in politics was at least two decades away.

In literature, however, several women writers rose to prominance: Hajira Masroor, Khadija Mastoor, and Jilani Bano in short story writing; Qurat-ul-Ain Hyder as a novelist and Zohra Nigar as a poet. During the early 1960s, Begam Liaquat Ali Khan was appointed as the first woman ambassador of Pakistan; she was accredited to Belgium. Her appointment was not due to her own active participation in political or social life; she was honoured as the widow of the assassinated first Prime Minister of Pakistan, Sahibzada Liaquat Ali Khan [see LIYĀḲAT ʿALĪ K̲H̲ĀN].

It was mostly during the 1970s that woman came to prominence in Pakistani politics. Begam Nasim Wali Khan had emerged, side-by-side with her husband, Khan Abdul Wali Khan, as a political activist against the rule of Zulfiqar Ali Bhutto. Soon after Bhutto's execution, his widow—Begam Nusrat Bhutto—and daughter—Benazir Bhutto—took up the leadership of the Pakistan People's Party and have become the focal point of opposition to the Martial Law Authority. More and more women are becoming involved in political activity; thus Hinda Gilan, a lawyer by profession, has recently emerged in Lahore as a dynamic political activist.

Bibliography: Most of the works referring to the status and role of Muslim women in the Indo-Pakistan subcontinent from the earliest times down to the end of the Mug̲h̲al period comprise the standard historical sources, see the Bibls. to HIND. iv. History and vi. Islamic culture. For a summary treatment of the status of Muslim women in pre-Mug̲h̲al times, see I.H. Qureshi, *Administration of the Sultans of Delhi*[4], n.d. Karachi, 150; Rekha Misra, *Women in Mughal India*, Delhi 1967, 5-15; R. P. Tripathy, *Some aspects of Muslim administration*, Allahabad 1936, 29; and Ishwari Parasad, *History of Qaraunah Turks in India*, Allahabad 1936, 132. Accounts of the status of Muslim women during the Mug̲h̲al period are available, mostly written in Persian: Gulbadan Begam, *Humāyūn-nāma*, tr. A. S. Beveridge, London 1902, provides an elaborate account of female life inside harems. Other important references to Muslim women's life can be found in ʿAbd al-Ḳādir Badāʾūnī, *Muntak̲h̲ab al-tawārīk̲h̲*, Calcutta 1884, 404-6; Abu 'l-Faḍl, *Akbar-nāma*, tr. H. Beveridge, Calcutta 1912, i, 43, 114, ii, 39-41, 149-51, 212, 230, 288-93, 317-19, 324-30, iii, 212-13, 215, 536, 1140; Muʿtamid K̲h̲ān, *Ikbāl-nāmā-yi D̲j̲ahāngīrī*, tr. Elliot and Dowson, Calcutta 1865, 345-6, 424-8, 430-1, 435-6. There are numerous studies in English on this period; see Rakha Misra, *op. cit.*, chs. 2-8; P. N. Chopra, *Society and culture during the Mughal age*, Agra 1963, ch. 5, 103-31; B. Andrea, ed. L. Binyon, *The life of*

a Mughal princess — Jahanara Begum, London 1931. On the status of Muslim women in modern times, intensive study is still very much needed; however, two works which have dealt with this theme should be mentioned, Cora Vreede de Stuers, *Parda: a study of Muslim women's life in Northern India*, Assen 1968, and Zarina Bhatty, *Status of Muslim women and social change*, in *Indian women: from purdah to modernity*, New Delhi 1976. (GHAUS ANSARI)

MARʿĀ (A.), pasture. 1. In nomadic Arab life.

The word *marʿā* is used only twice in the Ḳurʾān, where it has the purpose of praising the divine power (LXXIX, 31, and LXXXVII,4). In *ḥadīth* there are also two uses of this substantive to be noted (cf. Wensinck, *Concordance*); one of them touches incidentally on the problem of the exploitation of pastures, but *ḥadīth* is more explicit with reference to *kalaʾ*, dry and green forage. In fact, a tradition asserts that "the Muslims are united (*shurakāʾ*) in three things: water, forage and fire"; it is the principle of the primitive collectivism of the Arab tribe which is stressed here. Another tradition conforms this point of view: "three things cannot be withheld: water, forage and fire". According to a third tradition, "it is forbidden to refuse excess water with the purpose of thereby denying forage" (*lā yumnaʿ faḍl al-māʾ li-yumnaʿ bi-hi 'l-kalaʾ*), since cattle eating without drinking will die of thirst (cf. Muslim, *Ṣaḥīḥ*, Cairo 1334, v, 34; *LA*, s.v. *k-l-ʾ*).

Besides these somewhat vague pieces of information, neither *ḥadīth* nor even the works of *fiḳh* seem to be concerned with the manner in which pastures were exploited among the Arabs of the open plains. On the other hand, tracts of religious jurisprudence are often concerned with the problem of the sharing of water and its utilisation among riverside communities. One of the most important sources, in this context, is presumably the work, still in manuscript form, intitled *al-Marʿā al-akhḍar fī fatāwī al-Bakrī wa-bn Ḥadjar* (in the library of Tarīm).

In accounts describing the *ayyām al-ʿArab*, the contest for pastures is frequently evoked. Each tribe has its own, where only its members enjoy grazing rights. If a *sayyid* considers himself sufficiently powerful to appropriate pasture land, he then declares it *ḥimā* [*q.v.*] and forbids even his fellow-tribesmen access to it. The violent war of Basūs between the sister-tribes of Bakr and of Taghlib came about as a direct result of trespass on the reserve of Kulayb by a camel belonging to the Tamīmi Basūs.

The romantic tales of Arab chivalry, such as the story of ʿAntara, often describe heroic, warlike exploits in the conquest or defence of pastures. A clan whose lands are blighted by drought sets out to seek other grazing land belonging to friendly or allied tribes, but it cannot proceed there without having asked for and obtained authorisation from the proprietors. This approach is usually accompanied by gifts presented to the chief whose goodwill is sought; if he consents, the agreement is made conditional on terms, the most important of which is the duration of the grazing facilities. The clan which accepts then takes the visitors und its protection (*dhimām*), but it may revoke its decision and insist on the latter leaving its reserves on the grounds that their presence has caused friction. This breach of promise can degenerate into armed conflict.

It is a fact that the information supplied by the classical Arabic sources on the question of pastures among the Bedouin is far from satisfactory. To examine this subject it is necessary to turn to another source, sc. ethnography.

The Bedouin economy is based essentially on animal husbandry, sometimes linked with land cultivation of a more or less intermittent nature. These two activities could not be developed without at the same time creating a certain number of rules, determined by custom and relating in particular to the ownership of land and of wells. It might be supposed that the desert, on account of its aridity and particularly severe living conditions, is free territory belonging to anyone who has the courage to dwell there. This is not at all the case. An expert on the subject, T. E. Lawrence, states correctly in this regard:

"Men have looked upon the desert as barren land, the free holding of whoever chose; but in fact each hill and valley in it had a man who was its acknowledged owner and would quickly assert the right of his family or clan to it, against agression. Even the wells and trees had their masters, who allowed men to make firewood of the one and drink of the other freely, as much as was required for their need, but who would instantly check anyone trying to turn the property to account and to exploit it or its products among others for private benefit. The desert was held in a crazed communism by which Nature and the elements were for the free use of every known friendly person for his own purposes and no more" (*The seven pillars of wisdom*, London 1935, 83-4).

Each tribe, even the most itinerant, possesses a fixed centre which serves it as a place of resort and as a rallying centre where its various clans assemble during the months of greatest heat. At this time of the year, everything in the desert has been scorched by the sun. Then the Bedouin returns to his summer camp, situated close to an oasis or a major source of water. When the ferocity of the climate is alleviated, with the signs of the first rains, he goes back to his natural habitat in search of grazing for his flocks. But he cannot wander at will. Each tribe has its pastures which it frequents periodically. The vast extent of its nomadic range enables it, in a good or a bad year, in spite of the rigours of the severest climate, to find adequate nourishment for its livestock. In this manner, the Ruwāla spend the summer, especially the months of July and August, in Syria, to the south of Damascus. With the alleviation of the temperature, they travel to their winter pastures situated in Saudi Arabia, crossing the Jordanian desert by way of Wādī Sirḥān.

It can happen, however, that a persistent drought consumes the hardy desert vegetation, roots and all, in spite of its legendary resilience. The Bedouin is then constrained to leave his ancestral territory in search of a more fertile zone. But he is evidently obliged to take into account the attitude towards him of the lawful owner of the coveted pastures. The latter, however, can in fact refuse to accede to his request or may offer him grazing rights only in exchange for the payment of rent. If the supplicant considers himself strong enought to confront him with force, he will be inclined to reject any compromise. Otherwise, he must submit to the conditions prescribed, or search elsewhere. In Jordan, a nanny-goat, known as *shāt al-ritāʿa*, is offered to the owner of the pastures.

The territory of a Bedouin tribe is jointly owned; it is communal property, the exploitation and tenure of which are reserved for its occupants alone, the members of the group and their protégés. It is divided into lots, of unequal size, corresponding to the number of clans belonging to this group. Friends, even strangers properly introduced, may move about there freely and use the wells. But the grazing right is accorded only to fellow-tribesmen and their clients.

Even at this level of social organisation, pastures are a cause of dispute, the best being appropriated by the strongest clans. Consanguinity and solidarity impose upon all an obligation to accept here, with apparent enthusiasm, the least prosperous among them, especially in times of drought. But the latter would be wrong to consider an acquired right what is in fact a duty for mutual aid. The collectivism of the desert is located essentially at the level of the *ḥamūla*, the members of which may pasture their livestock in any part whatsoever of the communal lot. The members of another *ḥamūla* are admitted to it only with the authorisation of the *shaykh*, and by reason of their links of kinship, geographical proximity and good relations with the titular proprietors.

Among the Ḳabīlīs of the high plateaux of the Yemen, although this people has long been sedentarised, the pastures of a tribe are reserved for its members, but also for those who are admitted on account of being refugees: *rabī^c^*, *matī^c^* or *ḳaṭīr*. The stranger who ventures there without authorisation is tolerated for three days; this is the right of tenure (*mut^c^a*) accorded to a friendly clan. Once this interval is passed, pressure is exerted on the unwelcome visitor to force him to leave. He is harassed, he is threatened, his mount may even be seized. But no attempt is made on his life, even if he insists on remaining; it will be enough to notify his *shaykh*. The latter is obliged to compensate the proprietors and force his subordinate to leave the place. If the demand is refused, serious conflict may erupt. To avoid this, the group of outsiders which has suffered drought must come to an understanding with more fortunate neighbours to pasture its livestock on their territory, in a place and for a period of time prescribed, in exchange for the payment of an indemnity in kind or in cash. Henceforward it will not be troubled. Furthermore, it enjoys the right of protected neighbour status (*djiwār* [*q.v.*]), according to which the lessors are required to act as official protectors.

There also exist in the Yemen, as among the Arabs of the desert, treaties of friendship between tribes which allow each contracting party to use the pastures of the other if the need arises. This is the case e.g., with the alliance known as *ṣuḥba* or *ṣaḥāb* which is based on a kind of fraternal relationship (*ta^ʾ^ākhī*). It is an agreement, both defensive and offensive, by which two tribes undertake to take up arms on one another's behalf. To conclude the agreement, there is no need for bloody sacrifices, except for the purpose of celebrating the event, nor for oaths; this is a pact that goes beyond sworn pledges. The agreement is set out in writing and signed by the leading *shaykhs*. Such documents (*marāḳīm*) state explicitly that the contracting parties consider themselves henceforward "as a single member, a single arm, sharing the same fear and the same tranquillity, sharing the loss and the gains, however meagre they may be, accruing from a common action against the enemy" (al-Hamdānī, *Iklīl*, ed. Khaṭīb, x, 70). Henceforth, the members of a tribe may go to live on the territories of the other and also take advantages for its pastures. Excluded from this treaty are the fornicator and the thief.

It will be understood that here it is the perspective of an essentially nomadic tribe that is under discussion. When the process of sedentarisation is initated, the community of proximity tends to take the place of consanguinity. Arabs residing in the same region exploit the pastures in common, even where they belong to different tribes. But a group from a different area which seeks to install itself there cannot do so before obtaining the consent of the leading *shaykhs*. The latter can even exact the payment of tribute.

The ownership of land, among the Arabs of the desert, is controlled by the law of the strongest. For this reason, it is never definitive. Until recent times, the Bedouin, even if sedentarised, despised any kind of bureaucratic administration of land and seldom had recourse to it. To defend his rights, he trusted his sword. The demarcation of territories operated in the most rudimentary fashion, since each clan knew its own domain, as well as that of its neighbour. For marking boundaries, very simple means were employed: a shallow ditch, stakes, mounds, piles of stones and, more recently, barrels. Those who occupied themselves with agriculture planted strips of onions to mark boundaries. Such an administrative system, clearly precarious and imprecise, often gave rise to disputes. Litigation was submitted to the jurisdiction of an *^c^ārifa*.

2. In Persia.

The terms *marta^c^* (pl. *marāti^c^*), *^c^alafzār*, *^c^alafkh^w^ār*, *^c^alafčar*, *marghzār*, and *čarāgāh* are used interchangeably in Persian literature to mean pasture. In early works, *giyāh-kh^w^ār* is also found (cf. *Ḥudūd al-^c^ālam*, tr. Minorsky, 94, 85 and Ibn al-Balkhī, *Fārs-nāma*, ed. G. Le Strange, London 1921, 155). *Marghzār* is also used to mean meadow-land, while the word *čaman* is restricted to this meaning. *Marā^c^ī*, *^c^alafkh^w^ār* and *^c^alafčar* are also used in the sense of pasture tax.

The wide variation in temperature in Persia is highly important in shaping the general plant geography, and coupled with the variations in the annual distribution of precipitation is responsible for the differences of Persia's plant cover and pasturage. Relief is also a decisive factor and affects both climate and soils; and a striking feature of Persia, especially the central plateau, is its micro-relief. The bulk of Persia's surface, apart from the Caspian region, receives its rains in autumn, winter and spring: summer rains are negligible in most regions. This affects the development of pastures and results in their exploitation being largely seasonal. In Islamic times the phytogeographical boundaries have probably continued broadly the same. Changes in microclimates may have been experienced, but the over-all macro-climate has probably remained unaltered.

Millenia of human activity have left their impress through the cutting of trees and grazing. In many regions it is probable that the primary vegetation was a kind of *Artemisietum* which included perennial grasses. Centuries of overgrazing and steady grazing would appear to have reduced the original vegetation of much of the plateau to a state of barrenness. In some places, it has led to the disapppearance of perennial grasses from the steppe vegetation and their replacement by anti-pastoral non-palatable components, such as *Amygdalus*, *Anabasis*, *Astragalus*, and *Artemisia herba-alba*. The movement of flocks has also resulted in the severe cropping of trees, as, for example, in the oak forests of Luristān, Pusht-i Kūh, Īlām and Kurdistān, and the disappearance of *Quercus brantii* from hillsides in the neighbourhood of Kirmānshāh. The natural vegetation along the travel routes of nomad and semi-nomad tribes has also been disturbed in recent centuries.

Another factor which has led to change in the make-

up of vegetation is the collection of plants for industry, fuel, drugs and food. Fuel collection, especially, has affected not only the forest regions but also the steppes and led to the occurence of some barren, almost unvegetated areas. At the higher altitudes on the plateau, the climate is often too cold and water too scanty to produce anything more than a thin vegetational cover of short grass and low scrub. Large areas of the country are sterile or almost sterile hammadas due to very low rainfall or to an excess of salt in the soil or both. The ecology of hillsides varies greatly with respect to latitude, altitude, exposure and soil. Many slopes of low ridges and hills are bare because of their exposure to wind, heat and drought. Perennial grasses survive only in the high mountains beyond the limits of agriculture and in places inaccessible to grazing, on slopes too steep for agriculture and in those districts which have a long snow cover (approximately at an altitude of 2,400 m. to 2,600 m.). Seasonal grasses are found in the steppe areas and a periodic or episodic growth of grasses in some semi-desert regions (see further E. Ehlers, *Iran: Grundzüge einer geographischen Landeskunde*, Darmstadt 1980, 63-127).

Drought, demographic movements, disease, invasian and war have all at different times affected the local distribution of arable and pastoral land and dead lands—sometimes temporarily and sometimes permanently. Frontier regions, in particular, tended frequently to be laid waste, presumably with the destruction of, or damage to, local pastures. In the predominantly pastoral regions the maintenance of a balance between pastures, animal population and human population was maintained, on a short term, by the dispersal or concentration of flocks according to the productivity of the pastures and the utilisation of widely separated pastures at their different periods of productivity. If the balance between pastures, flocks and human population was upset, conflicts between different groups over pastures and encroachment upon neighbouring arable land would be likely to occur. If the settled population increased and productivity rose, more land would be brought under cultivation and grazing land would be restricted. Changes in land use, usually on a small scale and sometimes of a temporary nature, have also occurred from time to time when nomad tribes have adopted a settled life.

Since most pastures were exploited seasonally, it is difficult to arrive at any realistic estimate of the number of animals carried per acre in the different regions. Masson Smith's estimate that "a sheep required something like 10 acres of steppe pasture" (*Turanian nomadism and Iranian politics*, in *Iranian Studies*, xi [1978], 62) does not appear to take the seasonal factor into consideration. B. Spooner puts the stocking rate in the Tūrān district, east of Simnān, which was declared a biosphere reserve in 1977 and in which pastoralism of various types was the dominant form of land use, at 8.6 acres per animal for the period October/November to May (*The Turan programme*, in Margaret R. Biswas and Asit K. Biswas (eds.), *Desertification*, Oxford 1980, 192). Similarly, it is difficult to determine the relative distribution of sheep and goats. The matter is to some extent obscured by the fact that the term *gūsfand* in Persian literature covers both. In modern times sheep predominate; they probably did so in the past also. Goats are numerous, especially in areas where the vegetation is less abundant. They voraciously crop all green plants and are largely responsible for the deforestation and decrease in plant and grass cover which has taken place. Oxen are widely used as draught animals, but herds of cattle are not important except in a few, mainly lowland, districts. Herds of camels are put out to pasture in the tragacanthic steppes, often in areas where the vegetation is unpalatable or too sparse for either sheep or goats. Herds of horses are (or were) bred and turned out to pasture in some tribal districts (cf. Sardār Asad, *Tārīkh-i Bakhtiyārī*, lith. 1333 AH, 20-1). Rulers needed large numbers of horses for their armies. Royal herds and army remounts were grazed in special reserves and elsewhere (see Sir John Chardin, *Travels in Persia*, London 1927, 169-70, on the horses of the Ṣafawid shah). Flocks of sheep kept to provision the royal establishments were similarly pastured in royal reserves.

Seasonal pastures in cool upland regions (*sardsīr, yaylāḳ*) are exploited mainly by tribal groups. Some of them make long-range migrations from their winter quarters in lowland regions (*garmsīr, ḳishlāḳ*); others travel short distances, sometimes only from valley bottoms to the upper mountain slopes. Most villages are surrounded by many square miles of waste land in which the villagers are able to keep a few sheep and goats and donkeys. Some, in the more fertile regions, keep flocks which they take to graze either in the neighbourhood of their villages or farther afield. Stubble grazing is an important form of land use. In many upland regions, notably in the Alburz, villagers practise a limited form of transhumance, sending their flocks to summer pastures in the neighbourhood of their villages. There is also some winter migration of village flocks to the coastal plains of the Caspian from higher regions (see also A.K.S. Lambton, *Landlord and peasant in Persia*, Oxford 1953, 354-5, and ĪLĀT).

With the contraction of the frontiers of Persia in the 19th century, the Mughān steppe in the north-west and the Turkoman steppe in the north-east, both regions in which there were good pastures, became frontier districts and tribal groups migrated annually across the Perso-Russian frontier. The Perso-Ottoman frontier in Kurdistān also traversed pasture land and seasonal migration across it took place, and continued in the 20th century after the creation of ʿIrāḳ.

A survey made by H. Pablot in 1967 shows 25% of the total land as range-land (*Pasture development and range improvement through botanical and ecological studies*, in *Report to the government of Iran*, FAO 3211, Rome 1967, quoted by E. Ehlers, *Agriculture in Iran*, in *Encyclopaedia Iranica*, i, fasc. 6, 613). It would, however, be rash to assume that this percentage was constant throughout Islamic times, but because of the inadequacy of the sources for a historical survey it is not possible to discuss changes in the extent of the land under agriculture and pasture land at different periods except in the most general terms.

Pasture was an important resource for villagers, and for nomads it was vital, while for those dynasties which relied on the support of tribal and nomadic forces the ability to ensure the availability of pasture for their followers was also of critical importance. This was especially the case during and after the Mongol invasions, which resulted in a large and permanent increase in the number of nomads. Throughout the Īlkhānate (654-736/1256-1335), the demand for pastures was insatiable. The wars between the Īlkhānate and the Golden Horde were, in part, over the acquisition of the rich pastures of Ādharbāydjān (C.J. Halperin, *Russia in the Mongol empire in comparative perspective*, in *HJAS*, xliii [1983], 250-1). The war which broke out between the Īlkhānate and the Mongols of Central Asia in A.D. 1270 was in part over the pastures of Bādghīs (W. Barthold, *An*

historical geography of Iran, tr. S. Soucek and ed. C.E. Bosworth, Princeton 1984, 49). The possession of pastures was also important for the succession states to the Īl-khānate, with the possible exception of the Muẓaffarids, who observed, to some extent, the traditions of settled government. It was also the case under Tīmūr (d. 807/1405), the Turkoman dynasties of the Aḳ Ḳoyunlū and the Ḳara Ḳoyunlū and the Ṣafawids when they first came to power in the early 10th/16th century; while one of the reasons which led Āḳā Muḥammad Khān Ḳādjār to choose Tehran as his capital was that it was within easy reach of Gurgān, where the pasture grounds of the Ḳadjār tribe were situated.

A comparison of the accounts of the early Islamic geographers with later accounts will reveal some changes in the distribution of pasture land. The accounts of later writers must, however, be used with reserve unless they are known to be writing from personal experience. Sometimes they merely repeat the information available in the works of their predecessors. What an author records does not necessarily refer to the time he was writing.

There is little evidence that the Arab invasion had much effect on the distribution of pastures, though there probably was some displacement of those who had previously exploited them. There are references to the collective reserves of tribes (*ḥimā*, *ḥimāya* [*q.v.*]) and to reserves in which the cattle and flocks of the caliphs and their governors and army remounts grazed. Al-Balādhurī mentions the pastures of the flocks of the caliph al-Mahdī (158-69/775-85) in the neighbourhood of Hamadān (*Futūḥ al-buldān*, 310-11). The *Tārīkh-i Ḳumm* also mentions that pastures (*čirāgāhhā wa ʿalafzārhā*) were reserved in every village in the neighbourhood of Nihāwand and Karadj for the beasts (*dawābb*) of the caliphs and were called *ḥiyāzāt* (Ḥasan b. Muḥammad b. Ḥasan Ḳummī, *Tārīkh-i-Ḳumm*, Persian tr. by Ḥasan b. ʿAlī b. Ḥasan b. ʿAbd al-Malik Ḳummī, ed. Djalāl al-Dīn Ṭihrānī, Tehran AHS 1313, 185).

It is perhaps significant that Dīnawar, the centre of Māh Kūfa, was within easy reach of rich pastures. Kirmānshāh, also part of Māh Kūfa, was similarly a district with plentiful pastures. Ibn Ḥawḳal, writing in the second half of the 4th/10th century mentions that it had abundant pastures where numerous flocks grazed and much water (*K. Ṣūrat al-arḍ*, ii, 359). Similarly, the availability of pastures in Khurāsān would have facilitated the settlement of large numbers of Arabs in that province and may perhaps have influenced the choice of the centres where they established garrisons. Even if they were not accompanied by flocks and herds, they would have required pastures for their remounts and baggage animals (on Arab settlement in Khurāsān, see further M. A. Shaban, *The ʿAbbāsid revolution*, Cambridge 1970). Elsewhere, so far as the Arabs settled in Persia as tribal groups, they would have required pastures for their flocks. But on the whole, there do not appear to have been many conflicts with local groups over pastures. The *Tārīkh-i Ḳumm*, 243-4, states that the Ashʿarī leaders ʿAbd Allāh and Aḥwaṣ complained in 102/720-1 to Yazdānfādhār, who had allocated to them the villages of Mamadjān and Djamar near Ḳumm in 99/717-18, saying that the pastures were too small for their camels, horses and sheep. Yazdānfādhār accordingly allocated to them the village of Farāba also.

The geographers of the 3rd/9th and 4th/10th centuries give, on the whole, a picture of a prosperous countryside practising arable and pastoral farming. There is mention of pastures and meadow lands in some districts and of the presence of large flocks in various regions, which implies the existence of pastures and grazing land [see ĪLĀT]. Transhumance was practised in Fārs, and al-Iṣṭakhrī puts the number of nomads at 500,000 tents (*Masālik al-mamālik*, 97-9; ĪLĀT), which suggest that pasturage was extensive. Yāḳūt, writing in the early 7th/13th century, also states that they were estimated at 500,000 tents (Barbier de Meynard, *Dictionnaire géographique et historique de la Perse*, Paris 1868, 412). It seems likely that he was merely copying al-Iṣṭakhrī, unless it is to be assumed that the pastures, flocks and tribal population were in a state of absolute equilibrium.

There were extensive pastures and grazing grounds on the borders of the *dār al-islām* occupied by the Ghuzz (cf. *Ḥudūd al-ʿālam*, 100, and GHUZZ). One of the factors behind their migration in the 5th/11th century into the *dār al-islām* may have been pressure on pastures in Central Asia and tribal movements which resulted therefrom. One of their needs on entering Persia was to secure pasturage for their flocks. However, the numbers of the Ghuzz coming into Persia, first as independent groups and then under the leadership of the Saldjūḳs, were not large, and there is little evidence of major displacements by them of those exploiting existing pastures (see further Lambton, *Aspects of Saljūq-Ghuzz settlement in Persia*, in D.S. Richards (ed.), *Islamic civilisation 950-1150*, Oxford 1973, 121 ff.), nor, with the exception of Gurgān, does there seem to have been much change in the distribution of arable land and grazing land as a result of their advent into Persia. Whereas Gurgān in the 3rd/9th and 4th/10th centuries appears to have been a well-cultivated countryside, in Saldjūḳ times much of it was pasture land. By the reign of Sandjar (511-52/1118-57), large numbers of Turkomans occupied pastures in Gurgān, Dihistān and the neighbourhood of Marw (*ibid.*, 110), and pasture land was probably encroaching on arable land.

Fārs continued to be rich in pastures in the Saldjūḳ period. Ibn al-Balkhī, who wrote in the reign of Muḥammad b. Malikshāh (498-511/1104-18), mentions by name extensive pastures in Fārs, and states "From end to end Fārs was valleys and mountains. The whole of it was pasture land (*giyāh-khʷār*)" (*Fārs-nāma*, 155). The pastures of Sīkān, Dasht-i Arzhan and Kāmfīrūz were associated with woodland, in which were found lions (*ibid.*, 154-5). Ibn al-Balkhī gives the interesting information that the grass of the Ḳālī pasture was beneficial in winter but that in summer it was harmful for animals (*ibid.*, 154). Afḍal al-Dīn Kirmānī, writing in the second half of the 6th/12th century, mentions the excellence of the pastures in Rūdbār (in the district of Djīruft), and states that animals thrived in them (*ʿIḳd al-ʿulā li 'l-mawḳif al-aʿlā*, ed. ʿAlī Muḥammad ʿĀmirī Nāʾīnī, Tehran AHS 1311, 70), Earlier, the *Ḥudūd al-ʿālam*, which was composed in 372/982-3, had mentioned the woods, trees and meadows of Rūdbār (124). Afḍal al-Dīn makes no mention of woods. When the Ghuzz invaded Kirmān after the death of Sandjar, there appears to have been a temporary contraction in arable land. Afḍal al-Dīn mentions that land in the Rāwar district was not cultivated because of the encroachment of nomads (*ʿIḳd al-ʿulā*, 29) and that crops were grazed by the flocks of the Ghuzz (*al-Muḍāf ilā badāyiʿ al-azmān*, ed. ʿAbbās Iḳbāl, Tehran AHS 1331, 19-20).

The Mongol invasions in the 7th/13th century resulted in widespread destruction and depopulation. Standing crops were ruthlessly grazed by the Mongol hordes; much land went out of cultivation. There was

a permanent increase in the numbers of the nomadic population and the flock population and consequently in the demand for pastures; it is likely that much arable land was converted into pasture. Hülegü, according to Djuwaynī, when preparing his expedition to Persia, declared pastures in the districts through which it was expected that the army would march to be reserves (*ḳuruḳ*) and forbade any grazing in them other than by the army (*Tārīkh-i Djahāngushā*, ed. Muḥammad Ḳazwīnī, London 1912-32, iii, 93). Later rulers also sometimes declared pastures to be *ḳuruḳ*. After their invasion of Persia, the Mongol hordes continued to practise transhumance. Al-ᶜUmarī, who lived in Mamlūk territory in the first half of the 8th/14th century, states that their summer residence was in the Ḳarabāgh region, which had many pastures, and that their winter quarters were in Ūdjān, which also had extensive pastures, and sometimes in Baghdād (*Masālik al-abṣār wa-mamālik al-amṣār*, ed. and tr, K. Lech, Wiesbaden 1968, Ar. text, 86). Many of the Mongol settlements in Persia were within easy, or fairly easy, reach of rich pastures. Marāgha, the first Īlkhānid capital, had good pasture in the neighbourhood and further afield at Ushnū and other districts in Kurdistān. Tabrīz, the capital of Abaḳa (663-80/1265-81) and later of Ghazan Khān (694-703/1295-1304), had good pastures nearby in Ūdjān and summer pastures in Mt. Sablān and Mt. Sahand. Ghazan also built a city, Maḥmūdābād, in the Mughān steppe, where the Mongols pastured their flocks and herds in winter (see Le Strange, *Lands of the eastern caliphate*, 176). Arghun (673-80/1284-91) founded the city of Sulṭāniyya, which was completed by Öldjeytü (703-16/1304-16) where there were very rich spring pastures. Another foundation built by Öldjeytü was Sulṭānābād-i Čamčamāl at the foot of Bīsutūn, which, because of its excellent pastures, was a regular camping ground of the Mongol establishments (Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, ed. Le Strange, London 1915, 107).

One of the biggest changes in the distribution of pasture land brought about by the Mongols was the expansion of land under pasture in the Mughān steppe and in the country round Sulṭāniyya. Some of this had formerly probably been under cultivation. Both regions continued to afford pasture to nomadic groups and army remounts down to modern times. Marco Polo on his journey south-east from Alamūt towards Yazd and Kirmān wrote, "When you leave this castle (sc. Alamūt), you ride across beautiful plains and valleys and charming hill-slopes, rich in fine grass and excellent pasture, and with abundance of fruits, and all other good things. Armies are glad to stop there on account of the great plenty" (*Travels*, tr. A. Ricci, London 1931, 53). Pastures in Gurgān, on the other hand, do not appear to have been important in Īlkhānid times: Mustawfī states that Gurgān and Kabūd Djāma were in a state of ruin (*Nuzhat al-ḳulūb* 160). It is possible that, apart from the destruction brought about by the Mongol invasion, they had been overgrazed. The pastures in Fārs of which Mustawfī gives a list were still extensive. He follows Ibn al-Balkhī's account but adds one or two details. He remarks that the pasture of Bīd and Mishkān was extremely large (135) and that the grass of the Shīdān pasture was beneficial (*ibid.*). He omits any reference to the pasture of Darābdjird, but mentions an extensive spring pasture near Kāzirūn (136). Mustawfī also mentions that there were excellent pastures in Khalkhāl (82) and a large pasture near Karadj-i Abū Dulaf (69). He states that the pastures of Ḳazwīn were especially rich in fodder for camels (58), and that the pasture lands of Iṣfahān were good for fattening animals (49). Round Tustar and in the neighbourhood of Dizful there were also many excellent pastures (110, 111). Curiously, he does not mention the pastures of Ūdjān or Ushnūya.

There is not much information on the pastures of Luristān [*q.v.*] in the early Islamic centuries. There was presumably some exploitation by transhumant herding, but this may have been more regularly organised in Īlkhānid times with benefit to the pastures. Muᶜīn al-Dīn Natanzī state that when Hülegü gave the governorate of Luristān to the Atabeg Shams al-Dīn Alp Arghun (d. 670/1271-2), the province was in a state of ruin and the subjects dispersed. The Atabeg brought the province back to prosperity by various measures. One reason for its renewed prosperity was, according to Mu ᶜīn al-Dīn, the fact that Shams al-Dīn adopted the custom of the Mongols of moving from summer to winter quarters, spending the winter in Shūsh and Īdhadj and the summer in the Zarda Kūh (*Muntakhab al-tawārīkh-i muᶜīnī*, ed. J. Aubin, Tehran 1957, 43-4).

Initially, the basis of the Mongol economy was the produce of their flocks and herds, hence their primary need was for pastures; but once they had become the rulers of a settled empire some more stable basis was required. Ghazān Khān, towards the end of his reign, sought to bring about an agricultural revival, and his efforts may well have restricted the availability of pasture. One of the measures he took to provide for the upkeep of the military forces of the state was to issue a *yarligh* in 703/1303-4 to allocate *iḳṭāᶜ*s to the soldiers. One of its provisions forbade the ploughing up of permanent pasture (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, 306). The reason for this prohibition can only be guessed at; perhaps, since land capable of cereal growing gave a higher yield in terms of foodstuffs per unit of area than land under pasture, it was due to a fear that the soldiers might plough up all the land allocated to them and as a result would not be able to keep their horses. Ghazan's reforms were shortlived and the agricultural revival ephemeral. With the emergence of new federations of tribes at the end of the Īlkhānid period and the apparent resurgence of nomadism in Khurāsān from about 747/1346 (see Mu ᶜīn al-Dīn Natanzī, *op. cit.*, 197 ff.), it is likely that the need for pasture again became paramount.

Tīmūr and his successors appear to have been in the habit of allocating pastures to their followers (cf. ᶜAbd al-Razzāḳ Samarḳandī, *Maṭlaᶜ al-saᶜdayn*, ed. Muḥammad Shafīᶜ, Lahore 1360-8 AH, ii, 1337). From the account of Clavijo, who travelled through Persia in the time of Tīmūr, there does not seem to have been undue pressure on pastures, in spite of the new influx of nomads. He states that a certain Čaghatay tribe, who served as Tīmūr's bodyguard, was allowed by him to seek pasture and to sow its crops in all districts, and he mentions meeting between Andkhʷuy and Balkh parties of Čaghatay nomads in search of pasture, who encamped in all places where there was pasture and water (*Embassy to Tamerlane*, 1403-1406, tr. Le Strange, London 1928, 196). He also describes extensive pastures in the neighbourhood of Khʷuy (148), meadow lands in Lār in the Alburz (169), rich pastures along the Tedjen River (186-7) and round Samarḳand (233) and the winter pastures of the plains of Ḳarabāgh (309). We know from the *Maṭlaᶜ al-sa ᶜdayn* that in 866/1461-2 the Djalāyirid tribe [see DJALĀYIR, DJALĀY IRID] had "long since" (*az dīr bāz*) had its *yurt*, or tribal pastures, in Astarābād and had innumerable flocks (*op. cit.*, ii,

1253), which suggests that there had been an improvement in the pastures there since Īl<u>kh</u>ānid times.

The period from the 8th/14th to the early 10th/16th centuries was one of tribal movement and resurgence under the Aḳ Ḳoyunlu, Ḳara Koyunlu and the early Ṣafawids, and it is unlikely that there was any reduction in the land under pasture, with the possible exception of the reign of Uzun Ḥasan (871-83/1466-78). With the consolidation of the power of the central government under <u>Sh</u>āh ᶜAbbās (966-1038/1587-1629), more land may have been brought under cultivation. Already before this in the reign of Ṭahmāsp (930-84/1524-76) one of the Ṣāʾin <u>Kh</u>ānī Turkoman tribes from <u>Kh</u>ʷārazm, who had come from there to Astarābād, are said by Iskandar Mun<u>sh</u>ī to have engaged in agricultural activity along the Gurgān River (*ᶜĀlamārā-yi ᶜAbbāsī*, Iṣfahān AHS 1334, i, 530). The pastures of ᶜArabistān, Luristān, Ba<u>kh</u>tiyārī, Kurdistān and many of the frontier regions, which were under provincial governors and *beglarbegs*, were presumably exploited by their tribal followers. The shahs themselves owned large herds of horses and sheep, for which they needed pasture in the neighbourhood of the capital and elsewhere. Tavernier, who visited Persia several times between 1632 and 1668, states that the shah kept 40,000 horses (*Voyages en Perse*, introd. by V. Monteil, Geneva, 1970, 231; cf. also *The travels of Monsieur de Thévenôt into the Levant*, London 1687, repr. 1971, ii, 121) and large flocks of sheep (Tavernier, 258). The movement of tribes to border districts and elsewhere by the Ṣafawids and later by Nādir <u>Sh</u>āh and Āḳā Muḥammad <u>Kh</u>ān Ḳād<u>j</u>ār may have resulted in some minor changes in land use. The Turco-Persian frontier in Ā<u>dh</u>arbāy<u>d</u><u>j</u>ān was deliberately laid waste during part of the Ṣafawid period, presumably with damage to its pasture also.

During the 12th/18th century, there is little information on the state of grazing land or the relative extent of arable and pastoral land. The numbers of various tribal groups were apparently increasing [see ĪLĀT], and this may have resulted in pressure on pastures. The disorders and disturbances which broke out on the fall of the Ṣafawids, on the death of Nādir <u>Sh</u>āh in 1160/1747 and after the death of Karīm <u>Kh</u>ān in 1193/1779, were in any case not conducive to prosperity in regions of either arable or pastoral farming. We have more information on the condition of pasture land in the 19th century, thanks to the accounts of European travellers. Much of this is to be found in the pages of the various editions of the *Gazeteer of Persia* compiled for the Government of India (this information is also to be found in L. W. Adamec (ed.), *Historical gazeteer of Iran*, Graz 1976-, of which two volumes have so far appeared).

In <u>Kh</u>urāsān there appears to have been excellent pasture in the 19th century. It is possible that the more stable conditions which prevailed compared to the 18th century may have resulted in an improvement in the pastures, but in the absence of information on their condition in the 18th century this can only be conjecture. There was good grazing in spring in the <u>D</u><u>j</u>ām valley, round Sara<u>kh</u>s, in the Gurgān plains and along the Gurgān and Atrek Rivers. Parts of the Gurgān steppe were, however, again converted into arable land. The Yamut, who inhabited the land south of the R. Atrek up to Astarābād, are recorded as regularly firing grass and undergrowth for grazing purposes (*Historical gazeteer of Iran*, ii, 665). There were fine pastures at Činārūd at the head of the R. Ka<u>sh</u>af, and in the mountains of Ḳūčān and Bu<u>dj</u>nurd. In Darra Gaz there was good pasture in the plain and luxuriant herbage on the slopes of the Darra Gaz mountains. The plains of Farīmān also had excellent pasture. Along the Af<u>gh</u>ān, border there was abundant grass in spring and in a good year it lasted well into the summer. In the Hastādān district of Bā<u>kh</u>arz, there was plentiful grass in winter and spring. In Rādkān there were also good but not very extensive pastures. In the region round Ma<u>sh</u>had, Turbat-i Ḥaydarī and Bīr<u>dj</u>and, short-lived spring grass fattened quantities of sheep.

In the north-west and the south-west there was probably little change in the distribution of pastures, which continued to be exploited by various tribal federations. Kinneir mentions the rich pasture lands of Sulṭāniyya (*A geographical memoir of the Persian empire*, London 1813, 124), the rich soil and pastures of Mu<u>gh</u>ān (153) and the luxuriant pasture of Luristān (138). In Kirmān<u>sh</u>āh the pasture was very good but inferior to that of Ardalān (141).

Failure of rains resulting in a partial or total lack of pasture occurred frequently in different localities. In the late 1860s and early 1870s there was widespread drought. From the winter of 1863-4, the rains were below average for some nine years, with the exception of 1865-6. In 1869-70, hardly any snow or rain fell in the valleys. In the south, particularly, there was little or no grass on the lower plains and there were heavy losses in flocks and herds (O.B. St. John, *Narrative of a journey through Baluchistan and Southern Persia*, in F. J. Goldsmid (ed.), *Eastern Persia, an account of the journeys of the Persian Boundary Commission 1870-1-2*, repr. London 1976, i, 95). From 1869-72, there was severe famine in almost all regions, accompanied by a country-wide outbreak of cholera; but what the effect of the resulting decline in population was on the distribution of arable and grazing land is not well documented.

In the last decades of the 19th century, there appears to have been some sedentarisation of nomads, on a fairly small scale, which may have resulted in the conversion of pasture land into arable land in some districts (see G. G. Gilbar, *Demographic developments in late Qajar Persia 1870-1906*, in *Asian and African Studies*, xi [1976], 146-7). In the latter part of the 19th century, there was also an expansion of cultivation in the piedmont zone round Tehran and Kara<u>dj</u>; as a result of this, various tribal groups which had formerly grazed this land were forced to extend their annual migration farther and farther south towards the heart of the Central Lūṭ, in order to make use of very inferior and short-lived flushes of pasture that follow sporadic rainfall (W. B. Fisher, *Physical geography*, in *Camb. hist. of Iran*, i, 58). Similar events may have taken place elsewhere.

It will have become clear from the foregoing that much grazing land was situated either in the *ḥarīm* of villages, i.e. in the land surrounding the cultivated lands of a village, or in waste or dead land, and so far as the law books discuss pastures they do so chiefly under the headings of *ḥimā* and *mawāt* [*q.vv.*]. A *ḥadī<u>th</u>* of the Prophet is recorded to the effect that all Muslims are partners in water, fire and grass. In the light of this, Abū Yūsuf lays down that although the meadows belonging to a village were similar to other private property, their owners could not prevent others from the free use of water and grass unless they had no pasturage apart from such meadows and unless no common land was available to them in which they could graze their flocks (*Le livre de l'impôt foncier*, tr. E. Fagnan, Paris 1921, 155 ff.; see also N. P. Aghnides, *Mohammedan theories of finance*, repr.

Lahore 1961, 513-14). Most Mālikīs and Ḥanafīs, however, apparently gave the villagers the exclusive use of the pasture lands in the *ḥarīm* of their village, but they nevertheless granted the *Imām* the right to make concessions of such lands to individuals should the public interest required it (*ibid.*, 514). In practice, a wide variety of usage seems to have prevailed. In modern times, the pastures round a peasant proprietor village were usually held in common by the villagers, while in landlord villages the villagers usually had a customary right to graze their animals in the village pastures (Lambton, *Landlord and peasant*, 355-7).

In privately-owned land (*milk, mulk*), the pastures followed the ownership of the rest of the land and could be transmitted by sale, gift or inheritance in the same way. Many pastures constituted, or were situated in, crown lands [see KHĀLIṢA], and could be granted to individuals as permanent, temporary or life grants like other crown land. Ibn al-Balkhī states that the pastures of Dasht-i Rūn in the Kūhgīlūya were partly *iḳṭāʿī* and partly *milkī* (*mulki*) (*Fārs-nāma*, 124, 155). At different times and in different regions there were considerable variations in the ownership of pastures and grazing rights, particularly in tribal districts. The allocation of grazing rights within the tribal areas was largely based on custom. Sometimes, rights were held jointly by households or tribes, sometimes individually. In some cases they were transmitted by inheritance, but in others they were subject to re-allotment by the chief of the tribe. Information on these matters is to be found in modern anthropological studies (see especially R. L. Tapper, *Pasture and politics*, London 1979, on the Shahsivan of Ādharbāydjān; F. Barth, *Nomads of South Persia: the Basseri tribe of the Khamseh confederacy*, London 1961; W. G. Irons, *The Yomut Turkmen: a study of social organisation among a Central Asian Turkic-speaking population*, Anthropol. papers, Museum of Anthropology, no. 58, University of Michigan, Ann Arbor 1975; idem, *The Turkmen nomads*, in *Natural history*, lxxvii [1968], 44-51; and G. R. Garthwaite, *Khans and shahs: a documentary analysis of the Bakhtiari in Iran*, Cambridge 1983).

On the basis of the *ḥadīth* of Muḥammad quoted above, al-Māwardī states that no governor could exact anything for the use of pastures in dead or reserved land (*al-Aḥkām al-sulṭāniyya*, Cairo 1966, 187, tr. Fagnan, *Les statuts gouvernementaux*, Algiers 1915, 401). In practice, however, there was a wide variety of usage in the matter of pasture taxes generally, and they are not always easily distinguishable from flock taxes [see KHARĀDJ. ii. In Persia]. The owners of pastures also levied dues on those who grazed their flocks in them (for modern usage, see *Landlord and peasant*, 290, 355-8).

(A. K. S. LAMBTON)

3. In Turkey.

The legal practice on the pastures appears, from the ancient legal texts, to have been influenced by custom and tradition. The Aydı̇n Edict of 935/1528, issued during the reign of Süleymān the Magnificent, states in its 8th clause that farming in areas that have been used from time immemorial as pasture is forbidden as being against public interest. Likewise, the 13th clause of the Kütahya Edict of the same year indicates that the ploughing and private ownership of areas where cattle are pastured is forbidden, in the interests of both the urban as well as rural population.

In fact, similar provisions existed even earlier: the 16th clause of the Bursa Edict of 892/1487 suggests that the arrangements concerning pastures were much the same previously. It says that "It is forbidden to cultivate and to establish private property on pastures where both city and village dwellers graze their herds because it brings harm to the public."

Hence we conclude from these measures of the 9th/15th and 10th/16th centuries that:

(1) acceptance of a given stretch of land as pasture is contingent upon its being used for this purpose from very old times and its having been allocated as a pasture for a certain town or village; (2) pasture lands should not be used for grain production, and frequent references to this prohibition in the laws of different periods show that this rule was implicitly admitted by society as an unchanging principle; (3) pastures cannot become private property; and (4) only the dwellers of the village or town to which the pasture is allocated may use it for this purpose.

The Land Edict of 1274/1858 is by far the most significant Ottoman legal text on this subject of the 19th century. Though it was a product of the *Tanẓīmāt* [*q.v.*] era when western influence was being felt in an increasing degree, this Edict combined custom and tradition with the tenets of the formal Islamic land law. Articles 91 to 102 of this Edict contained provi-

sions regarding the *arāḍī-yi matrūka* "assigned lands", though the normal term of Islamic law in which such stretches which are allocated to the use of town or village dwellers as pastures and winter grazing [see ḲIṢHLAḲ] is *arāḍī-yi maḥmiya* "protected lands". Now according to this new law, there were two kinds of *arāḍī-yi matrūka*. The first included areas of public utility such as roads, and recreational areas, while the second covered pasture, summer and winter grazing grounds, and scrubland where firewood might be gathered. Their salient features may be summarised as follows: (1) title deeds cannot be released for such lands; (2) they are not subject to taxation; (3) prescription is not applicable to them; (4) *ex officio* settlements of conflicts on these areas are not admissible; (5) such areas cannot be increased or decreased; (6) they cannot be made the subject of gifts; and (7) proof of collective use of such areas prevails over that of individual use in conflicts regarding their allocation.

Article 97 of the law defines pastures, concerning which the following points may be noted: (1) allocation is the *conditio sine qua non* for any area to be considered as pasture; (2) where allocation does not exist, it must have been used as a pasture from time immemorial; (3) the town or village dwellers to whom the allocation has been made alone can utilise a pasture for their herds; (4) pastures cannot be bought or sold; (5) buildings cannot be constructed on and trees cannot be planted in pastures, nor can they be converted into vineyards and fruit farms; (6) the surface areas of pastures may not be increased or decreased; (7) pastures cannot become private property through prescription; (8) the nature of the pasture cannot be altered, thus it cannot be used as arable land; (9) the offspring of animals grazing in the pasture are allowed there also; (10) summer and winter grazing grounds are accessible to dwellers of other town and cities, while the pastures are exclusive to urban or rural population to whom they are allocated; and (11) the use of summer and winter grazing grounds requires the payment of a certain fee, although the pastures are at the free disposal of the herds of towns and villages to which they are allocated.

There has been much debate among the Turkish jurists on whether the provisions regarding pastures of the 1274/1858 Land Edict were annulled by the 1926 Turkish Civil Code modelled on its Swiss counterpart. Though article 641 of this Code stated that *ad hoc* provisions would be introduced regarding the administration and utilisation of property for public use, such provisions have yet to be adopted, particularly concerning the pastures. Likewise, article 912 states that immovable property allocated for public use and not owned by individuals is in general not subject to the registration procedure. This does not appear to contradict the spirit of the 1274/1858 Land Edict or the practical implementation of the provisions concerning pasture lands. Article 43 of the Law on the Implementation of the Turkish Civil Code states unequivocally that the *Medjelle-yi aḥkām-i ʿadliyye* is rescinded, but without making any reference to the Land Edict; it merely mentions in a general fashion that the provisions of the previous laws contradictory to those of the Civil Code are deemed to have been repealed. Due to this uncertainty, the status of pastures has largely been governed by existing law and the Land Edict, even after the entry into force of the Civil Code in 1926.

Some of the laws passed after the proclamation of the Republic in 1923 nevertheless contain a number of provisions on pastures. Law no. 442 of 1340/1924 on Rural Administration declares in its article 6 that the rural population will continue utilising pastures as in the past and article 8 indicates that infringements of the arrangements regarding pastures will entail action appropriate to those usurping State property. Law no. 1580 of 1930 on Municipal Administration declares in its article 4 that the right to use the pastures within city limits is reserved to their previous users, and article 15 charges the municipalities with protecting such pastures.

During the period of its implementation, Law no. 4753 of 1945 on Land Distribution to Farmers has introduced some modifications to the law on pastures. Article 8 (b) permits the distribution to landless peasants of such areas of common village, town or city property as may be declared redundant by the Ministry of Agriculture. This Law has been rescinded, however, by no. 1757 of 1973 on Land and Agrarian Reform. Formally, Law no. 66 of 1966 on Cadastral Surveys empowers the national cadastral survey organisation to determine the boundaries of pastures and their areas (article 35). Law no. 1757 of 1973 mentioned above did not introduce a system different from that established by the Land Edict and existing legal practice. Its article 140, however, was important in that it foresaw the estalishment of a registry for pastures and winter and summer grazings as an expression of the state's determination to get a firm grip on the pasture land and to keep it from being nibbled away. At the same time, as a distinct departure from the previous principles of free use of pastures, article 151 required users to pay a certain fee to the village administration or to the municipality. This Law was in fact cancelled in 1976 by the Constitutional Court on procedural grounds, with effect from 1977. Consequently, it may be contended that the Turkish pasture law is governed today by the 1274/1858 Land Edict and the existing legal practice.

Statistics show that there has been a continuous decrease of pasture areas in Turkey:

Years	*Pastures* (in 1000 ha)
1928	46.298
1938	42.370
1948	38.330
1952	34.789
1957	29.748
1962	28.598
1967	26.135

Under article 639 of the Civil Code governing the acquisitive extraordinary prescription, any person who holds immovable property not entered on the land registry for an uninterrupted and legally unchallenged 20 years may request the registration of such property in his possession. Though this provision was used in a rather limited fashion in Switzerland, whence the Civil Code was borrowed, widespread use had been made of this article in Turkey in order to establish private ownership of land under state control and possession, including of pastures. This has been to some extent facilitated by the inadequacy of the land registry system and by the incompleteness of the cadastral survey work, not to mention the rapid population growth and the accelerating rate of agricultural mechanism. Finally, when the matter appeared to have attained significant proportions, the legislative power felt the need to take action, and a modification was made to article 639 of the Civil Code concerning the acquisitive extraordinary prescription whereby requests for registry were to be directed to

the treasury and the relevant public corporation. In 1972, Law 1617 limited the areas for which registration as private property could be requested under acquisitive extraordinary prescription to 20 *donums*. Meanwhile, the over-use of pastures far beyond their possibilities of natural regeneration has caused major problems, such as soil erosion. Accordingly, the introduction of a new legal framework for the regulation of pasture lands in Turkey should yield considerable benefits in developing livestock production and in making the existing pasturelands more productive.

(ADNAN GÜRIZ)

MARABOUT [See ḲUBBA, MURĀBIṬ and WALĪ].

MARĀFIḲ (A.), sing, *marfiḳ*, "bribes, douceurs", literally, "benefits, favours". In mediaeval Islamic society, various terms in addition to this are found, such as *ras̲h̲wa/ris̲h̲wa*, *manāla*, *d̲j̲aʿāla*, *hadiyya*, etc., with varying degrees of euphemism, for the inducements given either directly to a potential bestower of benefits or as an inducement for a person's intercession or mediation (*s̲h̲afāʿa*, *wasāṭa*).

In the ʿAbbāsid caliphate, this form of bribery became institutionalised in the caliphate of al-Muḳtadir (295-320/908-32 [*q.v.*]), when the vizier Ibn al-Furāt [*q.v.*] instituted a special office, the *dīwān al-marāfiḳ* [see DĪWĀN. i] in which were placed bribes and money from commissions collected from aspiring candidates for office, above all for the lucrative financial ones, in return for a grant of such an office. Naturally, the vizier himself benefited from this, and among the accusations against Ibn al-Furāt at his fall was the one that he had kept back a proportion of the monies received from confiscations (*muṣādarāt* [see MUṢĀDARA]) and bribes for the grant of an office (presumably above the level at which it was recognised that a vizier or secretary might by convention keep back some part of the payment as a recognised commission, the *ḥaḳḳ al-istit̲h̲nāʾ*). Even a vizier with a reputation for probity and avoidance of the grosser forms of corruption like ʿAlī b. ʿĪsā [*q.v.*] was not averse to accepting *marāfiḳ* as a normal perquisite of office.

Amedroz, *Abbasid administration in decay, from the Tajarib al-umam*, in *JRAS* (1913), 828-9, 834-5; F. Lokkegaard, *Islamic taxation in the classic period*, Copenhagen 1950, 190-1; D. Sourdel, *Le vizirat ʿabbāside*, Damascus 1959-60, ii, 408, 510-11, 594, 610-13, 636, 741. See also HIBA and for a more detailed treatment of bribery, RAS̲H̲WA.

(C. E. BOSWORTH)

MARĀG̲H̲A, the old capital of Ād̲h̲arbāyd̲j̲ān.

Position. The town lies in lat. 37° 23' N. and long 46° 15' E. at a height of 5,500 feet above sea-level on the southern slope of Mount Sahand (11,800 feet high) which separates it from Tabrīz [*q.v.*]. This explains the very considerable difference in climate between the two towns, which are only 50 miles apar as the crow flies (by the high road 80 miles). Th climate of Marāg̲h̲a is mild and rather moist (Ḥam Allāh and Mecquenem, 1904). The plentiful wate supply makes the vegetation rich. The fruit o Marāg̲h̲a is celebrated in Persia and a good deal of i is exported to Russia via Ardabīl. The district i watered by the stream which comes down from th Sahand and then turns west to Lake Urmiya which i 20 miles from Marāg̲h̲a. The town is built on the lef bank of the river Ṣāfī (Sofi)-čay which then water Bināb. A little distance to the east runs the paralle river Murdi-čay which waters the district to whic Mecquenem gives the name Pahindur (Bayandur?) on the left bank rise the heights of Mandīlsar (= "with head bound"). The next stream is the Laylā which flows into the D̲j̲ag̲h̲atu [cf. SĀWD̲J̲-BULĀḲ]. Th rivers farther east (Ḳarang̲h̲u and its sources, whic water the Has̲h̲tarūd district) belong to the system o the Safīd-rūd [*q.v.*], i.e. the basin of the Caspian Sea

From the geographical point of view, Marāg̲h̲a i quite independent of Tabrīz. It lies a little off the grea road from Tabrīz to Kirmāns̲h̲āh which runs neare Lake Urmiya (via Bināb). The direct bridle-pat Tabrīz-Marāg̲h̲a by the passes of the Sahand is onl practicable in summer. There is also a direct rout along the Sahand on the south and southeast side joining Marāg̲h̲a to Ardabīl and Zand̲j̲ān. This roa has always been of importance whenever Marāg̲h̲ was the capital of Ād̲h̲arbāyd̲j̲ān. The important plac on the route was Kūlsara (cf. below).

At the beginning of the 19th century, Marāg̲h̲a ha 6,000 families (*Bustān al-siyāḥat*); in 1298/1880 it ha 13,259 inhabitants, of whom 6,865 were men an 6,394 women (H. Schindler). Mecquenem (1904 gives Marāg̲h̲a 15-20,000 inhabitants.

At the present day, the inhabitants speak Ād̲h̲ä Turkish, but in the 14th century they still spok "arabicised Pahlawī" (*Nuzhat al-ḳulūb*: *pahlawi-y muʿarrab*) which means an Iranian dialect of the north western group.

The walls of the town are in ruins. Its gates have th following names: Aḥmadī, Kūra-K̲h̲āna, Aḳdas̲h̲ Pul-i Bināb (or Gilaslik) and Ḥād̲j̲d̲j̲-Mīrzā. Th quarters are: Ag̲h̲a-Beg, Maydān, Darwāza an Sālār-K̲h̲āna.

Prehistory. The valley of the Murdi-čay i famous for its deposits of fossil vertebrates discovere by K̲h̲anikov in 1852. Excavations have bee conducted by Goebel (Russia), Straus, Rodler, Pohli (Austria), Günter (England) and Mecquenen (France). On the Murdi-čay have been found remain of the hipparion, of the rhinoceros, etc., dating fron the period before the eruption of the volcano o Sahand. Cf. J.F. Brandt, *Über die von A. Goebel .... b der Stadt Maragha gefundenen Säugethierreste*, in *Denkschi d. Naturforscher-Vereins zu Riga* (1870), and th bibliography in Mecquenem, *Contribution à l'étude d gisement des vertébrés de Maragha*, 1908; cf. another arti cle of the same author and title in *Annales de paléon tologie* (1924), 133-60.

The name. According to al-Balād̲h̲urī, the tow was at first called Aḳrā-rūd̲h̲ (Ibn al-Faḳīh, 284 Afrah-rūd̲h̲; Yāḳūt, iv, 476: Afrazah-rūd̲h̲). Thi name which means in Persian the "river of * Afrāh' recalls very much the name of the town τὰ Φράατ which Mark Antony besieged in this region on hi campaign against the Parthians in 36 B.C. (Plutarch *Vita Antonii*, ch. xxxviii, Paris 1864, 1113, and Pseud Appian, *Parthica*, ed. Sweighäuser, Leipzig 1785, iii 77, 99). It has long been supposed that the names c Οὔερα in Strabo xi, ch. xiii, and Index, 935, Φαράσπα

1. Open semi-desert-like vegetation in Adharbāydjān having been browsed extensively for millennia by sheep, goats, horses and camels and dominated by antipastoral plants. (Photograph by M. Zohary, published in W. Holzner, M. J. A. Werger and I. Ikusima (eds.), *Man's impact on vegetation*, The Hague - Boston - London 1983, 292.)

2. Same formation as shown in Fig. 1 but in a still hotter and drier area near Iṣfahān. Dominants are antipastoral and antipyric plant species (*Artemisia* spp., *Astragalus* spp.). The white dots are plants of *Tulipa polychroma*; the flowering shrub to the right in the foreground is a thorny species of *Amygdalus*. (Photograph by M. Zohary, *ibidem*, 292.)

3. Slope grazed by sheep and goats near Kirmān<u>sh</u>āh originally covered by a low forest of *Quercus brantii*. (Photograph by M. Zohary, *ibidem*, 290.)

4. Detail from Fig. 2: *Artemisia*, probably *herba-alba*. (Photograph by M. Zohary, *ibidem*, 293.)

5. Another detail from Fig. 2: *Astragalus sect. Tragacantha*. (Photograph by M. Zohary, *ibidem*, 293.)

Ptolemy, vi, ch. ii, τοῖς Πραάσποις, Dio Cass., xlix, 25, are variants of the same name, which was probably that of the ancient capital of Atropatene; cf. Ritter, *Erdkunde*, ix, 770. If the identification of Γάζακα (summer capital, Strabo) with Takht-i Sulaymān suggested by Rawlinson has been accepted (cf. Hoffmann, *Auszüge aus syrischen Akten*, 252; Marquart, *Ērānšahr*, 108; A.V. Williams Jackson, *Persia, past and present*, 136), the identification of Θράατα is still uncertain. On general principles, it is improbable that a town like Marāgha so advantageously situated by nature was not in existence in Roman times, as the ancient name of Marāgha increases the probability of the identification Φράατα = Marāgha (of course with a reservation as to the exact site of the ancient town).

A place-name Marāgha is mentioned in Arabia (Yāķūt) and a little town of the same name is in Egypt near Tanṭā. The etymology "place where an animal rolls" (from *m-r-gh*) proposed itself to the Arabs here, but in Ādharbāydjān (cf. also the village of Marāgha near Abarkūh, *Nuzhat al-ķulūb*, 122) the name is rather a popular Arab etymology of some local name. It is to be observed that Ptolemy, vi, ch. 2, calls Lake Urmiya Margiane (μέχρι τῆς Μαργιανῆς λίμνης) and gives the same name to the country along the coast of Assyria. Lastly, Marquart in *Ērānšahr*, 143, 221, 313, retains the variant Μαρτιανή, but Μαργιανή seems also to be based on a good tradition (cf. Ptolemy, ed. Wilberg, 1838, 391).

The Arabs. Marāgha must have been among the towns of Ādharbāydjān conquered by al-Mughīra b. Shuʿba al-Thaķafī in the year 22 (al-Balādhurī, 325; al-Yaʿķūbī, *Buldān*, 271). Marwān b. Muḥammad returning from his expedition to Mūķān and Gīlān in 123/740 (cf. al-Yaʿķūbī, *Historiae*, ii, 365) stopped here. As the place was full of dung (*sirdjīn* < Pers. *sirgīn*) the old village (*ķarya*) was given the name of Marāgha (cf. above). Marwān did some building there. The town later passed to the daughters of Hārūn al-Rashīd. On the rebellion of Wadjnāʾ b. Rawwād, lord of Tabrīz [*q.v.*], Khuzayma b. Khāzim, who was appointed governor of Ādharbāydjān and Armenia (probably in 187/803, cf. R. Vasmer, *Khronologia namestnikov Armenii*, in *Zap. Kolleg. Vostokovedov* [1925], i, 397), built walls round Marāgha and put a garrison in it. When Bābak rebelled in 201/816-17, the people sought refuge in Marāgha. Al-Maʾmūn sent men to restore the walls and the suburb (*rabaḍ*) became inhabited again (al-Balādhurī, *loc. cit.*). In 221/836 Marāgha is mentioned as the winter quarters of Afshīn in his campaign against Bābak (al-Ṭabarī, iii, 1186).

In 280/893 the Sādjid Muḥammad Afshīn b. Dīwdād seized Marāgha from a certain ʿAbd Allāh b. Ḥusayn, who was killed (al-Ṭabarī, iii, 2137; al-Masʿūdī, *Murūdj*, viii, 143 = § 3281). In 296/908 the caliph confirmed Yūsuf b. Dīwdād in possession of Marāgha and the whole of Ādharbāydjān. A *dirham* is known of this year struck by Yūsuf at Marāgha (Vasmer, *O monetakh Sadjidov*, Bākū 1927, 14). According to Ibn Ḥawķal, 238, there was at Marāgha a military camp (*muʿaskar*), a governor's palace (*dār al-imāra*), a treasury (*khizāna*) and government offices (*dawāwīn al-nāḥiya*), but Yūsuf razed the walls of Marāgha and transferred the capital to Ardabīl (cf. al-Iṣṭakhrī, 181). Marāgha is only mentioned as the place where the last Sādjid Abu 'l-Musāfir al-Fatḥ was killed in 317/929 (ʿArīb, *Ṭabarī continuatus*, ed. de Goeje, 145).

The Daylamīs. In 332/943 (during the rule of the Daylamī Musāfirids) the Russians (Rūs) had taken Bardhaʿa [*q.v.*]. Ibn Miskawayh (GMS, vi, 100) speaks of the diseases which decimated them because they ate too much fruit in Marāgha. This reference to Marāgha is quite unexpected in the text, and Margoliouth has rightly proposed to read بردعة in place of مراغة. A coin struck at Marāgha in 337/948-9 by Muḥammad b. ʿAbd al-Razzāķ is a record of the brief conquest of Ādharbāydjān by the general of the Būyid Rukn al-Dawla (Vasmer, *Zur Chronologie d. Ġastāniden*, in *Islamica*, iii/2 [1927], 170). Of 347/958 we also have *dirhams* of Marāgha in the names of the two sons of the Daylamī Marzubān, Ibrāhīm and Djastān (*ibid.*, 172).

The Rawwādīs and the Saldjūks. After the disappearance of the Daylamīs, we find in Tabrīz the family of Rawwādī Kurds who seem to have been related to the Musāfarids by marriage only. On the other hand, it is very likely that the Rawwādīs are the descendants of the Arab al-Rawwād al-Azdī, lord of Ādharbāydjān (al-Balādhurī, 331) who became assimilated by their neighbours in Ādharbāydjān. The best-known of these Rawwādīs is Wahsūdān b. Mamlān (= Muḥammad; the change of *d* to *l* in Kurdish is common) who is mentioned between 420/1029 and 446/1054 (Ibn al-Athīr, ix, 279, 351, 410), and who in addition to Tabrīz possessed other strongholds in the mountains (Sahand). When in 420/1029 the Ghuzz reached Marāgha and executed there a great number of Hadhbānī Kurds, the latter united under Wahsūdān and drove out the Ghuzz (Ibn al-Athīr, ix, 270-2). This incident shows that the district of Marāgha was within the sphere of influence of Wahsūdān. In 446/1054 Wahsūdān became a vassal of the Saldjūks, but Ibn al-Athīr, ix, 410, says nothing about the extent of his possessions around Sahand.

In 497/1104 the peace between the sons of Malik-Shāh, Barkiyaruķ and Muḥammad, was signed near Marāgha, and in 498/1105 Muḥammad visited Marāgha.

The Aḥmadīlīs. In 505/1111-12 we have for the first time mention of the Āmīr Aḥmadīl b. Ibrāhīm b. Wahsūdān al-Rawwādī al-Kurdī, lord of Marāgha and Kūtab (Kūlsara?) (Ibn al-Athīr, x, 361). He was the founder of a little local dynasty, which lasted till about 624/1227. We know very little of the history of the Aḥmadīlīs [*q.v.*], which has never been closely studied.

Aḥmadīl was certainly the grandson of Wahsūdān b. Mamlān of Tabrīz (cf. above), and this explains the insistence with which the Atābegs of Marāgha tried to retake Tabrīz. Only imprescriptible hereditary rights can explain the strange fact of the presence of a Kurd among the *amīrs* of the Saldjūķs. The name Aḥmadīl is a peculiar formation; the name of Maḥmadīl, a village to the south of Marāgha, belongs to the same category of diminutives. The Aḥmadīls, however, very soon adopted Turkisch names.

Aḥmadīl with a large army took part in the Counter-Crusade of 505/1111-12. During the siege of Tell Bāshir, Joscelin came to terms with him (*ṭaṭāraḥa*) and he withdrew from the town (Kamāl al-Dīn, *Taʾrīkh Ḥalab*, in *Rec. des hist. des croisades*, iii, 599). Aḥmadīl soon abandoned Syria entirely, for he coveted the lands of the Shāh-i Arman Sukmān who had just died. We know that Sukmān had extended his sway over Tabrīz, and the reference is probably to this town. According to Sibṭ b. al-Djawzī, in *ibid.*, 556, Aḥmadīl had 5,000 horsemen and the revenues from his fiefs amounted to 400,000 *dīnārs* a year. In 510/1116-17 (or 508/1114-15) Aḥmadīl was stabbed in Baghdād by the Ismāʿīlīs, to whom he had done much injury (*ibid.*, 556; Ibn al-Athīr, x, 361).

Aḳ-Sunḳur I. In 514/1120 Malik Masʿūd, governor of Mawṣil and Ādharbāydjān, rebelled against his brother Maḥmūd and gave Marāgha to his Atābeg Ḳasīm al-Dawla al-Bursuḳī, but the rebellion collapsed and in 516/1122 Aḳ-Sunḳur al-Aḥmadīlī (client of Aḥmadīl?), lord of Marāgha, who was in Baghdād, was authorised by Sultan Maḥmud to return to his fief. As the *amīr* Kün-toghdī, Atābeg of Malik Ṭughrīl (lord of Arrān; Ibn al-Athīr, x, 399), had died in 515/1121, Aḳ-Sunḳur expected to get his place with Ṭughrīl. The latter ordered Aḳ-Sunḳur to raise 10,000 men in Marāgha and set out with him to conquer Ardabīl, in which enterprise, however, they failed. In the meanwhile, Marāgha was occupied by Djuyūsh Beg, sent by Sultan Maḥmūd. The Georgian Chronicle (Brosset, i, 368) mentions under 516/1123 the defeat of Aḳ-Sunḳur (whom he calls "Aghsunthul, Atābeg of Ran" = Arrān) during a demonstration against the Georgians carried out by Ṭughrīl from Shīrwān. In 522/1128, Aḳ-Sunḳur took a part, but not a very active one, in the suppression of the intrigues of the Mazyādid Dubays [see MAZYADIDS]. In 524/1130 he was one of the promoters of the election of Sultan Dāwūd, whose Atābeg he was. In 526/1132 Ṭughrīl, uncle of Dāwūd, defeated the latter and occupied Marāgha and Tabrīz (al-Bundārī, ed. Houtsma, 161). Dāwūd, along with his uncle Masʿūd and Aḳ-Sunḳur, sought refuge in Baghdād. With the support of the caliph and the assistance of Aḳ-Sunḳur, Masʿūd reoccupied Ādharbāydjān. After the capture of Hamadān, Aḳ-Sunḳur was killed there by the Ismāʿīlīs (527/1133), instigated by Ṭughrīl's vizier (al-Bundārī, 169).

Aḳ-Sunḳur II. The name of Aḳ-Sunḳur's son is transmitted in different forms. Ibn al-Athīr, xi, 166, 177, calls him, Aḳ-Sunḳur (II); cf. also *Taʾrīkh guzīda*, 472. Al-Bundārī, 231, calls him al-Amīr al-Kabīr Nuṣrat al-Dīn Khāṣṣbek and, 243, Nuṣrat al-Dīn Arslān Āba (cf. al-Kāshghari, *Dīwān lughat al-Turk*, i, 80). The *Rāḥat al-ṣudūr*, 241, 244, 262, gives him the name of Atābeg Arslān Āba. Al-Bundārī treats him as an equal of the great *amīr* Ildeñiz [*q.v.*], whose family finally triumphed over the lords of Marāgha. Aḳ-Sunḳur II's adversary was the *amir* Khāṣṣbek b. Palang-eri (?), who was the favourite of Sultan Masʿūd and sought to establish himself in Arrān and Ādharbaydjān. This Khāṣṣbek had besieged Marāgha in 541/1146-7 (al-Bundārī, 217). In 545/1150-1 Sultan Masʿūd took Marāgha and destroyed its walls (*bāra*), but a reconciliation later took place between Khāṣṣbek and Aḳ-Sunḳur II under the walls of Rūyīn-diz (cf. below). The execution of Khāṣṣbek in 547/1153 by Sultan Muḥammad alienated Ildeñiz and Aḳ-Sunḳur II and they installed Sulaymān on the throne of Hamadān. Muḥammad on his return to power sent an embassy to restore good relations with the two lords of Ādharbāydjān (*ṣāḥibay Ā.*). Peace was concluded in 549/1154, and the two great *amīrs* shared Ādharbāydjān between them (al-Bundārī, 243). On his deathbed (554/1159), Muḥammad entrusted his young son Malik Dāwūd, (cf. the genealogical tree in the *Rāḥat al-ṣudūr*) to Aḳ-Sunḳur. As Ildeñiz was furthering the interests of his ward Sultan Arslān, Pahlawān b. Ildeñiz advanced against Aḳ-Sunḳur II, but the latter with the help of Shāh-i Arman defeated him on the Safīd-rūd. In 556/1161 Aḳ-Sunḳur sent 5,000 men to the help of the governor of Ray, Īnandj, who was fighting Ildeñiz. The latter gained the upper hand, and in 557/1162 Aḳ-Sunḳur II took part in the expedition of Ildeñiz against the Georgians (Ibn al-Athīr, xi, 189). In 563/1168, however, Aḳ-Sunḳur II obtained recognition for his ward from Baghdād. Pahlawān b. Ildeñiz at once besieged Aḳ-Sunḳur in Marāgha (*ibid.*, 218), but a peace put an end to hostilities.

In 564/1168-9, the *amīr* of Ray, Īnandj, was killed (Ibn al-Athīr, xi, 230). The *Taʾrīkh-i guzīda*, 72, seems to suggest that the rebellion in Marāgha of Ḳutlugh (?), brother of Aḳ-Sunḳur (II?), was due to Īnandj's influence. He was punished by the Atābeg Pahlawān b. Ildeñiz, and Marāgha was given to his brothers ʿAlāʾ al-Dīn and Rukn al-Dīn.

Under 570/1174-5, Ibn al-Athīr (xi, 280) mentions at Marāgha Falak al-Dīn, son of Ibn Aḳ-Sunḳur (i.e. son of Aḳ-Sunḳur II), to whom his father had bequeathed his estates. Pahlawān besieged the fortress of Rūyīn-diz and Marāgha. On this occasion, peace was concluded on the cession of Tabrīz to the family of Ildeñiz. This important detail shows that down to 570 the fief of the Aḥmadīlīs comprised all the country round Mount Sahand, including Tabrīz.

In 602/1205-6 the lord of Marāgha ʿAlāʾ al-Dīn came to an agreement with the Atābeg of Arbīl, Muẓaffar al-Dīn Gök-büri, to deprive the Ildeñizid Abū Bakr of Ādharbāydjān of power, on the pretext that he was incapable of ruling. From Marāgha they marched on Tabrīz, but Abū Bakr called to his aid the former slave of his family Ay-doghmïsh (cf. Defrémery, *Recherches sur quatre princes d'Hamadan*, in *JA* [1847], i, 160). Gökbüri returned to his own lands and Abū Bakr with Ay-doghmïsh came to Marāgha. ʿAlāʾ al-Dīn had to surrender the fortress which was the bone of contention, but was given in compensation the towns of Urmiya and Ushnū. In 604/1207-8 ʿAlāʾ al-Dīn, whom Ibn al-Athīr, xii, 157, 182, here calls Ḳara-Sunḳur, died and left one son, a minor. A brave servant of ʿAlāʾ al-Dīn assumed the guardianship of the child, but the latter died in 605/1208-9. Abū Bakr then took possession of all the lands of the Aḥmadīlīs except Rūyīn-diz, where the servant already mentioned had entrenched himself with his late master's treasures.

It is not clear if ʿAlāʾ al-Dīn Ḳara-Sunḳur is identical with the brother of Aḳ-Sunḳur II mentioned in 564/1168-9. For the date of his accession and his importance we have a hint. According to the preface of the *Haft-paykar* of Niẓāmī [*q.v.*], this poem (finished in 593/1197) was composed at the request of ʿAlāʾ al-Dīn K.r.b (?) Arslān (the Rūm and the Rūs paid him tribute [*kharādj*]; the Georgians suffered reverses at his hands). This *mamdūḥ* was definitely identified by Rieu, *Catalogue*, ii, 567 and *Supplement*, 1895, 154, with ʿAlāʾ al-Dīn of Marāgha. Niẓāmī mentions two sons of ʿAlāʾ al-Dīn, Nuṣrat al-Dīn Muḥammad and Aḥmad; but to reconcile this with Ibn al-Athīr we should have to suppose that both died before their father.

The family of the Aḥmadīlīs was continued for some time in the female line. In 618/1221 the Mongols arrived before Marāgha, and the town was stormed on 4 Ṣafar/30 March. The Mongols sacked and burned the town and massacred the inhabitants (*ibid.*, xii, 246, 263), but the lady of Marāgha (daughter of ʿAlāʾ al-Dīn?), who lived in Rūyīn-diz escaped the catastrophe.

Djalāl al-Dīn. In 622/1225, the Khwārazmshāh Djalāl al-Dīn came to Marāgha via Daḳūḳā. He entered it without difficulty, for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawī, *Sīrat Djalāl al-Dīn*, ed. Houdas, 110). Djalāl al-Dīn tried to restore the prosperity of Marāgha; cf. Ibn al-Athīr, xii, 280, 282.

In 624/1227, while Djalāl al-Dīn was in Persian ʿIrāḳ, his vizier Sharaf al-Mulk was forced to recon-

quer Ādharbāydjān. In the course of his campaign he besieged Rūyīn-diz, the lady of which was a grand-daughter (*min ḥafadāt*) of the Atābeg ʿAlāʾ al-Dīn Karāba (?) (Nasawī, 129). This princess was married to the deaf-mute Khamūsh, only son of the Ildeñizid Özbek. The Atābeg Nuṣrat al-Dīn, son of Khamūsh, mentioned incidentally by Djuwaynī, *GMS*, ii, 242, must have been his son. As a way out, she offered her hand to Sharaf al-Mulk. Djalāl al-Dīn suddenly arrived from ʿIrāḳ and married the princess himself. Rūyīn-diz was given to a certain Saʿd al-Dīn. The citadel contained some thousands of houses (*ulūf min dūr*) occupied by the former inhabitants of the town (*ḳudamāʾ*). Saʿd al-Dīn decided to evacuate them, but as a result of his tactlessness, the fortress closed its gates again (to Saʿd?) (Nasawī, 129, 157). Ibn al-Athīr, xii, 322, seems to deal with the course of these events. Under 627/1230 he says that the troops of Djalāl al-Dīn besieged Rūyīn-diz for some time. The fortress was about to capitulate when some malcontents summoned the assistance of a Turkoman *amīr* Sewindj (Ṣwndj) of the tribe of Ḳush-yalwa. The domination of this chief and his relatives who succeeded him only lasted two years.

Rūyīn-diz. This fortress lay "near Marāgha" (Ibn al-Athīr, xii, 322). According to Zakariyyā Ḳazwīnī, who gives a very accurate description of Rūyīn-diz, it was 3 *farsakhs* from Marāgha. Its proverbially impregnable position (*ḍuriba bi-ḥiṣānatiha al-mathal*) suggests that is was built on the side of Sahand. The Russian map marks on the Sofiča 10 miles (*ca.* 3 *farsakhs*) above Marāgha a place called Yay-shähär (in Turkish = "summer town") besides which two streams flow into the Sofi-ča (on the left bank) and between them is written the corrupted name "Res or Eris". It is very probable that this is the site of the famous fortress, on either side of which there was a stream (*nahr*); for *Res* one should read *Dez*, i.e. Rūyīn-diz. The date of the final destruction of Rūyīn-diz unknown. As late as 751/1350 the Čobanid Ashraf imprisoned his vizier there (von Hammer, *Geschichte der Ilchane*, ii, 337) but the *Nuzhat al-ḳulūb*, in 740/1340, only knows the other Rūyīn-diz, that of Sawalān (there is still a Rūyīn-dizak 4 *farsakhs* north-east of Ardabīl).

Kūlsara. Ibn al-Athīr, x, 340, calls Aḥmadīl "lord of Marāgha and of Kūtab". This last name (كوتب) seems to be a corruption of Kūlsara (كولسره) or Kūsara, a little town well-known to the Arab geographers on the Marāgha-Ardabīl road (10-12 *farsakhs* from Marāgha and 20-7 from Ardabīl); cf. Ibn Khurradādhbih, 120; Ḳudāma, 213; al-Iṣṭakhrī, 194; Ibn Ḥawḳal, 252, in particular from his own experience talks of the importance of Kūlsara and its flourishing commerce. This place may correspond to the village of Kūl-täpä "hill of cinders" (polular Turkish etymology) which lies on the Ḳaranghu about 35 miles (ca. 10 *farsakhs*) east of Marāgha. The fort of Ḳalʿa-yi Zohāk, notable ruins of which were discovered by Monteith, *ca.* 15 miles below Kūl-täpä (cf. Morier , *op. cit.*, 296), must have been a bulwark for Kūlsara and Marāgha against invasion from the northeast. Rawlinson, in *JRGS* (1841), 120, saw a Sāsānid fortress in Ḳalʿa-yi Zohāk.

The Mongols. Marāgha was definitely taken by the Mongols in 628/1231 (Ibn al-Athīr, xii, 324). After the taking of Baghdād in 656/1258, Hülegü took up his quarters in Marāgha and ordered an observatory to be built there from the plans of Naṣīr al-Dīn Ṭūsī (who had as advisers four astronomers, one of whom, Fakhr al-Dīn, was a native of Marāgha) (Rashīd al-Dīn, ed. Quatremère, 324). The observatory was built on a fortified hill to the west of the town, where only traces of foundation of the walls are still to be seen. According to Schindler's plan (1883), the levelled area on the hill measures 137 x 347 metres. On the observatory, cf. Jourdan, *Mémoire sur les instruments employés à l'observatoire de Maragah*, in the *Magasin encyclop, rédigé par A. L. Millin*, Paris 1809, vi, 43-101 (tr. of an Arabic *risāla* belonging to the Bibl. Nationale and attributed to Naṣīr al-Dīn's colleague Muʾayyid al-Dīn al-ʿArdī); Ritter, *Erdkunde*, ix, 839-43; D. Wilber, *The architecture of Islamic Iran. The Il Khānid period*, Princeton 1955, 107-8, no. 9. To contain his treasures, Hülegü built a castle on the island of Shāhī, 1-2 days distant from the capital. Here he was buried. On the fortifications of Shāhī, cf. al-Tabarī, iii, 1171. The handsome sepulchral towers, of which there are four at Marāgha (Mecquenem, 1908), date from Hülegü or his immediate successors: (1) the one at the entrance to the bridge of Ṣāfī-čay is built of red brick on a square foundation and with a vaulted cellar (*Gunbad-i ḳirmiz?*); (2) a similar one, situated in the gardens to the south of the town on the road from Khānägä; (3) and (4) near the old cemetery in the interior of the town, the octagonal tower (3) being of red brick overlaid with blue enamelled faience (*Gunbad-i kābūd*), and (4) being round, covered with plaster which is decorated with arabesques (*Ḳoy-burdj* "Tower of the Ram"). There is a photograph of (1) in de Morgan (1894), 337, and Sarre, *op. cit.*, text, 15-16; of (3) in Sarre, *ibid.*, and of (4) in the Morgan, *ibid.*, 340. According to Sarre, (4) is later than 751/1350. The monuments require to be again studied on the spot. Lehmann-Haupt says that inscriptions can still be seen in their interiors. See now on the Gunbad-i Ghaffāriyya, apparently the tomb of Shams al-Dīn Ḳara-Sunḳur, governor of Ādhar-bāydjān under Abū Saʿīd, A Godard, *Les monuments de Marāgha*, Paris 1934; idem, *Notes complémentaires*, in *Athār-é Īrān*, i/l (1936), 125-60; and Wilber, *op. cit.*, 171-2, 175-6, nos. 78, 82.

The early Mongol Īlkhāns led a semi-nomadic life, which explains the absence from Marāgha of any other kind of memorial. It was only with Ghazan that a regular capital was built at Tabrīz. Marāgha continued to be of some importance on account of its pastures, and was a station on the road between Ādh-arbāydjān and Mesopotamia. Its name continually appears in the history of the ʿIlkhāns. In 703/1304 Öldjeytü received at Marāgha the ambassadors from the Ḳāʾān of China and installed at the observatory the son of Naṣīr al-Dīn Ṭūṣī.

In 712/1312 Ḳara-Sunḳur, *amīr al-umarāʾ* of Aleppo, fearing the wrath of the sultan of Egypt al-Nāṣir Muḥammad, sought an asylum in Persia with Öldjeytü, who gave him Marāgha. Ibn Baṭṭūṭa, who tells this (i, 179), adds that this town was known as "Little Damascus" (*Dimishḳ al-ṣaghīra*). Ḳara-Sunḳur died in 728/1328 (d'Ohsson, *Hist. des Mongols*, iv, 699).

The geographers of the Mongol period. Zakariyyā Ḳazwīnī (673/1275) seems to be personally acquainted with the town. According to him, there were in the town memorials of the pre-Islamic period. He describes the mineral springs (near the village of Ḳiyāmatābād) and a cave which must correspond to the Čay-bāghī visited by Morier, Lehmann-Haupt, Minorsky, etc. Ḳazwīni also mentions the mountain of Zandjaḳān with a calcareous spring, the village of Djnbdḳ (Gunbadak) with a bottomless well (350) and gives a description of Rūyīn-diz (358).

The *Nuzhat al-ḳulūb* (written in 740/1340), ed. Le Strange, 27, estimates the revenues of Marāgha paid

to the treasury at 70,000 *dīnārs* (Ardabīl paid 85,000) and those of its *wilāyat* at 185,000 *dīnārs*. The *tuman* of Marāgha comprised all the southern part of Ādharbāydjān; in the north it was bounded by the *tuman* of Tabrīz, in the west by that of Khoy (Urmiya), in the south by the lands of Kurdistān (Dīnawar) and in the east by ʿIrāk-i ʿAdjam (Zandjān, Sudjās). All the lands now under the modern Sāwdj-Bulāk or Mahābād [*q.vv.*] were then ruled from Marāgha. As dependencies of Marāgha, Ḥamd Allāh gives the towns of Dih-i Khwārakān (in popular Turkish, Tukhorghan) to the south of Tabrīz, Laylān on the right bank tributary of the Djaghatu (cf. Rawlinson, 1841, 39: the ruins of Kalʿa-yi Bākhta) and Paswē in Lāhidjān, in the valley of the Tigris [cf. SĀWDJ-BULĀK]. The *tuman* comprised six cantons (the names are much mutilated): Sarādjūn (?): Niyādjūn (?); Dūzakhrūd (? cf. the mountain Dūzakh on the middle course of the Djaghatu); Gāwdūk (at the confluence of the river of Laylān with the Djaghatu (the name is also read Gāwdūl, Gāwdawān. It is remarkable that Firdawsī (ed. Mohl, vii, 141, 151) mentions in these regions a Dash-i Dūk and Kūh-i Dūk where Bahrām Čūbīn was defeated by Khusraw); Bīhistān (probably the district of Bāhī on the Tatawu); and Hashtarūd (to the east of Sahand on the Karanghu). The district of Angūrān on the Kizil-üzen was also a dependency of Marāgha.

Christianity at Marāgha. In the Mongol period, Marāgha had become an important centre of Christianity. The celebrated Mār Bar Hebraeus [see IBN AL-ʿIBRĪ] (Jacobite *Maphrian*) lectured in 1268 on Euclid and in 1272 on Ptolemy in the "new monastery" of Marāgha; there he wrote the *Kitāb al-Duwal*. When he died on 30 July 1286, as a sign of mourning the Greeks, Armenians and Nestorians closed their shops in the market-place (Assemani, *Bibl. Orientalis*, ii, 266; Wright, *A short history of Syriac literature*, Oxford 1894, 267, 271, 276, 279). The history of Mār Yahbalāhā III (patriarch of the Nestorians [1281-1317], tr. Chabot, Paris 1895) contains valuable notes on Marāgha. Yahbalāhā rebuilt the already existing church of Mār Shalīṭā and built a house beside it. In 1289 Arghūn had his son baptised in Marāgha. In 1294 the patriarch laid the foundations of the monastery of John the Baptist two-thirds of a *farsakh* north of Marāgha. After the accession of Ghazan (694/1295), the persecution of the Christians began, instigated by the *amīr* Nawrūz. The mob plundered the residence of the patriarch and the church of St. George built by the monk Rabban Ṣawmā (it had been furnished with articles from the portable church of Arghūn's camp). The patriarch sought refuge in the suite of the Armenian king Haīton. On his return to Marāgha, Ghazan punished the formenters of the troubles. In 1298 Yahbalāhā was confirmed in his rights. In September 1301 he finished the monastery of St. John, authorised by Gaykhatu (see Wilber, *op. cit.*, 14). His biographer and contemporary gives an account of the beautiful buildings, the numerous relics and riches of the monastery (Chabot, *op. cit.*, 133). The village of Dahlī (?) to the east of Marāgha was purchased to serve as a *wakf* of the monastery (to the north-east of the town there is still a village of Kilisā-kändi "village of the church"). Ghazan and his successor Öldjeytü visited the monastery. Yahbalāhā died and was buried there in 1317.

On the south side of the hill of the observatory there are chambers carved out of the rock (3 rooms, 12 feet high, communicating with one another, and a corridor). Inside there are niches in the shape of altars. Local tradition sees a church in these (perhaps of the Sāsānid period); cf. Macdonald Kinneir; Houtum-Schindler; Lehmann-Haupt; and Minorsky, in Zvoirao, xxiv (1917), 167.

After the Mongols. In 737/1337 the Djalāyirid Shaykh Ḥasan inflicted a defeat on Tugha-Tīmūr near Marāgha (or at Hashtarūd). The pretender Muḥammad was buried at Marāgha in 738/1337-8 (*Shadjarat al-Atrāk*, 315). Later, the political struggles of the Turkmens had their pricipal arena in the northern part of Ādharbāydjān. In the same period, the Kurdish elements of the districts south of Lake Urmiya became consolidated and received reinforcements from the districts of Mawṣil (*Sharaf-nāma*, i, 288). The Mukrī Kurd *amīrs* extended their influence over Marāgha and even as far as Dih-Khwārakān. The Turks during their rule over Ādharbāydjān included Marāgha with Tabrīz and levied 15 *kharwārs* of gold per annum on it, which caused its inhabitants to go away (*ibid.*, 294). In 1002/1593 the name of the fortress of Saru-kurghan (demolished in 795/1393 by Tīmūr; cf. *Ẓafar-nāma*, i, 628 and rebuilt by the Mukrīs) in the regions of Marāgha often occurs in the *Sharaf-nāma*, 294-6; this name recalls that of the Sārūk, the right bank tributary of the Djaghatu.

During the second Ottoman occupation (1137/1725), Marāgha was governed by ʿAbd al-ʿAzīz Pasha; this administrative unit consisted of 5 *sandjaks*, of which 2 were hereditary and 3 granted by the government (von Hammer, *GOR*, iv, 228, according to Čelebizāde). In 1142/1729 Nādir defeated the Ottomans at Miyān-dū'āb on the Djaghatu and occupied Dimdim, Sāwdj-bulāk, Marāgha and Dih-Khwārakān (Mahdī-Khān, *Taʾrīkh-i Nādirī*, Tabrīz 1284, 66; tr. Jones, i, 104). According to the recently-discovered history of Nādir, the monarch transplanted 3,000 inhabitants from Marāgha to Kalāt (Barthold, in Zvoirao, xxv, 88).

The Mukaddams. As early as the time of Nādir, the Turkish tribe of Mukaddam is mentioned as settled in the region of Marāgha (Macdonald Kinneir: 15,000 men). Aḥmad Khān Mukaddam played a considerable part in the affairs of Ādharbāydjān. Jaubert, *Voyage*, 160, knew him in 1805 as *beglerbegi* of Ādharbāydjān under prince ʿAbbās Mīrzā. In 1810 he exterminated the Bilbās chiefs whom he had invited to Marāgha [see SĀWDJ-BULĀK]. According to Morier, *Second journey*, 293, this patriarch was aged 90 in 1815 (cf. Brydges, *Dynasty of the Kajars*, 90). The governor of Marāgha Ṣamad Khān, a partisan of Muḥammad ʿAlī Shāh who besieged Tabrīz in 1909, was of the family of Aḥmad Khān. At the present day, the Mukaddams are concentrated round Miyān-dūʾāb.

In 1828 Marāgha was occupied by Russian troops. In 1881, the Kurdish invasion by Shaykh ʿUbayd Allāh reached the gates of Marāgha. The town was not taken, but the whole country round was in ruins when Houtum-Schindler visited it in 1882. During the Great War of 1914-18, Marāgha was within the zone of the Russo-Turkish operations [see TABRĪZ].

Marāgha is today a town of 54,106 people (*ca.* 1970 figure) in the province (*ustān*) of Eastern Ādharbāydjān. It is also the centre of a district (*shahrastān*) of the same name which stretches as far west as Lake Urmiya and contains four component sub-districts (*bakhshs*), Huma, ʿAdjabshīr, Bunāb and Malik Kardī, the total population of the *shahrastān* being 252,067. As well as Sunnīs and Shīʿīs, in the main Turkish-speaking, the district also has some ʿAlī-Ilāhīs [see AHL-I ḤAKK], mainly Kurdish; see *Farhang-i djughrāfiyā-yi Īrān*, iv, 489-91, and L. Adamec,

Historical gazetteer of Iran. i. Tehran and north-western Iran, Graz 1976, 434-5.

Bibliography: In addition to the indigenous sources quoted in the text: Samʿānī, *Kitāb al-Ansāb, GMS*, xx, fol. 519a, ed. Hyderabad, xii, 171-5 (he also derives the *nisba* Marāgha from the clan al-Marāgh of the tribe of al-Azd); Ḥādjdjī Khalīfa, *Djihān-nümā*, 389; Ewliyā Čelebi, *Siyāḥat-nāma*, iv, 333 (confused and of doubtful value); Zayn al-ʿĀbidīn, *Bustān al-siyāḥa*, 555; Ḥāfiẓ-i Abrū, *Dhayl-i Djāmiʿ al-tawārīkh*, i, ed. Kh. Bayānī, Tehran 1317/1938, 95.

The European descriptions of Marāgha (only since the 19th century) are not very numerous and do not exhaust the subject: Macdonald Kinneir, *Geogr. memoir*, London 1813, 155-5; S. Morier, *A second journey*, London 1818, 281-97 (Tabrīz-Marāgha-Gultapa[Kül-täpä?]-Säräskänd); R. Ker Porter, *Travels*, London 1822, ii, 493; Monteith, *Journal of a tour*, in *JRGS* (1833), 4 (Sahand-Säräskänd-Kalʿa-yi Zohak); H. Rawlinson, *A march from Tabrīz*, in *JRGS* (1841), 39 (Miyān-dūʾāb); Ritter, *Erdkunde*, ix, 828-52; G. Hoffmann, *Auszüge aus syrischen Akten*, Leipzig 1880, 248, etc. (important historical and geographical notes); A. Houtum-Schindler, *Reisen im nord-west Persien*, in *Zeitschr. d. Gesell. d. Erdkunde*, Berlin (1883), 334 (cf. the article *Marāgha* in the *Encycl. Britannica*, 11th ed., 1911); J. De Morgan, *Mission scientifique. Études géographiques*, i, Paris 1894, 337-40 (several views); Zugmayer, *Eine Reise d. Vorderasien*, Berlin 1905, 123-8; S.G. Wilson, *Persian life*, London 1890, 71-80; Le Strange, *The lands of the eastern caliphate*, 164-5; R. de Mecquenem, *Le lac d'Ourmiah*, in *Annales de Géogr.* (1908), 128-44; C. (V. Minorsky*)

MARAKKAYAR (Tamil corruption of A. *markab* "boat"), an endogamous Tamil-speaking Muslim group of South India located mainly in the coastal districts of Tamil Nadu State in the Indian Union. Major concentrations are found in the districts of Thanjavur, South Arcot, Tiruchi-rapalli and Tirunelveli, particularly in the ports of Nagappattinam, sc. Nagor, Porto Novo, Adirampatnam, Muttupet and Pottalpudar.

No population figures exist, but the Marakkayar probably number under 100,000. They are Sunnīs of the Shāfiʿī *madhhab* and read the Ḳurʾān in a Tamil translation written in Arabic characters. Descent is claimed from Arab traders, and certainly Nagappattinam was known to early Arab merchants as Malifattan and was an important port of call en route to the Malay peninsula and Sumatra by the 15th century A.D.

The division between the Labbai [*q.v.*] and the Marakkayar is obscure. In the 19th century, the term was used in Thanjavur district amongst wealthy Labbai shipowners and traders to distinguish them from their poorer co-religionists, and in the 18th century records of the English East India Company similar usage is found particularly for Muslims trading out of ports in the Thanjavur district. As late as the early 20th century the title was freely adopted in Tirunelveli district by Labbais engaged in the rice export trade to Ceylon.

Despite such loose usage, there was by the 19th century a clear division between Labbai and Marakkayar in larger ports such as Nagappattinam. The division was most clearly based on wealth, with the Marakkayar comprising the more prosperous section of the Muslim community and dominating indigenous seaborne trade with Burma, Malaysia, Singapore, Indonesia and Ceylon. The Marakkayar Tamil dialect in Nagapattinam also included a smattering of Arabic words, and socially they followed fewer Hindu practices than the Labbai. In part, the division between Labbai and Marakkayar was probably confirmed by occupational and wealth differentiation which occurred during the 18th century and 19th with wealthy Muslim shipowners and overseas traders separating themselves socially from the larger and poorer Labbai community.

By the mid-19th century the Marakkayar were stereotyped as the wealthiest and most orthodox section of the Tamil Muslim community. Their women were unique in observing *gosha* (*purdah*), intermarriage with other Muslim groups was discouraged, and they deliberately attempted to eliminate Hindu practices from their social and religious life. In the late 19th century, under the influence of north Indian *ʿulamāʾ*, and propagandists from ʿAlīgarh, there was a shortlived movement to abandon Tamil in favour of Urdu.

Despite the tightening of group boundaries in the 19th century, the Marakkayar remain a cosmopolitan community. Communities exist abroad today in Malaysia, Sri Lanka, Singapore and Indonesia, and formerly in Burma. During the 20th century, they have broadened their economic base in southern India to include shopkeeping, hotel development and industrial development.

The most important Marakkayar religious centre, which is shared by other Muslim groups and Hindus, is the nationally-famous tomb of Shāh al-Ḥamīd ʿAbd al-Ḳādir (d. 1600), commonly known as Ḳādir Walī or Mīrān Ṣāḥib, at Nagappattinam-Nagore. The tomb was endowed at foundation by the Hindu Raja of Thanjavur, and until the late 19th century it was patronised by the princesses of that family. Similar centres of pilgrimage patronised by the Marakkayar exist at Adirampatnam (the tomb of Shaykh ʿAlāʾ al-Dīn Ṣāḥib Andavār) and Muttupet.

Bibliography: The first references to Marakkayars are found scattered amongst the voluminous records of the English East India Company. G.A. Herklots, *Islam in India*, London 1832, details the history and practice of the Nagore shrine. E. Sell, *The faith of Islam*, Madras 1880; E. Thurston, *Castes and tribes of Southern India*, Madras 1909, and Kadir Hussain Khan, *South Indian Mussalmans*, Madras 1910, provide the first modern descriptive and anthropological analysis of the group. *The census of India*, xv (1901), xii (1911), xiv (1931), provides details of occupation, distribution and social practices, but no statistics; the records of the Madras Presidency are similar. District Gazetteers provide local information concerning the group: L. Moore, *Trichinopoly*, Madras 1878; T. Venkasami Row, *Tanjore*, Madras 1883; F. R. Hemingway, *Tanjore*, Madras 1906 and Trichinopoly Madras 1907; W.

Francis, *South Arcot*, Madras 1906; and H. R. Pate, *Tinnevelly*, Madras 1917. S. Playne and W. Bond, *Southern India, its history, people, commerce and industrial resources*, London 1914, provides biographical and descriptive data of the groups' economic interests; S. M. Fossil, *The Islamic South*, Madras 1942, provides further biographical details. J. Dupuis, *Madras et le nord du Coromandel*, Paris 1960, details group economic diversification. K. McPherson, *The political development of the Urdu- and Tamil-speaking Muslims of the Madras Presidency, 1901 to 1937*, M.A. thesis, University of Western Australia 1969, unpublished, and idem, *The social background and politics of the Muslims of Tamil Nad, 1901-1937*, in *The Indian Economic and Social History Review*, vi (1969), provide accounts of the group in their regional context. M. Mines, *Muslim merchants*, New Delhi 1972, describes the economic behaviour of Muslim merchants in a changing, industrialising Tamil urban community. (K. McPherson)

MARAND 1. Town in the Persian province of Ādharbāydjān.

Position. The town lies about 40 miles north of Tabrīz, halfway between it and the Araxes or Aras in lat. 38° 25' 30" N. and 45° 46" E. at an altitude of *ca.* 4,400 feet/1,360m. (it is 42 miles from Marand to Djulfā). The road from Tabrīz to Khoy also branches off at Marand. A shorter road from Tabrīz to Khoy follows the north bank of Lake Urmiya and crosses the Mishowdagh range by the pass between Tasūdj [*q.v.*] and Ḍiyā al-Dīn. Marand, which is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about 10 miles broad and sloping slightly to the west. To the south, the Mishow range (western continuation of the Sawalān) separates it from the plain of Tabrīz and from Lake Urmiya. The pass to the south of Marand often mentioned by historians is called Yam (Mongol = "post-station"). The pass between the plain of Marand and Tasūdj takes its name from the village of Waldiyān. To the east of Marand lies the wild and mountainous region of Ḳaradja-dagh (capital: Ahar). To the north, the plain of Marand is separated from the Araxes by a range, a continuation of the central heights of the Ḳaradja-dagh which is crossed by the defile of the Därädiz. The plain of Marand is watered by the river of Zunūz, the southern arm of which called Zilbīr runs quite near Marand. The combined waters of Zunūz and Zilbīr flow into the Ḳotur-čay (an important right-bank tributary of the Araxes) about 20 miles north-east of Khoi. The length of the Zunūz is about 40 miles (Ḥamd Allāh Mustawfī: 8 *farsakhs*).

History. A lofty *tell* which rises besides the town is evidence of the great antiquity of this as an inhabited site; it must have existed in the time of the Vannic (Urartian) and Assyrian kings. Its Greek name Μοροῦνδα is perhaps connected with the people Μαροῦνδαι who, according to Ptolemy, vi, 2, occupied the lands as far as Lake Urmiya. A legend of Armenian origin based on the popular etymology *mair and* "mater ibi" locates in Marand the tomb of Noah's wife (Hübschmann, *Die altarmenischen Ortsnamen*, Leipzig 1904, 346, 415; Ker Porter, *Travels*, i, 217). Moses of Chorene places Marand (ch. 60) in the district of Bakurakert. There was another Marand mentioned by the Armenian historian Orbelian (*ca.* 1300) in the province of Siunikh (north of the Araxes) and a village of Marand still exists east of Tīghnīt in the khānate of Mākū [*q.v.*].

Ibn Baʿīth. After the Arab conquest, a certain Ḥalbas of the tribe of Rabīʿa took Marand. His son Baʿīth, a soldier of fortune (*ṣuʿlūk*) in the service of Ibn al-Rawwād, ruler of Tabrīz, fortified Marand. Muḥammad b. Baʿīth erected castles there (*ḳuṣūr*) (al-Balādhuri, 330; cf. *Camb. hist. of Iran*, iv, 227). This chief had acquired considerable notoriety. In 200/815 he had taken from the family of Rawwād the strongholds of Shāhī and Tabrīz (al-Ṭabarī, iii, 1171). (In another passage, al-Ṭabarī, iii, 1379, mentions Yakdur [?] in place of Tabrīz). Ibn Baʿīth lived at Shāhī, which stood in the centre of Lake Urmiya (the peninsula of Shāhī, where at a later date the Il-Khānid Hülegü kept his treasure and where he was buried). Ibn Baʿīth was at first on good terms with the Khurramī Bābak [*q.v.*], whose authority must have prevailed in the Ḳaradja-dagh in particular, in the north-eastern corner of which was his residence al-Badhdh [*q.v.* in Suppl.]. Ibn Baʿīth suddenly changed his tactics and seized by a ruse ʿIṣma, one of Babāk's generals, whom he sent to the caliph al-Muʿtaṣim. In 221/836 Ibn Baʿīth accompanied Bughā on his expedition against al-Badhdh (al-Ṭabarī, iii, 1190, 1193). Under the caliphate of al-Mutawakkil, Ibn Baʿīth committed some crime (*khālafa*) and was imprisoned in Sāmarrā or Surra-man-raʾa. On the intercession of Bughā al-Sharābī, 30 people of repute became guarantors of Ibn al-Baʿīth's good behaviour, and he must have been allowed considerable liberty, for in 234/848 he escaped to Marand. Ibn Khurradādhbih, who wrote in 234/848-9, mentions Marand as being Ibn Baʿīth's fief. Al-Ṭabarī, iii, 1379-89, gives a very graphic account of the expedition sent against this town. The wall which enclosed Marand and its gardens was 2 *farsakhs* in circumference. There were springs within it. The dense forest outside was a further protection to the town. Ibn Baʿīth collected 2,200 adventurers who were reinforced by a number of non-Arabs (*ʿulūdj*) armed with slings. He had ballistas constructed to repel the assailants. During the 8 months that the siege lasted, 100 individuals of note (*awliyāʾ al-sulṭān*) were killed and 400 wounded. When Bughā al-Sharābī (al-Balādhuri, 330: Bughā al-Ṣaghīr) arrived, he succeeded in detaching the men of the Rabīʿa tribe from Ibn Baʿīth. Ibn Baʿīth and his relatives were seized and his house and those of his partisans plundered. In Shawwāl of 235/April-May 850, Bughā arrived with 180 prisoners at the caliph's court. Al-Mutawakkil ordered Ibn Baʿīth to be beheaded, but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (*inna maʿahu la-adab^an^*) and gave him his life. Ibn Baʿīth died in prison and his sons entered the corps of mercenaries (*al-shākiriyya*). According to one of al-Ṭabarī's authorities (iii, 1388), the *shaykhs* of Marāgha who praised the bravery and literary ability (*adab*) of Ibn Baʿīth also quoted his Persian verses (*bi 'l-fārisiyya*). This important passage, already quoted by Barthold, *BSOS*, ii (1923), 836-8, is evidence of the existence of the cultivation of poetry in Persian in northwestern Persia at the beginning of the 9th century. Ibn Baʿīth must have been Iranicised to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his *rustāḳs* (*ʿulūdj rasātīḳihi*).

Later history. The Arab geographers of the 4th/10th century (al-Iṣṭakhrī, 182; Ibn Ḥawḳal, 239; cf. Le Strange, *Lands*, 166-7) mention Marand among the little towns of Ādharbāydjān where the trouser-bands called *tikak* were manufactured. Al-Muḳaddasī, 51, 374, 377, puts Marand under Dabīl and notes its gardens, its flourishing suburb and a cathedral mosque in the centre of the market. The same author, 382, mentions a direct road from Marand to Marāgha (via Nūrīn [?], somewhere west of Tabrīz?). Later,

Marand must have shared the fate of Tabrīz [*q.v.*]. According to Yāḳūt, iv, 503, the town had begun to decline after it was plundered by the Georgians (Kurdj), who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208-10 (605-7) [see TABRĪZ and AL-KURDJ].

Among the theologians born in Marand, Yāḳūt mentions one who died in 216/831 and another who had studied in Damascus in 433/1041-2. In 624/1226, Marand, which had not sufficient defences, was occupied by the *ḥādjib* ᶜAlī al-Ashrafī of Akhlāt. Sharaf al-Mulk, governor for the Khwārazmshāh, retook the town and wrought great slaughter in it (Nasawī, ed. Houdas, 166).

The only historical monument in Marand is the old mosque, Saldjūḳ in origin, now in ruins, with a *miḥrāb* in stucco bearing the dates of rebuilding 730/1330 (reign of the Il-Khānid Abū Saᶜīd) and 740/1339 by Khwādja Ḥusayn b. Maḥmūd (Cf. Sarre, *Denkmäler persischer Baukunst*, Berlin 1910, 24-5 and pl. xvii; the observations by E. Herzfeld, *Die Gumbadh-i ᶜAlawiyyan*, in the *Volume ... presented to E. G. Browne*, Cambridge 1922, 194-5; and D. Wilber, *The architecture of Islamic Iran. The Il Khānid period*, Princeton 1955, 172-3, no. 79. A caravanserai some 8 miles/13 km. to the north of Marand dates from *ca.* 730-5/1330-5 but is known locally as "the caravanserai of Hülegü (Wilber, *op. cit.*, 176-7, no. 85).

Around this time, Ḥamd Allāh Mustawfī describes the excellent fruit and cereals of Marand and mentions that to the south of the town was found the *ḳirmiz* insect (*kermes ilicis*) for crimson dye. There were 60 villages in the district, and the revenues of the town and its dependencies amounted to 24,000 *dirhams*. The walls of the town were 8,000 paces round, but the town itself occupied only half this area (*Nuzhat al-ḳulūb*, 88, tr. 89). In the Tīmūrid period, Marand appears as a mint-town (in 832/1428-9), see E. von Zambaur, *Die Münzpragungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 238.

Marand is several times mentioned in connection with the Turco-Persian wars. According to Ewliyā Čelebi (in 1647), *Siyāḥat-nāma*, ii, 242, Marand was a hunting-resort of the Tīmūrid Shāhrukh. In spite of the damage done by the invasion of Sulṭān Murād, the town looked prosperous and had 3,000 houses. Ewliyā enumerates a number of celebrated theologians buried north of Marand.

In the autumn of 1724 ᶜAbd Allāh Pasha Köprülü sent the Kurdish Khān of Bitlīs Muḥammad ᶜĀbid to occupy Marand, the inhabitants of which had fled. Resistance centred round the town of Zunūz (10 miles north of Marand) which had 7,000 (?) houses and a castle called Diza by the Persians. To dispose of the threat to their flank, the Janissaries, before advancing on Tabrīz, fought a battle here in May 1725 with the Persians, of whom a large number were slain. Diza was taken and dismantled (cf. von Hammer, *GOR*², iv, 226, following Čelebi-zāde).

Marand has often been mentioned by European travellers since the time of Hans Chr. von Teufel (1589), cf. the notices by Chardin (ed. 1811, i, 318) and by Ker Porter, Jaubert, Morier, Ouseley and Monteith, of which a résumé is given in Ritter, *Erdkunde*, ix, 907. Marand has recently gained in importance since it lies on the modern high road from Tabrīz to Djulfā built by the Russians in 1906 and replaced by a railway in 1915-16.

In contemporary Iran, Marand comes within the third *ustān* of Ādharbāydjān, and is the centre of a *shahrastān* (1951 pop. 128,762) containing three *bakhshs*; the town itself had a population of almost 14,000 in 1951 and about 24,000 some years later (see Razmārā, *Farhang-i Djughrāfiyā-yi Īrān*, iv, 493; L. Adamec, *Historical gazetteer of Iran. i. Tehran and north-western Iran*, Graz 1976, 435-7).

Bibliography: Given in the article.

2. Town in the district of Khuttal. On this town to the north of the Oxus, cf. al-Muḳaddasī, 49, 290-1. (V. MINORSKY-[C. E. BOSWORTH])

MARᶜASH, a town in the Taurus Mountains region of southern Anatolia, falling within modern Turkey and now the chef-lieu, as Maraş, of the *il* (formerly *vilayet*) of Maraş.

It lies about 2,000 feet/610 m. above sea-level on the northern edge of the hollow (ᶜAmḳ of Marᶜash; now Čaḳal Owa and south of it Shēker Owa or Marᶜash Owasī) which lies east of the Djayḥān and is watered by its tributary, the Nahr Ḥūrīth (Aḳ-Ṣū). As a result of its situation at the intersection of the roads which run to Anṭākiya, to ᶜAyn Zarba and al-Maṣṣīṣa, to Albistān (Abulustain) and Yarpūz, via Göksün (Kokussos) to Ḳaysāriyya, via Behesnī (Bahasnā) to Sumaysāṭ and via al-Ḥadath and Zibaṭra to Malaṭya, Marᶜash was from the earliest times one of the most important centres of traffic in the Syrian frontier region. It is repeatedly mentioned as early as the Assyrian texts as Marḳasi, capital of the kingdom of Gurgum [see DJARĀDJIMA], and several Hittite monuments have been found there (cf. Unger, *Marqasi*, in Ebert's *Reallexik. d. Vorgesch.*, viii, 1927, 48).

1. History up to the Ottoman period. In the Roman imperial period it was called Germanikeia in honour of Caligula (on the coins, Ceasarea Germanikē; cf. Grégoire, in *Rev. de l'instr. publ. en Belg.*, li [1908], 217 ff.). The identity of Germanikeia and Marᶜash is certain from numerous literary, especially Syriac, references. The Armenians probably knew, but probably from learned tradition only, the name Germanik (Kermanig in Vahram; cf. Matthew of Edessa, ed. Dulaurier, 487 below; St. Martin, *Mém. sur l'Arm.*, i, 200). The statement in a description of the district of Ḥalab (B.N. ms. Arab., no. 1683, fol. 72a) that the Armenian name of the town was Nākinūk (Blochet, *ROL*, iii, 525-6, 6) is wrong; this is a mistake for Göynük, a name later given to the neighbouring al-Ḥadath [*q.v.*]. The Emperor Heraclius passed through the town in 626 (Theophanes, *Chron.*, ed., de Boor, 313; Ramsay, in *Classical Review*, x, 140; Gerland, in *Byz. Zeitschrift*, iii [1894], 362). The Emperor Leo III came from Marᶜash (Germanikeia); later authors (like Theophanes, *op. cit.*, 391) wrongly called him the "Isaurian" (a confusion with Germanikopolis; cf. K. Schenk, in *Byz. Zeitschr.*, v [1896], 296-8).

In the year 16/637 Abū ᶜUbayda sent Khālid b. al-Walīd from Manbidj against Marᶜash, and the Greek garrison surrendered the fortress on being granted permission to withdraw unmolested; Khālid then destroyed it (Caetani, *Annali dell' Islām*, iii, Milan 1910, 794, 806). Sufyān b. ᶜAwf al-Ghāmidī in 30/650-1 set out from Marᶜash against the Byzantines. Muᶜāwiya rebuilt Marᶜāsh and settled soldiers in this "Arab Cayenne" (as Lammens, in *MFOB*, vi [1913], 437 calls it). After Yazīd I's death, the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muḥammad b. Marwān in 74/693-4 had broken the truce concluded by ᶜAbd al-Malik with the Greeks, in Djumādā I of the following year the Greeks set out from Marᶜash against al-Aᶜmāḳ (= ᶜAmḳ of

Antāḳiya; cf. Le Strange, *Palestine under the Moslems*, 391) but were again driven back in the ᶜAmḳ of Marᶜas͟h. Marᶜas͟h was restored by al-ᶜAbbās, son of al-Walīd I, and fortified and repopulated; a large mosque was also built there.

The people of Ḳinnasrīn [*q.v.*] (i.e. probably of the *d̲j̲und* of Ḳinnasrīn) had to send troops every year to Marᶜas͟h. During Marwān II's fighting against Ḥimṣ, the Emperor Constantine again besieged Marᶜas͟h, which had finally to capitulate (129/746) and was destroyed (al-Balād̲h̲urī, 189; Theophanes, *Chron.*, ed.de Boor,422; Georgios Kedrenos, ed. Bonn, ii, 7). The inhabitants emigrated to Mesopotamia and the *d̲j̲und* of Ḳinnasrīn. After the capture of Ḥimṣ, Marwān sent troops to Marᶜas͟h, who rebuilt the town in 130/747; the castle in the centre of the town was henceforth called al-Marwānī after him (Yāḳūt, iv, 498-9). But by 137/754 the Greeks again sacked the town. Al-Manṣūr then had it rebuilt by Ṣāliḥ b. ᶜAlī (d. 150/767) and gave it a garrison which al-Mahdī strengthened and supplied with ample munitions (al-Balād̲h̲urī, *loc. cit.*; Theoph., *op. cit.*, 445: ὁ Σάλεχ .... μετεποιήθε Γερμανικείαν εἰς Παλαιστίνην). The Arabs in 769 (1080 Sel.) entered the ᶜAmḳ of Marᶜas͟h and deported the inhabitants of the region who were accused of espionage on behalf of the Byzantines, to al-Ramla (Michael the Syrian, *Chron.*, ed. Chabot, ii, 526). According to the Syriac inscription of ᶜEns͟h on the Euphrates, in 776-7 A.D. (1088 Sel.) the people of the hollow (*ᶜumḳā*) of Marᶜas͟h invaded Asia Minor (Bēt̲h̲ Rhōmāyā) to plunder (Chabot, in *JA*, ser. 9, vol. xvi [1900], 286-7; Pognon, *Inscr. semit. de la Syrie et de la Mésopotamie*, 148-50, no. 84). A Greek army of 100,000 men in 161-2/778-9 under Michael Lachanodrakon besieged Marᶜas͟h, which was defended by ᶜĪsā b. ᶜAlī (Ἰσβααλί in Theophanes, *op. cit.*, 451), grand-uncle of the Caliph al-Mahdī, destroyed al-Ḥadat̲h̲ and laid waste the Syrian frontier (Weil, *Gesch. d. Chalifen*, ii, 98). In 183/799 Hārūn al-Ras͟hīd built the town of al-Hārūniyya near Marᶜas͟h (al-Balād̲h̲urī, 171; Yāḳūt, iv, 498, wrongly calls it a suburb of Marᶜas͟h); he also raised the prosperity of Marᶜas͟h and al-Maṣṣīṣa (al-Masᶜūdī, *Murūd̲j̲*, viii, 295 = § 3449). The *amīr* Abū Saᶜīd Muḥammad b. Yūsuf in 226/841 invaded Asia Minor; the Greeks drove him back, however, and took al-Ḥadat̲h̲, Marᶜas͟h and the district of Malaṭya (Michael the Syrian, iii, 102; Weil, *Gesch. d. Chalifen*, ii, 315-16, n. 1, considers this story unhistorical). The emperor Basil I in 877 passed via Κουχουσός (Göksün) and the Taurus passes (στενὰ τοῦ Ταύρου) against Marᶜas͟h (Γερμανίκεια), but could not take it and had to be content with burning and plundering the suburbs; the same thing happened at al-Ḥadat̲h̲ (Ἄδατα; Georgios Kedrenos [Bonn], ii, 214; Theophanes continuatus, ed. Bonn, 280). According to the Περὶ παραδρομῆς πολέμου (*De velitatione bellica*, Migne, Patrol. Graec., cxvii, 1000), shortly before the attack on Germanikeia he crossed the Παράδεισος ποταμός (cf. Pliny, *Nat. Hist.*, v. 93: one of the *intus flumina* of Cilicia, probably the Aḳ-Ṣū, Arabic Nahr D̲j̲ūrīt̲h̲ or Ḥūrīt̲h̲; the location by Tomaschek in *SBAk Wien*, cxxiv [1891], Abh. viii, 66, is therefore presumably wrong). The Byzantine Andronicus in 292/904-5) invaded the region of Marᶜas͟h, defeated the garrisons of Ṭarsūs and Maṣṣīṣa and destroyed Kūrus (Ibn al-At̲h̲īr, vii, 378; al-Ṭabarī, iii, 2298, Weil, *op. cit.*, ii, 533; Vasiliev, *Vizantiya i Arabî*, i, 1902, 154). The Armenian Mleḥ (Arab. Malīḥ) plundered Marᶜas͟h in 916; 50,000 prisoners were carried off from it and Ṭarsūs (Weil, *op. cit.*, ii, 634; Vasilev, *op. cit.*, 203). In the fighting against Sayf al-Dawla, the Greeks under John Kurkuas took Marᶜas͟h in the spring of 337/949 (Kamāl al-Dīn, in Freytag, *ZDMG*, xi, 187; Weil, *op. cit.*, iii, 14, n. 1; Vasiliev, *op. cit.*, 268). In 341/952 the Ḥamdānid defeated the Domestikos at Marᶜas͟h, and in June rebuilt the defences of the town (Freytag, *op. cit.*, 191; Vasiliev, *op. cit.*, 291). When the Ḥamdānid Abu 'l-ᶜAs͟hāʾir in 345/956 was taken prisoner by the Byzantines, his father-in-law Abū Firās followed as far as Marᶜas͟h in the attempts to rescue him, but could not overtake his captors (Dvořák, *Abû Firâs*, Leiden 1895, 31; Vasiliev, *op. cit.*, 297). Nicephorus Phocas in Rabīᶜ I 351/August 962 occupied Marᶜas͟h, Dulūk and Raᶜbān (Freytag, *op. cit.*, 199; Rosen, in *Zapiski Imp. Akad. Nauk*, xliv, 152, n. 100). Band̲j̲ūtakīn in 382/992 carried out a raid on Marᶜas͟h and came back with prisoners and great booty (Freytag, 248; Rosen, 250, 263). The Armenian Philaretos Brachamios (Filardūs al-Rūmī) who in the second half of the 5th/11th century, as a leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of S͟hīrbaz in the district of Marᶜas͟h (Michael the Syrian, iii, 173, 173 n.*).

After the Franks under Godfrey de Bouillon had taken Marᶜas͟h in 490/1097, they installed a bishop there (Michael the Syrians, iii, 191). Bohemund of Antioch was taken prisoner in June 1100 in the *ᶜamḳ* of Marᶜas͟h in the village of Gafinā (*ibid.*, iii, 188) on his campaign against Malaṭya by Gümüs͟htegīn b. Dānis͟hmand (*Recueil des hist. or des crois.*, iii, 589; Röhricht, *Gesch. des Königr. Jerus.*, 9; Weil, *op. cit.*, iii, 179). The emperor Alexius later sent the general Butumites against Marᶜas͟h (τὸ Μάρασιν) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monastras there as ἡγεμῶν (Anna Comnena, *Alexiad*, ed. Reifferscheid, ii, 132, 11 ff; F. Chalandon, *Les Comnène*, i, Paris 1900, 234). The town of Marᶜas͟h was placed under the Armenian prince Thathul, who had distinguished himself in its defence against Bohemund (Matthēos Uṛhayecᶜi, ed. Dulaurier, ch. clxvi, 229-30; Chalandon, *op. cit.*, i, 104-5). But by 1104 he had to abandon it and surrender it to Joscelin de Courtenay, lord of Tell Bās͟hir (Matthēos, *op. cit.*, 257, ch. clxxxvi; Raoul of Caens, ch. 148; Röhricht, *op. cit.*, 49, n. 8, 52, n. 4). This Thatful is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, x, 1, he is called Tafroc; in Albert of Aix, iii, 31, v, 18: Taphnuz; cf. Chalandon, *op. cit.*, 103). By 1105 Tancred of Antioch seems to have been in possession of Marᶜas͟h (Röhricht, 56), to whom it was allotted in the treaty of September 1108 (ἡ Γερμανίκεια καὶ τὰ ὑπὸ ταύτην πολίχνια: Anna Commena, ed. Reifferscheid, ii, 217; Röhricht, 66). In 1114 the widow of the recently-deceased Armenian prince Kog͟h Vasil (= "Basil the thief") of Marᶜas͟h submitted to Aḳ Sunḳur of Mawṣil (Weil, *op. cit.*, iii, 199); on 28 D̲j̲umādā II 508/27 November 1114, Marᶜas͟h was devastated by a disastrous earthquake in which 40,000 lost their lives (Michael the Syrian, tr. Chabot, iii, 200; *Recueil hist. or. crois*,, iii, 607; Matthēos Uṛhayecᶜi, 289, ch. ccvii). King Baldwin granted a monk named Godfrey (*Goisfridus Monachus*) a fief consisting of Marᶜas͟h, Kaysūm and Raᶜbān (Michael the Syrian, iii, 211; Röhricht, *op. cit.*, 161); in 1124 Godfrey was killed at the siege of Manbid̲j̲ in the train of Joscelin of Edessa. The Dānis͟hmandid Muḥammad b. Amīr G͟hāzī in 531/1136-7 laid waste the villages and monasteries near Marᶜas͟h and Kaysūm (Matthēos, 320, ch. ccliii). The Sald̲j̲ūḳ sulṭān Masᶜūd in 532/1138

advanced as far as Mar^cash, plundering the country as he went (Michael the Syrian, iii, 246) as did Malik Muḥammad of Malaṭya in 535/1141 (*ibid.*, iii, 249) and Ḳilīdj Arslan II in 541/1147 ibid., iii, 275). The town then belonged to Raynald, son-in-law of Joscelin II of Edessa, who fell in 1149 at Innib (Röhricht, *op. cit.*, 260). On 5 Djumādā I 544/11 September 1149, Ḳilīdj Arslan and his father Mas^cūd set out from Albistān against Mar^cash, plundered the country around and besieged the town. The Frankish garrison capitulated on being promised a safe retreat to Anṭākiya; but the sultan sent a body of Turks after them, who fell upon them on the road and slew them. On this occasion, all the treasure of the churches of Mar^cash was lost, which the priests who had rebelled against the bishop had appropriated (Michael the Syrian, iii, 290; Matthēos Urhayec^ci, 330, ch. cclix; Chalandon, *op. cit.*, 421; Röhricht, *op. cit.*, 263). After the capture of Joscelin, Nūr al-Dīn of Ḥalab in 546/1151-2 took a large part of the country of Edessa including the towns of Mar^cash, Tell Bāshir, ^cAyntāb, Dulūk, Kūrus, etc. (*Recueil hist. or crois.*, i, 29, 481, ii, 54; Weil, *op. cit.*, iii, 296; Röhricht, *op. cit.*, 265, n. 5). The district was then divided: the sultan received Mar^cash, Barzamān, Ra^cbān, Kaysūm and Bahasnā; the Artuḳid Ḳara Arslan of Ḥiṣn Ziyād got Bābūlā, Gargar, K^yākhta and Ḥiṣn Manṣūr; Nūr al-Dīn kept the rest (Michael the Syrian, iii, 297; William of Tyre, xvii, 16). When Mas^cūd's son Ḳilīdj Arslan, lord of Mar^cash (Michael the Syrian, iii, 318), attacked an Armenian village, the Armenians under Stephan, brother of the prince Thoros, in 1156 revenged themselves by setting Mar^cash on fire and carried off the whole population into captivity, during the absence of the sultan and his Turks (*ibid.*, ii, 314 [expanded from Barhebraeus, *Chron. syr.*]; differently in Abū Shāma, *Rec. hist. or. crois*, iv, 92;F. Chalandon, *Les Comnène*, ii, Paris 1912, 434). Among those carried off was the bishop Dionysios bar Ṣalībī, who escaped to the monastery of Kālsiūr (according to Chabot, *loc. cit.*, the κάστρον Καλιζίερυν of Anna Comnena, ed. Reifferscheid, ii, 219) and wrote three *mēmrē* about the devastation of his former diocese of Mar^cash (Michael the Syrian, *loc. cit.*; Baumstark, *Gesch. d. syr. Litt.*, 298). Thoros of Little Armenia in 1165 plundered Mar^cash (Barhebraeus, *Chron. syr.*, ed. Bedjan, 331; Röhricht, *op. cit.*, 319, n. 8; Chalandon, *op. cit.*, ii, 531, n. 1). Nūr al-Dīn again took Mar^cash from Ḳilīdj Arslan II when he was on a campaign against the Dānishmandid Dhu 'l-Nūn (Michael the Syrian, iii, 350) in the beginning of Dhu 'l-Ḳa^cda 568/14 June 1173) and Bahasnā in Dhu 'l-Ḥidjdja (*Rec. hist. or. crois.*, i, 43, 592, iv, 158, Matthēos Urhayec^ci, ed. Dulaurier, 360; Abu 'l-Fidā^ɔ, *Annal. musl.*, ed. Reiske, iv, 4; Röhricht, *op. cit.*, 303, who is followed by Chalandon, *Les Comnène*, ii, 463, wrongly puts these events as early as 1159).

Nūr al-Dīn perhaps handed Mar^cash over to his ally Mleḥ of Little Armenia. When the dynast of Mar^cash raised the district of Ra^cbān, al-Malik al-Ẓāhir in 592/1195-6 took the field against him, whereupon the lord of Mar^cash sought forgiveness and recognised his suzerainty (Kamāl al-Dīn, tr. Blochet, in *ROI*, iv, 212). The Armenian ruler Rupen III took Bohemund III of Anṭākiya prisoner in 1185 and forced him to cede the territory from the Djayḥān up to Ḳastūn (Michael the Syrian, ii, 396-7; Röhricht, *op. cit.*, 403, n. 7, 661). Ghiyāth al-Dīn Kay-Khusraw, son of Ḳilīdj Arslan II, in 605/1208, when on a campaign against Little Armenia, took Mar^cash (Abu 'l-Fidā^ɔ, *Annal. musl.*, ed. Reiske, iv, 232), and made Ḥusām al-Dīn Ḥasan governor of the town. He was succeeded in this office by his son Ibrāhīm, who in turn was succeeded by his son Nuṣrat al-Dīn, who ruled Mar^cash for 50 years. The long reign of his son Muẓaffar al-Dīn was followed by that of his brother ^cImād al-Dīn who however in 656/1258 abandoned the town, which was much harassed by the Armenians and Georgians, after failing to find support either from ^cIzz al-Dīn Kay-Kāwūs of Rūm or al-Malik al-Ṣāliḥ of Egypt. The town then surrendered to the Armenians (Ibn al-Shiḥna, Beirut 1909, 192).

Mar^cash did not escape during the great Mongol invasion of Asia Minor. Baybars I of Egypt in his campaign against them in 670/1271 sent from Ḥalab a division under Ṭaybars al-Wazīrī and ^cĪsā b. Muhīn to Mar^cash, who drove all the Tatars from there and slew them (*Rec. hist. or. crois.*, ii, 246; al-Maḳrīzī, ed. Quatremère, *Hist. de Sultans Mamlouks*, i/2, 101). In the wars with the rulers of Little Armenia, troops from Ḥalab went as far as Mar^cash in 673/1274 and destroyed the gates of the outer town (Weil, *Gesch. d. Chal.*, iv, 7). In the next few years, Baybars negotiated with envoys from Sīs, from whom he demanded the surrender of Mar^cash and Bahasnā; but he was satisfied instead with a considerable sum of money (al-Maḳrīzī, *op. cit.*, i/2, 123 [year 673/1274]; ii/l, 104 [688/1289]). It was not till 692/1292 that sultan Khalīl by a treaty received Bahasnā, Mar^cash and Tell Ḥamdūn (Mufaḍḍal b. Abi 'l-Faḍā^ɔil, *Hist. des Sultans Mamlouks*, ed. Blochet, in *Patrol. Orient.*, xiv, 557; Weil, op. cit., iv, 186; S. Lane-Poole, *History of Egypt in the Middle Ages*, London 1901, 287). But the Armenians must have retaken the two last-named towns not long afterwards (Weil, iv, 213, n. 1), for in 697/1297 Mar^cash was again taken by the *amīr* Bilban Tabakhī, *nā^ɔib* of Ḥalab, for Lādjīn. A treaty was then concluded with the ruler of Little Armenia, by which the Djayḥān was to be the frontier between the two countries; Ḥamūs, Tell Ḥamdūn, Kūbarā, al-Nukayr (for its position, cf. L. Alishan, *Sissouan*, 493-6), Ḥadjar Shughlān, Sirfandakār and Mar^cash thus passed to Egypt (al-Maḳrīzī, *op. cit.*, ii/2, 63; Abu 'l-Fidā^ɔ, *Ann. musl.*, v, 140).

In the second half of the 8th/14th century, Zayn al-Dīn Ḳaradja and his son Khalīl, the founders of the house of the Dhu 'l-Ḳadr-oghlu, conquered the lands along the Egyptian Asia Minor frontier with Malaṭya, Albistān, Mar^cash, Bahasnā and Kharpūt [see DHU 'L-ḲADR]. In the mosque of Mar^cash, one of his successors, Malik Arslān, was murdered in 870/1465-6; his portrait with the inscription "Sulṭān Arslān" and that of his sister Sittī Khātūn with the legend ἡ μεγάλη χάτω are painted in the Codex Venetus 516 of the *Geography* of Ptolemy, which he apparently intended to dedicate to this father-in-law Meḥemmed II (Olshausen, in *Hermes*, xv [1880], 417-42)

2. In Ottoman and modern times.

In Ottoman times, Marʿash lay on one of the major routes to Syria: in the early 11th/17th century, Polonyalī Simeon passed through the city when returning from Aleppo to Istanbul by way of Kayseri. The pre-Ottoman or else 10th/16th century bridge, which still crosses the Ceyhan somewhat to the west of Marʿash, must have served this traffic. If the surviving bridge is identical with the bridge mentioned in an Ottoman tax register of the second half of the 10th/16th century, this structure should been the site of a toll gate. According to the *ḳānūn* applied in the region, nomads travelling with their flocks were exempted from toll payment, which was only demanded from traders.

Marʿash was considered as lying on a *ḥadjdj* or pilgrimage route, even though the "diagonal road" crossing Anatolia by way of Konya and Adana seems to have been much more popular. Ewliyā Čelebi passed through Marʿash on his way to the Ḥidjāz, and the suppression of robbery in the district of Marʿash was always treated with particular urgency because of the danger it presented to pilgrims (cf. Başbakanlık Arşivi, Istanbul, Mühimme defterleri, 40, p. 42, no. 88, 987/1579-80). Probably for the same reason, a number of guarded mountain passes (*derbend*) was instituted in the area in the course of the 11th/17th and 12th/18th centuries.

In the second half of the 19th century, the old thoroughfare passing through Marʿash had apparently lost much of its importance, for in 1891 Cuinet reported that no road suitable for wheeled vehicles existed in the entire *sandjaḳ*. As a result, not much of an outlet existed for local industries. Only in 1948 was Marʿash linked up with the Malatya-Fevzipaşa railway, which in certain sections follows the area's historical routes. In addition, asphalted roads were built, so that by 1960, Marʿash was easily accessible from Adana, Iskenderun, Gaziantep and Malatya.

Administrative structure and population. After the Ottomans had conquered the Dhu 'l-Ḳadr principality in 921/1515, the area was first governed by Dhu 'l-Ḳadrlī ʿAlī Beg b. Shāhsuwār under Ottoman suzerainty. However, after the latter had been killed in 928/1522, surviving members of the Dhu 'l-Ḳadrlī family were appointed to governorships in the European provinces of the Ottoman Empire, and the Ottoman *wilāyet-sandjaḳ* structure was established in the lands which this dynasty had formerly ruled. A tax register (*taḥrīr*) dating from the early years of Sultan Ḳānūnī Sulaymān's reign (after 931/1525-6) refers to a *wilāyet* of Dhu 'l-Ḳadriyya, governed by two *sandjaḳ begis* and divided into five *ḳaḍāʾ*s (Marʿash; Elbistān; Ḳarṣ or modern Kadirli, also referred to as a *liwā-sandjaḳ*; Ṣamanto; and Bozok). This *wilāyet* consisted of 523 villages, 665 nomadic tribes, and 3,412 *mezraʿas* (sown, but not necessarily inhabited, agricultural land). The total adult male population of the *wilāyet* amounted to 76,181 men. Among the latter, 9, 644 were exempt from the payment of *ʿawāriḍ* [*q.v.*] taxes, either because of their former position under the Dhu 'l-Ḳadr dynasty or because of services rendered to the Ottoman administration. Total population registered in the *wilāyet* can thus be estimated at 230,000 to 300,400 persons.

During those years, the town of Marʿash appears as an administrative centre with an unusually high proportion of tax-exempt inhabitants. Of the 1,557 adult males recorded in the town (this should have corresponded to a population of about 7,500, since only 85 persons were recorded as unmarried), 836 men were *sipāhīs* and *sipāhīzādes*, in addition to the usual contingent of tax-exempt religious functionaries. This would have left the town with a tax-paying population of only about 550 adult males, an anomalous situation which can be explained only by the fact that the count must have been prepared a short time after the conquest. At this time, Marʿash was inhabited only by Muslims.

During Ḳānūnī Sulaymān's reign, the number of adult males registered in the *taḥrīr* as resident in Marʿash almost doubled, and before 972/1564-5 had reached the level of 3,054 men. Of these, 370 were recorded as unmarried. Thus a total population of 13,000-14,000 is probable, apart from certain tax-exempt families which may have gone unregistered. This figure placed Marʿash among the large towns of contemporary Anatolia. According to Ewliyā Čelebi, who passed through Marʿash in 1058/1648 and again in 1082/1672-3, the town consisted of 11,000 houses, which would seem to point to a much larger settlement than that described in the 10th/16th century tax registers. However, the town seems subsequently to have lost population. Texier, who refers to Marʿash as it was in the early 19th century, estimates its population at 5,000-6,000 inhabitants. Struggles between the family factions of the Dhu 'l-Ḳadrlī and the Bāyezīdli were brought to an end only during the reign of Sultan Maḥmūd II (1223-55/1808-39), and seem to have contributed to a decline in urban population. However, according to a British Foreign Office source, between 1830 and 1840 Marʿash had again reached the level of 23,000 inhabitants.

Administrative structure between the late 10th/16th and the early 19th century showed relatively slight variations. According to a register containing appointments to provincial governorships between 975-82/1568-74, the *wilāyet* of Dhu 'l-Ḳadriyya consisted of the *sandjaḳ*s of Marʿash, Malāṭya, ʿAyntāb, Sis and Ḳarṣ (modern Kadirli). In 1041-6/1632-41, this *wilāyet* had been much reduced, and now consisted only of the *sandjaḳ*s of Marʿash, ʿAyntāb and Ḳarṣ. ʿAynī ʿAlī, who wrote during the reign of Sultan Aḥmed I (1012-26/1603-17) mentions the *sandjaḳ*s of Marʿash, Malāṭya, ʿAyntāb, Ḳarṣ and Samīṣād as forming part of the *wilāyet* of Dhu 'l-Ḳadriyya. This list has also been reproduced in the *Djihān-numā* of Kātib Čelebi (p. 598). Thus the *wilāyet* was apparently soon restored to its former size. Writing at the end of the 11th/17th century, Ewliyā Čelebi enumerates the following: Marʿash, Malāṭya, ʿAyntāb, Ḳarṣ, Samṣad and Niğde.

During the Ottoman-Egyptian conflict of the 1830s, the troops of Ibrāhīm Pasha, Muḥammad ʿAlī's son, temporarily held Marʿash, which was returned to the Ottoman realm in 1840. Administrative structure as it existed during the second half of the 19th century has been described by Cuinet: the *sandjaḳ* of Marʿash then formed part of the *eyālet* of Aleppo and consisted of the *ḳaḍāʾ*s of Marʿash, Elbistān, Andīrīn, Pazārdjīḳ and Zeytūn (modern name: Süleymanlı). According to the same author, the total *sandjaḳ* population amounted to 179,853, of whom 52,000 lived in the town of Marʿash proper (32,000 Muslims, 20,000 non-Muslims). These figures indicate that a substan-

tial number of non-Muslims must have immigrated into the town, probably mainly during the 19th century.

For the early days of World War I, Besim Atalay reports 32,700 inhabitants for the town of Marʿash proper including 8,500 non-Muslims. In 1927, when the first census of the Turkish Republic was undertaken, the impact of the World War, the occupation of 1919 (first British, then French), and the War of Independence had reduced population to 25,672. From this low point, the city expanded continuously (1940: 27,744; 1945: 33,104; 1950: 34,641; 1960: 54, 447, 1970: 110,761; 1980: 178,557), without experiencing the temporary contraction that many Anatolian towns went through during and immediately after World War II. Between 1960 and 1980, the *vilâyet* (later *il*) consisted of the following *kazas* (later *ilçe*): Maraş-merkez, Afşin, Andırın, Elbistan, Göksün, Pazarcık and Türkoğlu. In 1980, the *il* of Kahramanmaraş contained a total population of 738,032, of which 281, 382 (38%) lived in towns and cities.

Economic activities. From the dues recorded in the tax register compiled before 972/1564-5, the importance of textile manufacture becomes apparent. Apart from a sizeable dyehouse, we hear of a tax payable by bleachers or fullers. The provincial governor claimed the right to tax the weavers' pits, (*djullāh čuḳuru*); at the end of the 11th/17th century, complaints on this score were addressed to the Ottoman central administration. In the late 12th/18th century, red cottons were particularly esteemed among locally manufactured textiles. Even in the last years of the 19th century, Marʿash still possessed a reputation as a textile centre. Although by that time many looms lay idle, 281 workshops were still active in this sector. Apart from fabrics intended for everyday use, Cuinet mentions the manufacture of textiles embroidered in gold and silver thread. A certain revival has taken place in the second half of the 20th century; in 1960 a state factory for the manufacture of poplin and other cottons (Sümerbank) began to operate in Marʿash.

Throughout the Ottoman period, the Marʿash area produced ironware; in 983/1575-6, anchors for a flotilla to be constructed in Başra were being ordered from Marʿash. This iron must have been mined in the *ḳaḍāʾ* of Süleymānlī, for Cuinet records that, in the second half of the 19th century, soft iron from this district was being employed by local farriers and blacksmiths. From the tax register of Ḳānūnī Sulaymān's early years, we learn that silver was being mined in Göksun; this latter mine, whose existence was also known to Cuinet, was apparently not exploited during the 1890s. In addition, salpetre mines were worked and powder was manufactured; during the Cyprus campaign of the 10th/16th century, the Ottoman armies were using powder from Marʿash. However, in the second half of the 20th century, the most important mines of the province of Kahramanmaraş are in Elbistan, where abundant lignite has been discovered, and power plants for the conversion of this raw material into electric energy are in the course of being completed.

Marʿash possesses an ample source of wood in the forests which are still fairly abundant in the district; in the 10th/16th century, this wood was used by the Ottoman central administration for the construction of a Euphrates flotilla in Bīredjik. According to Cuinet, in the second half of the 19th century wood was employed particularly in the manufacture of European-style furniture, whose quality and cheapness the author praised highly.

Agriculture in the Marʿash area during the 10th/16th century was dominated by the cultivation of wheat and barley; but in addition, a wide variety of garden cultures was present. Among the latter, the vine was particularly prominent, as it also was in Cuinet's time and still is today. Apparently fruit cultivation even by the reign of Ḳānūnī Sulaymān had given rise to processing activities; for the tax register compiled before 972/1564-5 specifically mentions the existence of helva and paste manufacturers. By the second half of the 19th century, rice had turned into a major commercial crop of the Marʿash area; it was traded mainly within the Ottoman Empire. On the other hand, fruit, dyestuffs, and other garden and forest products were at this time also being exported to Europe, primarily through the port of Iskenderun.

By the middle of the 1970s, the continued importance of fruit and vegetable cultivation (163, 194 tons of fruit in 1975) had given rise to a certain number of processing industries, particularly the manufacture of dried red pepper. Furthermore, since World War II, agriculture has benefited from a number of state-sponsored projects for irrigation and swamp drainage.

Throughout the Ottoman period, the nomadic tribes which were particularly numerous in the Marʿash district and in the province of Dhu 'l-Ḳadriyya as a whole practiced a pastoral economy. In the 10th/16th century, the province was not infrequently called upon to provide sheep so that Istanbul could be supplied with meat. Records of the 11th/17th century also refer to the raising of water buffaloes. But in the late 19th century, the most widely present animal was the goat, which particularly in the Marʿash *ḳaḍāʾ*, by far outnumbered sheep. By the mid-1970s, however, this pattern had changed, and throughout the *vilâyet* of Kahramanmaraş, sheep now substantially outnumbered goats. In addition, the state has been encouraging cattle raising by the establishment of the Maraş Inekhanesi.

Pious foundations and public buildings. The long reign of ʿAlāʾ al-Dawla Bozḳurd (884-921/1479-1515) marks the period during which the Dhu 'l-Ḳadr principality moved from the Egyptian into the Ottoman orbit. This period is of special importance in the history of Marʿash, for it was ʿAlāʾ al-Dawla Beg who established the capital of his principality in this town, after Elbistan, the previous seat of the dynasty, had been sacked and destroyed by the Ṣafawid Shāh Ismāʿīl I in 913/1507. A construction programme of some importance was undertaken by the ruling dynasty. ʿAlāʾ al-Dawla Beg's name appears most frequently in this context, but certain structures were equally erected in the name of his wife Shams-Māh (also Shams) Khātūn and other members of the ruling family. Among the surviving buildings, one might name the Ulu Djāmiʿ, the Tash *madrasa* with the grave of (possibly) ʿAlāʾ al-Dawla's son Meḥmed, the Khaznadārlī Djāmiʿ, the mausoleum of Iḳlīme Khātūn and the Khātūniyya Djāmiʿ. In an Ottoman list of pious foundations compiled before 972/1564-5, we also find a Djāmiʿ-i Sulaymān Beg, which had possibly been established by ʿAlāʾ al-Dawla's father (846-58/1442-54), and which Ewliyā seems to ascribe to Sultan Ḳānūnī Sulaymān. This foundation is not mentioned in the secondary literature of the 20th century, and the same applies to the mosque of Shādī Beg, although Ewliyā knew of its existence; this latter foundation had been established at an unknown date. During the later years of the 10th/16th century, a *madrasa* called the Maktūbiyya also flourished in Marʿash, but nothing is known about the founder.

According to an Ottoman *idjmāl* register going back

to the early years of Ḳānūnī Sülayman, Marʿash at the time also possessed three *zāwiyas*. However, in actual fact the number must have been greater, for a later register (before 972/1564-5) refers to six dervish foundations as having benefited from the Dhu 'l-Ḳadrlî rulers' generosity. Among the latter, the *zāwiya* of Čomaḳ Baba continued to function at least until the late 12th/18th century, and during this latter period of its existence was inhabited by Bektāshī dervishes.

The Ottoman tax registers of the 10th/16th century also refer to the existence of a covered market or *bedestān*, which had been constructed by ʿAlāʾ al-Dawla Beg. This latter ruler had also established a *kerbānsaray* and an *ārāsta*. It is possible that the last-named building survived in one of the three covered streets, lined with shops, which still exist, or until recently existed, in the centre of Marʿash. In the early Ottoman period, further business structures were added, for it is very probable that Ferhād Pasha, who caused his rival ʿAlī Beg b. Shāhsuwār to be killed upon Sultan Ḳānūnī Sulaymān's order in 928/1522, is identical with the Ferhād Pasha who (at sometime before 972/1564-5) had a *ḥammām* and *kerbānsaray* constructed in Marʿash. The citadel, which is said to go back to Hittite times, was according to Ewliyā Čelebi adorned with an inscription bearing the date 915/1509-10 (*sic*) and bore the name of Sultan Ḳānūnī Sulaymān (926-74/1520-66), who had ordered a complete reconstruction of the fortress.

(Suraiya Faroqhi)

al-**MARʿASHĪ** [see nūr allāh al-shushtarī].

MARʿASHIS, a line of *sayyids* originally from Marʿash [*q.v.*], whose *nisba* became well-known on account of their dynasty which dominated Māzandarān [*q.v.*] for most of the period between 760/1358-9 and the second half of the 10th/16th century. The Ṣafawids [*q.v.*] were related to them by matrimonial alliances (see Table B and below, 2). Their descendants, offspring of the various branches of the Marʿashīs, have continued to bear this *nisba* by which they are generally known (see below, 3). It was also attributed over the course of the centuries to various *sayyid* and non-*sayyid* individuals. Concerning the *laḳab* Marʿash, another explanation of the origin of the Marʿashi *sayyids*, see Table A.

1. The dynasty of the Marʿashī *sayyids* of Māzandarān. (a) The first phase. Founded by Sayyid Ḳawām al-Dīn al-Marʿashī, known by the name of Mīr-i Buzurg, this dynasty is sometimes called *Silsila-yi mulūk-i ḳawāmiyya-yi marʿashiyya* (*Rayḥānat*, iii, 323). Its historical context is the vacuum of political power which—in post-Ilkhānid Iran—enabled *sayyids* and dervishes to impose their influence. Ḳawām al-Dīn traced his lineage to the Imām ʿAlī Zayn al-ʿĀbidīn. However, the connection between his Marʿashī ancestors and Zayn al-ʿĀbidīn remains unclear (see M. Sutūda, ed., *TDG, Muḳaddima*). His genealogy, as featured in the work of Ẓahīr al-Dīn (*TTRM*) has been disputed by ʿA. Shāyān, who established an "exact" genealogy with which the biographers of the Marʿashī family concur. A genealogy, different from the two afore-mentioned. seems to have been current in the Ṣafawid period (see Table A.).

The family of Mīr-i Buzurg resided at Dābū, a village near Āmul [*q.v.*] where he studied religious sciences. He made a pilgrimage to the tomb of the Imām ʿAlī b. Mūsā al-Riḍā at Mashhad [*q.v.*] and

Table A
THE LINE OF MĪR ḲAWĀM AL-DĪN MARᶜASHĪ "MĪR-I BUZURG"

After:

Ẓahīr al-Dīn Marᶜashī[1]	*The Ṣafawid sources*[3]	*ᶜAbbās Shāyān*[5]
Imām ᶜAlī Zayn al-ᶜĀbidīn	Zayn al-ᶜĀbidīn	Zayn al-Ābidīn
Ḥusayn al-Aṣghar	Ḥusayn al-Asghar	al-Ḥasan Abū Muḥammad
Ḥasan al-Marᶜashī	Ḥasan	Muḥammad Abu 'l-Karām
Muḥammad	Muḥammad al-Akbar	ᶜAbd Allāh Abū Muḥammad
Ābd Allāh	ᶜAbd Allāh	ᶜAlī al-Marᶜashī Abu 'l-Ḥasan
ᶜAlī	Ālī al-Marᶜash[4]	al-Ḥusayn Abū ᶜAbd Allāh
Ḥusayn	Ḥasan	ᶜAlī Abu 'l-Ḥusayn
ᶜAbd Allāh	ᶜAlī	Abū Hāshim

(3) *Djahān-ārā*, 88; Yazdī, fol. 2a; Shūshtārī, *Madjālis*, ii, 380.
(4) The *laḳab* al-Marᶜash (a kind of pigeon) is said to have been given in the first place to ᶜAlī Marᶜash, the eponym of the Marᶜashi *Sayyids* (*Rayḥāna*, iv, 10). In Yazdī, ᶜAlī al-Marᶜash and his son Ḥasan are made into a single "al-Marᶜash".
(5) *TTRM. Muḳaddima* (approved by the Āyatallāh Marᶜashī-Nadjafī, *TTRM*, ed. Tasbiḥī, *Muḳaddima*, 39-40, with typographical errors).

frequented the *khānḳāh* of the *sayyid* ᶜIzz al-Dīn Sūghandī, one of the three influential Ṣūfī *shaykhs* of Khurāsān, disciple of Shaykh Ḥasan Djūrī, founder of the Shaykhiyya-Djūriyya *ṭarīḳa*, promotor of the Sarbadār movement in Khurāsān (see J. Aubin, in *Studia Iranica*, v [1976], 217-24). Having obtained the *idjāzat* of ᶜIzz al-Dīn, Ḳawām al-Dīn founded his own *khānḳāh* at Dābū where he attracted numerous disciples. The control of Ṭabaristān-Māzandarān was then the object of keen competition between local powers. After the reconciliation concluded between the Kiyā-i Čulāb and the Kiyā-i Djalāl, in 750/1349, Fakhr al-Dawla Ḥasan, last representative of the third branch of the Bāwandids [*q.v.*], was assassinated by a son (or by two sons?) of Kiyā Afrāsiyāb, former *sipahsālār* and brother-in-law of Fakhr al-Dawla, eponym of the Kiyā-i Čulāb who were also known as Afrāsiyābids [*q.v.*]. Having thus obtained a precarious control over Āmul and Māzandarān, Kiyā Afrāsiyāb attempted to strengthen his popularity by becoming a disciple of Mīr-i Buzūrg, who conferred on him the *laḳab* of *shaykhī*. But the other disciples of Mīr-i Buzurg harassed Afrāsiyāb and his followers. Afrāsiyāb imprisoned Mīr-i Buzūrg, but the latter was freed by his furious disciples. Having appealed in vain for the aid of the Kiyā-i Djalāl, Afrāsiyāb was defeated at Djalālakmār-parčīn, near Dābū, by three hundred dervishes under the command of Kamāl al-Dīn b. Ḳawām al-Dīn (760/1358-9). Afrāsiyāb and four of his sons were killed; another, Muḥammad, the assassin of Fakhr al-Dawla, was killed by the *malik* of Rustumdār; another, Sayf al-Dīn, died of *ḳūlandj*, i.e. some abdominal illness (an act attributed to the supernatural powers of Mīr-i Buzurg); the only survivor was an infant, Iskandar-i Shaykhī (according to Rabino, in *JA* [1943-5], 236, three sons were killed at Djalālakmār-parčīn and ᶜAlī in the same battle as Muḥammad: *TTRM*, 250 ff.; Mahdjūrī 15 ff.). The Marᶜashīs then turned on the Kiyā-i Djalāl, Fakhr al-Dīn and Vishtāsp, who held respectively Sārī and Tūdjī (a fortress near Bārfurūsh-dih = Bābul). After the first battle, Ḳawām al-Dīn and Kamāl al-Dīn entered Bārfurūsh-dih as victors. With some former followers of Afrāsiyāb, Vishtāsp assassinated ᶜAbd Allāh b. Ḳawām al-Dīn. Fakhr al-Dīn and four of his sons perished in a battle near Bārfurūsh-dih. Vishtāsp took refuge with his family and close associates in the fortress of Tūdjī, which was reduced by the Marᶜashīs after a long siege, in the course of which Vishtāsp and his seven sons were killed (763/1362). Kamāl al-Dīn married the daughter of Vishtāsp by the daughter of Ḥasan Fakhr al-Dawla Bāwand, grandmother of the historian Ẓahīr al-Dīn (see below, 2). Then he undertook the restoration and enlargement of Sārī.

From the outset, Mīr-i Buzurg had indicated his intention to devote himself exclusively to pious activities. He entrusted the government of Māzandarān to his sons, and it was only in a non-combattant capacity that he accompanied them on their expeditions. The elder son, ᶜAbd Allāh (see above) having refused to assume power, this was exercised in the name of Mīr-i Buzurg by his second son Kamāl al-Dīn, who shared responsibilities with his brothers. In 763/1361-2, he entrusted the government of Āmul to Riḍā al-Dīn (*TTRM*, 255 ff.). With control of Āmul, Bārfurūsh-dih and Sārī thus assured, the Marᶜashīs extended their power over Sawādkūh and Fīruzkūh, which were held by the representatives of the last Bāwandids. In the conquest of the fortress of Fīrūzkūh, and seizure of the treasury of Fakhr al-Dawla, they were assisted by their allies, the Malātī *sayyids* of Gīlān (*TTRM*, 261 ff.). The conquest of Rustamdār as far as Nātil-rustāḳ was the operation of Sayyid Fakhr al-Dīn (782/1380-1). His conquest of Kudjūr having given to the Marᶜashis control over the whole of Māzandarān, Kamāl al-Dīn entrusted Rustamdār to him. Henceforward, he undertook to subdue the fortresses of Kudjūr, of Kalā-rustāḳ and of Nūr; he conquered Ṭāliḳān and Lawāsān, as well as part of Lārīdjān fortresses of Kuhrūd or Kahrūd in Dayla-rustāḳ, from Lawandar to Rayna (*TTRM*, 271 ff.). Fakhr al-Dīn took possession of Ḳazwīn—then being contested between Ādharbāydjān and ᶜIrāḳ-i ᶜAdjam—a brief control interrupted by the death of Mīr-i Buzurg (see below). Subsequently, he reoccupied the town, levied taxes

there, went to Ṭāliḳān, and then pillaged Alamūt (*TTRM*, 290 ff.).

At the end of a long retreat to Bārfurush-dih, Mīr-i Buzurg died of an illness (781/1379). For a period of twenty years, by his charismatic leadership, he controlled Māzandarān through his sons, among whom there was then a fair degree of unity (four of his fourteen sons died in infancy). Kamāl al-Dīn held Sārī and had entrusted Āmul to Riḍā al-Dīn, Rustamdār to Fakhr al-Dīn and Ḳaraṭughan to Sharaf al-Dīn. The power of the Mar^c^ashīs extended to the west as far as the frontiers of Ḳazwīn; with their support, the Malāṭī *sayyids* controlled a large part of Gīlān. But their position was threatened in the east by Mīr ^c^Imād al-Dīn, founder of the small dynasty of the Murtaḍā'ī *sayyids* of Hazārdjarīb and in Astarābād by Amīr Walī, who attempted to have Kamāl al-Dīn assassinated. The latter conquered Astarābād, where he left a garrison (781/1379). Fearing lest Amīr Walī would join forces with Tīmūr Lang, he restored Astarābād to him; similarly, he handed over Rustamdār to Malik Ṭūs (794/1391-2; *TTRM*, 293 ff.; Mahdjūrī, 23 ff.). But soon after Tīmūr's conquest of Khurāsān and Harāt, Iskandar-i Shaykhī, younger son of Afrāsiyāb, who had campaigned in Khurāsān, joined forces with him. Twice, Tīmūr took possession of Astarābād. The second time, he appointed as governor there Pīrak, with whom Kamāl al-Dīn maintained amicable relations. Kamāl al-Dīn also sent his son Ghiyāth al-Dīn to Tīmūr on three occasions with suitable presents, in the hope of persuading him to protect the Mar^c^ashīs from persecution by Iskandar. But animosity towards the Mar^c^ashīs (Imāmī and Rāfiḍī Shī^c^īs) was rife among the predominantly Sunnī military chieftains of Tīmūr. It was fostered in the west, in Rustamdār, by Malik Ṭūs and in the east, in Astarābād, by Pīrak, who, inwardly, supported Iskandar-i Shaykhī (Mahdjūrī, 27 ff.).

Tīmūr had given orders to open up the route through the forests of Māzandarān, and he sent Ghiyāth al-Dīn, held as a hostage, with his vanguard force. Kamāl al-Dīn had a fortified camp built on a promontory in the lagoon of Māhānasar. Besides some property concealed at Sārī, the greater part of the wealth of Māzandarān, including that of merchants, foreigners and dignitaries, as well as funds seized from the Čulābīs, Djalālīs, Sawādkūhīs, etc., was hoarded at Māhānasar. Informed of Tīmūr's advance, Kamāl al-Dīn and his supporters left Māhānasar and took up a position at Ḳaraṭughan, where the confrontation with the Tīmūrid forces took place on 6 Dhu 'l-Ḳa^c^da 794/24 September 1392. Although inflicting losses, the Mar^c^ashīs were defeated by numerical superiority and withdrew to Māhānasar. after two months and six days of siege, Kamāl al-Dīn sent *^c^ulamā'* to Tīmūr to request *amān* or quarter for himself and his associates. They left the fortress of Māhānasar on 22 Ramaḍān 795/2 August 1393 and escaped persecution at the hands of Iskandar-i Shaykhī due to the efforts of Malik Ṭūs, who interceded with Tīmūr on their behalf. All the non-*sayyid* occupants of Māhānasar were executed (*TTRM*, 300 ff.).

Tīmūr is said to have obtained the most important spoils ever conceded to him by a king. Massacres and pillage continued in all the urban centres from Māhānasar to Āmul as well as at Sārī, to where the *sayyids* were brought. He then despatched them to Khwārazm and to Transoxiana by sea and river routes, and compelled them to reside in these mutually isolated places. Before embarkation, three *sayyids* were able to take refuge in Gīlān: ^c^Abd al-Muṭṭalib b. Riḍā al-Dīn, ^c^Abd al-^c^Aẓīm b. Zayn al-^c^Ābidīn and ^c^Izz al-Dīn Ḥasanī Rikābī. Two sons of Kamāl al-Dīn (^c^Alī and Ghiyāth al-Dīn) were in the service of Tīmūr, who entrusted Sārī to Djamshīd Ḳarīn Ghawrī and Āmul to Iskandar-i Shaykhī. In spite of their efforts towards repopulation and economic restoration, these towns did not regain their former prosperity. Iskandar destroyed the mausoleum of Mīr-i Buzurg at Āmul, which numerous inhabitants left for Sārī. ^c^Izz al-Dīn Rikābī, returning from Gīlān, was pursued and killed with his five sons. Iskandar accompanied Tīmūr in his campaigns, before leaving him in Ādharbāydjān and setting out for Āmul (802/1399-1400). Subsequently, he rebelled and fortified the fortress of Fīrūzkūh, which he entrusted to his son Ḥusayn Kiyā. ^c^Alī and Ghiyāth al-Dīn Mar^c^ashī took part in Tīmūr's operations against Iskandar (805/1402-3), whose son ^c^Alī Kiyā, coming to his rescue, was captured. Overtaken in the forest, Iskandar fought valiantly against the troops of Hazārasf Muḥammad and was killed at Shīr-rūd-dūhazār. His severed head was displayed to his sons, the prisoners ^c^Ali Kiyā and Ḥusayn Kiyā, who surrendered the fortress of Fīrūzkūh. Both sons were pardoned by Tīmūr, who then assigned the governorship of Āmul to ^c^Alī b. Kamāl al-Dīn, with his brother Ghiyāth al-Dīn as his deputy, and promised him the liberation of the *sayyids* upon his return to Transoxiana. At Sārī, Djamshīd Ḳārīn died and was replaced by his son Shams al-Dīn. who did his utmost to discredit Sayyid ^c^Alī (*TTRM*, 313 ff.; Mahdjūrī, 29 ff.).

(b) The second phase: return to power and decline. On the death of Tīmūr (Sha^c^bān 807/February 1405), four sons of Mīr-i Buzurg were living in Transoxania (Zayn al-^c^Ābidīn, ^c^Alī, Yaḥyā and Sharaf al-Dīn). Kamāl al-Dīn and Fakhr al-Dīn had died at Kāshghar and three others (Riḍā al-Dīn, Ẓāhir al-Dīn and Naṣīr al-Dīn) in Transoxiana. The four surviving sons travelled with other *sayyids* to Harāt for an audience with Shāhrukh, who permitted them to return to Māzandarān. At Astarābād, Pīrak did not believe in the validity of their *idjāza* and detained them in order to protect Shams al-Dīn Ḳārin Ghawrī. The latter was then attacked and killed by dervishes, who informed ^c^Alī b. Kamāl al-Dīn of their intention of marching on Astarābād. But Pīrak freed the *sayyids* who, joined by numerous partisans, entered Sārī in triumph. Having controlled Āmul for three years, ^c^Alī b. Kamāl al-Dīn (^c^Alī Sārī) took over the government of Sārī and of Mazandarān (809/1406-7 to 812/1409-10). He retained Yaḥyā and Sharaf al-Dīn at Sārī and entrusted Bārfurūsh-dih to Ghiyāth al-Dīn. The descendants of Riḍā al-Dīn wanted to install ^c^Abd al-Muṭṭalib as ruler of Āmul, but ^c^Ali Sārī preferred Ḳawām al-Dīn b. Riḍā al-Dīn (Ḳawām al-Dīn II), replaced in 810/1407-8 by ^c^Alī b. Ḳawām al-Dīn (^c^Alī Āmulī) who governed equitably (*TTRM*, 317 ff.; ḤS, iii, 347; Mahdjūrī, 33 ff.). Ghiyāth al-Dīn sowed discord between ^c^Alī Āmulī and ^c^Alī Sārī who, defeated by a coalition of elements from Rustamdār and from Hazārdjarib (Amīr ^c^Izz al-Dīn and his son-in-law Sayyid Murtaḍā) was forced to flee to Astarābād. His only ally in this business was his brother Naṣīr al-Dīn, whom he sent to Harāt to anticipate Shāhrukh.

After their victory, the people of Āmul set Murtaḍā b. Kamāl al-Dīn in control at Sārī where, in spite of the threats of Shāhrukh, he continued to hold sway for almost a year (812-13/1409-10) before being deposed by the populace on account of his drinking habits. ^c^Alī Sārī regained control of Sārī and of Māzandarān

Table B

SIMPLIFIED GENEALOGICAL TABLE OF THE MARʿASHĪ DYNASTY(1)

- Kawām al-Dīn I b. al-Ṣādiḳ(2) d. 781/1379
  - ʿAbd Allāh
  - Kamāl al-Dīn I d. 801/1379
    - ʿAlī Sārī d.820/1417-8
      - Murtaḍā d. 837/1433
        - Muḥammad d. 856/1452
          - ʿAbd al-Karīm I d. 865/1461
            - ʿAbd Allāh I d. 872/1467-8
              - ʿAbd al-Karīm II (916/1510-1)
                - Amīr Shāhī (938/1531-2)
                  - Murād I (984/1576-7)
                    - Mīrzā Khān Maḥmūd (986/1578-9)
                      - Murād II
                - Maḥmūd

    - Ẓahīr al-Dīn
      - Faḍl Allāh
  - Sharaf al-Dīn

Notes to Table B

(1) When the death dates are too uncertain, the dates of the end of the reign are shown between parentheses.

(2) Ḳawām al-Dīn had 14 children, of whom four died at an early age.

(3) Grandson of Kiyā Vishtāsp Djalal by his mother's side, born of the daughter of Fakhr al-Dawla Bāwand.

(814-20/1411-17). Ghiyāth al-Dīn took refuge at Āmul under the protection of ᶜAlī Āmulī and then at Rustamdār under the protection of Malik Gayūmarth, and finally returned to Bārfurūsh-dih with his son Zayn al-ᶜĀbidīn. Aided by the sons of Riḍā al-Dīn, ᶜAlī Sārī expelled ᶜAlī Āmulī from Āmul; the latter took refuge at Rustamdār and then at Gīlān under the protection of Sayyid Riḍā Kiyā (*TTRM*, 321 ff.). ᶜAlī Sārī sent his brother Naṣīr al-Dīn to Harāt with *pīshkash* or presents. Under the pretext of the agitation maintained by ᶜAlī Āmulī and his supporters over a period of two years, he refused to pay the annual tribute and expelled the envoy of Shāhrukh, having cut off his beard. By chance, the punitive expedition mounted by Shāhrukh was obliged to make a detour towards Samarḳand, at which time, on the instructions of Naṣīr al-Dīn, who was being held hostage, Murtaḍā b. Kamāl al-Dīn came to offer apologies to Shāhrukh (816/1413). This same year, when ᶜAlī Sārī was suffering from an attack of gout, Malik Gayūmarth (of Rustamdār) brought ᶜAlī Āmulī back from Gīlān and sent him to Āmul with an army in pursuit of Ḳawām al-Dīn II.

Once returned to power, ᶜAlī Sārī decided to come to terms with Malik Gayūmarth, to whom he entrusted some territories (Namā-rustāḳ. Daylā-rustāḳ and Tartiya-rustāḳ). The union was sealed by matrimonial alliances (his son Murtaḍā married the daughter of Gayūmarth; the daughter of his nephew Ḳawām al-Dīn II (Āmulī) married Kāwūs b. Gayūmarth). After a temporary refuge at Tunukābun, ᶜAlī Āmulī regained Āmul from Ḳawām al-Dīn II (*TTRM*, 331 ff.).

Before dying, ᶜAlī Sārī named his son Murtaḍā as successor (820/1417). His brother Naṣīr al-Dīn promised to support the legitimacy of Murtaḍā, which Ghiyāth al-Dīn did not accept. Thus Naṣīr al-Dīn installed his nephew at Sārī (820-37/1417-33). He obtained from ᶜAlī Āmulī a guarantee not to rebel and strengthened ties with Malik Gayūmarth. But when Murtaḍā took power into his own hands, he made strenuous efforts to eliminate his uncle Ghiyāth al-Dīn and his two sons (whom he held as hostages), using for this purpose a former officer of Ghiyāth al-Dīn, Iskandar Rūzafzūn, whom he had made his *sipahsālār*. Disapproving of this conduct, Naṣīr al-Dīn left Murtaḍā. Prompted by Iskandar, Murtaḍā sent pursuers after Naṣīr al-Dīn, who reached Harāt by way of Čulāw, Sawādkūh and Dāmghān. He returned with Shāhrukh's army and a contract for the taxation of Māzandarān, but Murtaḍā made a higher bid and retained Māzandarān. After a fierce battle, Naṣīr al-Dīn was defeated by Murtaḍā and levies (*čarīk*) from Rustamdār. He was forced to flee to Nūr by way of Lāridjān, then to Nātil-rustāḳ, and took up residence in the region of Rūdsar in Gīlān. Murtaḍā expelled ᶜAlī Āmulī and Naṣīr al-Dīn tried in vain to recapture Āmul. ᶜAlī Āmulī returned to Tunukābun, and Naṣīr al-Dīn to Rūdsar (824/1421). After a further attempt, ᶜAlī was wounded and died (825/1421-2). Naṣīr lived as a beneficiary of the ruler of Lāhidjān (Sayyid Riḍā Kiyā died in 829/1425-6 and was replaced by his brother Sayyid Ḥusayn Kiyā) until his death in 836/1433. The same year, Ghiyāth al-Dīn died in prison at Sārī (*TTRM*, 336 ff.).

Malik Gayūmarth sought to extend his domain towards Tunukābun and Daylamistān, and Murtaḍā was thus drawn, with his ally Amīr Ilyās, governor of Ḳūm, into a conflict from which he emerged victorious (832/1428-9). After governing firmly and fairly, Murtaḍā died (837/1433) and was succeeded by his son Shams al-Dīn Muḥammad (837-56/1433-52). Although a drinker, the latter was a decent and peace-loving man, regularly paying the annual revenue to Shahrūkh. On the death of Ḳawām al-Dīn II, the governorship of Āmul passed to his son Kamāl al-Dīn, who conscientiously paid tribute to Sārī. But Muḥammad had five sons, including two favourites, ᶜAbd al-Karīm and Kamāl al-Dīn, to whom he wanted to award governorships. His *sipahsālār* Bahrām Rūzafzūn suggested that Kamāl al-Dīn and the other descendants of Riḍā al-Dīn should be deprived of control of Āmul. Muḥammad expelled Kamāl al-Dīn and established ᶜAbd al-Karīm at Āmul, which was soon retaken by Kamāl al-Dīn with the aid of the people of Tunukābun. Muḥammad then sought to install Murtaḍā b. Riḍā al-Dīn (uncle of Kamāl al-Dīn) at Āmul. When Murtaḍā was put to flight by Kamāl al-Dīn in alliance with Ẓahīr al-Dīn b. Naṣīr al-Dīn, Muḥammad allied himself with Amīr Hindūka of Astarābād. This coalition expelled Kamāl al-Dīn and Ẓahīr al-Dīn, who sought refuge with Malik Gayūmarth at Rustamdār and then at Gīlān. Kamāl al-Dīn proceeded to regain from his uncle control of Āmul, which he retained until his death (849/1445-6). Murtaḍā (a pious and just man) then returned from exile in Rustamdār and was established in power at Āmul by the inhabitants and by dervishes (*TTRM*, 350 ff.).

On the death of Shāhrukh (850/447) the Tīmūrid Abu 'l-Ḳāsim Bābur b. Baysunghur undertook the conquest of Khurāsān and fought with Muḥammad for control of Māzandarān. In spite of the losses which he inflicted, Muḥammad was obliged to come to terms with Bābur, and gave him his daughter in marriage. Subsequently, he was forced to confront him again and was killed by one of his own officers acting on behalf of Babūr who, with the murder of his brother Muḥammad, controlled Khurāsān (Mahdjūrī, 465-6, according to *MS* and *RS*).

On the death of Muḥammad (865/1452), his son ᶜAbd al-Karīm was held hostage at Harāt (in the army of Djahān Shāh Ḳara-Ḳoyunlu, according to *ḤS*, iii, 352). A month after the temporary enthronement of his son ᶜAbd Allāh, ᶜAbd al-Karīm I arrived to take over the government of Sārī and of Māzandarān (856/1452 to 864/1459-60). Soon afterwards, Murtaḍā died and was replaced at Āmul by his son Shams al-Dīn, an incompetent drunkard. To obtain payment of the revenue, Bābur was obliged to send an expedition against ᶜAbd al-Karīm, who experienced difficulties with rival families claiming to be his *sipahsalar*: the Bābulkānī *sayyids* (ᶜAzīz and later Shams al-Dīn) to the east of Sārī, and Bahrām b. Iskandar Rūzafzūn to the west of Sārī. Killed at the instigation of Shams al-Dīn Bābulkānī, Bahrām was replaced by his brother ᶜAlī Rūzafzūn. ᶜAbd al-Karīm entrusted Āmul to Asad Allāh b. Ḥasan b. Riḍā al-Dīn (*TTRM*, 367 ff.).

After the death of Bābur (861/1457), Sulṭān Ibrāhim and Maḥmūd competed for control of Māzandarān. Out of patience with the tyranny of Amīr Bābā Ḥasan, the Tīmūrid governor of Astarābād, Abd al-Karīm and the leading citizens of Māzandarān appealed to Djahān Shāh Ḳara Ḳoyunlu (d. 872/1467) to come and intimidate them (Mahdjūrī, 48, according to *MS* and *RS*). But the Tīmūrid took control of Khurāsān (863/1459), then, on two occasions, of Māzandarān which he gave in *suyūrghāl* to his son Maḥmūd. ᶜAbd Allāh b. ᶜAbd al-Karīm (ᶜAbd Allāh I) succeeded his father (865/1461 to 872/1467-8). Under this ruler, an ineffectual man and a drunkard, the Rūzafzūn and the Bābulkānī carried on their vendettas. The Bābulkānī replaced ᶜAbd

Allāh I with his uncle Kamāl al-Dīn even more of a drunkard and more ineffectual than this nephew, who returned to power. ʿAbd Allāh I had another uncle, Mīr Ḳawām al-Dīn, a simple and virtuous man who went to live in Āmul, then governed by Asad Allāh. As he gained influence, ʿAlī Rūzafzūn made him return to Sārī. But disorder erupted in Māzandarān following the elimination of ʿAlī Rūzafzūn by the Bābulkānī *sayyids*. ʿAbd Allāh I eliminated his rivals. He had his cousin Murtaḍā castrated and put his uncle Kamāl al-Dīn in prison where he died. Zayn al-ʿĀbidīn avenged his father by killing ʿAbd Allāh, whose son and heir, ʿAbd al-Karīm was only four years old and lived in the *urdū* of Abū Saʿīd. The majority of leading citizens pledged alliance to Zayn al-ʿĀbidīn, but the Pāzavārī *sayyids* took pains to overthrow him. The supporters of ʿAbd Allāh attempted to enthrone his son ʿAbd al-Karīm, whom they brought back from Ādharbāydjān, but when Asad Allāh refused them entry to Āmul, Ābd al-Karīm was taken by his mother to the court of Ḥasan Beg Aḳ Ḳoyunlu (Uzun Ḥasan [*q.v.*]) with some *pishkashs*. Ḥasan Beg appointed one of his officers, Shiblī, who, with levies from Gīlān, Rustamdār and Māzandarān, established ʿAbd al-Karīm at Sārī. But Zayn al-ʿĀbidīn retained allies, including Sayyid Haybat Allāh Bābulkānī, who betrayed ʿAbd al-Karīm and joined him. Hiding in the forest, he defied Shiblī's confederation and recaptured Sārī, then helped Ibrāhīm to drive his uncle Asad Allāh from Āmul. But on the orders of Malik Djahāngīr b. Kāwūs Pādūspānī, he reinstated Asad Allāh at Āmul. In the interval before acceding to power, ʿAbd al-Karīm lived at Gīlān under the protection of Kār Kiyā Muḥammad (end of 878/1474) and spent seven months at Ḳum as the guest of Ḥasan Beg. Sayyid Ḥasan, one of the sons of Asad Allāh, left Āmul and went to Sārī to serve Zayn al-ʿĀbidīn, who ordered the detention of Asad Allāh and his younger son Ḥusayn and installed Ḥasan at Āmul. Asad Allāh was imprisoned at Bārfurūsh-dih, but was freed by the inhabitants and, when reinstated at Āmul, urged ʿAbd al-Karīm to join him in opposing Zayn al-ʿĀbidīn. But the latter attacked Asad Allāh at night, had him executed and regained temporary control of Sārī (880/1476). ʿAbd al-Karīm went to Āmul and then, with numerous supporters, took Sārī and control of Māzandarān, but was expelled once more by Zayn al-ʿĀbidīn and was forced to take refuge for the third time at Lāhīdjān under the protection of Sayyid Muḥammad and then of his son ʿAlī Kiyā, who sent him back to Māzandarān with a force commanded by Sayyid Ẓahīr al-Dīn Marʿashī. Zayn al-ʿĀbidīn fled to Sawādkūh and sent his brother Shams al-Dīn to appeal to Yaʿḳūb Beg Aḳ Ḳoyunlu, who sent an army to confront Mīrzā ʿAlī at Gīlān and another army to Māzandarān. Ẓahīr al-Dīn installed ʿAbd al-Karīm at Sārī, but the latter fled once more to Gīlān at the approach of the army of Yaʿḳūb Beg. In the disorder which ensued, a fiscal officer of Yaʿḳūb Beg was killed (888/1483) when he tried to establish himself as independent sovereign at Sārī (*TG*, 443-4; Woods, 147, n. 38). The continuing agitation led to an Aḳ Ḳoyunlu invasion of Māzandarān and to a threat posed to ʿAlī Kiyā, required to pay a heavy indemnity, and to his protégé ʿAbd al-Karīm, who was extradited to Tabriz. Even after his annexation of Māzandarān, control remained difficult for Yaʿḳūb Beg (Woods, 147, n. 40).

On the death of Zayn al-ʿĀbidīn, his brother Shams al-Dīn succeeded him at Sārī (892/1486-7 to 905/1499-1500). Further bloody battles took place between ʿAbd al-Karīm with the army of Gīlān (reinforced by Malik Bisutūn) and the army of Sārī. Temporally ousted, Shams al-Dīn regained Sārī through the good offices of his *sipahsālār*, Āḳā Rustam Rūzafzūn, who captured twelve *sardārs* of the army of Gīlān (*TKh*, 48 ff.). Faced by the unwillingness of Shams al-Dīn and Āḳā Rustam to return the prisoners, ʿAlī Kiyā made his way towards Māzandarān (899/1493-4), and was joined by forces from Tunukābun, Rustamdār and Fīrūzkūh. These forces linked up at Tunukābun with an army from Astarābād sent by Badīʿ al-Zamān Mīrzā. In spite of initial successes, the Gīlān confederacy was obliged to accept a compromise: Sārī and Āmul reverted to Shams al-Dīn and Bārfurūsh-dih to ʿAbd al-Karīm (*TKh*, 65 ff.).

After the death of Shams al-Dīn, Āḳā Rustam enthroned the son of the former, Mīr Kamāl al-Dīn (905/1499-1500 to 908/1502-3). ʿAbd al-Karīm made a further attempt, with the army of Gīlān, to regain Māzandarān. Defeated by Rustam Rūzafzūn, he went to Harāt, allied himself with the Tīmūrid Ḥusayn Bāyḳarā, and returned several times with the army of Khurāsān. Finally, Rustam (initially governor of Sawādkūh) assigned to him half of the revenue of Āmul and then, having eliminated Kamāl al-Dīn, firmly controlled Māzandarān and maintained good relations with the neighbouring powers. He admired Shaybak Khān Uzbek and died, it is said, when Shāh Ismāʿīl Ṣafawī sent him the latter's hand after killing him (*Ilčī*, 78-9, *AAA*, 38-9, tr. 62-3).

After the death of Rustam, ʿAbd al-Karīm was obliged to negotiate with his sons (Suhrāb and Muḥammad) and with the Ṣafawid power in order to regain a precarious control over Māzandarān (916/1510-11 to 932/1525-6). Having squandered his patrimony, Suhrāb attempted an alliance with ʿAbd al-Karīm who eliminated him. Compelled by the Ṣafawid power to share the government of Māzandarān with Muḥammad Rūzafzūn (who maintained amicable relations with the leading Ṣafawid dignitary Čūha Sulṭān Tekkelu), ʿAbd al-Karim regained his throne by force and subsequently reigned with benevolence and equity. A learned man, in spite of his stammer, he was eloquent and conversed with the *ʿulamāʾ*. He was protected by Shāh Ismāʿīl, whose commensal he was. But under Ṭahmāsp (1524-76), Čūha Sulṭān obtained the release of Muḥammad Rūzafzūn (imprisoned under Shāh Ismāʿīl) and established him at Sārī. Ābd al-Karīm returned to Bārfurūsh-dih, where he died at about 24 years old after an unsuccessful attack on Muḥammad.

The *sayyids* and leading citizens were divided into two groups regarding the succession, some favouring the son and heir designate Amīr Shāhī (932/1525-6 to 938/1531), others his brother Sulṭān Maḥmūd. Placed in power by one faction, Maḥmūd was quickly deposed and sought refuge with Muḥammad Rūzafzūn who eliminated him (*Ilčī*, 86). Amīr Shāhī led a licentious life, and delegated official business to Amīr ʿAlī Ḥusaynī who was soon eliminated by the partisans of Maḥmūd. Out of patience, the leading citizens turned towards Muḥammad Rūzafzūn. Others allied themselves with ʿAbd Allāh b. Sulṭān Maḥmūd. Amīr Shāhī joined Ṭahmāsp's retinue in Khurāsān, and Muḥammad Rūzafzūn had him assassinated on his return to Māzandarān, at Āhūsar (near Fīrūzkuh) by Muẓaffar Beg Turkamān. Muḥammad also eliminated some of the Marʿashī princes (Sulṭān Murād b. Mīr Shāhī, then in Gīlān, escaped the massacre), then dominated Māzandarān and maintained its security (939/1533-4 to 952/1545-

6; *Ilčī*, 86 ff.). He entrusted military affairs to Ḥasan-mat, a leading citizen of Sawādkūh, who appointed his brother Surhāb-mat to the *wikālat* of Āḳā Rustam, elder son of Muḥammad, and his other brother Gustahm to the governorate of Sawādkūh. In gradual stages, all districts of Māzandarān came under the control of his relations, but jealous parties impelled Muḥammad to depose Ḥasan-mat and his associates and disorder ensued. S̲h̲āh Ṭahmāsp sent an expedition (in 952/1545-6) to avenge the blood of Amīr S̲h̲āhī. But Muḥammad maintained a longstanding friendship with the *wakīl* Ḳāḍī D̲j̲ahān, who was able to pacify the S̲h̲āh. Mīr ᶜAbd Allāh b. Sulṭān Maḥmūd came to Rustamdār to avenge his father, and defeated the army commanded by Āḳā Rustam near Barfūrūsh-dih. Almost a year after this defeat, Āḳā Rustam died (*Ilčī*, 89 ff.).

After killing Farāmarz b. Muḥammad—who was in the Ṣafawid *urdū*—at the time of his father-in-law's death, and expelling Suhrāb, nephew of Muḥammad (enthroned at Sārī for a brief period)—ᶜAbd Allāh b. Māhmūd ruled over the whole of Māzandarān. Ignoring the demands of S̲h̲āh Taḥmāsp to pay tax and to restore the funds of Muḥammad Rūzafzūn, he was deposed in favour of Sulṭān Murād b. Amīr S̲h̲āhī who, under Muḥammad Rūzafzūn, was part of the retinue of S̲h̲āh Taḥmāsp at Ḳazwīn. Summoned to repay the funds of Muḥammad, ᶜAbd Allāh was tortured by Murād and put to death in the course of a collective execution involving *sayyids* and other leading citizens of Māzandarān (969/1561-2). Shortly afterwards, Murād died, leaving the government (in part, see below) of Māzandarān to his son "Mīrzā K̲h̲ān" Sulṭān Maḥmūd (*Ilčī*, 90-6). Two sons of ᶜAbd Allāh and their sister took refuge at the court of S̲h̲āh Taḥmāsp. The elder of the two, Ibrāhīm, died after consuming opium. Taḥmāsp married the daughter of ᶜAbd Allāh, K̲h̲ayr al-Nisāʾ Begum (Mahd-i ᶜUlyā), to his eldest son, Sulṭān Muḥammad K̲h̲udābanda (see below). Mīrzā K̲h̲ān was obliged to share the government of Māzandarān with the elder son of Muḥammad K̲h̲udābanda, Ḥasan Mīrzā, accompanied by a *wakīl*, Mīrak Dīv, whom he caused to be assassinated at the instigation of Mīr ᶜAzīz K̲h̲ān, another son of ᶜAbd Allāh (*AAA*, 210, 240, tr. 312-13, 358-9). After the death of S̲h̲āh Taḥmāsp (984/1576), control of Māzandarān reverted in entirety to Mīrzā K̲h̲ān, through the good offices of S̲h̲ams al-Dīn Dīv, but in order to avenge the death of her father ᶜAbd Allāh, Mahd-i ᶜUlyā had Mīrzā K̲h̲ān assassinated and replaced him with her uncle Mīr ᶜAlī K̲h̲ān b. Maḥmūd, who died soon afterwards (*AAA*, 210-11, 240-1; tr. 312-13, 358-9; on the campaigns of Mīr ᶜAlī K̲h̲ān against Mīrzā K̲h̲ān and his "reign", see Mīr Taymūr, 201-2; on the successors of ᶜAbd Allāh K̲h̲ān, see also *D̲j̲ahān-ārā*, 91-2; S̲h̲āyān, *Māzandarān*, 230-1).

In the chaos which ensued, Mahd-i ᶜUlyā was assassinated in her turn. While *ḳizilbās̲h̲* factionalism enfeebled Ṣafawid power, Māzandarān was the object of competition between various local potentates. After the death of Mīr ᶜAlī K̲h̲ān, his control was shared between Sayyid Muẓaffar Murtaḍāʾī (of Hazārd̲j̲arīb, d. 1005/1596-7) and Alvand Dīv, but the descendants of the various branches of the Marᶜas̲h̲ī family continued to struggle for power. Notable among the latter were Mīr Ḥusayn K̲h̲ān, cousin of Mīr ᶜAlī K̲h̲ān (Mīr Taymūr, 282-3) and especially Mīr Sulṭān Murād II b. Mīrza K̲h̲ān (*ibid.*, 316-17). This unstable situation persisted until annexation to the Ṣafawid crown (see below). At Iṣfahān, distant descendants of Mīr-i Buzurg were influential at the centre of Ṣafawid power (below, 2).

Political, religious and cultural activity. In pre-Ṣafawid Iran, the Marᶜas̲h̲ī movement represents an interesting case of political aspirations from which "Mahdism" is apparently absent. Unlike the militant messianism professed by the "S̲h̲īᶜī republic" of the Sarbadārs of Sabzavār (1338-81), it remains, although S̲h̲īᶜī, within the framework of Ṣūfism (Arjomand, 68-9, 83; on the Marᶜas̲h̲īs in the context of "popular" movements, see Petrushevsky, *Islām dar Īrān*, tr. K. Kis̲h̲āvarz, Tehran 1354, 379-80). Few indications are available, however, as to the doctrine of the Marᶜas̲h̲īs between the 8th/14th and 10th/16th centuries, preoccupied as they were with the extension or defence of their power (very few theological or literary works have survived, see below). Their immunity as *sayyids* saved them from the extermination inflicted by Tīmūr on the Sarbadārs and other local potentates, but the charisma enjoyed by the founders—Mīr-i Buzurg and his sons—suffered from the erosion of power.

During the "second phase", after the death of Tīmūr, their descendants divided into rival groups competing for control of Sārī, Āmul, Bārfurūs̲h̲-dih and the frontier zones (in the east, Ḳaraṭug̲h̲an; in the west, Rustamdār; in the south, the foothills of the mountains) which, with Gīlān, often provided refuges for claimants temporarily deprived of power. Control of Sārī, entailing that of Māzandarān, was the most hotly-contested. Essentially, it belonged to the descendants of Kamāl al-Dīn, while Āmul was controlled in the 8th/14th-9th/15th centuries by Riḍā al-Dīn and his descendants. But claimants from both branches remained in a state of constant rivalry.

Limited to the east by Tīmūrid control of Astarābād, the influence of the Marᶜas̲h̲īs was more easily extended on the side of their allies in Gīlān, especially at Lāhīd̲j̲ān [*q.v.*], where they assisted Sayyid ᶜAlī Kiyā to establish himself as master of Biyā-pīs̲h̲ and to extend his control as far as Ḳazwīn, Ṭārum and S̲h̲amīrān. The rivalries between claimants were complicated by the fact that some were supported by contemporary powers (Tīmūrids, Ḳara Ḳoyunlu, Aḳ Ḳoyunlu and Ṣafawids), while others asserted to varying degrees a refusal of allegiance or independence. Increasingly threatened by local powers, they sought alliances and even, after the end of the 8th/14th century, marriages with influential families (Kiyā-i D̲j̲alāl, Kār Kiyā, Pāzavārī, Rustamdārī, etc.). Eclipsed in their domains by the Rūzafzūn of Sawādkūh in the early 10th/16th century, the Marᶜas̲h̲īs were in no position to compete with the increasing power of the Ṣafawids. It was another S̲h̲īᶜī power, that of Amīr Ḥusayn Kiyā Čulāwī, which was obliged to tackle S̲h̲āh Ismāᶜīl I (1501-24) in order to establish a precarious control over Māzandarān in 909/1504 (Savory, *Consolidation*, 73-4). It was to assert his hereditary rights as grandson of Mīr ᶜAbd Allāh K̲h̲ān Marᶜas̲h̲ī (through his mother) that S̲h̲āh ᶜAbbās took control of Māzandarān in 1005/1596; local non-Marᶜas̲h̲ī chieftains (Sayyid Muẓaffar Murtaḍāʾī, Alvand Dīv and especially Malik Bahman Lārīd̲j̲ānī) were obliged to defeat or subdue his general Farhād K̲h̲ān Ḳaramanlu (*AAA*, 518 ff.; tr. 693 ff.).

Some important vestiges of the Marᶜas̲h̲ī domination have survived in Māzandarān, a region subject to frequent earthquakes. The mausoleum (sometimes called mosque) of Ḳawām al-Dīn Mīr-i Buzūrg at Āmul, constructed in 781/1379-80, destroyed under Iskandar-i S̲h̲ayk̲h̲ī, rebuilt after the death of Tīmūr, decorated with *kās̲h̲īs* [*q.v.*] and embellished with gold under S̲h̲āh ᶜAbbās I, was in a quite dilapidated state in the mid-19th century (Stuart, quoted by Rabino,

Māzandarān, 37; drawings from photographs in the Morgan (1307/1890) reproduced in Mahdjūrī, 24; Rabino, *Le Guilan*, Illustrations, 87). The Gunbad-i Naṣīr al-Ḥaḳḳ or Naṣīr al-Kabīr (i.e. of the *dāᶜī* Ḥasan b. ᶜAlī al-Uṭrush) was built (or restored?) at Āmul by Sayyid ᶜAlī b. Kamāl al-Dīn (*TTRM*, 328 ff.; Mahdjūrī, 36, 339). Among the monuments of Sārī, the *Imām-zāda* Zayn al-ᶜĀbidīn shelters the tombs of Zayn al-ᶜĀbidīn and Shams al-Dīn, son of Kamāl al-Dīn b. Muḥammad (Rabino, Māzandarān, 55; Mahdjūrī, 340; photograph in Rabino, *Le Guilan*, Illustrations, 89). On the monuments of Māzandarān and the tombs of the Marᶜashīs, see Sutūda, *Astārā*, iv, v (photographs and numerous indices).

2. Some descendants of the Marᶜashī Sayyids of Māzandarān. Although all related to Ālī al-Marᶜash/al-Marᶜashī or to Ḥasan al-Marᶜashī, the Marᶜashī *sayyids* are divided into various branches (in Māzandarān, at Ḳazwīn, Iṣfahān, Shūshtar, Mashhad, Nadjaf, etc.) in which the lines of kinship are sometimes hard to trace. The only ones to be mentioned here are the best-known, in the period subsequent to the foundation of the dynasty (on other Marᶜashīs, see below, 3).

In spite of their charisma and their acknowledged status as *sayyids*, very few of the Marᶜashīs of the dynasty gained renown as *ᶜulamā*ʾ or *udabā*ʾ. Besides Kamāl al-Dīn b. Mīr-i Buzurg, a prolific author and poet (*Rayḥānat*, iv, 12), two historians have left vivid accounts of their family. The best-known, Ẓahīr al-Dīn b. Naṣīr al-Dīn, spent the greater part of his life at Gīlān, where he had taken refuge with his father. Becoming one of the senior officers of the sovereigns of Biyā-pīsh (Lāhīdjān), he participated with the army of the Gīlānīs in numerous operations in Māzandarān (see above). Two important works of this author are available (*TTRM*, *TG*, in *Bibl.*). The date of his death must have been close to the last events described in *TG* (894/1488-9); on the author, his brothers and sons, his works, see *TTRM* (ed. Shāyān, *Muḳaddima*, where there is reproduction of an article by Kasravī and a translation of the Preface of Dorn's edition; ed. Tasbīḥī, with reproduction of an article by Kasravī; *TG*, *Muḳaddima*, by M. Sutūda). Little is known of the works of the second historian, Mīr Taymūr, identified by M. Sutūda as a son of ᶜAbd al-Karīm b. ᶜAbd Allāh. His only known work (see *Bibl.*, s.v. Mīr Taymūr) constitutes a kind of supplement to the *TTRM*, which comes to an end in 881/1476-7, and recounts the history of the family until 1075/1664-5.

Beginning at the start of the 9th/15th century, the migration of the Marᶜashī *sayyids* beyond the bounds of Māzandarān accelerated with their decline. Under the Ṣafawids, many of them settled at Shūshtar, Iṣfahān, Shīrāz, and then in India, at Nadjāf, etc. These migrations sometimes took the form of deportations. Among the descendants of representatives of the dynasty, Shāh Mīr b. Mīr Ḳawām al-Dīn, grandson of Mīr ᶜAlī Khān, deported to Iṣfahān, was followed by a group of Marᶜashī *sayyids* deported to Shīrāz in 1039/1629 (Mīr Taymūr, 377 ff.).

The Marᶜashī *sayyids* of Shūshtar were related to ᶜAlī Marᶜash/Marᶜashī and to the *sayyids* of Māzandarān. Mīr Nadjm al-Dīn b. Aḥmad, coming from Āmul on a pilgrimage to the *ᶜatabāt*, settled in Shūshtar where he was *naḳīb* at the beginning of the 9th/15th century. When Shāh Ismāᶜīl took the town (914/1508), he confirmed in office his fourth descendant, the *naḳīb* Mīr Nūr Allāh, who disseminated Imāmī Shīᶜism there. While the Marᶜashīs of Shūshtar tended to an increasing extent to migrate towards Shīrāz and India, the Imāmī Shīᶜī *ᶜālim* Ḳāḍī Nūr Allāh b. Mīr Sharīf b. Mīr Nūr Allāh (965-1019/1549-1610), author of numerous works (including the *Madjālis* and *Iḥḳāḳ*, see *Bibl.*), held the office of *ḳāḍī* at Lāhawr, under Akbar. On the instigation of Sunnī *ᶜulamā*ʾ, he was executed at the orders of Djahāngīr. Imāmī Shīᶜīs conferred on him the title of Third Martyr. His son, ᶜAlāʾ al-Mulk Ḥusaynī Shūshtarī Marᶜashī, was the author of the *Firdaws*; his descendants ultimately settled at Nadjaf (*Firdaws*, 16 ff.; see also *Muḳaddima* and *Taᶜlīḳāt*; *Tadhkira-yi Shūshtar*, 33 ff.; *Rayḥānat*, ii, 436-9). Amīr Asad Allāh b. Mīr Zayn al-Dīn Marᶜashī Shūshtarī (d. 963/1555-6) was appointed *ṣadr* under Shāh Ṭahmāsp in 943/1536-7. His son, Mīr Sayyid ᶜAlī, shared the *ṣidāra* with Muḥammad Yūsuf Astarābādī, and later performed the *tawliya* of the sanctuary of Imām Riḍā at Mashhad (*AAA*, 144, 316, tr., 251, 450; *AT*, 362, 510-11; *KhT*, 435. 797; *Firdaws*, 21-2 and *Taᶜlīḳāt*, 195 ff.). Another descendant, Amīr Zayn al-Dīn, received the *ṣidāra* of Shīrwān, of Khurāsān and of Ādharbāydjān in 970/1562-3 (*AT*, 538).

At Iṣfahān, descendants of Mīr-i Buzurg formed the influential family of the Khulafāʾ Sayyids, of which the most eminent representative was the *ᶜālim* Khalīfa Sulṭān Ḥusayn b. Muḥammad b. Maḥmūd al-Ḥusaynī, son-in-law of Shāh Abbās I, appointed *wazīr-i-dīwān-i aᶜlā* (1033/1624), while his father Mīrzā Rafīᶜ al-Dīn held the post of *ṣadr*. Under Shāh Ṣafī (1629-42), he was exiled to Ḳūm, and his four sons were blinded (as were some Ṣafawid princes). He returned to the *wizāra* under Shāh ᶜAbbās II (1642-66) and died at Ashraf in 1064/1653-4 (*AAA*, 1013, tr. 1234 sq.; Mahdjūrī, 15; Shāyān, *Māzandarān*, 233).

Other Marᶜashis enjoyed the favour of Ṣafawid sovereigns. Under Shāh Ṭahmāsp, Mīr ᶜAlāʾ al-Mulk Marᶜash, *ḳāḍī-i ᶜaskar*, was appointed *ṣadr* of Gīlān (*AAA*, 155, tr. 234). The *ᶜālim* Sayyid Asad Allāh Ḥusaynī Marᶜashī "Shah Mīr" (d. 984/1576-7)—who also exercised the *ṣidāra*—was appointed *mutawallī* of the sanctuary of Imām Riḍā at Mashhad (*Rayḥānat*, iv, 10-11). Other Marᶜashīs continued to exercise this important function at the shrine-town of Mashhad [*q.v.*]. Their descendants were even able to claim double Ṣafawid and Marᶜashī lineage on account of Mīrza Sayyid Muḥammad Mutawallī (1126-76/1714-63), crowned under the name of Shāh Sulaymān II at Mashhad in January 1740 (on this "forty days' king" and his genealogy, see Gulistāna, *Mudjmal al-tawārīkh*, ed. Mudarris Raḍawī, Tehran 2536/1977, 396 ff. and index; *Madjmaᶜ al-tawārīkh*, 90 ff.). His grandson, Mīrzā Muḥammad Khalīl Marᶜashī Ṣafawī (who died in Bengal *ca.* 1220/1805-6) was the author of the *Madjmaᶜ al-tawārīkh* (ed. ᶜA. Iḳbāl, Tehran 1328 A.S.H.; see *Muḳaddima*; *Rayḥānat*, iv, 12-13).

Many other Marᶜashīs have played important roles in the religious or political domain since the time of the Ṣafawids (Marᶜashī-Nadjafī, in *TTRM*, ed. Tasbīḥī, *Muḳaddima*, 41-2; Fischer, 94-5). The *ᶜālim* Sayyid Aḥmad b. Muḥammad b. ᶜAlī Musawī Marᶜashī was a close associate of Fatḥ ᶜAlī Shāh Ḳādjār (*Rayḥānat*, iv, 10). Scion of an *ᶜulamā*ʾ lineage, Mīr Muḥammad Ḥusayn Shahristānī Ḥāʾirī b. Mīr Muḥammad ᶜAlī b. Muḥammad Ḥusayn Ḥusaynī Marᶜashī (*mardjaᶜ-i taḳlīd* at Karbalā) was the author of numerous works, as was his son Ḥādjdj Shaykh Mīrzā 'Alī Shahristānī, who settled at Ḳum (*ibid.*, 362-3). Currently, the most eminent *ᶜālim* of the family is the *āyatallāh* Shihāb al-Dīn Muḥammad Ḥusayn b. Maḥmūd Ḥusaynī Marᶜashī Nadjafī (born at Nadjaf in 1315/1897). Having arrived at Ḳūm in 1924, he is best known as *mutawallī* of numerous *madrasas*, of which one, endowed with a wealthy library, bears his name (brief biography in *Rayḥānat*, iv, 11-12; Fischer, index; Momen, 317). Although

TABLE A
THE LINE OF MĪR ḲAWĀM AL-DĪN MARᶜAS̲H̲Ī "MĪR-I BUZURG"

Ẓahīr al-Dīn Marᶜas̲h̲ī(1)	After: *The Ṣafawid sources*(3)	*ᶜAbbās Shāyān*(5)
Imām ᶜAlī Zayn al-ᶜĀbidīn	Zayn al-ᶜĀbidīn	Zayn al-Ābidīn
Ḥusayn al-Aṣg̲h̲ar	Ḥusayn al-Asg̲h̲ar	al-Ḥasan Abū Muḥammad
Ḥasan al-Marᶜas̲h̲ī	Ḥasan	Muḥammad Abu 'l-Karām
Muḥammad	Muḥammad al-Akbar	ᶜAbd Allāh Abū Muḥammad
Ābd Allāh	ᶜAbd Allāh	ᶜAlī al-Marᶜas̲h̲ī Abu 'l-Ḥasan
ᶜAlī	Ālī al-Marᶜas̲h̲(4)	al-Ḥusayn Abū ᶜAbd Allāh
Ḥusayn	Ḥasan	ᶜAlī Abu 'l-Ḥusayn
ᶜAbd Allāh	ᶜAlī	Abū Hās̲h̲im
Ṣādiḳ	Abū Hās̲h̲im	Muḥammad Abū ᶜAbd Allāh
Muḥammad(2)	Muḥammad	ᶜAbd Allāh Abū Ṣādiḳ
ᶜAbd Allāh	Abd Allāh	al-Ṣādiḳ
Ḳawām al-Dīn	Ṣādiḳ	Ḳawām al-Dīn
	Ḳawām al-Dīn	

Notes to Table A
(1) *TTRM*, ed. Tasbīhī, 166.
(2) Muḥammad absent from *TTRM*, ed. S̲h̲āyān, 236.
(3) *D̲j̲ahān-ārā*, 88; Yazdī, fol. 2a; S̲h̲ūs̲h̲tārī, *Mad̲j̲ālis*, ii, 380.
(4) The *laḳab* al-Marᶜas̲h̲ (a kind of pigeon) is said to have been given in the first place to ᶜAlī Marᶜas̲h̲, the eponym of the Marᶜas̲h̲i *Sayyids* (*Rayḥāna*, iv, 10). In Yazdī, ᶜAlī al-Marᶜas̲h̲ and his son Ḥasan are made into a single "al-Marᶜas̲h̲".
(5) *TTRM*, *Muḳaddima* (approved by the Āyatallāh Marᶜas̲h̲ī-Nad̲j̲afī, *TTRM*, ed. Tasbiḥī, *Muḳaddima*, 39-40, with typographical errors).

more and more involved in the world of politics and public affairs, the Marᶜas̲h̲īs of Iran regard themselves predominantly as religious "specialists" (*rūḥāniyyūn*), with the religious line contracting matrimonial alliances among the élite of the *ᶜulamāʾ*. Alongside the major branch constituted by the family of the *āyatallāh* Marᶜas̲h̲i-Nad̲j̲afī—one of the seven leading *mard̲j̲aᶜ-i taḳlīds* in 1975 (a position still held in 1985: Momen, 249)—there exists a junior branch of Marᶜas̲h̲ī *mard̲j̲aᶜ-i taḳlīds* at S̲h̲īrāz (see Fischer, tables, 90, 92, 94).

Like other Imāmī *ᶜulamāʾ*, the Marᶜas̲h̲ī *sayyids* have established themselves in various parts of the Muslim world (Iran, ᶜIrāḳ, Syria, Turkey and Egypt) and in countries of the Indian Ocean fringes (East Africa (Zanzibar) and Java (*Rayḥānat*, iv, 12)). Sayyid ᶜAbd al-Ḥusayn Marᶜas̲h̲ī S̲h̲us̲h̲tarī was sent to Zanzibar in 1885 as *mullā* to guide the newly-established Imāmī community there (Momen, 317).

3. Other Marᶜas̲h̲īs. In the genealogies of descendants of ᶜAlī Marᶜas̲h̲/Marᶜas̲h̲ī (or Ḥasan Marᶜas̲h̲ī), mention is found of titles or functions such as *muḥaddit̲h̲*, *faḳīh*, *naḳīb al-as̲h̲rāf*, *wazīr*, etc., which indicate that previous to Mīr-i Buzurg, some of them must have held office or wielded a certain influence in ᶜIrāḳ and later in Iran, in the capacity of *ᶜulamāʾ* or *naḳībs* of the *sayyids*, or in administration. Among the other *sayyid* or non-*sayyid* Marᶜas̲h̲īs, whose lines of kinship with the various branches of the Marᶜas̲h̲īs are uncertain, the following are worthy of mention: Sayyid Ḥasan b. Ḥamza b. Alī Marᶜas̲h̲, Abū Muḥammad Ṭabarī Marᶜas̲h̲ī, *ᶜālim* of Ṭabaristan who went to Bag̲h̲dād in 356/966-7 and died there two years late (*Rayḥānat*, iv, 11); Ḥusayn b. Muḥammad Marᶜas̲h̲ī, Abū Manṣūr (d. 421/1030), historian and close associate of Sulṭān Maḥmūd of G̲h̲azni (*ibid.*); Sayyid Aḥmad b. ᶜAlawī Marᶜas̲h̲ī (d. 539/1144-5) extremist S̲h̲īᶜī *ᶜālim* (*g̲h̲uluwwī*) who travelled widely before settling at Sārī where he died (*ibid.*, 10); and S̲h̲ibāb al-Dīn Aḥmad b. Abū Bakr b. Ṣāliḥ b. ᶜUmar Marᶜas̲h̲ī, Abū al-ᶜAbbās, Ḥanafī *faḳīh* (d. 872/1467-8) (see Dihk̲h̲udā, *Lug̲h̲at-nāma*, s.v. Marᶜas̲h̲ī).

MARĀSIM (a), official court ceremonies, both processional and non-processional. The whole range of ceremonial, including protocol and etiquette, is called also *rusūm*; other terms found frequently are *mawsim* [*q.v.*] and *mawkib*. *Mawākib* [*q.v.*] refer specifically to solemn processions, but seem also to have had the more general meaning of audiences (for the ʿAbbāsids, see references in D. Sourdel, *Le vizirat ʿabbāside de 749 à 946*, Damascus 1960, ii, 684, n. 3; for the Fāṭimids, see e.g. al-Ḳalḳashandī, *Ṣubḥ*, iii, 494: *djulūs* [*al-khalīfa*] *fi 'l-mawākib*; *ayyām al-mawākib*).

1. Under the caliphate and the Fāṭimids.

The caliph presided over court ceremonies seated on a throne (*kursī*, *sarīr*), a custom dating back to the Umayyads, surrounded by the insignia of sovereignty (*shiʿār al-khilāfa*), and veiled by a curtain (*sitr*). The insignia, according to al-Ḳalḳashandī, *Ṣubḥ*, iii, 269-72, are: the seal (*khātam* [*q.v.*], the mantle of the Prophet (*burda* [*q.v.*], the staff (*ḳaḍīb* [*q.v.*]), the caliphal garments (*thawb* [see khilʿa and libās]), and [the dynastic] colour displayed in banners and robes of honour [see ʿalam and khilʿa]. Most of these insignia can be traced back to the Prophet himself. To these, the prerogatives of the *khuṭba* and *sikka* [*q.vv.*] can be added. For further discussion of insignia of sovereignty, see Ibn Khaldūn, *Muḳaddima*, tr. Rosenthal, New York 1957, ii, 48 ff.

Clear distinctions were made between ceremonial costume and ordinary wear. When summoned to the palace by al-Muḳtadir shortly before his arrest in 306/918, the vizier Ibn al-Furāt enquired, *bi-thiyāb al-mawkib am bi-durrāʿa?* ("in ceremonial dress or the *durrāʿa* [everyday costume of the scribal class]?", al-Ṣābī, *Kitāb al-Wuzarāʾ*, 264).

The ʿAbbāsid caliph wore a black *ḳabāʾ* and black *ruṣāfiyya* (a *ḳalansuwa*-type turban), and red boots. He girded himself with the sword of the Prophet. To his left, another sword was kept, and in front of him, the Ḳurʾān of ʿUthmān. He wore the *burda* and held the *ḳaḍīb* (al-Ṣābī, *Rusūm dār al-khilāfa*, ed. Mikhaʾīl ʿAwwād, Baghdād 1383/1964, 90-8, tr. Elie A. Salem, *The rules and regulations of the ʿAbbasid court*, Beirut 1977). Dignitaries, *arbāb al-marātib*, wore black *ḳabāʾ*s and black robes of honour (*khilaʿ*) were conferred on army commanders and honoured notables (al-Ṣābī, *op. cit.*, 90-4).

For the Fāṭimids, the sources on caliphal costume are more plentiful. The *dār al-kiswa* (see al-Maḳrīzī, *Khiṭaṭ*, i, 409-13) provided magnificent costumes to the caliph and his entourage for each ceremony, as well as the *khilʿas* bestowed on innumerable occasions. The Fāṭimid colour was white, and the caliph's garments were often made of white *dabīḳī*, a fine silk stuff [see dabīḳ]. The most common term for Fāṭimid court apparel is *badla*, an outfit consisting of eleven pieces (al-Maḳrīzī, *op. cit.*, i, 413: *badla mawkibiyya*). The caliphs adopted the white *ṭaylasān* of lawyers and judges during Ramaḍān and the two festivals (*ibid.*, i, 413; ii. 227. 280).

The prerogative of wearing the dynastic colours was reserved to the caliphs, their families, their retinue and the highest officials of the bureaucracy and court. Red was also a royal colour. We read of a Fāṭimid vizier upon whom the caliph bestowed his own red garment (Ibn Taghrībirdī, *al-Nudjūm al-zāhira*, iv, 99), as well as a warning against wearing red in the caliph's residence "[because it] is the colour of the caliph's dress as well as those who rebel against him" (al-Ṣābī, *Rusūm*, 75).

The most frequent of all ceremonies were caliphal audiences (*madjlis*; *djulūs*, used in the general sense as well as for accession) which took place in the palace (for discussion, see Sourdel, *Questions de cérémonial ʿabbāside*, in *REI* [1960], 121-48, and M. Canard, *Le cérémonial fatimite et le cérémonial byzantin: essai de comparaison*, in *Byzantion* [1951], 408 ff.). Al-Ḳalḳashandī lists three categories of audiences for the Fāṭimids: *al-madjlis al-ʿāmm ayyām al-mawākib* (general audiences), the *djulūs* held expressly for the *ḳāḍī* and *shuhūd* on the four *layālī al-wuḳūd* ("nights of lights"), and the *djulūs* on the *mawlid al-nabī* [see mawlid] and several other *mawlids*.

Even these audiences had some processional elements, manifested primarily in the formal arrival of the vizier at the palace riding his mount. After the audience hall had been prepared by covering the walls and the *sarīr* in fine fabrics (*dībādj* in the winter, *dabīḳī* in the summer), the *ṣāḥib al-risāla* summoned the vizier and rode with him, in customary haste, to the palace (*ʿalā al-rasm al-muʿtād fī surʿat al-ḥaraka*). The vizier wore ceremonial costume and rode with his entourage in the same order as that of the procession of the New Year (*fa-yarkabu fī ubbahatihi wa-djamāʿatihi ʿalā 'l-tartīb al-muḳaddam dhikruhu fī dhikr al-rukūb awwal al-ʿām*); cf. al-Maḳrīzī, *Khiṭaṭ*, i, 448-9 ff., for details of the vizier's arrival at the palace on the New Year.

The prerogative of mounts, even in a non-processional setting, was an important symbol of authority. Caliphs maintained large stables [see iṣṭabl], and horses were often distributed as gifts to particularly honoured officials. Even within the palace walls, caliphs were expected to ride from one point to another. Similarly, gates and doors were symbols of sovereignty and authority and were the sites of important ceremonial activity. The caliph and vizier usually mounted and dismounted at a gate or door (see e.g. al-Maḳrīzī, *Khiṭaṭ*, i, 389-90), and officials sometimes dismounted at a gate of the palace and kissed it even when the caliph was not present (idem, *Ittiʿāẓ al-ḥunafāʾ*, Cairo 1967, ii, 71-2).

Under both the ʿAbbāsids and the Fāṭimids, the

vizier enjoyed the privilege of entering the palace walls while riding his mount, a prerogative normally reserved to the caliph himself (idem, *Khiṭaṭ*, i, 387) Even the high-ranking *ḳāḍī al-ḳuḍāt*, accorded so many other ceremonial privileges (see below), dismounted at the avenue running between the two Fāṭimid palaces (*bayn al-ḳaṣrayn*, see *ibid.*, i, 433). The Fāṭimid vizier dismounted at the first *dihlīz* (vestibule of columns) of the palace, which is referred to in texts as his *makān* (*ibid.*, i, 386, 389). Upon his investiture with the *laḳab* [*q.v.*] of *Tādj al-milla* in 367/977, the Būyid *amīr* ʿAḍud al-Dawla [*q.v.*] requested permission to enter the courtyard of the palace (*ṣaḥn al-salām*) mounted on his horse, as a special mark of distinction by which his honoured position would be known. The caliph granted the audacious request, but took the precaution of having a barrier of baked brick and clay built across the door to the courtyard, forcing the vizier to dismount before entering (al-Ṣābī, *Rusūm*, 80).

Caliphal ceremonies in the palace required keen attention to rank and dignity. In this sense, the position of each person in attendance with respect to the caliph can yield important information about social and political order. The responsibility for ordering the participants according to rank, presenting them to the caliph, and observing protocol in general, rested with the chief chamberlain (*ḥādjib* [*q.v.*]). He controlled access to the caliph and shielded him from those unworthy of his attention. He also supervised the retinue of the caliph and a corps of assistant chamberlains.

In addition to the *ḥādjib*, several other functionaries supervised the preparations and conduct of caliphal audiences. The ʿAbbāsids, for whom such information is sparse, employed a *ṣāḥib al-sitr* (master of the curtain, known already in the Umayyad period) and *ṣāḥib al-marātib* (master of the ranks). For the Fāṭimids, we are somewhat better informed. The *ṣāḥib al-bāb* (master of the door) was recruited from the *arbāb al-suyūf* (men of the sword) and fulfilled many of the functions of the chamberlain. He, along with the *isfahsālār* of the army [see ISPAHSĀLĀR], had duties in processional ceremonies as well.

The caliph's private service was provided by an élite corps of eunuchs (*al-ustādhūn al-muḥannakūn*) [see FĀṬIMIDS], who performed a wide range of ceremonial duties. From this corps were drawn the *shādd al-tādj* (the official charged with winding the caliph's turban in the prescribed manner), and the *ṣāḥib* (or *mutawallī*) *al-madjlis* (master of the audience hall), who placed people in their assigned places and informed the vizier when the caliph was seated on his *sarīr*, also called *ṣāḥib al-sitr*, master of the curtain. The *ṣāḥib al-risāla* (messenger), *ṣāḥib* (or *mutawallī*) *bayt al-māl*, the *ḥāmil al-dawāt* (bearer of the inkwell) and *ṣāḥib al-māʾida* (master of the table) performed ceremonial duties (for enumeration of these functions, see al-Maḳrīzī, *Khiṭaṭ*, i, 386, 411; al-Ḳalḳashandī, *Ṣubḥ*, iii, 484-5; and explanations in Canard, *Cérémonial fāṭimite*, 365 ff.).

The protocol for both ʿAbbāsid and Fāṭimid audiences was much the same. The caliph was concealed behind a *sitr* until all those in attendance were in their assigned places, according to their rank (*ʿalā ṭabaḳātihim*, *ʿalā marātibihim*). The *sitr* was then raised to reveal the caliph, who was saluted first by the vizier and then in descending order of rank by the highest officials of the state. The salute (*al-adab fi 'l-salām, adab al-khidma*) consisted in greeting the caliph with the formula *al-salām ʿalā* [or: *ʿalayka*] *amīr al-muʾminīn wa-raḥmat Allāh wa-barakātuh*. Under the Fāṭimids, however, this formula seems to have been reserved exclusively for the *ḳāḍī al-ḳuḍāt* (*Khiṭaṭ*, i, 386, and *Ṣubḥ*, iii, 496). The second element, *taḳbīl al-arḍ*, kissing the ground, was acknowledged to be a late introduction. Previously, high-ranking officials (viziers and *amīrs*) used the verbal salute only. As an honour to a favoured official, the caliph might offer his hand, covered by his sleeve, to be kissed. The custom of kissing the ground seems to have been thoroughly engrained and observed, regardless of rank, by the ʿAbbāsid period. Variations included kissing the caliph's hand and foot, kissing his stirrup, and kissing the *martaba* in front of his *sarīr*.

Those attending a caliphal audience were exhorted to stand straight and still, not to fidget, to maintain absolute silence unless spoken to by the caliph, and then to answer in a low and clear voice. They were to fix their attention upon the caliph to refrain from laughing even if there was cause for it, and to avoid slander, calumny, and criticism at all costs. The caliph's mistakes were not to be corrected, nor was his name or that of his wives to be used. One approached the caliph only if summoned and in that case, advanced a few steps at a time, stopped with bowed head, and waited for the caliph's command to proceed. Even the vizier, who was permitted to approach the caliph to speak about matters of state with him, was advised to retreat to a distance of five cubits upon completion of his business.

The *djulūs* for the four *layālī al-wuḳūd* (at the beginning and middle of Radjab and Shaʿbān) took place in the belvedere (*manẓara*) overlooking the Bāb al-Zumurrud. The high point of the ceremony occurred when the caliph opened one of the windows of the *manẓara* and revealed his head and face. On of his *muḥannak* eunuchs put his head and right hand, covered by his sleeve, out of another window and proclaimed: "The Commander of the Faithful returns your greeting." The *ḳāḍī al-ḳuḍāt* and the *ṣāḥib al-bāb* were then greeted personally.

The Fāṭimids celebrated six (according to some sources four) different *mawlids*: those of the Prophet, al-Ḥasan and al-Ḥusayn, ʿAlī, Fāṭima, and the present *imām* (*mawlid al-khalīfa* [or *al-imām*] *al-ḥādir*). The *mawlids* took place under the *manẓara* surmounting the *Bāb al-dhahab*, and included much of the same ceremony as the *layālī al-wuḳūd*, with the addition of distribution of *ṣadaḳāt* and an impressive quantity of food prepared in the *Dār al-fiṭra*. The powerful vizier al-Afḍal b. Amīr al-Djuyūsh annulled the observance of these *mawlids* at the height of his power, but the caliph al-Āmir, encouraged by his *muḥannak* eunuchs, restored them when he regained power.

Both the Fāṭimids and the ʿAbbāsids prepared elaborate receptions of ambassadors, in particular of the Byzantine embassies. Ambassadors rode to the palace and dismounted at its gate, then entered the audience hall through a column of soldiers. The *ṣāḥib al-bāb* and his *nāʾib* flanked the caliph, who was seated on his *sarīr*, surrounded by his vizier and high-ranking members of his retinue. Al-Maḳrīzī describes two such embassies in *Khiṭaṭ*, i, 403, 461, and al-Ṣābī, *Rusūm dār al-khilāfa*, describes in detail the reception of the Byzantine ambassador Ward, 14-17. See also S.M. Stern, *An embassy of the Byzantine emperor to the Fāṭimid caliph al-Muʿizz*, in *Byzantion*, xx (1950), 425 ff.

The caliphs (at least theoretically) held an audience every evening for redress of grievances (*al-djulūs li 'l-maẓālim*). The Fāṭimids conducted these *djulūs* in the *saḳīfa* of the palace.

Investitures of high officials with robes of honour

(*khilʿas*) and titles (*alḳāb* [see LAḲAB]) abound in the historical literature. These investitures generally occurred in the context of an audience, and the same protocol was observed.

Banquets (*simāṭ*, pl. *asmiṭa*) were some of the most elaborate and impressive ceremonial occasions. They occurred during Ramaḍān and on the two *ʿīds* (*ʿīd al-fiṭr* and *ʿīd al-aḍḥā* or *al-naḥr*), at the New Year, and at the *mawlid al-nabī*. The *simāṭ* of the Fāṭimids extended across the entire length of the audience hall, and was filled with all manner of delicacies, including sugar figurines and castles made entirely of confectionery. During Ramaḍān, the *amīrs* would rotate in attending the banquet every night, although their presence was not required. They were, as usual, seated according to their ranks. A significant feature of all banquets was the permissibility of taking food out of the palace and distributing (and even selling) it among one's family and friends. Descriptions of these banquets are found in Ibn Taghbirdī, *al-Nudjūm al-zāhira*, iv, 97-8; al-Maḳrīzī, *Khiṭaṭ*, i, 387-8. For further information about ceremonies on Ramaḍān and the two *ʿīds*, see MAWĀKIB.

2. In Muslim Spain.

In al-Andalus, as elsewhere, *rusūm* is used, in the same manner as *marāsim*, to denote court etiquette and procedure. On this subject, no treatise is available comparable to the *De Caeremoniis* composed by the Byzantine Emperor Constantine Porphyrogenitus, or to the *Rusūm dār al-khilāfa* of Hilāl al-Ṣābī; there is no alternative therefore other than to attempt to reconstruct Hispano-Arab court etiquette by means of the meagre information preserved by the chronicles and to have recourse to descriptions of official acts (*bayʿa*, [*q.v.*]), signings of agreements, receptions, processions (*mawākib* [*q.v.*]).

When, in 138/756, ʿAbd al-Raḥmān al-Dākhil [*q.v.*] transformed al-Andalus into an independent amīrate, he was the initiator of the (embryonic) Cordovan etiquette. It is in this sense that the dispositions of his entourage are best understood. According to al-Maḳḳarī (*Nafḥ*, ii, 25), "he was obliged to maintain a certain distance and not to mingle to an excessive degree with the people, nor to show himself in public". But it was ʿAbd al-Raḥmān II [*q.v.*] who (influenced by Ziryāb [*q.v.*]?) instituted Andalusian etiquette. According to al-Maḳḳarī (*Nafḥ*, i, 223), "he was the first to isolate himself, behind a tapestry, from the public". Ibn Ḥayyān (*Muḳtabas*, ii, 91) is still more explicit: "It was he who organised the hierarchy of the court (*rattaba rusūm al-dawla/al-khidma*)". This information is confirmed by Ibn ʿIdhārī (*Bayān*, ii, 91) and Ibn Saʿīd (*Mughrib*, i, 45); the *Dhikr bilād al-Andalus* (117) makes of him "the first to clothe himself in the pomp of the caliphs". The separation of the functions of the *shurṭa* [*q.v.*] and of the *ṣūk* [*q.v.*] which all authors attribute to him are to be seen in the same sense.

At the time of his *bayʿa*, in 206/822, his brothers, his uncles, his kinsmen, his "men" (the senior functionaries of the court), the judges and the *fuḳahāʾ*, military officers of every rank, the dignitaries and the people, pledged allegiance to him (*Dhikr*, 117). This order reflects a hierarchy, since the text clearly distinguishes six "groups" or "categories". The same regulation recurs (with minor variations) throughout the whole of the caliphate. It is observed in the allegiance pledged, in 300/912, to ʿAbd al-Raḥmān III al-Nāṣir [*q.v.*] (*Chron. anón.*, 29-30) and in the list of witnesses who applied their signatures to the act of surrender of Saragossa in 326/937 (Ibn Ḥayyān, *Muḳtabas*, v, 277-9). The same hierarchy appears in the description of the feasts of the Breaking of the Fast in the years 360-4 and in that of the Sacrifices in the years 360-4, preserved by the *Muḳtabas* of Ibn Ḥayyān. Lévi-Provençal (*Hist. Esp. Mus.*, ii, 117) speaks of pomp and ostentation, of a rigid etiquette: "The reverential fear (*hayba*) which is inspired by the august person of the caliph and the magnificence (*fakhr*) which presides over all the manifestations of his official life encompass him in the manner of a halo".

It does not seem that al-Manṣūr b. Abī ʿĀmir [*q.v.*] introduced any changes into the organisation of the caliphate. He was obliged to co-exist with the *mulūk al-ṭawāʾif* [*q.v.*], judging by the comments of the *amīr* ʿAbd Allāh [*q.v.*], when he examines, in his *Memoirs*, the various groups capable of supporting him.

Nothing is known of the norms of Almoravid etiquette. In the Almohad period, there is no demonstrative proof of the effective application of the complex and discordant order described by Ibn al-Ḳaṭṭān, *al-Ḥulal al-mawshiyya* and the *K. al-Ansāb fī maʿrifat al-aṣḥāb* (13 categories according to the former, 18 according to the *K. al-Ansāb*; cf. the observations of J.F.P. Hopkins, *Medieval Muslim government in Barbary*, London 1958). The actual gradation was that relfected by Ibn Ṣāḥib al-Ṣalāt (*al-Mann bi 'l-imāma*, 232, 420, 437, 445, 457, 511), similar to the Hispano-Umayyad pattern.

In 558/1163, at the time of his proclamation, Abū Yaʿḳūb b. ʿAbd al-Muʾmin was recognised by the *shaykh* Abū Ḥafṣ, the Almohads and the *ashyākh* of the tribes. In the course of the formal audience at Marrākush in 1170, the hierarchical order was: Almohad *ashyākh*, *ṭalaba* [*q.v.*] *ashyākh* and viziers. In 1171, at the time of his entry into Rabat-Salé, he was followed by the Almohad *ashyākh*, the vizier, the *kuttāb*, the *ṭalaba* and the Bedouin. During the Feast of Sacrifices, at Cordova, the "great Almohad *ashyākh*, the *abnāʾ al-djamāʿa* [*q.v.*], and their followers, the *ṭalaba* of the capital, the *fuḳahāʾ*, the judges, the *kuttāb*, the governors, delegations and notables of the town, were introduced according to their rank." At the time of the Feast of Sacrifices of 568/1172, at Murcia, a development is observed: "First to present themselves were his brothers, followed by the Almohad *ashyakh* and the great men of the state". A further development is attested by ʿAbd al-Wāḥid al-Marrākushī (*al-Muʿdjib*, 239); in 610/1213, the proclamation of Abū Yaʿḳūb Yūsuf "took place first—on the Thursday—in private, attended by his close relatives; on the Friday, he was recognised by the Almohad *ashyākh*; and on the Saturday, by the people".

The hierarchy of the Naṣrids [*q.v.*] was probably close to the Hispano-Umayyad tradition. This is merely a hypothesis, for although Ibn al-Khaṭīb (*Lamḥa*, 38) makes of the second sultan, Muḥammad b. Muḥammad (672-701/1273-1302), "the initiator of the State, the organiser of its administration and its hierarchy... the creator of the royal protocol (*mumahhid al-dawla waḍaʿa alḳāb khidmatihā wa-ḳaddara marātibihā... wa-aḳāma rusūm al-mulk*)" this tells us nothing of its components.

(P. Chalmeta)

3. In Iran.

Persian society in most, if not all, periods was intensely formal: the demeanour, manners, dress and mode of speech of each class was minutely regulated by custom. The court set the pattern. Respect for age and position was ubiquitous. An extensive *adab* [*q.v.*] literature, which sought to regulate all aspects of social life and behaviour, grew up (cf. al-Ghazālī, *al-Adab fi 'l-dīn*; Kāwūs b. Iskandar, *Ḳābūs-nāma*; and see J.S. Badeau, *They lived once thus in Baghdad*, in Sami A. Hanna (ed.), *Medieval and Middle Eastern Studies in honor of Aziz Suryal Atiya*, Leiden 1972, 38-49).

Persian ceremonial was designed to emphasise both the awe in which the ruler was held and his separation from the rest of the population. Its influence was felt already in Umayyad times and became marked under the ʿAbbāsids. Much of the ceremonial of later times can be traced back to the early centuries. There was a long continuity of tradition in respect of the insignia of sovereignty. The parasol or *čatr* [see MIẒALLA] held over the ruler's head was an ancient custom going back at least to Achaemenid times, while the *liwāʾ* or standard was an old symbol of royalty going back to Parthian and Sāsānid times (see Spuler, *Iran*, 348), though neither were confined absolutely to the rules, but might also be attached to high offices. The beating of kettle-drums [see NAWBA] in honour of the ruler and those elevated to important governorships was also a practice of great antiquity, the origins of which are possibly to be found in Mithraism. The office charged with this ceremony was known as the *naḳāra-khāna* [*q.v.*]. Drums, trumpets and other instruments were played daily at sunset and sunrise and on religious festivals, on the ruler's birthday and at feasts given by him. If the ruler was in camp or on a journey, his musical instruments accompanied him. The *naḳāra-khāna* survived in Tehran until 1937. Considerable importance attached also to the throne. In the early centuries this was placed on a *ṣuffa*, or dais, which was often a considerable structure, consisting sometimes of a portico or pavilion open in the front in which the dais was situated. Sometimes on the throne itself there was another chair or seat on which the ruler sat. Apart from these ancient insignia, there were also insignia of Islamic provenance, such as the right of the ruler to have his name mentioned in the *khuṭba* [*q.v.*] and on coins [see SIKKA].

The grant of robes of honour [see KHILʿA] though not specifically one of the insignia of royalty, was a practice followed by all rulers and one attended in Ṣafawid and Ḳādjār times, if not earlier, by special ceremonies. The purpose of the grant was partly to honour the recipient, but partly also to fill the ruler's coffers, since the recipient was often expected to make gifts to the ruler in return, and if the recipient was in the provinces, to whoever brought the *khilʿa*. Another practice was the distribution of bags of gold and silver coins by the monarch on the occasion of his accession to those who were present at his court (H.L. Rabino, *Coins, medals, and seals of the Shahs of Iran, 1500-1941*, London 1945, 87). The distribution of scattering (*nithār*) of coins. jewels and precious objects, both by the ruler and by his subjects, was also customary on festive occasions such as the Naw Rūz (the Persian New Year). The canonical festivals of the *ʿīd al-aḍḥā* and the *ʿīd al-fiṭr* [*q.vv.*] were the occasion for public celebration. It was customary for the ruler to go out to the the *muṣallā* outside the town where the *ʿīd* prayers were performed and to take part in them (see further MAWĀKIB. 2. In Iran).

The ruler was expected, especially if his followers were largely drawn from tribal groups, to keep open table. Feasting was especially common under the Ghaznawids, the Īlkhāns and the Tīmūrids. Masʿūd b. Maḥmūd, the Ghaznawid, used to have a large leather table-cloth (*khʷān*) laid out on the dais on which he sat to hold audiences, on in some neighbouring garden or pavilion, and to invite the great men of the state to sit with him at the *khʷān* (cf. Abu 'l-Faḍl Bayhaḳī, *Tārīkh-i Masʿūdī*, ed. ʿAlī Akbar Fayyāḍ Mashhad A.H.S. 1350/1971, 439, 734-5). Wine flowed freely at these feasts (see *ibid.*, *passim*). Niẓām al-Mulk considered it indispensable for the ruler to keep an open table and he claims that Ṭoghrïl Beg entertained his followers thus in the early morning (*Siyāsat-nāma*, ed. Schefer, Paris 1891, 115). The court astrologer, though not essential to court ceremonial, nevertheless played an important role, especially under the Ṣafawids and Ḳādjārs, in deciding the most auspicious moment for the coronation of the ruler or for some movement such as when the entry into a town should take place, or even for the proper hour "to sit, to rise, to depart, to eat, to go to bed" (Du Mans, *Estat de la Perse en 1660*, ed. Schefer, Paris 1890, repr. 1969, 30).

The Ziyārid Mardāwīdj [*q.v.*] (d. 323/935), when he sat on a golden throne and wore a crown (*tādj*), was imitating Sāsānid (or what he believed to be Sāsānid) custom (Miskawayh, *Tadjārib al-umam*, v, 489, and see A. Mez, *Die Renaissance des Islams*, Heidelberg 1922, 17). In subsequent centuries, the throne and the *tādj* continued to be important elements in royal ceremonial. The Būyid ʿAḍud al-Dawla [*q.v.*] was surrounded by great magnificence when holding audiences. Like the caliph, he sat on a throne on a dais. High-standing visitors sat on stools or chairs (*kursī*) in front of his throne. As in the caliph's court,

the right hand side was the place of honour (see further H. Busse, *Chalif and Grosskönig*, Beirut 1969, 222 ff., and ʿAlī Aṣghar Faḳīhī, *Shāhinshāhī-i ʿAḍud al-Dawla*, Ḳumm n.d., 215 and *passim*). Hilāl al-Ṣābī describes the caliph al-Ṭāʾiʿ's reception of ʿAḍud al-Dawla in Baghdād in 367/977-8 and the royal insignia which he gave to him in 368/978-9 (Faḳīhī, *op. cit.*, 62 ff. See also al-Suyūṭī, *History of the caliphs*, tr. H.S. Jarrett, Calcutta 1881, 427).

The Sāmānids and Ghaznawids both evolved an elaborate ceremonial, which was influenced by what was assumed to be Sāsānid practice and by practice at the caliph's court. In the Ghaznawid court, every effort was made to enhance the glory of the ruler. On formal occasions, the greatest deference was exacted from all, even the caliph's envoys. It was Masʿūd b. Maḥmūd's custom to hold court, sitting on a dais (*ṣuffa*), in one or other of his palaces or gardens (cf. Bayhaḳī, 438). It seems that his throne was originally made of wood. This was replaced in 429/1038 by a golden throne of great magnificence, which had taken three years to make. When it was finished, it was placed on a dais in the new palace which Masʿūd had built and surmounted by a parasol. Bayhaḳī describes the splendour of the scene when Masʿūd, wearing a red satin cloak shot with gold, mounted the throne for the first time on 21 Shaʿbān 429/8 July 1038. Ten richly dressed *ghulāms* stood on the dais on the right side and ten on the left, with rows of *ghulāms*, also finely dressed and bearing arms and the *martabadārān* standing in a body the hall. (The meaning of *martabadār* is uncertain. The term may have been applied to a *farrāsh* who held a switch or some such implement, whose duty was to keep back the crowds. On the other hand, one of the meanings of *martaba* was a cushion on a dais, see Ibn Baṭṭūṭa, *Travels*, tr. H.A.R. Gibb, Cambridge 1956-71, iii, 660, 18n., and *martabadār* may, thus, have been the bearer of the royal cushion.) The notables from the provinces and the great men sat on the dais. The "pillars of the state" and the great men of Masʿūd's entourage scattered innumerable gifts before him. The ceremony apparently began early in the morning, for Bayhaḳī states that Masʿūd sat until breakfast time (*čāstgāh*). At the close of the audience, Masʿūd's boon companions (*nadīmān*) came forward and scattered their gifts, after which Masʿūd mounted and rode off to a garden. Having changed his clothes, he went again on horseback to another palace or pavilion (the Spring House) where a feast was held for the great men and the "pillars of the state". After this Masʿūd went to another garden where he drank wine with his boon companions until the time of the afternoon prayer (Bayhaḳī, 714-15).

Masʿūd's reception in Muḥarram 423/December 1031-January 1032 in Balkh of an envoy sent by the caliph was marked, according to Bayhaḳī's description, by much splendour. Four thousand palace *ghulāms*, splendidly dressed and equipped, were drawn up in ranks on either side of the palace. Two hundred royal *ghulāms*, in full regalia, stood in rows near Masʿūd, while the great men of the court, the provincial governors and chamberlains, in their court dresses, gathered in the assembly. Masʿūd sat on a dais. The only other person to be seated was the chief minister, Aḥmad b. Ḥasan al-Maymandī [*q.v.*]. When the caliph's envoy was brought in, he greeted Masʿūd and was led to a seat by the chamberlain, Bū Naṣr. Masʿūd then asked after the health of the caliph, and the envoy told him of the death of al-Ḳādir. After Aḥmad b. Ḥasan had said a few words to the envoy in Arabic, he gave him a signal to give the caliph's letter to Masʿūd. The envoy got up, took the letter, which was in a black brocade bag, gave it to Masʿūd and went back to his seat. Masʿūd then called to Bū Naṣr to come up to the throne. He took the bag, opened it and read the letter and then at Masʿūd's command translated it into Persian. The following day, a mourning assembly for the caliph al-Ḳādir was held. Masʿūd and all his court were dressed in white. The bazaars were closed and the *dīwān* shut for three days. When they were reopened, drums were played and on the following Friday the *khuṭba* was read in the name of the new caliph. Masʿūd sat close to the *minbar*, which was covered with cloth of gold (*dībā-yi zar-bāft*). The chief minister and the notables of the court sat nearby, with ʿAlī Mīkālī and the caliph's envoy rather further off. After the *khuṭba* had been read, the royal treasures placed 10,000 *dīnārs* and five silken purses at the foot of the *minbar* as a present for the caliph. The gifts of Masʿūd's sons, the chief minister, the great chamberlain, and others were then brought, after which Masʿūd departed, while the treasurers' scribes and *mustawfīs* took the gifts to the royal treasury. Some days later, the envoy was given a *khilʿa*, a mule and two horses, and sent back with the presents to the caliph. The chief minister also sent him a mule, with a rug (*djul*) and hood (*burḳaʿ*), 500 *dīnārs*, and ten garments (*ibid.*, 383 ff.). Similarly, in later times, the exchange of presents was also not confined to the two principal parties on the occasion of ambassies: ministers also expected to receive presents from envoys and sometimes made gifts themselves to envoys.

In the following year, 424/1033, another envoy accompanied by a eunuch (*khādim*) brought a diploma and *khilʿa* from the caliph for Masʿūd, who was then in Ray. When the envoy was taken to Masʿūd, he kissed the latter's hand, while the *khādim* kissed the ground. On this occasion, after Masʿūd had enquired for the health of the caliph, Bū Naṣr took the envoy under the arms and seated him near the throne on the dais, on which the army commander ʿAlī Dāya and the *ʿāriḍ*, the head of the military department [see ISTIʿRĀḌ] were also sitting—the chief minister was absent (*ibid.*, 471-2). This custom of taking envoys under the arms when bringing them near to the presence of the ruler also prevailed in the Tīmūrid, Ṣafawid and Afshārid courts (see below). Bū Naṣr then came forward and told the envoy to rise and take the diploma, which was rolled up in black brocade, and put it on the throne. The envoy, standing up, told Masʿūd to come down from the throne in order to put on the caliph's *khilʿa*. Masʿūd ordered a prayer rug (*muṣallā*) to be brought. As he turned to the *ḳibla*, drums were beaten and trumpets blown in the garden and at the gate of the palace. Bilge Tegīn and other military leaders ran forward to help Masʿūd down from the throne to sit on the prayer rug. The caliph's envoy then called for the box with the *khilʿa* and brought out seven robes and other garments. Masʿūd kissed them and performed two *rakʿas* of prayer and remounted the throne. A jewelled crown, necklace and bracelet were then brought forward, kissed and placed on the throne at Masʿūd's right hand, while the *khādim* advanced with a turban, which Masʿūd kissed and placed on his head. A standard (*liwāʾ*) had also been brought by the envoy, and this Masʿūd held in his right hand. He also put on the sword and sword-belt which the envoy had brought and then, having kissed them, put them aside. Finally, Bū Naṣr read and translated into Persian the caliph's letter and the diploma, after which those present began to scatter coins, jewels and rarities (*ibid.*, 473-4).

Mihragān and Naw Rūz appear to have been regularly celebrated by Masʿūd. In 426/1035 Mihragān fell on the 16 Dhu 'l-Ḳaʿda. Bayhaḳī states that on this occasion coins and jewels were scattered before Masʿūd and presents made to him. After prayers, wine was passed round and the "the customs of Mihragān were performed" (*ibid.*, 643, cf. also 655, 697, 743). When recording the celebration of Mihragān in 430/1039, Bayhaḳī states that poets and singers were not given presents on that occasion because there had been a shortage of rain (*ibid.*, 789-90). Under later rulers, the festival of Mihragān fell into desuetude. Bayhaḳī mentions that in 429/1038 Masʿūd observed the customs of the Naw Rūz and gave presents and that wine flowed (*ibid.*, 705, cf. also 815). After the Ghaznawids, Naw Rūz was celebrated as a popular rather than a public festival; under the Ṣafawids and Ḳādjārs it was again celebrated as a public festival (see below). Bayhaḳī also mentions the celebration of Sada, the festival of fire, in 426/1035, but this was probably not a public celebration. He states that Masʿūd sat in a tent pitched beside a stream with his boon companions. Musicians were also present and a fire of wood was lit (*ibid.*, 572). (On Sada, see *Cambridge History of Iran*, iii/2, *The Seleucid, Parthian and Sasanian periods*, ed. E. Yarshater, Cambridge 1983, 800-1.) The Ziyārid Mardāwīdj had before this made an abortive attempt to revive the feast of Sada. He prepared a great bonfire in Iṣfahān in 323/935, but was murdered before the ceremony could take place (Faḳīhī, *op. cit.*, 20). The recovery of the ruler from illness was another occasion for the offering of presents to him. On 1 Rabīʿ 428/22 December 1036 Masʿūd, who had just recovered from an illness, held a court in Bust. His entourage and the great men of the city came and scattered coins and presents, while the people offered prayers for him and sacrificed animals, giving the meat with bread to the poor (Bayhaḳī, 278).

It would appear from the *Tārīkh-i Masʿūdī* that Masʿūd b. Maḥmūd frequently granted *khilʿas* to his subjects. These appear to have differed according to the rank of the recipient. A large stock was presumably held in the royal wardrobe (*djāma-khāna*). Thus ʿAlī Dāya on 1 Djumādī I 432/6 January 1041 was "clothed with a *sipahsālārī khilʿa*, such as was customary for army commanders" (*op. cit.*, 436), while the *khilʿa* given to the caliph's envoy in 423/1031-2 was "such as is given to the *fuḳahā*ʾ" (*ibid.*, 390). When the *ḥādjib* Sübashī was made chief minister (*khwādja-i buzurg*) on 10 Ṣafar 427/13 December 1036, he was given a "complete" *khilʿa* with a banner, standard, drum and kettle drum, suits of clothes (*takht-hā-yi djāma*), bags of silver and other things which went with this office (*ibid.*, 648). A special horse was also the mark of certain offices. Tāsh Farrāsh, the army commander, when setting out for ʿIrāḳ in 422/1030-1 was presented with "the horse of the army commander (*sipahsālār*) of ʿIrāḳ" (*ibid.*, 373). Bayhaḳī also mentions "the horse of the leader (*sālār*) of Hindustān" (*ibid.*, 355). Horses played a special part in royal processions [see MAWĀKIB].

The Saldjūḳs, when they came into Khurāsān, took over some of the ceremonial forms they found in existence. When Ṭoghrïl Beg came to Nīshāpūr in 429/1073-8 he sat on Masʿūd b. Maḥmūd's throne, which was in the front part of a dais, to receive the welcome of the population. His personal apparel was modest compared to that affected by Masʿūd. Bayhaḳī states that on his entry into Nīshāpūr he wore a woven cloak (*kabā-yi mulḥam*), a *tawwazī* turban and felt boots, and was fully armed, and carried on his arm a strung bow with three wooden arrows (*ibid.*, 732). It is not without interest that a bow and arrows were part of the insignia of the Ḳādjārs (see below). Even after the rule of the Saldjūḳs had become firmly established, their court remained less minutely regulated and less luxurious than that of the Ghaznawids. This may have been due in part to a survival of tribal tradition (so far as this survived), and in part to the fact that the Saldjūḳ sultans were frequently engaged in military expeditions and spent much time travelling about their empire. Rāwandī states that Malikshāh was not cut off from the people by a curtain (*ḥidjāb*) and that if someone came to him for redress he would speak to him face to face (*Rāḥat al-ṣudūr*, ed. Muḥammad Iḳbāl, London 1921, 131).

Niẓām al-Mulk believed that fixed procedures in ceremonial matters enabled the subjects to regulate their conduct. Accordingly, he lays down rules in the *Siyāsat-nāma* for the holding of audiences by the sultan (110, 84, 86). These may well have represented his ideal rather than actual practice. He obviously felt that the Saldjūḳ sultans had failed to maintain the pomp necessary to preserve the awe in which he believed the monarch ought to be held. However, on occasion the Saldjūḳ sultans did observe an elaborate ceremonial (cf. the marriage of the daughter of Malikshāh to al-Muḳtadī [see MAWĀKIB]). Niẓām al-Mulk also lays down rules for the reception of foreign envoys. They were to be accompanied by an officer of the sultan as soon as they crossed the frontier. The reason for this was not only to honour the envoy but also to find out the aims and power of his patron (*ibid.*, 86). The practice of appointing an official, known in later times as the *mihmāndār* [*q.v.*], to conduct important personages through the country is also found under the Ṣafawids and Ḳādjārs.

Bundārī and Ibn al-Athīr both give the impression that Ṭoghrïl Beg held the caliph in great veneration, though this did not prevent him from demanding the same honours as had been accorded to the Ghaznawids and in insisting on his own marriage to the caliph's daughter (see G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste au XIe siècle*, Damascus 1963, 78 ff. and *passim*; idem, *The marriage of Tughril Beg*, in *IJMES*, i [1970], 259-75). In 449/1057-8 when he was granted an audience by the caliph, he dismounted at the gate of the caliph's palace and went in on foot. On seeing the caliph sitting on his throne, he kissed the ground several times. He was then seated on a chair (*kursī*) in front of the caliph's throne. The caliph, addressing him through the *raʾīs al-ruʾasāʾ*, gave him a *khilʿa*, standard and diploma and girded him with a sword (Sibṭ b. al-Djawzī, *Mirʾāt al-zamān*, ed. Ali Sevim Ankara 1968, 24-6; Ibn al-Athīr, *al-Kāmil*, ix, 436; see also MAWĀKIB). The caliph's envoy when he came in Shaʿbān 453/August-September 1061 to Tabrīz for the conclusion of the *ʿaḳd* between the caliph's daughter and Ṭoghrïl Beg, appears to have been treated with great respect. When he entered the sultan's presence the latter was sitting on his throne, around which were standing the *amīrs* and *maliks* according to their ranks. After the envoy had saluted the sultan, ʿAmīd al-Mulk al-Kundurī [*q.v.*], Ṭoghrïl Beg's *wazīr*, approached him and greeted him; under both the Ghaznawids and the Saldjūḳs it appears to have been the function of the chief minister to speak on such occasions on behalf of the sultan. The caliph's envoy then stood up and took out his deed of proxy (*kitāb al-wikāla*). The whole company rose and when he came to the passage stating the "exalted ceremonies which were to be performed" he bowed, and those present, including the sultan and ʿAmīd al-

Mulk, also bowed. When details of the marriage portion (*mahr*) were mentioned, voices were raised in prayer for the caliph. The *khuṭba* was read by a certain Masᶜūd al-Khurāsānī, after which ᶜAmīd al-Mulk scattered pearls and *dīnārs* before the throne (Sibṭ b. al-Djawzī, *Mirʾāt al-zamān*, ed. Sevim, 93-4).

Whereas the Ghaznawid Masᶜūd b. Maḥmūd distributed *khilᶜas* in great profusion, the Saldjūḳ sultans seem to have been more sparing in their grants. When Alp Arslan took oaths of allegiance from his *amīrs* for his son Malikshāh as his heir apparent, he gave them *khilᶜas* (Ibn al-Athīr, x, 34). Similarly, when Sandjar came to Rayy in 543/1148-9 and renewed Masᶜūd b. Muḥammad's diploma, he gave Masᶜūd and all the *amīrs* of ᶜIrāḳ valuable *khilᶜas* (Rāwandī, 175). Whereas Masᶜūd b. Maḥmūd appears to have espected his subjects to present him with gifts on all occasions, under the Saldjūḳs the practice was less common. The Salḍuḳs adopted the various insignia of royalty which had prevailed under earlier rulers. They added to them the *ghāshiya* [*q.v.*, and see also MAWĀKIB]. They apparently had special tents when on expeditions. When Maḥmūd b. Muḥammad spent one month with his uncle Sandjar in 521/1127 after he had rebelled against him, he was not allowed a red *djahrumī* tent. When he was restored to the government of ᶜIrāḳ at the end of the month, Sandjar again accorded to him the customary marks of royalty and a special garment (*kiswat-i khāṣṣ*), as well as a bejewelled cloak, a special horse (*asb-i nawbat*) with harness set with jewels and an elephant with a howdah also set with jewels (Rāwandī, 170). Pīr Muḥammad, Tīmūr's grandson, also had a red tent (Clavijo, *Embassy to Tamerlane 1403-1406*), tr. from the Spanish by G. Le Strange, London 1928, 254), and so too did Fatḥ ᶜAlī Shāh (Feuvrier, *Trois ans à la cour de Perse*, Paris 1906, 44).

The Īlkhāns brought with them new ceremonial from Central Asia, some but not all of which survived their conversion to Islam. On the death of an Īlkhān, after the mourning ceremonies had been held, the Mongol princes and princesses and the great *amīrs* used to hold a *ḳuriltay* [*q.v.*], or council, to elect (or acclaim) a new Īlkhān. The procedure was similar to that held on the enthronement of the Great Khan (for a description of the enthronement of Güyük, see Simon de Saint-Quentin, *Histoire des Tartares*, ed. J. Richard, in *Documents relatifs à l'histoire des Croisades*, viii, Paris 1965, 90-2; see also Spuler, *Die Mongolen in Iran*³, Wiesbaden 1968, 264). The decision to confer the throne on one of the princes was followed by feasting and celebrations. During the reign of Ḳubilay (d. 1294), confirmation of the election by the Great Khan was considered necessary. Ghazan had a golden tent (*khargāh*) and a golden throne which, like the throne of the Ghaznawid Masᶜūd, also had taken three years to make. It was set up in Ūdjān in 701/1301-2 and a seat, set with jewels, placed on it. After three days, during which religious celebrations were held, Ghazan gave a great feast, at which he put on garments of gold brocade, placed on his head a jewelled crown and girded on a belt of similar splendour to the crown (Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, ed. K. Jahn, London 1940, 137-8, 139). Mongol customs pertaining to the recognition of the ruler appear to have been adopted in Fārs by the Atabeg Abū Bakr Saᶜd b. Zangī. Rashīd al-Dīn relates that the *umarāʾ*, when offering allegiance to him, "took off their girdles and put them on their necks" (ed. Blochet, ii, 36, quoted by Spuler, *op. cit.*, 264). Subordinate rulers were given, together with the *yarligh* or *farmān* entrusting them with their governments (which was sealed with a special seal or *tamgha*), some or all of the following insignia: a parasol (*čatr*), a sword, a *pāʾīza* or tablet of authority in gold, silver or wood, according to the rank of the recipient, a standard, kettle-drums and a *khilᶜa*. Some *pāʾīzas* were written in red and had a falcon at their head (cf. Naṣīr al-Dīn Munshī, *Simṭ al-ᶜulā*, ed. ᶜAbbās Iḳbāl, Tehran A.H.S. 1328/1949-50, 79, 89; *Tārīkh-i Sīstān*, ed. Malik al-Shuᶜarāʾ Bahār, Tehran A.H.S. 1314/1935-6, 406; see also Marco Polo, *Travels*, tr. A. Ricci, London 1931, 17, 113). The birthday of the ruler, at least during the reign of Ghazan Khān, was celebrated with great splendour and presents were given to him (see Spuler, *op. cit.*, 264). There were apparently special ceremonies concerned with the presentation of drink to the Īlkhān. These, too, were modelled on the practice of the court of the Great Khan (cf. *Travels*, 132 and also *Tārīkh-i shāhī-i Ḳarā-Khitāʾīān*, ed. Muḥammad Ibrāhīm Bāstānī Pārīzī, Tehran Shāhinshāhī 2535/1976-7, 139). One of the features which differentiated the ceremonies of the Īlkhānid and Tīmūrid courts from earlier and later courts was the participation, on occasion, of women of the royal house in public ceremonies. The Īlkhān's chief wife sometimes sat on the throne with him. The Īlkhāns were lavish in their grant of *khilᶜas*. They and their wives held large stocks of precious garments. Some of these were made in royal workshops (cf. Rashīd al-Dīn, *Tārīkh-i mubārak-i ghāzānī*, 333; Kāshānī, *Tārīkh-i Öljeytü*, ed. Mahīn Hambly, Tehran A.H.S. 1348/1969, 121-2). Rashīd al-Dīn states that Ghazan gave away on one occasion 20,000 garments (*Tārīkh-i mūbarak-i ghāzānī*, 185);

Much of the ceremony of earlier times continued to be found under the Tīmūrids. Clavijo, in his account of Tīmūr's reception of foreign ambassadors in Samarḳand, describes how they were taken under the armpits by a series of waiting officials as they advanced through the palace and its grounds. First they came to Tīmūr's nephew, a very old man, seated on a dais, to whom they made obeisance; then they came to several of Tīmūr's grandsons, who were also seated on a dais and to whom they paid their respects. Three of the young princes got up, asked for the letter which the envoys had brought from the king of Castile and took it to Tīmūr. The envoys followed and found Tīmūr sitting on a dais in the portal at the entrance of the palace. He was dressed in a cloak of plain silk, wearing a tall white hat, ornamented with pearls and jewels, with a balas ruby on the crown, and sat on a mattress covered by an embroidered silk cloth with cushions behind him. On sight of Tīmūr, the envoys bowed and put their right knees to the ground, crossing their arms over breasts. Advancing another step, they again bowed, and on the third occasion remained kneeling. Tīmūr then commanded them to rise and approach him. Three chamberlains came forward, took them under the armpits, led them up to Tīmūr until they stood immediately before him, and again made them kneel. At the end of the audience a feast was held (*Embassy of Tamerlane*, 220 ff.). Clavijo describes another feast given by Tīmūr which was attended by numerous men and women (ibid., 227 ff.). At the end of it "one of the lords in waiting came forward with a silver bowl full of small pieces of silver money ... and of this money he proceeded to throw handfuls over us ambassadors as also over the other guests present, and gathered up all the rest of the coins that remained in the bowl and threw them into the skirt of the cloaks we ambassadors were wearing, this being a gift to us" (*ibid.*, 232). Tīmūr then presented each of them with a robe of honour. They

bowed in acknowledgement three times and then knelt before him (*ibid.*, cf. also the reception of the Spanish envoys by Pīr Muḥammad, Tīmūr's grandson, 254). At various other times the ambassadors were given robes of honour—on one occasion they each received not only a robe of kincob, but also a skirt to match, a hat and a horse for riding (*ibid.*, 236), and on another they were each given a robe of honour of kincob and for wearing underneath it a close fitting jacket of silk cloth lined with skins, with a high collar made of the fur of two marten skins, a hat and a wallet containing 1,500 silver pieces (*ibid.*, 276-7).

Once when Tīmūr received the envoys in the Great Pavilion in Samarḳand, he was accompanied by a great crowd of his imperial kinsmen and many foreign ambassadors, all of whom took their seats in due order of precedence. Elephants then were brought in and performed tricks, and minstrels played their instruments. Round about there stood some 300 wine jars for the guests and two tripods made of wooden staves painted red, with a great leather sack hanging on each filled with cream and mares' milk. These the attendants kept stirring and threw in many loaves of sugar. Tīmūr's chief wife appeared at the feast, taking her place beside Tīmūr but slightly behind him on a low dais, three of her ladies sitting beside her. Seven others of his wives, and the wife of one of his grandsons also took their allotted places (*ibid.*, 257 ff.). Describing the ceremonies connected with drinking that took place at the feast (which appear to have resembled customs at the court of the Īlk͟hāns), Clavijo states, "Those who are given to drink at the hands of Timur have to do so ceremoniously and after this fashion. They come forward and bending the right knee kneel, once at some distance before approaching: then they rise and step forward nearer to him (Timur) and kneel with both knees on the ground, receiving the offered cup from his hand. Then they stand up and go backwards a little distance, taking care always to face his highness, and they kneel again and then drink at a draught all that is in the cup, for to leave any wine undrunk would be against good manners. Then having swallowed the draught they rise again and salute, placing the hand to the head. When we ambassadors were thus called up for presentation, two of the lords in waiting seized each of us under the arms and did not let us loose until we had been subsequently brought back to our seats .... All round and about there were pitched many smaller tents and awnings where sat the various other ambassadors who had come to attend the court of his Highness but who were not deemed of sufficient rank to warrant a seat in the Great Pavilion where Timur himself had his place" (*ibid.*, 262).

Under the Ṣafawids court ceremonial was more tightly controlled. The *Dastuī al-mulūk* of Mīrzā Rafīʿā gives an account of the duties of court officials and of the precedence of civil and military officials and where they stood or sat in the royal assembly and of the robes of honour and other insignia given to them on appointment to office. This manual appears to have been written in the reign of S͟hāh Sulṭān Ḥusayn, the last of the Ṣafawids, but the practices which it describes probably go back to earlier reigns, and some of them were later revived under Fatḥ ʿAlī S͟hāh and his successors (Muḥammad Taḳī Dānis͟h-Paz͟hūh, *Dastūr al-mulūk-i Mīrzā Rafīʿā wa Tad͟hkirat al-mulūk-i Mīrzā Samīʿā*, in *Tehran University*, *Rev. de la Faculté des Lettres et des Sciences Humaines*, xv/5-6 [1967], 62-93, xvi/1-6 [1968-9], 298-322, 416-40, 475-504; see also V. Minorsky, *Tad͟hkirat al-mulūk*, London 1943). The *is͟hīḳaḳasi-bas͟hi*, the chief chamberlain, was charged with the supervision of court ceremonial. He normally belonged to the military classes and was one of the four "pillars of the state", the others being the *ḳurči-bas͟hi*, the *ḳullar-aḳasi* and the *tufangči-aḳasi*. His insignia of office was a mace (*daganak*). He regulated the proceedings of the Bihis͟htāʾīn assembly. It was his duty after repasts and feasts to recite the *takbīr* Dānis͟hpaz͟hūh, *Dastūr al-mulūk*, in *op. cit.*, xvi [1968], 82-3). Great splendour prevailed in the court. The reception of envoys was accompanied by banquets and the giving and receiving of presents.

When Humāyūn, the Mug͟hal emperor, took refuge in Persia in 951/1544-5, S͟hāh Ṭahmāsp welcomed him warmly. Many banquets were held, and at the final one Ṭahmāsp showered gifts on Humāyūn (Iskandar Muns͟hī, *Tārīk͟h-i ʿālamārā-yi ʿabbāsī*, Tehran A.H.S. 1334/1956, 99). Similarly, when Bāyazīd, the son of the Ottoman sultan, took refuge in Persia, having been dismissed by his father from the governorship of Kütahya, Ṭahmāsp arranged a magnificient reception for him in Ḳazwīn (*ibid.*, 102). The Mug͟hal emperor and the Ottoman sultan were the greatest of the contemporary Muslim rulers, but the lavishness of Ṭahmāsp's reception of Humāyūn and Bāyazīd was probably due to the fact that he hoped through them to extend his own influence in India and the eastern provinces of the Ottoman empire respectively.

Great importance was attached to the custom of kissing the ground before the ruler (*pābūsī, zamīnbūsī*), his throne and the gates of his palace; not only was it a means of showing honour to the ruler, but the action was believed to confer honour also upon the one who performed it. When the D̲j̲alālīs, who had defected to Persia from the Ottoman empire, came to Iṣfahān in 1016/1607-8 they had, Iskandar Muns͟hī states, "the good fortune of kissing the shah's stirrups" in the audience hall of the Naḳs͟h-i D̲j̲ahān palace, and the supports of the shah's throne (*ibid.*, ii, 777). William Parry records that Sir Robert Sherley and his companions, on their arrival in Ḳazwīn, were brought by the shah's steward (the shah being absent on an expedition) to the gate of the palace "to offer that homage that all strangers do—that is to kiss the entrance of the palace three times" (*Sir Antony Sherley and his Persian adventure, including some contemporary narratives relating thereto*, ed. E.D. Ross, London 1933, 116). Sir John Chardin describes the ceremony which took place when a foreign ambassador was presented to the shah in the following words: "The ambassador or other person is conducted to within four paces of the king, and right against him where they stop him, and make him kneel, and in that posture he makes three prostrations of his body and head to the ground, so low that his forehead touches it. This done, the ambassador rises and delivers the letter he had for the king to the captain of the gate, who puts it in the hands of the first minister, and he presents it to the king, who puts it on his right side without looking into it: after this the ambassador is conducted to the place appointed for him" (*Sir John Chardin's travels in Persia*, with an introduction by Sir Percy Sykes, London 1927, 84-5).

Exaggerated respect was shown to any communication received from the shah. The recipient of a letter or *farmān* would kiss the document and raise it to his eyes and head, "a ceremony all Persians religiously observe" (*The journal of Robert Stodart*, with an introduction and notes by E.D. Ross, London 1935, 29). If a *k͟hilʿa* was sent to a provincial governor, the recipient would go out to a set distance beyond the city gates to meet the *k͟hilʿa*, which he would then put on

and return to the city accompanied by a concourse of the local officials and inhabitants (*The travels of Monsieur de Thevenôt*, London 1687, repr. 1971, ii, 72, 104; Jean-Baptiste Tavernier, *Voyages en Perse*, Geneva 1970, 273). This was also the case under the Afs͟hārs and Ḳād͟jārs (cf. Jonas Hanway, *An historical account of the British trade over the Caspian Sea*, London 1762, i, 101; Malcolm, *History of Persia*, London 1829, ii, 407, 408; ʿAbd Allāh Mustawfī, *S͟harḥ-i zindagānī-i man*, Tehran A.H.S. 1324/1945-6, i, 546-7). Prior to taking leave of the shah, envoys were given *k͟hilʿ*as, which they wore at the farewell audience. The quality of the person regulated the value of the *k͟hilʿa*. Some consisted of a whole suit of clothing, even to the shirt and shoes. Some were taken out of the king's own wardrobe from amongst the garments he had worn. The common ones consisted of a vest, an upper vest, a scarf and a turban. The value of *k͟hilʿ*as varied enormously. One given to an ambassador from the Mug͟hal emperor was valued at 100,000 crowns and consisted of a garment of gold brocade with several upper vests, lined with marten furs and enriched by a clasp of precious stones, 15,000 crowns in money, forty very fine horses, their trappings garnished with precious stones, a sword and a dagger covered with the same and two large boxes filled with rich brocade of gold and silver, and several chests of dried fruits, liquors and essences (Chardin, ed. Sykes, 112-13). *K͟hilʿ*as were also given to ministers, provincial governors and others, especially on their appointment to office and on the accession of the shah (cf. *Dastūr al-mulūk*, in *op. cit.*, xvi/1-2 [1968], 71 and *passim*). In the latter case, the grant of a *k͟hilʿa* indicated that the repicient was to continue to hold the office which he had held under the previous shah. Iskandar Muns͟hī states that sultan Muḥammad S͟hāh (985-96/1578-87) gave the large stocks of robes of honour which had been accumulated over the years to officials and others and that never a day passed without him giving ten or twenty robes of honour to unknown persons (Iskandar Muns͟hī, i, 228). Chardin records that when S͟hayk͟h ʿAlī K͟hān, Ṣafī II's first minister, was restored to favour after he had been in disgrace, he was sent a *k͟hilʿa*, a horse with a saddle and trappings of gold, a sword and a dagger both set with diamonds, with an inkhorn, letters patent and other marks which denoted the post of prime minister. The next day, ʿAlī K͟hān, clothed in the *k͟hilʿa*, came to kiss the shah's feet. Three days later he entertained the shah (Chardin, ed. Sykes, 8-9). Minor rulers also gave *k͟hilʿ*as to their followers and to each other (cf. ʿAlī b. Shams al-Dīn, *Tārīk͟h-i k͟hānī*, ed. M. Sotoodeh, Tehran A.H.S. 1352/1973-4, 87, 129, 135).

Olearius, describing an audience given by the shah in 1656, mentions that the ambassadors were held under the arms by officials as they approached the shah, and notes that the purpose was both to honour the envoy and to ensure the security of the shah. At the end of the audience there was a feast at which dancers and singers performed (*Vermehrte Newe Beschreibung der Muscowitischen und Persischen Reyse*, Schleswig 1656, ed. von Dieter Lohmeier, repr. Tübingen 1971, 510-12). Du Mans, who gives a detailed description of court ceremonial, does not mention the practice of taking envoys under the arms. He states that the ambassador, with his hands crossed on his chest, would be led by the *is͟hiḳaḳasi-bas͟hi*, holding a kind of mace in his hand, to the shah to perform his obeisance. As they approached the shah, the *is͟hiḳaḳasi-bashi* would press his hand on the ambassador's shoulder to make him kneel. Then in that posture he would kiss the feet of the shah, after which he would retreat backwards to the place asigned to him by the *is͟hiḳaḳasi-bas͟hi* (*Estat de la Perse en 1660*, ed. Schefer, 30). Whenever an ambassador presented his letters and kissed the shah's feet, it was customary for him to eat with the king and his court and to sit in his assembly (*ibid.*, 32). According to the *Dastūr al-mulūk*, it was the duty of the *wazīr* of the supreme *dīwān* to read the *Fātiḥa* after meals in the royal assembly (*mad͟jlis-i bihis͟htāʾīn*) (in *op. cit.*, xvi/1-2 [1968], 77). Thevenôt states that in audiences given to Christian ambassadors or others there was always much drinking (*op. cit.*, ii, 100). Kaempfer describes in detail the farewell audience given by the shah in Iṣfahān to the Swedish ambassador Ludwig Fabritius in 1684 (*Am Hofe des persischen Grosskönigs 1684-1685*, tr. W. Hinz, Tübingen-Basel 1977, 252 ff.). Twenty-two eunuchs stood behind the shah in a half-circle and six Georgian pages on his right side. One of them fanned the shah, another looked after the water-pipe (*ḳaliyān*), a third the spittoon, and a fourth had charge of a censer. One of the black eunuchs held the shah's dagger, and others held his gun, quiver, and bow, etc. (*ibid.*, 259). The various officials, who had their allotted places, stood in two rows, one on the right and the other on the left; the bodyguard stood four paces behind them (*ibid.*, 259-60). After the audience a sumptuous banquet was held (*ibid.*, 260 ff., 277 ff.).

On the shah's birthday the *amīrs*, "pillars of the state", the intimates of the court and the retinue, each according to his rank and status, gave the shah a sum of money. Some of this was handed over to the chief astrologer (*munad͟jd͟jim-bas͟hī*) to give to the deserving (*arbāb-i istiḥḳāḳ*). The garments that the shah wore on his birthday were given as a *k͟hil ʿa* to the *munad͟jd͟jim-bas͟hi* (*Dastūr al-mulūk*, in *op. cit.*, xvi/3 [1968], 309). The Naw Rūz was also an occasion for the giving of presents (*pīs͟hkas͟h*) to the shah (*Dastūr al-mulūk*, in *op. cit.*, xvi/1-2 [1968], 71 and *passim*). It was the duty of the *malik al-s͟huʿarāʾ* [*q.v.*] to write a *ḳaṣīda* in praise of the shah, or in description of spring, and to read it at the public audience held on the Naw Rūz (*ibid.*, in *op. cit.*, xvi/4 [1969], 424). When the shah was in Iṣfahān, the Naw Rūz was celebrated by a great banquet held usually in the Čihil Sutūn palace or in the Naḳs͟h-i D͟jahān gardens. In 1004/1595-6, the celebrations went on for several days and there was a public holiday for ten or twelve days. The bazaars were decorated and in the Saʿādatābād Square there were polo matches and archery contests (Iskandar Muns͟hī, i, 506, cf. also 518, 532). In 1011/1602-3 the Naw Rūz celebrations were held in the Naḳs͟h-i D͟jahān gardens, which were brilliantly lit for the occasion. The celebrations lasted three days (*ibid.*, ii, 634). In 1017/1608-9 the celebrations were again held in the Naḳs͟h-i D͟jahān gardens. The space round the large pond (*ḥawḍ*) in the middle of the garden was reserved for the *amīrs*, *wazīrs*, pillars of the state, and intimates of the court, while the great men and notables of Iṣfahān and its districts (*bulūkāt*), the people of K͟hurāsān and Tabrīz, merchants and different groups who happened to be in Iṣfahān, were given places along the banks of the irrigation canals according to their different ranks (*ibid.*, ii, 780). In 1022/1613-14 also, celebrations were held in the Naḳs͟h-i D͟jahān gardens, but they did not begin until the third day of the Naw Rūz because the shah did not return to Iṣfahān from Farahābād until then. On this occasion, he gave tax remissions to the people of the province of Iṣfahān (*ibid.*, ii, 861). If the shah was in the provinces, the celebrations of the Naw Rūz were of a minor character. In 1009/1600-1 he was in Mas͟hhad and the celebrations took the form of games

of polo and archery contents in the *maydān* of the city (*ibid.*, i, 598). Sometimes owing to the exigencies of war, the Naw Rūz was not celebrated officially, as was the case in 1025/1616-17 when the shah was en route for Georgia (*ibid.*, ii, 897-8).

Sir John Chardin gives an eye-witness account of the coronation of Shāh Ṣafī II (1077-1105/1667-94). His father Shāh ʿAbbās II having died in Ṭabaristān without designating his successor, his chief ministers decided to put Sulaymān (who later took the name Ṣafī) on the throne. They sent the *ḳurči-bashi* to Iṣfahān to bring Sulaymān out of the *ḥaram* where he had been confined on the orders of his father, and to give him a letter announcing their decision. Every effort was meanwhile made to conceal the late shah's death, to which purpose the chief ministers, other than the *ḳurči-bashi* remained in Ṭabaristān, sending only their deputies to Iṣfahān. Sulaymān was informed of the decision to place him on the throne and preparations for the coronation were immediately made. The *ḳurči-bashi*, attended by the chief eunuch and a train of other persons, conducted the prince to the audience hall, where the deputies of the ministers of state made their three usual prostrations in the name of the ministers of state as also did the *munadjdjim-bashi*, who had come with them from Ṭabaristān (for a description of the hall, see *The travels of Sir John Chardin into Persia and the East Indies .... to which is added The coronation of the present king of Persia Solyman the III*, London 1691, *Coronation*, 37 ff.). The prince then went to the bath to purify himself and put on new clothes. Meanwhile, the *munadjdjim-bashi* and another astrologer who had come with him from Ṭabaristān set themselves to observe the most favourable moment for the coronation to take place. The *shaykh al-islām*, who was to perform the ceremony, was sent for and the hall prepared for the coronation. Four articles needed for the coronation were placed in the middle of the hall. The first was the throne or *kursī*, "a little square cushion stool, three geometrical feet in height, the feet of the pillars that supported the corners being fashioned like so many great apples". These and the pillars were plated with gold and set with rubies and emeralds. When not in use, the throne was kept in the royal treasury and was so weighty that it needed two men to carry it (Chardin, *Coronation*, 39-40). The second article was the *tādj* or crown (for a description of this see *ibid.*, 40-1). The third was a sword and the fourth a dagger, both of which were set with precious stones (*ibid.*, 41). The three last mentioned articles were placed near the throne. When all was ready, Sulaymān came in and sat down (not on the throne) and the assembled company ranged themselves in their appointed places (*ibid.*, 42-3). When the *munadjdjim-bashi* gave notice that the propitious moment had arrived, the prince and those present rose to their feet. The *ḳurči-bashi*, after throwing himself at the shah's feet, rose to his knees, opened the bag in which was the letter he had brought from Ṭabaristān, took it out, kissed it, raised it to his forehead, and presented it to the prince and then rose to his feet. The prince, having received it, returned it to him and commanded him to open it and read it. When he had finished reading, the prince ordered him to send for the *shaykh al-islām*. The latter, approaching the prince, threw himself at his feet, rose after the usual prostrations, and took the letter from the *ḳurči-bashi*. Having laid it on his head, he read it and examined the seals, and then fell upon his knees before the prince and made three bows to the ground, thus declaring the authenticity of the letter and the elevation of the prince to the throne. The *ḳurči-bashi* on the left and the *shaykh al-islām* on the right then conducted the prince to the golden chair or throne in the middle of the hall. The *shaykh al-islām*, kneeling, said a prayer, blessed the *tādj*, the sword and the dagger, girded the sword on the shah's left side and hung the dagger on his right side. Then having made a sign to the *ḳurči-bashi* to take off the shah's bonnet, he put on the *tādj*, reciting as he did so verses from the Ḳurʾān, which he also did when he girded him with the sword and the dagger. He then gave way to the *khaṭīb*, who read the *khuṭba*. As the latter ended the *khuṭba* by praying for the long life of the shah and the increase of his conquests, those present loudly repeated five or six times the words *in shāʾ allāh*. The *shaykh al-islām* then bowed his forehead to the ground three times, pronounced a second benediction and bowed again three times, after which those present, according to their rank, came forward and made the three customary prostrations. This concluded the ceremony (*ibid.*, 42 ff.). Subsequently, as a result of an illness which attacked the shah, a shortage of foodstuffs, an outbreak of pest and various other infelicitous events, it was believed that the coronation had taken place under an unfavourable constellation. Accordingly, a second coronation was decided upon at what was hoped would be a more favourable hour. This took place in the Čihil Sutūn palace, and the shah took the name of Ṣafī (*ibid.*, 132-3).

Under Nādir Shāh, court ceremonial was inevitably much reduced, since he spent much of his life in camp and on military expeditions. Hanway describes his camp and the pavilion tent in which he gave audience and transacted business. Sometimes he used to sit cross-legged on a large chair or dais and sometimes on the floor. There was nothing sumptuous in the pavilion; the front was always open even in the worst weather; in very cold weather charcoal braziers were placed in the middle. Behind the pavilion were his private apartments, to which he retired at meal-times. His officers of state and those having business with him stood in the open air forming a semi-circle in front of the tent. If anyone was brought to answer for his conduct, he was held under the arms by officers to prevent his escape or committing an act of violence. "The same ceremony with very little difference", Hanway continues, "was observed towards foreign ambassadors, of great men, being made on the pretence of respect but in reality to prevent an accident" (*op. cit.*, i, 166-7). He mentions that there were two standards in Nādir's camp when he visited it in 1743. One was in stripes of red, blue and white and the other in red, blue, white and yellow, without any ornament. They were very large and extremely heavy (*ibid.*, i, 169).

Nādir's coronation was also a break with tradition. When he had decided to assume the crown, he summoned governors, *ḳāḍīs*, *ʿulamāʾ* and provincial notables to a *ḳuriltay* in the Mūghān steppe ostensibly to choose their ruler, but in fact to acclaim him as their ruler. Those who assembled were too numerous to be received simultaneously and so were divided into groups, each being given a separate audience. Finally, on 24 Shawwāl 1148/8 March 1736, after several days of charade, Nādir having signified his readiness to accept the crown subject to certain conditions, the *umarāʾ* and other persons of consequence clad in robes of honour assembled, and Mīrzā Zakī placed a golden crown, adorned with magnificent jewels, on Nādir's head. All those present knelt down and prayed, except the deputy chief *mullā*, who intoned the prayer. While this was being uttered, all kept their arms above their heads; afterwards, while the *Fātiḥa* was being read,

they bowed their faces to the ground. When the *Fātiḥa* was finished, everyone rose and seated himself in his appointed place according to his rank (see further, L. Lockhart, *Nadir Shah*, London 1938, 96 ff.). Among the spoils that Nādir brought back to Persia from his Indian expedition in 1739 was the Peacock Throne. This was lost in the troubles after Nādir's death. The modern Peacock Throne is of Ḳād̲j̲ār manufacture (see Amīr Gīlāns̲h̲āh, *Yak ṣad u pand̲j̲āh sāl-i salṭanat dar Īrān*, n.d. Tehran, 28-9 ᶜAlī Aṣg̲h̲ar Ḥikmat, *Tak̲h̲t-i ṭāwūs*, in *FIZ*, viii, 138-52).

Āḳā Muḥammad K̲h̲ān (1193-1211/1779-97), like Nādir S̲h̲āh, spent much of his life in military expeditions and had little use for court ceremonial. Under his successor Fatḥ ᶜAlī S̲h̲āh (1211-50/1797-1834), traditional ceremonies were revived. No court, according to Sir John Malcolm, paid more rigid attention to forms and ceremonies, the maintenance of which were deemed essential to the power and glory of the monarch. Looks, words, and the motions of the body were all regulated by the strictest forms. When the king was seated in public, his sons, ministers and courtiers stood erect, with their hands crossed over their chests, and in the exact place belonging to their rank (*History of Persia*, ii, 400). James Morier also remarks that the king was never approached by his subjects without frequent inclinations of the body; and when the person introduced to his presence had reached a certain distance, he would wait until the king ordered him to proceed; upon which he would leave his shoes and walk forward to a second spot and wait there until the king directed him to advance further. No one sat before the king except relations of kings, poets, learned and holy men and ambassadors; his ministers and officers of state were never permitted this privilege (*A journey through Persia, Armenia, and Asia Minor*, London 1812, 286).

The insignia of royalty consisted of the following articles, all of which were set with jewels and pearls: the crown (of which there appear to have been several), the sword of state, a dagger, the royal bow and its arrows, a shield and staff or mace. These were held on ceremonial occasions by pages (*g̲h̲ulāms*) or other officials, or by the princes (cf. W. Ouseley, *Travels in various countries of the east....*, London 1819, iii, 130-1; Morier, *op. cit.*, 192, 214-15; Muᶜayyir al-Mamālik, *Yāddās̲h̲t-hā-ī az zindagānī-i Nāṣir al-Dīn S̲h̲āh*, Tehran n.d., 25). On the front of the crown was placed an aigrette (*d̲j̲īg̲h̲a*). A similar ornament was also worn on the headdress of the shah and princes. On state occasions, special bracelets were worn by the shah and his sons (Morier, *A second journey through Persia, Armenia, and Anatolia*, London 1818, 173). A variety of standards were in existence, some with religious symbols, such as D̲h̲u 'l-Fiḳār, the sword of ᶜAlī, on them. The royal standard usually had on it the figure of a lion couchant with the sun rising behind it, which sign was also commonly sculptured upon the royal palaces (Malcolm, *History of Persia*, ii, 406-7). Hanway mentions that this emblem was to be found on the palace built by S̲h̲āh ᶜAbbās at As̲h̲raf (*op. cit.*, i, 199). It was a sign of some antiquity; the Sald̲j̲ūḳ of Rūm, G̲h̲iyāt̲h̲ al-Dīn Kay Ḳubād (634-42/1236-44) had it on one of his coins (Malcolm, *op. cit.*, ii. 406 n.).

The arrival of a foreign embassy was deemed one of the occasions when the king ought to appear in all his grandeur. Fatḥ ᶜAlī vied with the most magnificent of his predecessors in this respect. The exact procedure differed, however, in that ambassadors were no longer required to kneel and kiss the ground in front of the monarch, but merely to bow at intervals as they approached his presence (Malcolm, *op. cit.*, ii, 400-1); those who escorted them into the royal presence no longer took them under the arms; and banquets were no longer held after audiences. Only ambassadors and the representatives of sovereign princes were allowed the distinction of being seated in the presence of the king at public audiences (Sir Robert Ker Porter, *Travels in Georgia, Persia...*, London 1821, i, 356). There is a curious reference in the account of the negotiations for the reception of Sire Gore Ouseley, the British envoy, who brought a letter from King George III addressed to Fatḥ ᶜAlī S̲h̲āh, in 1811. Ouseley wished to present the letter personally. The Persian ministers insisted that it should be transmitted through them according, as they alleged, to Persian usage; and Fatḥ ᶜAlī himself said that he could not possibly receive the letter directly from Ouseley at a public audience. A compromise was reached, by which the shah agreed to receive the letter at a private audience (W. Ouseley, *op. cit.*, iii, 123).

It was the custom in early Ḳād̲j̲ār times for foreign envoys, when they were received in audience by the shah or a prince governor, to wear red cloth stockings under green leather slippers with high heels, which they removed on entering the audience hall (Ker Porter, *op. cit.*, i, 249-50; cf. also Morier, *A journey through Persia*, 186; Ouseley, *op. cit.*, ii, 10-11, 222, iii, 129-30). In the early years of the 19th century, if *k̲h̲ilᶜa*s had been sent to the envoy and his suite by the shah or prince governor, they would wear these when attending his audience. The practice of sending New Year presents to foreign envoys was discontinued, at least so far as the British mission was concerned, from about the middle of the century (Great Britain, Public Record Office, F.O. 60.130.Sheil to Palmerston, No. 46, Tehran, 23 April 1847).

The Naw Rūz was the most important of the public festivals celebrated by the shah. Fatḥ ᶜAlī appears always to have returned to Tehran or Sulṭāniyya for it. To each of the chief men and officers of the court he would send a *k̲h̲ilᶜa*, consisting of a complete suit of brocade with a shawl, and sometimes he would add to this a horse with its trappings and caparisons (see further Morier, *op. cit.*, 205; idem, *A second journey through Persia, Armenia and Asia Minor*, 93). Malcolm states that it was the custom for the shah to march out of his capital on the Naw Rūz, attended by his ministers, nobles, and as many of his army as could be assembled. The ceremonies of the day would commence with a review, after which the tribute and presents of all the rulers and governors of the different provinces would be laid at the foot of the throne, which was placed in a magnificent tent pitched for the purpose in an open plain. The shah would remain in camp for several days. Horse-races were among the amusements. (*History of Persia*, ii, 405; cf. also Morier, *op. cit.*, 208). Often, however, the Naw Rūz audience took place in the capital (see Ker Porter for a detailed account of Fatḥ ᶜAlī S̲h̲āh's Naw Rūz audience in Tehran in 1818, *op. cit.*, 320 ff., also quoted by R.G. Watson, *History of Persia*, London 1866, 138 n.). Under Nāṣir al-Dīn S̲h̲āh also, the Naw Rūz was celebrated with great magnificence. Three audiences were held; the first (the *salām-i taḥwīl*) took place when the sun passed into Aries and was held in the hall in which Fatḥ ᶜAlī's throne was kept. A large white cloth for the Haft Sīn stretched from near the door of the hall to the edge of the dais on which the throne was placed. The Ḳād̲j̲ār princes, military officers, civil officials, and religious dignitaries proceeded to their places an hour before the sun entered Aries. Three

quarters of an hour later, a curtain was raised and the shah in a blaze of jewels, preceded by the *ishikakasi-bashi* and the Iʿtimād al-Ḥaram, advanced slowly towards the throne, but out of respect for the *ʿulamāʾ*, he did not sit on the throne; instead he sat on a chair (*masnad*) covered with gold brocade, placed beside the throne, holding the sword of Nādir Shāh on his knees. The first minister (the *ṣadr-i aʿẓam*), with his cloak and sword of office, and his subordinates stood near the throne. The *imām djumʿa* and the great *ʿulamāʾ* sat beside the *masnad* of the shah, while the less distinguished *ʿulamāʾ* stood at the foot of the throne. The *khaṭīb al-mamālik* and the *munadjdjim-bashi* stood facing the throne. The former, approaching the throne, read a *khuṭba* and at the mention of the names of the prophet, ʿAlī and the shah all heads bowed. The *munadjdjim-bashi* then came forward and after a moment or two announced that the sun had entered Aries. Immediately the trumpeters, who were drawn up outside, sounded their trumpets and guns were let off in the Maydān-i Mashḳ. The shah offered his congratulations to the *ʿulamāʾ* and then to the rest of the company. Taking the Ḳurʾān in his hands he reverently read a passage, after which Ḥādjdjī Niẓām al-Islām knelt before the shah and put a little dust from a packet into water and gave it to him to drink. Having drunk it, the shah began to give New Year presents (*ʿīdī*) consisting of purses full of gold coins, to the *ʿulamāʾ*. When this was finished and the *ʿulamāʾ* had left, the bands which were drawn up outside, hitherto silent out of respect to the *ʿulamāʾ*, would begin to play. The shah then got up from his *masnad* and sat on a chair and gave purses full of gold coins first to the princes, then to the army leaders and *mustawfīs* and finally to the rest of those present, saying a few words to each one in turn. The recipients, on receiving their presents, kissed them and raised them to their heads. The assembly lasted some two or three hours, after which the shah withdrew into the garden, and thence into the *andarūn*, where the ladies of the *ḥaram* vied with each other in kissing his feet (Muʿayyir al-mamālik, *op. cit.*, 70 ff.).

On the second day of the Naw Rūz, a public audience was held in the *dīwān-khāna*, attended by the Ḳādjār princes and leaders of the Ḳādjār tribe, military officers, civil officials and foreign envoys. When all were assembled, the shah entered the *dīwān-khāna*, mounted the marble throne and sat on a chair, set with jewels, which was placed on it. Bands then played the special music for the *salām* (*muzīḳ-i salām-i īrān*), trumpeters sounded their trumpets, guns were fired, and the instruments of the *naḳāra-khāna* were played. When this was over the *khaṭīb al-mamālik* read the *khuṭba*, and the court poet recited a *ḳaṣīda*, after which the *ḥakīm al-mamālik* brought the special *ḳāliyān* kept for audiences on a tray set with jewels and placed it at the feet of the shah, who, according to custom, began to smoke it. At this audience presents were given only to the military and the bureacracy; the *munshī al-mamālik*, with two others, took round large trays of coins and each person to whom it was offered took a handful (*ibid.*, 82 ff.). The audience held on the third day was of an informal nature; the *mustawfīs* and military officers were not present, only the shah's intimates. On this occasion he would watch the various activities which went on in the grounds and streets around the palace. These included ram fights, cock-fighting, bear-dancing, performances by conjurers, wrestlers and members of *zūr-khānas*. The shah would distribute largesse to the performers and a special armlet to the champion wrestler (*ibid.*, 86-7). On the eve of the Naw Rūz there was a firework display, which the shah would watch with his ladies from one of the palaces. On the thirteenth day of the *ʿīd*, the shah would go to one of the royal gardens with his *ḥaram* (*ibid.*, 89).

On the shah's birthday, three receptions were given in the reign of Nāṣir al-Dīn Shāh. One was given by Anīs al-Dawla, the shah's chief wife, to which the wives of ambassadors and other European women resident in Tehran would be invited, together with wives of ministers and notables. The shah would appear at the reception and give the guests presents of gold coins. A lunch would then be held for the princes, after which Nāṣir al-Dīn would sit in the portico of the Shams al-ʿAmāra palace and give them presents (*ʿīdī*). In the evening the Nāʾib al-Salṭana, the shah's son, who was governor of Tehran, would hold a reception at which he would make a speech in honour of the shah's birthday, after which the foreign envoys who were present would also make speeches; before each of these the national anthem of the country which the envoy represented would be played. The shah would watch the proceedings with members of his *ḥaram* from a window looking on the audience hall (*ibid.*, 91).

The other major festivals celebrated by Nāṣir al-Dīn Shāh were the religious festivals of the *ʿīd al-aḍḥā*, the birthdays of the prophet Muḥammad, the Imām ʿAlī and the Hidden Imām, the *ʿīd-i ghadīr* [see GHADĪR KHUMM], the *mabʿath* and the *ʿīd al-fiṭr*. Muẓaffar al-Dīn added to these the birthday of Ḥusayn (*ibid.*, 73).

The Ḳādjārs, influenced by European precedent, made various innovations in ceremonial matters. In addition to the playing of national anthems on state occasions, various orders were instituted. One of the first was the Order of the Sun which Fatḥ ʿAlī gave to the French envoy General Gardane; shortly afterwards he instituted the Order of the Lion and the Sun for Malcolm (see Kaye, *Life and correspondence of Major-General Sir John Malcolm*, London 1856, ii, 31 ff.). Nāṣir al-Dīn Shāh introduced the custom of giving his picture (*timthāl-i humāyūn*) adorned by one, two or three rows of diamonds to favoured recipients. The first class with three rows of diamonds was given only to foreign rulers (Muʿayyir al-Mamālik, *op. cit.*, 83-4).

(A.K.S. LAMBTON)

4. In the Ottoman Empire.

In the Ottoman Empire, ceremonial, protocol and etiquette are generally referred to as *Teshrīfāt*. *Alay* [*q.v.*] "procession", "parade", forms an integral part of most ceremonies held by the court, in the residence of the sultans as well as those organised by provincial governors who, in a lesser way, were expected to display the splendour of their monarch's régime.

The same purpose was served by military ceremonial and display. Splendid occasions were the mustering of the army setting out on campaign when the "horsetails" were planted in the field of Davudpaşa or outside Üsküdar. Likewise, the fleet of the *ḳapudān-pasha* lay at anchor in front of the tomb of Khayr al-Dīn Barbarossa at Beşiktaş before putting to sea on its yearly tour in the Mediterranean (see BAḤRIYYA. iii, and TUGH).

Popular entertainment (modern *şenlik*) often had a processional character as well. Ceremonial festivities of the sultan's court, such as weddings, circumcisions of princes and anniversaries, were coupled as a rule with extensive popular entertainments like illuminations (*donanma*) and theatricals.

The great Islamic festivals [see ʿĪD], especially those

during Ramaḍān, were occasions of general enjoyment. Special dress and the distribution of presents by the sultan, as well as to his person, by his subjects and by foreign princes belong to the ceremonial sphere [see HIBA; KHILʿA; LIBĀS, iv; PĪSHKASH]. Ottoman ceremonial derives on one hand from the ancient traditions of world rule cultivated by the Mongol and Turkish empires in Central Asia and the Middle East. On the other hand, the traditions of leadership in Islam begun in Medina and developed in the historical seats of the caliphate in Syria and ʿIrāḳ which had adopted much from the pre-Islamic Persian kingdoms and from elements of provincial Byzantine administrations, were formative elements. The Mamlūk sultanate played an important role in the transmission of prevalent Islamic political culture to the Ottomans. Some scholars maintain that the greater part of Ottoman court ceremonial was in direct imitation of imperial Constantinople, but recent research in Islamic history has shown that such a hypothesis is no longer tenable. The pioneering studies here of M.F. Köprülü have been confirmed by the work of modern scholars such as A.K.S. Lambton and H.İnalcık.

The rules of ceremonies and protocol set by the Ottoman government were applied within the frame of Islamic legal usage and custom (*ʿörf*) [see ʿURF] and laid down in so-called "law codes" *Ḳānūn-nāmes* [*q.v.*]. Hardly any sources can be dated with certainty before the reign of Bāyazīd II (886-918/1481-1512). Dilger's (1967) and Heyd's (1973) researches have shown that the mss. of *Ḳānūn-nāmes* used and published by von Hammer and Meḥmed ʿĀrif were composites or pious frauds of later date than the years of Sultan Meḥemmed II (second reign 855-86/1451-81). Hence the so-called "Ottoman *Ḳānūn-nāme*" is unreliable as an unqualified source, and the use made of these texts by von Hammer and, *a fortiori* by İ. H. Uzunçarşılı, is therefore flawed.

Court ceremonial, appropriately enhanced by Islamic ritual, was designed to emphasise the awe in which the ruler was to held by means of a show of splendour to be seen as evidence of his power. As a consequence, his separation from the rest of the population followed. A protective seclusion was a characteristic of the Ottoman sultans, with their forerunners in the Islamic Middle East. A reliable source, Bertrandon de la Brocquière (1433) describes already the isolation of the reigning sultans, e.g. Murād II still dining with the companions, but his successor sitting at table alone. The increased elevation of the sultan's person and his gradual disappearance from the public eye led to heightened ceremonial on the rare event of the ruler showing himself at appointed occasions.

The audience maintained the link between the separate spheres of authority of the sultan and of his ministers united in the *Dīwān-i hümāyūn* [*q.v.*] presided over by the Grand Vizier [see ṢADR-I AʿẒAM]. In the early days of the Ottoman monarchy, the meetings of the *dīwān* were still public audiences. Probably during the reign of Selīm I (918-26/1512-20), the public audience was instituted in front of the *Bāb-i Seʿādet* in the Palace of Istanbul, when a throne was placed there under an awning. The appearance of the ruler was formally applauded under the guidance of the Chief Applauder or *Alḳishčī Bashī*. *Alḳish* (applause), accompanied by exclamations like "*pādishāhïmïz čok yasha*" intonated by the *Selām Čavūsh* or *Duʿādjī*, is a ceremonial known already in Saldjūḳ times. The audience proper (*ʿarḍ*) implied kissing hands (*destbūs*) or kissing the hem of the ceremonial kaftan of the sultan seated on his throne placed on a dais (*ṣofa*) on such occasions. *Ca.* 1525 the throne was replaced in a room specially built for audiences just inside the gate, the *ʿarḍ odasï* still to be seen in the Topkapı Sarayı today. The protocol is well-known from numerous reports of foreign ambassadors thus received. The guests were led to the sultan while held by their arms. The traditional explanation that it was a measure of security originating in the assassination of Murād I [*q.v.*] in 1389 is rendered doubtful by the earliest sources mentioning this protocol dating from 1518. In fact, this rigid guidance is known from Saldjūḳ times and the Mamlūk court (Dilger, 1967, 58-9 and n.; Lambton).

As tokens of favour, precious kaftans were presented to those persons received as *khilaʿ* or robes of honour. In times of decline, according to diplomatic sources of the 17th and 18th centuries, these robes were actually bought back by the Ottoman Porte to be given out another time. Since the days of Selīm I, the ruler would remain immobile and practically silent during audiences. An exceptional favour was a compliment on a speech of an ambassador in the guise of a word or two, e.g. "*güzel*" or a mere gesture of the hand. Bāyāzīd II and Meḥemmed II still seem to have entered upon some civil conversation on such occasions. The throne (*Takht-i hümāyūn*, *serīr*) did not have an important ceremonial significance in itself apart from being of luxury manufacture. The newly-succeeding sultan would receive the homage or oath of allegiance of his subjects (*bayʿa* [*q.v.*], *bīʿat* in Ottoman usage).

The actual accession to rule was the subject of the great ceremony of the *djulūs*. The ruler proceeded in state on horseback (or boat) to the shrine of Eyyūb on the Golden Horn, where took place the Girding of the Sword (*taḳlīd-i sayf*, *ḳïlïč kushatmasï* in Turkish) in lieu of a coronation in Western style. According to tradition, this took place for the first time in 824/1421 at Bursa, where the venerable Sheykh Emīr Bukhārī girded Murād II. Since Meḥemmed II, the ceremony was held at the Eyyūb *türbe* till the accession of the last Ottoman Meḥemmed VI, on 3 July 1918, when the Sheykh Sayyid Aḥmad Sanūsī [*q.v.*] performed it. It is a persistent but erroneous notion that the sword was fastened by the Grand Sheykh of the Mawlawiyya [*q.v.*] dervish order.

An imperial astronomer had to appoint the exact date, which was to fall between the third and seventh day after the actual accession. On the return journey, the sultan passed the Janissary Barracks of Eski Odalar. There, this corps offered *sherbet*, and the traditional intention for the next campaign of holy war was formulated by the ruler's words "We shall meet at the Red Apple" (*Ḳïzïl Elma*, in Turkish the symbol of distant Christian capitals such as Rome and Vienna). A distribution of money to the Janissary Corps became usual (*Djulūs bakhshīshi*) as was also customary at the reception of foreign ambassadors by the sultan and separately by the *dīwān* in full session, a so-called *Ulūfe Dīwānï* ("Salary Council"). The swords used formed part of the collection of the Holy Relics of the Prophet Muḥammad, *emānāt-i mubāreke*, still kept in the room in the Palace appointed for that purpose, the *khïrḳat-i sherīf odasï*. These relics acquired by Selīm I comprised *inter alia* the Holy Mantle itself (*burda*), the Holy Banner (*sandjaḳ-i sherīf*), a fragment of a tooth of the Prophet (*dendān-i seʿādet*), hairs of the Prophet's beard (*liḥya-yi seʿādet*), a print of his footstep (*ḳadem-i seʿādet*) and swords which belonged to the Prophet, to the caliphs Abū Bakr, ʿUmar and ʿUthmān and to six of his Companions.

These *es͟hyāʾ-i müteberrike* were in a way the insignia of government for the Ottoman sultans in their role as leaders of Islam, and during the 19th century, especially from the time of ʿAbd Ḥamīd II (1293-1327/1876-1909) became symbolic of Ottoman pretentions to the caliphate. The true regalia and symbols of recognition as Muslim ruler were for the Ottomans as for all others, the right of coinage (*sikka* [*q.v.*]); the mention of the sultan's name in the Friday Prayers (*k͟hutba* [*q.v.*]); the seal stamp (*mühür*); the monogram, i.e. the prestigious *ṭug͟hra* [*q.v.*], the hallmark of Ottoman rule par excellence; on some occasions, the dressing of the Imperial Tent (*otāg͟h-i hümāyūn*, also *čadīr*); and accompanying most ceremonies, the military music of the Janissaries (*mehterk͟hāne* [*q.v.* and also NAḲĀRA-K͟HĀNA and NAWBA]).

The other sovereign ceremony with religious significance was the expedition of the annual "holy" caravan to Mecca and Medina carrying the concrete embodiment of Ottoman devotion toward the Holy Places. The *sürre-yi hümāyūn* was organised around the date of 12 Radjab by the *Dār al-seʿādet ag͟hasī* [*q.v.*] in the Harem apartment of the Palace. The first sending of the *ṣadaḳāt-i rūmiyye* was ordered by Meḥemmed I. Selīm I for the first time received the holy relics, together with the keys of the Kaʿba. ʿAbd al-Ḥamīd II sent a sum of 3,503,610 *g͟hurus͟h* with the *Maḥmal-ī S͟harīf* the "Holy Camel", thus called by Western observers. The end of the Ramaḍān saw a regular series of splendid religious ceremonials at court and in the capital. The congratulations on the occasion of the principal Islamic holidays took place in the sultan's palace in the form of a great audience in front of the *Bāb-i Seʿādet* (the *muʿāyede*). The traditional public visit to the mosque by the sultan for the Friday *ṣalāt al-ẓuhr* each week remained one of few ceremonies during which a great number of subjects, and also foreign visitors, had the opportunity to see if the ruling sultan was alive and well. This so-called *selāmlïḳ* is the Ottoman ceremony most widely described (and photographed) through the ages, and was the symbol of the religious as well as the secular sovereignty exercised by the Ottoman dynasty.

Ceremonial and protocol were maintained according to traditional standards by a number of court officials. The *Čavūs͟h-Bas͟hī* was in charge of protocol of the *Dīwān* and the sultan's audiences in the Palace. The *Mīr ʿAlem(Emīr-i ʿAlem)* or standard bearer, an officer of the "Outside Service" of the palace, was custodian of the regalia, e.g. the *aḳ ʿalem*, *čadīr* [see MIẒALLA], the *mehter* and the "Horse tails" (*tug͟h* [*q.v.*]). He had to distribute standards and banners to newly-appointed *beylerbeys* and lesser provincial governors. The office of Master of Ceremonies, *tes͟hrīfātčī bas͟hī*, was instituted according to traditional opinion by Süleymān I. Registers were kept of all expenses and receipts related to ceremonial occasions. A journal of day-to-day events at court or at the headquarters of the Commander-in-Chief (*Serdār-ī Ekrem*) seems to have been kept by these officials (also see R.F. Kreutel and K. Teply, *Kara Mustafa vor Wien 1683*, Graz, etc. 1982, 103-210). This office by 1683 or at least by 1703 fell under the authority of the Grand Vizier rather than that of the palace service (see K. Kepeci, *Tarih lûgati*, Istanbul 1952, s.v. *teşrifatçılık*).

The reforms begun by Sultan Maḥmūd II (1223-55/1808-39), and completed under the *Tanẓīmāt* [*q.v.*], brought about changes in ceremonial and protocol: if not in principle and terminology, then certainly in size, luxury and uniforms. The setting of many occasions was changed completely by the moving of the sultans' residence and court out of Top Kapı Sarayı to palaces outside town along the Bosphorus near Beşiktaş and even across the water, notably the palaces of Çiragan, Dolmabahçe and the vast complex of Yıldız, the last one built upon the initiative of ʿAbd-Ḥamīd II.

On the whole, tradition was maintained in a more sober form. To the ever-increasing number of foreign visitors to the Ottoman capital, ceremonies nevertheless still made a deep impression, as is evident from the mass of travel accounts, private memoirs and observations of diplomatists. ʿAbd al-Ḥamīd reputedly took a great interest in keeping alive the great traditions, and promoted the study and restoration of institutions from the Ottoman and Islamic past, for ceremonial was still considered a useful means to enhance the pretentions of the Ottoman Sultan-caliph to great power status and to paramount leadership of the Islamic world.

During the second half of the 19th century, we see in ceremonial a blend of ancient oriental and modern European styles. The *Tes͟hrīfātčī* remained an official attached to the Grand Vizerate, i.e. the *Dīwān-i Hümāyūn*. The newly-created Ottoman Foreign Office employed its own Chef-de-Protocole (*K͟hāridjiyye Tes͟hrīfātčisi*). Official titles and ranks are systematically arranged into a hierarchy. The *sālnāme* of 1323/1905-6 (164) mentions a *Tes͟hrīfāt-i ʿUmūmiyye Nāẓīrī*, ranking as a vizier of second class attached to the Grand Vizier's office. Next to him functioned a *Tes͟hrīfātī-yi Dīwān-i Hümāyūn* carrying the *ūlā* rank of civil servants (*ibid.*, 164). In the Yıldız Palace, a *Merāsim Dāʾiresi* functioned. The ancient office of *Alḳïs͟hčī Bas͟hī* leading a group of official "applauders" still survived. The classical *mehterk͟hāne*, however, was replaced by a western-style military band playing martial music at all occasions.

A remarkable innovation *alla franga* was the introduction at public ceremonies, such as the *muʿāyede*, *selāmlïḳ* or the visit to the *K͟hïrḳa-yi S͟herīf*, on 15 Ramaḍān, of the prominent female members of the Sultan's household and family. The Wālide Sulṭān [*q.v.*] princesses, high-ranking consorts and female officials of the Harem had to take part in a great number of ceremonies and to watch the military parades in front of the *Taʿlīmk͟hāne Kös͟hkü* inside Yıldız Park, which was the successor, in a way, of the *Alay Kös͟hkü* on the wall of the Topkapı Sarayı facing the Sublime Porte (*Bāb-i ʿAlī* [*q.v.*]). As of old, the births, circumcisions and weddings of princes and princesses were occasions for court ceremonies and public entertainments. The collective circumcision of princes took place three times during ʿAbd al-Ḥamīd II's reign. The first days of the great Islamic holidays were celebrated with splendid ceremonial audiences in the Dolmabahçe palace. Foreign ambassadors could watch proceedings from balconies opened for that purpose. The *destbūs* was performed by a long row of dignitaries. The *S͟heyk͟h al-Islām* performed the ritual prayer first but (a sign of the reforms!) was followed by the Orthodox Patriarch and the Chief Rabbi in congratulating the Sultan.

The last time Ottoman ceremonial was watched by multitudes in the streets of Istanbul was the accession to the throne by the last Ottoman sultan, Meḥemmed VI, in 1918. The Grand Vizier Aḥmed Tewfīḳ Pas͟ha [*q.v.*] was the last one to leave the sultan's palace in stately procession (*alay*) to proceed to the Sublime Porte, this time in a carriage instead of on horseback, on 4 November 1922 (see A. F. Türkgeldi (a former *Mabeyn*, Chief Secretary to the last sultan) *Görüp işittiklerim* [= Memoirs], Ankara 1951², 165).

5. In Muslim India.

Ceremonial at the Muslim courts in India, while deriving much from Islam elsewhere, especially Iran, has also continued and adapted indigenous traditions. The pomp and ceremonial of Hindū courts is of considerable antiquity, and the grandeur of kings is a favourite theme of Hindū literature and Indian folklore; no Muslim ruler could have allowed the splendour of Hindū ceremonial to exceed his own! The psychological value of state ostentation is of course considerable, as tending to emphasise the power of the sovereign, his distance from his subjects, and the awe in which he is held. This ceremonial is most in evidence in the state audiences, and in the royal processions; for the latter, see mawākib.

Ceremonial in the earliest days of the Dihlī sultanate must be presumed, from the fact that the earliest records of the administration of the sultanate show such a close connection with that of the Ghaznawids whose power in the Pandjāb it inherited, to have been modelled on that of the Ghaznawids, for whom see section 3 above; through them came ʿAbbāsid connections also, which were undoubtedly strengthened in the time of Iltutmish when Fakhr al-Dīn ʿIṣāmī, who had served as a *wazīr* at Baghdād, was appointed the Dihlī *wazīr*. However, the prestige of the sultanate declined after the death of Iltutmish, when real power was in the hands of a confederacy of Turkish *amīrs* ("the Forty")—with the result that the sultan was prevented from being adequately distanced from his subjects—and was not restored until the reign of Balban who "introduced the Persian ceremonial" (Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz-Shāhī*, Bibl. Ind. text, 27-9, 30-2). Ibn Baṭṭūṭa (iii, 217-29, tr. Gibb, Cambridge 1971, 658-64), an eyewitness, describes that of the court of Muḥammad b. Tughluḳ; the entrance to his palace (the Hazār Sutūn at Djahānpanāh: see dihlī. 2. Monuments) was approached by three gates, each guarded by men-at-arms and equipped with a band of musicians [see naḳḳāra-khāna, and also nawba]. At the second gate was the *naḳīb al-nuḳabāʾ* (principal usher; for his functions see naḳīb), whose headdress was surmounted with peacock feathers (a borrowing from Hindū practice); he and his assistants scrutinised all who entered. At the third gate, beyond the antechamber, the names of all visitors were recorded, and none who had not the sultan's permission were permitted to proceed to the *darbār* within. Here the ceremonial was under the direction of the *amīr ḥādjib* (also called *bārbek* in the Dihlī sultanate). In Ibn Baṭṭūṭa's description this was the sultan's nephew Fīrūz b. Radjab, who later succeeded to the throne as Fīrūz Shāh; but it was common for the *amīr ḥādjib* to be of royal blood. His duty was, with the *nāʾib bārbek* and his assistant *ḥādjibs*, to marshall those attending the *darbār* according to their precedence and seniority, to present all petitions to the sultan, and to transmit the royal commands to subordinate officials and to any petitioners; one *ḥādjib* (*ḥādjib-i faṣl*, *ḥādjib-i faṣṣāl*) had the special duty of making an inventory of all gifts received by the sultan [see further, ḥādjib]. The sultan sat in the daily *darbār* on a cushioned seat (golden bejewelled thrones were in use only at *darbārs* on feast days), the *wazīr* and his secretaries standing before him, followed by the various *ḥādjibs*, and about a hundred *naḳībs*. The noble appointed to carry the fly-whisk stood immediately behind the sultan, who was flanked to left and right by his special armed bodyguard, the *silāḥdārs*.

ranged in order down the *darbār*-hall were the *ḳāḍīs*. the *khāṭib*, the principal jurists and other *ʿulamāʾ*, the *shaykh*s of the Ṣūfī brotherhoods in the capital, the sultan's relations by blood and marriage, and then the principal *amīr*s and other commanders. When all these were in place, some sixty caparisoned horses of the royal stable, and fifty adorned war-elephants, were brought in. If anyone waiting at the third gate had brought a gift for the sultan, this was reported to him by the *ḥādjib*s; if the sultan approved, the donor and his gift were brought in, and welcomed by the sultan who might recompense the donor by a *khilʿa* [*q.v.*] and a purse of money "for washing the head" (*sar-shustī*); Ibn Baṭṭūṭa describes a more elaborate ceremonial in the case of gifts and revenues presented by one of the provincial officers (*ibid.*, iii, 226-7, tr. Gibb, iii, 663). When an audience was held on a feast day, the palace was spread with carpets and the hall was enclosed beneath vast awnings; on the first day of a feast the sultan sat on a cushioned seat on the large golden throne, with heavily jewelled legs, and a jewelled parasol was held over him; on later days of feasts smaller golden thrones were in use. All attending the court would salute the sultan individually, in descending order of precedence; then revenue-holders would bring present, and all would be entertained to a great banquet, again being served in order of precedence, while a large golden brazier would fill the hall with the smoke of different kinds of incense and fragrant woods, and those present would be sprinkled with rose-water. The dishes were escorted from the kitchens by *naḳīb*s, and a eulogy of the sultan would be pronounced by the *naḳīb al-nuḳabāʾ* before those present were assigned to their places. Ibn Baṭṭūṭa describes some of the dishes presented; last comes *pān* (betel-leaves containing chopped areca-nut with lime and a bitter gum). (This is an indigenous custom, and the presentation of *pān* is still used at Indian meals as a gracious sign of dismissal.) Ibn Baṭṭūṭa further describes the special ceremonies at the reception at court of the son of the ʿAbbāsid caliph; since these involved a processional entry, they are described s.v. MAWĀKIB.

Ibn Baṭṭūṭa (iii, *passim*) refers often to the insignia of rulers and *amīr*s; for these see MARĀTIB. Shams-i Sirādj ʿAfīf, whose *Taʾrīkh-i Fīrūz Shāhī* is richer in administrative details than most chronicles, lists twenty-one royal prerogatives (*sikkahā-yi tādj-dārān*) maintained by Fīrūz Shāh, including the *khuṭba* [*q.v.*], the throne (*takht*), the royal seal cut in agate, use of a *tughra* [*q.v.*], the right to the fly-flap (*magas-rān*), the royal saddlecover [see GHĀSHIYA], a white quiver, encampments outside the gate, the black umbrella, the royal headdress (*kulāh-i malik*; a crown is not specified), and others. The right to strike coin [see SIKKA] is, curiously enough, not included here, and also *ṭirāz* [*q.v.*] finds no mention, although the practice is not unknown in India. For the umbrellas (*recte čhatra*, though commonly also *čatr* in Indian Persian texts) see MIẒALLA; for the special spear used in the royal escort see DŪRBĀSH. Another common royal prerogative is the scattering of small coin (and also small golden stars, arrowheads, etc.) among the populace at festivals, sometimes by catapult (*mandjānīḳ*); for this see NITHĀR. Possession of royal slaves (usually *bandagān* in Indian histories; but see GHULĀM, iii, and also ḤABSHĪ), and the overlordship of the state treasuries and workshops (*kārkhāna*s) should also be mentioned.

There is little definite information on ceremonial in the later Dihlī sultanate and in the provincial dynasties, but there is no ground for supposing it to be different other than in detail (for example, the vast number of slaves, both male and female, in the later stages of the sultanate of Mālwā) from that already described. With the coming of the Mughals in the 10th/16th century, however, there are notable innovations, and also many more sources of information: autobiographies by Bābur, Gulbadan Bēgam and Djahāngīr, extensive dynastic histories (many produced under the stimulation of the millennium) and administrative accounts such as the *Āʾīn-i Akbarī* and part of the *Mirʾāt-i Aḥmadī*, accounts by European travellers, and the valuable contributions to social history of contemporary Mughal painting.

The *naḳḳāra-khāna* was extended both in the number and the variety of its instruments (*Āʾīn-i Akbarī*, *āʾīn* 19). The ruler in *darbār*, whether in the hall of general or special audience, was always seated on one of the thrones, which were of several kinds and of different shapes; some, in the Mughal forts, were permanent structures of marble, with or without a canopy. That in the *dīwān-i ʿāmm* of the Red Fort at Dihlī is a marble baldachino (*nishēman-i ẓill-i ilāhī*) under a marble "Bengali" roof, all inlaid with precious stones; Bernier describes a railed space round it, reserved for the *umarāʾ*, the Hindū *rādjā*s at court, and foreign ambassadors; further space within the *dīwān* was reserved for other officials, and the general public awaiting audience were accommodated in the outer courtyard; he gives a full account of *darbār* ceremonial in *Travels*, 261-3. The elaborate golden thrones were in use in the halls of special audience (*dīwān-i khāṣṣ*), including the magnificent Peacock Throne (*takht-i ṭāwūs*) which was later looted by Nādir Shāh in 1152/1739 (description in *Bādshhāh-nāma*, i, 78-81; Bernier, *Travels*, 269 ff.; Tavernier, *Travels*, i, 384 ff.; for its fate, see G. N. Curzon, *Persia and the Persian question*, i, 321-2). Besides the appearance of the ruler in audience, there had been introduced under Akbar his appearance on a balcony on the wall of his palace so that he might be seen by the populace at large; for this adoption of a Hindū practice, see DARSHAN. The emperor here and in *darbār* was usually accompanied only by the *magas rān* and a single veiled sword; outside the palace he was invariably accompanied by the royal umbrella and the *ḳur*, a variety of arms wrapped in bags of scarlet cloth (other colours also appear in Mughal painting), the hilts of the swords often showing, together with *ʿalam*s and the *čhatrtōḳ*, and *tumāntōḳ*, standards resembling the common *ʿalam* but with their shafts adorned with Tibetan yak-tails. The *magas rān* was commonly a switch of yak-tails (*čamarī*, *čawnrī*; see Hobson-Jobson, s.v. *Chowry*), although the folded towel is not unknown in Mughal painting; in contemporary Deccan painting, however, the folded towel is invariably depicted. *Darbār* paintings of Shāhdjahān often show the fly-whisk in the hands of a Hindū *rādjā* at court. Together with these trappings was carried a flat oval shield-like screen on a long pole, the *āftābgīr* (also called *sāyabān*), to shade the royal person from the rays of the sun. Other insignia also might be carried; see further MARĀTIB.

The dignities of the *čhatrtōḳ* and *tumāntōḳ*, the *māhī-marātib*, the right to an umbrella and to the use of elephants, might be conferred on royal princes and favoured nobles. The emperors took the title *bahādur* [*q.v.*] to themselves, only very rarely conferring it on distinguished generals; they used also the title *bādshāh*; it would seem that *mīrzā* might also be awarded as a title, as it is found appended to the names of those not of noble birth, and even to Hindūs [see MĪRZĀ]; royal princes were generally called *sulṭān*.

To the privilege of striking coin was added the

minting of pieces bearing the royal portrait, perhaps starting with the "symbols of faith"—the likeness of the emperor and the motto *Allahu Akbar*—presented by Akbar to his *murīds* in the Dīn-i Ilāhī (*Āʾīn-i Akbarī*, i, 160), and a *shast wa shabīh* were given by Djahāngīr to favoured members of his court circle—including Roe, the English ambassador (*Embassy of Sir Thomas Roe*, ed. Foster, Hakluyt Socy., i, 244-5). Austin de Bordeaux ("Hunarmand") was similarly honoured. Other portrait medals were presented to nobles (S. H. Hodivala, *Historical studies in Mughal numismatics*, xi: "Portrait muhrs" of Jahāngīr, 147-70, Calcutta 1923). Gigantic minted pieces of Mughal emperors are also known, some intended as presents, but more generally retained as treasury pieces. Small coin was also struck specially for the *nithār* [*q.v.*], together with gold and silver fruits and flowers following Čaghatay practice, and was continued at least as late as the reign of Farrukh-siyar Royal seals [see MUHR] were cut in steel as well as in cornelian and agate, for use on *farmāns* and for accessioning additions to the royal libraries (*Āʾīn-i Akbarī*, *āʾīn* 20).

As well as royal attendance at the public mosques and at the *ʿīd* ceremonies (described s.v. MAWĀKIB), new ceremonies were introduced within the Mughal courts: Djahāngīr writes of his own regular weighing against gold, silver and other commodities, on the lunar and solar anniversaries of his accession, and the scenes are represented in Mughal painting. He also writes of the golden chain outside his palace, attached to a bell, which any suppliant for justice could ring (but *zandjīr pīsh-i dākhūl* already occurs in ʿAfīf's list of prerogatives of Fīrūz Shāh). The *nawrūz* and *āb-pāshān* ceremonies were also observed with great pomp in the palaces, again with painting confirmation available. Plate 7 of the Leningrad Album shows the scene of Djahāngīr's investiture (sometimes called "coronation": but there was no Mughal crown, merely a jewelled headband worn on the cap): foreign emissaries and Jesuit priests are distinguished by their attire (including perhaps Roe?), wrestlers and dancing-girls perform, ushers carry trays of money-bags, a courtier scatters coin, kettledrums are played from the back of an elephant which blocks a gateway, while *karnās* are blown from the palace walls. Plate 32 shows a *darbār* scene of Djahāngīr, painted by Abu 'l-Ḥasan: Djahāngīr wears a jewelled band round his turban, behind him are the *āftābgīr* and a small *čhatr* with the *kur* in a pink cloth; many of the courtiers are named, and indeed Rādjā Bīr Singh Dēv acts as his chowry-bearer (Leningrad Album publ. as *Al'bom indiiskikhi persidskikh miniatyur xvi-xviii vv.*, Moscow n.d.).

Ind. text, Calcutta 1890, 107-8; Abu 'l-Faḍl ʿAllāmī, *Āʾīn-i Akbarī*, and ʿAbd al-Ḥamīd Lāhawrī, *Bādshāh-nāma*, cited from Bibl. Ind. texts; F. Bernier, *Travels in the Mogul empire*, ed. London 1901; *Tavernier's travels in India*, ed. V. Ball, London 1889. (J. BURTON-PAGE)

MARĀTHĀS, the name of the "caste-cluster of agriculturalists-turned-warriors" inhabiting the north-west Dakhan, Mahārāshtra "the great country", a term which is extended to all Marāthī-speakers. The Marāthā homeland stretched between 15° N. and 23° N., nearly equidimensional with the main mass of the Dakhan lavas north of the Malaprabha river and south of the Sātpūras. It lies within the rain-shadow of the Western Ghāts, a plateau compartmented by mesas and buttes between which valleys of black soil, watered by a 20" to 30" annual rainfall, yielded cereals, oilseeds and cotton. The significance of the Marāthās in Islamic Indian history is that they stopped the Mughal empire in its prime.

Marāthā fighters and revenue agents became indispensable to the sultanates of Aḥmadnagar [see NIẒĀM-SHĀHĪS] and Bīdjāpur [see ʿĀDIL-SHĀHĪS]. Hereditary local notables, *deśmukhs*, *deśpāndes* and *desāījīs*, and village headmen, *pātīls*, dominated rural society with their armed followings and family connexions as *waṭandārs* with rights to land revenue. *Deśmukh* families, often ensconced in hill forts, became *sardārs*, cavalry captains, for Muslim rulers, receiving *mukāsa* or (additional) revenue assignments. One such, Shāhdjī Bhōnslē (1002-74/1594-1664) father of Śivādjī (1036 or 1040/1627 or 1630 to 1680), the creator of Marāthā *rādj*, helped, along with other Marāthā *deśmukh* families, Malik ʿAnbar [*q.v.*] to preserve Aḥmadnagar against the Mughals in the 1620s. Following the final Mughal absorption of Aḥmadnagar in 1035/1636, Shāhdjī served Bīdjāpur in South India. In Shādjī's absence, Śivādjī from 1056/1646 onwards used the resources of his father's *djāgīr* of Pūna to extend his own control over the strongholds of neighbouring, often hostile, *deśmukh* families. By 1066/1656, Śivādjī was sufficiently important and free from Bīdjāpurī control for Awrangzīb, then governor of the Mughal Dakhan and attacking Bīdjāpur, to make overtures. In 1070/1659, Śivādjī's slaying of the Bīdjāpurī commander Afḍal Khān drew more Marāthās to himself. Hitherto, Śivādjī had been a Marāthā chief among many, taking advantage of the agriculturally-destructive wars between the Mughals and the Dakhan sultanates, and the dearths that accompanied them, to recruit larger Marāthā war bands for service under Muslim paymasters. Afḍal Khān, however, had desecrated the shrine of Tuldjapur and Pandharpur, the latter a major centre of Marāthā pilgrimage as "the focus of a specifically Maharashtrian *bhaktī* movement". By 1073-4/1663-4, during which time Śivādjī humiliated the Mughals by successfully raiding their chief commander's camp at Pūna (Shaʿbān 1073/April 1663) and the port of Sūrat (Djumādā II 1074/January 1664), Śivādjī had created a distinctively non-Muslim political authority in the Dakhan.

The massive Mughal campaign under Rādja Djay Singh in 1075/1665, together with the bait of a future joint Śivādjī-Djay Singh campaign against Bīdjāpur, led to the treaty of Purandar by which Śivādjī was to surrender 23 of his 35 forts. Śivādjī's attendance upon Awrangzīb at Āgra in 1076-7/1666 and his escape in a fruit basket illumine the obstacles to his becoming loyal to the Mughals at the price which they could pay. Rādjput refusal to accord Śivādjī *kśātriya* status, Mughal anger over the sack of Sūrat, and reluctance to reward defiance, limited Awrangzīb's freedom of action, while the decay of Bīdjāpur offered Śivādjī more opportunities than Mughal service could have done.

Śivādjī's coronation in 1085/1674 according to "Hindu" rites as *chatrapatī* symbolised the repudiation of an Indo-Muslim ethos, but not of the administrative structure of the Dakhan Muslim sultanates. He tried to curb the larger *deśmukhs* and assignees in his own territory (*svarādjya*) and his successful military and political activity furthered upward social movement among Marāthā and Kunbi *djātīs* and the tribal Kolis.

Prince Akbar's rebellion in 1091-2/1681 against

Awrangzīb, and his joining Śivādjī's successor Śambhadjī (1067-1100/1657-89) following on a Śivādjī-Golkondā alliance from 1084-5/1674 and the experience of only temporary accommodations with Śivādjī before the latter's death in 1091/1680, determined Awrangzīb to destroy Bīdjāpur and Golkondā and to force Marāthā submission. By 1100/1689, with the capture and brutal execution of Śambhadjī, following the seizure of Bīdjāpur (1097/1686) and Golkondā (1098/1687), Awrangzīb appeared triumphant. But Rādjarām, Śivādjī's younger son, migrated to Marāthā outposts at Tandjūr and Djindjī in South India, and the Mughals were faced with a mounted guerrilla campaign in the western and southern regions of the peninsula. Although Djindjī was taken in 1109/1698, several hill forts in Śivādjī's former *svarādjya* occupied, and many Marāthā chiefs apparently won over by the award of Mughal *manṣabs*, "the Mughal peace" was, south of the Narmadā, only established (temporarily) in Golkondā. The Mughals indeed succeeded in shattering authority and in splintering allegiances; they did not weaken Marāthā self-consciousness. At Awrangzīb's death in 1118/1707, there was no chief Marāthā with whom to conclude an agreement by which all Marāthās would abide, but only Marāthā chiefs to be cajoled into a personal and temporary submission. Śambhadjī's son Shāhū (1093-1163/1682-1749) was being raised in Awrangzīb's camp. In 1111/1700 Rādjarām's widow Tarabai installed her young son Śivādjī II as *chatrapatī* in one of the Marāthā camps.

After Awrangzīb's death, Mughal-Marāthā relations became a function of inter-Marāthā and inter-Mughal rivalries. Shāhū was allowed to escape: he was installed as *chatrapatī* at Satara in 1119/1708. In 1121/1709, the Mughal *pādshāh* Bahādur Shāh granted both Shāhū and Śivādjī II rights to *sardeśmukhī* (a notional 10% of the land revenue assessment as *deśmukh*) from the Mughal Dakhan. In 1130/1718, Ḥusayn ʿAlī, governor of the Mughal Dakhan, promised Shāhū *čawth* (a notional 25% of the land revenue assessment), *sardeśmukhī* and recognition of his *svarādjya* in return for 15,000 Marāthā horse for use against the Mughal *pādshāh* Farrukh-siyar, private concessions which were formally confirmed by the puppet *pādshāh* Rafīʿ al-Daradjāt in 1131/1719. Earlier, Ḥusayn ʿAlī's rival, Čīn Ḳilič Khān, had intrigued with Tarabai's faction while resisting raids upon the Mughal Dakhan by Marāthās obedient to Shāhū. In 1137/1724, Shāhū's *pēshwā*, Bādjī Rāo, assisted Čīn Ḳilič Khān to retain by force (against the Mughal *pādshāh* Muḥammad Shāh [1131-61/1719-48]) the governorship of the Dakhan. However, fear of encirclement by Bādjī Rāo's Marāthās raiding northwards into Gudjarāt and Mālwā and southward into the Karnātak induced Čīn Ḳilič Khān to treat with Shāhū's rivals (how headed by Rādjarām's second son Śambhadjī II [1109-74/1698-1760] at Kolhāpur). Defeat by Bādjī Rāo in 1140/1728 at Palkhed, and the treaty of Mungi Śivgaon, tilted the balance in the Dakhan permanently towards the Satara Marāthās.

In 1125/1713, Shāhū, struggling to assert authority over leaders of raiding bands unused to control, and faced with a rival *chatrapatī* at Kolhāpur, had appointed Bālādjī Rāo Visvanāth (d. 1132/172) as *pēshwā* or chief minister. A systematic policy of raiding Mughal territories and of dealing with local Mughal officers enabled the *pēshwā* to bind chiefs to him and to acquire resources for a Marāthā central direction. Under Bālādjī Rāo's son Bādjī Rāo (1132-53/1720-40), the Satara Marāthās secured Mughal recognition of their claim to *čawth* and *sardeśmukhī* (supplemented by *rāhdārī* or transit dues) from Gudjarāt (by 1143-4/1731), and from Mālwā (by 1154/1741)—this following a decisive victory over the Mughals at Bhopal in 1150/1737. Between 1154/1741 and 1164/1751, the forces of Raghudjī Bhōnslē plundered Bihār, Bengal and Orissa, forcing the granting of *čawth* from Bengal and the loss of Orissa. In the 1740s, the Marāthās were ready to intervene in the Gangetic region, over which Mughal authority had been fatally weakened by Nādir Shāh's [*q.v.*] sack of Dihlī in 1151/1739.

Although in wars against the *niẓām* of Ḥaydarābād in 1164-5/1751-2, 1171/1757 and 1173/1760, the Marāthās acquired the cities of Aḥmadnagar, Bīdjāpur, Dawlatābād and Burhānpur, their gains further south proved insecure. After 1145-6/1732, the Marāthā possessions centred upon Tandjūr often became tributary to the *nawwābs* of Ārkāt (Arcot), and in 1156/1743 the then *niẓām* of Ḥaydarābād (Čīn Ḳilič Khān) captured Tiruchirapallī (Trichinopoly). In 1174/1760-1, Ḥaydar ʿAlī [*q.v.*] seized power in Mahisūr (Mysore) [*q.v.*] and closed off the south to Marāthā exploitation. Even in the Marāthā homeland, the treaty of Varana (Warna) in 1143/1731 between Shāhū and Śambhadjī II of Kolhāpur, giving Shāhū control of the latter's diplomatic relations but recognising his *svarādjya*, indicated the segmentary character of Marāthā polity.

Under the *pēshwā* Bālādjī Rāo II (1153-74/1740-61) the Marāthās led by Malhar Rāo Holkar, Djayappa Sīndhīyā and Raghunnāth Bādjī Rāo, supported now Ṣafdar Djang of Awadh [*q.v.*], now Ghāzī al-Dīn ʿImād al-Mulk (grandson of Čīn Ḳilič Khān), and now the puppet *pādshāhs* Aḥmad Shāh (1161-7/1748-54) and ʿĀlamgīr II (1167-73/1754-9) in return for promises of *čawth* from the Pandjāb or from the Gangā-Djamnā *dō-āb*, and of Mughal offices and subventions. In 1171/1758 Raghannāth Rāo moved to Lāhawr against the invading Afghān ruler Aḥmad Shāh Durrānī [*q.v.*]. In Djumādā I-II 1173/January 1760 Aḥmad Shāh's forces expelled the Marāthās from Dihlī, provoking a grand military riposte under Sadaśiv Rāo, the *pēshwā's* uncle. In Djumādā II 1174/January 1761 the Afghāns savagely defeated the Marāthās at Pānīpat, decimating their military leadership.

The death of many of the *pēshwā*'s principal aides and a succession of feeble *pēshwās* after the early death of Madhav Rāo in 1186/1772, dispersed authority among the Marāthās to the regional military chiefs, the Gāikwārs of Barōda, the Holkars of Indore, the Sīndhīyās of Gwāliyar and the Bhōnslēs of Nagpur. The military power of the Marāthās as an uneasy confederacy was sufficient for Mahādadjī Rāo Sīndhīyā (1139-40 to 1208/1727-94) to instal in 1185/1772 the Mughal *pādshāh* Shāh ʿĀlam in Dihlī as a dependent: it was sufficient for the Marāthās to defeat the East India Company's army at Talegaon in 1192/1779 and to repulse it from Pūna in 1195/1781, during the indecisive Anglo-Marāthā wars of 1192-96/1778-82; it was sufficient for Tukodjī Rāo Holkar and Dawlat Rāo Sīndhīyā in 1209/1795 to defeat the *niẓām* of Ḥaydarābād's forces at Kharda.

But Dawlat Rāo Sīndhīyā and Djaswant Rāo Holkar fell to struggling for control of the *pēshwā* Bādjī Rāo II (1211-33/1796-1818) and, in desperation, the latter turned to the East India Company. Wellesley's subsidiary treaty of Bassein (1217/1802) took away the *pēshwā*'s independence. Raghudjī Bhōnslē and Dawlat Rāo Sīndhīyā resorted to arms and in 1218/1803 the latter lost Dihlī, the *dō-āb* and

territories in Gudjarāt and the Dakhan. Djaswant Rāo Holkar belatedly intervened in 1219/1804, inflicting a major defeat on the Company's troops near Kotah, a further inducement for Wellesley's recall to England. A revised settlement with Śīndhīyā restored to him territories south of the Čambāl; Holkar was left free in central India. But in 1233/1817, British pressure on the Pindarī freebooters was recognised as pressure on the Marāṭhā leaders, so the *pēshwā*, the Bhōnslēs and Holkar made one last effort by war to retain their independence, but were defeated piecemeal. The peace settlements of 1233/1817-18 incorporated the Marāṭhā home territories into the Bombay Presidency and reduced the *pēshwā* and the principal Marāṭhā chiefs to pensionaries or to mediatised princes under British paramountcy.

The Marāṭhās had hollowed out the Mughal empire, diverting its resources to themselves and distressing its peoples. But by accepting Mughal privileges, grants of revenue and titles, conferred in due form, they had preserved Mughal "sovereignty". Shāhū accepted the title of *rādjā* and Mughal *farāmīn* granting *čawth* and *sardeśmukhī*; in 1154/1741 the *pēshwā* accepted the *nā'ib-ṣūbadārī* of Mālwā; in 1198/1784 Mahādadjī Rāo Śīndhīyā received the title of *wakīl-i muṭlaḳ* from Shāh ʿĀlam. Mughal political and military defeats were accompanied by Mughal ideological successes. The Marāṭhās behaved like *arrivistes* with no faith in themselves. This was not inevitable. By 1091/1680, Śivādjī had created an independent polity with (against the backcloth of Awrangzīb's Islamising aspirations as expressed in the formal imposition of *djizya* and some temple destruction) an alternative religio-political symbolism (to be represented in Marāṭhā historiography). Śivādjī moved to protect cultivators in his *svarādjya* against his own kind—the overmighty *deśmukh* and *muḳāsa* holder. But by 1118-19/1707, Awrangzīb had occupied sufficient of Śivādjī's *svarādjya* to force Marāṭhā warrior bands to live off the Mughal countryside by plunder, unable to dominate and rule it from the urban centres that formed the nuclei of Mughal power. Wide-ranging Marāṭhā raids estranged the rural notables, the *zamīndārs*, from the Mughals, without attaching them to the Marāṭhās.

Among the Marāṭha chiefs, respect for Śivādji's family, the success of the *pēshwās* against the *niẓām* of Ḥaydarābād and the Mughals north of the Narmadā, and the pride of confounding the Mughals, provided sufficient cohesion before Shāhū's death in 1163/1749. Thereafter, the centrifugal possibilities opened up both by the practice of the chiefs operating in Mughal territory receiving the larger proportion of *čawth* and *sardeśmukhī* collections, and also by their being granted hereditary assignments and tax farms in the Marāṭhā homelands, proved to be beyond thwarting by a succession of sickly and feeble minors installed as *pēshwās*. How in fact the emergence of regional and local Marāṭhā chiefdoms affected the welfare of those living under them remains to be fully investigated.

MARĀṬHĪ, the main Indo-Aryan language [SEE HIND. iii. Languages] spoken by some 40 million in Bombay and the surrounding state of Mahārāshṭrā. It differs from the "central" Hindī-Urdū language especially by its retention of the three genders of Old Indo-Aryan, by retroflex *-n-* and *-l-* consonants, by the presence of a past tense with *-l-* infix, and by a vocabulary more dependent on Sanskrit than on Arabic and Persian. As the chief language of Barār and the north-west Deccan, it was the regular demotic language for the populations of the old Niẓām Shāhī, ʿImād Shāhī and part of the ʿĀdil Shāhī sultanates, and later for much of the Niẓām's dominions in the old Ḥaydarābād [*q.v.*] state, as bilingual (Marāṭhī-Persian) and trilingual (Marāṭhī-Kannada-Persian) inscriptions, as well as monoglot ones, testify. These are particularly directed to conveying official orders (*ḳawl-nāmas*, *farmāns*, etc.) in the country districts, Marāṭhī has however been little cultivated as a literary language by Muslims, except for a few productions of "Sant" poets, i.e. local Ṣūfīs aiming at reaching the local population, often by reinterpreting well-known Hindū religious or philosophical works.

Bibliography: J. Bloch, *La formation de la langue marathe*, Paris 1920; for the linguistic relations of Marāṭhī, see *Bibl.* to HIND. iii. Languages. For the Muslim contribution to Marāṭhī literature, see S. Dhere, *Musulmān Marāṭhī santa-kavi*, Poona 1967 (in Marāṭhī). Useful comment on the bilingual inscriptions is in Z.A. Desai, *Arabic and Persian epigraphy*, in H.K. Sherwani (ed.), *History of Medieval Deccan*, ii, 378, Hyderabad 1975; see also M.K. Dhavalikar, *Marathi epigraphy*, in *ibid.*, ii, 398-9, 401-2. (J. BURTON-PAGE)

MARĀTIB (A.), literally "ranks, degrees" (sing. *martaba*), a term applied especially in Muslim India to the "honours" or "dignities", *aṭbāl wa- ʿalamāt*, drums and standards, borne by the sultan or conferred by him on the great *amīrs* (Ibn Baṭṭūṭa, iii, 106; tr. Gibb (1971), iii, 599), later elaborated (ibid., iii, 110; tr. iii, 601) as "standards, kettledrums, trumpets, bugles and reedpipes" as carried by two

ships among the fifteen of the governor of Lāharī Bandar. The practice of Fīrūz Shāh's troops marching with 90,000 cavalry under 180 *marātib* and *nishāna-yi har djins* (ʿAfīf, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind. text 144), i.e. two such insignia per thousand troops, indicates that the *marātib* could function as battle ensigns. (One per thousand troops were employed in Čingiz Khān's army, cf. Djuzdjānī, *Ṭabaḳāt-i Nāṣirī*, Bibl. Ind. text, 338; tr. Raverty 968.) A phrase in ʿAfīf, *op. cit.*, 374, *ʿalamhā wa nishānhā-yi marātib hamīsha ṣūrat taṣwīr mīkardand* seems to indicate that "standards and banners among the *marātib*" were painted with pictures, although Fīrūz Shāh ordered their removal. The practice of using the *marātib* as battle ensigns continued in Mughal times, as is demonstrated profusely in Mughal painting; but there is no lack of painted (or embroidered) pictures here, including conspicuously the Persian Lion-and-Sun device (Sol in Leo?); see SHĪR WA KHURSHĪD. This device is known elsewhere in Indian Muslim art, e.g. among the Bahmanī buildings at Bīdar [*q.v.*], with no evidence however, to connect it with the *marātib*.

A special dignity, especially but not exclusively of Mughal times, is the *māhī-marātib*, "fish banner", the institution of which has been attributed to Khusraw Parvīz, Sāsānid emperor of Persia 591-628, from whom it passed to the house of Tīmūr, especially to the Mughal emperors, as a symbol of sovereignty or of authority emanating from the sovereign (W. H. Sleeman, *Rambles and recollections of an Indian official*, ed. V.A. Smith, London 1915; the editor states that he "has been unable to discover the source of the author's story"). Originally there was a golden fish carried upon a long staff, flanked by two metal balls (*kawkaba*) similarly carried (possibly commemorating the inception of a royal reign when the moon was in Pisces); later the two emblems were separated and the fish used independently: the fish alone passed through Mīrzā Muḳīm Abu 'l-Manṣūr Khān, Ṣafdār Djang, governor of Awadh under Muḥammad Shāh, to the sultans of Awadh, becoming the badge of the royal house and used freely on their buildings in Laknaʾū. "Possessors of [*djāgīrs*], collectors of districts, etc., have permission to use the fish in the decorations on their flags ... In Oude the fish is represented in many useful articles—pleasure boats, carriages, etc. Some of the king's chobdaars [*čūbdār*, "mace-bearer"] carry a staff representing a gold or silver fish." (Mrs Meer Hassan Ali, *Observations on the Mussulmauns of India...*, 1832; ed. W. Crooke, Oxford 1917, 43; her account is based on 12 years' residence in Laknaʾū). The *māhī-marātib* was among the favours conferred by Shāh ʿĀlam II on Lord Lake in 1803 after the latter had delivered Dihlī from the Marāthās.

The *marātib* are also mentioned by Djaʿfar Sharīf (*Ḳānūn-i Islām*, ed. W. Crooke as *Herklots' Islam in India*, Oxford 1921), 159 ff., among the standards carried in procession at the Muḥarram [*q.v.*] ceremonies, later to be laid up at the Imāmbāŕā; his list, however, does not specifically distinguish *marātib* from other emblems. He says the *marātib* "is [sic] also a standard fixed on a bamboo, decorated with a rich cloth. These are carried on elephants, like colours". Certainly banners may bear such signs as the Prophet's sword Dhu 'l-Faḳār [*q.v.*], the lion, the hand of ʿAlī, the shield or *dāl ṣāḥib*, the shoe of Ḥusayn's horse at the battle of Karbalā (*naʿl ṣāḥib*); many of these are also represented as metal objects, and are then called simply *ʿalam* [*q.v.*]. Djaʿfar also remarks that "in all Shīʿa houses the fish standard is conspicuous"; this practice persists today in Ḥaydarābād. For the possible connexion of the common device in Bīdjāpur building of the rosette-on-bracket with the fish symbol, see J. Burton-Page, review of E. S. Merklinger, *Indian Islamic architecture: the Deccan. 1347-1686*, in *Marg*, xxxvii/3 (Bombay 1986), 89.

Other "dignities" and emblems of sovereignty or nobility such as the *čhatr* [see MIẒALLA] and *dūrbāsh* [*q.v.*], the *aftābgīr* and the veiled swords of state do not seem to be included in the term *marātib*, although treated similarly in practice, as Mughal art shows; for these see MARĀSIM. 5. India. For the use of flags and banners in the central Islamic lands, see ʿALAM.

Bibliography: Given in the article.

(J. BURTON-PAGE)

MARBAṬ, MARBIṬ (A., pl. *marābiṭ*), the noun of place from the root *r-b-ṭ* in the sense of "to fasten, attach, tie", which denotes first of all the place where domestic animals (members of the camel, equine, canine, and more rarely, of the goat and sheep families) are tethered. Among the nomads, the *marbaṭ* simply involves tying the animal's halter to some bush or, failing that, tying the two ends of a rope (*ribāṭ*, pl. *rubuṭ*, *mirbaṭ* or *ākhiyya*) to a large stone which is buried in the sand and letting the loop emerge as a ring for tethering, in the shade of a tent; the beast thus tethered is called *rabīṭ* (for *marbūṭ*). With the same association of ideas, in Saʿūdī Arabia and the United Arab Emirates, *marbaṭ* and *mirsal* are also the names of the "leash" which holds the falcon down to its perching-block (*wakar*) or on the falconer's gauntlet (*mangala*).

In regard to the Ḳurʾānic expression (VIII, 62/60) "... *min ribāṭ al-khayl* ... (horses held in readiness)", the philogist al-Bayḍāwī [*q.v.*] in his commentary (*Anwār al-tanzīl*, ed. H. L. Fleischer, Leipzig, 1896, i, 372) is hesitant about the exact nature of this term *ribāṭ*, proposing to interpret it either as a singular, or as a *maṣdar*, or as a plural of *rabīṭ*; this last seems most logical, even though the lexicographers do not give a plural for this singular.

For sedentary and urban populations, the *marbaṭ* takes the form of a kind of shelter, made from palm leaves or from straw thatching, beneath which animals can shelter from the sun.

By extension, *marbaṭ* very soon imposed itself, in the towns of the East, on *iṣṭabl* [*q.v.*] and, in the Maghrib, on *riwā/rwa* in the general sense of stables, i.e. the building intended for the guard and the housing of horses in the palaces; for garrisons, for postal relays [see BARĪD] and for the open spaces used for equestrian exercises and racing [see MAYDĀN].

Already in the 5th/11th century, the hagiographer al-Thaʿlabī [*q.v.*] in his "History of the Prophets" (*K. ʿArāʾis al-madjālis fī ḳiṣaṣ al-anbiyāʾ*), describing the fabulous flying city of King Solomon, mentions the following nomenclature: ... *wa-fī asfali-hā marābiṭ wa-iṣṭablāt wa-awārī wa-awākhī li-khayli-hi wa-dawābbi-hi* "and in the lower part [of this city] were shelters, stables, tethering-posts and rings for attaching there his horses and beasts of burden". There is hardly anything one could add to these four terms for defining means of restraining domestic beasts.

MARCHES [see THUGHŪR].

MARDAITES [see DJARĀDJIMA].

MARDAM, name of an affluent and distinguished Syrian family, two of whose members, the cousins Djamīl and Khalīl, achieved renown in the first half of the 20th century, the former in the realm of politics, the latter in that of literature.

1. Djamīl, born in Damascus in 1894, received his primary and secondary education in various schools in his native city, in particular that of the Lazarist Fathers, and pursued higher studies in law and political sciences in Paris and Switzerland. For this reason, he was residing in Paris when the First World War broke out. His political activities began in 1913 with his involvement in the Arab Congress which was convened in Paris to defend the interests of the Arabs and of which he was elected Secretary-General. In 1919, after making a tour of South America, he returned to Damascus where he was appointed adviser to the *amīr* Fayṣal. In 1920, he became adviser to the Ministry of the Interior in the Cabinet of Hāshim al-Atāsī.

Having participated in the Syrian Revolution (1925-6), he escaped to Jaffa in Palestine, but was arrested and handed over to the French Mandatory authorities. He spent two months imprisoned at Arwād/Ruwād, a small island situated close to the Syrian coastal city of Ṭarṭūs. In 1928, he was sent to Paris to negotiate on behalf of the Constituent Assembly which had recently been instituted in Syria. Elected deputy for the city of Damascus to the Syrian Parliament in 1932, Djamīl Mardam was subsequently appointed Minister of Finance. In April 1933 he resigned and became involved again in the politics of resistance.

From January to March 1936, he was placed under house-arrest by the French authorities at Ḳirḳ-Khān, a little town belonging to the *sandjaḳ* of Alexandretta. On his return to Damascus, he was received with enthusiasm. Subsequently he was a member of the Syrian delegation which travelled to Paris to discuss the term of the Franco-Syrian Treaty.

In December 1936 he formed the first Nationalist cabinet and served as Prime Minister until February 1938. During this period, he travelled to Paris and to Geneva to defend the Syrian position in the question of the *sandjaḳ* of Alexandretta and to continue discussions relating to the Franco-Syrian Treaty. In the early part of the Second World War, he lived in ʿIrāḳ and in Saudi Arabia, not returning to Damascus until 1941. In 1943, he was again elected deputy for his native city and became successively Minister of Foreign Affairs (1943-4) and Minister of National Defence and of the National Economy (1944-5).

After the proclamation of Syrian independence in 1945, Djamīl assumed the functions of Minister Plenipotentiary to the Kingdom of Egypt and to the Kingdom of Saudi Arabia. In November 1946, he returned to Damascus and formed a Syrian Cabinet for the second time (from January 1946 to October 1947). In July 1947, he was re-elected deputy for Damascus and was charged for the third time with the task of forming a Syrian Cabinet which lasted from October 1947 to summer 1948. Having resigned, he was recalled to form yet another Cabinet, and he remained at its head until the *coup d'état* of Colonel Ḥusnī al-Zaʿīm (30 March 1949). Djamīl Mardam then left Syria and made his way to Egypt, where he stayed until the end of his life. He died in Cairo in 1961, and his remains were conveyed to Damascus and interred in the cemetery of Bāb al-Ṣaghīr.

A veteran activist of the Nationalist Bloc (*al-kutla al-waṭaniyya*), a political party linking the eminent Syrian personalities who led Syria to independence, Djamīl Mardam was a skilful and far-sighted statesman. Fervent in his speeches, which were sometimes improvised, he was not lacking in eloquence.

Bibliography: Ziriklī, *Aʿlām*[4], ii, 138; Georges Faris, *Man hum fi 'l-ʿālam al-ʿarabī*, i (Syria), Damascus 1957; Archives of the Syrian Ministry of Foreign Affairs and of the Syrian Parliament.

2. Khalīl, born in Damascus in 1895, received his primary and secondary education in the schools of his native city, then studied *fiḳh*, *ḥadīth* and the Arabic language as a pupil of the great masters of his time, including the *shaykh* ʿAṭāʾ al-Ḳasm, *muftī* of Damascus, the great scholar of tradition *shaykh* Badr al-Dīn al-Ḥasanī and the *shaykh* Saʿīd al-Bānī.

After the establishment of the Arab government in Damascus (1918-9), he was appointed, at a very early age, editor-in-chief of the Bureau of Communication (*dīwān al-rasāʾil*), and then a teacher at the school for journalists which had recently been founded by the authorities, but he left his post when French troops entered Damascus (1920).

In 1921 he founded, with a group of eminent contemporary scholars, a "literary league" (*al-Rābiṭa al-adabiyya*), of which he was elected president. This association published a review bearing the same name, to which he contributed his first poems as well as his first articles. This review was also the forum for numerous well-known writers of the period. But the league was disbanded and its organ ceased to appear after its ninth issue.

In 1925 Khalīl Mardam was elected a member of the Arab Academy of Damascus after presenting a monograph on "The Syrian poets of the 3rd century of the Hidjra". The following year he travelled to Alexandria where he stayed four months, associating with certain eminent Egyptian literary figures, in particular, the poet Ḥāfiẓ Ibrāhīm. Then, deciding to pursue his studies in the West, he made his way to England where, for four years, he studied literature at the University of London. This journey to the West and his knowledge of English literature exerted a profound influence on his poetry.

In 1929, returning to Damascus, he composed a fine poem entitled "Hail Damascus!", which was received enthusiastically by scholars who recognised in him a great poet. He was subsequently professor of Arabic Literature in a college renowned in Syria at that time, *al-Kulliyya al-ʿilmiyya al-waṭaniyya*, for a period of nine years (1929-38). Many of his pupils subsequently became respected literary figures.

In 1933, he published a review entitled *al-Thaḳāfa* with the aid of some well-known teachers and men of letters, including Djamīl Ṣalībā, Kāmil Dāghistānī and Kāmil ʿAyyād. Serious literary articles, short stories and poems were published in this review, which unfortunately was short-lived.

In 1941 he became Secretary-General of the Arab Academy of Damascus and in 1953 he was appointed President of the Academy, a post which he held until the end of his life. He was also elected a corresponding member of numerous Arab and European Academies, notably those of Cairo (1948) and of Baghdād (1949), the Mediterranean Academy of Palermo (1952) and the Moscow Academy of Sciences (1958).

Besides his literary activity, Khalīl Mardam participated in the political life of his country, serving as Minister of Public Education in 1942, ambassador of the Syrian Republic to Baghdād in 1951 and Minister of Foreign Affairs in 1953. Then he abandoned political life and devoted his energies to literature and to the Arab Academy. He died in Damascus on 21 July 1959, and was buried in the plot reserved for his family in the cemetery of Bāb al-Ṣaghīr.

His principal works are: a *dīwān* (edited after his death by the Arab Academy of Damascus in 1960 in collaboration with his son, the poet ʿAdnān Mardam);

and studies of al-Djāḥiẓ, Ibn al-Muḳaffaᶜ, Ibn al-ᶜAmīd, al-Ṣāḥib Ibn ᶜAbbād and al-Farazdaḳ (published, undated, in Damascus in the *Aʾimmat al-adab* collection). He also established and published in the series of the Arab Academy of Damascus the texts of the *dīwāns* of Ibn ᶜUnayn (1946), ᶜAlī b. al-Djahm (1949), Ibn Ḥayyūs (1951) and Ibn al-Khayyāṭ (1958). Some biographical works were published in Damascus and Beirut after his death; most worthy of mention are *Djamharat al-mughannīn* (the singers), *al-Aᶜrābiyyāt* (the Bedouin women), *ᶜAyān al-ḳarn al-thālith ᶜashar*, (the notables of the 13th century A.H.) and *Yawmiyyāt al-Khalīl* (his diary).

The poetry of Khalīl Mardam comprises the traditional genres and is distinguished by its lyrical tone. In his description of nature and in his love poems, the poet displays extreme sensibility and remarkable finesse. His patriotic poetry is sincere, and his cultivated style is always fluent and clear and reflects the lucidity of his mind.

Bibliography: Khalīl Mardam, *Dīwān*, ed. Damascus 1960; Ziriklī, *Aᶜlām*[4], ii, 315; Kaḥḥāla, *Muᶜdjam al-muʾallifīn*, Damascus 1961, xiii, 384; Georges Fāris, *Man hum fi ʾl-ᶜālam al-ᶜarabī*, i (Syria), Damascus 1957; S. al-Dahhān, in *MMIA*, xxxiv/4 (1949); a collection of speeches in memory of Khalil Mardam, published by the Ministery of Culture in Damascus, 1960. (J. Rikabi)

MARDANĪSH [see IBN MARDANĪSH].

MARDĀWĪDJ B. Ziyār b. Wardānshāh, Abu ʾl-Ḥadjdjādj, founder of the Ziyārid dynasty [*q.v.*] in the Caspian regions of Persia.

Mardāwīdj's rise as a soldier of fortune in northern Persia is bound up with the decline of direct caliphal control there, seen already in the independent role of the Sādjid governors [*q.v.*] in Ādharbāydjān towards the end of the 3rd/9th century and in the general upsurge of hitherto submerged indigenous Iranian elements, Daylamī, Djīlī and Kurdish, forming what has been called the "Daylamī interlude" of Persian history [see DAYLAM, and also BUWAYHIDS, KĀKŪYIDS, MUSĀFIRIDS, RAWWĀDIDS, SHADDĀDIDS, etc.].

On his father's side, Mardāwīdj (literally, "man-assailant", see Justi, *Iranisches Namenbuch*, 194) sprang from the royal clan of the Djīlīs, and on his mother's from the *ispahbadhs* of Rūyān. He served the Ḥasanid Shīᶜī rulers of Ṭabaristān and then the Djīlī condottiere Asfār b. Shīrūya or b. Shīrawayh [*q.v.*] until the latter's tyranny impelled Mardāwīdj, with the support of the ruler of Ṭārum, Muḥammad b. Musāfir, to rebel against Asfār, killing him in 319/931 and then rapidly capturing Hamadān, Dīnawar and Iṣfahān in western Persia from their caliphal governors. He now clashed with a rival Daylamī commander, Mākān b. Kākī [*q.v.*], who had held Ṭabaristān, Gurgān and western Khurāsān since 318/930. Mardāwīdj conquered Ṭabaristān and attacked Mākān, but since Mākān obtained the backing of the Sāmānid *amīr* Naṣr b. Aḥmad, Mardāwīdj agreed to a peace treaty, retaining only Ray as tributary to Naṣr. It was at this time that the three Būyid brothers ᶜAlī, Ḥasan and Aḥmad transferred to his service from that of Mākān, and Mardāwīdj appointed ᶜAlī (the future ᶜImād al-Dawla) governor of Karadj. Since Mardāwīdj was able to overrun most of Djibāl almost to Ḥulwān, the ᶜAbbāsid caliphs al-Muḳtadir and al-Ḳāhir were compelled to recognise him as governor there, on condition that Mardāwīdj evacuate Iṣfahān, now governed by his brother (and eventual successor) Wushmgīr.

By the end of 322/934, Mardāwīdj's forces had even occupied the province of Ahwāz. But the ambitions attributed to him in the (generally hostile) sources of planning to conquer Baghdād, overthrow the caliphate and proclaim himself ruler of a renewed Persian empire, were frustrated by his murder at Iṣfahān in Ṣafar 323/January 935, whilst celebrating the Zoroastrian festival or Sadhak, by his Turkish *ghulāms*, whom he had treated with contempt and harshness. Minorsky has described Mardāwīdj as "fantasque et barbare", and al-Masᶜūdī imputes to him delusions of grandeur and the assumption of a messianic role as the awaited "man with yellow-marked legs" who would rule the world. His brother Wushmgīr and his descendants kept the Ziyārids as a force in the Caspian region for a further century, but the main southwards impetus of the Daylamī *Völkerwanderung* was to be spearheaded by the Būyids.

MĀRDĪN (written in Arabic as Māridīn, in Greek as Μάρδης, Μάργδις, in Syriac as Mardē and in modern Turkish as Mardin), a town in what was in mediaeval Islamic times Upper Mesopotamia or al-Djazīra, in the region of Diyār Rabīᶜa [*q.v.*] lying on a slope rising to an altitude of 3780 ft./1152 m. in lat. 37° 18' N. and long. 40° 44' E. The modern town, in southeastern Turkey near the Syrian border, is the chef-lieu of the *il* (formerly *vilayet*) of the same name.

Position. In Upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Ḳaradja-dagh (5,000 feet) to the south-west of Diyār Bakr. This basalt massif is continued eastwards in the direction of Djazīrat Ibn ᶜUmar by the limestone chain known in ancient times as Masius and later as Izala (Ἰζαλᾶς). The eastern part of this ridge forms the district of Djabal-Ṭūr or Ṭūr ᶜAbdīn [*q.v.*], the capital of which is Midyāt. From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of ᶜAbd al-ᶜAzīz or Elaziğ (in the west) and Tell Kawkab and Sindjār (in the east); their combined waters form the river Khābūr [*q.v.*].

Mārdīn lies near the point where there is an easy pass through the Masius from the lands south of the Tigris (the rivers Gök-su and Shaykhān) to the lands round the sources of the Khābūr (the stream called Zuwārak which rises north of Mārdīn), in other words, Mārdīn commands the Diyār Bakr-Niṣībīn road (which then turns towards Djazīra Ibn ᶜUmar and Mawṣil). On the other side towards the west, several (Ritter, xi, 356, gives three) direct roads connect Mārdīn via Urfa with Bīredjik (on the Euphrates); to the south-west, a road runs from Mārdīn to Raʾs al-ᶜAyn and to Ḥarrān. The direct distances are as follows: Mārdīn-Diyār Bakr 55 miles: Mārdīn-Niṣībīn 30 miles; Mārdīn-Sawur-Midyāt 75 miles; Mārdīn-Bīredjik 160 miles; Mārdīn-Adana (by rail) 450 miles.

The advantages of this position at the intersection

of important roads are enhanced by the very strong natural situation of the town, built on an isolated eminence, on the top of which is a fort 300 feet above the town (cf. the sketch in Černik, *Technische Studien-Expedition*, in *Peterm. Mitt.*, Ergänzungsheft, x [1875-6], Heft, 45, pl. ii, no. 17). J.S. Buckingham compared its position with that of Quito in South America. All travellers (cf. Ibn Ḥawḳal, 152) have been struck by the unique spectacle of the vast Mesopotamian plain which from the height of the town is seen to stretch southwards as far as the eye can see. Only a hundred years ago, Mārdīn was still considered impregnable, but the difficulty of access sensibly affected its commerce. According to Černik, loaded camels could not ascend right up to the town. A branch line 15 miles in length now connects Mārdīn with the station of Derbesiye on the Adana-Nusaybin section of the Istanbul-Baghdād railway, but the station for Mārdīn is five miles from the town.

1. In pre-Ottoman times.

Ancient history. It is noteworthy that in spite of its remarkable situation, Mārdīn does not seem to be mentioned in the cuneiform sources. Ammianus Marcellinus (xix, 9,4) is the first to mention two fortresses "Maride and Lorne" between which the road passed from Āmid (Diyār Bakr) to Nisībīn. Theophanes Simocatta (ii, 2, 19) mentions τοῦ Μάρδιος φρουρά and (v. 3,17) το Μάρὸες 3 parasangs from Dārā. Procopius, *De Aedificiis*, (ii, 4) mentions Σμὰργδις (or Σμάρδις) and Δούρνης and Georgius Cybrius, ed. Gelzer, 1820, 46, Μάρὸης Δόρνης. The name Μάρὸη in Ptolemy, vi, l, however, refers to another place in Assyria to the east of the Tigris.

The Muslim conquest. The Muslims under ᶜIyāḍ b. Ghanm occupied the fortress of Mārdīn along with Ṭūr ᶜAbdīn and Dārā in 19/640 (al-Balādhurī, *Futūḥ*, 176). In 133/750-1 Mārdīn is mentioned in connection with a rebellion in Upper Mesopotamia. The town formed part of the possessions of Burayka, chief of the Rabīᶜa, who was defeated by the ᶜAbbāsid Abū Djaᶜfar (Ṭabarī, iii, 53). In 279/892, Aḥmad b. ᶜĪsā took Mārdīn from Muḥammad b. Isḥāḳ b. Kandādj (*ibid.*, iii, 2134). The Ḥamdānid Ḥamdān b. Ḥamdūn after his accession in 260/873 seized Mārdīn. In 281/894, the caliph Muᶜtaḍid marched on the town. Ḥamdān fled and left Mārdīn to his son. The latter surrendered the fortress which was dismantled (*ibid.*, iii, 2142). The "grey fortress" (*al-bār al-ashhab*) was later restored, for Ibn Ḥawḳal (in 366/976-7) attributes its erection to Ḥamdān b. al-Ḥasan Nāṣir al-Dawla b. ᶜAbd Allāh b. Ḥamdan. On the death of his father 358/969, Ḥamdān was dispossessed by his brother Faḍl Allāh Abū Taghlib [*q.v.* in Suppl.]. By the peace of 363/794, concluded between the Būyid Bakhtiyār and Abū Taghlib, Ḥamdān recovered his possessions with the exception of Mārdīn (Ibn Miskawayh, ed. Amedroz, ii, 254, 319.

The Arab geographers give few details about Mārdīn, but they emphasise its importance. According to Ibn al-Faḳīh, 132, 136, the *kharādj* of Mārdīn was equal to that of Mayyāfarīḳīn (865,000 *dirhams*). Al-Iṣṭakhrī, 76 n. *k*, says that it is a large town on the summit of a peak, the ascent of which is a *farsakh* in length; Dunaysar [*q.v.*] was one of its dependencies. Ibn Ḥawḳal, 143, gives the ascent at two *farsakhs*. The quarter of Mārdīn itself was flourishing, thickly populated with large markets. The water supply was brought by subterranean canals from the springs to the town. The rain-water was also collected in cisterns (*ṣahāridj wa-birak*). Yāḳūt, iv, 390 (cf. al-Ḳazwīnī, 172), speaks of the splendour of the quarters outside Mārdīn (i.e. below the town itself) and its many *madrasas*, *khānḳāhs*, etc.; as to the *ḳaᶜla*, there was nowhere in the world so strong a defence; its dwelling-houses rose in terraces one above the other.

The Marwānids and the Saldjūḳs. It is probable that Mārdīn was within the sphere of influence of the Marwānids, for according to their historian (cf. Amedroz, in *JRAS* [1904], their ancestor Bādh (d. 380/990) had extended his power over Diyār Rabīᶜa (Niṣībīn, Ṭūr ᶜAbdīn). The Saldjūḳs ruled here next. After the death of Malikshāh [*q.v.*] Tutush b. Alp Arslan seized for a time all the lands as far as Niṣībīn. Under Berk-yaruḳ, Mārdīn was given to his old bard (*mughannī*).

The Artuḳids. At this time arose the dynasty whose fortunes are especially associated with Mārdīn. The Artuḳ grandson called Yāḳūtī took by stratagem the fortress in which he had been imprisoned, but it was taken from him by his brother Sukmān b. Artuḳ, who died in 498/1104-5. In 502/1108-9, we find at Mārdīn Īl-Ghāzī b. Artuḳ (Ibn al-Athīr, x, 269, 321), whose line ruled there till 811/1408. (On their coins struck at Mārdīn in 599, 600, 634, 637, 648, 655, 656, etc., cf. Ghālib Edhem, *Catalogue des monnaies turcomanes*, Constantinople 1894, and S. Lane Poole, *Catalogue of oriental coins in the British Museum*, iii, x, index, s.v. Mardin.)

In 579/1183 Ṣalāḥ al-Dīn came to Ḥarzam (6 miles to the south-west of Mārdīn) but was unable to take the town. In 594/1198, al-Malik al-ᶜĀdil b. Ayyūb seized the outer suburb, which was pillaged, but the siege of the town itself was abandoned in the following year. In 599/1202-3, al-ᶜĀdil sent against Mārdīn his son al-Ashraf, who appointed governors (*shaḥna*) in its dependencies. The Ayyūbid of Aleppo al-Ẓāhir b. Ṣalāḥ al-Dīn offered his good offices, and al-ᶜĀdil was content with an indemnity of 150,000 *dinars* and the acknowledgement of his suzerainty by the Artuḳid of Mārdīn (cf. Abu 'l-Faradj Barhebraeus, *Mukhtaṣar*, ed. Pococke, 412, 425, 427).

The Mongols. In 657/1259, the Mongol Hūlāgū Khān demanded the homage of the prince of Mārdīn, Nadjm al-Dīn Ghāzī Saᶜīd, who sent his son Muẓaffar to him but maintained a neutral attitude. In 658/1260 the town was besieged for 8 months by the troops of Yashmut, son of Hūlāgū. Famine and an epidemic raged in the town. According to Rashīd al-Dīn (ed. Quatremère, 375), Muẓaffar killed his father in order to put an end to the sufferings of the inhabitants (Abu 'l-Faradj and Waṣṣāf give different versions, cf. d'Ohsson, iii, 308, 358). Muẓaffar was confirmed as lord of Mārdīn; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Ṣāliḥ b. Manṣūr (769/1367), whose sister Dunyā Khātūn was the wife of the Īlkhān Muḥammad Khudābanda, Ibn Baṭṭūṭa (ii, 142-5) visisted Mārdīn; he mentions the fine garments made there from goats' hair wool (*mirᶜizz*).

Tīmūr. The Artuḳid sultan ᶜĪsā (778-809/1376-1406) was the king of Mārdīn at the invasion of Tīmūr in 796/1394. Malik ᶜĪsā came to pay his homage to the conqueror, but the citizens attacked those of Tīmūr's men who ventured into the town. Malik ᶜĪsā was put in chains and taken to Sulṭāniyya (*Ẓafar-namā*, i, 663, 671-2). In Shawwāl 803/April 1401, Tīmūr returned to the attack and the town was taken by storm. Then the siege of the upper fortress (*al-ḳalᶜa al-shahbāʾ*) was begun, but it was never taken. Tīmūr was content with presents and promises of *kharādj*, and returned to the plain (*ibid.*, i, 676-9). The people of Mārdīn obtained an amnesty on the birth of Ulūgh Beg. Ṣāliḥ

was appointed at Mārdīn in place of his brother, ʿĪsā (*ibid.*, i, 676-81), but three years afterwards the latter was pardoned and restored to his fief (*ibid.*, i, 787). When in 803/1400-1 Tīmūr reappeared in Mesopotamia, ʿĪsā shut himself up in Mārdīn. As the siege would have taken some time and supplies were short, Tīmūr did not stop before the town, but ordered Ḳara ʿUthmān Aḳ-Ḳoyunlu to besiege Mārdīn (*ibid.*, ii, 354).

The Aḳ-Ḳoyunlu. This was the beginning of Aḳ-Ḳoyunlu interference in Mārdīn, but Ḳara ʿUthmān's forces were not yet equal to this task. In 805/1402-3, ʿĪsā came of his own accord to Tīmūr and was pardoned (*ibid.*, ii, 51).

For a brief period, the Ḳara-Ḳoyunlu tried to resist the extension of the power of the Aḳ-Ḳoyunlu to Mārdīn. When, after the death of Tīmūr, Ḳara Yūsuf left Egypt to re-enter into possession of his territory he joined ʿĪsā and advanced against Ḳara ʿUthmān. The battle lasted 20 days and was settled by agreement. As soon as Ḳara Yūsuf had left for Ādharbaydjān, Ḳara ʿUthmān returned to the attack, defeated ʿĪsā near Djawsaḳ (there is a Djawsat 10 miles to the west of Mārdīn on the road from Derek) and besieged Mārdīn, but once more without success (Münedjdjim-bashî, ii, 685). It is not clear what connection these hostilities have with an expedition against Diyār Bakr conducted by Djakīm or Djakūn (governor of Aleppo, a former *mamlūk* of Barḳūḳ's) in which Malik ʿĪsā took part. In the battle which Muḥammad (?) son of Ḳara Ilik (= Ḳara ʿUthmān) fought against the allies on 15 Dhu 'l-Ḳaʿda 809/23 April 1407, ʿĪsā was slain (cf. the Egyptian sources consulted by Rieu for Howorth, iii, 685). Ṣāliḥ succeeded a second time to ʿĪsā, but the Aḳ-Ḳoyunlu continued to harass him and finally in 811/1408, he ceded Mārdīn to the Ḳara-Ḳoyunlu, who gave him Mawṣil in exchange.

We do not know the exact course of subsequent events, but according to Münedjdjim-bashî, Ḳara ʿUthmān's successor ʿAlī Beg (832-42/1429-39, cf. Aḥmed Tewḥīd, *Musée Imp. Ottoman, monn. musulmanes*, part iv, Constantinople 1903) gave his brother Ḥamza the task of establishing the Turkomans in the vicinity of Mārdīn. Djihāngīr (848-57/1444-53), son of ʿAlī, was already master of the town. In the reign of Uzun Ḥasan, Josafa Barbaro visited Mārdīn and was lodged in the hostel (*ospedale*) built by Djihāngīr Beg (*Ziangir*). We have coins struck at Mārdīn by Uzun Ḥasan (875/1470-1) and his son Yaʿḳūb. After the death of Yaʿḳūb, ʿAlāʾ al-Dawla, prince of the Dhu 'l-Ḳadr Turkomans [*q.v.*], seized the land of Diyār Bakr but, as the anonymous Venetian merchant shows, the Aḳ-Ḳoyunlu retained Mārdīn. In 903/1498, Abu 'l-Muẓaffar Ḳāsim b. Djihāngīr dated his *firmān* in the name of the prince of Egīl from his capital (*dār al-salṭāna*) Mārdīn; cf. Basagić, *Der älteste Firman der Čengić-begs*, in *Wissensch. Mitt. aus Bosnien*, vi, Vienna 1899, 497. The coins of Ḳāsim come down to 908/1502-3. The *takiya* of Ḳāsim-Padshāh which Niebuhr mentions must date from the same ruler.

The Persian conquest. In 913/1507, all the lands as far as Malaṭya were conquered by Shāh Ismāʿīl [*q.v.*], who appointed his general Ustadjlu Muḥammad over them. According to the Venetian merchant who travelled there in 1507 (*Travels*, 149), Mārdīn was occupied without bloodshed. The same traveller mentions the fine palace and mosques of the town; there were more Armenians and Jews in Mārdīn than Muslims. The battle of Čāldirān [*q.v.*] in 920/1514 shook the power of the Persians. In place of Ustadjlu Muḥammad, killed at Čāldirān, his brother Ḳara Khan was appointed and established his headquarters at Mārdīn. Soon the Ottomans occupied Diyār Bakr, and then the town of Mārdīn, but the Persians, who never lost the fortress, restored the status quo.

(V. MINORSKY*)

2. The Ottoman and modern periods

Finally, in 922/1516, the Persian commander Ḳara Khān was defeated and slain in battle at Karghandede near the old town of Ḳoč-ḥiṣār, 10 miles to the southwest of Mārdīn. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mārdīn still remained in the hands of Sulaymān Khān, brother of Ḳara Khān. The siege lasted a year, and not till Meḥmed Bïyïklï Pasha [*q.v.*] arrived from Syria with reinforcements was it stormed and its valiant defenders put to the sword (Iskandar Munshī, *Taʾrīkh-i ʿālam-ārā*, 24, 32, tr. Savory, i, 72; this Persian source mentions Oläng-i Ḳurūḳ in place of Ḳoč-ḥiṣār) (von Hammer, *GOR*², i, 7367-40, quoting Abu 'l-Faḍl, son of Ḥakīm Idrīs and continuer of his *Hasht-bihisht*).

In the Baghdād campaign of 941/1534, Mārdīn was created a *sandjaḳ* and included in the *eyālet* of Diyārbakr (for the history of the region at this time, see Nejat Goyunç, *XVI. Yüzyılda Mardin sancağı*, Istanbul 1969). Ewliyā Čelebi, iv, 59, gives Mārdīn 36 *zi ʿāmets* and 465 timāriots; Mārdīn could put in the field 1,060 armed men (*djebeli*) In the 18th century, Mārdīn became a dependency of the Pashas of Baghdād; Otter (1737) found at Mārdīn a *voyvoda* appointed by Aḥmed Pasha. As late as the time of Kinneir (1810), Mārdīn was the frontier town of the *pashalïḳ* of Baghdād and was governed by a *mütesellim* sent from Baghdād.

The reforms of Sultan Maḥmūd II were badly received in Upper Mesopotamia. In 1832 (Ainsworth), Mārdīn rebelled. Power in Mārdīn had passed to the Kurdish beys. Southgate (1836) speaks of a hereditary (?) family who ruled in Mārdīn. The two brothers of the "ruling bey" seized power and refused to recognise the authority of the Porte. (It may be asked if these beys were not of the Millī tribe; on their chiefs cf. Buckingham, *Travels in Mesopotamia*, London 1827, 156.) Rashīd Pasha, the pacifier of Kurdistān, besieged the town and blew up the great mosque (Ainsworth). Order was temporarily restored. Considerable works were undertaken to improve the road giving access to the town. Rashīd Pasha died in January 1837 (Poujoulat). When the Egyptians under Ibrāhīm b. Muhammad ʿAlī Pasha invaded Syria, their partisan Timawī b. Ayyūb of the Millī tribe seized Mārdīn (Sir Mark Sykes, *The Caliphs' last heritage*, 320) but was killed. The defeat of the Ottomans at Nizīb (June 1839) brought matters to a head. The Porte entrusted Mārdīn to Saʿd Allāh

Pas̲h̲a of Diyārbakr, but the inhabitants preferred to submit to Ibrāhīm Pas̲h̲a of Mawṣil, who was opposed to the *Tanẓīmāt* reforms. This Pas̲h̲a appointed a governor to Mārdīn, but the rebels still held the citadel (Ainsworth 1840), and the governor soon perished in a rising.

By the "*wilāyet* law" of 1287/1870, Mārdīn became a *sand̲j̲aḳ* of the *wilāyet* of Diyārbakr. It had 5 *ḳaḍā*ʾs: Mārdīn, Nīṣībīn, D̲j̲azīra, Midyāt and Avine. The area of the *sand̲j̲aḳ* was 7,750 square miles and the number of towns and villages 1,062. The *sand̲j̲aḳ* was mainly agricultural. The town of Mārdīn produced a small quantity of silk, wool and cotton, leather, shawls, etc., but in spite of the excellence of the work these articles were mainly used for local consumption (Cuinet). By the reforms of 1921, Mārdīn formed a *wilāyet* with 6 *ḳaḍā*ʾs, 1,018 towns and villages, and 125,809 inhabitants (*Türkiyye D̲j̲emhüriyeti 1925-1926 sāl-nāmesi*). In the present-day Turkish Republic, Mārdīn is also the name of one of the 12 component *ilčes* or counties of the Mārdīn *il*. The modern town lies on the main road from Diyarbekir to Nusaybin and the Syrian frontier, and is also the terminus of a railway spur from Şenyurt on the Konya-Adana-Nusaybin-Bag̲h̲dād line.

Population. Niebuhr (1766) counted 3,000 houses in Mārdīn (of which 1,000 were Christian) with 60,000 inhabitants. Dupré (1808) estimated the population at 27,000, of whom 20,000 were Turks (i.e. Muslims), 3,200 Jacobites, 2,000 Armenians and 800 S̲h̲amsiyya. The statements of other travellers are as follows: Kinneir (1814): 11,000, of whom 1,500 were Armenians; Southgate (1837): 3,000, of whom 1,700 were Muslims, 500 Armenian Catholics, 400 Jacobites, 250 Syrian Catholics, 100 Chaldaeans; Mühlbach (1838): 12-15,000 inhabitants; Sachau (1879): 20,000; Cuinet (1891): 25,000, of whom 15,700 were Muslims. By 1955, the town had an estimated population of 24,306, and according to the 1970 census, the town had 33,251 inhabitants, the *ilçe* of Mārdīn 66,197, and the whole *il* 456,415.

According to Southgate, Arabic and Kurdish were the predominating languages in the town. The rural population of Ṭūr ʿAbdīn speaks the Ṭorānī dialect of Neo-Aramaic; cf. E. Prym and A. Socin, *Der neu-aramäische Dialect des Ṭūr ʿAbdīn*, Göttingen 1881; H. Ritter, *Die Volksprache der syrischen Christen des Ṭūr ʿAbdīn*, Beirut-Wiesbaden 1967-79; on the Kurdish dialect, cf. Makas, *Kurdische Texte aus der Gegend Mârdîn*, Leningrad 1924.

Among the religious sects of Mārdīn, the S̲h̲amsiyya would merit a special study. In the time of Niebuhr (1766), there were about a hundred families in the town, and Buckingham (*op. cit.*, 192) and Southgate (1837) also mention them. The S̲h̲amsiyya probably represent the last survivors of a local pagan cult. Towards the middle of the 18th century, they were led to declare themselves Jacobite Christians, but only formally (cf. Ritter, *Erdkunde*, xi, 303-5).

Christianity at Mārdīn. The district of Mārdīn has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which began in 755 is closely associated with Mārdīn. Towards the end of the 8th century, numerous monasteries were established round the town by the bishop John of Mardin. In 1171 the Jacobite patriarchate was transferred from Diyār Bakr (Āmid) to Mārdīn. In 1207 it was moved to Dayr al-Zaʿfarān, an hour's journey from Mārdīn, to return to Mārdīn in 1555 (Assemani, *Bibl. Orient.*, ii, 110, 221, 470; W. Wright, *A short history of Syriac literature*, Oxford 1891, index). On the position of the Christians before 1914, cf. the works of Southgate, Parry, Cuinet, etc.

Monuments. Niebuhr noted many Arabic inscriptions at Mārdīn. Those of the buildings of the Artuḳids and the *waḳfiyyas* of their principal buildings were studied by ʿAlī Emīrī [*q.v.* in Suppl.], himself a native of the Diyār Bakr region; see his edn. of Kātib Ferdī (wrote 944/1537-8), *Mārdīn mulūk-i Artuḳiyye taʾrīk̲h̲i*, Istanbul 1331/1931. The citadel of the town was built or rebuilt in Ḥamdānid times. Numerous mosques were erected by the Artukid beys from the time of Nad̲j̲m al-Dīn Īl-G̲h̲āzī in the early 6th/12th century onwards, including the great mosque, and an Artuḳid *ḥammām* remains. They constructed the Zind̲j̲īriyya and K̲h̲ātūniyya or Sitt Riḍwiyya *madrasas*, whilst the imposing Ḳāsim Pas̲h̲a *madrasa* was built in 849/1445 by the Aḳ-Ḳoyunlu Ḳāsim b. D̲j̲ihāngīr. There are many interesting churches and monasteries in the town and the surrounding countryside, including the Dayr al-Zaʿfarān, where numerous Syrian Christian patriarchs and metropolitans are buried. See A. Gabriel, *Voyages archéologiques dans la Turquie orientale*, Paris 1940, i, 3-44, ii, pls. a-d, I, XXIV; *İA*, art. *Mardin*, addition on *Eski eserler* by T.H.; Metropolit Hanna Dolapönü, *Tarihte Mardin, Itr-el-nardin fi tarih Merdin*, Istanbul 1972, 128 ff.

(V. MINORSKY-[C.E. BOSWORTH])

AL-MĀRDĪNĪ, the *nisba* of three mathematicians and astronomers, for whose life and work we have up to now little information.

1. ABU 'L-ṬĀHIR ISMĀʿĪL B. IBRĀHĪM B. G̲H̲ĀZĪ AL-NUMAYRĪ, S̲H̲AMS AL-DĪN, known as IBN FALLŪS. He probably came from Mārdīn [*q.v.*]) in al-D̲j̲azīra, and was born in 590/1194, dying in *ca.* 650/1252. He made the pilgrimage to Mecca, and was the author of works on arithmetic (see Suter, 143-4, no. 359, and *Nachträge*, 227; Brockelmann, I², 622, S I, 860).

2. ʿABD ALLĀH B. K̲H̲ALĪL B. YŪSUF, D̲J̲AMĀL AL-DĪN

(d. 809/1406-7), disciple of the great astronomer Ibn al-Shāṭir (d. 777/1375), perhaps at Damascus; he later became a *muwakkit* at Cairo (list of works in Suter, 170, no. 421; Brockelmann, II², 218, S II. 218). A good number of these are treatises on the use of various kinds of astronomical quadrants (*dastūr* quadrant, almucantarat quadrant and sinus quadrant). W.H. Worrell and W. Carl Rufus have translated the introduction to the *K. al-Durr al-manthūr fi 'l-ʿamal bi rubʿ al-dastūr* (*Maridini's introduction to the use of the quadrant*, in *Scripta mathematica*, x [1944], 170-80); this introduction is a brief, independent treatise in which the author sets forth the basic ideas (mainly definitions) of geometry and spherical astronomy. The rest of the work (60 chapters) is mostly concerned with problems regarding the transformation of coordinates with the *dastūr* quadrant. D.A. King has edited, translated and studied his *R. fi- 'l-ʿamal bi-rubʿ al-shakkāziyya (An analog computer for solving problems of spherical astronomy*, in *AIHS*, xxiv [1974], 219-42). This is a treatise on the use of a double quadrant, probably an evolved version of a similar instrument invented, in the second half of the 8th/14th century, by the astronomer of Aleppo Ṭaybughā al-Biklimishī or by his son ʿAlī. All these instruments derived from the *ṣafīḥa shakkāziyya* of the Spanish astronomer of the 5th/11th century al-Zarkālluh or from the universal plate of his contemporary ʿAlī b. Khalaf. King has also edited and translated the introduction to his *R. fi 'l-ʿamal bi 'l-djadāwil al-maʿrūfa bi 'l-shabaka*, a work in which Djamāl al-Dīn tabulates three functions of spherical astronomy and elaborates three auxiliary tables similar to those of Ḥabash al-Ḥāsib (d. perhaps between 250 and 260/864-74 [*q.v.*]), Abū Naṣr Manṣūr (d. between 416 and 427/1025-36) or al-Khalīlī (*ca.* 766/1365), although less useful.

3. MUḤAMMAD B. MUḤAMMAD B. AḤMAD ABŪ ʿABD ALLĀH, BADR AL-DĪN, known as SIBṬ AL-MĀRDĪNĪ (826-912/1423-1506), grandson of no. 2 and disciple of the astronomer Ibn al-Madjdī (d. 850/1506); he became *muwakkit* at the Azhar Mosque in Cairo (list of works in Suter, 182-4, no. 445, and 222 n. 90; Brockelmann, II², 216-18, S II, 215-17; see also II,² 468, S II, 484). Like his grandfather, he wrote on the use of the almucantarat quadrant and the *dastūr* and sinus ones (cf. P. Schmazl, *Zur Geschichte des Quadranten bei den Arabern*, Munich 1929, 34-5, 63, 68, 72, 84). He also compiled a collection of tables, computed for the latitude of Cairo, in order to trace the curves of a solar quadrant (cf. K. Schoy, *Sonnenuhren der späterarabischen Astronomie*, in *Isis*, vi [1924], 332-60). He was also interested in arithmetic, algebra, the division of inheritances (*farāʾiḍ* [*q.v.*]) and mental arithmetic (*al-ḥisāb al-hawāʾī*), further writing commentaries on the works of the Egyptian mathematician Ibn al-Hāʾim (d. 815/1412), as well as on those of the Maghribī mathematician Ibn al-Yāsmīn (d. 601/1204; cf. Mohammed Souissi, *Ibn al-Yāsamīn, savant mathématicien du Maghreb*, in *Actas del VI Coloquio Hispano-Tunecino*, Madrid 1983, 217-25). In a work on the arithmetic of degrees and minutes, he brings out the periodicity of the sexagesimal fraction (cf. B. Carra de Vaux, *Sur l'histoire de l'arithmétique arabe*, in *Bibliotheca mathematica*, ser. 2, xiii [1899]). His works on the *mīkāt* [*q.v.*] and the astronomical instruments became very popular, and were still in use as textbooks at the Azhar in *ca.* 1800, according to the testimony of the Egyptian historian al-Djabartī (d. 1237/1822).

Bibliography: In addition to references in the text, see King, *The astronomy of the Mamluks*, in *Isis*, lxxiv (1983), 531-55.

(M. PLESSNER - [J. SAMSÓ])

AL-**MARDJ** [see BARKA].

MARDJ BANĪ ʿĀMIR, "the plain of the Banū ʿĀmir", the largest of its kind in Palestine, named after the Arabian tribe ʿĀmir b. Ṣaʿṣaʿa [*q.v.*], parts of which reached Palestine after the Arab conquests and settled there. Stretching between the mountains of Nābulus and those of Galilee, it constituted an important link on the Cairo-Damascus highway. Ever since the Neolithic era, it has encompassed fortified urban centres, some of which (e.g. Megiddo) flourished in biblical times. Its strategic location turned it into a scene of crucial battles in pre-Islamic periods and after; Ṣalāḥ al-Dīn and other Ayyūbids against the Crusaders, the Mamlūks Baybars and Kutuz against the Mongols in the 7th/13th century, and Allenby against the Ottomans in 1918.

Mediaeval geographers usually referred to it rather by its most famous historical site, ʿAyn Djālūt [*q.v.*], or by the administrative centres to its east (Baysān) and south (Djinīn and Nābulus). The term occurs, however, occasionally in texts from late Mamlūk times in various forms: "*Wilāyat* Djinīn and Mardj Banī ʿĀmir" or as a separate administrative sub-unit (*ʿamal*) of the province of Ṣafad.

Early Ottoman *taḥrīrs* point to a formalisation of the term and its status: as part of the newly-set administrative system, a *nāḥiya* by this name was designated, consisting of 38 villages bordering on Baysān in the east, Nazareth in the north, Kabāṭiyya in the south, and extending towards the Mediterranean. The 74 uninhabited *mezraʿas* included in it indicate the extent of ruin caused to the population and economy during the late Mamlūk period. In order to restore law and properity, it was granted to the local Bedouin *amīrs* of Ṭurabāy, who continued to rule it during the 16th and 17th centuries. The decline of Ottoman rule in Palestine meant once more a loss of any central control over this area, which became increasingly infested with Bedouins and gradually deserted by its sedentary population. "The whole of this country is in a state of insecurity... at present almost entirely deserted" is a description by Burckhardt which was invariably repeated by dozens of travellers who visited the place in the 18th and 19th centuries.

In the second half of the 19th century, most of its land was registered in the name of a few urban *aʿyān* [*q.v.*] families, of which the Christian Sursuks of Beirut had the lion's share. Jewish philanthrophic societies anxious to purchase lands in Palestine conducted elaborate negotiations with the Sursuks during the late 19th century, but actually bought only a small fraction. In the wake of First World War, the Jewish National Fund acquired from these *aʿyān* 250,000 dunams, compensated the 700 tenants living there, and proceeded with similar purchases in later years when this became a major bone of contention between Jews and Arabs. The drainage of the infectious swamps that covered most of the plain, the establishment of Jewish collective settlements and the intensive cultivation that resulted there, turned it into most fertile part of Palestine during the British Mandate. Ever since, both under the British and in the State of Israel, the term Mardj Banī ʿĀmir fell into disuse and was replaced by the biblical equivalent, "the valley of Jezreel".

MARDJ DĀBIḲ, a plain near Dābiḳ [*q.v.*] on the Nahr al-Ḳuwayḳ in northern Syria. The town of Dābiḳ, was known to the Assyrians as *Dabigu* (Sachau, *ZA*, xii, 47) and is called Δάβεκον by Theophanes (*Chron.*, ed. de Boor, 143, 451 ff.).

For convenience in his campaigns against the Byzantines, Sulaymān b. ʿAbd al-Malik moved the headquarters of the Syrian troops from Djābiya [*q.v.*] to Dābiḳ. In 717 with an army under ʿUbayda he set out from Mardj Dābiḳ for Asia Minor and on his return died there in Ṣafar 99/September-October 717 (al-Masʿūdī, *Murūdj*, v, 397 = §2151; *Chronica minora*, ed. Guidi, in *GSCO*, *Scr. Syri*, ser. iii., vol. iv., text, 234, tr. 177). Hārūn al-Rashīd also encamped in 191/807 on this plain (Syr. *Margā Dābeḳ*) and composed the differences between the Syrian bishops (Michael Syrus, *Chron.*, ed. Chabot, iii, 19; Barhebraeus, *Chron. eccles.*, ed. Abbaloos-Lamy, i, 339). The Mirdāsid Maḥmūd in Radjab 457/ June 1065 defeated his uncle ʿAṭiyya on the field of Dābiḳ and then took Ḥalab (Ibn al-ʿAdīm, *Zubda*, ed. Dahan, i, 296.

When in 491/1098 the Franks conquered Anṭākiya, Kerbōghā of Mawṣil assembled a large army on Mardj Dābiḳ, with which he laid siege to Anṭākiya. (Ibn al-Athīr, x, 188; Abu 'l-Fidāʾ, Ibn al-ʿAdīm, etc., in *Rec. hist. or. crois.*, i, 3, 194; iii, 580). In the spring of 513/1119, Īl-Ghāzī on his campaign against the Franks crossed the Euphrates at Baddāyā (now Beddāī on Sachau's map) and Sandja and advanced via Tell Bāshir [*q.v.*], Tell Khālid, Mardj Dābiḳ and Muslimiyya against Ḳinnasrīn (Ibn al-ʿAdīm, ii, 187 *Rec. hist. or. crois.*, iii, 616). In Radjab 518/September 1124, Dubays b. Ṣadaḳa was defeated by Ḥusām al-Dīn Timūrtāsh on the field of Dābiḳ (*Rec. hist. or. crois.*, v, 645). On his campaign against Leo II of Little Armenia, al-Malik al-Ẓāhir encamped in 602/1305-6 on Mardj Dabiḳ (*Rec. hist. or. crois.*, v, 155). On Sayf al-Dīn Tungur's campaign against the Tatars to Malaṭya [*q.v.*], in which Abu 'l-Fidāʾ of Ḥamā took part, a halt was made on the way back on the plain of Dābiḳ from 3 Ṣafar to 2 Rabīʿ II 715/9 May-6 July 1315) (Abu 'l-Fidāʾ, in *Rec. hist. or. crois.*, i, 3).

On 25 Radjab 922/24 August 1516 was fought at Mardj Dābiḳ the battle which gave Selīm I a decisive victory by which Syria passed for the next four centuries under Ottoman rule (H. Jansky, *Mitteil. z. osman. Geschichte*, ii [1923-6], 214-25) [see also DĀBIḲ and ḲĀNSAWH AL-GHAWRĪ].

Bibliography: The geographical texts are gathered together in Le Strange, *Palestine under the Moslems*, 503; cf. R. Dussaud, *La topographie de la Syrie antique et médiévale*, Paris 1927, 474, to which should be added ʿIzz al-Dīn Ibn Shaddād, *Aʿlāḳ*, ed. S. Dahan, tr. A. M. Edde-Terrasse, index. The main historical references are: Masʿūdī, *Murūdj*, index; Yaḥyā al-Anṭākī, ed. Kratchkovsky and Vasiliev, in *Patr. or.*, 442; Ibn al-Athīr, ix, 160, x, 188; Ibn al-Adīm, *Zubda*, ed. S. Dahan, index. (E. Honigmann)

MARDJ RĀHIṬ, the name of a plain near Damascus famous in Islamic history on account of the battles which took place there.

According to Ibn Ḥawḳal, "a *mardj* is a wide expanse of land with numerous estates where large and small cattle and beasts are raised". For M. Canard (*H'amdânides*, 204), a *mardj* is "the place where agriculture and gardens cease to be found". Beyond the *mardj* lies the *ḥamād*, the sterile terrain.

Mardj is a term which, in reference to Damascus, denotes a semicircular zone situated between the Ghūṭa [*q.v.*] and the marches of ʿUṭayba and Hidjdjāna, and the desert steppe which extends eastwards. In the north, the *mardj* is bounded by the foothills of the first chain of the Ḳalamūn, in the west by the slopes of Mt. Hermon, and in the south by the lava bed of the Ladjāʾ [*q.v.*] and the Ṣafā. At the present time, this plain forms parts of the *muḥāfaẓa* of Damascus. Certain part of the *mardj* have special names; amongst these, certain ones have played a great rôle in the history of Syria, sc. the Mardj ʿAdhrāʾ or Mardj Rāhiṭ in the north-east, and the Mardj al-Ṣuffar [*q.v.*] in the south.

The climate of the *mardj* is identical with that of Damascus; at an elevation of 700 m. above sea level on average, it receives each year between 300 to 400 mm of rain. In February, after the winter rains, the region is swollen with water, and it is more difficult to get around, since the roads and tracks are impassable. In the spring, the springs situated at the foot of the first lines of the Ḳalamūn allow the agglomeration of ʿAdhrāʾ to be irrigated and give enough water to Mardj Rāhiṭ for the grass and flowers to grow in April. Towards mid-May, the Bedouin come to camp and to pasture their flocks on the eastern border of the *mardj*. In August, the grass has disappeared, and the region is dusty until the first rains of autumn.

According to certain authors, like Muḥammad Kurd ʿAlī, Mardj Rāhiṭ is identical with Mardj ʿAdhrāʾ, but for others, Mardj Rāhiṭ is situated near ʿAdhrāʾ, which Yāḳūt mentions as one of the villages in the vicinity of Damascus. This settlement, which sometimes give its name to the neighbouring *mardj*, is situated between the modern village of Shafūniyya and the Khān al-Ḳuṣayr at the foot of the Hill of the Eagle (Thaniyyat al-ʿUḳāb) on the road from Damascus to Ḥimṣ. When going northwards, one passes by the Ḳubbat al-ʿAṣāfir, the Khān ʿAyyāsh—identified with the Khān of Lādjīn [*q.v.*] built in 690/1291—and the Khān of al-Ḳuṣayr. It is to the south-east of this district that Musil fixes the Mardj Rāhiṭ.

In Muḥarram 13/March-April 634, the general Khālid b. al-Walīd [*q.v.*] left ʿIrāḳ in order to take part, with two other Arab contingents, in the conquest of Syria. After their defeat at al-Adjnādayn [*q.v.*], the Byzantines fell back on Damascus, where they shut themselves up in Muḥarram 14/March 635. Khālid b. al-Walīd, having arrived himself at the beginning of spring in the region of Damascus, drove out the Ghassānids who were there and installed himself at Mardj Rāhiṭ, to the north-east of the city, which fact has led some people to think that he had come via Tadmur. Some others think that he took the southern road via Dūmat al-Djandal [*q.v.*]. Whilst Khālid encamped to the north-east, the general Abū ʿUbayda b. al-Djarrāḥ [*q.v.*] deployed his troops to the south-west in order to besiege Damascus, which had to surrender in Radjab 14/September 638.

In 64/684 Mardj Rāhiṭ was the scene of a great battle involving an internal struggle of the Arabs. On the death of Muʿāwiya II b. al-Yazīd [*q.v.*], a complex crisis ensued over the succession to the caliphate. The community became divided into two, with the Ḳaysīs, partisans of ʿAbd Allāh b. al-Zubayr [*q.v.*] on one side, and the Kalbīs, supporters of Marwān b. al-Ḥakam [*q.v.*] on the other. Whilst an assembly

convoked to choose a successor to Muʿāwiya II met at al-Djābiya [*q.v.*], al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*], head of the Ḳays and supporter of ʿAbd Allāh b. al-Zubayr, who had made him governor of Damascus, concentrated the Ḳaysī forces at Mardj al-Ṣuffar. Marwān, having become caliph, had as his prime aim the dislodging and breaking-up of the forces of al-Ḍaḥḥāk, who had rallied to Ibn al-Zubayr, in turn proclaimed caliph at Mecca. A first engagement took place in the middle of Dhu 'l-Ḥidjdja 64/mid-August 684 at Mardj al-Ṣuffar; the Ḳaysīs fell back towards Damascus, but their opponents were in place to the north-east of Damascus at the foot of the Thaniyyat al-ʿUḳāb; this was "the encounter (*waḳʿa*) of Mardj Rāhiṭ". After some 20 days ("nights", according to Ibn al-Athīr) of skirmishes, the final struggle, called "the day (*yawm*) of Mardj Rāhiṭ", took place on 1 Muḥarram 65/18 August 684. If certain sources are to be believed, Marwān is supposed to have had 13,000 men under the command of ʿAbbād b. Ziyād [*q.v.*], whilst al-Ḍaḥḥāk had as many as 30,000. Can the death of al-Ḍaḥḥāk in battle, and the sight of his severed head presented to Marwān, alone explain the débâcle for the Ḳaysīs, whose main leaders were killed, only Zufar b. al-Ḥārith al-Kilābī finding safety in flight northwards? Amongst the dead are mentioned 80 *ashrāf* of Damascus. According to al-Harawī and Ibn Shaddād, at Mardj Rāhiṭ in the 6th-7th/12th-13th centuries there were to be found the tombs of two Companions of the Prophet, Zumayl b. Rabīʿa and Rabīʿa b. ʿAmr al-Djarashī, both killed fighting Marwān; it was, accordingly, a place of pilgrimage.

The success of the Kalb party may be explained by the rallying to Marwān, in the course of the manoeuvres, of elements allied to Ḳays, as well as the fact that the Umayyads, having succeeded by means of a coup-de-main in seizing the state treasury (*bayt al-mal*) at Damascus and a store of arms, had at their disposal means for redressing the balance of forces. Only the defection, to Marwān's profit, of an important part of the Syrian tribes, anxious to preserve their hegemony, seems able to explain the overwhelming success of the Umayyad army.

After this victory, Marwān undertook the conquest of the lands where allegiance had been given to ʿAbd Allāh b. al-Zubayr. One result of the battle was to accentuate the rivalry of the Ḳays and the Kalb. The victorious Kalb and the family of Baḥdal [*q.v.*] acquired a preponderance which the Ḳays, with the support of Bāhila and Ghanī [*q.vv.*], were to contest strongly.

The "encounter at Mardj Rāhiṭ" was much mentioned in poetry of the Marwānid period, in particular by al-Akhṭal [*q.v.*]; and al-Masʿūdī cites in his *Tanbīh*, in connection with this Umayyad victory, verses by al-Farazdaḳ [*q.v.*].

In Dhu 'l-Ḥidjdja 334/July 946, the Ḥamdānid Sayf al-Dawla [*q.v.*] broke the treaty which he had made with the Ikhshīdid regent Kāfūr [*q.v.*] and seized Damascus, but the ruler in Cairo sent troops to regain the city. The Ḥamdānid army was put to flight by the Ikhshīdid troops near Nāṣira in Djumādā I 335/December 946, and retreated towards Damascus; it encamped at Mardj Rāhiṭ and then reached Ḥimṣ in Djumādā II 335/January 947, whilst Kāfūr's forces reoccupied Damascus. In spring 335/947, Sayf al-Dawla returned to Damascus, but he was beaten at Mardj Rāhiṭ, whose terrain was suitable for warfare, and fled towards Aleppo, pursued by the Ikhshīdid forces.

In 381/991 the Fāṭimid caliph al-ʿAzīz [*q.v.*] dismissed Munīr al-Khādim, the governor of Damascus, and sent as his replacement the Turkish general Mangūtakīn, who took up his position initially at ʿAdhrāʾ at Mardj Rāhiṭ before making his entry into Damascus.

In Djumādā I 529/mid-February 1135, the Atabeg ʿImād al-Dīn Zangī arrived from Aleppo and went to encamp at Mardj Rāhiṭ between ʿAdhrāʾ and al-Ḳuṣayr with the aim of occupying Damascus. Whilst the city organised its defence, the Atabeg left Mardj Rāhiṭ and took up a position to the south at the ʿAḳabat al-Ḳibliyya on the road to Ḥawrān [*q.v.*]. On 7 Dhu 'l-Ḳaʿda 535/22 June 1141, Zangī appeared again on the outskirts of Damascus in order to cut off food supplies from the city. A sortie by the defenders compelled Zangī to lift the siege and beat a retreat; he then fell back to Mardj Rāhiṭ in order to await his troops. When these last returned, loaded with plunder, he joined them on the road northwards.

A few years later, in spring 544/1149, Nūr al-Dīn in turn established his camp at ʿAdhrāʾ in the western part of Mardj Rāhiṭ whilst he was besieging Damascus. Two years later, on 13 Muḥarram 546/2 May 1151, Nūr al-Dīn's vanguard set up its tents at ʿAdhrāʾ in Mardj Rāhiṭ, but then the army, endeavouring to keep up the pressure on the city, changed camp several times before falling back at the approach of the Franks from Jerusalem who had come to the aid of the Damascenes. When Nūr al-Dīn came back a third time to lay siege to Damascus, in the second half of Muḥarram 549/beginning of April 1154, he set up his camp at Mardj al-Ḳaṣṣāb to the north of the Bāb Tūma.

Ibn al-Furāt [*q.v.*] tells us that in 680/1280, "al-Manṣūr (sc. the Mamlūk sultan Ḳalāwūn [*q.v.*]) got together his troops in the *mardj* and left with his army for Ḥimṣ"; assuming that the sultan journeyed northwards, this must be Mardj Rāhiṭ.

In 698/1298-9, the Mongol troops of the Il-Khān Ghazan [*q.v.*] entered Syria, passed by Ḥamāt [*q.v.*] and marched on Damascus. In Ramaḍān 698/June 1299, they regrouped at Mardj Rāhiṭ before embarking on the attack on Damascus. Fighting between the Mongols and Mamlūks was fierce. The city was burnt, the suburbs destroyed, the Ghūṭa sacked, and Sayf al-Dīn Ḳipčaḳ al-Manṣūrī who, with the *amīr* Baktimur al-Silāḥdār had passed into the Mongol service, was appointed governor of Damascus by Ghazan. But after the retreat of the troops commanded by Ḳuṭlūshāh, Sayf al-Dīn Ḳipčaḳ once more submitted to the Sultan al-Nāṣir Muḥammad b. Ḳalāwūn, and Djamāl al-Dīn Aḳḳush al-Afram re-assumed the office which he had abandoned when the Mongols had appeared.

In 702/1303, the Mongols crossed Mardj Rāhiṭ in order to reach Mardj al-Ṣuffar, where they went to take up positions at Shaḳḥab before confronting the Mamlūk army.

From the 8th/14th century onwards, the name Mardj Rāhiṭ seems to disappear in local toponomy in favour of the designation Mardj ʿAdhrāʾ.

(N. Elisséeff)

MARD̲J̲ AL-ṢUFFAR, the plain stretching from the south of the G̲h̲ūṭa and falling within the administrative district of Damascus (*arḍ Dimas̲h̲ḳ*). It holds an important position in the history of Syria because of the many battles occurring there over the centuries and the frequent crossings of it by pilgrims. It provides a convenient stopping place south of Damascus, and because of the good water supply there and excellent grazing, it makes an ideal encampment for any army travelling from the north or the south.

To the north it is bounded by the right bank of the Nahr al-Aʿwad̲j̲, which drops down from Hermon to disappear to the east in the Baḥr al-Hid̲j̲d̲j̲āna, and to the east by the railway line from Damascus to Darʿa (Ad̲h̲riʿāt [*q.v.*]) and Amman (ʿAmmān [*q.v.*]). In the south-east, the Mard̲j̲ ends in the volcanic area of the Safā, and in the south the boundary is the lava field of the Lad̲j̲ā [*q.v.*], which is roughly situated between Umm al-Ḳuṣūr and G̲h̲abāg̲h̲ib. To the west, the village of Kanākir marks the boundary, while in the north-west it is marked by the lava flow (*waʿr*) of Zakiya.

The Syrian Darb al-Ḥad̲j̲d̲j̲ crosses the Mard̲j̲ al-Ṣuffar from north to south after going through the S̲h̲uḥūra pass, the D̲j̲abal Aswad and the Nahr al-Aʿwad̲j̲. In its course it passes through Kiswa, K̲h̲ān Danūn, S̲h̲aḳḥab and G̲h̲abag̲h̲ib, before entering the Ḥawrān [*q.v.*].

Here on the Mard̲j̲ al-Ṣuffar one of the historically famous battles in the Syrian campaign of the caliph Abū Bakr was fought, in D̲j̲umādā 13/August 634. After the victory of Ad̲j̲nādayn [*q.v.*], the Prophet's Companion K̲h̲ālid b. Saʿīd b. al-ʿĀṣ [*q.v.*], who had been put under the command of S̲h̲uraḥbīl b. Ḥasana, arrived in the advance party on his way from D̲j̲awlān [*q.v.*] and camped here with his troops. He was taken by surprise by the Byzantines under Theodore, the brother of the emperor Heraclius, who was supported by the G̲h̲assānid troops of al-Ḥārit̲h̲ b. Abī S̲h̲ām. K̲h̲ālid b. Saʿīd was killed in battle and buried on the spot. His newly-married wife Umm Ḥakīm bint al-Ḥārit̲h̲ b. His̲h̲ām b. al-Mug̲h̲īra, who had been the widow of ʿIkrima b. Abī D̲j̲ahl, plunged into the conflict and killed his enemies. In memory of this exploit, the bridge on which she fought was named Ḳanṭarat Umm Ḥakīm. With the arrival of Arab reinforcements, the Byzantines fell back and shut themselves in Damascus, which was besieged by the Muslims shortly afterwards.

After his victory over the G̲h̲assānids at Mard̲j̲ Rāhiṭ [*q.v.*], K̲h̲ālid b. al-Walīd [*q.v.*] headed southwards and stayed for some time at the Mard̲j̲ al-Ṣuffar before returning to Boṣrā [*q.v.*] by way of Ḳanawāt.

In Ramaḍān 64/May 684, partisans of the Umayyads met at al-D̲j̲ābiya [*q.v.*] to nominate a successor to Muʿāwiya II [*q.v.*]. The governor of Damascus, al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*], the leader of the Zubayrid party, was also invited to the meeting and promised to be there. He left Damascus with a considerable number of troops, but when he came to the Mard̲j̲ al-Ṣuffar, half-way to al-D̲j̲ābiya, he decided to stop there to await the outcome of the meeting, whilst at the same time making his way towards a meeting of the Ḳays [*q.v.*] of Syria, who were in rebellion against the Umayyads.

On 3 D̲h̲u 'l-Ḳaʿda 64/22 June 684, after forty days of deliberation, the Kalb [*q.v.*] and the Umayyad partisans elected to the caliphate by acclamation Marwān b. al-Ḥakam [*q.v.*]. Immediately, he started out for Damascus and arrived at the Mard̲j̲ al-Ṣuffar in the middle of D̲h̲u'l-Ḳaʿda/the beginning of July. The Ḳays were unable to hold their position, and in an effort to avoid combat al-Ḍaḥḥak set off hastily towards Mard̲j̲ Rāhiṭ, to the north of Damascus. In the battle which followed, the Ḳaysī leader and a large number of his men lost their lives.

In 476/1083, while the Sald̲j̲ūḳ Tutus̲h̲ [*q.v.*] was away leading an expedition against the Byzantines in the Anṭākiya region, Muslim b. Ḳuroys̲h̲, the leader of the Banū ʿUḳayl and ruler of Ḥalab [*q.v.*] decided to besiege Damascus. The troops of Ḥalab, joined by the Banū Numayr [*q.v.*] and the Banū S̲h̲aybān [*q.v.*] as well as some Turkmen elements, came to lay siege to the town. The Ḳays and some Yemenis joined them there. Muslim hoped for aid from Egypt promised by the Fāṭimids, but he hoped in vain. Tutus̲h̲ was recalled by the townsmen of Damascus, but they had defeated their attacker before he could get back. The ʿUḳaylid was betrayed by some of his troops, and leaving the walls of the city, he went to make camp on the Mard̲j̲ al-Ṣuffar. From there he took the road eastwards across the Ḥamād and reached the district of Salāmiyya.

Riḍwān b. Tutus̲h̲ [*q.v.*], the ruler of Ḥalab, came to besiege Damascus in 489/1096, supported by Suḳmān b. Artuḳ. When he heard that S̲h̲ams al-

Mulūk Duḳāḳ was returning to Damascus with his troops, Riḍwān raised the siege and fell back to the Mardj al-Ṣuffar, and then went on to pillage the Ḥawrān. Duḳāḳ arrived in Damascus, and set out in pursuit of Riḍwān's army. As Duḳāḳ began to close in on him, Riḍwān broke away, took a northerly route through the Syrian desert and returned to Ḥalab at the end of Dhu 'l-Ḥidjdjā 489/mid-December 1096.

In 11 Muḥarram 507/28 June 1113, the Saldjūḳ troops of the Amīr Sharaf al-Dīn Mawdūd of Mawṣil and of the Atabeg Ṭughtakīn [*q.v.*] of Damascus won a resounding victory over the Franks at al-Ṣinnabra, the former winter residence of the caliph Muʿāwiya, south of Lake Tiberias. The Franks retreated to some rising ground to the west of Tiberias, whilst the Muslims camped at the foot of the hill. After thirty-six days under siege, debilitated by the extreme heat and the lack of provisions, they were obliged to surrender their position on Rabīʿ I 507/16 April 1113. Heading north through Baysān, they reached the Mardj al-Ṣuffar, where Mawdūd paid off his troops and they dispersed. He then accompanied the Atabeg Ṭughtakīn to Damascus, arriving there on 21 Rabīʿ I 507/5 September 1113.

At the end of 519/1125, Baldwin II of Jerusalem decided to launch a surprise attack on Damascus in reprisal for a raid during the previous autumn by the Atabeg Ṭughtakīn. He intended to reach the area by way of the Mardj al-Ṣuffar and Sharkhub. The Atabeg positioned his troops on the Mardj al-Ṣuffar and advanced as far as Tell al-Shaḳḥab. On 27 Dhu 'l-Ḥidjdja 519/25 January 1127, the two armies confronted each other and fought a little battle which has become of great interest to military historians, as noted by Charles Oman, relying upon the accounts of Fulcher of Chartres and William of Tyre. This was, in fact, the first time that the Turks had used infantry to support their cavalry. The Franks were split into twelve field units each composed of cavalrymen and footsoldiers. Opposed to them was the Muslim army made up of Turkmen cavalrymen supported by young recruits, who were mounted behind the riders and ready to leap down and fight on foot when the enemy was near. On the Damascene side also were thousands of men on foot, for the most part citizens who had very little military training. It was only in respect of the irregular foot-soldiers that the Damascenes had a clear numerical superiority. Although the battle was extremely hard-fought, the casualties were not excessive. The Franks were first surprised by a hail of arrows and yielded ground, but then rallied, and the Damascus troops retreated at nightfall, falling back as far as Djabal Aswad, near Kiswa. Finally, both sides returned home.

In the first half of Shawwāl 523/the second half of September 1129, the Franks launched a new offensive against Damascus after the massacre of the Bāṭiniyya [*q.v.*]. Tadj al-Mulūk Būrī in vain solicited the help of the Fāṭimid caliph. The Franks encamped at the entrance to the Mardj al-Ṣuffar before Djisr al-Khashab and foraged on the plain between Tell Shaḳḥab and Kiswa. The Muslim army, now enlarged by Turkmens and Bedouins, halted in front of the Franks, who clustered round their tents while one group of them continued foraging in the Ḥawrān. After launching several attacks the Muslims were at last able to achieve a decisive victory, taking much booty and leaving many dead.

During the reigns of Nūr al-Dīn [*q.v.*] and Ṣalāḥ al-Dīn [*q.v.*], we find hardly any mention of the Mardj al-Ṣuffar in contemporary chronicles. The *Nudjūm* of Ibn Taghrībirdī makes no mention of any conflict on this plain which the armies used to cross on the way from Cairo to Damascus. In Djumādā II 590/May 1194, the Ayyūbid of Egypt al-ʿAzīz camped at Kiswa, on the banks of the Nahr al-Aʿwadj on the northern edge of the Mardj al-Ṣuffar, on his way to Damascus to hold discussions with his eldest brother al-Afḍal.

During the battle between al-ʿĀdil and al-Afḍal in 595/1199, al-Afḍal went to encamp on the Mardj al-Ṣuffar several times before resuming the siege of Damascus in Ramaḍān/July. In the following year (596/1200), it was the turn of al-Malik al-Ẓāhir to encamp on the Mardj al-Ṣuffar during the rainy season before reaching to Ḥalab.

In 614/1217 al-ʿĀdil [*q.v.*], the younger brother of Ṣalāḥ al-Dīn, was hard pressed by the Crusaders, and fell back from Palestine to the north. He travelled through Baysān, crossed the Jordan, passed through ʿAdjlūn [*q.v.*] and then turned northwards to follow the track of Raʾs al-Māʾ in order to get the Mardj al-Ṣuffar. From there he appealed for help to the Ayyūbid princes, but only al-Mudjāhid Shīrkūh of Ḥimṣ came to his camp. While al-ʿĀdil was in the Mardj al-Ṣuffar, his elder son, who was governing Egypt on his behalf, had to confront the Fifth Crusade when it disembarked at Damietta (Dimyāṭ [*q.v.*]) on Rabīʿ I 615/28 May 1218. As soon as al-ʿĀdil had heard that the Franks had set foot on Egyptian soil, he left for Damietta. After a day's forced march he arrived at ʿAliḳīn where he fell ill, shocked by the defeat at Damietta. He died in his camp on Friday, Djumādā II/31 August 1218. He was buried in Damascus, firstly in the citadel and then in his own *turba*. Whenever al-ʿĀdil stayed at Damascus during the rose blossom season, he would have his tent erected in the Mardj al-Ṣuffar, being allergic to the smell of the flowers, and then go back to the city later.
